95,338.—THOMAS J. HALL, Bryan, Texas.—*Cultivator.*—September 28, 1869.

Claim.—1. The cultivator-beams A, arranged either singly or in pairs, and suspended, by the adjustable rods B, from the levers C, vibrating laterally, and arranged to be operated by the feet, substantially as specified.

2. The combination of the levers C, transverse beam I, and springs H, when arranged substantially as specified.

95,339.—WILLIAM HALLAM, Cheltenham, Mo.—*Brick-Kiln.*—September 28, 1869.

Claim.—1. The bridge-wall B, arranged with distributing-flues *b*, and combined with the furnaces D D', substantially as set forth.

2. The arrangement of flues, furnaces, and bridge-wall in such manner that the heated gases shall rise in the annular chamber, without the bridge-wall, then pass down the center of the kiln to the base thereof, to be carried to the circumference, and rise to the chamber between the double crown, and from there pass to the chimney, substantially as described.

3. The steam-passages I, arranged at the base of the kiln, substantially as and for the purposes set forth.

95,340.—ROBERT HAM, Troy, N. Y., assignor to PHILO P. STEWART, same place.—*Stove-Pipe Damper.*—September 28, 1869.

Claim.—The damper B, having cast or otherwise attached thereto the pivots *c* and *c'*, so constructed as to permit of their insertion into the pivot-holes from within the pipe, and provided with shoulders or their equivalents, against which the inside of said pipe shall press, substantially as and for the purpose herein shown and described.

95,341.—HENRY W. HARPER, Berlinsville, Pa.—*Machine for Grinding and Polishing School-Slates.*—September 28, 1869; antedated March 29, 1869.

Claim.—1. The two horizontal grinding-disks J and H, revolving in contrary directions, in combination with the bars *d*, or their equivalents.

2. The disk H, and its band *d*, in combination with the movable disk J and its slots *f*.

3. The revolving wheel K or M, constructed substantially as described, for holding the slates, in combination with a grinding or polishing wheel or disk.

4. The wheel K, its band, the split ring *p*, and bolt *r*.

5. The combination of a revolving wheel, K or M, for holding the slates, with one or more horizontal revolving, polishing, or grinding disks, arranged to overlap the said wheel, as set forth.

6. The combination of the two vertical polishing-wheels T and R with the bar V, for the purpose specified.

95,342.—Henry W. Harper, Berlinsville, Pa.—*Machine for Grinding and Polishing Slate.*—September 28, 1869; antedated March 29, 1869.

Claim.—1. The screw *m*, arranged on the machine substantially as described, for regulating the extent of the reduction of the slates.

2. The combination of the said screw with a pointer and graduated plate, for the purpose specified.

95,343.—Henry W. Harper, Berlinsville, Pa.—*Machine for Grinding Slate, Stone, Marble, &c.*—September 28, 1869; antedated March 29, 1869.

Claim.—1. The revolving disk H, or its equivalent, to which are secured a number of grinding or polishing blocks, arranged apart from each other, in combination with a rotating disk or reciprocating bed for containing the object to be ground or polished.

2. Rendering the said blocks adjustable to and from the center of the disk H, or its equivalent, by means of slots *f f* in the latter for the reception of the stems of the blocks, as set forth.

95,344.—B. B. Hill, Springfield, Mass.—*Method of Manufacturing Type-Wheels.*—September 28, 1869.

Claim.—1. As an improvement in the method of forming, by compression, the letters or figures on the periphery of type-wheels, and to avoid thickening or displacement of the metal during such compression, except along the angles which separate the circumferential surface from the lateral surfaces, tightly compressing said wheel between two circular plates or disks, which completely cover and compress the two lateral surfaces of said wheel, excepting only a narrow rim or margin thereof, allowed for lateral extension under the action of the die, substantially as described.

2. As a new article of manufacture, a type-wheel, having characters or figures formed or produced upon its periphery by the process substantially as herein described.

95,345.—Martin V. B. Hill, Bridgeport, Conn.—*Cartridge-Loading Machine.*—September 28, 1869.

Claim.—1. The combination of the spur-wheels A, B, and C, the spring *c*, and the pin *a*, substantially as and for the purpose hereinbefore set forth.

2. The combination of the ratchet-wheel *h*, the pawl *v*, the arm *i*, the spring *x*, the connecting-rod *q*, the pin *w*, and the cam *z*, substantially as and for the purpose hereinbefore set forth.

3. The combination of the pawl *v*, the wires *o* and *f*, the angle-lever *s*, and the knob *e*, substantially as and for the purpose hereinbefore set forth.

95,346.—M. T. Hitchcock, Springfield, Mass.—*Eduction-Ventilator for Railroad-Cars.*—September 28, 1869.

Claim.—An eduction-ventilator for railroad-cars, composed of the shell A, draught-opening D, and angular portions C and C′, and the base B, for attaching the ventilator to the car, the whole constructed, arranged, and applied substantially as set forth.

95,347.—D. L. Holden, New Orleans, La.—*Ice-Machine.*—September 28, 1869.

Claim.—1. The well K, provided with a space below the inlet-pipe J, having a cock, K, through which to draw off the impurities, and also provided with a strainer, *n*, between the ends of pipes J and L, when arranged in an ice-machine, to operate in the manner and for the purpose specified.

2. The arrangement of the sprayers G, in connection with the plugs *a a*, pipe E, and tubes C C, or tubular connections, with the chambers B B, substantially as shown and described.

95,348.—William R. Hollingsworth, Mount Pleasant, Iowa.—*Harrow.*—September 28, 1869.

Claim.—1. The metallic harrow-head, herein described, constructed and arranged to operate substantially as specified.

2. The combination of the metallic head B and wedges *c′*, when arranged to operate substantially as and for the purpose described.

95,349.—George B. Holzach, New Orleans, La.—*Window-Shade Fixture.*—September 28, 1869.

Claim.—The means herein described, consisting of an endless cord, *f*, in connection with its attachment to the roller C and the cord *b c*, and its connection with the cross-bar B, for winding and unwinding the shade upon its roller, simultaneously with the raising and lowering of the supporting and carrying bar, substantially as before described.

95,350.—R. B. Hugunin, Cleveland, Ohio.—*Sash-Holder.*—September 28, 1869.

Claim.—The arrangement of the elastic roller D and D′, combined with the smaller roller F, compressed into the elastic covering of the former, and secured in that position between the plates A B, &c., substantially as described herein.

95,351.—William Hull and Charles W. Hammond, Baltimore, Md.—*Grain-Drier.*—September 28, 1869.

Claim.—The screen *c*, combined with the inclosing-cylinder B, dirt-space *e*, and spiral flanges *b*, substantially as and for the purpose set forth.

95,352.—Almon Hunt, Macomb, Ill.—*Cultivator.*—September 28, 1869.

Claim.—The cultivator herein described, having frames C, bars D, equalizing-bars K, clamps P, and plates *c*, arranged, with reference to the beams O, as described, constructed and arranged substantially as set forth.

95,353.—Jakob Husnik, Tabor, Austria, assignor to Heinrich Pollack and Albert Edwin Schmidt, Hamburg, Germany.—*Rotating Hook for Sewing-Machines.*—September 28, 1869.

Claim.—The tail or projection T, upon the rotating hook of a sewing-machine, constructed and adapted to operate substantially as herein set forth.

95,354.—J. J. Kendall, Troy's Store, N. C.—*Washing-Machine.*—September 28, 1869.

Claim.—The boxes or pressers B B, provided with the slats *i*, in combination with the perforated plates D D, as and for the purpose set forth.

95,355.—Jefferson Kindleberger and William Augustus Arnold, San Francisco, Cal., assignors to "The Inventors' Association of San Francisco, California."—*Machine for Wiring Blinds.*—September 28, 1869.

Claim.—1. The above-described rod-wiring device, consisting of the conductor O, with the guard R, and the sliding-bar N, lever M, and sliding-bar L, operated by the lever B, substantially as described.

2. In combination with the above-claimed device, the pawl E, pivoted upon the bent lever B, for feeding forward the rods, substantially as described.

3. The combination, with the rod-wiring device above claimed, of the device for wiring the blind-slats to the rods, substantially as herein set forth.

95,356.—Philip Kneipp, Philadelphia, Pa., assignor to James S. Earle & Sons, same place.—*Ornamental Transfer.*—September 28, 1869.

Claim.—The decorating of surfaces by the process substantially as herein set forth.

95,357.—Carl Künstler, Brooklyn, N. Y.—*Blacking-Fount.*—September 28, 1869.

Claim.—The blacking-fount A, provided with the necks B and D, the latter being made so as to admit a sponge E, covered or not covered, and the neck B to admit the blacking, in combination with the caps C and F, constructed and operated substantially as and for the purposes set forth.

95,358.—Louis La Breche-Viger, Montreal, Canada, assignor to William Woods Averell, Bath, N. Y.—*Manufacture of Cast Steel.*—September 28, 1869.

Claim.—1. The use of the admixture of plumbago and iron-ores, iron-sand, wrought iron, iron scraps, shavings, chips, and sponge, in a clay crucible or other non-melting pot, substantially as set forth, to produce cast steel at one operation.

2. The use of the said admixture of plumbago and iron-ores, iron-sand, wrought iron, iron scraps, shavings, chips, and sponge, in a reverberatory furnace, the said mixture covered with a flux of glass or blast-furnace cinders, or with glass-making materials, or with thin slabs of soapstone, or with those substances combined during reduction, carburization, and fusion, to produce cast steel at one operation.

3. The use of the admixture of powdered charcoal, compressed or not with iron-ores, iron-sand, wrought iron, iron scraps, shavings, chips, and sponge, in a reverberatory furnace, the said mixture covered with a flux of glass, or glass-making materials, or blast-furnace cinders, or thin slabs of soapstone, or with those substances combined, to make cast steel at one operation.

95,359.—SALEM T. LAMB, New Albany, Ind.—*Pitman-Joint for Harvesters.*—September 28, 1869.

Claim.—1. Forming a pitman-joint by means of the eye D E, and hook G, in connection with a pressure-block, J M, or its equivalent, to compensate for wear and take up lost motion, as described.

2. The nut I, constructed with a sleeve and spring-pawl L, substantially as described, in combination with the ratchet K, on the end of the pressure-block J, as and for the purpose set forth.

95,360.—JOHN LARIMORE and J. M. WILLIAMS, Connersville, Ind.—*Railway-Car Coupling.*—September 28, 1869.

Claim.—1. The bumper A, provided with pivoted jaws B B, having shoulders *i i*, constructed substantially as described, and for the purpose set forth.

2. The combination of the pivoted jaws B B, stop E, and springs D D, all substantially as and for the purpose set forth.

3. The stop E, constructed substantially as described, and for the purposes set forth.

4. In combination with the bumper A, the slotted tube G and cap I, substantially as and for the purpose set forth.

5. The combination of the bumper A, pivoted jaws B B, springs D D, coupling-bolt C, projection F, slotted tube G, and cap I, all constructed and operating substantially as and for the purposes herein set forth.

95,361.—ANDREW S. LAZIER, North Parma, N. Y.—*Horse-Rake.*—September 28, 1869.

Claim.—The combination and arrangement of the pendant *f*, stirrup *g*, and oscillating bar *e*, having staples or levers *n*, and rods *h h'*, substantially as and for the purpose set forth.

95,362.—DAVID R. LEWIS, Manchester, Iowa.—*Cloth-Holding Guide for Sewing-Machines.*—September 28, 1869.

Claim.—The combination, with the guide-bar A and stand B, of the spring clamping-bars F and H, having long arms F' and I, when all are constructed and arranged to operate as set forth.

95,363.—TYLER C. LORD, Chicago, Ill.—*Hinge for Blinds.*—September 28, 1869.

Claim.—When forming a part of a window-blind hinge, the circular plate B, when provided with a central pivoting-pin D, cogs or teeth C, and lips or flange F, in combination with the support E and bevel-wheel H, when all are constructed and arranged substantially as and for the purposes specified.

95,364.—HENRY C. MARCH, Limerick Station, Pa.—*Base-Burning Stove.*—September 28, 1869.

Claim.—1. A movable grate and fire-pot, combined substantially in the manner described.

2. A coal-reservoir or feeder, consisting of two cylinders, K and K', one of which is so arranged to slide on or to be adjusted upon the other, that the length of the reservoir can be increased or diminished as required.

3. The spiral ribs or threads *e* and *e'*, formed on the two sections of the reservoir, and adapted to each other substantially as herein set forth.

4. The throttle-valve L, when arranged in the lower adjustable portion of the reservoir, as described.

5. The combination of the scoop M, and its lug or lugs *h*, with the hinged lid M', and its rod or rods *h'*, all substantially as herein set forth.

6. The arrangement of dampers I and I', in combination with the scoop M, substantially as described.

7. The combination, with the corrugated or channeled ledge *a*, of the movable perforated fire-pot F, all substantially as herein set forth.

95,365.—GEORGE E. MARSHALL, Laurel, Ind.—*Bleaching Paper-Stock.*—September 28, 1869.

Claim.—1. Gathering the escaping gases evolved from the bleaching-solution, and conveying them away by an inflowing current of air, produced by a fan or equivalent means, substantially as described.

2. The utilization of said gases, by returning them to the tub or reservoir, substantially as described.

3. The combination of a bleaching-tub or reservoir, a receiver or cover, and a fan or its equivalent, substantially as and for the purpose set forth.

4. The adjustable delivery-pipes *a*, arranged to receive and deliver the gas, either within or above the fluid or solution, as set forth.

95,366.—GEORGE MARTZ, Pottsville, Pa.—*Hoisting and Dumping Apparatus.*—September 28, 1869.

Claim.—1. The center-drop *c'*, in combination with the curved recesses *a* and the catch *a''*, in the manner and for the purpose specified.

2. In a hoisting-apparatus for mines, the combination of a water-bucket and coal-car holder, substantially as described.

3. The dumping-apparatus, consisting of the quadrantal side-pieces C', provided with means for the retention of a car, and with trunnions or other axial devices, in combination with the concave deflectors D, substantially as set forth.

4. The combination of the counterweight H' with the bucket C and slotted guide-ways H, arranged and operating in the manner explained.

5. The guard F'', in combination with the side-pieces F', arranged and operating substantially as specified.

95,367.—LE ROY MCWHINNEY, Winterset, Iowa.—*Hand-Plow.*—September 28, 1869.

Claim.—As an article of manufacture, a hand-plow, composed of parts A, B, and C, constructed substantially as set forth.

95,368.—HENRY D. MEARS, New York, N. Y.—*Sealing Boxes, &c.*—September 28, 1869.

Claim.—Cording and sealing boxes, and other similar articles to be transported, by means of a metal cord, or wire, passing through said article, and securing the ends thereof by a metallic seal, as and for the purpose herein described and represented.

95,369.—JOHN MOESSINGER, New York, N. Y.—*Reading-Desk.*—September 28, 1869.

Claim.—1. The reading-desk G, constructed of two parts, united by a balance-lever, H, substantially as shown and described.

2. The end slides *f*, carrying the cover-holders *j* and friction leaf-holders *k*, either or both, in combination with the desk G, substantially as set forth.

3. The lateral slides *n*, carrying the surface leaf-holders *l*, in combination with the adjustable cover-holders *j*, and with the desk G, substantially as described.

95,370.—WILLIAM F. MOODY, Auburn, N. Y.—*Carriage-Wheel.*—September 28, 1869.

Claim.—1. A cap and oil-box or chamber on the point of the hub, and screwed to the journal-box, as and for the purpose herein described and represented.

2. In combination with an oil-box or chamber on the end of the hub, and a journal-box, and journal projecting therein, the division-plate in the chamber, and the hole or holes through the journal-box, for directing and passing the oil or other lubricator from the chamber to the journal, as and for the purpose described.

3. Securing the hub or wheel to the axle or journal, by the combined use of the groove and split ring, and the nut or follower bearing against said ring, as and for the purpose described.

95,371.—James O. Morse, Englewood, N. J.—*Screw-Cutting Die.*—September 28, 1869.

Claim.—1. The improved screw-cutting die herein described, consisting essentially of the rim or frame A, solid and in one piece, and thread-cutting dies, abutting against the inner surface of said rim, and held firmly in such position by screws, or other equivalent means, substantially as described.

2. In combination with the rim or frame A, the cutters C, constructed substantially as described, that is, with a body-portion, *a*, by means of which the cutter is fitted to its seat, and a spindle, *b*, and nut *n*, or other equivalent and easily-removable fastening by means of which it is secured in its place upon the frame.

95,372.—Frederick Nishwitz, Brooklyn, N. Y.—*Harvester.*—September 28, 1869.

Claim.—1. The combination of a gear-frame, vibrating on the main axle, a tongue, or draught-frame, vibrating on the gear-frame, finger-beam hinged to the tongue, or draught-frame, and a lifting-lever, connected with the rear end of the tongue by a link, which allows the finger-beam to rise, but limits its descent below a given point, substantially as set forth.

2. The combination of a main frame vibrating on the driving-axle, and a tongue, or draught-frame vibrating on the gear-frame, with a cutting-apparatus hinged to the tongue, or draught-frame, by one end only, substantially as set forth.

3. The combination of a vibrating gear-frame and a vibrating tongue, or draught-frame, with a down-hanger attached to the tongue, and to which the finger-beam is hinged, substantially as set forth.

4. The combination of a gear-frame, vibrating about the main axle, with a tongue, or draught-frame vibrating on an axis coincident with that of one of the down-hangers or coupling-arms to which the finger-beam is pivoted.

5. The arrangement, as set forth, of the vibrating gear-frame, vibrating draught-frame, or tongue, finger-beam hinged to the tongue, and the pitman, arranged nearly in line of the joint of the tongue, to allow the cutting-apparatus to vibrate without injuriously disturbing the relation of the cutters to the guards.

6. The combination of the hinged cutting-apparatus with the vibrating tongue-plate, in the manner described.

7. The combination of a hinged cutting-apparatus, pivoted to down-hangers, vibrating with the tongue, or draught-frame, with a brace secured to the tongue, or draught-frame, and forming the pivot of the hinge, substantially as set forth.

8. The combination, with a hinged finger-beam and tongue, or draught-frame, vibrating in unison, of a thrust-link, and a lever, mounted on the tongue, or draught-frame, substantially as and for the purpose set forth.

9. The combination of the hinged finger-beam with the tilting-lever pivoted on the front coupling-arm, and connected with the shoe by a link, to lift the divider-end of the finger-beam, substantially as set forth.

10. The combination, with the hinged finger-beam, of the tilting-lever, mounted on the tongue, or draught-frame, with the restraining-cord or chain secured to the gear-frame, as set forth.

11. The combination of the pivoted shoe and its link with the tilting-lever and friction-roller, for the purpose specified.

12. The combination, with the shoe to which the finger-beam is fastened, of the supplementary spring-shoe, pivoted concentrically with the supporting-shoe in front, and adjustable at its heel-end, as set forth.

13. The arrangement, as set forth, of the vibrating gear-frame, vibrating tongue, or draught-frame, and hinged finger-beam, with the down-hangers and long shoe.

14. The combination of the gear-frame, tongue, and driver's seat, all vibrating on parallel pivots, with a link connecting the driver's seat and tongue, or draught-frame, substantially as set forth.

95,373.—Frederick Nishwitz, Brooklyn, N. Y.—*Harvester.*—September 28, 1869.

Claim.—1. The combination, with the main frame and removable shafts, of gear-wheels revolving loosely on the shafts, all constructed as described, to permit the gearing to be removed or replaced without removing any portion of the frame.

2. The combination of the spur-wheel on the main axle, the loose spur-gears on the counter-shaft, the loose spur-gears on the shaft *f'*, the bevel-wheel on the same, and the crank-shaft crossing the main axle, all constructed and arranged for joint operation, as set forth.

3. The combination of the shipping-lever, constructed as described, and operated by a foot-lever sliding on the rod which connects the tongue and driver's seat, substantially as set forth.

4. The arrangement on the counter-shaft, as described, of the gear-wheels, the shipping-lever, and the platform-cover.

5. The combination, with the shoe, of the pivoted spring-stop, operating, as described, to prevent the cutter from dropping out when the divider-end of the finger-beam is elevated.

6. The combined foot-board and gear-cover, arranged to vibrate about the counter-shaft, as set forth.

95,374.—G. E. Noyes, Washington, D. C., assignor to himself and E. N. Gray, same place.—*Clay-Tempering Machine.*—September 28, 1869.

Claim.—The construction of the pinion D, substantially as and for the purpose set forth.

95,375.—Henry D. Palmer, Volena Township, Mich.—*Combined Grain-Drill and Land-Roller.*—September 28, 1869; antedated September 22, 1869.

Claim.—In a combined land-roller, grain-drill, seed and plaster sower, the construction and arrangement of the reciprocating bar C, in combination with the spring S, pins 3, 3, 3, and grooved feed-bars *x x x*, as specified.

95,376.—John Pool, Hermon, N. Y.—*Compound for the Cure of Cholera-Morbus.*—September 28, 1869.

Claim.—The compounding of roots of blackberry, golden jewel, buckthorn-brake, crane's-bill, wandering milk-weed, water-nettle, and sumach, with the barks of green ozier and choke-cherry, substantially in the manner as above specified.

95,377.—W. P. Pugh, High Point, N. C.—*Medicated Soap.*—September 28, 1869.

Claim.—The foregoing combination as a whole, and its application, in said combination, to the cure of disease in man or beast, and to the destruction of parasitic insects or vegetables on man or beast.

95,378.—Evander W. Ranny, New York, N. Y.—*Composition for Roofing, Pavements, &c.*—September 28, 1869.

Claim.—The combination of these materials and their use, for the purposes and in the manner substantially as set forth.

95,379.—T. M. Richardson, Stockton, Me.—*Auger.*—September 28, 1869.

Claim.—The method herein described for attaching a removable lip and screw to the body of an auger, consisting of the dovetail-groove and recess *c* in said body, and the dovetail-form of the lip, with the projection therein adapted to said recess, substantially as specified.

95,380.—John Robson, Chicago, Ill.—*Newspaper-File.*—September 28, 1869.

Claim.—The combination and arrangement of the bar A, the rod or bar B, with the pivotal sliding bolt *b*, spring *s*, and fastening *d*, substantially as and for the purposes specified.

95,381.—Edward P. Roche, Bath, Me., assignor of one-half to E. A. Potter, same place.—*Chafing-Iron for Wagons.*—September 28, 1869.

Claim.—A chafing-roller, applied to the body of a vehicle in such a manner as to present its axis of revolution at right angles to the plane of revolution of the wheel at the point of incidence of the two,

when combined with the anti-friction balls *d d*, the spring *f*, and the bar *a*, as and for the purposes herein described.

95,382.—Ferdinand Rochow, New York, N. Y.—*Safety-Valve for Steam-Generators.*—September 28, 1869.

Claim.—1. A valve-box of a safety-valve, having an interior cylinder, A^1, which is, at its upper end, in direct and unobstructed communication with the opening in the valve-seat D^2, and, at its lower end, in permanent free communication with the interior of the boiler only, while the escape-opening, with which its upper end communicates, is also in free and unobstructed communication with the interior of the boiler, when the valve is made to form a piston, closed at its lower end, constructed and arranged substantially as before described.

2. The combination of the annular sleeve E with the cylindrical portion D^1 of the valve, and the inner cylinder A^1 of the valve-box, substantially as before described.

3. The inner cap L, constructed with a left-hand screw-thread, V, and the inclosing-chest P, with a right-hand screw-thread, W, in combination with the forked lever R, whereby the said cap and chest are securely locked together, substantially as before described.

4. The inner inclosing-cap L, constructed with legs *f f*, and an annular screw-ring, L^2, in combination with the lever R, constructed so as to embrace one of the said legs, thus constituting the lock, substantially as before described.

5. The inner cap L, for inclosing the spring G, and the outer chest P, for inclosing said cap, constructed and arranged substantially as before described.

6. The inner cap L, for inclosing the spring G, constructed with a cylindrical hollow guide, *l*, projecting within the spring, so as to form a guide for the spindle K, substantially as before described.

7. The guard *d*, arranged above the bottom of the cap L, and with reference to the exterior of said cap, and the escape-pipe Q, so that, in connection with the cap, a double protection is afforded to the adjusting-devices of the spring, substantially as before described.

8. The construction and arrangement of the chest P, forked lever R, bolt S, eye-splint *i*, and flange M, with the cap L, valve-box A, and valve D, constructed and arranged substantially as before described.

95,383.—Isaac S. Russell, New Market, Md., and Henry R. Russell, Woodbury, N. J.—*Caster-Wheel for Harvesters.*—September 28, 1869.

Claim.—1. The combination and arrangement of the braeket F, having a cam, *a*, with the swinging caster-bar D, substantially as and for the purpose set forth.

2. The bracket F, having cam *a*, and supporting the swinging caster-bar D, in combination with the vibrating axle of the caster-wheel C, substantially as shown and described.

3. The arrangement of the stop or projection *h*, in combination with the vibrating axle of the caster-wheel C, substantially as and for the purpose set forth.

95,384.—Milton Satterlee, Foreston, Ill.—*Wagon-Brake.*—September 28, 1869.

Claim.—1. A "shoe" for wagons, composed of two or more plates, P, Q, &c., joined together, substantially as and for the purposes specified.

2. In connection with a shoe constructed of two or more joined plates, the spur-wheels *n n*, applied in the manner and for the purpose set forth.

3. The combination of hub-brake *e'* with a shoe, G, by means of a curved supporting-arm E, substantially as and for the purposes set forth.

4. The arrangement of the lever L, supports B D D', shaft A, rod or chain F, arm E, and shoe G, when the several parts are constructed and applied in connection with each other, substantially as and for the purposes set forth.

95,385.—Francis Scherb, San Francisco, Cal.—*Spring-Wagon.*—September 28, 1869.

Claim.—1. The reaches C C, in combination with the cross-bars E E and bent wooden jacks D, the whole arranged substantially as herein described.

2. The combination of the split strap-bolt H and shoulder I, for securing the ends and regulating the tension of the thoroughbraces, substantially as described.

95,386.—Henry Selick, Lewistown, Pa.—*Plow.*—September 28, 1869.

Claim.—1. The slots or holes *e e'*, arranged in the rear end of the mold-board and landside of a plow, in the arc of a circle described from the pivoted point *a*, at which the handles are attached, as and for the purpose set forth.

2. The attachment of the handles D to the mold-board and landside of a plow, in the manner and for the purpose specified.

95,387.—Noah Shaw, Eau Claire, Wis.—*Steam-Generator.*—September 28, 1869.

Claim.—1. Passing a continuous current of water through suitable devices, from a steam-boiler under and at the side of the fire, converting it into steam, and returning the steam and water into the boiler, substantially as herein set forth.

2. Passing a continuous current of water through suitable devices from a steam-boiler, between the bridge-wall and said boiler, converting it into steam, and returning the steam and water into the boiler, substantially as herein set forth.

3. Providing the fire-box of a steam-boiler with hollow grate-bars on the bottom and sides, and the space between the bridge-wall and the boiler with a tortuous pipe, all connected with the boiler, substantially as herein set forth.

4. The auxiliary grate-bar *d*, provided with ribs *e e*, constructed substantially as herein set forth.

5. Providing the fire-box B with one tortuous pipe, or several pipes connected together, so as to form the bottom inclined upward from the center toward the sides, and extending up the sides, substantially as herein set forth.

6. The combination of the boiler A with pipes C and D, connecting said boiler with the inclined pipe or pipes running along the bottom and sides of the fire-box B, substantially as herein set forth.

7. One or more tortuous pipes connected together in an inclined position in the space between the bridge-wall and the boiler, substantially as herein set forth.

8. The combination of the boiler A, and the pipes E E connecting said boiler, with the inclined pipe or pipes running back and forth in the space between the bridge-wall and the boiler, substantially as herein set forth.

95,388.—Frederick Shickle, Saint Louis, Mo., assignor to Shickle, Harrison and Company.—*Molding-Pipe.*—September 28, 1869.

Claim.—1. The flask L L', supported vertically upon sliding tables M M', substantially as set forth.

2. Supporting the pattern-frame Q by the center-plate O and spindle P, substantially as set forth.

95,389.—Gerard Sickels, Boston, Mass.—*Counting-Register.*—September 28, 1869.

Claim.—1. The combination and arrangement of springs *i* on plate B, with the notched rings C, substantially as and for the purposes set forth.

2. The segmental annular cams *g*, in combination with rims *f* on plate B, substantially as and for the purpose set forth.

3. The combination and arrangement of springs *m* with rings C and cams *g*, substantially as and for the purpose described.

95,390.—John Siddons, Rochester, N. Y.—*Metallic Roof.*—September 28, 1869.

Claim.—In combination with the ribs B, sheets *a*, and *a'*, and double-locked seam *b*, the fibrous packing *r*, as shown and described, and for the purposes set forth.

95,391.—William S. Spratt, Cincinnati, Ohio.—*Apparatus for Sharpening and Gumming Saws.*—September 28, 1869.

Claim.—1. The swinging frame J, sliding frame

H, and swiveling adjustable frame C, constructed and arranged substantially in the manner and for the purpose described.

2. The combination of the adjustable gauge U with the cutter A, sliding spindle D, and retracting-spring F, substantially as shown and described.

95,392. — W. X. STEVENS, East Brookfield, Mass.—*Vise.*—September 28, 1869.

Claim.—The combination of the vise and shank, substantially as described, for the purposes specified.

95,393.—JOB SWEET, Decatur, Mich.—*Hinge for Gates.*—September 28, 1869.

Claim.—A gate, constructed with a rod-hinge, the lower end of which is made in a spiral form, and operating in a slotted plate, as and for the purpose set forth.

95,394.—HENRY T. TAPLIN, South New Market, N. H.—*Combined Rotary Cultivator and Harrow.*—September 28, 1869.

Claim.—1. The combined cultivator and harrow-teeth M *n'*, constructed substantially as herein shown and described, and for the purpose set forth.

2. The reversible teeth M and adjustable radial arms L, in combination with the revolving-plate *k*, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the teeth M, adjustable arms L, revolving-plate *k*, shafts H and F, gear-wheels E and D, axle B, wheels A, and frame C, with each other, substantially as herein shown and described, and for the purpose set forth.

4. The combination of the detachable circular cutter N *n'* with the shaft H, plate *k*, adjustable arms L, and teeth M, substantially as herein shown and described, and for the purpose set forth.

5. The combination of the bent lever O and lever Q with the shaft H, plate *k*, adjustable arms L, and teeth M, substantially as herein shown and described, and for the purpose set forth.

95,395.—A. L. VARNEY, Watertown, assignor to A. B. ELY, Newton, Mass.—*Breech-Loading Fire-Arm.*—September 28, 1869.

Claim.—1. The construction and arrangement of the parts, substantially as described, by which the breech is opened, the shell extracted, and the hammer cocked by the same operation, substantially as set forth.

2. The swinging breech-block, and opening and closing-rod or lever, constructed, arranged, operated, and operating in combination with and in relation to each other, substantially as described.

3. The breech-block and hammer, constructed and arranged, in relation to and in combination with each other, substantially as described.

4. The breech-block, opening and closing and cocking-rod or lever and hammer, constructed and arranged, in relation to and in combination with each other, substantially as described.

5. The swinging breech-block, opening and closing-rod or lever, and extractor, constructed, arranged, operated, and operating in combination with and in relation to each other, substantially as described.

6. The combination and arrangement of handle, cocking-rod or lever, and hammer, substantially as and for the purposes described.

7. The breech-blocks, constructed, as to their several parts, substantially as described, and arranged and operated substantially as set forth.

8. The hammers, constructed and arranged substantially as described, and manipulated substantially as set forth.

9. The combination of breech-block, firing-pin, opening, cocking, and closing-rod or lever, hammer, handle, and ejector, when the several parts are constructed and arranged substantially as and for the purposes described.

10. The combination of sliding guard, pendent hook or lever, with swinging breech-block, substantially as and for the purposes described.

95,396.—DAVID WEIMER, Gettysburg, Ohio.—*Grinding-Mill.*—September 28, 1869.

Claim.—1. The springs E, and their arrangement, with reference to the spring-head D, spindle C, and pinion H, substantially as and for the purpose described.

2. The spring-adjusting device, composed of the band F, block G, and arranged, in connection with the spring E, substantially as and for the purpose described.

95,397.—WILLIAM N. WHITELY, Springfield, Ohio.—*Harvester-Dropper.*—September 28, 1869.

Claim.—1. The independent hinged dropper-slats G G, substantially as and for the purpose set forth.

2. The plate E, hinged to the finger-bar B, and provided with lugs C C, in combination with the independent dropper-slats G G, for the purpose of raising said slats simultaneously, and supporting them, as set forth and described.

3. The shield-plate K, to cover the joint between the finger-bar and dropper, as set forth.

4. In combination with the sliding head T and reel-shaft box P, the L-hook screw-rod S, as and for the purpose set forth.

95,398.—WILLIAM WILLHIDE, Fetterman, West Va.—*Tire-Bender.*—September 28, 1869.

Claim.—The combination and arrangement of the levers C G, having the cams and pins, with the supporting-frame A B, when the several parts are constructed to operate together, substantially as and for the purposes specified.

95,399.—SAMUEL H. WILLIAMS, Baltimore, Md.—*Coal-Stove.*—September 28, 1869.

Claim.—1. The combination of the coal-chamber F, elliptical case or body B, and base A, all constructed and arranged to operate substantially as and for the purpose set forth.

2. The base A, when constructed with the upright flanges D and plate K K', to form an ash-pit and flues, for directing the draught to the flue L, when the damper H' is closed, substantially as shown and described.

95,400.—L. R. WITHERELL, Galesburgh, Ill., assignor to himself and CHARLES F. CALKINS, same place. — *Dish-Washing Machine.* — September 28, 1869.

Claim.—The stationary rack L, constructed as described, in combination with box A, wings X X'', spout W, crank T, and frame H, I, and K, when arranged to operate, as herein described, for the purpose specified.

95,401.—TRAVIS P. YORK, Terre Haute, Ind.—*Churn-Dasher.*—September 28, 1869.

Claim.—The combination of the metallic conical-shaped open plate C with the solid metallic inverted dished-shaped plate B, placed directly on the open space of the top of the plate C, by means of the three standards D D, all arranged substantially as shown and described.

95,402. — EDWARD WILLIAM YOUNG, New Street, Spring Gardens, Great Britain.—*Bridge.*—September 28, 1869; patented in England, February 19, 1868.

Claim.—A bridge having two cantilever portions, and an intermediate suspended portion, all constructed substantially as described.

95,403. — JAMES GOULD, Lexington, Mass. — *Paint-Compound.*—September 28, 1869.

Claim.—The improved composite material, compounded of ingredients and under the process hereinbefore set forth and explained.

95,404.—Canceled.

95,405.—ROBERT A. ADAMS, New York, N. Y. —*Composition for Making Types for Printing Wall-Paper, Oil-Cloth, and other Fabrics.*—October 5, 1869

Claim.—1. The employment of flock as an element in a composition for printing surfaces, in the manner and for the purpose herein set forth.

2. The employment of gum-camphor in a composition for printing surfaces, in the manner and for the purposes herein set forth.

3. The compound for printing surfaces, composed of flock, camphor, shellac, alcohol, and benzoin, in

about the proportions, and applied substantially in the manner herein described.

4. The employment of fine cork, in combination with gummy material, for a composition for printing surfaces, as herein set forth.

95,406.—W. A. ALLEN, Baltimore, Md.—*Sawing-Machine.*—October 5, 1869.

Claim.—1. In a sawing-machine having the table B, carriers C C, and knees K K, in connection with a set of saws F F^1, arranged in two converging lines, the dividing-saw F^2, arranged at the open end of the triangle formed by the two converging lines, substantially as and for the purpose specified.

2. In a sawing-machine having the table B, carriers C C, and knees K K, the arrangement of the saws F F^1, in two converging lines, with no two saws laterally opposite to each other, but each saw on one side of the table so disposed that it will cut into the log just after or just before a saw on the opposite side of the table, substantially as and for the purposes set forth.

3. In a sawing-machine having the table B, carriers C C, and knees K K, the arrangement of the saws in two converging lines, each pair of saws being obliquely disposed, as hereinabove set forth, together with the single saw F^2 at the open end of the converging lines, being the precise arrangement shown in Fig. 2, substantially as and for the purpose described.

95,407.—JOSEPH AMBROSE, Nashville, Tenn.—*Medical Compound or Cordial.*—October 5, 1869.

Claim.—The manufacture or preparation of a compound, which I denominate as Ambrose Cordial, of the ingredients, in the proportions, and for the purposes set forth.

95,408.—ISAAC ANDERSON, Poland, Ohio.—*Hay-Loader.*—October 5, 1869.

Claim.—The wheel G and trip H, as arranged, in combination with yoke M, block B, and block I, substantially as and for the purpose set forth.

95,409.—E. F. ANGELL, Chicago, Ill.—*Binding-Guide for Sewing-Machine.*—October 5, 1869.

Claim.—The bar G, recessed in plate B, the bar E, the plate I J, fastened to the bed-plate, projecting upward, and serving as a guide for the plate A, the plates A B, and the screw-bolt H, and nuts R S, for operating the binding-guides D D′, and loops C C, when all are constructed and arranged as described.

95,410.—HARRISON W. AUSTIN and EDWIN C. PERRY, Portage Township; EDWIN C. PERRY, assignor to GUY T. NASH, Kalamazoo, Mich.—*Hames-Fastener.*—October 5, 1869.

Claim.—The bar C, provided with the ridge *m*, when so arranged as to shut into the slotted bar B, and, in connection with the latter, to swing its inner end through the bar A, and, moving inside the line of draught, thus make itself self-locking, the whole being constructed and arranged as described.

95,411.—AUGUSTINE BALDWIN, New York, N. Y.—*Cotton-Press.*—October 5, 1869; antedated September 22, 1869.

Claim.—1. The external rods E E, when provided with the toggle-joint *y y*, or its equivalent, the slot, connected with the lower platen B, for the purpose of securing the co-operation of said lower platen toward the conclusion of the operation of compression, substantially as set forth.

2. The combination of the jointed or slotted rod E E with an upright shaft, having a removable threaded collar, and with segments, having removable threaded faces, encircling said threaded collar, the whole being constructed substantially as and for the purposes specified.

3. The halves or V-shaped groove and tenon, for the purpose of guiding the segments in the line of the threaded shaft, substantially as above set forth.

95,412.—ARTHUR BARBARIN, New Orleans, La.—*Apparatus for Carbureting Air and Gas.*—October 5, 1869.

Claim.—1. The rod R, when constructed, arranged, and operating substantially as herein described, for the purposes set forth.

2. The pipes H and T, in combination with each other, and with a receiver, A, and a tank, B, and a carbureter, K, that is enveloped by a vessel, S, when the parts are constructed, arranged, and operate substantially as herein described, for the purpose set forth.

3. The above combination, in combination with the rod R and its indicating-appliances, substantially as and for the purpose set forth.

95,413.—SOLOMON BARBER, South Coventry, Conn.—*Device for Steaming Rovings.*—October 5, 1869.

Claim.—The reservoir C and damper D, combined with the inclined roofed chamber E through which the roving passes, the roof deflecting the steam on the roving, substantially as described.

95,414.—WESLEY C. BARR and EDGAR J. HUNKINS, Macon City, Mo.; said HUNKINS assignor to said BARR for his right.—*Band-Cutter.*—October 5, 1869; antedated September 22, 1869.

Claim.—1. The combination, in a band-cutting machine, of the carrier D and elliptical cutting-disks G, one or more, arranged across and over the carrier, substantially as described, with the vibrating tines *n n n n′*, arranged to operate as described, and the accessory belts and pulleys for driving the same, all as set forth.

2. The combination, in a band-cutting machine, of the inclined chute E, having sloping sides *c c*, substantially as described, with the carrier D and cutting-disks G, all as set forth.

3. Vibrating tines *n n n n′*, arranged to operate substantially as described, in combination with the carrier D of a band-cutting machine.

4. The combination of the frame A, side-boards C, carrier D, and cutting-disks G, either plane or helical, when operating together, substantially as described.

5. The adjustable bearing-plates *f*, substantially as described, for adjusting the height of the cutting-disks over the carrier D, all as set forth.

6. A band-cutting machine, constructed and operating substantially as shown and described, and for the purpose set forth.

95,415.—BRUNSON B. BEERS and NATHAN COUCH, New Fairfield, Conn.—*Washing-Machine.*—October 5, 1869.

Claim.—The combination and arrangement of the standards B B, rollers C, H, and I, yokes G G, side and cam E, working between the rollers F F, all substantially as described for the purpose set forth.

95,416.—JOHN BERKELEY, Washington, Texas.—*Hay and Cotton Press.*—October 5, 1869.

Claim.—1. The combination of the sweep-shaft N, drum N^1, shaft O, spirally-grooved drum O^2, and follower, when arranged substantially as specified.

2. The arrangement of the spirally-grooved drum O^2, shaft O, and guide R, all substantially as specified.

3. The arrangement of the sweep N, loose drum N^1, button N^2, withdrawing-cord Q, and follower M, all as specified.

95,417.—ALBERT BETTELEY, Boston, Mass.—*Shaft-Coupling for Carriages.*—October 5, 1869.

Claim.—Shaft-connections for vehicles, made with spherical pieces, to be fixed to the shafts, and split screw-threaded bolts, provided with open spherical jaws, made capable of pinching said spherical pieces, by means of nuts, substantially as described.

95,418.—JOHN G. BORDEN, Brewster Station, N. Y.—*Machine for Soldering Tin Cans.*—October 5, 1869.

Claim.—1. In combination with the heating-stove A and the reservoir B, the pivoted soldering-iron C and rod D, all arranged and operating substantially as described.

2. The bent levers H, grooved collar *p*, or its equivalent, the collar *m*, the rod *o*, and the collar *r*, combined, arranged, and operating substantially as described.

3. In combination with the mechanism described,

for holding and revolving the can or other article to be soldered, the soldering-iron C, whereby solder is melted on the inside of the can, substantially as described.

95,419.—Edward Brady, Philadelphia, Pa.—*Purifying Iron and Steel, or other Metal.*—October 5, 1869.

Claim.—Mixing the sulphates of the alkalies or alkaline earths, &c., and calcium, in the form of lime, or other available form, with melted iron, or any other metal or mineral, whereby the impurities of sulphur, silicon, phosphorus, &c., are set free, substantially as above described and set forth.

95,420.—J. H. Britton, Painesville, Ohio.—*Rim-Press and Tire-Heater.*—October 5, 1869.

Claim.—A combined heating and expanding apparatus, consisting of the former A, cap B, campins C, clamps E, slots F and G, furnace H, or its equivalent, and pins I, all constructed as described, and for the purpose set forth.

95,421.—Aaron Brower, Rochester, N. Y., assignor to himself and C. S. Hall, same place.—*Table-Slide.*—October 5, 1869; antedated September 18, 1869.

Claim.—An extension-slide, A, when provided with the groove B and roller C, when constructed with or without a flange, as and for the purpose set forth.

95,422.—Isaac W. Burch, Fayette, Miss.—*Cotton-Thinning Machine.*—October 5, 1869.

Claim.—1. The combination, with the frame A, axle and wheels C, of the vibrating frame H, rotary shaft G, operated as described, and the disk L, either arranged for the application of rotary cutters N′, or vibrating cutters, all substantially as specified.

2. The combination, with the frame E and shaft G, of the block or frame F, posts E′, bar N, arm O, cutter-stock and guiding-block M, all substantially as specified.

3. The combination, with the arm O, disk L, and grooved block M, of the cutter-stock and cutters, substantially as specified.

95,423.—Duncan Campbell, Indian Town, Ill.—*Thrashing-Machine.*—October 5, 1869.

Claim.—1. The hinged or pivoted gatherer E, when provided with a revolving apron, G, and operating independently of the thrashing-cylinder or straw-carrier, substantially as specified.

2. The platform P, in combination with a thrashing-machine, substantially as and for the purposes described.

3. The arms *j* and lever L, when secured to a shaft, and arranged and operating substantially as specified.

4. The fingers I and rod *m*, in combination with the lever H or weight *w*, for depositing the straw in heaps, as described.

95,424.—Frederick Catlin, New York, N. Y.—*Safety-Pin for Securing Clothing.*—October 5, 1869.

Claim.—1. The tubular back A, studs B B′, spring *k*, spring-bolt *h*, slotted tube D, slotted knob E, and pin C, combined and operating substantially as described, for the purposes set forth.

2. In combination with the above, the pin L, substantially as herein described, for the purpose specified.

95,425.—H. Champenois, New York, N. Y.—*Dyers' Vat.*—October 5, 1869.

Claim.—The new article of manufacture, of a dyers' vat, made substantially as herein specified; that is to say, the combination, with the interior surface of the body of a dyers' vat, made of plastic earth, of an incorrodible coating or enamel, substantially as herein specified.

95,426.—S. N. Chapin, New Britain, Conn.—*Attachment for Window-Sash Cords.*—October 5, 1869.

Claim.—The button A of the bars *a a* and *a′*, of malleable metal, arranged so that the bar *a′* may be forced down upon the cord, to retain it, without the use of a knot, substantially as and for the purpose set forth.

95,427.—Daniel S. Chapman, Conneaut, Ohio—*Stump-Extractor.*—October 5, 1869.

Claim.—1. The perpendicular lever A and yoke B, in combination with stump-chain C and guy-chain D, substantially as and for the purpose set forth.

2. The perpendicular lever A, as described, with yoke B, handles E, staples *e e′*, or their equivalent, in combination with stump-chain C, guy-chain D, and anchor-chains F F′, purchase-blocks and tackle *a a′ a″*, luff-blocks and tackle *b b′ b″*, and running-block and tackle *c c′*, substantially as and for the purpose described.

3. The construction and operation of the apparatus as a whole, in the manner and for the purpose herein specified.

95,428.—A. J. Chase, Boston, Mass., assignor to B. F. Horn, same place.—*Refrigerator.*—October 5, 1869.

Claim.—An "air-tight" refrigerator, so called, composed of the two chambers *f g*, separated by the partition *b*, and communicating with each other through the cold-air aperture *h*, and the conduit *e* for the ascent of the warm air, the latter passing up through the non-conducting material which forms the walls of the refrigerator, and the whole being arranged for joint operation, as herein shown and described.

95,429.—Benjamin F. Clement, Saint Louis, Mo., assignor to Charles H. Buck and Wiley S. Wright, same place.—*Cooking-Stove.*—October 5, 1869.

Claim.—The combination of a hollow perforated bridge, E, with the two passages, *a* and *b*, arranged, with respect to the oven G, fire-chamber B, and ash-pit A, substantially as and for the purposes described.

95,430.—J. Clendening, Rockford, Ill.—*Hames-Fastener.*—October 5, 1869.

Claim.—A hames-fastening, composed of the parts A, B, and C, when the parts A and C are secured to the hames, as herein described, and the latch-lever B is hinged to the piece A, and provided with the adjusting-hooks *a′ a″ a‴*, the whole constructed and operating substantially as and for the purpose set forth.

95,431.—Michael Connelly, Baltimore, Md., assignor to himself and Henry W. Rogers, same place.—*Railway-Car Coupling.*—October 5, 1869.

Claim.—1. In combination with the two pawls C D, the lever L, having the double cam-head G G′, the latter being arranged to operate directly upon the pawls, substantially as and for the purpose described.

2. In combination with the lower pawl D, having the spur *s*, the weighted and slotted plate W, pivoted at *w*, when the several parts referred to are constructed to operate in connection with each other, substantially as and for the purposes set forth.

95,432.—David J. Cooper, New Orleans, La.—*Hernia-Truss.*—October 5, 1869.

Claim.—1. A continuous spring of a hernia-truss, having its ends crossed and locked by a fastening, in such manner as to prevent pivotal motion of the joint, and readily admit of the separation of the parts, while at the same time maintaining the pads at equal and uniform distances apart, substantially as before described.

2. The enlarged opening *b* in the overlapping end of the spring A, in combination with the locking-pin *c* and pivoted spring-toothed locking-arm C, substantially as before described.

95,433.—David J. Cooper, New Orleans, La.—*Truss and Supporter.*—October 5, 1869.

Claim.—1. A ventilated supporting and protecting strap arranged beneath the spring of a truss, substantially as before described.

2. Making the connections between the ventilated supporting-band and abdominal supporter, by

means of the compound connections G and H, substantially as before described.

3. The combination of a continuous spring-truss, the ventilated supporting and protecting strap E, the perforated abdominal supporter F, with the compound connecting-straps G H and the inelastic strap K, substantially as before described.

95,434.—William Cottrell, Bordentown, N. J., assignor to himself and Frederick G. Wiese, same place. — *Railway-Car Coupling.* — October 5, 1869

Claim.—As an improvement upon ear-couplings, the recessed draw-head A and spring E, in combination with the spring-slide F, all operating together to drop the pin and retain the link in a horizontal position, in the manner shown and described.

95,435.—George N. Creamer, Trenton, N. J.—*Lathing-Machine.*—October 5, 1869.

Claim.—1. The combination, with the frame, of the clamping-dogs H H, operating as set forth.

2. The combination of the parallel sliding bars with pins to clamp the edges of the lath, as set forth.

3. The combination, with the frame, of the sliding bars A B, levers C, and link-rod D, and its spring, the combination being and operating substantially as set forth.

4. The combination of the laterally-adjustable frame and adjustable bridge with the grasping-hooks and their lever mounted on the bridge, as set forth.

5. An adjustable clamping and holding frame for applying laths to the joists or studding of buildings, substantially as described.

6. The combination, with the clamping and holding-frame, of the guides for adjusting the parallel bars, substantially as and for the purpose described.

95,436.—L. H. Critchfield, Shreeve, Ohio.—*Bee-Hive.*—October 5, 1869.

Claim.—1. Two or more hives, A A, united by means of hinges and hooks, and provided with removable partitions B′ B′, and sash K, substantially as and for the purpose set forth.

2. The combination of the inclined bottoms D D, with two or more hinged hives, A A, provided with removable partitions and sashes, substantially as and for the purpose set forth.

95,437.—H. N. Dalton, Pacheco, Cal.—*Spring for Gang-Plows.*—October 5, 1869.

Claim. — The combination of a coiled or other spring with the axle and frame of a gang-plow, substantially as herein shown and described, and for the purpose set forth.

95,438. — Asa B. Davis, Pleasantville, Pa. — *Wrench.*—October 5, 1869.

Claim.—The lower jaw B, limb G, hinge E, and spring F, in combination with the hinged jaw A and the handle K, constructed substantially as above set forth.

95,439. — Winfield Denton, Iowa City, Iowa.—*Hay-Derrick.*—October 5, 1869.

Claim.—1. In combination with the base A and standard B, the beam E, rod G, pulleys J and K, and rope M, whereby, by means of the hoisting-rope H and rod G, the derrick is made self-supporting and self-adjusting, substantially as and for the purposes described.

2. In combination with the hay-derrick, constructed as described, the hoisting-rope, the guide-rope M, and the arrangement of the self-adjusting pulleys J and K, substantially as described.

95,440. — Joseph Diffendal and Samuel Hughes, Westminster, Md.—*Horse-Power.*—October 5, 1869.

Claim.—1. The arrangement, in the horse-power frame herein described, of the wheels H C, and the short hollow shaft *a* and solid shaft B, with relation to each other, as shown, whereby they are adapted to rotate together in the same direction, for the purpose specified.

2. The described arrangement of the wheels C H, hub G, pinions E E, and spur-wheels F F, whereby the journals of the latter have an even bearing, as and for the purpose specified.

3. In combination with the frame A of the construction shown, the short tubular shaft *a*, solid shaft B, large spur-wheel C, large bevel-gear wheel B and its hub G, the large spur-wheels F F, and pinions E E, all constructed, arranged, and operating together, as herein described.

95,441. — Joseph Dill and Edward Rice, Grand Rapids, Mich. — *Method of Forming Moldings.*—October 5, 1869.

Claim.—As a new article of manufacture, straight moldings for picture and other frames, &c., formed of two or more strips, in the manner and for the purposes hereinbefore set forth.

95,442.—David Dryburgh, Philadelphia, Pa.—*Band for Booms and Gaffs.*—October 5, 1869; antedated September 20, 1869.

Claim.—The combination and arrangement of the parts A and B, saddle D, provided with lugs *l* and *l′*, keys *k* and *k′*, and clew C, so as to operate substantially in the manner and for the purpose set forth.

95,443.—P. J. Dwyer, Elizabethport, N. J.—*Railroad-Spike.*—October 5, 1869.

Claim.—The railroad-spike, constructed as described with the extended head A B C, having the ledges G, and the short, inflexible stud E, formed upon the underside, in such a manner as to enter the wood at some distance from the shank D, whereby two separate openings are made in the wood, as herein described for the purpose specified.

95,444. — James William Ebert and Eli C. McCloy, Zanesville, Ohio.—*Boiler-Feeder Alarm-Device.*—October 5, 1869.

Claim.—1. The combination of the balanced valves C C, water-supply pipe *b f*, floats, and float-lever, substantially as specified.

2. The combination of the balanced valves C C, water-supply pipe *b f*, valves C′ C′, steam-pipe and floats, and float-lever, substantially as specified.

3. The arrangement of the link N, screw-rod M, screwed extension E′ of the lower valve C, and rod H′, all substantially as specified.

4. The arrangement of the extension M′ or the steam-chest L′, cap K′, and rod H′, all substantially as specified.

95,445.—Albert Eckstein, Vienna, Austria, assignor to "Zdenks Ritter Von Wessely," same place.—*Apparatus for Evaporating and Decomposing Liquids.*—October 5, 1869.

Claim.—An apparatus for evaporating and concentrating liquids of the means described, substantially as and for the purpose herein shown.

95,446.—Lloyd W. Emmart and Edward D. Griffith, Washington City, D. C.—*Turn-Table.*—October 5, 1869.

Claim.—1. The combination, as described, of the hinged locking-lever, and its hinged support, both revolving with the table, for the purpose set forth.

2. The combination, substantially as described, of a locking-lever revolving with the turn-table, a hinged support attached to the lever, a fixed tripping-block, and a locking-catch, whereby the table is automatically locked by its own revolution, and securely held from moving in either direction when the rails are in line with the track.

95,447.—Charles J. Emmett, New York, N. Y.—*Baling-Press.*—October 5, 1869.

Claim.—1. The end screws D^1 D^2, and the overhanging parts B^1 B^2 on the follower B, arranged to operate relatively to each other and the casing or framing A, and to the ratchets d^1 d^2 and operating-means N^1 N^2, substantially in the manner and for the purposes herein set forth.

2. The long lever M, connections m^1 m^2, sub-levers N^1 N^2, changeable pawls n^1 n^2, and ratchets d^1 d^2, arranged as represented, in combination with the screws D^1 D^2, and the movable follower B, having the overhanging parts B^1 B^2, and press-framing A.

3. The means represented for moving the follower and its connections out of the way; that is to say

the screws D^1 D^2, to turn on their lower ends and assume an inclined position, substantially as herein set forth and described.

95,448.—WILLIAM EPPELSHEIMER, San Francisco, Cal., assignor to himself and EDWARD A. TRAPP, same place.—*Hoisting-Machine.*—October 5, 1869.

Claim.—The system of gearing, as shown, in combination with the brakes and brake-wheels, and the shafts and levers connected therewith, for the purpose of operating a hoisting-reel.

95,449.—CHARLES L. ERICZON, Salt Lake, Utah Territory.—*Snow-Plow.*—October 5, 1869.

Claim.—The snow-plow above described, consisting substantially of the inclined plane A^4, plow B, dumping-platform a^3, with their attachments, vertical cutters b^2, wings b^3, connecting-rod C, cord *c*, and pulleys c^2, shaft D, and pulleys c^1 c^3, arranged and operated substantially as described, and for the purpose set forth.

95,450.—MORGAN Z. EVANS, Ormsby, Pa.—*Fixing Puddling and Boiling Furnaces.* — October 5, 1869; antedated October 1, 1869.

Claim.—In combination with a puddling or boiling furnace, the curved plates A A, substantially as and for the purposes herein shown and described.

95,451.—NEWTON FARLOW and JOHN A. HAM, Sullivan, Ill.—*Hay-Raker and Loader.*—October 5, 1869.

Claim. — 1. The combination of the gathering-rake D, guards O, revolving rakes P, and discharger S, when all arranged substantially as specified.

2. The arrangement of the rake D, runners E, rollers H, arm N, connecting-rod M, lever K, and chains G, all substantially as specified.

3. The discharging-teeth S, hinged to the platform, and provided with the yielding rollers U, and combined with the finger P, substantially as specified.

4. The gravitating-dogs Q, pivoted to the wheels, and arranged for action upon the studs R in the axle, substantially as specified.

95,452. — RUBIN FINK and REUBEN DAVELER, Lancaster, Pa.—*Device for Supporting the Shafts of Vehicles.*—October 5, 1869.

Claim.—The combination and arrangement of the elbowed lever L E, fulcra A B, springs S, and rod *l*, when attached to the shafts of vehicles, substantially in the manner and for the purpose specified.

95,453.—SAMUEL FISHER, Hightstown, N. J.—*Wheeled Cultivator and Plow.*—October 5, 1869.

Claim.—In combination with a main axle, a pair of carrying-wheels, and a main frame that can be widened or narrowed, and adjustable beams and plows thereon, the hub, pulley, lever, and chain, and their appliances, for raising or lowering, or holding the plows or cultivators on the main frame or axle, substantially as described.

95,454.—CHARLES FORSCHNER, New York, N. Y.—*Sausage-Stuffer.*—October 5, 1869.

Claim.—The arrangement and combination of the frame D with the cylinder A, by means of its bolt *a* and catch *w*, in combination with the projection *m*, on the cylinder, substantially as and for the purpose hereinbefore set forth.

95,455.—HENRY FOULKES, Utica, N. Y.—*Toy-Top.*—October 5, 1869.

Claim.—A toy-top, with a hook, A″, or pin F F, on its upper surface, also the ring B″, or the loops G G on the operating-string, said hook and ring or loops and pin to be so arranged that when the top is set whirling, and placed on the floor, said ring or loops will be thrown off by their centrifugal force, and thus leave the top to revolve freely, the whole to be constructed and operated substantially as described.

95,456. — JIM B. FULLER, Norwich, Conn. — *Bearing for Spindles in Spinning-Machines.*—October 5, 1869; antedated September 16, 1869.

Claim.—1. The combination, with the tube *b* and step-bearing *f*, serving as an upper and lower bearing for the spindle, of the case *c*, when constructed and arranged substantially as and for the purpose specified.

2. In combination with the above, the whirr *d*, having its lower side made to conform to the top of the case, as and for the purpose set forth.

95,457.—JOSEPH W. GARDNER, Shelburne Falls, Mass., assignor to "LAMSON AND GOODNOW MANUFACTURING COMPANY," same place. — *Attaching Handles to Cutlery.*—October 5, 1869.

Claim.—Holding or uniting handles to cutlery, by extending one of the bolsters to and around the rear of said handle, as and for the purposes herein described and represented.

95,458.—DAVID L. GARVER, Hart Township Mich.—*Harrow.*—October 5, 1869.

Claim.—The circular-shaped harrow-tooth *d*, constructed and used in the manner and for the purpose herein specified.

95,459.—WILLIAM GIBSON, Cambridge, Mass.—*Manufacture of Coal-Gas.*—October 5, 1869.

Claim.—A gas-apparatus, in which dip-pipes are dispensed with, and the retorts operated, without pressure, by the introduction of one or more valves, or cut-offs, at any convenient point between the gas-producing material in the retort and the liquid contents of the hydraulic main, substantially in the manner and for the purposes set forth.

95,460.—EDWARD L. GILMAN, Somerville, Mass., assignor to himself and F. HOUGHTON, same place.—*Lamp-Burner.*—October 5, 1869.

Claim.—The combination of the deflector D, having openings *d′*, the bonnets E, and perforated plate C, with the wick-tube A and opening *b′* in the base B, all constructed and arranged as herein shown and described, for the purpose specified.

95,461. — BARTHOLOMEW GOMMENGINGER and CHARLES W. TROTTER, Rochester, N. Y.—*Hot-Air Furnace.*—October 5, 1869.

Claim.—The double bottom *a a*, space or flue *d*, communicating with perforated flue *c c c* by two perpendicular air-chambers *f f*, in the manner and for the purpose herein specified and set forth.

95,462.—JOHN GOOD, Brooklyn, E. D., N. Y.—*Machine for Drawing Flax, &c.*—October 5, 1869.

Claim.—The combination of the two or more endless belts of combing or heckling pins, arranged one before the other, and running at different velocities with the mechanism, substantially as herein described, for presenting their operating-points in or nearly in a plane, substantially as herein specified.

95,463.—E. A. GOODES, Philadelphia, Pa., assignor to the PHILADELPHIA PATENT AND NOVELTY COMPANY, same place. — *Knife-Guard.*—October 5, 1869.

Claim.—The wire guard A C D E, constructed as described, whereby it may be adjusted laterally from the knife B, as herein shown, for the purpose specified.

95,464.—S. A. GOODWIN, Buffalo, N. Y.—*Wash-Boiler.*—October 5, 1869.

Claim.—A corrugated false bottom, in combination with a wash-boiler, substantially as and for the purposes set forth.

95,465. — CHARLES GRAEB, Frankfort on the Main, and CHARLES LIEBERMANN, Berlin, Prussia. —*Process of Preparing Alizarine.*—October 5, 1869.

Claim.—The within-described process for the production of alizarine, by first preparing bibromanthrakinon or bichloranthrakinon, and then converting these substances into alizarine, substantially as above set forth.

95,466.—SIMON P. GRAHAM, Columbus, Ohio.—*Carriage-Seat.*—October 5, 1869.

Claim.—1. The carriage-seat herein described, as an article of manufacture, composed of the metal back and sides F, bottom E, handle and angle-iron

G, flange H, and fillet I, all constructed in the manner substantially as described.

2. The fillet I, in combination with the rim H of the seat-back, substantially as and for the purpose specified.

3. The combined handle and double-corner iron G, constructed with or without a groove, *e*, as and for the purpose set forth.

95,467.—P. S. GRAVES and P. B. PARCELL, Ashmore, Ill.—*Harrow.*—October 5, 1869.

Claim.—The combination of a triangular frame, A, and two converging continuous rods, D, with a series of pivoted shifting-lever teeth, arranged at any angle thereto, as shown and described.

95,468.—JOHN TYNDALE GREENFIELD, Dover, England.—*Cleaning-Brush for Ordnance.*—October 5, 1869.

Claim.—A cylindrical brush for cleaning ordnance-bores, in which the bristles are set helically into a central support, with a uniform inclination, not only slightly rearward, but also inclined to the axis of the central support, substantially as herein set forth.

95,469.—LOUIS H. GUNNERMAN, Pittsburgh, Pa., assignor to himself and WILLIAM G. HOOVER, same place.—*Ruffling Attachment for Sewing-Machines.*—October 5, 1869.

Claim.—The two plates A B, the former having slots *b b*, *e e*, *d*, and needle-notches *f f* therein, and the latter upwardly-projecting lugs *a a c* thereon, when the said plates are constructed and arranged, with respect to each other, and operated as and for the purpose specified.

95,470.—M. E. HALL, Spring, Pa.—*Shoe-Knife.*—October 5, 1869.

Claim.—The triangular slot H in head B, in combination with knife E and arc C, substantially as and for the purpose described.

95,471.—DAVID HARRISON, Fayette, Miss.—*Railway.*—October 5, 1869.

Claim.—1. The combination of the raised rails I, grooved longitudinally upon their lower sides, with the ordinary track of the railroad, substantially as herein shown and described, and for the purpose set forth.

2. The wheels F, attached to the engine or cars, when used in connection with the rails I, substantially as herein shown, and for the purposes set forth.

3. The combination of the toothed rails J, with the rails I, grooved longitudinally upon their lower sides, and with the ordinary track B of a railroad, substantially as herein shown and described, and for the purpose set forth.

4. The toothed wheels K, attached to the engine or cars, when used in connection with the toothed rails J, grooved rails I, wheels F, and the ordinary track of the railroad, substantially as herein shown and described, and for the purpose set forth.

5. The wires L and levers M, arranged and operating in connection with the wheels F, grooved rails I, and the ordinary track of the railroad, substantially as herein described and set forth.

95,472.—DANIEL FRANKLIN HAWKES, Timbuctoo, Cal.—*Apparatus for Separating Gold from Sand.*—October 5, 1869.

Claim.—1. The tank B, with the adjustable sliding gate C, having its lower edge rounded or beveled, and standing beneath the surface of the mercury, the whole constructed and arranged substantially as herein described.

2. In combination with the quicksilver-tank B, and the beveled adjustable gate C, the curved adjustable discharge-pipe F, for regulating and maintaining the height of the mercury, substantially as described.

95,473.—THEODORE W. HEINEMANN, New York, N. Y.—*Process of Seasoning Wood.*—October 5, 1869.

Claim.—Extracting the sap from the green timber, and then submitting it to the usual and natural drying-process, as described.

95,474.—THEO. W. HEINEMANN, New York, N. Y.—*Process and Apparatus for Preserving Wood.*—October 5, 1869.

Claim.—1. Exhausting the sap from the wood within a suitable tank, and then warming the wood and opening the pores by the application of steam and steam-heat, substantially as described.

2. Then exhausting the steam, (while the heat is maintained,) and supplying the melted rosin from an auxiliary chamber to the sap-exhausted and heated wood, substantially as described.

3. As new, the employment, in the apparatus, in connection with a suitable steam-supplier, of a series of jacketed tanks or chambers, so connected and provided with the means for exhausting each, that the sap-exhausting, wood-heating, rosin-melting, and the saturating operations, may be successively carried on, in the manner substantially as hereinbefore explained.

95,475.—ALEXANDER W. HENDRICK, Batavia Ill.—*Press for Making Coffin-Tops.*—October 5, 1869.

Claim.—The within-described press, for making coffin-lids, consisting of the frame A, the horizontal pieces E, the T-shaped bolts E′, the vise-jaws F, the screws G, and the former-boards H and K, all constructed and arranged substantially as shown, and for the purpose specified.

95,476.—EDMUND H. HEWINS, Boston, Mass.—*Valve-Device for Steam and other Enginery.*—October 5, 1869.

Claim.—1. The two valves *j* and *g*, with their respective openings, ingress and egress passages pertaining thereto, with the co-ordinate elements thereof, constructed, combined, and arranged substantially as above made known.

2. The combination and arrangement of the two valves *j* and *g*, when combined with suitable ports of entry and discharge for steam or other fluid, and with a proper actuating-mechanism, substantially as explained.

3. The duplex arrangement of the valves *j* and *g*, and the ports *l l′*, and passages *d d′*, and ports *h h′*.

4. The valves *j* and *g*, as suspended from a point above the apex of the former, as represented, by which means one or both are retained upon the port closed by them until the roller *r* has passed over and beyond such apex, when the valve is suddenly shifted, the quantity of fluid which escapes in the interim being very slight, and of practically like amount under all conditions.

5. In combination with the above-described arrangement of valves and ports, a spring for effecting the reciprocations of the two valves *j* and *g*, for the purpose explained.

95,477.—WILLIAM HINMAN, Elkhart, Ind.—*Milk and Provision Safe.*—October 5, 1869.

Claim.—The sliding doors A, provided with the guard-arms E, in combination with the standard, having elastic packing F, all constructed and arranged to operate as herein described, for the purpose specified.

95,478.—JOHN C. HINTZ, Cincinnati, Ohio.—*Cigar-Machine.*—October 5, 1869.

Claim.—1. The combination of the forming-roller O, O′, O″, with band N and the platform K, all constructed and operating as shown and described, for the purpose set forth.

2. Operating the feeding-belt *b″*, by means of the friction-lever B‴, hinged to the swinging arm *b*, in combination with the pulley *b′*, spring *b⁗*, and *b‴*, all arranged as shown and described.

3. Alternately loosening and tightening the band N, by the combined operation of the crank-arm *a*, roller *a‴*, spring *a″*, and pin *x*, as and for the purposes specified.

4. Reciprocating the platform K, by means of the cam C, lever J′, arms J″ and J‴, and stop *j*, all combined as and for the purposes set forth.

5. The combination of the presser *i* i with the knife R, when operated as set forth, for the purposes described.

6. The combination of the gate *i* iii, carrying the crib Q′ with the slide *i* iiii, carrying the cover *i i′*, when operated as and for the purposes set forth.

7. The arrangement of the several gates or frames carrying the presser-bar, knife, crib, and its cover, with their operating-cams, levers, and springs, as shown, for the purposes described.

8. The crib Q′, operating by means of the pinion Q and the rack Q″, as and for the purposes set forth.

9. The crib Q′, in combination with the detached cover *i i′*, constructed as described, for the purposes stated.

10. Operating the hinged cover *i i′*, by means of the slide *i* iii, cam-shaped lever *k*, pin *k″*, and spring *k′*, as and for the purposes described.

11. The sliding bed H L L′, constructed as shown, in combination with the eam C, platform K, band N, crib Q′, and forming-roller O, when operated as described, for the purposes specified.

12. The feeding-device P, when constructed, arranged, and operated as shown and described, for the purpose set forth.

13. The apparatus for cutting wrappers, consisting, essentially, of frame Ax, knife Bx, block Ex, roller Fx, bar Dx, and spring Cx, all combined, arranged, and operating as shown and described.

14. The cigar-machine above described, as a whole, when its parts are all combined, arranged, and operated as shown and described.

95,479.—George Jackson, Albany, N. Y.—*Tile-Machine.*—October 5, 1869.

Claim.—The laterally-sliding shaft K and driving-pinion *e*, in combination with shaft G, pinion *c*, spur-gear *b*, shaft F, pinion *a*, and rack E, all arranged and operating as set forth, to reciprocate the piston in the manner described.

95,480.—Clark Jillson, Worcester, Mass.—*Machine for Cutting Tapers.*—October 5, 1869.

Claim.—1. In a machine for turning tapers, the employment, substantially as herein shown and described, of a divided spindle, the front or removable portion of which constitutes not only the pattern after which the blank is to be shaped, but also the support in which said blank is held during the turning-operation, as set forth.

2. The combination of the longitudinally-moving divided pattern-spindle and the rest or eye 7, upon the prolongation of the axis of said spindle, with the arms N and Q, capable of vibrating upon a common fulcrum, and carrying the cutting-tool M and friction-roll G, for operation, substantially as herein shown and described.

3. The combination of mechanism, constructed as described, for moving the spindle longitudinally with the devices for holding the cutting-tool and directing its motions, substantially as herein described, as shown in the accompanying drawings.

95,481.—William Johannes Kesselmeyer and Charles Augustus Kesselmeyer, Manchester, England, and Emil Hermann Nacke, Als-Schoenfeld, Saxony.—*Governor for Steam and other Enginery.*—October 5, 1869.

Claim.—The combination, with a governor, of the vessel F, which communicates with a reservoir, G, so as to be emptied or filled, as it rises and falls, substantially as herein shown and described.

95,482.—Albert W. Johnson, New York, N. Y.—*Whip-Holder.*—October 5, 1869.

Claim.—1. The web *k*, having the curved slots *o*, one on each side, when used, arranged, constructed, and applied as described, for the purpose set forth.

2. The combination of the slotted web *k*, having the curved slots *o o*, one on each side, with the arms *m m*, the whole being arranged, constructed, and operating as described, for the purpose set forth.

3. The band-fastening *b*, whose rivet, or its equivalent, pierces the leather of the dash, when constructed, arranged, and applied as set forth.

4. The combination of the band-fastening *b*, constructed and arranged as set forth in the preceding clause, with the barrel *f*, the whole being constructed as set forth, for the purpose set forth.

95,483.—William J. Johnson, Newton, and George Tainter, Watertown, Mass.—*Boring-Tool.*—October 5, 1869.

Claim.—1. The boring-tool, constructed and arranged, as to its several parts, substantially as described.

2. The screw-tube, constructed substantially as set forth, in combination with the screw-nut and case, when constructed and arranged substantially as shown and described.

3. The screw-tube, with its screw-nut, spiral spring, and borer or bit, severally constructed and arranged to operate substantially as shown and described.

4. The screw-tube, nut, spiral spring, and guide-rod, severally constructed and arranged to operate in combination, substantially as shown, and for the purposes described.

95,484.—Richard Jones, Mount Holly, N. J.—*Manufacture of White Oxide of Zinc.*—October 5, 1869.

Claim.—Introducing atmospheric air into the gaseous products of the furnaces after complete oxidation has taken place, and before such products enter the collecting-chambers, for the purpose of cooling said products, substantially as set forth.

95,485.—Charles H. Keniston, Somerville, and J. H. Sawyer, Boston, assignors to John T. Prince, Boston, Mass.—*Hulling-Machine.*—October 5, 1869.

Claim.—The adjustably-journaled serrated wheel *c*, in combination with the yielding and adjustable segmental stripper-plates *f*, provided with metal teeth, substantially as described, and arranged together and operated as and for the purpose herein set forth.

95,486.—Alden Kilby, Boston, Mass.—*Steam-Engine.*—October 5, 1864.

Claim.—1. A duplicated piston, constructed substantially as above described, thereby securing double the power for the same-sized cylinder.

2. The manner of operating the valve, by means of the pin F, through the piston-shaft or journal H.

3. The device L, in Fig. 4, for reversing the valve.

95,487.—Henry Killam, Mendon, Mich.—*Plow.*—October 5, 1869.

Claim.—1. The combination of the wing L, the point I, and the flange D, when all are constructed and arranged as and for the purposes aforesaid.

2. The combination of the beam A, mold-board B, landside C, handle E, washer G, point I, and wing L, when constructed, arranged, and operating substantially as and for the purposes described.

95,488.—John W. Kingsbury, New Bedford, Mass.—*Carriage-Axle Connection.*—October 5, 1869.

Claim.—The arrangement of the helical spring D and its cap-nut E with the king-bolt C, its cheek-nut F, the axle A, and the spring-block B, as specified.

95,489.—Martin Kintzback, Philadelphia, Pa.—*Doll.*—October 5, 1869.

Claim.—The "fastening the leather arm to the porcelain hand, by means substantially as shown and described."

95,490.—Robert M. Lafferty, Three Rivers, Mich., assignor to himself and J. E. & J. P. Prutzman, same place.—*Sawing-Machine.*—October 5, 1869.

Claim.—1. The method herein described of transferring motion from one part of a machine to another part of the same machine, by the use of a loose pulley upon an independent shaft.

2. The arrangement of the saws G, and their arbors F, upon the drum B, rotating upon fixed shaft *b*, in connection with pulley H upon an independent shaft, when constructed and operating as and for the purposes above set forth.

3. The arrangement of the pulley H upon the independent shaft, provided with cutter-head *g*, the pulley I, and the belt T, in connection with the saw-shafts F, when constructed and operating as and for the purposes above set forth.

4. The arrangement of the thimble C, the cog-wheel L, the worm-screw *e*, the shaft D, and the crank E, in connection with the belt T, when constructed as described, and operating to tighten said belt T, as above set forth.

5. The combination and arrangement of the parts A, *a*, B, *b*, C, *c*, D, *d*, E, *e*, F, *f*, G, *g*, H, *h*, I, *i*, J, *j*, K, *k*, L, *l*, M, *m*, N, *n*, O, *o*, P, *p*, R, *r*, S, *s*, and T, as and for the purposes herein set forth, shown, and described.

95,491.—Allen Lapham, Paterson, N. J.—*Chair.*—October 5, 1864.

Claim.—An improved chair, the parts of the frame of which are connected to each other by tenons and mortises, dovetailed upon one side, and locked together by wedges driven in upon the other or straight side of said tenon and mortise, substantially as herein shown and described, and for the purpose set forth.

95,492.—L. F. Leger, New York, N. Y.—*Chocolate-Paste.*—October 5, 1869.

Claim.—The chocolate-paste, made substantially in the manner and of the ingredients herein specified.

95,493.—J. C. Leonard, S. B. Holcomb, and W. B. Wright, Clinton, Mo.—*Hay-Raker and Loader.*—October 5, 1869.

Claim.—The combination of the hinged rake, elevator, spring-dischargers, and guide C, when arranged upon a truck, substantially as specified.

95,494.—William H. Lewis, Boston, Mass., assignor to himself and John B. Folger, same place.—*Marine Paint.*—October 5, 1869.

Claim.—1. The employment of a solution of caoutchoue or gutta-percha, in tar-naphtha, or other naphtha containing benzole and its cogeners, as a basis in the production of a marine paint.

2. As a new manufacture, or composition of matter, an improved marine paint, composed of a solution of caoutchoue or gutta-percha, in tar-naphtha, or other naphtha containing benzole and its cogeners, in combination with oxide of copper, or other poisonous mineral substance, which is slowly soluble in water, containing alkaline chlorides in solution.

95,495.—William J. Linton, Detroit, Mich.—*Combined Try-Square, Caliper, &c.*—October 5, 1869; antedated September 20, 1869.

Claim.—The combination of a try-square, rule, caliper, and instrument for determining the angles of six-sided work, into one tool, constructed as herein substantially shown and described.

95,496.—Louis Joseph Frederic Marguéritte, Paris, France.—*Manufacture and Refining of Sugar.*—October 5, 1869; patented in France, October 16, 1867.

Claim.—1. The direct dissolution (without the aid of any acid) of the molasses by the aid of wood-spirit, together with the washing and purification of raw sugars by the same agent.

2. The treatment of any saccharine matter (a mass concreted by coction, of either sugar-cane or beet-root, as resulting from Fryer's concretor,) by the aid of non-acidulated wood-spirit, for the purpose of obtaining a supersaturated sugar-solution, and determining the crystallization of the latter by the addition of sugar-crystals, if the undissolved sugar will not suffice for effecting such crystallization.

3. Adding sulphuric acid, either previously or not, to the wood-spirit, for the purpose of decomposing the molasses, properly so called, in the manufacture and refining of sugar, for the purpose of separating the sugar and allowing it to crystallize.

4. The treatment of dried beet or any concentrated sirups by means of wood-spirit, either acidulated or not, for the purpose of extracting the sugar contained in a free state, as well as that from molasses, as also the employment of sugar for effecting the desupersaturation of the liquor, as above described.

5. The following combination of operations: First. The washing of raw and impure sugars, by means of wood-spirit, (methyl.) Second. Adding sulphuric acid to the solution of molasses resulting from the above treatment, for the purpose of afterwards extracting the sugar by crystallization by the addition of sugar-crystals or powder.

95,497.—James R. Mathews, New London, Conn.—*Car-Spring.*—October 5, 1869.

Claim.—A spring, formed of radially-corrugated plates B B Bx, having their top and bottom surfaces of contact parallel to each other, and arranged alternately with plain, flat plates A A Ax, substantially as herein described.

95,498.—Hiram S. Maxim and James Radley, New York, N. Y.—*Locomotive Head-Light.*—October 5, 1869.

Claim.—1. The combination of the elevated tank with the steam gas-generator and the burner of the lamp, substantially as described.

2. The arrangement of the perforated metallic conducting-plate F, between the generating-chamber G and the superheating-chamber Q, substantially as described.

3. The lining R R, which incases the stem of the valve D, in the manner and for the purpose substantially as described.

4. Inclosing the regulator-chamber or case C and the carbureter B within the pipe S S, so as to heat the atmospheric air in the passage thus formed, which goes to the carbureter B, and to support the combustion of the gas at the burner A, substantially as described.

5. The tangential arrangement of the steam and exhaust pipes with the steam-jacket, by which a rotary motion of the steam is produced within the steam-jacket, around the superheating-chamber and the conducting-plate of the generator, substantially as described.

6. The arrangement of the return-pipe *o* with the tank and pipe H, below the cock *n*, in the manner and for the purpose substantially as described.

7. The combination of the steam-valve N and spring *l*, with the eduction-pipe L and waste-pipe O, in the manner and for the purpose substantially as described.

8. The combination of the sliding tube *f* and its spiral spring and sliding rod *e*, with the diaphragm *g g*, in the manner and for the purpose substantially as described.

95,499.—Thomas L. Melone, Mount Gilead, Ohio.—*Sewing-Machine.*—October 5, 1869.

Claim.—1. The wheel E′, arranged about the needle-bar and supporting the feed-foot, when provided with pins *y*, for the purpose of operating automatically the pawl *w*, and reversing the direction of rotation of that wheel, as specified.

2. The combination of the friction-cap D′ with the wheel E′, rod B², and slotted arm A′, on shaft *f*, all constructed and operating as and for the purpose set forth.

3. The mechanism described, for effecting the feed, by having the cloth at all times between a rough and a smooth surface, said surfaces being in contact alternately with the upper and lower surface of the cloth, and operating alternately to free the cloth while being fed, and to fix it while the stitch is being made, and the feed-foot retracted, preparatory to a renewed impulse, in the manner specified.

4. The vertically-reciprocating, smooth, circular tablet K, operated as described, in combination with the circle of stationary points *i*, and the reciprocating feed-foot *t*, arranged and operating as set forth.

5. The combination of one or more braid-spools with the revolving feed-mechanism, for the purpose of maintaining the proper relation between the braid-supply and the braiders, during the revolution of the feed, as specified.

6. The combination of the cam G′, lever H′, collar I′, and rod *n*, in the manner described, for the purpose of operating the braiders *o p*, as set forth.

95,500.—F. C. Mende and T. F. Mende, Philadelphia, Pa.—*Manufacturing German Hand-Cheese.*—October 5, 1869.

Claim.—1. The within-described process of manufacturing what we term "German hand-cheese," by subjecting the milk and curd to the various successive manipulations above set forth.

2. The product obtained by subjecting milk to the various successive manipulations herein specified, as a new article of manufacture.

95,501.—Bernard H. Menke, Cincinnati, Ohio.—*Cooking-Stove.*—October 5, 1869.

Claim.—1. A stove-plate with a crack or opening, substantially as described, and for the purpose set forth.

2. The combination of the collar-piece C with the plate A A, for the purpose set forth.

95,502.—Suspended.

95,503.—George Murray, Jr., Cambridgeport, Mass.—*Water-Gauge.*—October 5, 1869.

Claim.—1. The glass tube D, constructed as described, in combination with the pipe E, substantially as and for the purpose specified.

2. The socket A, provided with the stuffing-box and gland, in combination with the tube D and pipes E and F, substantially as shown and for the purpose described.

3. The within-described water-gauge, consisting of the socket A, provided with the stuffing-box and gland, the glass tube D, and the pipes E and F, all constructed and arranged substantially as and for the purpose set forth.

95,504.—J. O. L. Murray and D. A. Mullane, New Orleans, La.—*Device for Holding Together the Different Parts of Bureaus and other Articles of Furniture.*—October 5, 1869.

Claim.—The fastening-device, herein described, consisting of the elbow-bracket A, the pin B, and the key C, when these parts are constructed and conjointly operate, substantially as and for the purpose hereinbefore set forth.

95,505.—A. S. Perrigo, Sandwich, Ill.—*Cultivator.*—October 5, 1869.

Claim.—1. The two-part clevises Q, pivoted to the beams A′, and to the clips M, and provided with slotted ends T, for adjusting the depth which the shovels are to run in the ground, as set forth.

2. The combination of the clevises Q, clips M, and standards K, as described.

3. The combination of the clevises Q, standards K, clips M, and rods B′ E, as and for the purpose set forth.

4. The combination of the rods *d c*, standards V, shovels U, and cam *e*, for holding the shovels the required distance apart, as specified.

5. The two-part clamp Y Y, in combination with the standard V, bolt and nut Z X, angular bar O, and shovel U, for holding and adjusting said shovel, as described.

95,506.—N. Petré, New York, N. Y.—*Combined Latch and Lock.*—October 5, 1869.

Claim.—The combination of the bolt A, its attachment C, and arm or arms E, with the hub D and eccentric F, when so arranged as that the bolt may have motion longitudinally, independent of the part C or arm E, one or both, to prevent the cramping of said bolt in the frame, substantially as herein described and represented.

95,507.—N. Petré, New York, N. Y.—*Combined Latch and Lock.*—October 5, 1869.

Claim.—1. The combination of the bolt and knob-levers, with a raising-mechanism, operated by a key from the exterior of the lock, so that the raising of the bolt-lever shall disconnect it from the knob-lever, and move the latter out of the reach of the tappets on the hub that the knob-shank passes through, substantially as and for the purpose described.

2. The combination of the stop E with the open or slotted bolt-lever, and the cam-opening F leading therefrom, so that the raising up of the bolt-lever shall project the bolt further from the lock-case than it is when simply acting as a latch, substantially as described.

95,508.—N. Petré, New York, N. Y.—*Latch.*—October 5, 1869.

Claim.—1. In combination with a bolt, yoke, and eccentric, when so arranged as that the bolt moves directly toward and from the eccentric, and operated from the exterior by a knob or key, and controlled by a spring, a recess, *i*, in the front of said bolt, that allows it to be forced into the lock, as in the act of shutting the door to pass over, without moving the eccentric, as and for the purpose substantially as described.

2. In combination with the spindle H and its recess *c*, the key-barrel L and its spring *b*, so that the insertion of the key shall form a connection between said spindle and barrel, and cause them to move together by the turning of the key, to move the bolt, substantially as described.

95,509.—N. Petré, New York, N. Y.—*Lock.*—October 5, 1869.

Claim.—The combination of the yoked bolt and eccentric, with its barrel, containing the movable and immovable parts *h h* and *f e*, through which the key must pass to press down the locking-pins, and turn said eccentric, when arranged and operating substantially as described.

95,510.—Hugh M. Phinney, Cambridge, Mass.—*Hot-Air Register.*—October 5, 1869.

Claim.—In combination with a hot-air register, the wheel or lever *o*, when applied to the outer side of the plate *a*, and in a plane parallel therewith, to operate the valve-actuating slide, substantially as described.

95,511.—Anthony Pirz and Manuel Pirz, East New York, N. Y.—*Window-Blind.*—October 5, 1869.

Claim.—1. The internal shutter or panel C, mounted within the main shutter A, and adapted to swing outward therefrom, as specified.

2. The triple frames or parts A, B, and C, when the part A forms the main frame or body of the shutter, the part B forms a sub-frame, swinging on a vertical axis, outward, and covering only a portion of the surface of the main frame, and the part C forms an internal shutter or panel for the second frame B, all the parts being combined and arranged for joint operation, as and for the purposes herein set forth.

95,512.—James W. Prendergast, New York, N. Y.—*Air-Pressure Water-Reservoir.*—October 5, 1869.

Claim.—The cylinder A, gauge-tube B, and ball-valve *e*, together with admission and discharge pipes C D, combined and arranged substantially as and for the purpose herein shown and described.

95,513.—W. F. Quinby, Wilmington, Del.—*Flying-Machine.*—October 5, 1869.

Claim.—1. The side wings A, provided with the upper system of stay-cords, and supported from the shoulder and the arms, substantially as specified.

2. The side wings A, provided with the lower system of stay-cords, and connected to the ring L^2, when the latter is suspended from the belt and connected to the feet, substantially as specified.

3. The dorsal wing, hinged to the waist, supported from the points of the shoulders, and connected to the feet, substantially as specified.

4. The cuirass, constructed and adapted for supporting the wings and protecting the body, substantially as specified.

5. The combination, with the rods B and the cuirass, of the double hinge I, swiveled to the said cuirass, substantially as specified.

6. The rods C and N, hinged to the long rods, and provided with the slides F P, and connecting-rods, and arranged for spreading the wings, substantially as specified.

95,514.—Gustav Radbruch, Hoboken, N. J.—*Churn-Dasher.*—October 5, 1869.

Claim.—The dasher herein described, consisting of the central shaft C, arms *b b*, and straight tubes D, the latter being inclined inwardly, from bottom to top, and having an elbow formed at their lower ends, as and for the purpose specified.

95,515.—John Reinhart, New York, N. Y., assignor to Andrew Christian, same place.—*Velocipede.*—October 5, 1869.

Claim.—1. The combination, with the cranked axle of a velocipede, of the levers H H′, constructed,

arranged, and operating substantially as herein specified.

2. The combination, to produce an improved velocipede, of the frame A, seat G, steering-mechanism D *a b c* E, and actuating-mechanism C C D I H H′, constructed, arranged, and operating substantially as herein specified.

95,516.—JOHN W. RICHARDSON, South Braintree, Mass.—*Machine for Making and Wrapping Webbing Boot-Straps.*—October 5, 1869.

Claim.—1. The combination of mechanism for feeding the paper with mechanism for feeding the webbing and wrapping it with the paper, substantially as described.

2. In combination with the feeding and wrapping mechanism, the mechanism for cutting the paper and the mechanism for cutting the webbing, substantially as described.

3. In combination with the mechanism for feeding, cutting, and wrapping the webbing, mechanism for folding the strap, substantially as described.

4. In combination with the mechanism for feeding, cutting, and wrapping the webbing, mechanism for applying cement to the ends of the strap, substantially as described.

5. The details of construction and arrangement of the feed-rolls *b c*, a^2 *h*, and a^3 b^3, the paper-folding plate *o*, the mechanism for working the paste-brush, and the folding-tongue r^3 and mechanism for working it, substantially as described.

95,517.—JOHN RILEY and CHARLES W. BISSELL, Troy, N. Y., assignors to CHARLES W. BISSELL, TERRANCE RILEY, and MARY C. FRAZER.—*Composition for Covering Steam-Boilers, &c.*—October 5, 1869.

Claim.—1. A composition or cement composed of "lime-putty," combined, as described, with the ingredients herein named, or their equivalents, when used for the purposes specified.

2. A composition or cement composed of "paper-pulp," made in the manner set forth, combined, as described, with the ingredients herein named, or their equivalents, when used for the purposes specified.

95,518.—SMITH RILEY, Kenton, Ohio.—*Fence.*—October 5, 1869.

Claim.—The rails A, pickets E, and connecting-links D, combined and arranged substantially as specified.

95,519.—WASHINGTON B. ROSS, Keene, N. H.—*Staging for Roofs.*—October 5, 1869.

Claim.—The combination of staging B, (in one or more pieces, jointed, as described,) braces *c′ c′*, having arms *c c* and pins *d d*, pulleys F F, and cords E E, all arranged and operating substantially as herein set forth.

95,520.—SIDNEY A. SABINE, Pecatonica, Ill.—*Cultivator.*—October 5, 1869.

Claim.—1. The sliding attachment described, by means of which the lifting-chains and the shovel-beams are united, consisting essentially of the clevises *j* and irons K, or their equivalents, as and for the purpose described.

2. The shield P, having the arms *p p*, in combination with the bar p^1, as and for the purpose described.

3. The machine described, consisting essentially of the frame B B C D, lifting-devices *h* h^1 h^2 h^3 I, clevis *j*, irons K, beams L, bar M, standards N, and shields P, the whole being combined and arranged as described.

95,521.—THEODORE SEARING, New York, N. Y.—*Sleigh-Attachment for Velocipedes.*—October 5, 1869.

Claim.—1. The combination, with the wheels of a velocipede, of the runners A, clamps C, and brakes F, when all constructed and arranged substantially as specified.

2. The combination, with a velocipede provided with runner-attachments, of the vibrating propellers G H, arranged for attachment to the crank-pins I, substantially as specified.

3. The combination, with the vibrating propellers G H, of the segmental spiked bars O, links P, heels Q, and springs S, substantially as specified.

4. The combination, with the driving-wheel of a velocipede, of vibrating propeller-arms G, when arranged for adjustment as to height, by shifting the wheel on the runner, substantially as specified.

95,522.—ALLEN SHERWOOD, Auburn, N. Y.—*Harvester.*—October 5, 1869.

Claim.—1. The combination of the coupling-arm with the hinged supporting-piece F, whereby said coupling-arm can swing with, and also roll independent of said supporting-piece, as and for the purpose described.

2. The combination of the clutch-plates K with the hubs of their respective wheels, when united thereto by recesses 1 and projections 2, and when said plates form one of the inclosing ends of the spring-pawl and ratchet-chambers, as described and represented.

95,523.—ABRAM H. SHOCK and HARRISON ROCK SHIRK, Lancaster, Pa.—*Manure-Drag.*—October 5, 1869.

Claim.—1. The construction and arrangement of the hooks 1, 2, and 3, in combination with the central beam A and brace or fulcrum R, operating substantially in the manner and for the purpose described.

2. In combination with the central hook A^2, with its head *h* and flange *f*, also the lever L, with its foot or toe *l*, and rounded heel, when constructed and operating in the manner jointly and for the purpose set forth.

3. The mode of constructing the handle-supports *s s*, so that their lower ends come in contact with the sides of the hooks 1, 2, and 3, as side-bearings, in combination with the brace or fulcrum-rod R, made and applied in the manner and for the purpose shown and described.

95,524.—DANIEL SHOCKEY, Waynesborough, Pa.—*Farm-Gate.*—October 5, 1869.

Claim.—1. The construction and arrangement of the slotted iron plate T on the side of the rear post, the single post B, and the lower rail J lying against the side of post B, and provided with a lateral-headed pin *w*, which projects through the slot *t* in the plate, but not through the post, when said parts are adapted to operate in connection with each other, as and for the purposes specified.

2. The latch M, having the hook *m*, vertical shank *n* and nearly horizontal shank n^1, and pivoted to the gate at *g*, when arranged and employed in connection with the cords N N, spring *o*, and notch *r*, substantially in the manner and for the purposes described.

95,525.—JOHN SIMS, Liverpool Road, England, assignor to WILLIAM SPARKS THOMSON.—*Mode of Attaching Trimming to Articles of Dress.*—October 5, 1869.

Claim.—The process above described for attaching trimmings to dresses or other garments, by a combination of the three steps specified.

95,526.—WILLIAM D. SLACK, Lewisburgh, Pa.—*Harvester.*—October 5, 1869.

Claim.—1. The arrangement of the lever *l*, roller *j*, pawl-lever M, and rack *o*, for raising, lowering, and holding at any suitably-adjusted height the frame G, to which the drag-bar that carries the finger-bar and cutters is attached, substantially as described.

2. In combination with the rake-driving head L, and the pinion-supporting spring-bearer *y*, a bent and pivoted lever, M, for throwing the pinion out of gear with said head, while it is thrown in by a spring, substantially as described.

3. In combination with the semi-clutches 2 3, one on the drive-wheel and the other on the main axle, the clutch-bar or rod *p*, constructed and operating as described, and connected therewith, and extending to near the driver's seat, so that the driver from his seat may clutch and unclutch the driving-connection, as and for the purpose described.

95,527.—LEBBEUS W. SMITH, Boston, Mass.—*Manufacture of Soap for Medicinal and for other*

Purposes.—October 5, 1869; antedated September 16, 1869.

Claim.—The composition as made of the mineral oxide and soap, as described.

95,528.—THOMAS SMITH, Baltimore, Md.—*Pipe-Coupling.*—October 5, 1869.

Claim.—1. The valves C, seated by means of the springs F, and provided with the projecting stems c', in combination with the pipe-coupling A B, substantially as and for the purpose set forth.

2. The combination of the sections or members A B, constructed respectively with the hollow tenon or arm A′ and socket B′, and the clamping-screw F, substantially as and for the purpose described.

3. The adjustable bars D, in combination with the valves C c c' and springs E, as and for the purpose specified.

4. The combination, in the coupling A B, of the stems a b, passages a' a'' b'' b', valve-seats a''' b''', bearings D D, valves C c c', C c c', springs E E, the tenon or arm A′, socket B′, clamping-screw F, and plate G, all constructed, arranged, and operating as represented and described, for the purposes set forth.

95,529.—ASA SNYDER, Richmond, Va.—*Fire-Place.*—October 5, 1869.

Claim.—The described arrangement of the basket-grate A, concave perforated radiator E, and damper F, with relation to each other and the chimney C, jambs B, as and for the purpose specified.

95,530.—AUGUSTUS SPIEGEL, Indianapolis, Ind.—*Cradle.*—October 5, 1869.

Claim.—The hook C and metal stop G, in combination with the rocking part and base of the cradle, substantially as and for the purpose herein set forth.

95,531.—FISHER A. SPOFFORD and MATTHEW G. RAFFINGTON, Columbus, Ohio.—*Water-Velocipede.*—October 5, 1869.

Claim.—A water-velocipede, consisting of the lever G, rods c, segments F, pinions D, pawls b, ratchet-wheels a, and paddle-shaft B, all combined and operating substantially as herein shown and described.

95,532.—SAMUEL STANTON, Newburgh, N. Y.—*Steam-Generator.*—October 5, 1869.

Claim.—The arrangement of the serpentine pipe C in the rear part of the furnace, below the boiler, its upper straight and perforated portion entering the rear end of said boiler in an inclined direction, below the water-level, as herein described, for the purpose specified.

95,533.—LEOPOLD STEIGERT, Cincinnati, Ohio.—*Boiler Water-Regulator and Alarm.*—October 5, 1869.

Claim.—1. The arrangement, with the shaft c^2, provided with the wipers h h, of the whistle-valve G, lever H, and set-screws g and g', substantially as and for the purpose described.

2. The arrangement of the water-plug I, connecting-arm E, and shaft c^2, substantially as and for the purpose described.

95,534.—ROBERT S. STENTON, New York, N. Y.—*Manufacture of Pigments for Paints.*—October 5, 1869.

Claim.—1. The use of the aforesaid black magnetic oxide of iron-ore or other primitive formations of iron-ore, either alone or in combination with other suitable substances, for the manufacture of pigments for paint, substantially as set forth.

2. The use, either alone or in conjunction with other suitable substances, for the manufacture of pigments for paint, of the aforesaid iron or steel scales, the same being an oxide of iron, produced substantially as herein set forth.

95,535.—S. STOW, East Enterprise, Ind.—*Seed-Drill.*—October 5, 1869.

Claim.—1. The straps m and n, in combination with wheel E, when constructed and arranged as and for the purpose described.

2. The straps m and n, in combination with wheel E, rods f and h, adjustable block e, and slide g, the whole constructed and arranged substantially as specified.

3. The plow A, in combination with seed-box D, slide g, seed-stop k, lever I, rest j, rods f and h, adjustable block e, wheel E, and straps m and n, the whole being arranged as and for the purpose substantially as described.

95,536.—SIMEON TAYLOR, Worcester, Mass.—*Organ and Melodeon.*—October 5, 1869.

Claim.—1. The combination, with the hinged coupler-bar F, of the crank H and coupling-lever E, said parts being constructed and arranged substantially as and for the purpose set forth.

2. The combination, with the coupling-lever E, of the upright slotted key-rods a, substantially as and for the purposes set forth.

3. The construction and arrangement of the draw-stop valve-levers M M′ and their respective hinged arms or levers I and J, provided with the projections 2 and 3, substantially as and for the purposes set forth.

95,537.—T. H. TAYLOR, Jeffersonville, Ill.—*Harvester.*—October 5, 1869.

Claim.—1. The combination of the driving-wheel, having the projections arranged as described, with the connecting-rods, suspended relatively thereto, substantially as specified.

2. The cutter-bar supports, formed of two parts, grooved for the reception of the cutter-bars, and united, substantially as described.

95,538.—HENRY THOMPSON, Mobile, Ala.—*Life-Boat.*—October 5, 1869.

Claim.—1. The combination of the levers, crank-shaft, and propelling-wheels, when arranged on a bed-plate, A, substantially as specified.

2. The shaft-levers and pumps, combined and arranged upon a bed-plate, A, all substantially as specified.

3. The wheel-houses or guards L, detachably connected to the boat, and adapted to be disconnected for rolling over the ground, substantially as specified.

4. The herein-described improved life, surf, or pleasure boat, provided with propelling and pumping devices, air-cells, and detachable wheel-guards, when all arranged substantially as specified.

95,539.—J. N. THOMPSON and WILLIAM KENADY, Belpassi, assignors to D. W. FRARY, Portland, Oregon.—*Gang-Plow.*—October 5, 1869.

Claim.—The levers A and B, the swivel-joint D, nut and screw E, link F, fulcrum G, beam H, and hook I, together with the adjusting-keys J, or their equivalents, substantially as described, and for the purpose set forth.

95,540.—HENRY H. TRENOR, New York, N. Y.—*Automatic Passenger-Register.*—October 5, 1869.

Claim.—1. In combination with a step or platform, so constructed as to descend by pressure upon it, and ascend or move back when the pressure is removed, the arrangement of the perforating-points c c', one or more, and of the paper or other ribbon, to receive the perforations, when combined and operating substantially as and for the purposes set forth.

2. In combination with a yielding step or platform and perforating-mechanism, as described in the last claim, the arrangement of the inclined slotted plate F, or its equivalent, and the anchor-pallets and escapement-wheel, substantially as and for the purposes set forth.

95,541.—CHARLES IMMANUEL VOIGT, West Salem, Ill.—*Double-Shovel Plow.*—October 5, 1869.

Claim.—1. The beam A, brace or gauge-rods I, standards B, round D, bolt or round F, handles E, keepers or staples G, and bolt H, in combination with each other, when said parts are constructed and arranged substantially as herein shown and described, and for the purposes set forth.

2. The cutters J, constructed and adjustably secured to the standards B, substantially as herein shown and described, and for the purposes set forth.

3. The fender K, constructed as described, and adjustably connected to the plow-beam A and standards B, by means of the long bolt H, washers N,

hook and links L, and adjustable slide M, substantially as herein shown and described, and for the purposes set forth.

95,542.—William H. Walton, Philadelphia, Pa.—*Bath-Tub Eduction-Tube.*—October 5, 1869.

Claim.—The combination of the bath-tub A with the socket H secured to it, as shown, and fitting upon the spigot E, secured to the floor B, and outlet pipe D, nut K, and stop M, all constructed and operating substantially as shown and described.

95,543.—William Wickersham, Boston, Mass.—*Steam-Engine Governor.*—October 5, 1869.

Claim.—1. The combination of the valve O with the time-keeper and shaft *h*, whereby the valve-movement shall be regulated by the time of the time-keeper, substantially as herein set forth.

2. The combination of the valve O, slide P, and time-keeper, whereby the movement of the valve shall be controlled by the time-keeper, while the movement of the cut-off slide may be controlled by the main shaft of the engine, substantially as set forth.

3. The combination of the slide *f*, pin *e*, and groove *j*, substantially as herein described.

4. The construction and arrangement of the fan and its immediate co-operative parts, as herein set forth, whereby the effective surface of the fan shall automatically vary in accordance with the unequal expansion of the metallic bars, as herein made known.

5. The construction and arrangement of the fans and their co-ordinate devices, whereby the respective leaves of the fans may occupy more or less of the spaces, and thereby increase or diminish the effective surface, substantially as herein described.

6. The combination of the ring *w* with the spring *c*, in the manner and for the purpose set forth.

95,544.—John T. Wightman, Charleston, S. C.—*Chair, Cradle, Cot, &c.*—October 5, 1869.

Claim.—The convertible article of furniture hereinbefore described, capable of being used as a chair, cradle, cot, or shelter-tent, by altering the relative positions of the rockers A, braces B C, and sacking D, in the manner described and shown.

95,545.—J. W. Wheeler, Cleveland, Ohio.—*Water-Elevator.*—October 5, 1869.

Claim.—1. The tilting-bar M and roller O, in combination with the rib D and shoulder *b* around the inner edge of the bucket, in the manner as and for the purpose set forth.

2. The roller O, in combination with the bucket I, arranged and operating in relation to each other, in the manner and for the purpose substantially as set forth.

3. The combination of the pawl and wheel G D, brake H, pin *a*, and wheel E, arranged to operate conjointly in the manner as and for the purpose specified.

95,546.—Joseph C. Wilson, Appleton, Wis.—*Railway-Car Coupling.*—October 5, 1869.

Claim.—The draw-head A, with its cheeks or filling C, constructed with the incline G, and having the tumbler F *e* fitted to it, and confined loosely in proper relation to the coupling-pin, so as to operate as set forth, all substantially as described.

95,547.—Charles V. Woerd, Waltham, Mass.—*Watch.*—October 5, 1869.

Claim.—1. A watch-plate or movement-frame made of a single solid plate, recessed, to contain the running-mechanism, and having a wall formed from such plate, and surrounding such mechanism, substantially as described.

2. A pivot-bridge having a steady-pin struck up from its under surface, substantially as described.

3. The described arrangement of the barrel, ratchet-pawl or click, and click-spring, all within the same cavity in the bed-plate, the click and spring lying in recesses in the bottom of the cavity, and the barrel covering them, substantially as set forth.

95,548.—Rufus C. Wood, Le Roy, Kansas.—*Pitman-Connection for Harvesters.*—October 5, 1869.

Claim.—The seat C c^1 c^2, constructed as described, loop D, and screw E, in combination with the sickle-bar A *a'* and pitman *b'*, substantially as herein shown and described, and for the purposes set forth.

95,549.—Daniel Woodbury, Rochester, N. Y.—*Horse-Power.*—October 5, 1869.

Claim.—1. The arrangement of the main frame A B C, shaft *i*, and tumbling-rod *o*, with reference to the carrying-axle and leveling-bar, substantially as herein shown and described.

2. The arrangement of the supporting-box *n*, within or upon the leveling-bar F, for the purposes set forth.

3. Providing the leveling-bar F with a detachable extension G, in the manner and for the purposes set forth.

4. The angle-arms *s*, having the spur *v*, constructed substantially as shown, for the purpose set forth.

5. The within-described arrangement of the hooks *j* and sockets *p* upon the gallows-frame and bridge-tree *b*, whereby the strain upon these latter is communicated directly to the outrigs.

6. Providing the gallows-frame with the extensions *c*, to which the braces *f* are attached, whereby the strain upon the former is communicated directly to the leveling-bar F.

95,550.—David H. Young, Manchester, N. H.—*Furnace-Door Frame.*—October 5, 1869.

Claim.—1. The device A, having hinge-ears E E and E' E', and latches L and L', for the face of a furnace-door frame, substantially as described.

2. The box D, having flanges F, F', and F'', as an improved setting-box to a furnace-door frame, substantially as set forth.

3. The combination of box A, constructed as described, and face A, constructed as shown, substantially as set forth.

95,551.—William Allchin, Newburgh, N. Y.—*Stove-Drum.*—October 5, 1869.

Claim.—The smoke-flue A, constructed of elliptical-shaped elbows, and arranged within a drum, having parallel sides, so that the greatest diameter of said smoke-flue shall be close to the sides of the drum, and, in combination with the partition G, form zigzag air-passages F F, as shown and described.

95,552.—Daniel Arndt, Toledo, Ohio.—*Washing-Machine and Table.*—October 5, 1869.

Claim.—1. In combination with a washing-machine, the stationary plate G and adjustable plate I, constructed as described, and operating substantially in the manner and for the purposes herein set forth.

2. In combination with the stationary plate G and adjustable plate I, the rubber rings K K, and hooks L L, all substantially as and for the purposes herein set forth.

3. In combination with the stationary plate G, adjustable plate I, rings K K, and hooks L L, the roller E, made in sections, with longitudinal corrugations along its entire surface, the end-plates F F, and journals *f f*, all substantially as and for the purposes herein set forth.

4. The combination of the box A with a hinged and extended cover, C, legs B D, roller E, plates F, journals *f*, rings K, plates G I, and lever M, all as herein shown and described.

95,553.—Lyman M. Bates, Jackson, Mich.—*Spring for Bed-Bottoms.*—October 5, 1869.

Claim.—The spring B, constructed with a quadrangular base, when used in combination with the disk E, substantially as described.

95,554.—Silas Barker, Hartford, Conn.—*Manufacture of Sheet-Iron.*—October 5, 1869.

Claim.—1. The process, herein set forth, of making imitation "Russia" sheet-iron.

2. The rolls, made by the process and in the manner described, and used for the purpose set forth.

3. The oven, made as described, with the sliding rods, or their equivalents, and used for the purpose set forth.

95,555.—Robert C. Blackall, Albany, N. Y.—*Railway-Rail Chair.*—October 5, 1869.

Claim.—The joint-chair *e*, formed with the lips 2 2 and flanges 3 3, in combination with the bridge-plank *b*, substantially as set forth.

95,556.—William Blakey, Baltimore, Md.—*Grain-Drier.*—October 5, 1869.

Claim.—1. The feeding-hopper A, constructed of tapering form, and provided with the space a^2, and perforated lining a^1, to admit of the passage of steam or dry heat to the coffee or grain in its passage therethrough, to deodorize or dry it, substantially as described, in combination with the self-feeding and self-discharging cleaning and polishing cylinder B, substantially as set forth.

2. The combination, with the cylinder B, of the longitudinal strips H and flaps I, substantially as described, for the purpose set forth.

95,557.—Righter W. Bowman, Orangeville, Pa.—*Grinding-Mill.*—October 5, 1869.

Claim.—1. The disk or spreader *d*, secured at or upon the top of the spindle C, and provided with post or stirrer *e*, all arranged in the manner and for the purpose described.

2. The arrangement, herein described, of the roller *m*, rods or arms *h*, tube *g*, and funnel G, in combination with the disk *d*, having post *e*, all constructed and operating as set forth.

95,558.—Asa Brooks, Tolland, Conn.—*Cider-Press.*—October 5, 1869.

Claim.—1. The combination of the pillar-gear *h*, the gear-wheels i^1 i^2 i^3 i^4, the screws *z z z z*, and the sliding platform *k*, the whole being arranged, constructed, and operated as described, for the purpose set forth.

2. The combination of the adjustable cog-wheel *b*, the swinging cog-wheel *n*, the cog-wheel *c*, the bevel-gear wheels *e* and *f*, and the parts specified in the preceding clause, the whole being arranged, constructed, and operated as described, for the purposes set forth.

95,559.—Orlando F. Bryant, Carver, Minn.—*Wagon-Tongue Holder.*—October 5, 1869.

Claim.—The arrangement of the frame A, with flanges *g* K, socket *h*, braces *d f*, loop *p*, and tongue X, all constructed and operating substantially as and for the porposes set forth.

95,560.—Francis Burdick, South East, N. Y., and Lodowick Burdick, Lockhaven, Pa.—*Churn.*—October 5, 1869.

Claim.—The combination and arrangement of the cylinder F, beaters E, wire-gauze dashers or wings C, and standards G, constructed and operated in the manner and for the purposes above set forth.

95,561.—Jesse Burgess, Richmond, Ind.—*Combined Straw-Cutter and Feed-Box.*—October 5, 1869.

Claim.—1. The knife C, having an arm, *c*, extending in a direction at right angles to the blade, when said arm is about equal in length to the cutting-edge of the blade, substantially as and for the purpose set forth.

2. The combination of the cutter-box A, feed-box B, and knife C, when constructed and operated substantially as herein shown and described.

95,562.—Morgan Burton, Darlington, Pa.—*Refrigerator.*—October 5, 1869.

Claim.—The combination of the vessels A B, with intervening space between, pipes *a a*, spigot D, and hollow cover C, all substantially as and for the purposes set forth.

95,563.—C. A. Caldwell, Concord, N. C.—*Cotton-Press.*—October 5, 1869.

Claim.—The improved arrangement, in the cotton-press above described, of the parts herein shown, consisting of the frames A B, gates M, adjustable bars N, press-beam G, screws H H, bearings *g g*, friction-rollers *z z*, and nuts *j j*, when said parts are constructed and arranged to operate in the manner and for the purpose described.

95,564.—Charles L. Chadeayne, Yonkers, N. Y.—*Spring-Bed Bottom.*—October 5, 1869.

Claim.—The combination, with the slats F, the transverse flat springs E, and the spiral springs C, arranged in relation to each other as described, of the spirally-grooved lower clamping-disk D, and upper disk D′, with their intervening packing or packings *d d′*, substantially as and for the purpose or purposes herein set forth.

95,565.—E. Hall Covel, New York, N. Y.—*Washing-Machine.*—October 5, 1869.

Claim.—1. In combination with the shaft D, disk E, and inclined dashers F, the stationary sleeve *o*, substantially as and for the purpose hereinbefore described.

2. In combination with the dashers F F and disk E, the funnel-shaped thimbles, substantially as shown and described.

95,566.—Z. S. Cracraft, Lacon, Ill.—*Post-Auger.*—October 5, 1869.

Claim.—The plate B, constructed as described, in combination with the stem A, substantially in the manner and for the purpose described.

95,567.—John Crampton and William H. Pangborn, Plainfield, N. J.—*Washing-Machine.*—October 5, 1869.

Claim.—The tub, contracted at the top, and receiving the removable frame of vertical adjustable squeezing-slats set in grooves, as specified, in combination with the swinging dasher of vertical slats, constructed and operating as specified.

95,568.—Norman Cutter, Cincinnati, Ohio, and Elliot Savage, West Meriden, Conn.—*Manufacture of Iron and Steel.*—October 5, 1869.

Claim.—1. An alloy of iron, manganese, and potassium or sodium, or both of the latter, substantially as herein described.

2. The manufacture of such an alloy as we have described from iron, the oxides of manganese, fusible compounds containing cyanogen, combined with one or more metals, and one or more compounds of sodium or potassium, substantially in the manner herein set forth.

3. Deoxidizing, purifying, and improving iron or steel, by treating it in a molten state, substantially as specified, with an alloy such as herein described.

95,569.—Charlton H. Davis, San Francisco, Cal.—*Rock-Drill.*—October 5, 1869.

Claim.—1. The arrangement of the sliding frame A, bed B, operating-wheels D, shafts C F, and rotating and feeding shafts T T′, substantially as specified.

2. The combination of the spring L, arranged as specified, for adding or removing leaves or plates for varying the power; the clamp N, adjusting-screw and the drill-rod, all substantially as specified.

3. The ratchet-wheel W, lever X, pawl J, and spring *l*, when constructed and arranged as described, with reference to the cam V, all operating together, as and for the purpose set forth.

4. The arrangement of the pawl-levers X X′, relatively to the ratchet-wheels, the springs *l l′*, and pawls *j j′*, whereby the said springs have the effect to keep the pawls in contact with the wheels, and to restore the pawl-levers, substantially as specified.

5. The arrangement, with the ratchet-wheel W′ and feed-screw, of the jaws *r* and springs, substantially as specified.

95,570.—Calvin R. Densmore and Jacob A. Vroorman, Oil City, Pa.—*Car-Coupling.*—October 5, 1869.

Claim.—The combination of the springs F and G with the hook H A and draw-heads B C, all constructed and arranged substantially as described, as and for the purposes described.

95,571.—Auguste Destouy, New York, N. Y., assignor to Charles Goodyear, Jr., same place.—*Sewing-Machine for Boots and Shoes.*—October 5, 1869.

Claim.—1. The last-holder, adjustable by the

means and in the manner substantially as herein shown and described.

2. The needle, having a movement away from its center of motion, after it has been drawn out of the work, substantially as herein shown and set forth.

3. In combination with the device for drawing out the loop, or for producing the movement of the needle away from its center of motion, a shield or needle-guard, operating concentrically with said needle, substantially as herein shown and described.

95,572.—HENRY A. DIRKES, New York, N. Y.—*Table-Caster.*—October 5, 1869.

Claim.—The arrangement, within the bow of the handle of a caster, of the gong A and its operating-lever, whereby the latter are entirely exposed to view, removed from the bottles, and adapted to be operated without rotating the caster, as and for the purposes set forth.

95,573.—CHARLES F. DODGE, New York, N. Y.—*Washing-Machine.*—October 5, 1869.

Claim.—The combination, with the box or barrel D of the machine, and cross-bar B, of the thumb-screws *f' f'*, arranged to enter from above, and made to fit boxes or nuts connected with said bar, substantially as shown and described.

95,574.—JOSHUA ELLINGWOOD, Owensborough, Ky.—*Process of Distilling Spirits.*—October 5, 1869.

Claim.—1. The introduction and use of water-slaked lime in the wort or beer during fermentation, at the stage of that process, in the proportions and for the purposes substantially as described and set forth.

2. The introduction and use of muriate of ammonia, in the wort or beer during fermentation, at the stage of that process, in the proportions and for the purposes set forth, and substantially as described.

3. In combination with the use of water-slaked lime and muriate of ammonia, each in the manner and for the purpose described, the introduction of hydrogen, by any suitable mechanical means, in quantity sufficient to unite with and take up any surplus carbon and oxygen evolved, which might otherwise escape during alcoholic fermentation, and thus form alcohol, substantially as described and set forth.

4. The introduction and use of carbonate of potassa in the singlings during the process of distilling alcoholic liquors, at the stage, in the proportions, and for the purpose set forth, substantially as described.

5. The described process of conducting alcoholic fermentation and distillation as a whole, substantially as described and set forth.

95,575.—CHARLES W. EMERSON, Hartford, Conn., assignor to himself and JOHN C. ABBOTT, same place.—*Lamp-Shade Supporter.*—October 5, 1869.

Claim.—Securing the arms *b* to the spring-clasp band *a* by means of the rivet *e*, as an improved manufacture of lamp-shade supporters.

95,576.—BENJAMIN F. FIELD, Beloit, Wis., and ROBERT D. O. SMITH, Washington, D. C., assignors to BENJAMIN F. FIELD.—*Fabric for Roofing and for other Purposes.*—October 5, 1869.

Claim.—A fabric, suitable for roofing, sheathing, and other purposes, saturated with a compound of bituminous matter and solution of silica, substantially as described.

95,577.—DAVID FOSTER, Sheffield, England.—*Manufacture of Anvils, and the Top and Bottom Parts of Hammers, &c.*—October 5, 1869; patented in England, June 14, 1868.

Claim.—Forming the wearing or resisting surfaces of parts of anvils, hammers, projectiles, railway-crossings, dies, or other articles, of the combination or mixture of metal herein described, when such articles are cast partly in iron and partly in steel, substantially as herein shown and described.

95,578.—ARTHUR L. FREEMAN, South Boston, Mass.—*Apparatus for Transmitting Power.*—October 5, 1869.

Claim.—1. The combination, with the frame B, arranged to swing on or in horizontal bearings, of the weight E, in radial connection with a cross-shaft, C, hung to freely rotate within said swinging frame, and to intersect the axial line of the same, substantially as specified.

2. The combination of the shaft G, in gear with the cross-shaft C, the weight E, carried by the latter, and the swinging frame B, essentially as herein set forth.

3. The combination of the shaft K with the swinging frame B and weight E, in radial connection with the cross-shaft C, carried by said frame, substantially as specified.

4. The catch-lever R, in combination with the lever Q, connected to the swinging frame B and shaft K, in gear by crank or cranks with the latter, essentially as and for the purpose herein set forth.

5. The combination, with the independently-rotating shaft C and weight E, carried by the swinging frame B, of a brake to arrest the motion of said weight at any desired point, and irrespective of the motion of the swinging frame, substantially as described.

95,579.—JOSEPH GILMER, Monticello, Fla.—*Platform for Railway-Car.*—October 5, 1869.

Claim.—The combination of one or more auxiliary platforms with a railroad-car, so as to form a gangway for aid in entering or leaving the car, substantially as described.

95,580.—JOHN GOULDING, Worcester, Mass.—*Machine for Drawing and Spinning Wool, &c., from the Carding-Machine.*—October 5, 1869.

Claim.—1. In combination with a carding-cylinder or main card, and with draw-rolls, and twister-tubes, and main twisting-fliers, the mechanism or devices for intermittently griping the roving between the two sets of draw-rolls, so as to uniformly stretch or draw and spin the yarn, substantially as described.

2. In combination with the bobbin-frame, the mechanism for producing the rise and descent of the frame, substantially as described.

3. In combination with the bobbin-frame, the mechanism for varying the movement of the bobbins while they are filling at the heads, substantially as described.

4. In combination with the bobbin-frame, the mechanism for gradually effecting the descent of the bobbin-frame to fill the bobbins evenly, substantially as described.

95,581.—JOSHUA GRAY, New York, N. Y.—*Sewing-Machine.*—October 5, 1869.

Claim.—1. The double-faced wheel on the shaft C, provided with two cams, H *a'*, in combination with the looper and take-up bars F and I, substantially as and for the purpose described.

2. The reciprocating feed-operating bar G, in combination with the pivoted looper-bar F, pin *o*, and cam *a'*, substantially as and for the purpose described.

95,582.—WILLIAM P. HALE, Ionia, Mich.—*Machine for Sawing Lath.*—October 5, 1869.

Claim.—1. The hollow collars *d d d*, when constructed as and for the purpose substantially described.

2. The collars *d d d*, in combination with saws *c c c*, when the said saws are so constructed as to admit of a free circulation of air between their inner edge and the shaft B, substantially as set forth.

3. The platform P, when provided with springs *p p*, in the manner substantially as described.

95,583.—IRA HAYFORD and JOSEPH F. PAUL, Boston, Mass.—*Process of Treating Wood, to Preserve, Season, and Give it a Better Surface.*—October, 5, 1869.

Claim.—1. Treating wood by impregnating and filling its pores and tissues with the combined vapors of paraffine or palm-oil and water, and then checking the evaporation of such materials, the result being the depositing of a thin film within and about the pores and tissues of the wood.

2. In combination with a material for preserving wood by injection into its pores, the use of sciliate of soda, and of carbonate of ammonia, for the purpose before stated.

95,584.—William Hebdon, New York, N. Y.—*Machine for Steaming and Shrinking Cloth.*—October 5, 1869.

Claim.—The arrangement of the steam-pipe *i*, plates *l*, rollers *b* and *c*, table *n*, and receptacle *m*, substantially as and for the purposes specified.

95,585.—George W. Heckart, New Lisbon, Ohio.—*Machine for Bending Fifth-Wheels.*—October 5, 1869.

Claim.—1. The combination and arrangement of the circular bed A, bars B B, base C, dial H, cap I, and screw J, all constructed and connected as described, and for the purposes set forth.

2. The arrangement of the collar K, shaft L, standard M, and lever N, with the screw J and base C, substantially as and for the purpose set forth.

3. The arrangement of the split wheel *h*, revolving on the pin *f*, and made adjustable by means of said pin, and the posts *d* S R, and the spring *g*, with the bar B, substantially in the manner and for the purpose herein described.

95,586.—William M. Henderson, Philadelphia, Pa.—*Mechanical Movement.*—October 5, 1869.

Claim.—The construction of a spur-wheel, B, with teeth of a triangular form, in combination with two frogs C C′, which, by a rectilinear motion of the frogs, or of the wheel in line with its axis, will impart an intermittent rotary motion to the wheel, or to the frogs, at a point intermediate from the ends of the stroke, where it shall be rigidly held from turning by the combined action of the teeth of the wheel, the inclined faces of the frogs, and their parallel continuations, as set forth.

95,587.—Suspended.

95,588.—Simon Ingersoll, Brooklyn, N. Y.—*Spring-Scale.*—October 5, 1869.

Claim.—1. The lever G, in combination with rack-bar *h*, pinion *m*, spiral spring *s*, and lever *d*, all arranged to operate substantially as described.

2. A scale, consisting of base A, upright B, beam C, rod *f*, levers *d* and G, rack-bar *h*, pinion *m*, and spring *s*, dial-plate D and bail E, the whole arranged to operate substantially as set forth.

95,589.—Hans Iverson and Daniel Acker, New York, N. Y.—*Stair-Rod.*—October 5, 1869.

Claim.—The transverse-sliding bolt *i*, in combination with the stair-rod socket *b* and attachment *c*, as and for the purposes set forth.

95,590.—Melvin Jincks, Wallace, N. Y.—*Wagon-Seat.*—October 5, 1869.

Claim.—1. The hooked plates *e e*, in combination with springs *h h*, when said plates and springs are connected by means of metal links *s s*, and each part constructed and arranged to operate in the manner and for the purpose described.

2. The seat A, in combination with metal plates *e e*, frames B B′, springs *h h*, metal links *s s*, and slotted plates *n n*, when all are constructed and arranged as and for the purpose set forth.

95,591.—Hans Knudsen, North Windsor, Wis.—*Steam-Engine Slide-Valve.*—October 5, 1869.

Claim.—1. The arrangement of the valve H, having the journal I, the plate Hi, and straps Hii, substantially as shown and described.

2. The construction and arrangement of the valve C and its seat B, in relation to the induction and eduction pipes E and E′, and the valve H of the cylinder A, substantially as described.

95,592.—James S. Kuder and Willoughby Seiple, Tiffin, Ohio.—*Sash-Holder.*—October 5, 1869.

Claim.—The combination of the toothed wheel D, and perforated strip C, arm E, spring F, shaft G, and thumb-piece H, or their equivalents, all substantially as and for the purposes herein set forth.

95,593.—Dennis Lane, Montpelier, Vt.—*Water-Wheel.*—October 5, 1869.

Claim.—1. The exterior case, forming a gate for the chutes, with its serrated flanges, all substantially as described.

2. The case and gate for water-wheels herein described, having guides *a*, forming the chutes, case B, cylinder D, sleeve E, arms H, and rods *s* and *v*, constructed and arranged substantially as specified.

95,594.—Daniel P. Leach, Franklin, Ind.—*Hen's Nest.*—October 5, 1869.

Claim.—1. The box A, provided with movable gratings B B on the sides, and hinged door or grating D at the front side, substantially as herein set forth.

2. The serrated arm, in combination with the weight J, when used substantially in the manner and for the purpose set forth.

3. The combination of the lever H, notched arm I, movable weight J, and strings *b* and *c*, connected, as described, with the door or grating D, substantially as and for the purposes herein set forth.

95,595.—L. L. Lee, Milwaukee, Wis.—*Low-Water Indicator.*—October 5, 1869.

Claim.—1. Safety-valve D, whistle C, yoke I, valve S, indicator-dials B B, and shell A, all constructed and arranged substantially as described.

2. Duplicate dials B B, rod P, adjustable joints H, so arranged in any part of the building as to show the height of water, in combination with the water-indicator, substantially as described.

3. Ground joint R, dial B, yoke I, valve S, lever K, and shell A, arranged substantially as described.

4. Shell A, dial B, whistle C, safety-valve D, safety-rod E, weight F, hand G, joints H, rods P, yoke I, and valve S, all combined substantially as described.

95,596.—William Mallary, Bucyrus, Ohio.—*Fence.*—October 5, 1869.

Claim.—1. The post A, when the same is provided with stirrups or clasps B B and stump B′, and is secured to the block A′ by rods *a a*, all being constructed and arranged substantially as described.

2. The compound brace E, when the same is arranged and applied substantially as described.

3. The double adjustable brace F, when the same is secured to the block G and applied to the fence, substantially as described.

4. Introducing, midway the panel, an intermediate support H, when the same is arranged so as to operate substantially as described.

5. A fence, consisting of panels C C′, connected by coupling-bars D D′, post A, braces E F, and intermediate support H, when the whole is so combined and arranged, substantially as described.

95,597.—William E. Marsh, Jr., Plainfield, N. J.—*Water-Closet for Railroad-Cars.*—October 5, 1869.

Claim.—The hinged lid *c*, and cam *i*, in combination with the hopper *a*, pan *e*, and cam tail-piece *l*, substantially as and for the purposes set forth.

95,598.—William J. Miller and James W. Campbell, New York, N. Y.—*Moldings of Wood.*—October 5, 1869.

Claim.—A molding, constructed substantially as herein specified.

95,599.—Elie Moneuse and Louis Dufarquet, New York, N. Y.—*Coffee-Pot.*—October 5, 1869.

Claim.—1. The movable foraminous coffee-holding piston, formed with the botton *n*, lids *p*, sides *o*, and provided with a handle, in combination with the coffee-holding cylinder *b*, into which said piston fits, as and for the purposes set forth.

2. The thermometer *k*, glass tube *l*, and divisions applied to and combined with the coffee-holding cylinder *b*, in the manner and for the purposes set forth.

95,600.—Charles Muhl, Bloomington, Ill.—*Washing-Machine.*—October 5, 1869.

Claim.—1. A cylinder for washing-machines, constructed as herein described, of the heads *a a* and troughs *e e* and *i i*, the said troughs opening alternately into and outward from the cylinder, substantially as and for the purposes herein set forth.

2. In combination with a wash-boiler, a revolving cylinder, when constructed substantially in the manner described, and for the purposes set forth.

95,601.—Gordon Hall Nott, Boston, Mass.—*Boiler-Furnace.*—October 5, 1869.

Claim.—The construction and arrangement of the protective walls *e* and *f f*, all facing the fire, with their concave sides before the tube-sheet in the furnaces of boilers, for the purpose as fully set forth and described.

95,602.—W. B. Noyes, Manchester, N. H., assignor to himself and C. S. Baker, same place.—*Saw-Teeth.*—October 5, 1869.

Claim.—A saw provided with a steel dovetail point *b*, substantially in the manner and for the purpose described.

95,603.—Elijah S. Pierce, Hartford, Conn.—*Screw-Feeding Apparatus.*—October 5, 1869.

Claim.—1. The arrangement of the springs *e e*, sliding bar *e*, and conductor *a*, constructed and operated as described, for the purposes set forth.

2. The combination of the conductor *a*, shield *a'*, sliding bar *c*, with its springs *d*, and the springs *e e*, the whole constructed, arranged, and operating as described, for the purposes described.

3. The plunger *i*, moved as described, in combination with the conductor *a*, both parts being constructed as described, for the purpose described.

4. The combination of all the parts mentioned in the preceding claims, the whole being constructed and operating as described, for the purpose described.

95,604.—John B. Read, Tuscaloosa, Ala.—*Construction of Ordnance.*—October 5, 1869; antedated September 27, 1869.

Claim.—In the construction of ordnance, shafts, axles, cylinders, and the like, of concentric coils or cylinders, applied to a central tube or core, in the manner described, providing channels or spaces for the introduction of the melted metal or alloy between the several coils or cylinders by previously grooving or corrugating the surface or surfaces of the plates to be coiled, or of the cylinders to be applied; or by holding the successive coils or cylinders apart from each other by the interposition between them of studs or points, as described, and then filling said grooves, channels, or spaces, as well as all other interstices, with melted metal or alloy, in the manner substantially as set forth, whereby the full strength and tension of the metal composing the enveloping-coils or cylinders may be secured while the whole mass is firmly consolidated by bronze or other alloy.

95,605.—Victor Rillet, Hoboken, N. J.—*Sirup for Flavoring Beverages, &c.*—October 5, 1869.

Claim.—The within-described sirup, made of the ingredients, and compounded substantially as described.

95,606.—Henry E. Rogers, South Manchester, Conn.—*Calendering-Machine.*—October 5, 1869.

Claim.—1. The rotary arms or cylinder *d*, secured upon the shaft *d'*, having the calender-rolls *x* arranged thereon in combination with the cylinder formation *b* and plate *b'*, substantially as set forth.

2. The feed-rollers *h h*, constructed as described, and for the purpose set forth.

3. An elastic or rubber pad, g^2, in combination with rotary arms or cylinder *d*, substantially as and for the purpose set forth.

95,607.—J. R. Rude, S. B. Rude, and G. W. Rude, Liberty, Ind.—*Grain-Drill.*—October 5, 1869.

Claim.—1. The seed-wheels, so constructed that the bearings come on shaft *h*, in the center of seed-wheels, for the purpose substantially as described.

2. The counter-shaft *m*, receiving motion from the driving-wheel H, by means of wheels N K and chain-belt L, substantially as set forth.

3. The standards *r*, furnished with shovels or hoes, and braced with rods *x*, when constructed substantially as described.

4. The counter-shaft *m*, in combination with hangers *o o*, as and for the purpose specified.

5. The hangers *o o*, arranged for accommodating the gearing in the manner described.

6. The counter-shaft *m*, in combination with wheels *p*, *j*, and *w*, and lever *t*, when arranged in the manner set forth.

7. Cases *i*, the seed-wheels *n*, pinions *j* and *p*, the chain L, toothed wheels *k* and N, and driving-wheel H, the whole combined and arranged as and for the purpose set forth.

95,608.—John Schaffer and Emanuel Stoner, Westminster, Md.—*Cider-Press.*—October 5, 1869.

Claim.—1. The beam *e''*, combined with the hook *e'''*, link *d'*, follower-beam C, and guide-bar *a*, substantially in the manner and for the purpose set forth.

2. The eye *e*, links *e d*, hook *e'*, lever D, guide-bar *a*, and follower-beam C, all combined as and for the purpose explained.

95,609.—Edward M. Shield, Cincinnati, Ohio—*Snag-Boat.*—October 5, 1869.

Claim.—1. The provision, in a snag-boat, of one or more steam-engines, adapted to operate the hoist independently of the main propelling-engines of the boat, substantially as and for the purpose set forth.

2. The pair of drag-chain booms B, having the oblique sheaves *b*, as and for the purpose designed.

3. The provision, in a snag-boat of a series of cross-cut-saws, U, at suitable intervals along one of the nearer or adjacent sides of the hulls, and each operated by an independent engine, as set forth.

4. The provision, in this connection, of the derrick or shears 5, for the purpose stated.

5. The sheaves 1 2, arranged and located as and for the purpose stated.

6. The arrangement of rollers H and inclined planes I, as described.

95,610.—Warren P. Sigsby, Delta, Ohio.—*Compound for Curing Toothache.*—October 5, 1869.

Claim.—The paste or pellets herein described, compounded of the ingredients and in the manner substantially as herein specified.

95,611.—Anthony Smith, Shellsburgh, Pa.—*Hay-Elevator.*—October 5, 1869.

Claim.—The arrangement within the mow, of the blocks C E, hoisting-rope D, guide-rope G, shifting-rope H, and staples *a a*, all substantially as shown and described.

95,612.—Daniel E. Somes, Washington, D. C.—*Refrigerator, Sideboard, and Room-Cooler.*—October 5, 1869.

Claim.—1. The movable shutter A^2 or its equivalent, and pipe A^3, in combination with the circulating-spaces A^1 and openings H', as set forth.

2. The combination of the ice-chest B, liquid-chambers D, and sideboard-shelf D^2, as set forth.

3. Refrigerating-compartments, with circulating-spaces between them, cooled by means of air or water surrounding them, and having air from the ice-box excluded from within them, substantially as described.

4. Separate air-tight compartments, surrounded by cooled air on all sides but the front, substantially as described.

5. The ice-box, water-tank, liquid-cells, refrigerating-chambers and drawers, circulating-spaces, ventilating-pipes and tubes, registers, and dampers, or their equivalents, in combination, substantially as described, and for the purpose set forth.

6. Ventilating-tubes and flues, shutters A^2, ventilating-pipes A^3, and ice-box B, all arranged as described.

95,613.—Daniel E. Somes, Washington, D. C.—*Air-Pump.*—October 5, 1869.

Claim.—The delivery-valve E, eduction-valve C, nozzle A', stuffing-box, and piston-rod B' in combination with the cylinder A and piston B, substantially as described.

95,614.—Robert Spear, New Haven, Conn.—*Apparatus for Transmitting Power by Means of a Fluid Passed through a Pipe or Tube.*—October 5, 1869.

Claim.—1. The within-described improvement in transmitting power by means of a fluid passed

through a tube or tubes, with diminished connection, substantially as described.

2. The pipe or pipes through which a fluid is transmitted from an engine or power-source to the machinery designed to be operated upon, or to the desired terminus with any form of engine, when said pipe or pipes are united with diminished connections, or provided with contractions, substantially as and for the purpose set forth.

95,615.—JOSEPH STEINHAUSER, Lancaster, Pa.—*Sleeves for Overcoats, &c.*—October 5, 1869.

Claim.—A coat having one or both sleeves provided with a pocket, substantially as shown and described, and for the purpose specified.

95,616.—SIDNEY M. STEVENS, Elwood, Ill.—*Grain-Drier.*—October 5, 1869.

Claim.—1. Tubes S and S″ and T, in combination with fans *f* and *f″*, arranged to operate substantially as and for the purpose set forth.

2. Heater A, constructed as described, in combination with tubes S S″ and T, fans *f* and *f″*, the whole arranged to operate substantially as and for the purpose specified.

95,617.—CHARLES M. STRAUSS, Memphis, Tenn.—*Process of Forming Letters, Characters, and Ornaments on Glass.*—October 5, 1869.

Claim.—1. The herein-described process of forming letters, characters, or ornaments on glass.

2. The use of movable type, characters, figures, or designs of any kind, in combination with paraffine or any equivalent material, for the production on glass of letters, characters, or ornaments, in the manner substantially as herein described.

95,618.—JAMES A. STRONG, North Woleott, Vt.—*Dish-Washer.*—October 5, 1869.

Claim.—The duplex, eccentric, soft packing I J, arranged, as represented, relatively to the shaft C and its connections, and to the fixed ring E, on the vessel M, as and for the purposes herein described.

95,619.—WILLIAM H. TRIMMER, Round Hill, Pa.—*Grain-Drill.*—October 5, 1869.

Claim.—1. The hinged frame A′, provided with pins *v v*, wheels *k k*, and coverers *w w*, in combination with the main frame A, all arranged to operate substantially as described.

2. A seeder and cultivator constructed with seed-boxes *d d*, *g g*, slides C C, adjustable frame A′, wheels *k*, casters L L, shovels *n*, forked hoes *w*, the whole combined and operated substantially as set forth.

95,620.—LUCIUS J. VANSANDS, Chicago, Ill.—*Hotel-Annunciator.*—October 5, 1869.

Claim.—1. The cams N, so constructed that they begin to act upon the pins O as soon as the wires begin to draw, substantially in the manner and for the purpose set forth.

2. The rods R, having one end bent at right angles, and having the slotted plates P secured to them, in combination with the pins O and lever V, when used substantially as specified.

3. The levers B, V, and L, bell K, hammer C, rods R, slotted plates P, cams N, arm X, pins O, handle W, springs G and H, and D, when arranged and combined to form a hotel-annunciator, substantially as described.

95,621.—AUGUSTUS WEYERMANN, Saint Gall, Switzerland.—*Pipe-Connection.*—October 5, 1869.

Claim.—1. The pipe *a*, provided with segmental lips, or flanges, in combination with the removable collar *b* and bolts *d*.

2. The pipe *a*, provided with segmental lips, or flanges, in combination with the collar *b*, connecting-piece *c′*, and bolts *d*.

3. The pipe *a*, provided with segmental lips, in combination with the collar *b*, connecting-piece *c*, intermediate piece *g*, and bolts *d*.

95,622.—N. S. WHIPPLE, Detroit, Mich.—*Spring for Beds, Berths, Car-Seats, &c.*—October 5, 1869.

Claim.—The combination of the springs B B, the continuous wire C, or independent wires D D, the whole being so arranged as to operate substantially as described.

95,623.—HENRY R. ROBBINS, Baltimore, Md., assignor to himself and J. J. MORAN.—*Boiler for Cooking-Stoves.*—October 5, 1869; antedated September 21, 1869.

Claim.—In connection with an oblong boiler, A, constructed and adapted to occupy the rear end of the stove, as described, the pipes C D, the cock F, the water-back B, and the glass pipe E, when said parts are each constructed and employed in the manner set forth, the whole forming a single boiling-apparatus for cooking-stoves, substantially as described.

95,624.—WILLIAM THORPE, Saint Louis, Mo.—*Mode of Applying Inks of Different Characters, so as to Print Safety, Revenue, and other Stamps.*—October 5, 1869.

Claim.—1. In the printing of stamps for internal-revenue, postal, and other purposes, the combination of the two inks described, or of any other two inks, of whatever ingredients and proportions thereof composed, provided that one of the inks shall have sufficient affinity for the acids, while the other shall have a like affinity for the alkalies, and the two shall produce substantially the results described, substantially in the manner described.

2. The using of any two inks of decidedly different colors and of materially different chemical affinities, one for the acids and the other for the alkalies, so that while one of them will be destroyed by the action of the acids, the other will be destroyed by the action of the alkalies, and the imprinting the ground color upon the stamp with one ink, and by another operation imprinting the letters, vignette, or other devices with the other ink over and upon the first impression, so as to commingle the tints and colors of the two upon the face of the stamp, for the purpose of preventing the removal of the ink used in canceling, without also destroying at least one of the inks used in printing the stamp, and as a means of increasing the difficulties of counterfeiting the same, when used and done substantially in the manner described.

3. In combination with the described mode of inking or coloring the paper of the stamp, paper sized with any material which is delicately sensitive to the action of chemical solvents, so that an attempt to remove the ink used in canceling, by the use of either an acid or an alkali, will result in the destruction of the sizing, as well as one of the inks of the engraving, substantially as set forth.

4. The described stamp for internal-revenue, postal, and other purposes, made substantially as described and set forth, as a new article of manufacture.

95,625.—K. MCRAE, New York, N. Y.—*Hoop-Skirt.*—October 5, 1869.

Claim.—The combination of a skirt-tape, A B, formed with pockets, with the hoop C and clasp D *d*, as described, when the latter is inserted within the said pocket or pockets, between the hoop and the front side of the tape, thus concealing its body, while its prongs grasp the hoop at each end of the said pocket, substantially as before described.

95,626.—THOMAS ANTISELL, Washington, D. C.—*Ink for Printing Revenue, Postage, and other Stamps, so as to Secure Greater Safety and Prevent Frauds.*—October 5, 1869.

Claim.—1. An ink, composed as described, having for its basis a salt of copper, or other metal acting similarly, as set forth.

2. An ink, having for its basis a sensitive vegetable color, acting in the manner and for the purposes set forth.

3. The combination of a vegetable-color ink, as described, with the metallic ink, set forth, on the same print by successive application.

95,627.—ALEXANDER ALLAN, New York, N. Y.—*Boring-Tool.*—October 12, 1869.

Claim.—1. The triangular tool H, with the pyramidal point working in the guide G, with the necessary eccentricity to reach the angles of the guide, as described.

2. The combination and arrangement of the clamping-box B, hollow standard E, tool-stock I, and tool H, in the manner and for the purpose described.

3. A tool, constructed as described, for boring rectangular and other angular holes, by having an eccentric movement or "play" communicated to it by the operator, in the manner set forth.

95,628.—Henry Andes, Wilkesbarre, Pa.—*Pneumatic Apparatus for Drawing Ale.*—October 12, 1869.

Claim.—The arrangement of the air-compressing vessel number one with its inlet and outlet cocks, 1 and A, the perpendicular tube or cylinder with the cock S, and enlargement number three, the cock N, and the cocks E and O, and connecting-pipes, all substantially as shown and described.

95,629.—Solomon Andrews, Perth Amboy, N. J.—*Velocipede.*—October 12, 1869.

Claim.—1. Two wheels A A, of equal diameters, arranged in a right line, the one forward of the other, and connected together by a connecting-rod, B, on each side, attached to crank-pins C, on the spokes of the wheels, to which connecting-rod the power is to be applied for driving the machine.

2. The combination, with the connecting-rods B B, of the cranks E and the standard G, substantially as hereinbefore set forth.

3. The combination of two driving-wheels, of equal diameter, fore and aft of each other, with two wheels, one on each side, in a cruciform plan, which will make it a four-wheel machine, and which side wheels, being depressed, will make it run on three wheels, so as to turn it around, and when they are elevated, making it run on two wheels, like a bicycle.

95,630.—V. M. Baker, Preston, Minn.—*Water-Wheel.*—October 12, 1869.

Claim.—1. The compound buckets F G, formed by the combination of the long double-curved buckets F and the short buckets G with each other and with the body of the wheel, substantially in the manner herein shown and described, and for the purpose set forth.

2. The gates J, formed with curved inner ends and with the projecting arms K, connected with the hoisting-ring L, by means of the rods M, whether the connecting-bars N be used or not, substantially as herein shown and described.

3. The straight chute-plates H, in combination with the gates J and case E, substantially as herein shown and described, and for the purpose set forth.

4. The rim a^2 of the wheel A, when constructed as herein shown and described, that is to say, with an incline or flare from the upper curve of the long buckets F, to the top of the wheel, substantially as herein shown and described, and for the purpose set forth.

95,631.—William C. Banks, Como Depot, Miss.—*Hay and Cotton Press.*—October 12, 1869.

Claim—The arrangement of the four levers L L L L, two at each end of the beam G, pivoted, at their upper end, to the frame of the press, and connected, by chains *g g*, or equivalent device, to the ends of said beam, substantially as and for the purposes specified.

95,632.—James H. Barker, Washington, D. C.—*Reel.*—October 12, 1869.

Claim.—The combination, with the arms B, of the slides D, the folding claws C, and the springs E, all arranged and operating substantially in the manner and for the purpose set forth.

95,633.—Arad Barrows, Philadelphia, Pa.—*Bath-Tub.*—October 12, 1869.

Claim.—An interiorly-enameled cast-iron vessel, having the curved surfaces adapted to receive and retain the enamel, and the vertical projection or tongue *g* to fit the grooved case, for the purposes and substantially as herein specified.

95,634.—Daniel P. Bartlett and Alfred Adams, Chagrin Falls, Ohio.—*Roofing-Fabric.*—October 12, 1869.

Claim.—1. The combination of shellac-coated paper, or felt, with an oleaginous paint and cement, or either of them, substantially as set forth.

2. The application of shellac to paper, cloth, or felt, singly therewith, preparatory to the application of a coating of oleaginous paint, or in combination with said paint, substantially as described and for the purpose specified.

95,635.—Carl August Baumgart, Allegheny City, Pa.—*Lubricator.*—October 12, 1869.

Claim.—The combination of a strainer, C, located between the cap and body of the cup, to arrest the impurities of the oil as it flows into the vessel, with a cup, A, to serve as a reservoir, to retain the oil while it is being fed to the object intended, and the tubes *d f*, to graduate the discharge of the said oil with greater or less rapidity, all being arranged, with respect to each other, as shown and described.

95,636.—Robert Batting, Albany, N. Y.—*Base-Burning Stove.*—October 12, 1869.

Claim.—The combination of the convex cap R with the upper end of the pipe F, to distribute the coal as it passes from the reservoir K, substantially as herein shown and described.

95,637.—William Baxter, Newark, N. J., assignor to William D. Russell, same place.—*Steam-Engine.*—October 12, 1869.

Claim.—1. The combination, with each of two or more steam-cylinders, which operate at different pressure, and exhaust one into the other, as specified, of a boiler which shall generate steam at a pressure corresponding with that at which its cylinders are to work, substantially as herein described.

2. The combination, with a series of two or more engines, working at different pressures, and united so that each cylinder shall exhaust into the cylinder having the next lower pressure, of a series of two or more boilers, arranged substantially as herein described, whereby the fire, and other products of combustion, shall pass from one boiler to the other, and produce in said boilers pressures corresponding with those in their respective cylinders, substantially as set forth.

3. In a series of two or more engines, combined with two or more boilers, operating at different pressures, as described, driving the piston of the second or subsequent cylinder by means of steam generated in that boiler having a corresponding pressure with said cylinder, in conjunction with the exhaust steam from the cylinder immediately preceding, the one supply of steam being auxiliary to and complementary of the other, as set forth.

4. Feeding the water to a series of two or more boilers, generating steam at different pressures, and united, as described, by causing the water to first enter the lowest-pressure boiler, and feeding it thence to the higher-pressure boilers, substantially as herein specified.

5. The herein-described arrangement of the high and low pressure engines, and their corresponding boilers or steam-generators, the same being constructed and connected together, substantially as shown and set forth.

95,638.—Edgar M. Birdsall, Penn Yan, N. Y.—*Harvester-Cutter.*—October 12, 1869.

Claim.—1. Attaching the cutters of a reaping or mowing machine to the cutter-bar, substantially in the manner shown and described; that is to say, by means of the plate B, orifice D′, rivet F, and hooks C, or either of their equivalents, substantially as herein described.

2. The button, having a depression upon the under side of its head, engaging with a corresponding projection upon the top of the cutter, to prevent the turning of the button when the machine is in use, substantially as herein shown and described.

95,639.—Byron Bisbee, North Waterford, Me.—*Grindstone-Frame.*—October 12, 1869.

Claim.—The described arrangement of the stone B, gear *a*, gear *d*, shaft *e*, friction-rollers *f g*, and water-receptacle *h*, with its valve and spout, as and for the purposes herein described.

95,640.—John Stricker Bradford, New York,

N. Y.—*Ore-Concentrator and Amalgamator.*—October 12, 1869.

Claim.—1. The construction and form of concentrator and amalgamator, in the combination of all their parts, and in the combination of the two as one machine, either being convertible into the other, as before described in this specification.

2. The wheel-arms, in their alternating sections, constructed alike for both concentration and amalgamation purposes.

3. The concentrating-chamber.

4. The waste, as arranged at *h* and *g*.

5. The water-discharge, as at *w*.

6. The valve-discharge, as at *x*, in the amalgamator, all constructed substantially as herein described, and for the purpose set forth, but not confining myself to absolute dimensions or materials, or relative positions of the points of feed or discharge

95,641.—James B. Brewster, Flushing, N. Y.—*Draught-Bar for Vehicles.*—October 12, 1869.

Claim.—The whiffletrees, evener-bars, and other draught-bars of vehicles, made of wood, with metal plates inserted in the wood, between the layers or cheeks of the same, substantially as herein shown and described.

95,642.—James B. Brewster, Flushing, N. Y.—*Supporting-Bars for Vehicles.*—October 12, 1869.

Claim.—The axle-beds and other supporting-bars of wheeled vehicles or sleighs, provided with metal plates *b*, which are interposed vertically between two layers or cheeks of wood, substantially as herein shown and described.

95,643.—James Bridger, Newark, N. Y.—*Railway-Rail Chair.*—October 12, 1869.

Claim.—A symmetrical railroad-chair, constructed substantially as herein set forth; that is to say, of two plates, *a* a^1 *b* b^1, each having a flat base and one lateral flange, formed as described and shown, and the lower plate provided with a recess or socket, *e*, to receive the edge *m* of the upper plate, when employed in connection with spikes driven through holes *c c*, arranged as described, the whole constituting a chair to receive and securely hold the rail, substantially in the manner specified.

95,644.—Warren Brown, Sandusky, Ohio.—*Heat-Radiator.*—October 12, 1869.

Claim.—1. The star *b b b b b*, Fig. 1, as described.

2. The star *g g g g*, Fig. 2, and *g*, Fig. 4, as described.

3. The bottom *c c*, and the surrounding side *a a a a*, the pipe *d d d*, the plate E, and the cover I, in combination with the star *b b b b b*, and with each and every other member of this combination, as described.

4. The bottom *f f*, and the surrounding side *f f f f*, and the pipe *h*, and the cover K, in combination with the star *g g g g*, Fig. 2, and *g*, Fig. 4, and with each and every member of this combination, as described.

5. The combination of the combination with the star *b b b b*, with the combination with the star *g g g g*, Fig. 2, and *g*, Fig. 4, as described.

6. The pipes *j j j*, Fig. 2, and *j j*, Fig. 4, in this combination, substantially as described, and for the purposes herein set forth.

95,645.—J. Brunner, New York, N. Y.—*Casting Hollow Articles.*—October 12, 1869.

Claim.—Making hollow castings by inserting in molten metal a chill-mold, A, having an air-passage or passages, *c*, in its upper side, and passage or passages B in its lower side, and then withdrawing the same when the shell is formed, to allow the central or unchilled portion of metal to escape, substantially as herein set forth.

95,646.—William Bunton, Pittsburgh, Pa., assignor to himself and George W. Jope, same place.—*Blank for Ax-Polls.*—October 12, 1869.

Claim.—As a new article of manufacture, a bar of iron, rolled to the shape of a continuous undivided series of blanks for "ax-heads," the fiber of the metal running lengthwise of the bar and ax-poll, as herein described.

95,647.—Hiram M. Burdick, Ilion, N. Y.—*Hay-Tedder.*—October 12, 1869; antedated May 19, 1869.

Claim.—In combination with the rocking fork-rod D, the continuous double-flanged cam *r*, roller *s*, bar J, and crank *t*, constructed and arranged to operate substantially as described, for the purpose set forth.

95,648.—Victor H. Buschman, Baltimore, Md.—*Velocipede.*—October 12, 1869; antedated September 29, 1869.

Claim.—1. The arrangement of the seat-frame E, suspended beneath a cranked axle, C, of transporting-wheels A A, and sustained at a point in rear of seat S, upon supporting-wheel F, substantially as described.

2. The tubular hand-slides *h h* on cranks C′ C′ of axle C, in combination with pawls applied to these cranks, and ratchets applied to the wheels A A, and a rider's seat, suspended beneath said axle, substantially as and for the purposes described.

3. The treadle or vibrating foot-board G, and connecting-rod J, in combination with the cranked axle C of two transporting-wheels, and a support for the rider, beneath this axle, substantially as and for the purposes described.

4. The flanged collars *n n*, applied to the hubs of wheels A A, and adapted to serve as ratchets for pawls *b b* on cranks C′ C′, and also as a means for suspending the front part of seat-frame E beneath the axle C, substantially as described.

95,649.—C. A. Buttles, Milwaukee, Wis.—*Stove-Pipe Thimble.*—October 12, 1869.

Claim.—A ring, head, or cylinder for stove-pipe holes, composed of an upper and an under cast-iron rim, with openings through them, as and for the purpose described, the upper rim flat and flanged, the under one conical or flaring, and the two held together and sustained by the outer band C and the inner band D, as described and represented, and for the purposes and objects set forth.

95,650.—C. A. Buttles and Dennis Murphy, Milwaukee, Wis.—*Machine for Bending Sheet-Metal for Cornices, &c.*—October 12, 1869.

Claim.—1. In a machine for bending sheet-metal cornice, the combination of the bed, clamp, and hinged wings or sides D E, arranged and operating in the manner herein described and represented.

2. In combination with the bed, clamp, and hinged wings or side-pieces, the removable and replaceable pattern-pieces *g h*, or their substitutes, for forming the smaller members of cornice, substantially as herein described.

95,651.—H. B. Cage, Madison Station, Miss.—*Cotton-Chopper and Scraper.*—October 12, 1869.

Claim.—1. Attaching the chopper K, and its shaft J, to an ordinary plow-beam, by means of the bent arms M M′ and screw-nuts *o o*, the several parts being combined and arranged substantially as and for the purposes specified.

2. Attaching the scraper N to the standard C by a shank or landside, N′, and a bolt, *n*, arranged as set forth, so that by means of a vertical rod, P, and screw-nut, *p*, operating in connection with said parts, as described, the inclination of the scraper can be adjusted at pleasure.

3. The device as a whole, consisting of the beam A, plate G, wheel H, rim I, shaft J, chopper K, arms M M′, scraper N, post C, rod P, brace D, handles B B, and round E, all constructed and operating substantially as and for the purposes specified.

95,652.—A. H. Clark, Otisville, Mich.—*Car-Coupling.*—October 12, 1869.

Claim.—1. In combination with the draw-head of a railroad-coupling, the block B, operating on inclines in the chamber E, substantially as shown and described, and for the purposes set forth.

2. The arrangement of the block B and chamber E, in combination with a railroad-coupling, substantially as shown and described.

95,653.—William H. T. Clark, San Francisco, Cal.—*Steam-Engine.*—October 12, 1869.

Claim.—1. The elongated piston I, and the stationary packing-rings L, substantially as and for the purpose herein described.

2. The interior linings or cylinders H, made larger than the piston, and the false heads F F, substantially as herein described.

3. Forming the packing of one or more series of rings, placed loosely within a case which is stationary in the cylinder, substantially as herein described.

4. Constructing the piston so that steam can be admitted at any point in the cylinder within its stroke, and allowed to circulate around the piston, substantially as herein described.

5. The valve C, having the double walls O O, substantially as herein described.

95,654.—S. Clough, Monmouth, Me. — *Roof-Bracket.*—October 12, 1869.

Claim. — 1. The compound vertical upright C, formed by a combination of bar D, slotted adjustable bar E, and clamping-screw and nut E, as set forth.

2. The combination, with a rigid metallic strap, H, of a hinged base-plate, G, centrally perforated claw I, and binding-screw J, all operating as described, to fasten a wooden bar, horizontally or vertically, to a shingle roof.

3. In combination with a roof-bracket, the adjustable hinge-connection, as seen at K, substantially as described.

4. A right-angled roof-bracket, consisting of the rigid horizontal bar B slotted near one end, and provided at the other with a fastening-device, and an upright, C, perpendicular thereto, and adjustable in altitude, all as specified.

95,655.—George L. Coburn, Hartford, Conn.—*Calendar.*—October 12, 1869.

Claim.—The removable calendar-card C, in combination with the permanent back B, and clips *l m n o*, when the several parts are arranged and constructed, with reference to each other, substantially as and for the purpose described.

95,656.—J. K. Collins, Hartford, Vt.—*Hay-Tedder.*—October 12, 1869.

Claim.—1. The combination of the crank-shaft, arms, fork-handles, pivoted rings, swiveled brackets, and tilting-frame, all operating together in the manner described.

2. The combination of the bent lever J, connecting-bar K, and curved rack or catch-bar L, with the frame F, and tilting-frame H, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the lever B′ and bent lever A′ with the spur-wheel Y and frame F, substantially as herein shown and described, and for the purpose set forth.

95,657.—Nathan Cope, New Waterford, Ohio.—*Fruit-House.*—October 12, 1869.

Claim.—A fruit house, constructed, as hereinbefore described, with bins, the walls of which are formed of movable slats, constructed, arranged, and operating substantially as set forth.

95,658.—James Cowden, La Prairie Centre, and Daniel Brown, Akron, Ill.—*Excavator.*—October 12, 1869.

Claim.—1. Broadly, the guides D, constructed as described, to give direction to the earth when passing through elevators B, as herein specified.

2. The combination of elevators B, rim V, and scraper C, with guide D, substantially as set forth.

3. Making the guide D adjustable, substantially as herein set forth.

95,659.—E. M. Crandal, Alton, Ill. — *Hemp-Break.*—October 12, 1869.

Claim. — 1. The operating of hemp-breaks, by means of a pitman or its equivalent device, wherein the motion is made a yielding one, by means of the spring *c*, substantially as shown and described.

2. The combination of the double-acting break *a′*, its rock-shaft B, arm B′, and springs *c′*, substantially as and for the purposes set forth.

95,660.—James M. Crockett, Newbern, Va.—*Fire-Place.*—October 12, 1869.

Claim.—The arrangement of the side-plates B B, the air-chamber E, cold-air pipe G, box H, with its upper and lower dampers J and K, when constructed and arranged as herein described, and for the purposes set forth.

95,661.—Edward Davidson, Boston, Mass.—*Water-Tuyere.*—October 12, 1869.

Claim.—1. The combination and arrangement of the tuyere A, pipe-section E, section G, tank and tightening-nut K, substantially as specified.

2. The combination and arrangement of the tuyere A, pipe-section E, cap M, and nut K, when the said cap is arranged for the attachment of water-pipes P, substantially as specified.

95,662.—Job A. Davis, Watertown, N. Y.—*Steam Cheese Vat.*—October 12, 1869.

Claim.—1. The process, herein described, of applying the controlling steam for heating the milk-pans of cheese-vats, the same consisting in passing it through a textile, fibrous, or equivalent material, placed between the steam-chamber and the bottom of the pan.

2. In combination with a cheese-vat, a finely-perforated metal tube or diaphragm beneath the milk-pan, and covered with a textile or equivalent material, substantially as and for the purpose described.

3. In combination with the steam-chamber of a cheese-making apparatus, an open-mouthed bent tube, substantially as and for the purposes described.

95,663.— Otis Dean, Richmond, Va.—*Vise.*—October 12, 1869.

Claim.—1. Forming a hole for the handle in the butt-ends of the screw, and extending said ends beyond the jaws, so as to apply the lever to either end, substantially as described.

2. The combination, with the vise-jaws, of the socketed bracket C, grooved shank A, and set-screw E, as and for the purpose set forth.

95,664.—John De Frain, Philadelphia, Pa., assignor to himself and William Callahan, same place.—*Cooking-Stove.*—October 12, 1869.

Claim.—1. The vertical sliding door G, combined and arranged with the front plate F, substantially in the manner and for the purposes herein described.

2. The construction of the flues I I and I′, with vertical side-plates *f f*, in connection with the horizontal plates *e*, for gaining additional heating-surface, as above specified.

3. The curved plates *h h* on the bottom A, arranged and operating, in relation to the flues I I and I′, as above described.

95,665.—Thomas S. Dickerson, Chicago, Ill., assignor for one-half his right to Rodney M. Whipple, same place.—*Manufacture and Application of Gas from Petroleum, &c.*—October 12, 1869.

Claim. — 1. The generator, composed of steam-space E E, tubes A A, oil-space *b b*, steam-pipe D, when used for the manufacture of gas from petroleum and any other oleaginous substance, substantially as shown, and for the purpose set forth.

2. The receiver K, with piston and rod to compress the gas, substantially as shown, and for the purpose set forth.

3. The gas-holder, when combined with the use of elastic sponges, substantially as shown, and for the purpose set forth.

4. In the apparatus herein described, the introduction of superheated steam directly into the oil, for the purpose of forcing out the gas as fast as generated, and to prevent the carbonizing in the pipes, substantially as shown, for the purpose set forth.

5. The use and application of petroleum, or other oleaginous substance, for generating steam, and for heating and illuminating purposes, by the combination and process herein described, substantially as shown, and for the purpose set forth.

95,666.—Martial Dimock, Newark, N. J., assignor to Samuel S. Barnaby and David Millard.—*Apparatus for Exhibiting Photographs.*—October 12, 1869.

Claim.—The connection of the cylinders *b* and *c*, substantially in the manner and for the purpose

hereinabove set forth, and the tension-spring in the cylinder, when used in combination therewith.

95,667.—EDWARD DITHRIDGE, Pittsburgh, Pa.—*Lamp-Chimney.*—October 12, 1869.

Claim.—The within-described lamp-chimney, its lower end or base being turned over and welted, substantially as set forth.

95,668.—WILLIAM JAMES DODGE, Syracuse, N. Y.—*Evaporating Salt Water, &c.*—October 12, 1869.

Claim.—The use of currents of air forced into and discharged through the liquid to be evaporated, in connection with or as auxiliary to the ordinary boiling or solar-evaporation methods, substantially as described.

95,669.—JOHN W. DOUD, Ward's Corners, Iowa.—*Combined Seed-Sower and Cultivator.*—October 12, 1869.

Claim.—1. The combination of the vibrating stirrer-arm K with the hopper A′, the latter being constructed and adjusted, in all its parts, as shown and described.

2. The combination of the above parts, constituting the seeder, with the axle B and inclined bars J, as and for the purpose specified.

95,670.—HENRY DOUGLAS and JAMES DOUGLAS, Glasgow, Scotland.—*Machine for Making Cop-Tubes.*—October 12, 1869.

Claim.—1. The combination of the mandrel H, adjustable arm I, and bracket K, as and for the purpose set forth.

2. The combination of a mandrel, H, and supporting-roll G, with a pair of folding-rolls, L M, constructed as described, and arranged respectively, with reference to the narrow and wide flaps of the tube-blank, and to operate upon each, to fold one end of the material under the other, in the manner described.

3. The combination, with the preliminary and finishing folders L, M, N, O, and mandrel H, all operating together as described, of a brushing-roller, P, acting upon the tube at an angle to its line of movement, and causing the contiguous pasted faces of the flap edges to coincide and adhere at every point, as set forth.

95,671.—JOHN S. DUNHAM and JAMES GREEN, Saint Louis, Mo.—*Oven.*—October 12, 1869.

Claim.—1. The arrangement of the passages C and D′, extending under the full width of the oven-floors, with flues G or D′, and the passage H, extending over the full width of the oven-crown, for distributing and equalizing the heat above the oven, substantially as set forth.

2. The side flues N, with dampers *n*, to carry heated air into the baking-chamber, in combination with the flues M′ and dampers *m′*, to carry off the heated air, when necessary, substantially as set forth.

3. The air-ducts O, controlled by proper slides, combined with the passage C, flues D, and passage E′, and side flues N, to carry air into the baking-chamber, substantially as set forth.

95,672.—W. C. EDENFIELD, Savannah, Mo.—*Stone-Drill.*—October 12, 1869; antedated September 27, 1869.

Claim.—The eyes G G, constructed as described, with the screw-shanks *d*, and the internal friction-rollers *e*, and adapted for adjustment laterally in the horizontal grooved bars *c*, as herein described, for the purpose specified.

95,673.—RUSSELL FISK, New York, N. Y.—*Compound for Pavements, Roadways, &c.*—October 12, 1869.

Claim.—1. The improved compound, consisting of the ingredients above stated, mixed in the proportions as described, either in whole, or with the exceptions stated as to the oils, tar, and pitch, substantially as specified.

2. The combination of the herein-described improved compound with sand, gravel, broken stone, cinders, and other like matters, in the construction of solid pavement, artificial stone, tile, and brick, substantially as specified.

95,674.—F. R. FOSTER, Brandon, Wis.—*Grain-Separator.*—October 12, 1869.

Claim.—1. The method herein described of separating wheat from oats, or other substances of lighter specific gravity.

2. The coffin-shaped perforated trough, constructed as described, for the purposes set forth.

3. The combination of the spout, the deflectors, and the trough, all constructed as set forth, for the purpose specified.

4. Constructing the screen with a diminishing number of holes toward the lower end, as and for the purpose set forth.

95,675.—E. W. GALE, Monroeton, Pa., assignor to himself and J. G. GALE, same place.—*Horse Cant-Hook.*—October 12, 1869.

Claim.—The herein-described horse-power cant-hook, consisting of an upright, A, with hooks D D′ at different elevations, the chain E with hook F, the hook B, and fulcrum-block C, when the latter has a straight base, and the chain E is made adjustable in its attachment to the upright, all as herein set forth, and for the purpose specified.

95,676.—FRANCIS M. GARDNER, Brown Township, Ohio.—*Clod-Fender.*—October 12, 1869.

Claim.—The mode of constructing and manner of attaching a guard or clod-fender to a plow or cultivator, as shown and described.

95,677.—S. B. GARDNER, Freeport, Ill., assignor to himself and ABRAHAM H. LEEDY.—*Railway-Car-Brake Shoe.*—October 12, 1869.

Claim.—1. In combination with the friction-plate C and block A, the plate D P, for preventing the block from taking fire, as set forth.

2. In combination with the friction-plate C and plate D P, the thimbles L, put around the bolts J J, as and for the purpose set forth.

95,678.—JOHN L. GRIFFIN, Ridding, Conn.—*Coal-Ash Sifter.*—October 12, 1869.

Claim.—The arrangement of the self-feeding bottom L, in combination with the endless screw G, pulley and gear H I, chain N, rod and catch M O, and spring P, in the manner substantially as and for the purpose set forth.

95,679.—HIRAM L. GULDIN, Robeson Township, Pa.—*Soap.*—October 12, 1869.

Claim.—The manufacture of a new and improved soap, of the ingredients, in the proportions, and for the purposes set forth.

95,680.—CHARLES P. HALL, Calhoun, Ky.—*Hay-Loader.*—October 12, 1869.

Claim.—1. The arrangement of the ratchet-wheels I, and pawls, with the wheels P, the cords M, swinging arms N, pulleys Y X, loop V, and rake, all substantially as specified.

2. The combination, with the detachable rack H, of the looped cords U, block V, shaft W, blocks X Y, and trip-lever Z, when all arranged substantially as specified.

95,681.—JACOB J. HARPEL, Lebanon, Pa.—*Corn-Planter.*—October 12, 1869.

Claim.—1. The combination of the cut-off B with the wheel A, so arranged as to stop the discharge of seed when the slide or cut-off is at rest, and during its stroke to let the seed pass through the slot B′, by the operation of the seed-wheel A, substantially as set forth.

2. The wheels R and short axle fastened to the front of the boot, substantially as set forth.

3. The arrangement and combination of the pulleys O, chains L and N, lever M, boot T, and gum spring F, all constructed and operated substantially as set forth.

95,682.—BRADDOCK R. HATHAWAY, Mormon Island, Cal.—*Key-Guard.*—October 12, 1869.

Claim.—The "key-keeper," composed of the plate A and hooks *b b*, to place over the bend or rim of

the key, the cam D for fastening it, and the spring and hook for securing it to the door.

95,683.—E. W. Haven, Brandon, Vt.—*Hand Corn-Planter.*—October 12, 1869.

Claim.—1. The gauge *a* and screw *r*, in combination with the slide-valve A, substantially as shown.

2. The arrangement and combination of the lever C, slide-valves A and B, springs D and E, gauge *a*, tube H, hopper *h*, and levers G L, substantially as and for the purposes set forth.

95,684.—Henry Hayward, New York, N. Y.—*Skirt.*—October 12, 1869.

Claim.—As a new article of manufacture, a skirt composed of a fabric whose warp and weft, one or both, are partially composed of spun horse-hair yarn, substantially as described.

95,685.—Joseph C. Henderson, Troy, N. Y.—*Base-Burning Stove.*—October 12, 1869.

Claim.—1. The supply-cylinder or magazine C, constructed with double walls, inclosing the air-chamber *a a*, with the apertures *b b*, the perforated annular tube or air-chamber F, and the air-flues E and G, all arranged and combined substantially as hereinbefore specified.

2. The oven D, in combination with the cylinder C, air-chamber *a a*, and air-flue or passage E, substantially as and for the purposes hereinbefore described and specified.

3. The said oven D, cylinder C, air-chamber *a a*, cover H, apertures *g g*, and damper I, all arranged and combined substantially as hereinbefore specified and set forth.

95,686.—Samuel A. Hill and Charles F. Thumm, Oil City, assignors to themselves and Oliver P. Scaife, Pittsburgh, Pa.—*Apparatus for Heating Puddling-Furnaces.*—October 12, 1869.

Claim.—1. An apparatus for burning gaseous fuel or matter, said apparatus consisting of chambers A and B, pipes C and D, and air-inlets *e* and *f*, constructed, arranged, and operating substantially as herein described, and for the purpose set forth.

2. In combination with the above, a gas or exhalating furnace or apparatus, for supplying the chambers A and B with gaseous fuel or matter for burning, as herein described.

3. Drawing the gaseous fuel or matter from a furnace or other apparatus, and then forcing it into chambers A and B, through the medium of compressed air, as herein described, and for the purpose set forth.

95,687.—Samuel A. Hill and Charles F. Thumm, Oil City, assignors to themselves and Oliver P. Scaife, Pittsburgh, Pa.—*Device for Generating Steam in Steam-Generators.*—October 12, 1869.

Claim.—1. The construction and arrangement of the hereinbefore-described devices, for commingling in chambers A and B heated hydrocarbon, heated air and superheated steam, so as to form a gaseous or vaporous admixture for burning, substantially as herein described.

2. The combination of the pipes *e*, *f*, *g*, and *h*, and chambers A and B, constructed, arranged, and operating substantially as herein described.

95,688.—Samuel A. Hill and Charles F. Thumm, Oil City, assignors to themselves and Oliver P. Scaife, Pittsburgh, Pa.—*Apparatus for Generating Steam in Boilers.*—October 12, 1869.

Claim.—The apparatus herein described for generating steam by consuming hydrocarbon and other matter susceptible of evolution or vaporization, by commingling it, in chambers A and B, with an active current of steam or air, or active currents of steam and air combined, substantially as herein described.

95,689.—James Howard, West Manchester, Pa.—*Machine for Tarring Paper for Roofing.*—October 12, 1869.

Claim.—The arrangement of the reservoir A, windlasses B and C, adjustable rollers D, scrapers *i* and *h*, and rollers *e* and *f*, constructed, arranged, and operating substantially as herein described, and for the purpose set forth.

95,690.—Lymon Howe, Worcester, assignor to himself, Jonathan Luther, same place, and Moses W. Wheeler, Millbury, Mass.—*Road-Scraper.*—October 12, 1869.

Claim.—1. A road-scraper consisting of the shaft attached to the scraper-board at E, the arc A, pivoted also to the board, and having holes to allow the shaft or thills to be turned aside, the ratchet-bar B and round C, turning in the handles, all constructed and arranged to operate as and for the purpose set forth.

2. In combination with such a scraper, the ears D D, as and for the purpose set forth.

95,691.—William M. Howland and George L. Howland, Topsham, Me.—*Hoisting-Apparatus.*—October 12, 1869.

Claim.—1. The combination, with the leg A, either permanently or detachably connected to the legs B, and arranged for supporting the chain shaft E in the parts D of the divided shank of the connecting-hook, as described, of the chain-shaft, ratchet-wheels, pawls, pawl-arms, pawl-lever, and connecting-rods, substantially as specified.

2. The combination, with the pawl L, of the tripping sliding spring N O, substantially as specified.

95,692.—George R. Johnson, Wilmington, Del.—*Station-Indicator.*—October 12, 1869.

Claim.—The combination of the four (4) toothed ratchet *g*, pawl *i*, and spring *j*, with the rollers *c c'* and apron *d*, when the names of the same stations are arranged on both sides of said apron in contrary series, with intervening spaces, which vary in width to compensate for the increase in the diameter of the taking-up roll, all substantially as set forth.

95,693.—Edward Kaylor, Pittsburgh, Pa.—*Drop-Hammer.*—October 12, 1869.

Claim.—One or more pins *o o'*, projecting from a revolving disk or arms, on the end of a horizontal shaft, *h*, in combination with a vertical drop-shaft *e*, and its bracket, *m*, so arranged that the pin or pins, in revolving to raise the drop-shaft, shall operate during one-half of its revolution, substantially as and for the purposes hereinbefore described.

95,694.—James Kievlan, Chicago, Ill., assignor to himself and William Wisdom, same place.—*Lathe.*—October 12, 1869.

Claim.—1. The stationary rest W, provided with a series of slotted studs, 1, 2, and 3, for sustaining and operating the cutters *h*, when constructed and operating as described.

2. The tool-holder X, provided with cutter *h*, thumb *j*, and steady-rest *k*, in connection with spring *i*, attached to stationary rest W, when constructed and operating as and for the purposes specified.

3. The arrangement of the several devices of the head-spindle F, consisting of the chuck N, the spring O, the pin *m*, and the recess *f*, when constructed and operating as shown and described, and for the purposes set forth.

4. The combination of the several devices of the tail spindle G, consisting of the chuck N', the spring O', the key-way *g*, the pin *e*, and the guide-pin P, when constructed and operating as and for the purposes described.

95,695.—John King, Warren County, Ohio.—*Liniment and Medical Compound.*—October 12, 1869.

Claim.—The preparation of a medical compound, which I denominate "King's Magic Ohio Liniment," of the ingredients, in the proportion, and for the purposes set forth.

95,696.—Emil Kunzendorf, New York, N. Y.—*Fire-Proof Paint.*—October 12, 1869.

Claim.—The fire-proof paint, composed of the ingredients substantially as herein described.

95,697.—M. C. Lawless, Montana, Iowa.—*Railway-Car.*—October 12, 1869.

Claim.—Clamping the timbers B to the stringers.

A by detachable clamps, substantially as herein shown and described.

95,698.—George A. Lloyd and Charles A. Stewart, San Francisco, Cal.—*Anchor.*—October 12, 1869.

Claim.—In combination with anchors having movable arms, flukes, or palms, the barb, beak, or projections *a a*, substantially as described.

95,699.—William W. Loomis, Wilkesbarre, Pa.—*Railway-Brake.*—October 12, 1869.

Claim.—The revolving brake-wheels A, A′, or A″, at either or both ends of a railroad-car, mounted upon the adjustable axle-tree B, to operate upon the car-wheels 1′, 2, by means of the slots *u* or *u′*, suitable springs *s s″*, wire ropes or chains *c c c*, or by any other suitable devices employed for working car-brakes.

95,700.—Ellis Luther, West Troy, N. Y.—*Machine for Wiring Hinges.*—October 12, 1869.

Claim.—1. The combination and arrangement together, in the manner described, of the jaws K L, discharging-follower *e*, and the mechanism by which the movable jaw L is advanced and retracted.

2. The combination of holding-jaws K L, with block J, slatted side P, recessed rotating cylinder O, hopper M, and reciprocating plunger I, all constructed and arranged as set forth.

3. The receiving-plate J and movable jaw L, in combination with the slatted side P, the recessed rotating blank-feeder O, and hopper M, all constructed and arranged as specified.

4. The construction and arrangement, with the reciprocating plunger I, of movable rest-blocks *g*, and chains *n*, as and for the purpose specified.

95,701.—Peter Lutteke, Saint Louis, Mo.—*Vehicle Propelled by Hand.*—October 12, 1869.

Claim.—The hand-lever I, combined with the vibrator L and N by the toggle-links *i* i^1 i^2 i^3, the fulcrum K, and rods L′ and N′, collar M and crank B′, operating substantially as and for the purposes set forth.

95,702.—Benjamin F. Mann, Oakland, Cal.—*Chimney.*—October 12, 1869.

Claim.—The combination, with two or more metallic chimney-flues, E and F, of a base-section, A, provided with a removable partition, consisting of the vertical plate G, the horizontal plate *g*, having openings *h*, and the cross-plate *i*, the same being constructed and arranged substantially as herein described.

95,703.—William P. Martin, Millersburgh, Ky.—*Apparatus for Imparting Age to Whisky and other Spirits.*—October 12, 1869.

Claim.—The swinging-frame A, in combination with shaft D and crank-axle E, the whole operated as described.

95,704.—William C. Mason, Beaver Falls, Pa., assignor to himself and J. H. Nichols, same place.—*Lock-Nut.*—October 12, 1869.

Claim.—In combination with the right and left-hand nuts C B, and the bolt A, the washer D, substantially as described, for the purpose specified.

95,705.—Mark McCammon, Chicago, Ill.—*Railway-Car-Axle Box.*—October 12, 1869.

Claim.—1. The combination of the inclined notched block G and the adjustable notched wedge H, either with or without the strips *i j*, with the shell A and journal-box F, substantially as herein shown and described, for the purpose specified.

2. Adjusting the lateral movement of the axle to regulate the motion of the cars from side to side, substantially as herein shown and described, for the purpose specified.

3. In combination with the shell A and axle E, the collar B, gasket C, and adjustable flanged collar D, substantially as herein shown and described, for the purpose specified.

4. In combination with the shell A, the convex projection M and convex guides N, substantially as herein shown and described, for the purpose specified.

5. In combination with the shell A, the passage or channel K, in which the oily residuum from the shell is received, and from which it is discharged, substantially as herein shown and described.

95,706.—V. K. McElheny, Pittsburgh, Pa., assignor to himself, Ernest Frank, and John B. Adt.—*Combined Pipe-Tongs and Wrench.*—October 12, 1869.

Claim.—The arrangement of the main stem *a* with the movable jaw *e*, oblique slot *g*, pawl *b*, band *h*, and lever *c*, substantially as described.

95,707.—James A. McGillivrae and C. O. Wheeler, Matteson, Ill., assignors to C. O. Wheeler, same place.—*Hay and Cotton Press.*—October 12, 1869.

Claim.—The combination of a vertically-sliding entrance-door, L, hinged upper and lower doors O P, to admit of a quick and easy discharge of the pressed bale, and the yielding end walls, all constructed and fitted together as described, to form an improved bale-pressing box.

2. The subject-matter of first clause, in combination with an oblong rectangular case or box, A, and a horizontal plunger, all as shown and described.

3. The arrangement, with the case A, of the yielding end walls V, substantially as specified.

95,708.—Albert G. Mead, Boston, Mass., assignor to himself, Charles J. Addy, and George H. Wood, assignors to Albert G. Mead, Charles J. Addy, and Milton A. Kent, same place.—*Lacing-Eye.*—October 12, 1869; antedated September 27, 1869.

Claim.—1. A transverse eye, H, and plate *c*, as described, which serve a double purpose, as a stay for the leather and for holding a loop or bight for the lacing.

2. A double lacing-eye, *f*, and plate *c*, constructed and applied in the manner and for the purpose substantially as described.

3. The combination of the transverse eye H and plate *c*, with eyelets *a*, when applied to the leather by plate *c*, for the purpose and substantially as described.

4. The combination of transverse eye G with eyelets *a*, substantially as described.

5. The combination of transverse eye G and H with eyelets *a*, for the purpose and substantially as described.

95,709.—Emil F. Meyer, Brooklyn, N. Y.—*Mode of Preparing Ornamental Transparent Letters for Signs, &c.*—October 12, 1869; antedated October 5, 1869.

Claim.—The device and making of transparent writing or painting, combining the beauty and usefulness of opaque and transparent painting, as heretofore described, using for the purpose the aforesaid ingredients and mode of process, or any other, and other material, for the same, and which will produce the intended effect.

95,710.—Elie Moneuse and Louis Duparquet, New York, N. Y.—*Coffee-Pot.*—October 12, 1869.

Claim.—The coffee-pot or holder, with the cocks *m* and *n*, introduced, the one higher up than the other, for the purposes and as specified.

94,711.—James A. Morrison, Brady's Bend, Pa.—*Railway-Car Coupling.*—October 12, 1869.

Claim.—The combination of the rods H and K, levers I and J, and rod L, with each other and with the bumper B, pivoted plates E, and springs G, substantially as herein shown and described, and for the purpose set forth.

95,712.—William F. Moore and Jacob A. Bowers, Channahon, Ill.—*Wagon-Box.*—October 12, 1869.

Claim.—The combination of the metal ends B, metal plates A, thumb-catches E, end-boards C, and side-boards D, arranged and constructed as and for the purposes set forth.

95,713.—Porter C. Moulton, New Haven, Conn.—*Neck-Tie-Retainer.*—October 12, 1869.

Claim.—As a new article of manufacture, a neck-tie-retainer, consisting of a metallic plate, with two tongues struck therefrom, and in one and the same piece therewith, as shown and described.

95,714.—J. H. MUDGETT, Camanche, Iowa.—*Grain-Binder.*—October 12, 1869.

Claim.—1. The combination, in a reaper-attachment, of the carrier E, elevator G, arms F, and stop or discharger L′, all substantially as specified.

2. The arrangement of the carrier E, bridge T, elevator G, spring-shifter treadle L, driving-shaft I, and pulleys for operating the elevators G, all substantially as specified.

3. The combination, with arm F on elevator G, of stop L, arranged to operate as set forth.

4. The rack O, arranged to swing over to and rest on the frame, as specified.

95,715.—GEORGE H. MUNROE, New York, N. Y.—*Preserving Meat for Pastry-Purposes.*—October 12, 1869.

Claim.—1. Preserving meat for pastry-purposes, by the use of saccharine sirup, substantially in manner as described.

2. Meat for pastry-purposes, prepared for preservation, shipment, and use, substantially as described.

95,716.—SAMUEL NASH, Boston, Mass., assignor to himself and JOHN M. DUNCAN, same place.—*Mode of Lubricating Journals.*—October 12, 1869.

Claim.—The combination, with the hollow journal perforated at *g*, and the retaining-nut *d*, with its corresponding perforation *h*, of the pin or screw *i*, which is inserted in said perforation, and serves not only as a plug to close the lubricating-chamber, but also as a stop to hold the nut in its proper position, as herein shown and set forth.

95,717.—PETER NOLING, Woodside, Wis.—*Wheelbarrow.*—October 12, 1869.

Claim.—1. The combination of the frame A, drive-wheel C, axle D, adjustable bearings E F, balancing-wheels G, double inclined bottom H, stationary ends I, and pivoted sides J, with each other, substantially as herein shown and described, and for the purpose set forth.

2. The ratchet O and pivoted pawl P, combined and arranged with the levers L, N, and K, as shown, whereby the sides J of the wheelbarrow may be adjusted and held open at the desired angle, to permit the discharge of the load from the car.

95,718.—JOHN D. O'CALLAHAN, Calhoun, Ga.—*Combined Wheelbarrow and Garden-Plow.*—October 12, 1869.

Claim.—1. The herein-described combination of the plow A E and wheelbarrow D G, as specified.

2. The herein-described manner of attaching the plow to the handles of the frame of the barrow, by means of the cross-piece *d*, leather strap *e*, link *f*, and braces *a a*, as shown and described.

95,719.—ALEXANDER OSBORN, Eagleville, Ohio.—*Milk-Cooler and Deodorizer.*—October 12, 1869.

Claim.—1. The combination and arrangement of the blower B, chute J, perforated or not perforated, and vat H, in the manner substantially as described, and for the purpose set forth.

2. The ice-box F, when arranged in relation to the blower B, and in combination therewith, in the manner as and for the purpose described.

3. An arrangement of devices, consisting of the wind-current generators, and a chute or chutes, as will produce a blast or current of air upon falling milk, as specified.

95,720.—J. W. PEARSON, Watertown, assignor to ALFRED B. ELY, Newton, Mass.—*Gas-Check for Ordnance.*—October 12, 1869.

Claim.—A gas-check for ordnance, constructed to operate substantially as described.

95,721.—GEORGE S. PECK, Towanda, Pa., assignor to himself and WILLIAM H. MORGAN, same place.—*Machine for Making Sheet-Metal Pans.*—October 12, 1869.

Claim.—1. In combination with a male and female die for swaging sheet-metal plates into pans, each pan being made entire out of one piece, the pulley H and sleeve N, provided respectively with the teeth *k k′* to form a clutch, the cam P on the sleeve N, the notch or recess *n* in the cross-frame J, and the spring O, all being constructed and arranged to operate in the manner substantially as and for the purpose specified.

2. Having two opposite sides or cleats C C of the female die applied in such a manner that they may be adjusted to vary the width of the spaces at the angles or corners of the female die, when said adjustable cleats are used in combination with a male die, F, arranged to operate (rise and fall) automatically, substantially as set forth.

3. The stops *o o*, on the pulley H, in combination with the buffers *p p*, substantially as set forth.

95,722.—JULIUS R. POND, New Hartford, Conn.—*Milk-Cooler.*—October 12, 1869.

Claim.—1. The construction and arrangement of the within-described milk-cooler, consisting of the inner and outer reservoirs A and B, inlet-pipe, for water, C, openings D and E, overflow-pipe F, central reservoir G, inlet and outlet pipes H and I, and spirals, Figs. 3 and 4, substantially as and for the purpose shown.

2. The combination of a movable spiral with one or more reservoirs or coolers, substantially as shown, and for the purpose specified.

3. The combination and arrangement of the pipes C and F and openings D and E with the reservoirs A, B, and G, substantially as shown and described.

95,723.—JULIUS R. POND, New Hartford, Conn.—*Milk-House.*—October 12, 1869.

Claim.—1. The arrangement of the double walls A and D, air-space E, openings *a a*, &c., and *x x*, &c., and ventilators H, for the purpose of ventilating a milk-room, substantially as herein shown and described.

2. The chamber I, rendered as nearly air-tight as practicable, by the use of double or other non-conducting walls, in combination with the mechanism for controlling the temperature of said room, consisting of the pipes *k k′* and *l*, all constructed and arranged substantially as and for the purpose shown.

3. The within-described milk-house, consisting of the double walls A and D, with openings *a* and *x*, roofs B and C, ceiling G, and ventilator H, when constructed and arranged substantially as described, and for the purpose specified.

95,724.—HENRY RAUSCH, Brooklyn, N. Y.—*Hydrant Stop-Cock Rod.*—October 12, 1869.

Claim.—The cast-iron head A, constructed substantially as herein shown and described, that is to say, recessed upon its lower edge to receive the shoulder of the valve-stem, and with an enlargement or projection, *a′*, upon its upper edge to receive the squared lower end of the rod B, substantially as and for the purpose set forth.

95,725.—F. S. REEFY and S. M. ZENT, Roanoke, Ind.—*Baking and Drying Stove.*—October 12, 1869.

Claim.—1. The radiating-drum B, provided with the return-flue, and arranged relatively to the stove, and with the air-openings C C′, all substantially as specified.

2. The arrangement, with the stove and oven F, of the inclined sides H, when provided with the air-passages I, and valves, substantially as specified.

3. The arrangement, in the side-walls, between the zinc lining G and the exterior sheet-metal, of the wood filling, substantially as specified.

95,726.—J. R. RENKIN, Hillsdale, Pa., assignor to himself and M. M. GRUMBLING, same place.—*Reversible Axle for Carriages.*—October 12, 1869.

Claim.—Providing the reversible spindle *e f* with the projections D, as herein described, and for the purpose set forth.

95,727.—EDWIN L. ROBBINS, Owego, N. Y.—*Fire-Box for Steam-Generators.*—October 12, 1869.

Claim.—The construction and arrangement of the tubular circulating cast-iron lining for fire-boxes and furnaces, with pipes B and B, substantially as herein described.

95,728.—L. M. Roby, Lcesville, Ohio.—*Foot or Bed Warmer.*—October 12, 1869.

Claim.—The arrangement herein described of the metallic heat-radiator A, with its projection E, and the cloth-covered non conducting cylindrical chamber, with its cap I and plug D, when applied as herein set forth.

95,729.—Thomas J. Rockwood, Saint Johnsbury, Vt.—*Machine for Milling the Knife-Edges of Scale-Beams.*—October 12, 1869.

Claim.—1. The notched supports *f f*, mounted in vertical guides in the blocks F^1, so that they may yield vertically downward to any required extent, being pressed upward by the action of the springs F^2, or their equivalents, the several parts being adapted to serve, relatively to each other and to the cutting-mechanism of a milling-machine, substantially in the manner and for the purposes set forth.

2. The cams *y*, and their operating-means, in combination with the yielding supports *f f*, all adapted to serve, in relation to each other and to the clamping and cutting mechanism in a knife-edge milling-machine, substantially as and for the purposes herein set forth.

3. The springs K^1, arranged, relatively to the clamps or cross-pieces H and to the supports G of a milling-machine, substantially as herein described.

4. The blocks Z^2, mounted, as represented, on the screws Z^1, and adapted to serve as represented, relatively to each other and to the cutting-mechanism of a milling-machine, for the purposes herein set forth.

95,730.—William H. Rogers, New York, N. Y.—*Friction-Match.*—October 12, 1869.

Claim.—A friction-match, with an inflammable coating applied below the ignitible end thereof, as and for the purpose specified.

95,731.—Sidney W. Rowell, Rutland, Vt.—*Screw-Propeller.*—October 12. 1869.

Claim.—The reciprocating propelling-screw, with attachments to hold it rigidly when moving in one direction, and to allow it to rotate freely when moving in the opposite direction, substantially as and for the purpose herein set forth.

95,732.—Franklyn Roys, East Berlin, Conn.—*Metallic Roofing.*—October 12, 1869.

Claim.—A roof of sheet-metal, one edge, or both, of the plates, of which is nailed through the projecting edge *d*, outside of the bent portion *c*, which forms the joint, and is connected to the adjacent sheet, as shown and described, to cover the nailed edge, substantially as set forth.

95,733.—J. Saxton and B. Saxton, Sumner, Ill.—*Process of Preparing Wool for Manufacture.*—October 12, 1869.

Claim.—The improved process for manufacturing wools into all kinds of colors and goods without the use of oil or grease in carding and spinning, substantially as herein set forth and described.

95,734.—Ph. I. Schopp, Louisville, Ky.—*Hot-Air Furnace.*—October 12. 1869.

Claim.—Connecting the pan A with the furnace B, cylinder G, forebay C, and reservoir D, in combination with float E and valve F, when arranged to operate as herein described.

95,735.—Ph. I. Schopp, Louisville, Ky.—*Boiler for Hydrating the Atmosphere of Apartments.*—October 12, 1869.

Claim.—1. Connecting the reservoir A with the air-chamber E, forebay C, and steam-chamber B, in combination with float F and valve V, when arranged to operate as herein described.

2. Connecting the apparatus in a permanent way with the top or sides of a stove, substantially as and for the purposes described.

95,736.—Charles Shea, Newark, N. J.—*Compensating or Equilibrium Spring.*—October 12, 1869.

Claim.—The spring E, when connected with the axle by straps F, and with the bearing-springs B by a rod, D, all arranged and operating as described.

95,737.—S. M. Sherman, Fort Dodge, Iowa.—*Window-Blind.*—October 12, 1869.

Claim.—1. The sliding-shaft *c*, provided with pinion b^3 and knob C, in combination with rack-segments b^2 and C′, arranged and operated substantially as described.

2. The slats a^1, constructed of sheet-metal and provided with the angular edges a^3 and a^4, as and for the purpose set forth.

3. The slats a^1, with the bars *b* and *c*, and connecting-rods b^1 and c^1, in combination with rack-segments b^2 and C′, arranged and operated substantially as described.

95,738.—Amos Smith, Springfield, Ohio.—*Harvester.*—October 12, 1869; antedated April 12, 1869.

Claim.—1. The bed-plate N, constructed with a curve, to admit of the passage and free play of the tongue, substantially as shown and described.

2. The combination of seat-support J, adjustable connecting-rod F, crank G, and hand-lever H, arranged and operating to raise the tongue and cutting-apparatus attached thereto, substantially as shown and described.

3. The combination of hand-lever H, segment S, crank G, guide-way L, and presser-foot K, operating substantially as and for the purpose described.

4. The supporting-bar O, attached flexibly, at one end to the collar of the box of the crank-shaft, and, at the other end, rigidly to the rear of the tongue and lng-plate B, substantially as shown and described.

5. The lifting-mechanism, consisting of seat-support J, adjustable connecting-rod F, crank G, segment S, hand-lever H, and bearing-chains *c* and *c′*, for raising and lowering the tongue and its attachments, by the weight of the driver and hand-lever combined, substantially as shown and described.

6. The draught-rod *k*, connecting the front of the frame with the rear of the tongue, (and its attachments,) to hold the same in position, as shown and described.

95,739.—Daniel Snell, Little Falls, N. Y.—*Permutation-Lock.*—October 12, 1869.

Claim.—1. The combination of the plates *a b c*, of which *a c* are the lock-plates, and *b* is the bolt, for constituting a lock which may serve as a door also, when said bolt is arranged to ocupy the entire space between the outer plates, to resist the introduction of powder, substantially as described.

2. In combination with the side-plates and the bolt occupying the entire space between said plates, the openings *r s t t′* in said bolt, as herein explained, the two knobs and their shanks and tumblers each forming a locking and unlocking mechanism, in connection with the sliding-bolt, one of said knobs turning and sliding, the other turning only, as and for the purpose substantially as described.

3. In combination with the plates, bolt, and knobs, or their shanks, constructed and arranged as herein described, the tumblers *h*, composed of the hubs *i* and flanges *j*, and their openings, *x*, *w*, and *l*, real and false, substantially as and for the purpose described.

4. In combination, the cheek-plates *a c* and the bolt *b*, capable of fitting and filling the space, and sliding between them, the knobs and shanks acting both as knobs and keys, tumblers, in which there are real and false openings, *x w l*, and set by permutation, the whole being arranged as and for constituting a vault or safe-lock without springs, or a removable key, substantially as described.

95,740.—Frank Sonier, Springfield, Ill.—*Distilling-Apparatus for Spirits.*—October 12. 1869.

Claim.—1. Combining two or more stills with a steam-boiler, substantially as and for the purpose specified.

2. Combining two or more stills with a doubler, H, and mash-heater D, so as to permit said stills to be alternately charged and worked off through each other and through the doubler, substantially as shown, and for the purpose specified.

3. Combining one or more stills, B or C, with the doubler H and boiler A, substantially as herein shown and described.

4. The combination of the boiler A, one or more

stills B or C, and the mash-heater D, substantially as and for the purpose specified.

5. The combination of the stills B and C, and pipes G and G′, substantially as shown and described.

6. The combination of the stills B and C, the pipes I, *i*, K, and *k*, and the doubler H, substantially as described, and for the purpose shown.

7. The combination of the pipes F and *f* with the boiler A and stills B and C, substantially as shown, and for the purpose specified.

8. The combination of the doubler H and pipe L with the mash-heater D and condenser M, substantially as and for the purpose shown.

9. The general combination of the various parts of the apparatus, substantially as shown and for the purpose set forth.

95,741.—JOHN STAINTHORP, New York, N. Y.—*Machine for Mixing Soap, Paint, Paste, and other Similar Materials.*—October 12, 1869.

Claim.—1. A mixing-vessel of spheroidal shape, rotating on its center, in combination and arrangement with two or more mixing-wheels, revolving in like or opposite directions, and in vertical planes, the whole working and operating in the manner and for the purpose specified.

2. The pipe B and valve V, in combination with the kettle or vessel A, as set forth.

3. The wheel J′, or its equivalent, that is to say, a stirring-wheel, formed of thin rims, mounted so as to present a dishing-shape, as represented and set forth.

95,742.—NEWELL D. STEVENS, Westbrook, Me., assignor to himself and O. A. HILL, same place.—*Plate.*—October 12, 1869.

Claim.—As a new article of manufacture, a porcelain, or other frangible plate, with a metal band, rim, or clamp spun upon the flange thereof, as herein described.

95,743.—DAVID P. STEWART, Spruce Creek, Pa.—*Horse Hay-Fork.*—October 12, 1869.

Claim.—The arrangement of the straight shank A, having the point B slotted, as described, the straight slides D, resting against said shank, and provided at their lower ends with the curved hooks C, crossing each other in the slot of the point B, and attached at their upper ends to the cross-head F, having the branching hooks E, the connecting-rod H, pivoted to the cross-head, and the operating-lever G, pivoted to the rod H and shank A, all as herein described and shown, for the purpose specified.

95,744.—DANIEL C. STILLSON, Charlestown, Mass.—*Wrench.*—October 12, 1869.

Claim.—1. The within described wrench, consisting of the shanks A and D, the jaws B and E, the frame C, the nut F, and the spring G, substantially as herein shown and specified.

2. The frame C, pivoted to or upon the shank A, and provided with the slotted part *c*, inclosing the shanks A and D, by means of which the jaws B and E are permitted to close upon but not crush a pipe, substantially as herein specified.

95,745.—SAMUEL STONE, North Manchester, Conn.—*Forming Horseshoe-Calks.*—October 12, 1869.

Claim.—The dies for swaging the calk, and shaping the bar, and cutting the calk therefrom, substantially as set forth.

95,746.—SAMUEL STONE, North Manchester, Conn.—*Metallic Bar.*—October 12, 1869.

Claim.—As an improved article of manufacture, a bar of iron, having a center core of steel through its entire length, substantially as shown and set forth.

95,747.—JAMES W. SYKES, Chicago, Ill.—*Railroad Grain-Transferrer.*—October 12, 1869.

Claim.—Arranging, on a car, elevating-belts, and a scale or scales, in such a manner that, by the apparatus, grain can be taken from a car, weighed, and thrown into another car, or warehouse, substantially as shown and described.

95,748.—SAMUEL TAYLOR, Georgetown, N. J.—*Shaft-Tug.*—October 12, 1869.

Claim.—1. The roller E, when applied to a shaft-tug and adapted to operate substantially as and for the purpose described.

2. As an article of manufacture, the shaft-tug above described, consisting essentially of the curved rod A, leather cover *l*, buckle *b*, iron rod *r*, and roller E, covered with rubber or other soft material, *e*′, all constructed, arranged, and adapted to operate in the manner and for the purpose substantially as described.

95,749.—STEPHEN P. THAYER, Baldwinsville, N. Y.—*Centrifugal Pump.*—October 12, 1869.

Claim.—1. The peripheral-discharge centrifugal pump, having wings K K, inclined forward toward the induction opening of the pump, substantially as and for the purpose herein specified.

2. In combination with the centrifugal wheel, constructed as above described, the two tangential discharge-openings in the case, substantially as and for the purpose herein set forth.

95,750.—JOHN R. TREADWELL, Brooklyn, N. Y.—*Oven.*—October 12, 1869.

Claim.—In combination with the "reel-oven," a steam-flue or series of steam-flues, when arranged above the mouth and below the top, substantially as described, whereby a proper steam-level is maintained to protect the face of the crackers when carried to the upper part of the oven, and the steam prevented from accumulating below said level, to interfere with drying out the crackers properly, substantially as described.

95,751.—JOHN WEICHART, San Francisco, Cal.—*Machine for Grinding Harvester-Cutters.*—October 12, 1869.

Claim.—The clamp or holder, consisting of the plates E and G, and set-screws H, in combination with the gauge I, slotted bar L, lever N, set screw P, and movable plate C, substantially as set forth.

95,752.—OTTO WUTH, Pittsburgh, Pa.—*Manufacture of Crystal Glass.*—October 12, 1869.

Claim.—The use, together with lime and sand, or other ingredients, in preparing the batch or mix for making glass, of the monohydrate of carbonate of soda, (or the anhydrous carbonate of soda,) prepared as hereinbefore described.

95,753.—MCCLINTOCK YOUNG, Frederick, Md.—*Velocipede.*—October 12, 1869.

Claim.—1. The V-shaped reach, composed of two bars A A, and provided with the upward-projecting diagonal braces E E, substantially as herein shown and described.

2. The steering-post, consisting of the bars *d d*, cross bars F *f*, and braces *g h*, all combined substantially as herein shown and described.

3. The saddle, so constructed that its pommel and cantel are connected by springs, webbing, and covering, substantially as herein shown and described.

4. The bag H, constructed as described, when arranged between the webbing *m* and covering *n*, as specified.

5. The brake I, in combination with two independent cords O and levers *y*, all so arranged that when one cord breaks, the other will serve to operate the brake, as set forth.

95,754.—FRED. T. ANGERS, Canastota, N. Y.—*Sculling-Oar.*—October 12, 1869.

Claim.—A sculling-oar, having grooved handle A, blade B, rod C, plate D, and staple *c*, constructed and arranged substantially as shown and described.

95,755.—FRED. T. ANGERS, Canastota, N. Y.—*Fish-Hook.*—October 12, 1869.

Claim.—The arrangement herein described of the hooks *h h*, hinged to the slotted tube A, rod *c*, and spring D, constructed to operate substantially as specified.

95,756.—JOHN ARMSTRONG, Jr., San Francisco, Cal.—*Heating-Apparatus.*—October 12, 1869.

Claim.—The apparatus described, consisting of

the case A, perforated at top and bottom, as shown, and radiator D, the whole being supported upon legs, as and for the purpose described.

95,757.—George H. Babcock, Joseph P. Manton, and Jonathan Boyd, Providence, R. I.—*Means for Preventing Backlash in Machines Driven by Gearing.*—October 12, 1869; patented in England, May 8, 1868.

Claim.—1. The double gears E and F, in combination with the wedge-acting key G, substantially as described, for the purposes specified.

2. The double gears E and F, mounted upon the hollow sleeve, in combination with the wedge-acting key G, arranged in such a manner that the gear F may be partially rotated upon the sleeve by means of the worm *a b*, the several parts forming one complete adjustable gear, which may be attached to and removed from the mandrel of the roller as one piece, substantially as herein shown.

95,758.—George S. Barton, Worcester, Mass.—*Machine for Printing Paper, Cloth, &c.*—October 12, 1869.

Claim.—The combination, with the divided gear D, of the holding-bolts *f f* and the adjusting wedge-bolt F, substantially as and for the purposes set forth.

95,759.—Alphonse V. Benoit, New York, N. Y.—*Draughtsmen's Square and Triangle.*—October 12, 1869.

Claim.—The combination of suitable leather with adjustable steel plates, for manufacturing T-square blades and triangles, in the manner substantially as herein described.

95,760.—William H. Berger, Pittsburgh, Pa.—*Graining-Machine.*—October 12, 1869.

Claim.—1. Arranging the printing-roller, with the apparatus for supplying it with coloring-matter, in a frame, and then swiveling this frame on a vibrating or rocking post, so that it may have rotatory and vibratory motion, substantially as herein described, and for the purpose set forth.

2. The adjustable metallic plate K, provided with a cloth facing, *m*, in combination with the distributing-roller J, constructed and arranged to operate substantially as herein described, and for the purpose set forth.

3. The post E and bar B, when constructed and arranged so as to be adjusted laterally, substantially as herein described, for the purpose of adapting the machine for graining different-sized articles, as set orth.

95,761.—Alfred Bixby, Lansing, Mich.—*Carriage-Clip.*—October 12, 1869.

Claim.—A thill-coupling, consisting of the iron *b*, with the cross-head or lugs C and the hook A, having the rubber *a* inserted in the bottom thereof, as shown and described.

95,762.—Jeremiah Bohan, New Hartford, Iowa.—*Cultivator.*—October 12, 1869.

Claim.—1. The evener E, pivoted upright B, metallic straps *c*, and sweep F, when constructed and arranged substantially as herein described, and for the purpose set forth.

2. The braces *h*, having their lower ends connected to the shovel-beams H, by means of gauge-nuts *t*, for adjusting the beams laterally, and their upper ends hooked or journaled to the frame to allow them to swing, substantially as and for the purpose set forth.

3. The bent arms *g*, in combination with the block N, lever K, and sweep F, when constructed and arranged substantially as herein described, for the purpose of spreading the shovels, as set forth.

4. The lever K, in combination with the sweep F, cross-piece O, shovel-beams G and H, and cord *k*, when constructed and arranged to operate substantially as and for the purposes set forth.

5. The treadle-hook L, and spring *p*, in combination with the lever K, cross-piece O, and sweep F, when constructed and arranged substantially as herein described, and for the purpose set forth.

6. In combination with the sweep F, and the devices for operating the shovels, the block I, having friction-rollers therein, when constructed and arranged substantially as and for the purpose set forth

7. The shield M, and slotted braces P, when constructed and arranged substantially as and for the purpose set forth.

95,763.—David Bookwalter, Gardner, Ill.—*Revolving Prow for Vessels.*—October 12, 1869.

Claim.—1. The cylindrical rotating prow P, constructed and operating substantially as set forth, and for the purposes herein specified.

2. In combination with the above, the cylindrical fore end of the hull H, substantially as set forth.

95,764.—Otto Brück, New York, N. Y.—*Fan*—October 12, 1869.

Claim.—The combination, with the head *a*, slotted arms *d*, and fan A, of the spring *h* and rod *l*, substantially as and for the purpose described.

95,765.—Solomon Brunswick, Saint Louis, Mo.—*Revolving Billiard-Table.*—October 12, 1869.

Claim.—The table-frame A, formed of side-rails securely joined, (in the usual manner,) arranged and combined with a plate, B, revolving entirely within said frame, said plate having the billiard-cushions *b* secured to one face thereof, and, when in position, being supported by lock-latches D, secured in the rails of the frame A, substantially as set forth.

95,766.—Hubert Burgess, San Francisco, Cal.—*Paper-File.*—October 12, 1869.

Claim.—1. A pair of clamping-bars or jaws, A and D, held parallel or nearly parallel, by their flanges or angle-pieces B and C, and by the bolts E, that draw them together, and so arranged as to clamp and hold the edges of papers, music-sheets, &c., without perforating them, substantially as described.

2. In combination with the clamping-bars, constructed as described, a portfolio, provided with a rigid back, G, to serve as a means of connecting the clamping-bars of the file to the portfolio, substantially as described.

3. In combination with the clamping-bars of a paper-file and portfolio, the bar K, fitted to notches in the clamping-bars to hold the portfolio open and spread the music-sheets, &c., whether applied as a wrench or otherwise, substantially as set forth.

95,767.—James S. Casey, Voluntown, Conn.—*Stop-Motion for Drawing-Frame.*—October 12, 1869.

Claim.—1. In combination with the eccentrics B and C, or their equivalents, the spur-wheel *a'*, secured to the extended shaft of the top roll A, substantially as shown and described.

2. The eccentrics B and C, partially toothed and weighted, so as to present their smooth and lank sides automatically to the geared end of the top roll, substantially as specified.

3. In combination with the eccentries B and C, the fork H, constructed and arranged to operate substantially as specified.

4. The stop-motion herein described, having sliding standard G, adjustable support D, with hinged and adjustable jaws *d d*, eccentrics B C, balanced fork H, spur-wheel *a'*, shaft K, and spiral spring *k*, all constructed and arranged to operate with the belt-shifter, substantially as specified.

95,768.—L. A. Chichester, Poughkeepsie, N. Y.—*Crib or Cradle.*—October 12, 1869.

Claim.—A cradle composed of the body formed of the bars E and slats F, provided with the end-pieces A A, extended above the body, as shown, and each formed of one piece of bent wood, having rockers B attached, and provided with the cross-bars C and slats D, as set forth, for the purpose specified.

95,769.—Thomas J. Clark and George M. Clark, Higganum, Conn.—*Mowing-Machine.*—October 12, 1869.

Claim.—1. In combination with the cutter-bar and its connecting-rod, the lever 1, with the rods 4, 5, 6, 7, jointed together, and so as to operate as set forth.

2. In combination with the reciprocating cutters of a mowing-machine, the arrangement of the springs 11 12, to act at the extremes of movement, substantially as and for the purpose set forth.

3. In combination with the frame A^2 and finger-bar pivoted thereto, the lever H, constructed, arranged, and operating substantially as described.

95,770. — S. P. CLEMONS, Dansville, N. Y. — *Milking-Stool.*—October 12, 1869.

Claim.—The milking-stool herein described, having receptacle for pail, and conduit-pipe M, constructed and arranged to operate substantially as specified.

95,771.—GEORGE CONROY, Mendocino County, Cal., assignor to ROBERT A. SMITH, same place.—*Medicine for Rheumatism.*—October 12, 1869.

Claim.—The medicine for the cure of rheumatism, prepared of the materials herein described.

95,772.—ROSWELL F. COOK and JOHN FOBES POST, Potsdam, N. Y.; said COOK assignor to said POST.—*Wood-Vise.*—October 12, 1869.

Claim. — The pawl O and lever E, being formed from the same piece of metal, and provided with point *m*, spring *k*, braces P, spring D, roller I, and ratchet H, when constructed, combined, and arranged to operate substantially as herein described.

95,773. — A. M. CORBIT, Bethlehem, Iowa. — *Weather-Strip.*—October 12, 1869.

Claim.—1. The strip G, pivoted by means of a rod, *i*, extending under the strip from side to side, in the two plates H H, one of which is stationary and the other movable, substantially as and for the purposes herein set forth.

2. In combination with the strip G, rod *i*, and plates H H, the lever *e*, strip B, and plate *c*, all constructed and arranged to operate substantially in the manner and for the purposes herein set forth.

95,774. — H. A. CROSSLEY, Cleveland, Ohio.—*Stave-Jointer.*—October 12, 1869.

Claim. — The swinging frame C, provided with clamps D *a*, D *a*, operated by means of the rock-shaft H, J J, and treadle G, through the medium of the connection *a a'*, and when provided with springs *b b*, whereby the clamps are rendered self-releasing, all arranged substantially as herein described.

95,775. — THOMAS CROSSLEY, Bridgeport, Conn.—*Carpet.*—October 12, 1869.

Claim.—As an article of manufacture, carpeting having a back of paper, or other suitable material, corrugated and attached thereto by an adhesive substance, as set forth.

95,776. — THOMAS CROSSLEY, Bridgeport, Conn.—*Felted Carpet-Fabric.*—October 12, 1869.

Claim. — A fabric composed of a foundation of coarse jute, cotton, linen, or equivalent fabric, to one or both sides of which is applied a layer of wool or other felting-material, and the two united by felting, and the surface finished by printing or embossing, one or both, substantially as described.

95,777. — THOMAS CROSSLEY, Bridgeport, Conn.—*Machine for Printing Carpets.*—October 12, 1869.

Claim.—1. A machine for printing carpets, and other fabrics, combining in its construction a table or platform, upon which the fabric is to be spread while receiving the impressions of the blocks; a lever or other equivalent mechanism, for raising the blocks; guides for determining the exact position of such blocks while making its impression; and mechanism for removing the blocks from the positions which they occupy when making their impressions, to that which they occupy when receiving the ink or coloring-matter, substantially as and for the purpose set forth.

2. The combination and arrangement of the table A, block or form B, sector-lever C', device D, crane E, and car F, substantially as and for the purpose set forth.

3. The arrangement of the car F and crane E, with reference to the table or platform A, substantially as and for the purpose set forth.

4. The combination and arrangement of the levers or rods F^1, screws F^2, car F, and platen G, substantially as and for the purpose set forth.

5. The combination and arrangement of the platen G, toggle-levers G^1, connecting-rods G^3, and treadle-levers G^2, substantially as and for the purpose set forth.

95,778. — HENRY CUNNINGHAM, Albany, N. Y.—*Grinding Curriers' Knives.*—October 12, 1869.

Claim.—The disk B, provided with the slots *c*, dogs *e*, or their equivalents, and the vertical shaft *a*, all in combination with the stone C, substantially as and for the purpose set forth.

95,779.—HENRY CUNNINGHAM, Albany, N. Y.—*Mode of Softening Leather.*—October 12, 1869.

Claim. — 1. In a leather-softening machine, the elastic rubber piece *g* within the roll of leather G, as an internal reacting power, substantially as set forth.

2. Softening leather between three or more corrugated rollers B, C, and D, constructed, arranged, and operated substantially as set forth, for the purpose specified.

3. In a leather-softening machine, operated by corrugated rollers, the roller D, hung in the vibrating frame *d*, in combination with the cams or wiper-wheels *e*, substantially as and for the purpose set forth.

4. The hinged bars *b'*, and wiper-wheels *e*, in combination with the roller D, substantially as and for the purpose set forth.

95,780.—HENRY CUNNINGHAM, Albany, N. Y.—*Machine for Splitting Leather.*—October 12, 1869.

Claim. — 1. In a leather-splitting machine, the elastic bearing-roller E, in combination with the knife B, and pressing-roller D, substantially as and for the purpose set forth.

2. In combination with a leather-splitting machine, the stretching-roller G, constructed and arranged substantially as and for the purpose set forth.

3. In combination with the stretching-roller G, the supplementary roller H, or equivalent weight, substantially as and for the purpose set forth.

4. Reversing the order of the elastic roller E and solid pressing-roller D, from that shown in Fig. 2 to that shown in Fig. 5, the screw G then being out of contact with the elastic roller, the whole substantially as and for the purpose specified.

95,781.—DANIEL S. CURTISS, Washington, D. C.—*Milk-Pail and Strainer.*—October 12, 1869.

Claim.—1. The employment of a valve, opening inward upon or within the cover of a pail, substantially as and for the purpose specified.

2. The employment of the diaphragm D, upon or within the cover B, substantially as shown and for the purpose specified.

3. The valve E, constructed as described, and provided with the spring-guides and supports *e*, substantially as shown and for the purpose specified.

4. The herein-described device, consisting of the cover B, provided with the rim C and flange G, the diaphragm D, and the valve E, provided with the strips *e*, substantially as and for the purpose shown,

95,782. — FRANK DOUGLAS, Norwich Town, Conn.—*Planing-Machine.*—October 12, 1869.

Claim.—1. The compound lever L L^1, having a movable fulcrum, and provided with the adjustable weight L^2, and connecting-bar l^2, when constructed and arranged substantially as described.

2. The sliding frame J, provided with vertically-sliding boxes for the support of the upper feed-rollers, and combined with the spindle K, cylinder m^1, cross-shaft M, nut *k*, and crank m^3, all arranged to operate substantially as described.

3. In combination with the pivoted arms G, the frame H, and pivoted presser-bar I, substantially as and for the purposes described.

4. The combination of the sliding boxes, screw-rod s^1, crank-shaft s^2, platform U, set-screw *u*, frame B', inclined bed *b*, arm *i*, rod *t*, and handle t^1, all constructed and arranged to operate substantially as described.

95,783.—Patrick J. Dwyer, Elizabeth Port, N. J.—*Coal-Ash Sifter and Table.*—October 12, 1869.

Claim.—1. The arrangement and combination of the doors D and I with the chamber A and ash-receptacle G, substantially as shown and described, for the purpose set forth.

2. The hod H, constructed with a pivoted bottom, *d*, and hinged cover *e*, and adapted for use in connection with the sifter, as shown and described.

3. The rod *h*, having projections *m n*, to form a detachable connection with the sieve J, as and for the purpose set forth.

4. The chest A, fitted internally with a reciprocating sieve J, hopper E, and receptacle G, and provided with hinged leaves L and brackets *p*, substantially as shown and described, for the purpose set forth.

95,784.—James B. Eads and Henry Flad, Saint Louis, Mo.—*Arched Bridge.*—October 12, 1869.

Claim.—The arches A A′, connected by a joint-piece, and supported by rollers on the piers C, substantially as and for the purposes set forth.

95,785.—George A. Fall, Hoboken, N. J.—*Water-Locomotive.*—October 12, 1869.

Claim.—The arrangement of four paddle-floats, with inclined surfaces, sustaining the braced platform, in combination with the bands and driving-pulleys, and the cranks and slip-pipe, substantially as and for the purposes set forth.

95,786.—Henry Flad, Saint Louis, Mo., assignor to James B. Eads, same place.—*Pile-Driver.*—October 12, 1869.

Claim.—1. The arrangement of a frame, C, and platform C′, movable vertically, when said movement is controlled from the platform, substantially as set forth.

2. The ram, raised by friction-wheels *i*, substantially as set forth.

3. The lever N and links *n*, operating to clutch the wheels *i* against the ram-shank, substantially as set forth.

95,787.—George Fowler, Claverack, N. Y.—*Railway-Track Clearer.*—October 12, 1869.

Claim.—1. The combination and arrangement of beam B, shovels C C, springs *e e e*, &c., in the manner, or substantially in the manner and for the purpose herein set forth.

2. The employment, in combination with the above, of the flanges or springs D D, substantially as and for the purpose described.

3. Attaching the above-described several parts and devices, when combined and arranged substantially as set forth, to the rear end of a railway-truck or car, substantially in the manner and for the purpose herein set forth.

95,788.—Henry A. Gaston, Stockton, Cal.—*Rotary Harrow.*—October 12, 1869.

Claim.—1. The central right and left disks, with their projections (right and left) and their central cylindrical projections, when constructed substantially as above described.

2. The right-angled triangular frame, provided with the hooks h^1 and h^2, constructed substantially as and for the purpose above described.

3. A rotary harrow, constructed and operated substantially as above described.

95,789.—Henry A. Gaston, Stockton, Cal.—*Combined Seeder and Grain-Drill.*—October 12, 1869.

Claim.—1. The oscillating or rotating shafts, when constructed and operated substantially as and for the purposes above described.

2. The comb C, combined with the divided shaft 3^1 3^2 in such manner that the teeth of the former may pass centrally through the fingers of the latter, as and for the purpose described.

3. The frame C E D, in combination with the lever *l*, arms *y*, head-bars S, and fluke-levers *b*, all arranged and operating substantially as set forth.

4. The governing-levers *l*, and their arms *y*, attached to the head-pieces S, substantially as and for the purpose above described.

5. The sharp-edged fluke *f*, with its internal projection *x*, and also its foot-like projection *i*, and its stop *k*, constructed substantially as above described.

6. The fluke *f*, provided with the foot-like and slotted projection *o*, and angular depression *g*, and combined with the point P, in the manner and for the purpose specified.

7. A grain drill, constructed and operated substantially as above described.

95,790.—Oscar L. Gaylord, Plainfield, Ill.—*Sulky-Cultivator.*—October 12, 1869.

Claim.—The combination of the main frame *a*, diagonal axles *c c*, cross-bar *b*, double-tree l, straps 2^2, pulleys 3^3, and suspended arms 4^4, arranged to operate as and for the purposes set forth.

95,791.—E. A. Goodes, Philadelphia, Pa., assignor to The Philadelphia Patent and Novelty Company, same place.—*Table and Cradle Combined.*—October 12, 1869.

Claim.—The combination and arrangement of the divided table-top A B, semi-elliptical legs C, and circular brace or support D, made in two parts, and hinged together substantially as specified.

95,792.—Benjamin F. Gott, Brooklyn, E. D., N. Y.—*Wash-Board.*—October 12, 1869.

Claim.—A wash-board, formed with a back composed of cylindrical sections *d d*, in combination with the ordinary fluted metallic surface *c*, substantially as herein shown and described.

95,793.—Emile Granier, Paris, France.—*Combined Tool.*—October 12, 1869; patented in France, May 9, 1868.

Claim.—The combined tool, constructed as described, and for the purposes herein set forth.

95,794.—Isaac H. Graves, Sacramento City Cal.—*Spark-Arrester.*—October 12, 1869.

Claim.—1. The arrangement of the inner casing A, substantially as described.

2. The combination of the flange E with the upper and lower net-work C C′, substantially as described.

3. In combination with the lower and upper system of net-work, the central diaphragm F, substantially as described, and for the purpose specified.

95,795.—William Green, Snyder Township, Pa.—*Cast-Metal Chimney-Cap.*—October 12, 1869.

Claim.—As an article of manufacture, the cast metallic cover, constructed as herein described, that is to say, with an arch, B, open at both ends, and overhanging the chimney-opening, and the slant roof *a*, projecting beyond the sides of the chimney, and the two parts operated together as herein described, for the purpose specified.

95,796.—John H. Guest, Brooklyn, N. Y.—*Electrical Fire-Alarm Thermometer.*—October 12, 1869.

Claim.—An electrical fire-alarm thermometer, formed with the expansion-tube bent at an angle to the bulb, so as to be inserted in the ceiling, and fitted with the platina conducting-wires, as and for the purposes set forth.

95,797.—Frederick Heiles, New York, N. Y.—*Pocket-Book.*—October 12, 1869.

Claim.—The locket, consisting of the raised portion E, the serrations *e*, the top plate B, and the locking slide I, when the parts are constructed substantially as herein described.

95,798.—Alexander Herbst, Moscow, Russia.—*Apparatus for Drying Sugar.*—October 12, 1869.

Claim.—1. The process, substantially as herein described, of drying the loaves, by forcing or drawing currents of heated air through them, while in their molds or formers, as herein set forth.

2. The apparatus, substantially as herein described, for holding and supporting the loaves while in their molds or formers, and passing currents of heated air through the loaves, from their apex to their base, to effect the drying of the sugar within the formers, essentially as specified.

95,799.—D. Hitchcock and D. S. Trout, Areola, Ill.—*Door-Sill.*—October 12, 1869.

Claim.—1. The arrangement of the frame L and sliding cover G, over the gutter B, said gutter being provided with a channel, C, having the weighted door D, all substantially as shown and described.

2. The sliding cover G, in combination with the springs E K and rabbet *a* on the door H, all constructed and arranged to operate substantially in the manner and for the purposes herein set forth.

95,800.—JOHN HOLZBERGER, Newark, N. J.—*Machine for Wiring Blind-Rods.*—October 12, 1869.

Claim.—1. The two detaining-plates, G and H, when arranged on a blind-wiring machine, to separately arrest the staples, substantially as herein shown and described.

2. The adjustable feeding device, consisting of the bell-crank D, carrying the working pawl, and connected by a rod, *e*, with the slotted oscillating lever C, substantially as herein shown and described.

95,801.—C. M. HUCKINS, East Topsham, Vt.—*Bridle-Bit.*—October 12, 1869.

Claim.—The toggle-levers B B, arranged on the arms of a jointed bit, substantially as herein shown and described, for the purpose specified.

95,802.—C. D. HUNT, Fairhaven, Mass.—*Nail-Cutting Machine.*—October 12, 1869.

Claim.—1. Connecting the vibrating arm of a nail-feeding device to the frame supporting it, by one or more flexible metallic straps, in the manner and for the purposes substantially as herein set forth.

2. The combination of the reciprocating rod O, barrel box V, vibrating arm K, bar P, link and spring *h*, and arm *g*, substantially as set forth.

3. The construction of the barrel-box V and its connections to the vibrating arm K, substantially as specified.

4. The arrangement, substantially as described, of the shafts C and J, miter-wheels H I, toothed segment L, and barrel-wheel M, in relation to the vibrating arm K and barrel-box V.

5. The combination of the friction-disks N N, ratchet-wheel *f*, pawl *i*, and arm *g*, with the bar P and the link and spring *h*, substantially as set forth, and for the purposes specified.

95,803.—W. A. IVES, New Haven, Conn.—*Auger.*—October 12, 1869.

Claim.—In auger-bits, the combination of the gouge floor-lips C C′, with their respective side or vertical cutters *a a*, connected and arranged substantially as shown and described.

95,804.—JAMES JERVIS, Baltimore, Md.—*File-Cutting Machine.*—October 12, 1869.

Claim.—1. The mechanism here described, whereby the movement of the regulator on "the shape" is made to change the angle of the chisel, so as to maintain the sharpness of the tooth the same in every part of the file.

2. The combination of a cross-head, having a rotating motion, substantially as described, with a chisel and regulator, whose agency, besides steadying "the shape," is to impart a movement to the cross-head corresponding to the taper of the shape.

95,805.—AMOS S. KELLY, Haverhill, Mass.—*Shoe.*—October 12, 1869.

Claim.—The new or improved manufacture of shoe, as made with the slits and gores arranged on the vamp, and with the instep-part of the vamp bent to an angle with the front portion of the said vamp, in manner as and for the purpose specified.

95,806.—JOHN S. KELLY, New York, N. Y.—*Peat Machine.*—October 12, 1869.

Claim.—1. The detachable double-convex circular, revolving cutters C, and tubular washers or rollers D, in combination with the shaft B and frame A, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the frame E F and scrapers G, with the frame A, cutters C, and tubular washers or rollers D, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the rollers H, frame A, shaft B, cutters C, tubular washers D, frame E F, and scrapers G, with each other, substantially as herein shown and described, and for the purpose set forth.

95,807.—WILLIAM G. KENYON, Wakefield, R. I.—*Mowing-Machine.*—October 12, 1869.

Claim.—1. The segmental gear *o′*, in combination with the cutter-bar *x* and the connecting-bar *g*, as and for the purpose specified.

2. The chain *w*, in combination with the shoe E and auxiliary frame G, substantially as and for the purpose set forth.

3. The cover Y, in combination with the parts that move the knife-bar, substantially as specified, and for the purpose set forth.

4. The guard-finger, in combination with the ledger-blades, constructed substantially as described, and for the purpose specified.

95,808.—HENRY KILLAM, New Haven, Conn.—*Hinge for Carriage-Tops.*—October 12, 1869.

Claim.—1. The hinge for carriage-tops, consisting of the two parts, C and D, upon one of which is fixed the lip *a*, so as to cover the joint and form the angle between the bow B and post A, substantially as set forth.

2. The outer surface of the lip *a*, eccentric to the pintle *d*, substantially as and for the purpose specified.

95,809.—JEFFERSON KINDLEBERGER and WILLIAM AUGUSTUS ARNOLD, San Francisco, Cal., assignors to "THE INVENTORS' ASSOCIATION, SAN FRANCISCO, CAL."—*Cutter-Head.*—October 12, 1869.

Claim.—The cylinder A, provided with wedge-shaped slots, H H, in combination with the plates E E and wedge-shaped plates *c c*, constructed and arranged to operate substantially as described.

95,810.—JEFFERSON KINDLEBERGER and WILLIAM AUGUSTUS ARNOLD, San Francisco, Cal., assignors to "THE INVENTORS' ASSOCIATION, SAN FRANCISCO, CAL."—*Machine for Tenoning Blind-Slats.*—October 12, 1869.

Claim.—1. In combination with the cutters F F, the slotted pinions E E, turned, and at the same time traversed by the cam-gears D, substantially as and for the purposes specified.

2. The combination of the flanges on the gears D and pinions E, and the link *g*, with its friction-wheels *i*, for keeping the gears and pinions properly connected while revolving, substantially as described.

3. In combination with the lug I, on the table R, the arrangement of the lever J, acting on the wheel C, for stopping the machine on the completion of each slat, substantially as described.

4. The combination of the hinged table R, the lever *e*, operated by the wheel C, and the spring M, for discharging the finished slat and returning the table to its place, substantially as described.

95,811.—JULIUS G. KLUGE, New York, N. Y.—*Bakers' Oven.*—October 12, 1869.

Claim.—The fire-pot A, provided with a flanged rim to receive the covering plates *b*, and with an outwardly-inclined side, *c*, to give ready access to the fire, in combination with the hearth of a baker's oven, all constructed and arranged substantially in the manner shown and described.

95,812.—L. F. LAKEY and W. B. HAYTE, Quincy, Ill.—*Grate-Bar.*—October 12, 1869.

Claim.—The construction and arrangement of the bars A A and movable plate B′, with the air-chamber B, substantially as shown and described.

95,813.—PHILANDER P. LANE and EDWARD MYERS, Cincinnati, Ohio, assignors to LANE & BODLEY, same place.—*Hanger.*—October 12, 1869.

Claim.—1. The arrangement, in the mold, of core, core-bar, or mandrel, A, provided with the necessary nuts, in proper position and adapted to be withdrawn from the finished casting leaving said nuts therein, substantially as described.

2. The combination, with the core, core-bar, or

mandrel A, of the convex-spherical chill E, substantially as set forth.

95,814.—Suspended.

95,815. — NOAH LOVELL, Adrian, Mich., assignor to himself and EDWARD W. MIXER, same place.—*Scaffold-Bracket.*—October 12, 1869.

Claim.—The combination of the strap *m*, clasp *g*, and screw T, with the bracket A and wedge W, constructed in the manner and for the purposes set forth and described.

95,816. — R. O. LOWREY, Salem, N. Y. — *Lock for Mail-Bags.*—October 12, 1869.

Claim.—1. A lock, having its case A provided with a guard, *h*, extending from the entire edge of the key-hole inwardly, and rigidly attached thereto, all constructed and arranged substantially as herein described.

2. The bolt B, consisting of the frame *a*, stem *d*, catch *e*, and cross-piece *f*, when constructed and arranged to be operated substantially as and for the purpose set forth.

95,817.—R. O. LOWREY, Salem, N. Y.—*Mail-Bag.*—October 12, 1869.

Claim.—1. A bag, having its body constructed of fibrous or textile fabrics and India rubber combined, in the manner substantially as herein described, for the transportation of mail or other matter, as set forth.

2. The metallic plates B and C, when constructed and arranged for operation, substantially as and for the purpose set forth.

3. The combination of the plates B and C, with the button D, when constructed and arranged to operate substantially as and for the purpose set forth.

4. The combination of the bag A and rubber packing F with the metallic plates B and C, and button D, all constructed and arranged substantially as and for the purpose set forth.

95,818.—R. O. LOWREY, Salem, N. Y.—*Mail-Bag Fastener.*—October 12, 1869.

Claim.—1. A mail-bag fastening, consisting of the plates A and B, the studs D, and the linked sliding bolts E, or their equivalents, when constructed and arranged substantially as herein described.

2. The combination of the linked sliding-bolts E and studs D, or their equivalents, when constructed and arranged to operate substantially as herein described, and for the purpose set forth.

3. The sliding-bolts E and studs D, when constructed and arranged for receiving the locking-device H, substantially as herein described, and for the purpose set forth.

95,819. — WILLIAM W. LYMAN, Meriden, Conn.—*Fruit-Jar.*—October 12, 1869.

Claim. — In a fruit-jar, the combination of the cover, constructed so as to pass down over the packing *d*, with a clamping-device, operating so that while the said clamping-device draws the cover down on the neck, it will, at the same time, impart a rotating movement to the cover, substantially as herein set forth.

95,820. — JOHN MARKLEY, Bucyrus, Ohio. — *Fence.*—October 12, 1869.

Claim.—A fence, in which the panels are secured together by clasps and screw-bolts, and supported above the ground by inclined stakes, when constructed and arranged as herein shown and described.

95,821.—GORDON ALLEN MAY, Chicago, Ill.—*Gate for Draw-Bridges.*—October 12, 1869.

Claim. — 1. The gate or fence C, consisting of pickets provided with rollers to run upon, and the lips or projections, to keep the same on the tracks, said pickets connected by suitable loose joints, so as to make the gate pliable, and adapted as a barrier for draw-bridges and other structures, substantially as herein set forth and specified.

2. In combination with the above, the bars, plates, or tracks E E, and pins, catches, stops, or other suitable projecting fixtures F F, substantially as and for the purposes herein set forth and specified.

95,822. — HAMILTON J. MAY, Brooklyn, N. Y., assignor to himself and JOHN S. THORNTON, Jersey City, N. J.—*Toy-Hoop.*—October 12, 1869.

Claim.—The wheel, constructed substantially as herein shown and described, in combination with the stick or rod D, as and for the purposes set forth.

95,823. — JOHN K. MERRICK, Odell, Ill. — *Dentists' Grinding and Polishing Wheel.*—October 12, 1869.

Claim. — Glass dental grinding and polishing wheels, secured upon a mandrel, as herein described, as an improved article of manufacture.

95,824.—E. C. MERRILL and A. W. WILLARD, Charlestown, Vt., assignors to E. C. MERRILL. — *Composition for Emery-Wheels and other Abrading-Implements.*—October 12, 1869.

Claim.—1. An abrading-wheel, or tool made of emery, artificially united or combined with a softer abrading-powder, having sharp cutting points, substantially as described.

2. As a new article of manufacture, a grinder-wheel or other tool, formed of abrasive powder, united by an oxide-of-zinc and a chloride-of-zinc solution, formed and compressed in a mold, substantially as described.

95,825.—JOHN S. MOORE, Jr., and CHARLES H. REYNOLDS, Brooklyn, E. D., N. Y.—*Washing-Machine.*—October 12, 1869.

Claim.—The beaters, connected to their points of suspension, that they can swing or yield toward or from their center of motion, substantially as and for the purpose described.

95,826.—GEORGE W. MOYERS, Gordonsville, Va.—*Horse-Power.*—October 12, 1869.

Claim.—1. Adjusting the line-shaft to the power-wheel, substantially in the manner set forth.

2. The connection of the power-wheel bridge C′ with the sills A A, by means of the turned-up end-pieces *d*, as and for the purpose described.

95,827.—WILLIAM NEWELL, Philadelphia, Pa.—*Machine for Polishing and Cleaning Coffee.*—October 12, 1869.

Claim.—A cylinder composed of wood, for cleaning and polishing coffee by the friction and attrition of the grains among themselves and the bulk of coffee with the wood of the cylinder, when said cylinder is strengthened, as described, furnished with openings covered by screens, and internal ribs, and is revolved upon journals secured to the wooden heads, as and for the purpose herein described and represented.

95,828.—J. H. ORMSBY, Dixon, Ill.—*Carriage-Body Brace.*—October 12, 1869.

Claim. — The carriage-body brace, composed of the pieces D and E, the brace-rod F, and pieces H, when the braee-rod F is connected by a journal or wrist-joint, and the pieces are otherwise constructed and operating substantially as and for the purpose specified.

95,829.—GEORGE PARKER, Poughkeepsie, N. Y. —*Feed for Grinding-Mills.*—October 12, 1869.

Claim.—1. The cone-shaped valve G, spirally cut, as and for the purpose set forth.

2. The chamber C, provided with any suitable valve arrangement, in combination with the chamber D, having the conveyers F, as and for the purpose described.

3. The machine described, consisting of the base A, shaft B, chambers C and D, center-piece E, conveyers F, valve G, lever H, and stirrers I, when combined and arranged as and for the purpose described.

95,830.—THOMAS PARKER, Shelby, Ohio.—*Sausage-Stuffer.*—October 12, 1869.

Claim.—The combination of the part A, having a rounded bottom, its interior divided, by partitions *b*, into spaces a^1 a^3 a^3 a^4, the cover C, hopper C′, spout

d, ring *j*, latch *k*, slotted roller B, sliding plates D, the gearing *f h*, and crank *i*, all constructed and arranged to operate substantially as herein described.

95,831.—JOHN C. PEARL, Mendota, Ill.—*Cultivator.*—October 12, 1869.

Claim.—1. The standards D, with sleeves D′, when constructed and arranged substantially as shown and described, for the purpose set forth.

2. The axles C, when constructed and arranged substantially as shown and described.

3. The clevises F, when constructed as shown and described, in combination with the plates F′, both arranged to operate as and for the purpose set forth.

4. The combination, with the whiffletree, of the thimble, whereby the former may be raised or lowered, as set forth.

95,832.—JAMES PENFIELD and DAVID F. WOOLSEY, Bridgeport, Conn.—*Coach-Door.*—October 12, 1869.

Claim.—The inside handle herein described, having operating-lever C, pitman *b*, and lever D, in combination with the spindle E, of the tumbler of the lock of a coach-door, constructed and arranged to operate substantially as specified.

95,833.—THOMAS THOMPSON PONSONBY, Liverpool, England, assignor to JOHN ANDERSON, same place.—*Machine for Surfacing and Ornamenting Wood.*—October 12, 1869; patented in England, September 5, 1865.

Claim.—1. Mounting the engraved cylinder *d* upon the disk-bearing *e*, fitted into the end of said cylinder, in such a manner that the latter may turn freely upon its axis, as described, and for the purposes set forth.

2. The cylinder *d*, disk-bearing *e*, with its sleeve and ring *f*, fastened by set-screw f^1, together with shaft *c*, when the parts are constructed for the purposes specified, as described.

3. The arrangement, of the driving-gear, consisting of cone-pulleys b^2, screw-pinion b^2, gear-wheel c^1, shaft *c*, and gearing k^1, in connection with brace *b*, when the parts are constructed and operated as described, for the purpose set forth.

4. The spirally-grooved and serrated rollers *d d*, in combination with the table C, operating as described for the purpose specified.

95,834.—JOHN H. PRICE, Boston, Mass.—*Combined Pliers and Scissors.*—October 12, 1869.

Claim.—The within-described instrument, consisting of a pair of jaws, A B, provided with cutting-edges, and a pair of jaws *d d′*, flattened at its extremities, for performing the respective function of scissors and pliers, when constructed substantially as described.

95,835.—WALKER V. PULLIAM, Kansas City, Mo.—*Railway-Car Coupling.*—October 12, 1869.

Claim.—1. As an improvement in self-adjusting car-couplers, the double plates D D, pivoted on either side of a metallic block or support, A, at one end, and secured to an interposed wedge-shaped head, B, at the other, substantially as herein described.

2. The combination of the spring G, or its equivalent, with the supporting-block A and cross-bar F of the plates D D, carrying the coupling-head of my improved car-coupler, substantially as herein described.

3. The combination of the bent lever K, pivoted to or upon the platform of a car, with the rod L pivoted to one of the plates D of an automatic car-coupler, constructed substantially as herein described.

95,836.—GEORGE W. RAWSON, Cambridgeport, assignor to himself and MICHAEL HITTINGER, Somerville, Mass.—*Stone-Crushing Machine.*—October 12, 1869.

Claim.—1. The arrangement of the surplus-receiver F, with the stationary and lateral jaw-plates B E E, as described, viz, so as to extend over, and serve as a cap to such plates, and a means of aiding in holding them in position when they are resting on the studs or projections *a a*, by which they are supported.

2. The arrangement of the wedge-keys *b b*, and their screws *d d* and nuts *c c*, with the jaw C, and its carrier H, applied together as set forth.

95,837.—W. B. REANEY, Chester, Pa.—*Hoisting-Apparatus.*—October 12, 1869.

Claim.—1. A hoisting-maching, in which are combined the following elements, namely: first, a shaft, to be revolved continuously in one direction; second, a barrel, loose on the said shaft; third, a braking-device, revolving with the shaft, and arranged to control the barrel, or release the same; and fourth, a braking-device for retarding and stopping the barrel, all arranged substantially as set forth.

2. The plate F, secured to the shaft *a*, and carrying the sliding sockets G G^1, in combination with the links *j* and *k*, connected together by a rod, H, passing through a slot in the shaft, and with a rod, *n*, passing through the shaft, all substantially as described.

3. The rod *n*, connected to the inner braking device, and the rods *h*, connected to the outer braking-device, in combination with the cross-piece M, for the purpose described.

4. The combination of the braking-device herein described, the cross-piece M, and the lever N, for the purpose set forth.

95,838.—JOHN B. ROOT, New York, N. Y.—*Cut-Off Gear for Steam-Engines.*—October 12, 1869; antedated October 2, 1869.

Claim.—1. The combination or gear of the driving-pulley of the governor with the main shaft of the engine, in such manner as that a reduced and minimum velocity is imparted to the governor at or about the commencement of each piston-stroke of the engine, at all speeds of the latter, substantially as specified.

2. The combination, with the main or crank-shaft A, of the engine and governor-driving pulley C, of the double-scroll gears E and F, essentially as herein set forth.

95,839.—JAMES J. ROSS, Buffalo, N. Y., assignor to SARAH ROSS, same place.—*Fishing-Reel.*—October 12, 1869.

Claim.—1. The arrangement and construction of the barrel or reel B, as described, and for the use and purpose set forth.

2. The combination of A′, barrel or reel B, and eccentric, C, to operate substantially as and for the purpose set forth.

95,840.—ENNO SANDER, Saint Louis, Mo.—*Device for Extinguishing Fires.*—October 12, 1869.

Claim.—1. The jar B, provided with the inverted cone-shaped valve D, the same opening upward, as described.

2. The feed-spout *x* with its cap, when arranged and operated substantially as described.

95,841.—Canceled.

95,842.—THEODORE O. L. SCHRADER, New York, N. Y.—*Spool and Thread-Protector.*—October 12, 1869.

Claim.—1. The combination, in a spool-thread protector, of the rim or ring *d* with the convex head *a*, and arms or projections *c*, substantially as and for the purposes set forth.

2. In combination with the above, the ring *f*, provided with points *g*, substantially as and for the purposes set forth.

95,843.—CHARLES WILLIAM SIEMENS, Westminster, England.—*Manufacture of Iron and Steel.*—October 12, 1869; patented in England, September 20, 1866.

Claim.—1. The above-described process of making cast steel upon the open hearth of a furnace, such process being by effecting, simultaneously, the reduction of iron-ores, in one or more heated hoppers, and the solution of the reduced metal, (without exposing it to the flame,) in a bath of metal, provided in the furnace, substantially as hereinbefore described.

2. The mode of making cast steel upon the open hearth of a furnace, the same consisting in causing

wrought iron, steel, or white cast iron, to descend upon inclined planes, or through hoppers, (where the metal becomes gradually heated,) and into a fluid bath of cast iron, under the influence of very intense heat, the metal being dissolved in such bath, and converted into cast steel, substantially as described.

3. The employment of a regenerative gas-furnace, with a bath of metal, and one or more hoppers, used as described, during and by the process of making steel thereby, as explained.

95,844. — JOHN SILSBY, New York, N. Y.— *House-Connection for Sewer, Water, and Gas Pipes.* —October 12, 1869.

Claim.—The tubular cases E, extending from the houses on the opposite sides of a street, under said street, and into the sides of the tunnel A, to form permanent channels, through which the house-connections of gas, water, and sewer pipes, either or all, can be introduced, without disturbing the street or sidewalk, as shown and described.

95,845.—GEORGE E. SMITH, Middleport, N. Y. —*Hoop-Bending Machine.*—October 12, 1869.

Claim.—The within-described device, consisting of the frame A A, B, and C, the rollers D D, F and L, the adjustable slides G, bolts H, and nuts *h*, the belt I, and the adjustable frame K, all constructed and arranged substantially as and for the purpose specified.

95,846.—S. A. SMITH, New Haven, assignor to THE CENTRE BROOK MANUFACTURING COMPANY, Centre Brook, Conn.—*Combined Bit and Tap.*—October 12, 1869.

Claim. — The bit and tap, constructed and combined in one and the same piece, as shown and described, as an improved article of manufacture.

95,847. — DANIEL MCLEAN SOMERS, Brooklyn, N. Y.—*Device for Securing Buttons to Fabrics.*— October 12, 1869.

Claim.—The combination, with the riveting-die F, and stud-supporting and centering die E, of the rubber spring G, arranged around the exterior of the riveting-die for action on the button, in concert with said die, essentially as herein set forth.

95,848.—DANIEL E. SOMES, Washington, D. C, —*Bed and Cushion Spring.*—October 12, 1869.

Claim.—1. A series of elastic tubes, one within another, as springs for bed, sofa, and chair bottoms and cushions, substantially as set forth.

2. A spring-bottom for beds, sofas, chairs, &c., composed of a series of elastic tubes, arranged in one or more horizontal layers, and either longitudinally or transversely, or both, substantially as set forth.

3. Circulating warm or cold water, or air, through or between a series of elastic tubes of a bed-bottom, by the devices substantially as and for the purpose described.

4. Perforated tubes, or their equivalents, so arranged as to admit and distribute air, substantially in the manner described, for the purpose of warming or cooling and ventilating beds.

5. Ventilating-beds by forcing air into them, and allowing it to escape through small perforations, in the manner described.

95,849. — B. F. STURTEVANT, Jamaica Plains, Mass.—*Apparatus for Utilizing Heat.*—October 12, 1869.

Claim. — For utilizing the heat escaping in currents of volatile products of combustion, an incased series of tubes, provided with inlet and outlet pipes for said volatile products, and with an air-inlet and an air-outlet entering and proceeding from the inclosed space around the tubes, when combined with a rotary blower, by which air is passed rapidly through said air-passages, and is forced from the outlet of the blower in a heated condition, substantially as described.

95,850.—BENJAMIN TATHAM, New York, N. Y. —*Die for Manufacturing Lead Pipe.*—October 12, 1869.

Claim.—The combination of a loose core with a cylinder and ram, for the manufacture of pipes, substantially as herein described.

95,851. — JACOB TAYLOR, Beloit, Ohio.—*Carriage-Body Brace.*—October 12, 1869.

Claim.—The brace F, guide G, and fulcrum-loop H, in combination with the spring G and reach A, substantially as and for the purpose shown.

95,852. — JAMES THOMPSON, Bridgeport, Ill.— *Horse-Rake.*—October 12, 1869.

Claim.—1. The arrangement of the frame A, platform B, seat C, braces D D, runners E E, and wheel F, all substantially as shown and described.

2. The arrangement of the frame A, with runners E, pivoted arms G G, rake H, handle J, spring-bars *a a*, and lugs *b b*, all constructed and operating substantially as specified.

3. The combination of the handle J, frame K, and forked rod L, all constructed and arranged substantially as and for the purposes herein set forth.

95,853.—JOSEPH THORNE, New York, N. Y.— *Type-Setting Machine.*—October 12, 1869.

Claim.—1. The combination of the pair of parallel series of type-holders with the type-race arranged between the pair, and with type-drivers traversing said type-race, and constructed to push the types along the same, substantially as before set forth.

2. The combination of two series of type-holders, arranged endwise to each other, with a type-race extending along both, and with type-drivers traversing said type-race in opposite directions, so as to deliver the types at a central point, substantially as before set forth.

3. The combination of two type-holders, arranged at opposite sides of a type-race, with a type-race divided into two courses, one course for the types ejected from each series of type-holders, substantially as before set forth.

4. The combination of a type-holder with an ejecting-finger, a key to select said finger, and a reciprocating carrier, operated by power separately from the key, to move said finger when it is selected, substantially as before set forth.

5. The combination of two series of type-holders with two series of ejecting-fingers and reciprocating carriers, operated in alternate succession, substantially as before set forth.

6. The combination of two series of ejecting-fingers with reciprocating type-carriers, operated in alternate succession, and with keys arranged in two gangs, one for each hand of an operator, substantially as before set forth.

7. The combination of the series of type-holders, type-race, and type-driver, with a reciprocating type-transferrer, to transfer the types from the type-race, the whole constructed to operate substantially as before set forth.

8. The combination of the series of type-holders with the type-race, type-transferrer, type channel, and reciprocating type-setter, the whole constructed to operate substantially as before set forth.

9. The combination of the type-channel with a reciprocating type-setter and spring-presser pawl, the whole constructed to operate substantially as before set forth.

10. The combination of a type-race and type-driver with a movable gauge, substantially as before set forth.

11. The combination of the ejecting-fingers with a friction-driver for the shaft, which imparts motion to said fingers by connecting-mechanism, the whole constructed to operate substantially as before set forth.

12. The combination of the reciprocating type-driver with a friction-driver for the shaft, which imparts motion to said type-driver by connecting-mechanism, the whole constructed to operate substantially as before set forth.

13. The combination of the type-driver and movable gauge with a friction-driver for the shaft, that imparts motion to said movable gauge by connecting-mechanism, the whole construeted to operate substantially as before set forth.

14. The combination of the reciprocating type-transferrer with a friction-driver for the shaft that imparts motion to said type-transferrer by connect-

ing-mechanism, the whole constructed to operate substantially as before set forth.

15. The combination of the reciprocating type-setter with a friction-driver for the shaft that imparts motion to the said type-setter by connecting-mechanism, the whole constructed to operate substantially as before set forth.

95,854.—MATTHEW TILDESLEY, Willenhall, England.—*Cotton Bale Fastening.*—October 12, 1869.

Claim.—The double tie, clip, or fastening, obtained by the combination of the two parts *a a*, when constructed and applied to each other, and to the surrounding band, as herein specified.

95,855.—A. J. TOMPKINS and J. M. WEGAND, Clarksville, Iowa.—*Hames-Fastener.*—October 12, 1869.

Claim.—The casings B and c^2, formed respectively on the socket A and perforated strap C, the socket B being adapted to receive and inclose the tube D, containing the spring-pin E, all arranged as described, for the purpose specified.

95,856.—E. W. VAILL, Worcester, Mass.—*Folding Chair.*—October 12, 1869.

Claim.—1. In a folding chair, the attachment of rigid arms to a rigid seat, having two slots in its side, as and for the purpose specified.

2. The combination of the legs A B, arm D, rigid seat C, slots *c*, pin *b*, and braces *a*, substantially as described.

95,857.—CHARLES R. VAN OSDEL, Chicago, Ill.—*Stirrup.*—October 12, 1869.

Claim.—1. A stirrup consisting of the sole and heel plates A and C, and provided with the toe-cap B, and with a counter, *b*, substantially as herein shown and described.

2. Making the stirrup extensible, to adapt it to feet of different length, as set forth, by arranging the heel-plate adjustably on the sole-plate, as specified.

3. The ring G and pin *f*, formed on the stirrup, when arranged on the stirrup, to allow the same to be swiveled in the straps D E, of which one has the ring F to fit on G, substantially as herein shown and described.

95,858.—LOUIS WALTHER, New York, N. Y.—*Medicated Cigar.*—October 12, 1869.

Claim.—As a new article of manufacture, medicated cigars, made from tobacco-leaves treated in an infusion of the substances herein described, substantially as specified.

95,859.—EDWARD G. WARD, Hoboken, N. J.—*Slate-Pencil Holder.*—October 12, 1869.

Claim.—Attaching the pencil to the slate by means of the elastic band *a*, passing through a mortise in the slate-frame, and beneath which, in the groove, formed in the edge of the frame, the pencil is placed, as herein shown and described.

95,860.—GEORGE J. WARDWELL, Rutland, Vt., assignor to STEAM STONE-CUTTER COMPANY, New York City.—*Stone-Channeling Machine.*—October 12, 1869.

Claim.—1. A stone-channeling machine, having its cutter-standard J applied to a base, T, which is adjustable upon the carriage A, substantially as described, and for the purpose set forth.

2. The combination of a hinged cutter-carrying standard, J, and an adjustable base, T, with the carriage A, substantially as described, and for the purpose set forth.

3. The adjustable sub-base D, on carriage A, having a steam-boiler mounted upon it by trunnions, substantially as described.

4. The air-chamber above the piston b^2, in cylinder M, and air-cock *t*, in combination with reciprocating cutters, and a support or standard, J, substantially as described.

5. The air chamber below piston b^1, in cylinder M^1, and air-cock *t'*, adapted to operate substantially as described.

95,861.—EDWARD WEISSENBORN, Hudson City, N. J.—*Pencil-Attachment.*—October 12, 1869.

Claim.—1. A pencil-clasp or stock, with compass-leg jointed thereto, for use, in connection with a pencil, as the scribing-leg and handle of the compass, substantially as specified.

2. The compass-leg C, constructed to form a knife-blade, *f*, and jointed to the pencil clasp or stock A, essentially as described.

3. A pencil-attachment, constructed to combine the threefold purposes or uses of a compass leg, a knife, and a pencil-point protector, essentially as herein set forth.

95,862.—MILTON D. WHIPPLE, Cambridge, Mass., assignor to JAMES T. SANFORD, New York City.—*Machinery for the Manufacture of Felt.*—October 12, 1869.

Claim.—1. The mode of fulling or contracting and softening cloth by rubbing and bending or looping it back upon itself, by means of the bed M, rubbing-plate M', and the feed-wheel or drum K, or their equivalents, operating substantially as described.

2. The combination of the pawls L' and *l'* with the ratchet-wheel K' and drum K, for giving to the latter an intermittent feed-movement, and at the same time preventing the fabric from being drawn too tightly over the edge of the bed M, as set forth.

3. The pawls L' and *l'*, slide L, and cam h^2, or its equivalent, for operating the ratchet-wheel K', and drum K, as set forth.

4. A regulator-rod, P, or its equivalent, in combination with the mechanism for operating the feed-drum K, for taking up the slack of the cloth and regulating the feed thereof, as set forth.

95,863.—MILTON D. WHIPPLE, Cambridge, Mass., assignor to JAMES T. SANFORD, New York City.—*Machine for the Manufacture of Felt.*—October 12, 1869.

Claim.—1. Automatically lifting the rubbing-plate D', to permit the feed of the cloth or bat to the bed D, by means substantially as described.

2. The intermittently-operating feed-rolls *j j'*, in combination with the intermittently-lifting rubbing-plate D', substantially as described.

3. The combination of devices for simultaneously operating the intermittently-lifting rubbing-plate D', and intermittently-rotating feed-rolls *j j'*, as described.

4. The combination of the levers E E^1, rock-shaft E^2, and cam *h*, for lifting the vibrating rubbing-plate D', without interfering with its vibratory movement.

95,864.—RICHARD M. WILLIAMS, Rockville, Md.—*Harvester.*—October 12, 1869.

Claim.—1. The platforms D D and finger-bars, placed opposite each other, and arranged so as to rotate, with their sickle-bars, in a horizontal plane, about a common center, substantially as and for the purposes explained.

2. In combination with the revolving platforms and the finger-bars, the beam H, carrying the graded series of fingers *l'*, arranged to operate in the manner and to the end set forth.

3. In combination with the revolving platforms and finger-bars, the beam G, carrying the adjustable rake *k*, arranged to act as described, and with the extent specified.

95,865.—SILAS N. BROOKS, Bernardston, Mass., administrator of the estate of LINUS YALE, Jr., deceased.—*Lock.*—October 12, 1869.

Claim.—1. The combination of the turning-slide, lock-bolt, and stop, all constructed to operate substantially as before set forth.

2. The combination of the turning-slide, bolt, stop, and detent, all constructed to operate substantially as before set forth.

95,866.—HUGH YOUNG, Middletown, Conn., and JAMES L. YOUNG, New York, N. Y.—*Carbon-Tool.*—October 12, 1869.

Claim.—The improved mode of inserting mineral carbons, or other hard stones, in tools for cutting stones, metals, or other substances, from the front side B of the block A, instead of inserting the same from the top part, or that part of the block through which the cutting-point is to project, as is now done,

and this we claim for any shape or size of mineral carbon, or other hard stones, when done substantially in the manner and for the purpose herein set forth.

95,867.—Louis Brauer, Washington, D. C.—*Car-Axle Bearing.*—October 12, 1869.

Claim.—1. The hollow vibrating box or case, provided with the side-rollers D D′ and large roller B, and with the shoulders H H and springs P P resting thereon, all constructed and arranged to operate as and for the purpose set forth.

2. In combination with the box carrying the described arrangement of wheels and springs, the stationary frame E, constructed and applied to the car, substantially as and for the purpose set forth.

95,868.—John F. Allen, Tremont, N. Y.—*Steam-Engine Slide-Valve.*—October 19, 1869.

Claim.—1. A perforated slide-valve, constructed as shown, whereby to admit the steam by four courses, allowing it to pass through the body of the valve, substantially as herein shown and described.

2. A perforated slide-valve, having the cross bars *n o* and connecting tube or tubes *t*, to admit or exhaust the steam by four different passages, as specified.

3. The cap F, arranged in the steam-chest, above the perforated slide-valve, and provided with one or two grooves, or recesses, to admit the steam above the valve, substantially as herein shown and described.

95,869.—Emanuel Andrews, Williamsport, Pa.—*Saw-Swage.*—October 19, 1869.

Claim.—1. The adjustable hexagonal anvil A, constructed and operating as described, and for the purpose aforesaid.

2. The saw-swage C, constructed and operating as above shown, and for the purpose above set forth.

3. The combination, arrangement, and employment of the saw-swage C, adjustable hexagonal anvil A, screws E E, and supports D D, in connection with a suitable frame, when constructed and operating as above mentioned.

95,870.—Henry M. Beidler, Philadelphia, Pa.—*Lamp-Burner.*—October 19, 1869.

Claim.—The bell-shaped case A, with its broad open or perforated bottom, in combination with the inner heat-conducting case C, constructed and arranged substantially as and for the purpose set forth.

95,871.—Henry C. Bell, Emporia, Kans.—*Saw-Filing Machine.*—October 19, 1869; antedated October 13, 1869.

Claim.—The construction and arrangement of the slotted angular clamp F, the slotted angular plate E adjustable upon the clamp F, and the slotted guide D, adjustable upon the plate E, as herein shown and described.

95,872.—Louis Black, Detroit, Mich.—*Spring Eye-Glass.*—October 19, 1869.

Claim.—1. Connecting the springs of spring eye-glasses to the eye-glass frame by clamps *a b′*, when arranged to be secured by wedge-formed devices, or their equivalents, substantially as specified.

2. In combination with the said clamps, the bent projections at the ends of the springs, or their equivalents, substantially as specified.

95,873.—William M. Bleakley, Verplank, N. Y.—*Can-Opener.*—October 19, 1869.

Claim.—A can-opener, composed of the levers A and B, which are pivoted together by a hook, and which carry respectively the adjustable cutter D and the adjustable prong C, substantially as herein shown and described.

95,874.—Henry E. Bodwell, Jr., South Norwalk, Conn.—*Tucking Attachment for Sewing-Machines.*—October 19, 1869.

Claim.—The adjustable sliding-plate A, the hinged folding-plate D, the forming-plate E, and regulating-guide L, all constructed and arranged as and for the purpose specified.

95,875.—Milton Bowker, Newark, N. J.—*Hay-Spreader.*—October 19, 1869; antedated October 9, 1869.

Claim.—1. The cylinders, pistons, and springs, constructed, combined, and arranged upon a hay-spreader, substantially as specified and shown.

2. The sleeves *d*, when constructed with the sockets *e* and set-screws *f*, in the manner and for the purpose herein described.

3. The adjusting-plate *g*, when used in combination with the cylinders, pistons, and springs, and the sleeves *d*, in constructing a machine to spread hay.

4. The combination of the connecting-rod *g*, the sleeve *d*, and the tines and set-screws *f*, substantially as specified and shown.

95,876.—Benjamin B. Brown, Delaware, Ohio.—*Adding-Machine.*—October 19, 1869.

Claim.—The combination of plate *l*, ratchet *n*, detent-pawl *q*, actuating-pawl *m*, chain *p p*, slide *b*, (having lug C and spring-pins *d*, thereon,) scroll-pin *g*, frame *k*, and face-plate, all constructed and arranged as and for the purpose specified.

95,877.—Daniel S. Brown, Astoria, Oregon.—*Boat-Detaching Apparatus.*—October 19, 1869.

Claim.—The combination of the stationary jaws B and pivoted jaws C, with the rods *b b′*, bar D, lever E, rod *d*, and catch F, all arranged and operating substantially as herein shown and described.

95,878.—Augustus Oliver Brummel, Memphis, Tenn.—*Driven-Well Points.*—October 19, 1869.

Claim.—1. The point C B, made in two sections, with the air-passages *a a a a*, in combination with *b b*, as described above, for the purpose there stated and described.

2. The point C B, in combination with the pipes A D, constructed as above described, and for the purpose therein contained and stated.

95,879.—T. N. Bunnell, Reynolds, Ind.—*Hay-Stacker.*—October 19, 1869.

Claim.—The frame-work A, combined with the pivoted bar B, the lever C, rope D, and stay *d′*, in the manner and for the purpose set forth.

95,880.—W. Newton Cook, Grand Rapids, Mich.—*Spring-Bed Bottom.*—October 19, 1869.

Claim.—The combination of the guide-bar C and frames A and B, bolts and thimbles D, springs *a a a a*, and canvas *b*, when constructed and used substantially as and for the purposes specified.

95,881.—Albert Cooper, Harrisburgh, Pa.—*Clothes-Line Holder.*—October 19, 1869.

Claim.—In combination with a line-holder, the double-incline plane disk-wheels E and D, and the center C with the collar B, constructed, arranged, and operating substantially as described, for the purposes set forth.

95,882.—John Corson, Washington, D. C., assignor to himself and Daniel Breed, same place.—*Manufacture and Preservation of Metals.*—October 19, 1869.

Claim.—The above-described mode of manufacturing, working, tempering, storing, and preserving metals in a state of insulation from earth-currents of electricity, in order to produce and preserve a superior fibrous condition of the metal, and to prevent or retard the crystallization and deterioration of the same, using the aforesaid means, or their equivalents, involving the same principles, substantially as set forth.

95,883.—E. D. Cramer, Hackettstown, N. J.—*Stable Horse-Tie.*—October 19, 1869.

Claim.—An improved stable horse-tie, formed by the combination of staple B, strap C, and elastic block D, the said parts operating together, substantially as shown and described.

95,884.—Hermann Cramer, Sonora, Cal.—*Saw.*—October 19, 1869.

Claim.—A saw, whose back edge is provided with a graduated scale, and whose blade is perforated, in combination with the square-edged handle B, spirit-

levels *d c*, and pivoted bar or plate *f*, all arranged and operating substantially as herein shown and described.

95,885.—MITCHELL R. DAND, Philadelphia, Pa.—*Car-Spring.*—October 19, 1869.

Claim. — 1. The spring, made substantially as shown and described, from the blank A, with the coils *b*, straight part *a*, and inclined portions *c d*, for the purposes specified.

2. The grooved plate B, in combination with the spring, arranged substantially as and for the purpose set forth.

95,886.—HIRAM DODGE, Beaver Dam, Wis.—*Shaft-Coupling.*—October 19, 1869.

Claim.—The head A, provided with arms E, internal ratchet *f f f f*, in combination with the nut M, provided with pawls J, cylindrical head F, provided with friction-rollers, the shafts C D, and shell B, as and for the purpose set forth.

95,887.—WILSON ELDER, Mill Hall, Pa.—*Straw-Cutter.*—October 19, 1869.

Claim.—The enlarged part B of the lever C, elastic bearing-ribs H H, annular groove I, plate A, and bolt C, all combined, constructed, and arranged as specified.

95,888.—ERVIN H. EWELL, Saint Louis, Mich.—*Machine for Sawing Lath.*—October 19, 1869.

Claim.—The devices by which the gang of saws M is adjustable vertically above and below the surface of the saw-table C, consisting of the mandrel L, the frame K, the slides *f*, the lever O, and the treadle P, when constructed and arranged as above set forth.

95,889.—WILLIAM M. FERRY, Grand Haven, Mich.—*Circular-Saw Mill.*—October 19, 1869.

Claim.—1. The head-block D, constructed substantially as herein described, and provided at its lower edge with stationary dogs *d*, as and for the purpose set forth.

2. The dogs G, recessed in the vertical guides F in the face of the head-block, which dogs engage, of their own weight, with a cant, as herein specified.

3. In combination with the dogs G, the racks *h*, operated by pinions I′, gears J J′, and lever K, or other suitable mechanism for raising said racks, substantially as described.

4. The employment of the springs C′, on the log-side of the carriage, to arrest the "throw" of the head-block, when the cant has become light.

5. The inclined-plane bearings *b*, on the back side of the saw-carriage, in which play the journals of the traction-wheels *a*′, so that while feeding up to cut, the carriage shall stand level, and, in gigging back, the back side will drop, causing the log-side of the carriage to diverge from the saw, as and for the purpose set forth.

6. The dial-wheel Q, perforated on its periphery with pin-holes, in parallel rows, the holes of each row being placed at equal distances from each other, in combination with a feed-pinion, N, of such diameter at its pitch-line as will accurately space off the various thicknesses of merchantable lumber, and come out even on the last cut of the cant, substantially as described.

95,890.—J. HYDE FISHER, Chicago, Ill.—*Nut-Lock.*—October 19, 1869; antedated April 19, 1869.

Claim.—In combination with the nut D and screw H, a washer, C, which is so formed to have projections *d b* fitting into corresponding depressions *d*′ *b*′ in its seat, as set forth.

95,891.—JOHN J. FLANSBURGH, Berne, N. Y.—*Sausage-Stuffer.*—October 19, 1869.

Claim.—1. The stuffing-cylinder F, provided with the sloping mouth *f*, and the trunnions *g g*, arranged so as to swing its mouth over a side of the machine, substantially as described, for the purpose set forth.

2. In a sausage-stuffer, in combination with the screw C and hand-wheel D, or its equivalent, the frame B, with the plunger E, attached, and working in the frame A, provided with the guides *a a*, and all arranged and operated substantially in the manner specified, for the purpose set forth.

95,892.—EGBERT GUY FOWX, Baltimore, Md.—*Photographic Printing.*—October 19, 1869.

Claim.—The combination of two or more negatives, for the purpose of producing photographic prints, substantially as described, and for the purpose set forth.

95,893.—CALVIN G. FRUSHOUR, La Gro, Ind.—*Animal-Trap.*—October 19, 1869.

Claim.—The combination of the notched flanges or wings *e*, with the spring-treadle L, constructed as herein shown and described.

95,894.—HORACE W. GEORGE, Danvers, Mass., assignor to JOHN H. YOUNG and JOHN A. GREENE.—*Box-Toe for Boots and Shoes.*—October 19, 1869.

Claim. — As a new article of manufacture, a molded box-toe for boots and shoes, made of vulcanized rubber, with or without an intermixture of fibrous material, or of any suitable material capable of being formed or shaped in molds, substantially as described.

95,895.—ALGERNON GILLIAM, Pittsburgh, Pa.—*Harness-Saddle.*—October 19, 1869.

Claim.—The tree A, with its upward-projecting flanges B, strengthened by means of the loop M, at each end of the same, and connecting said flanges, in combination with the patent-leather top piece D, housing K, and pad I, in the manner and for the purpose herein set forth.

95,896.—DENNIS GORMAN, Hornellsville, N. Y.—*Potato-Digger.*—October 19, 1869.

Claim.—The digging-fork scoops D D D as constructed and arranged on the revolving disk C for adjusting their depth, in combination with the screen E, operating in the manner substantially as herein described, for the purposes set forth.

95,897.—MERRITT W. GRISWOLD, New York, N. Y.—*Lock-Nut.*—October 19, 1869.

Claim.—1. A spiral spring, F, or H, combined with the edges or periphery of either end of a free screw-bolt, or of a free screw-nut upon a fixed bolt, to lock and tighten the same, substantially as herein set forth.

2. An interposed spring, when extended between and secured to the edges or peripheries of two or more nuts B B, or of two or more free bolts G, passing into fixed or secured nuts or threaded apertures, so as to lock and tighten the same, substantially as herein set forth.

95,898.—JOSEPH D. HALL, Trenton, N. J.—*Ruler.*—October 19, 1869.

Claim.—The combination of the ruler and blotting-pad with the frame which holds the blotting-pad, and the manner of attaching them, substantially as described, and for the purposes hereinbefore set forth.

95,899. — WILLIAM HALL, Boston, Mass., assignor to himself and SAMUEL PECK AND COMPANY, New Haven, Coun.—*Rose for Door-Knobs.*—October 19, 1869.

Claim. — The molded composition washer C, in which the metallic part D E is molded into the non-metallic part, substantially as described, and for the purpose set forth.

95,900.—JOHN HARVEY, Martinsville, Ind.—*Fruit-Drier.*—October 19, 1869.

Claim.—1. The arrangement of the case A B, the flue E, F, G, M, dividing the case into compartments, the ventilating-passages Q, and dampers R, all substantially as specified.

2. The improved fruit-drawers or shelves, constructed and arranged as specified.

95,901.—JOHN HINE, Cockermouth, England.—*Machine for Dressing Millstones.*—October 19, 1869.

Claim.—1. The guide B, fastened to the plate J, which is pivoted to the radial arm A, substantially as described, so that the position of the guide can be varied at will, as specified.

2. The lever E, pivoted to the radial arm, to move the cutter-block and the ratchets, which impart in-

termittent rotary motion to the entire apparatus, as specified.

3. The radial arm A, toothed disk C, and worm H, in combination with the lever E, ratchet-bar I, cutter-block F, and holder M, all arranged and operating substantially as herein shown and described.

4. The diamond holder M, having the split conical end, the collar l', and nut m, all arranged as described, to clamp the diamond between the segments of the cone, as specified.

95,902. — DAVID H. HORNER, Battle Ground, Ind.—*Weather-Strip.*—October 19, 1869.

Claim.—The combination, with a door and door-frame, of the under-cut bracket B, strip A, springs C and D, when all constructed and arranged as specified.

95,903. — J. W. HOWARD, Greenville, Ala.—*Slack-Belt Attachment for Machinery.*—October 19, 1869.

Claim.—The combination of loosely-pivoted lever E and pin G with the post C, having a series of holes arranged thereon, in the arc of a circle, as and for the purpose specified.

95,904.—JOSEPH HUBBELL, Zanesville, Ohio.—*Head-Block of Saw-Mills.*—October 19, 1869.

Claim. — 1. The combination of the vibrating hand-lever, the reciprocating pitman, the spring-clutches linked to and operated by the pitman, the ratchet-teeth on the driving-wheels, the pinion, the worm-shaft, and the jacks, all these parts being constructed as set forth.

2. The combination of the driving-wheels, the reciprocating pawls moving parallel to the face of the wheels, the springs, and the vibrating pawl-holders, all constructed as set forth.

3. The combination of the pawl-holders, the spring-pawls, each having a short projection or foot, l^2, and the retractor k, all constructed as set forth.

4. The combination of the reciprocating sliding bar, pawls, or spring-clutches, connected by links with the bar, cogged driving-wheels, having internal ratchet-teeth, screw or worm shafts, secured in the head-blocks, and carrying pinions corresponding with and driven by the cogged wheels, screw-socket or nuts, in which the shafts turn, and feeding-jacks, sliding in the head-blocks, and to which the sockets or nuts are secured, the combination being and operating substantially as set forth.

95,905. — A. J. JACK and D. E. BRAND, Des Moines, Iowa.—*Water-Wheel.*—October 19, 1869.

Claim.—1. The buckets D, each pivoted at the beginning of the curved outer termination, thence to the inner end being plane, as shown and described.

2. The buckets D, having the form shown, the rods E, and bell-cranks F, pivoted at their angles to the notched disk G, fixed on the shaft H, all arranged as specified.

95,906.—JESSE JENKINS, Andrew County, Mo., assignor for one-half to ABRAM DOBBS, same place.—*Corn-Planter and Cultivator.*—October 19, 1869.

Claim.—1. The combination of the seed-box a, slide a', shaft b', with the pivoted standard c'', spring c''', and slotted guide-frame c', all arranged and operating substantially as described.

2. The combination, with the seeder-frame, of the lever h, rod h'', and handle h''', in the manner and for the purpose set forth.

3. The combination of shaft and roller D D′ with the shafts and shovels C C′ r, controlling-shaft B, planter-apparatus a a', crank-shaft b', disconnecting-apparatus c c' c'' c^3, and brake-mechanism h' h'' h^3, all arranged and operating in the manner explained.

95,907. — C. H. JOHNSON, Chelsea, Mass., assignor to himself and CHARLES LIBBEY, Whitefield, N. H.—*Sleigh and Sled Runner.*—October 19, 1869.

Claim.—In a sled or sleigh runner, the combination of the head-piece B, the elastic runner-iron D, the springs C^1 C^2, and body A, made and connected substantially as described, and for the purpose set forth.

95,908.—WILLIAM H. JOHNSON, Philadelphia, Pa. — *Wash-Pave Key-Handle.* — October 19, 1869; antedated October 5, 1869.

Claim. — The construction of a wash pave key, with the handle of any irregular shape, whereby the hose is kept in position, substantially as described.

95,909.— WILLIAM J. JOHNSON, Newton, and HENRY A. HILDRETH, Lowell, Mass. — *Broiler.*—October 19, 1869.

Claim.—1. The hinged or pivoted drop-hooks, attached to the frame or body of a wire broiler, as and for the purposes specified.

2. Handles formed and attached to the frame or body of a wire broiler, as shown and described, and for the purposes set forth.

95,910. — JOHN J. KIMBALL, Naperville, Ill.—*Water-Wheel.*—October 19, 1869.

Claim. — 1. The combination, with the case A, having the chutes B, of the ring D, and vertical wedge-shaped projections E, substantially as specified.

2. The combination, with the wheel, composed of the rings G G′, vertical arms H, and buckets I, having vertical and inclined faces, of the tubular extension C of the case, substantially as specified.

95,911.—CHARLES A. KING, Springfield, Mass.—*Lubricator for Loose Pulleys.*—October 19, 1869.

Claim. — 1. A valve for pulley-lubricators, constructed and arranged as described, so as to open and close the passage communicating between the reservoir and the pulley-bearing, by its own weight, as the pulley revolves.

2. The combination of the slide-valve A, with adjusting-screws H and I, and hole G, and the reservoir C, with hole E, constructed and arranged as and for the purpose shown.

95,912.—CHARLES A. KING, Springfield, Mass.—*Lubricator for Loose Pulleys.*—October 19, 1869.

Claim.—1. A valve for pulley-lubricators, operated by the centrifugal force obtained from the revolution of the pulley, said valve opening and shutting a passage communicating with the pulley-bearing.

2. The combination of the supply-chamber A, oiling tube B, valve F, and spring I, the parts being constructed and arranged substantially as herein set forth.

3. The independent annular oil-chamber A, constructed in the manner and for the purpose set forth.

95,913.—WILLIAM E. KNIGHT, Shrewsbury, assignor to DARIUS A. MARTIN, Mount Holly, Vt.—*Rotary Vegetable-Grater.*—October 19, 1869.

Claim.—The combination of the revolving disk-grater Z, with a sliding carriage, F, for feeding the vegetable up to the grater, by means of the weight W, cord S, pulleys a' and b', or their equivalents, substantially as and for the purposes specified.

95,914.—FREDERICK KÖHLER and A. J. ALSING, New York, N. Y.—*Spring Pounding and Chopping Block.*—October 19, 1869.

Claim.—An apparatus for reducing and diminishing the shocks and noise of machinery and of pounding-instruments, consisting of the box-shaped support A, the spring or springs B, and the block C, substantially as herein shown and described.

95,915.—FRANZ FRIEDERICH KULLRICH, Berlin, Prussia.—*Picture-Case.*—October 19, 1869.

Claim. — 1. The endless band I, carrying the pictures, in combination with the drum A of a music-box, all arranged so that the band is moved when the music is in action, as set forth.

2. The roller G, held by springs d away from the music-drum A, for the purpose of keeping the band tense, as specified.

3. The case or box J, containing a music-box and picture-belt, and provided with an aperture, through which the pictures are displayed successively while the music is in action, as set forth.

95,916.—WILLIAM LEIGHTY, Ebensburgh, Pa.—*Washing-Machine.*—October 19, 1869.

Claim. — In combination with the triangular bracket E, the sliding stop-plate K, as and for the purpose described.

95,917.—J. C. LONGSHORE, Mansfield, Ohio.—*Clothes-Drier.*—October 19, 1869.

Claim.—1. The combination, with the parallel extension-frame A, united by the bars B, of the frame C, constructed as described.

2. The combination, with the parallel extension-frames A, united as described, and the frame C, of the posts E, all arranged as specified.

95,918.—HENRY O. LOTHROP, Milford, Mass.—*Machine for Making Wire Ferrules.*—October 19, 1869.

Claim.—1. The combination of instrumentalities herein described, for making a soldered-wire ferrule, all substantially as set forth.

2. In coiling mandrels, the combination of a tapering form and grooves *f f*, with a groove *e*, all arranged and operating together in the manner described.

3. The combination and arrangement of mechanism by which the arbor and knife are respectively operated at the time and in the manner set forth.

4. In combination with the mandrel I, the beater *a*, formed as described, actuated in any suitable manner, and operating as explained.

5. As a new manufacture, a ferrule made of coiled and soldered wire, having each fold of the coil formed with an offset, substantially as and for the purposes set forth.

95,919.—THOMAS MAHER, Cleveland, Ohio.—*Core-Box for Car-Wheels.*—October 19, 1869.

Claim.—The core-box A, cover C, and sweep D, constructed and arranged substantially as described.

95,920.—JOEL MANCHESTER, New York, N. Y.—*Animal-Trap.*—October 19, 1869.

Claim.—1. The lever G, with the projections *o o'*, and S, on the inner surface of the slot and end of the lever, substantially as and for the purposes set forth.

2. The bait-box P, constructed as described, when attached, by means of the wires *q*, to the bait-bar F, and arranged as herein set forth and shown, for the purposes specified.

95,921.—HORACE A. MEARS, Pecatonica, Ill.—*Stove-Pipe.*—October 19, 1869.

Claim.—The supplemental open joint B, with beads *c c d*, plates *e e*, and prominences *f f*, when operated by means of the wedge *h*, and used in connection with the pipe A A, as and for the purpose described.

95,922.—GEORGE A. MILANI, Frankfort, Ind.—*Propelling Vessel.*—October 19, 1869.

Claim.—1. The combination of a centrally-fulcrumed lever, having a seat at each end, with two pairs of pawls and ratchet-wheels, arranged as described, to rotate two aligned shafts, D D, simultaneously and with equal velocity, as set forth.

2. The arrangement, on a boat, of two aligned shafts, D D, rotating with equal velocity, spur-wheels E E, pinions *a a*, and shafts B B, to propel the paddle-wheels C C, in the manner described.

3. The arrangement, upon the paddle-driving shaft D D of a boat, of loose equalizing spring spur-wheels E E, for the purpose of giving a uniform motion to the paddle-wheels.

4. The arrangement, near the bottom of the boat, of a lever, H, fulcrumed and shaped as described, for the purpose of removing the pawls from the ratchets, in the manner specified.

95,923.—EDWARD MILNER, Marquette, Mich.—*Wagon-Stake.*—October 19, 1869.

Claim.—The stake A, when provided with the eye B and lug D, in connection with the bolster C, substantially as herein described.

95,924.—TITUS MOLINIER, New Orleans, La.—*Apparatus for Decanting Liquids.*—October 19, 1869.

Claim.—1. The combination, with the divided and hinged decanting-tube or conduit, of the funnel, fixed to the free end of said tube, and arranged to receive the liquid and conduct it to the tube, substantially as and for the purposes set forth.

2. The combination, with the decanting-tube or conduit, of a handle, connected with the free end of said conduit, and adapted to effect the elevation or depression of the receiving-funnel or orifice, and to hold it at any desired height, substantially as set forth.

3. The combination of the hinged conduit, the receiving-funnel or orifice, the handle, for elevating and depressing the same, and the hinged float, surrounding the mouth of said funnel, substantially as set forth.

4. The arrangement, at the point where the two sections of the conduit are hinged together, of leather, India rubber, or other suitable pliable material, which will unite the two sections in one continuous tube, and yet allow the upper or movable section to be swung up or down on its hinge, as set forth.

5. The combination, substantially as described, with the flexible or pliable material, connecting the two sections of the conduit, of props or supports, arranged within the conduit, so as to sustain the said pliable material, and prevent it from impeding the passage of the liquid through the conduit, when the upper section is elevated.

95,925.—ALBERT MOORE and FRIEDERICH WENDEL, Chillicothe, Ohio.—*Combined Plow and Harrow.*—October 19, 1869.

Claim.—The combination of the harrow G, draught-rods H and I, and jointed catch-rod J, with the plow A B C D E F, substantially as herein shown and described, and for the purpose set forth.

95,926.—CHARLES S. MURPHY and DONALD MCGREGOR, Detroit, Mich.—*Soap-Cutting Machine.*—October 19, 1869.

Claim.—1. The vibrating frame D, provided with cutting-wires *o*, table E, and handle L, in combination with the frame C, when constructed and operating substantially as herein specified.

2. In combination with the above-named parts, the slides F, table G, and cutting-wires *m*, when arranged relatively to each other, and operating as herein set forth.

3. In combination with the frames C, D, and G, provided with the various parts herein mentioned, the frame A, provided with cutting-wires *a*, and the ways B, when constructed, combined, and operating substantially as and for the purposes herein described.

95,927.—JOHN MCLEOD MURPHY, New York, N. Y., assignor to JAMES LORIMER GRAHAM, same place.—*Cut-Off Nozzle for Cans.*—October 19, 1869.

Claim.—Packing-cans, for oils and other fluids, provided with nozzles A, having the lateral holes D E, and screw or other caps B, and the cut-off rings F and spouts G, all substantially as specified.

95,928.—FREDERICK NICKLIN, Troy, N. Y., assignor to himself and REUBEN WILLIS, same place.—*Railway-Rail Chair.*—October 19, 1869.

Claim.—A railroad-chair in two parts, whose internal faces are shaped as described, in combination with two keys, with reversed inclination on their coincident sides, the said elements being fitted together, as and for the purpose specified.

95,929.—JORGE OYARZABAL, Malaga, Spain.—*Ice-Cream Server.*—October 19, 1869.

Claim.—The implement or ice-cream server, substantially as described, that is, as composed of the knife A, blade B, and spring-bow C, arranged as set forth.

95,930.—L. D. PARSONS, Tremont, N. Y.—*Wind-Wheel Pump.*—October 19, 1869.

Claim.—1. The combination of a reciprocating weight, P, with a pump-rod, K, having an eye at the top and another at L, whereby, as the weight strikes the top *g*, the rod is raised, and when it strikes the bottom one, it is depressed, all as shown and described.

2. The combination of a winding-spindle, G, loose upon its shaft, and alternately locked and unlocked, with a cord, O, and weight P, whereby the rod K is

raised by mechanical power, but depressed by gravity, in the manner set forth.

3. The combination of the rod K, reciprocating weight P, and lever M, arranged and operated as described, to ship and unship the clutch-sleeve G, in the manner described.

4. The combination of the shaft F, clutch-collar H, clutch-sleeve G, lever M, cord O, and weight P, with the lugged rod K, to displace the water and cause its elevation, as set forth.

5. The combination of the shaft F with a wind-driver, whose wings T face inward, as specified, whereby a vane is rendered unnecessary.

6. The subject-matter of fourth clause, in combination with the wind-driver, as and for the purpose specified.

95,931.—ALMARIN B. PAUL, San Francisco, and J. L. WOOD, Independence, Cal.—*Process for Amalgamating Gold and Silver.*—October 19, 1869.

Claim.—1. The combination of the simple horizontal rotating hollow or perforated-axled cylinder A, with a furnace, for the purpose of drying and ventilating materials to be amalgamated.

2. The process of drying and ventilating metalliferous ores, and amalgamating the same, substantially as set forth.

3. The amalgamating of pulverized ores in a dry condition, with mercury, in metallic or wooden barrels or cylinders, without the use of artificial heat.

95,932.—JAMES N. PEASE, Panama, N. Y.—*Fence-Stake.*—October 19, 1869.

Claim.—1. The sill C, in combination with the cross-cleats B and stakes A, when constructed and arranged as and for the purpose herein substantially described.

2. The combination and arrangement of the cap E, stakes A, cross-cleats B, and sill C, substantially as described.

95,933.—JOHN PLAYER, Philadelphia, Pa.—*Manufacture of Iron and Steel.*—October 19, 1869.

Claim.—1. As a preparatory step in the conversion of crude iron into steel or malleable iron, mechanically dividing cast iron into pieces, flakes, grains, or powder, by running it, in a fluid state, either alone or mixed with other substances, between rollers or other suitable moving and crushing surfaces, substantially as and for the purposes described.

2. The process of converting crude iron into steel, or malleable iron, by subjecting it to the puddling-process or any other suitable treatment, iron which has first been reduced in the manner above described, from a melted state, either alone or together with other substances, to pieces, flakes, grains, or powder, and then mixed, in this solid state, with oxides or other ingredients or agents, also in a solid state, either before being placed in the puddling or other furnace, or in such furnace before any considerable portion of them is melted, substantially as and for the purposes set forth.

95,934.—WILLIAM J. REED, West Middlesex, assignor to himself, JOHN M. CLAPP, and WARNER PEARSON, Newcastle, Pa.—*Steam-Generator.*—October 19, 1869.

Claim.—Throwing jets of steam into the flame, just above and clear of the fuel, by devices constructed and arranged with specific reference thereto, as herein set forth.

95,935.—ANDREW JACKSON ROBERTS, Boston, Mass.—*Machine for Making Horseshoes.*—October 19, 1869.

Claim.—1. The train of mechanism by which the formers Q Q′ are opened and closed, its several parts being constructed, arranged, and operating substantially in the manner described.

2. Constructing, arranging, and fitting together, upon the head-block, the sliding bars R Y and levers V V′, substantially in the manner specified.

3. The train of mechanism by which the sliding bars R Y are actuated, its several parts being arranged and operated as set forth.

4. The combination of the anvil-plate, the pressure-plate *u*, and bar *r*, acting together as a holding-device, with the dies a^1 and p', all being constructed and arranged as shown and described.

5. The subject-matter of the preceding clause, in combination with the formers Q Q′, all the elements of said combination being arranged and operating together as and for the purpose specified.

6. The subject-matter of the preceding clause, in combination with the punches *p p*, all the elements operating together to make a complete shoe, as set forth.

7. The combination of the bending, punching, face-forming, calk-forming, and discharging devices, all arranged and operating together as and for the purpose specified.

8. The arrangement of the punch-carrier R, the orifice H′, the feeding-carriage g^1, and the herein-described mechanism for reciprocating the same, substantially as and for the purposes set forth.

95,936.—EDWARD P. ROCHE, Bath, Me.—*Hooks and Eyes.*—October 19, 1869.

Claim.—As a new manufacture, hooks and eyes, formed from continuous strips of spring or tempered wire, bent into the shape substantially such as herein shown and described.

95,937.—THEODORE W. RYDING, Tully, N. Y.—*Butter-Package.*—October 19, 1869.

Claim.—The improved butter-package, herein described, as a new article of manufacture, the same consisting of a tub, A, with packing groove *a*, the cover B, cross-piece C, screws D, riveted to the tub and to the hoop *e* of the tub, and nuts *d d*, when the cross-piece has its ends cut away, so that the screws and nuts do not project, all the parts being constructed and arranged substantially as herein described.

95,938.—ALBERT G. SAFFORD, Boston, Mass.—*Railroad-Car Ventilator.*—October 19, 1869.

Claim.—The arrangement and combination of the ball D and the stops *b c* with the valve A, its pivots, and the opening B, for reception of the valve, the whole being substantially as set forth.

95,939.—GEORGE W. SCOLLAY, Saint Louis, Mo.—*Preserving Dead Bodies.*—October 19, 1869; antedated October 5, 1869.

Claim.—1. Preserving the body or carcass, by combining, in the arterial or vascular system thereof, the antiseptic, or preserving qualities or influence of a fluid or fluids and a gas or gases, so made, mixed, and compounded as to exert an antiseptic influence upon the body, when united therein, whether the gas or gases and fluid or fluids are antiseptic in themselves or not, or whether they would exert an antiseptic influence or not upon the body, when separately applied thereto.

2. Restoring and preserving the life-like color of the venous blood, and the consequent life-like appearance of the corpse or flesh of the carcass, by means of a combination of gases which are antiseptic and color-restoring in their influence, when united in the vascular and arterial system of the body, substantially as described.

3. Subjecting the body or carcass to an antiseptic influence, in the form of a fluid, introduced into the arterial and vascular system, and to an antiseptic influence in the form of a gas, introduced into the blood and tissues either through the lungs, the pores of the skin, or through the arterial and venous system, so as to cause the two influences to combine in the body, for the purpose of preserving the same, substantially as described.

95,940.—WARREN SHUMARD, Richmond, Ind.—*Soil-Pulverizer.*—October 18, 1869; antedated October 5, 1869.

Claim.—The toothed frame A, in combination with the movable toothed frame B, the teeth of which latter are passed, with a reciprocating or oscillating movement, between those of the frame A, substantially as described.

95,941.—BENJAMIN SILLIMAN, New Haven, Conn.—*Manufacture of Illuminating Gas.*—October 19, 1869.

Claim.—The use and application of the material or mineral hydrocarbon called Wollongongite, possessing the attributes and qualities substantially as

above described, either by itself or mixed with other gas-producing substances, for the purpose of making gas for illuminating or heating purposes.

95,942. — R. H. SIPES and D. DEFIBAUGH, Bloody Run, Pa.—*Fruit-Drier.*—October 19, 1869.

Claim.—1. The combination, with the case A, of the tube G, sliding fire-pot H, fitted thereto, the flues K, radiator L, and flue M, when the said case is provided with suitable air-passages and regulating-valves at top and bottom.

2. In combination with the subject-matter of the above, the posts P, brackets O, and pans N, all substantially as specified.

95,943.—ANTHONY SLUTHOIN, Cleveland, Ohio.—*Pump.*—October 19, 1869.

Claim.—1. The lever L, provided with the hub N, the slotted stuffing-box M, glands O, and any suitable packing, in connection with the air-chamber of a double-cylinder pump, substantially as and for the purposes set forth.

2. The combination and arrangement of the shell A, covers B, lugs b', rods b, cylinder C, air-chamber D, valves E, suction G, piston-rod H, perforated pistons I, followers K, lever L, stuffing-box M, glands O, diaphragm P, and discharge Q, when constructed, arranged, and operating substantially as and for the purposes herein shown and set forth.

95,944. — JOSEPH R. SMITH, Chicago, Ill., assignor to CORNELIUS WALSH, Newark, N. J.—*Traveling Bag.*—October 19, 1869.

Claim.—1. The band A, having its ends a a bent around the hinge-corners of the frame, and connected by a separate strip or brace, B, of greater strength or stiffness, substantially as represented and described, for the purposes set forth.

2. The band A, having its ends a a bent around the hinge-corners of the frame, and united by a separate stiff strip or brace, B, in combination with the corner-shields or protectors F, applied externally of the cover, as represented and described, for the purpose set forth.

95,945. — W. C. SMITH, Warrensburgh, Mo.—*Bed Bottom.*—October 19, 1869.

Claim.—In combination with a bed-bottom, the rollers or pulleys a, resting upon the strips g, the girths d and the slats c, rounded on the under side, all constructed as described, and for the purposes set forth.

95,946. — DAVID T. SNELBAKER, Cincinnati, Ohio, assignor to ALEXANDER DELORAC, same place.—*Wagon-Brake.*—October 19, 1869.

Claim.—The pawl F, with limb f and spring G, or its equivalent, in combination with the ratchet B and levers H and C, arranged and operating substantially as and for the purpose set forth.

95,947.—EUGENE SPEDDEN, Astoria, Oregon.—*Milking-Apparatus.*—October 19, 1869.

Claim.—1. The combination of the pail, tube, funnel, and elastic wristlets D, substantially as specified.

2. The elastic wristlets D, ring a'', and hooks E, in combination with the funnel C, when said parts are constructed and arranged to operate as shown and described.

95,948.—HENRY W. STAPLES, Saco, Me.—*Lamp-Filler.*—October 19, 1869.

Claim.—The tube C, attached at one end to the discharge-nozzle B, and at the other to the top of the can A, at a point farthest, or nearly so, from the angle of said nozzle, substantially as herein shown and described, for the purpose specified.

95,949.—H. STICKNEY, Cleveland, Ohio.—*Coal-Stove.*—October 19, 1869.

Claim.—1. The arrangement, in a heater and about the magazine, of the radiator N, surrounding the reservoir P, and formed of two conical frusta, but having the respective bases thereof reversed, all as shown and described.

2. The combination of a fire-pot, M, and stirrer G, with a magazine, P, having a self-adjusting valve, all operating together, to supply, contain, and stir the fuel, as set forth.

3. The combination, with the grate-lever H, of the rod I and operating lever L, when arranged substantially as specified.

4. The combination of the draught-door V, magazine-door X, catch W, and connecting-rod U, when arranged for causing the draught-door to be disconnected from the suspending catch, for closing the same by the action of the magazine-door, when opened, all substantially as specified.

95,950. — JOEL V. STRAIT, Litchfield, Ohio.—*Mowing-Machine.*—October 19, 1869.

Claim.—The combination of wheel B, having the eccentric gears C D E thereon, and arranged on shaft A, with the pawled fast collar J, ratchet spur-gear G, and clutch and gears H K I, arranged on the shaft F, all operating together, in the manner set forth.

95,951.—WILLIAM SWARTS, Pent Water, Mich.—*Boot-Pattern.*—October 19, 1869.

Claim.—Cutting the foot of a boot or shoe-pack in one piece, of the form specifically shown in Fig. 3 of the drawing, and the use of the same for boot-packs, in combination with a leg cut in one piece.

95,952.—LEWIS TAWS and JOHN M. HARTMAN, Philadelphia, Pa., assignors to LEWIS TAWS and JOHN M. HARTMAN, same place.—*Air-Hoist.*—October 19, 1869.

Claim.—1. An air-hoist, constructed with one double-acting pneumatic cylinder, substantially as shown.

2. The ropes a, twisted in contrary directions, the hollow piston B, and the cylinder A, substantially as shown and described.

3. The cylinder A, piston B, ropes a, oblique or transverse pulleys D', balance-ring D, pawls C, and the racks M, substantially as shown and described.

4. The upper and lower three-way cocks H H, levers V W, and the ropes or rods k, as shown and described.

5. The cylinder A, in combination with the tracks or guides G, racks M, platforms E, with framings, guide-wheels F, balance-ring D, hanger N, pin O, and the pawls C, substantially as shown.

95,953.—L. TAYLOR, Jordan, and J. C. RICHARDSON, Prairie du Chien, Wis.—*Water-Elevator.*—October 19, 1869.

Claim.—1. The combination of the double-grooved winding-wheel I, cord L, cars G H, track D, and balanced track E, when arranged and operating substantially as specified.

2. The combination of the cars G or H, buckets P, spring-pins S, valves R, and guides T T', when arranged and operating substantially as specified.

3. The combination of the track C^1, Fig. 3, car d, weighted roller a, bar b, and cord c^2, when arranged and operating substantially as specified.

4. The combination of the car d, having a ledge, d', stem k, and hinged catch-plate w, when arranged substantially as specified.

5. The combination of the car d, spring-levers t', with their pins, stem k, and contracting-blocks n', when arranged and operating substantially as specified.

6. The combination, with the car d and bucket P', of the watering-trough A, and tilting discharger B^2, substantially as specified.

95,954.—JOSÉ TORT, Mexico, Mexico.—*Water-Wheel.*—October 19, 1869.

Claim.—1. The combination of the wheel A and eccentric plate C with the wheel B, when the latter is arranged to inclose the former, substantially as shown and described.

2. The combination of the fixed buckets f', hinged buckets e', springs g, and eccentric plate C, when arranged substantially as specified.

3. The toothed hub a, of the wheel B, the wheels e f, and shaft of the wheel A, all combined and arranged as specified.

95,955.—FREDERICK TOWNSEND, Albany, N. Y.—*Stone-Cutting Machine.*—October 19, 1869.

Claim.—The tangentially arranged chisels E, applied to a rotary head, and operated substantially as and for the purpose described.

95,956.—THEODOR UEHLING, Logan, Nebraska—*Rotating Cultivator.*—October 19, 1869.

Claim.—1. The cultivator A, constructed and operated substantially as described, for the purposes set forth.

2. In combination with a rotating cultivator, the slide E, arranged and operated substantially as shown and described, for the purposes specified.

95,957.—HENRY C. VAN GIESON, Paterson, N. J.—*Box-Opener.*—October 19, 1869.

Claim.—1. A box-opener, provided with an angle-iron, E, to form a rigid fulcrum against the box itself, in the manner described.

2. A box-opener, provided with a recess, *g*, and corresponding projection on the respective jaws, as and for the purpose specified.

95,958.—REUBEN WAKEFIELD, Hardwick, Vt.—*Apparatus for Evaporating Liquids to Obtain Sugar, &c.*—October 19, 1869.

Claim.—1. The combination of the evaporating-pan B, tubular grate A′, and feed-pipes C C′, all arranged and operating substantially as set forth.

2. The combination of the pan B, tubular grate A′, feed-pipes C C′, and stop-cock *c*, substantially as and for the purpose set forth.

95,959.—SETH V. WARNER, Buffalo, N. Y.—*Coffee-Pot.*—October 19, 1869.

Claim.—1. The combination and arrangement of the inner jar B, provided with feet *a a* and lugs *b b*, with the outer metal case A and circulating-water space *c c*, all operating in the manner and for the purpose herein specified.

2. The combined tunnel and strainer D E, arranged as described, in combination with the jar B and outer case A, the whole operating in the manner and for the purpose set forth.

95,960.—WILLIAM B. WEST, Utica, Wis.—*Plow.*—October 19, 1869.

Claim.—The combination, with a plow, of the anti-friction-rollers F, shaped and arranged substantially as specified.

95,961.—B. ROBERT WEHNER, Mankato, Minn.—*Excavator.*—October 19, 1869.

Claim.—1. The central frame B, made vertically adjustable, so as to excavate a ditch with a plane bottom, and to any depth, and also so arranged, with reference to the truck A, as to be capable of being turned down horizontally for convenience in transportation, substantially as described.

2. Providing an excavating-machine with side-cutting apparatus, so arranged and made adjustable as to form a ditch with sides of any required slope, as and for the purpose set forth.

3. In combination with an excavating-machine having side-cutting apparatus, capable of receiving greater or less inclination, an extensible rear axle, arranged as and for the purpose explained.

4. Providing an excavating-machine with side-cutting apparatus, having a reciprocating motion, substantially as set forth.

95,962.—JOHN WHITEFORD, Pond City, Kansas.—*Brick-Machine.*—October 19, 1869; antedated October 9, 1869.

Claim.—The combination of the pressure-roller or rollers H, mold-cylinder D *d′*, interior loose roller I, and side-wheels E with each other and with the frame A and hopper F, said parts being constructed, arranged, and operated substantially as herein shown and described, and for the purposes set forth.

95,963.—HENRY WICKER, Olean, N. Y.—*Fence.*—October 19, 1869.

Claim.—The metal ring D, and hooks *c c*, as arranged, in combination with the stakes B B, latch C, and the connecting-bar E, substantially as and for the purposes herein set forth.

95,964.—J. S. ZERBE, Delaware, Ohio.—*Combination-Tool.*—October 19, 1869.

Claim.—The compound tool-stock and receptacle above described, its several parts being constructed and arranged in the manner set forth.

95,965.—HENRY AIKEN, Philadelphia, Pa.—*Mode of Hanging Window-Curtains.*—October 19, 1869.

Claim.—1. Arranging a window-curtain, in connection with rollers and pulleys, with two endless cords, whereby it may be lowered from the top, or raised from the bottom, and two fixed cords for rotating the rolls as they are moved vertically, substantially as set forth.

2. The combination of the rolls B B′, fixed cords C C′, endless cords D D′, and pulleys E, all arranged to operate substantially as and for the purpose set forth.

95,966.—JOSEPH N. ARONSON, New York, N. Y.—*Reflector for Street-Lamp.*—October 19, 1869.

Claim.—The arrangement of oppositely-situated lens-reflectors C C, mounted by means of band-sockets E E, on forked arms F F, which project from a collar, H, provided with a set-screw, K, so that the whole may be applied to and adjusted on the ordinary burner of a street-lamp, substantially as and for the purpose herein specified.

95,967.—JAMES M. BAKER, Aurora, Ill.—*Stove-Pipe Damper.*—October 19, 1869.

Claim.—1. The disk B, provided with the corrugated sections *b* and with the fixed pivot C, in combination with the removable pivot D, provided with the enlarged and flattened portion *d*, substantially as and for the purpose specified.

2. The means employed for adjusting the damper to and securing it in position, consisting of the quadrant E, provided with the notches *e*, and with the inclined slot G, and the pivot D, provided with the crank-handle F, all constructed and arranged substantially as and for the purpose set forth.

95,968.—WILLIAM BALL, Wilmington, Ohio.—*Railway-Moving Machine.*—October 19, 1869.

Claim.—1. In combination with the wheel A, the compound lever P, spring *g*, and ratchet-wheel B, substantially as set forth.

2. The moving-machine, herein described, having ratchet-wheels B B, compound levers P P, forked double lever M M′, braces N N, coupling D, forked levers F F, and toothed rings E, constructed and arranged to operate substantially as specified.

95,969.—CHARLES B. BARLOW, Portsmouth, N. H.—*Game.*—October 19, 1869.

Claim.—The implements herein described, for playing the game "le circle," when constructed, colored, and arranged substantially as specified.

95,970.—FREDERICK BAUMANN, Chicago, Ill.—*Composition for Cleaning Stone.*—October 19, 1869.

Claim.—The application of the bioxalate of potassa in aqueous solution, whether mixed or not with sulphuric acid or its equivalent, to the surfaces of stone, in the manner substantially as herein described and for the purposes set forth.

95,971.—BENJAMIN BELLAIR, Paris, France.—*Safety-Tackle.*—October 19, 1869.

Claim.—The arrangement in the block, and with relation to the pulley and ratchet-wheel fixed to the same, of the pawl *o* suspended above the ratchet-wheel, and pivoted to the rear end of the brake *q*, which vibrates upon an axis over the pulley, and is actuated by said pawl, as herein shown and specified.

95,972.—JACOB BENNER, Pittsburgh, Pa.—*Fire-Place Stove.*—October 19, 1869.

Claim.—A water-chamber, in combination with the inclined front flue-plate 1, constructed, arranged, and operating in the manner and for the purpose herein described.

95,973.—HENRY L. BENNETT, Geneva, Ill.—*Feed-Mechanism for Grinding-Mills.*—October 19, 1869.

Claim.—In combination with the runner of a pair of grinding-stones or burrs, which is suspended to or by a hollow spindle, supported and driven from above said runner, a feed-mechanism arranged and operating in connection with said hollow spindle,

substantially as herein described and represented, and for the purpose set forth.

95,974.—Russell O. Benton, Buffalo, N. Y.—*Apparatus for Applying Roofing-Composition to Felt.*—October 19, 1869.

Claim.—The combination of the removable bed B with the ways A A and hoppers E F, either or both, substantially as and for the purposes hereinbefore set forth.

95,975.—John William Bowker, Sacramento City, Cal.—*Spark-Arrester.*—October 19, 1869.

Claim.—The perforated plates F G H, provided with short tubes *a a a*, constructed and arranged substantially as and for the purpose herein described.

95,976.—Thomas Bracher, Rahway, N. J.—*Sectional Coffer-Dam.*—October 19, 1869.

Claim.—A sectional coffer-dam, constructed of a series of curved sections formed of metal plates A, riveted together and to cross-bars B, and provided with interlocking devices, whereby a series of sections can be interlocked together, substantially as described and specified.

95,977.—Joel Brenton, Pittston, Pa., assignor to himself, Frederick C. Epting, Alpheus Cattler, James L. Giddings, and Richard Brenton, same place.—*Paint and Pigment.*—October 19, 1869.

Claim.—1. The manner, herein described, of preparing a material to be used in making black paint out of the above-described black mineral, substantially as set forth.

2. The manner, herein described, of making a black paint out of a newly-discovered "black mineral," substantially as set forth, and for the purposes specified.

3. A black paint or pigment, made of the mineral herein described, as set forth.

95,978.—E. W. Brettell, Elizabeth, N. J.—*Door-Latch.*—October 19, 1869; antedated October 9, 1869.

Claim.—1. The combination of the tail-piece *a*, with its hole *b*, arm *f*, pin *g*, and slot *e*, with the latch A, in the manner and for the purpose set forth.

2. The lever *h* and shaft *j*, with its projection *n*, constructed, arranged, and operated as above described and shown.

3. The combination of the shaft *j* and lever *h* with the tail-piece *a* and latch A, in the manner and for the purpose herein specified and shown.

95,979.—F. T. Brown, New York, N. Y.—*Shutter-Fastener.*—October 19, 1869.

Claim.—The bolt B within the blind, operating the dog *c*, in combination with the spring G, substantially and for the purposes set forth.

95,980.—Reuben F. Brown, Provincetown, Mass.—*Composition for Beverage.*—October 19, 1869.

Claim.—The composition composed of gum-arabic and other ingredients, as hereinbefore set forth.

95,981.—Thomas Brown, Chicago, Ill.—*Steam and Air Whistle.*—October 19, 1869.

Claim.—The construction of whistles with the flattened end of a pipe, and with an opening in the side of the cylindrical box, so constructed and combined with the pipe that the distance between the aperture from which the air or steam issues, and the edge upon which it strikes, may be increased or diminished, whereby to vary the quality of the sound, all arranged as herein made known.

95,982.—J. S. Burch, Buffalo, N. Y.—*Fence.*—October 19, 1869.

Claim.—The construction and arrangement of the post A, the supports B B, and the joint C, all constructed in combination as described, and for the purposes and uses set forth.

95,983.—Jonathan E. Burdge, Cincinnati, Ohio.—*Automatic Boiler-Feeder.*—October 19, 1869.

Claim.—1. In connection with the water-supply pipe E and pipes F F′, communicating with the interior of the steam-boiler, the double-headed piston G, chamber H, and ports B C D of cylinder A, the parts being constructed and arranged, and the whole operated, substantially in the manner and for the purpose described.

2. In combination with an automatic boiler-feeder, which embodies a water-chamber, or feed-pocket, which is brought into alternate communication with the water-supply and the boiler, the feed-pipe F′, communicating with the boiler, when the same terminates inside the boiler, at the point corresponding with the required water-line or level, as set forth.

3. In the described connection with the elements of the clause preceding, the pipe F, when the same terminates inside the boiler, at or near the water-line, as set forth.

4. In the described combination with the feeding-mechanism embodied in the first clause of claim, the side-passages or pipes J J′, and cylinder-heads *a a′*, for the purpose of adapting the feeding-mechanism for direct operation by steam, in the manner substantially as set forth.

95,984.—Edwin L. Bushnell, Poughkeepsie, N. Y.—*Spring-Mattress.*—October 19, 1869.

Claim.—1. The spring A, having the eyes *a* formed thereon at each end, as set forth.

2. A spring-mattress, consisting of a series of springs, A, with eyes *e*, united by cords *c* and *f*, as described.

95,985.—Eben Simpson Chase, Eau Claire, Wis.—*Device for Burning Sawdust in Steam-Generator Furnaces.*—October 19, 1869.

Claim.—1. The arrangement of the pipe E, with valves *b* and *e*, for conveying the steam from the dome B to the superheating-pipes D D, substantially as and for the purposes herein set forth.

2. In combination with the superheating-pipes D D, the elbows or nozzles *a a*, when constructed and used substantially in the manner and for the purposes herein set forth.

3. The spouts G and F F, provided with valves *d d*, and slides *i i*, substantially as and for the purposes herein set forth.

4. The combination and arrangement of the boiler A, dome B, furnace C, superheating-pipes D D, conducting-pipes E, with its valves *b e*, and the spouts F F and G, with their valves *d d* and slides *i i*, all substantially as and for the purposes herein set forth.

95,986.—Ebenezer Clark, Rushville, Ill.—*Hand-Cultivator.*—October 19, 1869.

Claim.—The metal shanks B B, being adjusted by the rod D, and the attaching and detaching of the shanks B B, to and from the handle C, by the bolts F F, as shown and described.

95,987.—D. R. Clem, Edinburgh, Va.—*Manufacturing Flour.*—October 19, 1869.

Claim.—1. The combination of a series of graded bolts, elevators, conveyers, and spouts, whereby the second grade of flour from the first bolt, and the first grade from the second bolt, are both returned to the first bolt, and so on continuously, with any desired number of bolts, substantially as described.

2. The combination of the elevators J K, dressing-machines B C, and the conveyers D E F and G H I, provided with the gates or slides *a b*, when constructed and arranged with connecting-tubes, substantially as herein described, and for the purpose set forth.

95,988.—Aury G. Coes, Worcester, Mass.—*Machine for Grinding Cylindrical-Fluted Cutters.*—October 19, 1869.

Claim.—1. The combination, with the sharpening-wheel and reciprocating carriage, of the cutter-holding mandrel, arranged in or parallel with the plane of rotation of the wheel, and supported in independently-adjustable bearings, substantially as described, so that the mandrel may be adjusted at either end to bring it into proper position to receive the tapering or other-shaped fluted cutter to be acted upon by the wheel.

2. In combination with the sharpening-wheel and sliding or reciprocating carriage, and cutter-holding mandrel, arranged in or parallel with the plane of

rotation of said wheel, as described, the employment of a guiding-plate or stop, affixed to the stationary part of the machine, and arranged to engage with the cutter-teeth during the reciprocations of the carriage, as set forth.

3. The combination of the sharpening-wheel and cam, for imparting an endwise motion to its shaft, with the reciprocating carriage and cutter-holding mandrel, arranged to move in or parallel with the plane of rotation of said wheel, substantially as shown and set forth.

4. A machine for grinding and sharpening fluted cutters, in which the vertically-adjustable reciprocating carriage, the cutter-supporting mandrel and its adjustable end-bearings, the revolving sharpening-wheel and cam for imparting an endwise motion to the same, and the guiding-plate or stop for holding in position the cutter-teeth, are combined and arranged, with relation to each other, and for joint operation, as herein shown and described.

95,989.—JOHN W. CORD, Pleasant Hill, Ind.—*Washing-Machine.*—October 19, 1869.

Claim.—The rocker G, with its bars *b b* and screws *c c*, in combination with the bottoms C and D, and the head-block I I, all arranged and operated as and for the purpose set forth.

95,990.—JOB B. CROWLEY, Middletown, Conn., assignor to himself and MANNING, BOWMAN AND COMPANY, same place.—*Metallic Roofing.*—October 19, 1869.

Claim.—As a new article of manufacture, metallic roofing, coated upon one or both sides, with porcelain, or other vitreous material, substantially as set forth.

95,991.—J. M. CRULL, Harrisburgh, Pa., assignor to himself, A. C. MCCULLEY, W. A. MIDDLETON, and JACOB WALTERS, same place.—*Locomotive Signal-Light.*—October 19, 1869.

Claim.—1. The application of adjustable signal-lights or reflectors to locomotives, steamboats, &c., when placed in such a position as to illuminate a portion or section of the smoke or steam issuing from the smoke-stack, substantially as and for the purposes herein set forth.

2. The two oblique faces A B, in combination with the reflector F, pulleys C G, and post A′ C′, substantially as herein set forth.

95,992.—JOHN CUTHBERT, Glenham, N. Y.—*Rotary Engine.*—October 19, 1869.

Claim.—The swinging abutments *p* and *q*, and screws *t t′*, in combination with the revolving piston *c*, valve *e*, and its actuating-mechanism, substantially as set forth.

95,993.—ALFRED S. DICKINSON, New York, N. Y.—*Curtain-Fixture.*—October 19, 1869.

Claim.—A curtain-fixture, combining in its construction a frame, A, and one or more semicircular glass sheaves, B, constructed and arranged, in relation to each other, as shown and described.

95,994.—ALFRED S. DICKINSON, New York, N. Y.—*Curtain-Fixture Device for Stopping the Motion of Cords.*—October 19, 1869.

Claim.—A device for stopping the motion of a cord or rope, consisting of a tube, A, pivoted at its upper end to any suitable frame, and having a tapering slit or slits, A′, as set forth.

95,995.—WILLIAM EWING, Columbia, La.—*Machine for Destroying Worms from Cotton-Plants.*—October 19, 1869.

Claim.—A machine or apparatus, constructed substantially as herein recited, for the purposes set forth.

95,996.—HENRY L. FRANKLIN and EUGENE CLARK, Nashua, N. H.—*Sad-Iron Holder and Clothes-Drier.*—October 19, 1869.

Claim.—1. The combination of sad-iron holder C and frame A, forming, with arms 1, 2, 3, &c., a clothes-drier, substantially as shown and described.

2. The combination of sad-iron holder C, clothes-drier described, and lock B D, substantially as shown and set forth.

95,997.—WILLIAM J. FUNK, Portland, Oregon.—*Gang-Plow.*—October 19, 1869.

Claim.—The combination of the rock-shaft M, the eye-piece F, links C and D, clevis E, roller L, incline L, and check J, on tongue K, when applied to a gang-plow as described and for the purposes set forth.

95,998.—WILLIAM GOLCHER, Saint Paul, Minn.—*Breech-Loading Fire-Arm.*—October 19, 1869.

Claim.—The snap-catch for fire-arms, as above described, consisting essentially of the slide-latch C, the stem B, having a head, *d*, that slides in contact with the under edges of the slot in the supporting-plate through which the stem extends, the inclined lever E, working in a vertical plane against the stem D, above the head *d*, and provided with an eccentric end, *m*, against which the spring *n* presses vertically, when said parts are constructed and arranged to operate in the manner and for the purposes set forth.

95,999.—VICTOR M. GRISWOLD, Peekskill, N. Y.—*Photographers' Plate-Vise.*—October 19, 1869; antedated October 7, 1869.

Claim.—1. The combination, with the frame and the sliding adjustable bar D, of the jaw E and the independently-adjustable jaw F, substantially as hereinbefore set forth.

2. The combination, with the frame and the sliding adjustable bar D, of the journals or handles C C′, or their equivalents, substantially as hereinabove set forth.

3. The combination, with the jaw F and bar D, of the screw *a*, nut *b*, and rods *c*, substantially as specified.

4. The combination, with the sliding bar D and the frame, of the pins *f* and holes *g*, substantially as set forth.

5. The revolving or reversible frame A A′ B B′, combined with the jaws E and F, and the adjustable bar D, substantially as set forth.

96,000.—WILLIAM M. HAMILTON, Jacksonville, Ill.—*Pump.*—October 19, 1869.

Claim.—The combination of the pipe A, flange B, sectional tapering cylinder E, tapering pipe F, rings G G and H H, and the flange or burr I, all constructed and arranged to operate substantially in the manner and for the purpose herein set forth.

96,001.—DAVID HARGER, Des Moines, Iowa.—*Furnace for Steam and other Devices.*—October 19, 1869.

Claim.—The pipe A, constructed, as described, with box-apertures *a a*, or a slotted aperture, *b*, with partitions *e e*, substantially as herein set forth.

96,002.—JESSE HARPSTER, Clyde, Ohio.—*Gate.*—October 19, 1869.

Claim.—The combination and arrangement of the gate-posts A A′, gate B, spring C, curved plate *a*, shoulders *b b*, hook *c*, eye *d*, and rubber-lined strip *e*, all constructed and operating substantially as shown and described.

96,003.—THOMAS HARRISON, Detroit, and WILLIAM HOLLMAN and WILLIAM CHART, Three Rivers, Mich.—*Chalk for Use at Billiard-Tables.*—October 19, 1869.

Claim.—The compound herein described, of the materials mentioned, for the uses and purposes specified.

96,004.—FRANKLIN B. HUNT, Richmond, Ind.—*Straw-Cutter.*—October 19, 1869.

Claim.—1. Securing the adjustable cutter-bar D to the bearing-bar C, by means of bolts E E, the heads of which are fitted in the elongated slots G G, as and for the purposes described.

2. The adjusting-keys *a a*, or their equivalents, in combination with the adjustable bar D, provided with vertical bolts, to hold it to its bed or bearings, substantially as and for the purpose shown and set forth.

96,005.—J. G. HUNTINGTON, Atkinson, assignor to himself and F. E. WILSON, North Bradford, Me.—*Horse Hay-Rake.*—October 19, 1869.

Claim.—1. The attachment of each tooth directly to the axle, by coiling it partially around a cylindrical groove or guide thereon, and leaving the end of the bend or coil free and unsecured, thus permitting a separate and independent rising and falling motion to each tooth, and without any strain thereon, as shown and described.

2. The arrangement of the frame G E E′ F upon the axle, and in relation to the loosely-hung teeth, turning on the axle as described, and so that the center of motion of the teeth shall not coincide with that of the frame.

3. The combination of the axle A, loosely-hung teeth H H, lever-frame sectors J and K, and lever M, when these parts are arranged and operate as described.

96,006.—Austin H. Jackson, Bear Valley, assignor to John C. Garland, Sacramento, Cal.—*Snow-Plow.*—October 19, 1869.

Claim.—1. The construction and arrangement of a snow-plow, in the manner and for the purpose herein described.

2. The peculiar construction of the wheel B, with its wings C enlarged at their base and convex sides, and combined with the concave bottom of the chamber D, in the manner and for the purpose herein described.

3. The combination of the wheel F with the concave chamber, within which it revolves, in the manner and for the purpose herein described.

4. The combination of the wheels B and F, constructed as described, revolving at right angles to each other, and within the concave chambers D and E, in the manner and for the purpose herein described.

5. The sliding doors I, with their extended racks J, operated by the gear-wheels K, substantially as above set forth.

6. The triangular wings N, secured to the sides of the car, and operated by means of levers *a* and *b*, substantially as and for the purpose herein described.

96,007.—Moses Johnson, Three Rivers, Mich.—*Potato-Digger and Cultivator.*—October 19, 1869.

Claim.—1. The concave wheels K, with their hooks *a*, staples S, and scrapers *v*, screws C, and nuts *n*, when constructed and arranged to operate substantially as specified.

2. The shields Y, in combination with the wheels K and beam A.

3. The potato-digger herein described, having adjustable concave wheels K, plow H, staples S, shield Y, and caster P, constructed and arranged to operate substantially as specified.

96,008.—Nelson Johnson, Jasper, N. Y.—*Saw-Gummer.*—October 19, 1869.

Claim.—1. The chain E, when used with the dogs, for the purpose of holding the saw against the cutter, substantially as set forth and described.

2. The dog G, consisting of a grooved metal block, provided with loops, substantially as specified.

3. The dog H, when formed like a hinge, with its rough and sharp projections, so as to prevent the saw from slipping, substantially as described.

4. The arrangement, upon the inner upper ends of the slotted frame A, of the two flat plates C C, placed at right angles with the frame, and provided with the central screw B and end screws D D, substantially as shown and described.

96,009.—Nelson Johnson, Jasper, N. Y.—*Saw-Swage.*—October 19, 1869.

Claim.—1. The adjustable gauge E, upon the end of the swage-pin, for the purpose of regulating the pitch of the teeth, substantially as set forth.

2. The key D, when used to hold the wedge C in its place, substantially as set forth and described.

3. The arrangement of the block A, with a slot in its end and side, pin B, wedge C, and key D, the several parts constructed and operated as specified.

96,010.—E. A. Kamerer, Greentown, Ohio.—*Shovel-Plow.*—October 19, 1869.

Claim.—1. A shovel-plow, provided with one and two movable shovels, when so constructed as that the movable shovels may be readily turned, so as to assume any required angle with the plow-beam, and may be set at any desired distance from said beam, and, also, so that said movable shovels may be readily moved into, or nearly into line with said fixed shovel, substantially as is herein set forth.

2. The arm M, rigidly attached to the shovel-standard G, and held by a bolt, P, working in a slot, *a*, in the plow-beam A, when said arm serves both to hold the shovel-standard G at the required distance from the plow-beam A, and, also, to regulate the angular position of said standard, with respect to said plow-beam, substantially as is herein specified.

3. Pivoting the standards G, of the side-shovels L, of a shovel-plow to the side beams F, by means of a hinge-pivot joint, H I K, and brace W, having a loose joint, *f*, with the standard G, substantially as is herein specified.

96,011.—George Karrmann, Ansonia, assignor to himself and Charles Alvord, Wolcottville, Conn.—*Machine for Making Needles for Sewing-Machines.*—October 19, 1869.

Claim.—1. The combination of a clamp or blank-holder with the tools *r′ s′*, arranged, in respect to each other and to the needle-blank, substantially as shown and described, and for the purposes set forth.

2. The combination of the tools *r′ s′* and *t* with the rotary clamp *b*, all arranged and operating substantially in the manner and for the purposes set forth.

96,012.—William M. Kimber, Sacramento City, Cal.—*Varnish for Plastered Walls and for Coating other Surfaces.*—October 19, 1869.

Claim.—A finish or varnish for covering and protecting walls and painted surfaces, composed of the ingredients herein enumerated, mixed and compounded in about the proportions and in the manner specified, substantially as and for the purpose above set forth.

96,013.—Stephen R. Kirby, New York, N. Y.—*Canal-Tug.*—October 19, 1869.

Claim.—The towing-chock, consisting essentially of the guide B and slide B′, in combination with the ropes *c* and blocks *d*, arranged and operating substantially as described.

96,014.—Frederick Hartt Knevitt and Henry Herbert Hazard, London, England, assignors to Frederick Hartt Knevitt.—*Window-Shutter and Blind.*—October 19, 1869.

Claim.—1. The two parallel-grooved parts, b^1 and b^2, constructed and operating together as herein described, in combination with the laths or slats of the revolving shutter or blind A, the said laths or slats having pins or studs fitted to work in the grooves of said parts, all substantially as herein set forth.

2. Effecting the separation and approximation of the two parts, b^1 b^2, of the compound groove by the segment *g*, arranged and operating in combination with the said parts, and provided with a cord or other means of adjustment, substantially as set forth.

96,015.—Daniel P. Leach, Franklin, Ind.—*Corn-Planter, Seed-Sower, and Cultivator.*—October 19, 1869.

Claim.—1. The arrangement of the knives B B′ and teeth C C, on the front end of the bed A, all substantially as shown and described.

2. The arrangement of the adjustable and changeable plow-beams H H and changeable plows J J, constructed substantially as described, and for the purposes set forth.

3. The arrangement of the adjustable strap *r*, connecting the bar *h* with the handle K, substantially as and for the purposes herein set forth.

4. The valve *i*, constructed as described, and for the purposes set forth.

5. The arrangement of the handles K K, connecting-bar I, and bars L L, for the purpose of adjusting the handles in any suitable manner, substantially as herein set forth.

6. The arrangement of the bed A with handles K K, pivoted platform M, with roller N, wheel R, bar

h, slide *d*, in box O, and devices for operating said slide, rod D, beam E, and teeth *a a*, all the parts being constructed and operating as specified.

96,016.—JOSEPH LETCHWORTH, Buffalo, N. Y. —*Breast-Strap Attachment for Harness.*—October 19, 1869.

Claim.—The breast-strap attachment A, as a new article of manufacture, cast of malleable iron, with fingers *c c* and transverse corrugation *i*, substantially as and for the purpose hereinbefore set forth.

96,017.—HENRY LOMAX, Over Darwen, Great Britain.—*Feeding-Mechanism for Sewing-Machines.* —October 19, 1869.

Claim.—1. The combination, with the bars carrying the feet D F, of levers B d^1, operated by a cam, A, or its equivalent, so that one foot shall be depressed, and the other simultaneously elevated, by the movement of the levers, substantially as set forth.

2. The feet E D, rods C E, and lever G, in combination with the levers B d^1, cam A, and set-screw H, or their equivalents.

96,018.—W. W. LOVE, Athens, Ohio.—*Metallic Double-Shovel Plow.*—October 19, 1869.

Claim.—The adjustable pivoted knees C C′, combined with the double extended draught-beam A A′ of a double-shovel plow or cultivator, constructed substantially as herein set forth.

96,019.—JAMES J. LYON, Cincinnati, Ohio.—*Catch-Basin for Sewers.*—October 19, 1869.

Claim.—In connection with a sewer "catch-basin," constructed substantially as described, the provision and attachment of the pipe F *f*, arranged and operating as and for the purpose described.

96,020.—J. C. LYONS, New York, N. Y.—*Manufacture of Hollow-Rubber Goods.*—October 19, 1869.

Claim.—1. A chamber of elastic gum, irregular in shape, and with walls of uniform thickness, and formed over a collapsible core.

2. A core for the above-named purpose, made of canvas or other suitable material, and filled with sharp, dry sand, or its equivalent.

3. The combination of the tube A and sand-bag B to form a hot core for vulcanizing irregular-shaped rubber chambers.

4. The tube A, provided with the feeding-tube D, in combination with the sand-bag B and ferrules F.

5. The herein-described process of forming rubber hollow ware, viz, by placing the raw-rubber blank upon a hollow sand-core, and then swathing the whole with strips of canvas, or other material, as set forth.

6. Curing of rubber ware by the transmission of heat through a sand-bath applied to one or more surfaces of the same.

96,021.—JOHN LYTH, Buffalo, N. Y.—*Manufacture of Sewer-Pipe.*—October 19, 1869.

Claim.—Forming and welding a socket to an already formed clay pipe, by applying a quantity of clay, and then subjecting it, within a mold, A B, to the pressure of the follower C, provided with flanges *d* and *d′*, substantially in the manner and for the purposes hereinbefore set forth.

96,022.—THOMAS J. MCGEARY, Newark, N. J. —*Plasterers' Hawk.*—October 19, 1869.

Claim.—A plasterers' hawk, having its upper plate, A, made of steel, and attached to the handle by means of the arms C C, as and for the purpose set forth.

96,023.—JOHN R. MOFFITT, Chelsea, Mass.—*Heel-Stiffener.*—October 19, 1869.

Claim.—A boot-heel stiffener, made of coarse textile fabric, molded into form by means of and in connection with a composition filling between the fabrics, substantially as described.

96,024.—F. B. MORSE, Plantsville, Conn., assignor to himself and PLANTS MANUFACTURING COMPANY, same place.—*Stump-Joint for Carriages.*—October 19, 1869.

Claim.—In a stump-joint for carriages, the extension *f* of the ear upon one part, and the corresponding recess in the ear of the other part, substantially as herein set forth.

96,025.—F. B. MORSE, Plantsville, Conn., assignor to himself and PLANTS MANUFACTURING COMPANY, same place.—*Stump-Joint for Carriages.*—October 19, 1869.

Claim.—As an article of manufacture, the herein-described joint, consisting of the two stumps A and B, with their ears *a* and *d*, constructed and united in the manner herein set forth.

96,026.—A. R. NETTLETON, Unionville, Conn.—*Music-Stand.*—October 19, 1869.

Claim.—The combination of the sheet-holder A, standard *d*, hub *a*, and legs *b*, substantially as set forth.

96,027.—PHILIP D. NORTHCRAFT, Thurston County, Washington Territory.—*Shingle-Machine.* —October 19, 1869.

Claim.—1. The drag-lifter M, secured to the carriage-frame, by staples S, and traveling with the carriage, the lever N, and drags U, V, and *o*, arranged as described, and operated by the groove *c*, lever W, and stop-frame S, and its pin *x*, substantially as and for the purposes set forth.

2. The upper rails B, provided with the slots *a b*, constructed as described, in combination with the gate or block O, with its vertically-moving head Q, provided with pins, to travel in groove *b*, and right-angled clamps *z*, rod P, and loops *t t*, all arranged and operating in the manner and for the purposes set forth.

3. The stop-frame S, provided with the stop *g* and pin *x*, performing the double duty of arresting the shingle, and lifting the drags, automatically, in the manner and for the purpose set forth.

4. In combination with the above, the knife *k* and roller J, as and for the purposes set forth.

5. The carriage-frame, moving inside of the ways, and provided on their exterior sides with the grooves *i*, so constructed that one end shall move over and raise and lower the lower shaving-knife *f*, and the other travel over the pin *x*, on the stop-frame, raising and lowering it automatically, and with reference to the movement of the knife *f*, in the manner and for the purpose set forth.

96,028.—JAMES O'CONNOR, Jackson, Mo.—*Carriage-Hub Shell.*—October 19, 1869.

Claim.—As a new article of manufacture, a shell A A′, of metal formed with flanges *e e*, spoke-recesses, and the beads *b b*, when made substantially as herein shown and described.

96,029.—JOHN S. OLIVER and EDWARD HARRIS, New York, N. Y.—*Distilling Whisky and other Spirits.*—October 19, 1869.

Claim.—1. The process of distilling whiskies and other spirituous liquors *in vacuo*, by means of an ordinary still, heated by fire, or a steam coil-pipe, a worm or condenser, an exhaust-pump, and a vacuum-receiving chamber, substantially as herein specified.

2. The combination, with the worm or condensing-tubes, of a still, and with said vacuum-chamber, of one or more shelves, arranged within the said chamber, substantially as and for the purposes herein specified.

3. The combination of the still, its worm or condensing-tubes, the receiving-chamber, and the exhaust-pump, arranged and operating in substantially the manner herein described.

96,030.—CHARLES T. PALMER, Norwich, Conn. —*Coffee-Roaster.*—October 19, 1869.

Claim.—1. A coffee-roaster, as made with the stationary head, provided with the retaining-arm and the tap-hole, as set forth.

2. A coffee-roaster, as so constructed, with the stationary head and the retaining-arm, as explained, and as having the set of stationary parallel rails *e e*, or the equivalent thereof, applied to or arranged with the same, as set forth.

96,031.—JOHN KINGSLEY PALMER, Cambridge, Mass.—*Water-Proof Coating or Paint for Wood and other Materials.*—October 19, 1869.

Claim.—The application of a solution of bichromate of potash to solutions of gelatine, in which pigments are mixed, substantially as and for the purpose described.

96,032.—WILLIAM P. PATTON, Harrisburgh, Pa., assignor to himself and ALFRED BOMGARDINER, same place.—*Spool-Rack.*—October 19, 1869.

Claim.—The combination of the elastic spring spool-supports *a a a a*, &c., with the frame of a spool-rack, constructed and operating substantially as herein set forth.

96,033.—CHARLES PERKES, Philadelphia, Pa.—*Compression-Cock.*—October 19, 1869.

Claim.—The combination of the spherical elastic loose-ball valve with the oblate-spheroidal seat and oblate-spheroidal compressing-cup, substantially as described.

96,034.—TRUMAN C. PHINNEY and CHARLES E. BANCROFT, Montpelier, Vt.—*Spouted Can.*—October 19, 1869.

Claim.—The can herein described, having spout E, tubes, Fig. 2 and Fig. 3, constructed with openings A and B respectively, and arranged as and for the purpose specified.

96,035.—A. J. PRESCOTT, Catawissa, Pa.—*Reamer.*—October 19, 1869.

Claim.—An outside ball or taper-reamer, having a hollow head, H, one or more cutting-sides C, one or more blank or smooth sides D, with cutting-edges G, open spaces 1, 2, 3, 4, and holes *i i*, all substantially as and for the purposes herein set forth.

96,036.—LEONARD QUETSCH, Urbana, Ill.—*Apparatus for Administering Medicated or Pure Steam to Brutes.*—October 19, 1869.

Claim.—The arrangement of the boiler A, furnace B, thermometer C, and flexible pipe D, all substantially as and for the purposes herein set forth.

96,037.—JOHN B. ROOT, New York, N. Y.—*Art of Making Metallic Tubes.*—October 19, 1869; antedated October 13, 1869.

Claim.—The improved method, herein described, of making tubes by rolling the skelp with longitudinal ridges and furrows, on its alternate edge-faces, and lapping the same in a spiral direction to form a lock in the manner specified.

96,038.—FREDERICK SCHAEFFER, Philadelphia, Pa.—*Apparatus for Dividing Powders.*—October 19, 1869.

Claim.—1. The box A, open at one side, and having a bottom, back, and side pieces, *a*, *b*, and *c*, the latter being furnished with horizontal and vertical grooves *f* and *h*, adapted to receive slides B and *i*, all substantially as and for the purpose herein described.

2. The combination of the said box A with the slide B, when the latter is furnished with wedge-shaped blocks *m*, arranged at regular distances apart, substantially as herein set forth.

96,039.—EDMUND A. SEELEY, Scotch Plains, N. J.—*Attachment to Rolls for Calendering Paper-Boards.*—October 19, 1869.

Claim.—The small perforated metal pipes E and F, when used in combination with the calenders for finishing paper-boards, in the manner herein specified.

96,040.—THOMAS SHARP, Carlisle, Pa.—*Machine for Cutting and Dressing Stone.*—October 19, 1869.

Claim.—1. A series of cutting chisels L, arranged in a sliding stock, J, in combination with a hammer which operates said chisels simultaneously, substantially as described.

2. A series of planing-chisels P, arranged in a sliding stock O, in combination with a ram, V, which operates said chisels simultaneously, substantially as described.

3. The sliding stocks carrying the cutting-chisels, and operating as described.

4. The adjustable guides, supporting the sliding tool-stocks, substantially as described.

96,041.—DANIEL SHEETS, Suisun, Cal.—*Gate-Latch.*—October 19, 1869.

Claim.—The projecting box *g*, on the lock-plate, as a protection to the end of the latch, to prevent its being bent or otherwise injured.

96,042.—JOHN B. SHERLOCK, Port Byron, Ill.—*Corn-Stalk Cutter.*—October 19, 1869.

Claim.—The combination and arrangement of the lever *g*, connected to the frame *b*, and the cord *e*, attached to the drag-bars *d*, whereby both the stalk-cutter and the drag-bars are raised or lowered simultaneously, as set forth.

96,043.—ALFRED E. SMITH, Bronxville, N. Y.—*Carriage-Axle.*—October 19, 1869.

Claim.—The combination of the case-hardened malleable iron ferrules, C and D, with and secured upon the spindle B, substantially as described, made and operating substantially as hereinbefore set forth.

96,044.—ELIAS SMITH, Normal, Ill.—*Galvanic Apparatus.*—October 19, 1869.

Claim.—1. The coil A, constructed as described, for the purpose of conducting a current of electricity around the whole or a part of the human body, substantially as herein set forth.

2. The method herein described of combining the primary and secondary currents of a galvanic or electric battery, for inducing magnetism in the living human body, by means of the coil A, battery B, helix C, and electrodes D and E, all constructed, arranged, and combined substantially as herein set forth.

96,045.—H. JULIUS SMITH, Boston, Mass.—*Mode of Attaching Diamonds for Stone-Drilling.*—October 19, 1869.

Claim.—1. A diamond-drill, or other tool, in which one or more diamonds are attached to the metallic head or stock, by casting the metal, under pressure, upon or around the diamonds, so that they shall be firmly embedded and held in the metal, as described.

2. A drill, or other tool, formed by setting or embedding single diamonds in separate plugs or settings of metal in the manner described, and screwing or otherwise inserting and fixing such plugs in the drill-head, or tool, substantially as specified.

96,046.—WRIGHT SMITH, Saint Louis, Mo.—*Superheating-Device for Steam and other Generators.*—October 19, 1869.

Claim.—1. The furnace B, hot-air pipe H, superheater F, and its tubes *f*, and the return-pipe I, combined substantially as set forth.

2. The return-pipe I, arranged to deliver the air to the furnace B, in the direction of the draught of the hot gases in said furnaces, substantially as set forth.

96,047.—DANIEL E. SOMES, Washington, D. C.—*Mode of Ventilating and Cooling.*—October 19, 1869.

Claim—1. Cooling the air which is supplied to a building, by passing it through ducts or channels containing a series of pipes, through which cool water is circulated, substantially as described, in combination with the shower-bath *d'*.

2. The air-pipes c^1, at the tops of the series C, provided with stop-cocks or open tubes, in combination with an air-duct, as and for the purpose set forth.

3. The combination of the supply-pipes B, series of pipes C C D, and cock *c*, with the air-ducts A A, substantially as described.

4. The dampers a^2, air-ducts, pipes, registers, valves a^1, or their equivalents, substantially as and for the purpose set forth.

5. Inclined boards E, air-duets, shower-bath, and water-pipes, in combination with the registers *a*, substantially as and for the purpose described.

96,048.—DANIEL E. SOMES, Washington, D. C.—*Process and Apparatus for Cooling and Preserving Perishable Articles.*—October 19, 1869.

Claim.—1. The air-duct P, with water-pipes and shower-bath and valves Q, in combination with ventilators B' B'', registers R, and the devices herein described, for cooling or freezing.

2. The chambers S, and apparatus for cooling the

same, when arranged in a market-house or store-house, as described, in combination with a railroad-track, as and for the purposes set forth.

3. The combination of the devices herein shown, whereby air and liquids may be cooled by several processes, successively applied, as described.

4. The combination of devices whereby the temperature of several apartments of a building, car, or vessel may be regulated at will, as described.

5. The combination of devices described, whereby air in several adjoining apartments may be cooled, dried, or purified, separately or together, as described.

96,049. — WILLIAM E. SPARKS, New Haven, Conn., assignor to SARGENT & CO., same place.—*Reversible Latch.*—October 19, 1869.

Claim.—1. In combination with the latch-bolt C and yoke D, the hub E and follower L, the said follower constructed with a stud, *f*, upon its inside, and so as to enter, through a corresponding opening in the hub, into the spindle-seat, substantially in the manner and for the purpose set forth.

96,050. — AUGUST STAUDINGER, Saint Louis, Mo.—*Fly-Trap.*—October 19, 1869.

Claim.—The trap formed of the wooden frame A, metal trough B, with its walls curved to a return at *b*, and a glass cover arranged to slide in or out, substantially as set forth.

96,051.—STEPHEN R. STINARD, Paterson, N. J.—*Railway-Car Brake.*—October 19, 1869.

Claim.—1. The combination of the rods D, D′, and G, sway-bars E, and levers F, with the brake-beams of a railroad-car, substantially as hereinbefore shown and described, for the purpose specified.

2. In combination with rods D, D′, and G, sway-bars E, and levers F, the mechanism seen at C, substantially as hereinbefore shown and described.

3. In combination with the elements of the second claim, the brake-staff chain, as specified.

96,052.—E. G. STORKE, Auburn, N. Y.—*Plane.*—October 19, 1869.

Claim.—A metallic plane, having the face grooved in lines parallel to the sides, in the manner and for the purpose specified.

96,053.—MICHAEL SWEENEY, Wheeling, West Va., assignor to SWEENEY, BELL & CO., same place.—*Lantern-Globe.*—October 19, 1869.

Claim.—As a new article of manufacture, a glass lantern-globe, constructed with four, more or less, concavo-convex reflectors, said reflectors being blown in the globe while being formed, substantially as set forth.

96,054.—STACY W. THOMPSON, Otsego, Ohio, assignor to himself, WILLIAM L. WARD, and WILLIAM D. WHITECAR, Philadelphia, Pa.—*Cotton-Seed Separator and Planter.*—October 19, 1869; antedated October 16, 1869.

Claim.—1. The combination, with the hopper F, having an opening *i*, of an agitator, G, and curved guide H, arranged within the said hopper, and operating substantially as and for the purpose set forth.

2. The spring catches *k k*, arranged, with respect to each other and to the opening *i* of the hopper, substantially as and for the purpose described.

3. The combination of the spring-catches *k k* with the pins *m*, of a revolving wheel J, all as herein set forth, for the purpose specified.

96,055.—CHARLES J. TRIPP, Wallingford, Conn.—*Flour-Sifter.*—October 19, 1869.

Claim.—The combination of the case A with its cover B and receptacle I, inner box C, with the crank-shaft E, arranged with a crank and connecting-rod F upon the inside of the case, attached to the box C, and the crank N outside, all constructed and arranged in the manner herein set forth.

96,056.—REUBEN DANIEL TURNER, New York, N. Y.—*Apparatus for Ageing Spirituous Liquors.*—October 19, 1869.

Claim. — 1. The combination of the air pipes *c* and liquid-pipes *d*, arranged radially around the chamber A, substantially as and for the purpose set forth.

2. The combination of the strainer G with the spray-chamber A, and arranged above the spray-tubes *c d*, for the separation of the spray from the escaping air, substantially as set forth.

3. The combination of the liquid-channel B, air-channel C, and their pipes *c d*, with the chamber A, arranged and operating substantially as and for the purpose specified.

4. The combination of the condenser H with the tank A and its spray-pipes or tubes *c d*, substantially as set forth.

5. The combination of the coil I with the tank A and its spray-pipes or tubes, essentially as and for the purpose specified.

96,057.—FLAVIUS J. UNDERWOOD, Rock Island, Ill.—*Rotary Colter.*—October 19, 1869.

Claim.—A rotary colter, having a hub, composed of the two parts B and C, constructed so as to screw together and clasp the blade A between them, substantially as described.

96,058.—WILLIAM VANSCOYOC, Oxford, Ohio.—*Tail-Board for Wagons.*—October 19, 1869.

Claim.—1. In connection with a wagon bed having a hinged tail-board, the quadrantal wings D D′, connected to the tail board for the purpose specified.

2. In the described combination with the quadrantal wings D D′ and hinged tail board B, the staples C, hooked bars or straps *d d′*, projections *d″*, and guides G G′, aranged and operating substantially in the manner and for the purpose stated.

96,059.—WILLIAM V. WALLACE, New York, N. Y.—*Railway-Car Coupling.*—October 19, 1869.

Claim.—1. A car-coupling, constructed and arranged in the manner herein described.

2. The combination, within the draw-head, of the coupler C and D, in the manner and for the purpose herein described.

3. The combination of the metallic plate *d* with the coupler C D, and the coupling-bar B, in the manner and for the purpose herein described.

96,060.—WILLIAM V. WALLACE, New York, N. Y.—*Spike.*—October 19, 1869.

Claim.—1. The combination of a spike, for railroad or other purposes, containing upon its shank, above the wedge-shaped point, grooves running to the top or head thereof, with a double-pronged clincher, containing a rib or ribs to fit into the aforesaid grooves, in the manner and for the purposes herein described.

2. The combination of the spike *a*, and its cap and double-pronged clincher *b*, as and for the purposes herein described.

96,061.—JETHRO W. WARNER, Dover, N. H.—*Lasting-Hammer.*—October 19, 1869.

Claim.—A lasting-hammer, provided at one end with an awl or awl-chuck, and at the other with a spacing-wheel, as herein shown and described.

96,062.—GARDNER WARREN, Boston, Mass.—*Laying Street-Pavement.*—October 19, 1869.

Claim.—The process, hereinbefore explained, of laying street-pavements, the same consisting, in brief, of first grading the road-bed, next puddling the mass of soil, and, after depositing the pavement thereupon, packing the interstices between the blocks of the latter, by means of sand and water.

96,063.—WILLIAM WEUSTHOFF, Dayton, Ohio.—*Seed-Wheel for Grain-Drills.*—October 19, 1869.

Claim. — The within described expansible seed-wheel, consisting of the sections C and D secured to the disks E and F, substantially as and for the purpose specified.

96,064.—W. WEUSTHOFF and CHARLES SCHMIDT, Dayton, Ohio.—*Grain-Drill.*—October 19, 1869.

Claim.—The slide G, provided with the lug H, in combination with the opening in the hopper-bottom A, and with the seed-wheel C, substantially as and for the purpose specified.

96,065.—JOHN M. WHEELER and CHARLES W. CHASE, Batavia, Iowa.—*Car Coupling.*—October 19, 1869.

Claim.—1. The combination and arrangement of the coupling-hook C and spring F, and the buffer A, substantially as and for the purpose specified.

2. The arrangement of the coupling-hook C and spring G, with reference to the projection upon the interior of the buffer, as a consequence of which the longitudinal movement of the coupling-hook is arrested, substantially as and for the purpose set forth.

96,066.—Earl A. White, Rock Island, Ill., assignor to himself and Basil D. Buford and Company, same place.—*Device for Grinding Metal Plates.*—October 19, 1869.

Claim.—1. The lever C, mounted on a fulcrum, in the manner described, so that it may be turned or adjusted at any desirable angle, laterally or vertically, and arranged to be operated by the attendant, substantially as set forth.

2. In combination with the lever C, the hinged holding-block, substantially as described.

3. The hand-lever E, in combination with the holding-blocks D T, as set forth.

4. The holding-block T, provided with the pin *v* and roller *n*, substantially as set forth.

5. The adjustable fulcrum F, having a ball or spherical head mounted in the rest L, and arranged to operate as herein described.

96,067.—S. Lloyd Wiegand, Philadelphia, Pa.—*Steam-Generator*—October 19, 1869.

Claim.—1. The tank B, constructed as shown and described.

2. The feed-pipe F, when combined and connected with the tanks, substantially as shown and described.

3. The separate supporting pieces K for the circulating-tubes, in combination with the caps, as shown and described.

4. The chamber Y, with the deflector T, arranged substantially as shown and described.

96,068.—Joseph B. Wilson, Philadelphia, Pa.—*Washing-Machine.*—October 19, 1869.

Claim.—1. A washing-machine, in which are combined, as described, the shaft E, vertical reciprocating beaters F, bevel-wheels *f* and *h*, shaft G, pulley *i*, and tube H, all operating as set forth.

2. The combination, with the tub and beaters, of a strip of elastic material, substantially as specified.

96,069.—John F. Worth, Brooklyn, N. Y., assignor to himself, Ira W. Gregory, and Alfred Gregory, same place.—*Tessellated Floor.*—October 19, 1869.

Claim.—The angular metal tongues, in combination with the blocks or slabs of wooden tessellated pavement, substantially as described, for the purpose set forth.

96,070.—J. S. Merriken, Baltimore, Md., assignor to himself and William Colton, same place.—*Railway-Car Coupling.*—October 19, 1869.

Claim.—1. The coupling pin D, provided with a collar, *b*, and passing through a tube or bushing, *d*, in the top of the bumper, substantially as and for the purposes herein set forth.

2. The coupling-link B, constructed as described, with its rear end rounded, and provided with springs C C, and its front end forked, and provided with hooks *a a*, substantially as and for the purposes herein set forth.

3. The block H, constructed as described, and screwed on to the coupling-pin G, substantially as and for the purposes herein set forth.

4. The coupling-pin G, passing through the bushing F, and having a screw-wheel I at its upper end, and the block H screwed on at or near its middle, substantially as and for the purposes herein set forth.

5. The set-screw J and lever L, arranged as described, and operating substantially in the manner and for the purposes herein set forth.

96,071.—A. Albee, Worcester, Mass.—*Heat-Radiator.*—October 26, 1869.

Claim.—The combination of the radiator A and the adjustable shelf F, arranged substantially as described, for the purposes set forth.

96,072.—Mason C. Ames, Hartford, Conn., assignor to himself and W. Edgar Simonds, same place.—*Stilt.*—October 26, 1869.

Claim.—1. The foot-rest B and the clamp-link C, when constructed as described for the purpose described.

2. The combination of the foot-rest B and clamp-link C, when constructed and arranged as described for the purpose described.

3. The combination of the foot-rest B, clamp link C, and stick A, when constructed and arranged as described for the purpose described.

96,073.—Arthur Barbarin, New Orleans, La.—*Machine for Carbureting Atmospheric Air.*—October 26, 1869.

Claim.—1. The combination of the supplementary tube K, stop-cock *l*, and perforations *q q q*, as described, and stop-cock M, with a metal air or ordinary gas-holder, A′, and its water-tank A, in the manner herein stated, and for the purposes set forth, whether said stop-cocks *l* and M, or equivalents, be used in conjunction with each other, or separately, as specified.

2. The combination of the pipe *v′*, provided with the perforated end *w*, the post V, provided with chamber *v″*, and the burner *x′*, arranged and operating substantially as set forth.

3. The combination of the funnel shaped opening J of the pipe H, with an air or gas holder, as shown upon the drawings, for the purpose set forth.

4. The combination of the pipes H and K, cocks *h* and *l*, carbureter Y, air-holder A′, and tank A, operating as set forth.

5. In combination with an apparatus for carbureting atmospheric air, the pipe H V, connected by intermediate pipes R, heated by burners S′, substantially as and for the purpose set forth.

6. The divisional pipes R, to connect the main pipe H to its continuation U, upon any part of the same, between the air-holder and the carbureter, for the purposes set forth.

7. The combination of vapor or other burners S′, with the divisional pipes R of the main pipe H, and continuation U, as herein described, for the purposes set forth.

8. The peculiar-shaped eccentric or cams 10′, Fig. 4.

96,074.—Arthur Barbarin, New Orleans, La., and Antoine Ernest Dupas, Paris, France.—*Apparatus for Carbureting Air.*—October 26, 1869.

Claim.—1. The revolving feeding-wheel B, when constructed and mounted as described, in combination with a box-recipient, A, therefor, in which is employed a water or other suitable liquid packing, as specified, when all the parts are arranged and operate substantially as described, for the purposes set forth.

2. The receiver F, when provided with two (2) apertures *l* and *m*, and surrounded by the outer vessel G, and this latter is connected with the box A by a pipe, *k*, substantially as and for the purposes set forth.

3. The combination of the receiver F and its adjuncts with the subject of our first claim, by means of a pipe *e*, and its elbow *e′*, substantially as described, for the purpose set forth.

4. The above combinations in combination with an indicator, L, provided with a gauge, *n*, substantially as and for the purpose described.

5. The carbureter N, when the same is divided into the gas and hydrocarbon chambers 1 and 2, and the latter is enveloped by the water-containing spaces 3 4, by means of an outer vessel, P, with a thermo-siphon, S, in which there is a globe-section, S′, when these parts are arranged, relatively to each other, as set forth, for the purpose specified.

6. The above combination in combination with the subjects of our first, second, third, and fourth claims, and a pipe, M, substantially as described, for the purpose set forth.

7. The carbureter N, when provided with the adjuncts herein specified, in combination with a reservoir, R, when the hydrocarbon is automatically fed from the latter, by means of pressure from the gas that passes therein from the former, in the manner herein described.

96,075.—Thomas Bell, Bellport, N. Y.—*Propeller.*—October 26, 1869.

Claim.—Making the shank of a paddle or blade, used for propelling-purposes, so that it will act as a torsion-spring, substantially as and for the purposes set forth.

96,076.—J. P. Benoit, Detroit, Mich.—*Pitching Barrel.*—October 26, 1869.

Claim.—As an attachment to a pitching furnace, a system of pipes, E F I, and valves G H, arranged, with respect thereto, in the manner shown and described, and for the purpose specified.

96,077.—B. Blackstone, Warren, Ill.—*Combined Saw Set, Clamp, and Vise.*—October 26, 1869.

Claim.—The combination of the set R P, provided with projections *c c c*, &c., with the wedge-shaped gauge N, jaws J K and L′ M, and standards A B, as and for the purpose set forth.

96,078.—Levi N. Borem, Kennard, Ohio.—*Machine for Sharpening Saws.*—October 26, 1869.

Claim.—The combination and arrangement of the frame B, with its openings *t*, *u*, and *v*, for the reception of the clamp in which the saw to be filed is secured, with the saw-plane C, its clasp *y*, and file-holders *w* and *x*, when constructed substantially as herein described.

96,079.—R. A. Boulware, Doniphan, Kans.—*Stalk-Cutter.*—October 26, 1869.

Claim.—The arrangement of the revolving frame F, carrying the cutters E, the roller D, guide-rods B, and pivoted lever G, with its caster or roller H, as herein described, for the purpose specified.

96,080.—Abraham N. Breneman, Lancaster, Pa.—*Samples for Shoe-Dealers.*—October 26, 1869.

Claim.—The exact similitude or sample of the cut trimmings, and ornamentation of shoes, gaiters, bootees, &c., on a flat surface, made in the manner and for the purpose specified.

96,081.—M. S. Bringier, Ascension Parish, La.—*Apparatus for Evaporating Cane Juice.*—October 26, 1869.

Claim.—1. Applying the heat from the furnace of the boilers of sugar-mills to the evaporation of cane-juice, when the same is done by the means of the pans C B A, and in the manner substantially as herein described, for the purpose set forth.

2. The arrangement of pipes *b*, within evaporating-pans, constructed, arranged, and operating as herein described, for the purpose set forth.

3. The pans A B C, when provided with pipes *a*, and otherwise constructed as herein described, in combination with the furnace of the sugar-mill, or an independent furnace, in lieu thereof, substantially as herein described, for the purpose set forth.

96,082.—T. B. Burgert, Crestline, Ohio.—*Lantern.*—October 26, 1869.

Claim.—1. The combination of the ears *b*, notches *a*, and spring *f*, with the top D, and rim C, when constructed to operate in the manner and for the purpose substantially as described.

2. The spring frill *h*, and removable cap G, in combination with the top D, when constructed to be applied and to operate in the manner substantially as described.

96,083.—D. S. Butler, Otterville, Mo.—*Buckle.*—October 26, 1869.

Claim.—1. A buckle, having a tongue-plate, B, with teeth *d* on its swinging end, combined with a bar, *c*, having corresponding teeth affixed thereto, as set forth.

2. A pivoted tongue-plate, B, having teeth *d*, and two pins, *f g*, in combination with frame A, having toothed bar *c*, and the recesses and perforations, shown and described.

96,084.—Jacob Closs, Decatur, Ind.—*Portable Fence.*—October 26, 1869.

Claim.—1. In combination with a fence, the braces D, hooked stakes E, and double iron clevises F, combined and arranged substantially as described, and for the purpose set forth.

2. Making each brace in two parts, and spreading the parts so as to admit a stake between them, substantially as and for the purpose described.

96,085.—Frederick Cole, Kankakee, Ill.—*Pallet and Brush for Graining.*—October 26, 1869.

Claim.—Distributing various colors on to a brush, S, provided with sections P, in combination with a pallet, A B C, provided with compartments I, to hold various colored paints, as set forth.

96,086.—Austin B. Culver, Westfield, N. Y.—*Ticket-Clip.*—October 26, 1869.

Claim.—The method above described of preventing fraudulent voting, namely, by inclosing the ticket of each elector, as soon as presented, with a clip of soft metal, substantially as specified.

96,087.—C. D. Cutting, Boston, Mass., assignor to himself and William J. Keefe, same place.—*Surge-Reliever.*—October 26, 1869.

Claim.—1. The oscillating disk B, in combination with the lower or fixed disk A and springs, arranged substantially as described, and for the purpose set forth.

2. The disk B, in combination with the springs V V′, diaphragm H, and springs S, working substantially as described, and for the purpose set forth.

96,088.—Anthony Demarce, Fairfield, Iowa.—*Sugar-Cane Mill.*—October 26, 1869.

Claim.—A cane-mill, consisting of the frame, constructed substantially as described, with the adjustable cross-bars E and rods *f*, and having the rollers F and G, and bed-plate J, all constructed and arranged substantially as set forth.

96,089.—Arnold F. Duckwitz, New York, N. Y.—*Aerated Medicinal Beverage.*—October 26, 1869.

Claim.—The medical compound herein described, made as set forth.

96,090.—Charles Durant, Jersey City, N. J.—*Telegraph-Apparatus.*—October 26, 1869.

Claim.—1. So combining a relay-machine, and one or more batteries, or other electrical supply, with a telegraph-instrument, that when, by the operation of the instrument, the main telegraph-circuit is opened and closed, another circuit, communicating with the same relay-machine, will be correspondently closed and opened, and the attractive power developed in the relay-magnet be thereby modified, substantially as described.

2. The conducting-spring E, or its equivalent, in combination with a telegraph-instrument, for the purpose described.

3. The lever-button Q, operating as described.

4. The combination of the screw J with the lever-key D and spring I, substantially as described.

5. The employment of the insulated adjusting-screw S′, in combination with the spring E, substantially as described.

96,091.—Charlton Eden, Indianapolis, Ind.—*Machine for Making Rope-Moldings.*—October 26, 1869.

Claim.—1. The combination of the rest R, the guide T, the bearing K K, the shaft O, and the pulley P, when the same are combined and used for the purpose of cutting rope-molding, substantially as herein set forth.

2. The combination of the rest R and guide T with the cutter Q, substantially as herein set forth.

3. The combination of the rest R, the slide S, and the guide T, substantially as herein set forth.

96,092.—Gilbert Eguillon, Paris, France.—*Method of Hanging Bells.*—October 26, 1869; antedated October 16, 1869.

Claim.—The system of suspended and oscillating levers for hanging bells, in the manner herein set forth, and illustrated by the accompanying drawings.

96,093.—Frank J. Eisenman, Chicago, Ill.—*Egg-Detector.*—October 26, 1869.

Claim.—As a new article of manufacture, the egg-detector, constructed as described, of the cylinder A, having the side opening *a* and annular rim F, the

drum B having the funnel-shaped opening C and the inclined reflectors D E, all arranged as herein set forth and shown, for the purpose specified.

96,094.—William H. Emmons, New York, N Y., and Franklin Kissam, Newark, N. J.—*Burglar-Alarm.*—October 26, 1869.

Claim.—1. An inner casing of glass, to which the alarm is connected by cords or wires secured to it, so that upon the breaking of the glass, the alarm is sounded, and protected by the outer case, as shown and described.

2. In combination with the above, the hollow shaft, protected by the pipe, passing through a safe, and connecting the alarm with the door-lock or sides of the safe, and allowing the alarm to be wound up from the inside of the safe, or vault, or room, to which it may be attached.

96,095.—James J. Essex, Newport, R. I.—*Uterine Syringe.*—October 26, 1869.

Claim.—An improved syringe, as specified, consisting of the bulb C, elastic neck E, body A, and rigid discharge-tube B, each of said parts being constructed as hereinbefore described.

96,096.—Samuel F. Estell, Richmond, Ind.—*Folding School-Desk.*—October 26, 1869.

Claim.—1. The book-box A, provided with slots B, in combination with pins G, and pivoted braces I, constructed and arranged to operate as herein described, for the purpose specified.

2. In combination with the above, the automatic locking-device C, when arranged to operate as herein described, for the purpose specified.

3. The friction-plate D, arms E, and lugs R, for the purpose specified, in combination with a school-desk, constructed and arranged to operate as herein described.

96,097.—Alonzo Farrar, Longwood, Mass.—*Process of Obtaining Useful Oil from the Acid Residuum of Petroleum.*—October 26, 1869.

Claim.—1. My new process, substantially as described, for treating the oily residuum obtained in the purification of the spent acid, as above mentioned.

2. As a new or improved manufacture, the deodorized oily product resulting from the employment of such process, in manner as set forth.

96,098.—Eugene De B. Freer, Lima Centre, Mich.—*Railway-Car Brake.*—October 26, 1869.

Claim.—The combination of the rack and coupling-bar *a* with the clutch and pinion, *e* and *b*, spring *i*, windlass *c*, longitudinal bar *f*, and coupling *g*, arranged substantially in the manner and for the purpose set forth.

96,099.—Alfonzo D. Gates, Surrey, Wis.—*Pump.*—October 26, 1869.

Claim.—1. The hollow plunger B, united directly to the valve Q of the pump, by means of a yielding connection, for the purpose substantially as before described.

2. The lower valve-stem D, having a stop, *c*, for arresting the ascent of the valve, substantially as described, in combination with the yielding connection of the valve and plunger, substantially as before described.

3. A valve, Q, having a notched or toothed bar, P, connected with the plunger, and a stem, D, connected with the seat of the valve, in the manner and for the purpose substantially as hereinbefore described.

96,100.—H. E. Gillet, Oswego, N. Y.—*Folding Desk and Seat.*—October 26, 1869.

Claim.—1. The improved friction-joint for the seat-arms, consisting of the hub L, of the end supports, whereon the arms are suspended, the metallic washers O and P, the yielding washer Y, and the bolt M, all arranged as and for the purpose specified.

2. The combination, with the braces O and the end supports A, of the crank-shaft V, having the tappets W, as and for the purpose specified.

96,101.—Louis M. Goldsborough, Washington, D. C.—*Refrigerator and Water and Wine Cooler.*—October 26, 1869.

Claim.—1. The construction and arrangement (in one piece) of a series of coils of pipes, two or more, within a refrigerator, in such a manner that they may be connected with the supply pipes through which water is convey d through and into a house or building, in the manner and for the purpose herein described.

2. The combination of the coiled water-supply pipes in a refrigerator, and the waste-pipes of the same, with the supply and waste pipes of the house or building, in the manner and for the purpose herein described.

3. In combination with the above, the shelf E, with the refrigerator A, and the supply-pipe G, and the waste-pipes H H′, in the manner and for the purpose herein described.

96,102.—Aaron Goodspeed, Granville, N. Y.—*Apparatus for Removing Electricity from Wool in Roving-Machines.*—October 26, 1869.

Claim.—The combination of the standards E F, the straight wires D, attached to adjustable arms, and the conducting-wire G, with the condensers of a roving-machine, all constructed and arranged as described, for the purpose specified.

96,103.—H. C. Grube, Plaquemine, La.—*Sofa-Attachment.*—October 26, 1869.

Claim.—The lounge or sofa, provided centrally with the drawer K, at one end with the bureau I, and at the opposite end with the sliding wash-stand F, toilet-drawers H, and sliding, hinged, and folding table A, having the spring B, and the spring-catch C, operated by the catch E, all arranged as and for the purpose herein set forth.

96,104.—Henry G. Haedrich, Philadelphia, Pa.—*Combined Horseshoe and Boot.*—October 26, 1869.

Claim.—The combined horseshoe and boot, composed of parts A, D, and C, with or without projections B, as described.

96,105.—William Hamilton, Toronto, Canada, assignor to himself and Hiram Kimball, Randolph, Vt.—*Fluid-Meter.*—October 26, 1869.

Claim.—1. The combination and arrangement, substantially as described, of the balanced reciprocating piston A C C, and balanced valves G G, constructed and operated substantially in the manner described, for the purpose set forth.

2. The combination, with the valves G G, mounted on a common rod, G′, of the oscillating "arms" F F F′, constructed and operated substantially as described, for the purpose set forth.

3. In combination with the piston A and the oscillating shaft O, actuated by said piston, the weight E E′ and arms F F F′, constructed and operating substantially in the manner described, for the purpose of instantaneously shifting the valves at the ends of the strokes of the piston, as set forth.

4. In combination with the reciprocating rack M, actuated by the piston, as described, the pawls *m m*, and ratchet-wheel N, employed and operating substantially as and for the purpose set forth.

96,106.—Reuben Hatch, Jr., Traverse City, Mich.—*Gate.*—October 26, 1869.

Claim.—The combination of the bar F, having notches on each side, with the button J and the gate herein described, substantially as and for the purpose hereinbefore set forth, whereby the gate may be fastened either open or shut, and when the gate is being opened, the bar F is self-acting.

96,107.—James Hatfield, Sparta, Wis.—*Clothes-Rack.*—October 26, 1869.

Claim.—The combination and arrangement of the foot-braces E, arm-braces D, head-plates F, and journal box J, when constructed and arranged substantially as shown and described, and operating in the manner and for the purpose set forth.

96,108.—George M. Hendrickson, Albany, N. Y.—*Paper Box.*—October 26, 1869.

Claim.—In combination with square paper boxes,

the pieces B, of woven fabric, leather, or other sheet-material, manipulated and applied substantially as described, for the purpose set forth.

96,109.—GEORGE HENSLER, Kankakee, Ill.—*Lime-Kiln.*—October 26, 1869.

Claim.—The rotating valve J N, operated by pinion *b* and ratchet-lever *d e*, in combination with chamber B, cupola D G F G, and kiln, as described.

96,110.—GEORGE W. HERRICK, Stuyvesant, N. Y.—*Base-Burning Stove.*—October 26, 1869.

Claim.—The shell A, provided with the apertures *e e*, in combination with the draught cylinder D, which has the apertures *a a*, all arranged substantially as described, to facilitate the combustion of the gases, and to constitute an illuminating-stove, as set forth.

96,111.—SELAH HILER, New York, N. Y.—*Stair-Rod.*—October 26, 1869.

Claim.—An enameled stair-rod, as a new manufacture, when made substantially as and for the purpose described.

96,112.—R. D. HAY and J. M. HILL, Crooked Creek, N. C.—*Nipple-Guards for Fire-Arms.*—October 26, 1869.

Claim.—The combination, with the barrel and the nipple-guard cap A, of a raised projection, B, substantially as specified.

96,113.—PHILIP HINKLE, San Francisco, Cal.—*Implement for Laying Wood Pavement.*—October 26, 1869.

Claim.—The gauge described, consisting of the vertical strip A, bent plate B, lugs C C, and posts E E, when arranged and adapted to the tamping bar, as described, for the purpose set forth.

96,114.—ROBERT HITCHCOCK, Springfield, Mass. *Railroad-Car Ventilator.*—October 26, 1869.

Claim.—1. A car-ventilator, having the case A, formed with the direct passage B through it, and the double walls, and having the opening G through the top of the passage B, through which air is forced, so as to pass around through the hollow sides, and through the supply-pipe, the parts being arranged substantially as shown.

2. In combination with the above, the balance-doors E and F, arranged with stops *a a*, &c., substantially as herein shown.

96,115.—EDMUND HOLDEN, Hartford, Mich.—*Filtering-Sections for Tube-Wells.*—October 26, 1869.

Claim.—A filter, constructed of two concentric tubes of copper, brass, galvanized iron, or other metal not liable to corrode, the inner tube being easily removable for cleansing, all substantially as shown and described.

96,116.—VICTOR AMEDÉE HOUDAILLE, Paris, France.—*Bung.*—October 26, 1869.

Claim.—The system of metallic bung hereinbefore described, and illustration of the accompanying drawings.

96,117.—N. W. HUBBARD, New York, N. Y.—*Parlor Skate.*—October 26, 1869.

Claim.—A skate, having its three wheels arranged relatively to the foot-piece, substantially as shown and described.

96,118.—JAMES P. JONES, Bloomfield, N. J., assignor to JASON CRANE, same place.—*Muff and Collar Box.*—October 26, 1869.

Claim.—A rectangular paper or pasteboard box A, having within it a rectangular apartment, B, and cylindrical apartment C as described.

96,119.—PHILIP P. JOSEF, Buffalo, N. Y., assignor to himself and WALLACE JOHNSON, same place.—*Egg-Carrier.*—October 26, 1869.

Claim.—A slatted support for the cells or pockets of egg carriers, constructed and arranged substantially as and for the purpose set forth.

96,120.—SAMUEL KEEN, East Bridgewater, Mass.—*Heel-Cutting Machine.*—October 26, 1869.

Claim.—1. The reciprocating knife H^1, operated by the cam D, or its equivalent, substantially as described, and for the purpose set forth.

2. The combination and arrangement of the cam K^2, the knife H^1, and the guard K^1, substantially as described and for the purpose set forth.

3. The combination of the adjusting cam N′ with the jacking-device L L^1 L^2, substantially as described, and for the purpose set forth.

96,121.—J. W. LARIMORE, Chicago, Ill., assignor to himself and ALONZO MARKS, same place.—*Sign for Street-Lamps.*—October 26, 1869; antedated October 12, 1869.

Claim.—The arrangement of the frame B, on which the names of the streets are painted, inclined forward at a suitable angle, and provided with the springs or other fastenings D D, in connection with an ordinary street-lamp. A, substantially as herein shown and described, and for the purposes set forth.

96,122.—JAMES A. LAWSON, Troy, N. Y.—*Handle for Pans and other Cooking-Utensils.*—October 26, 1869; antedated October 9, 1869.

Claim.—An ear or handle for pans or other similar or cooking-utensils, constructed from wrought or malleable cast iron, and stamped, cast, or pressed in the form or shape substantially as herein described and set forth.

96,123.—FABIUS H. LAWTON, Fluvanna, N. Y., assignor to himself, DAVID W. PROSSER, and JOSHUA CHENEY, same place.—*Washing-Machine.*—October 26, 1869.

Claim.—1. The combination, in an oscillating presser, of unyielding adjustable rubbing-bars L, with a series of intermediate rollers D, operating as described.

2. The combination of the vertically adjustable, unyielding rubbing-bars L, with the eccentric roller N and springs *e*, operating to either project the bars below the surface of the rollers, or to retract them, as described.

3. In combination with the above, the concave bed of rollers C, with the braking-brands or straps *r*, operating as described.

4. The arrangement of the armed pulley I, in combination with the stirrup *c*, strap J, and the vertically adjustable rubber frame G, as described.

96,124.—EDWARD A. LEWIS, Saint Charles, Mo.—*Velocipede.*—October 26, 1869.

Claim.—The sliding crank E, having the guide-pins *a*, in combination with the fixed eccentric ring or track D, to operate substantially as herein shown and described.

96,125.—WILLIAM LIDDELL, Boston, Mass., assignor to himself and B. S. BINNEY, same place.—*Machine for Making Tags.*—October 26, 1869.

Claim.—1. The combination of the glue-feeding device F^3 F^4 with the glue-roll F^5, operating substantially as described, and for the purpose set forth.

2. The combination and arrangement of the eyeleting-punchers O^4 H^2 and the compressing-jaws H^3 H^4, working substantially as described, and for the purpose set forth.

3. The bar K′, in combination with the levers L^1 L^2, when used for passing the string S forward into the fold of the tag, operating substantially as described, and for the purpose set forth.

4. The string carrier E^6 E^7, operating substantially as described, and for the purpose set forth.

96,126.—JAMES H. LOCKIE Humphrey, N. Y.—*Cultivator.*—October 26, 1869; antedated October 16, 1869.

Claim.—The combination, with the central beam A, of the outer beams B B, when the same are constructed, as described, and connected by the three-armed piece C, substantially as described for the purpose specified.

96,127.—BARON LUDWIG LO PRESTI, Vienna, Austria.—*Railway-Track.*—October 26, 1869; patented in England, October 22, 1868.

Claim.—1. A railway-track, consisting of beams A, rails D, and supports B, constructed and arranged as and for the purpose hereinbefore set forth.

2. The combination of vertical double-coned keys *c*. with the tranverse bolts *d*, to unite the longitudinal halves of a beam, in the manner shown and described.

3. The application of the rollers *e*, between the supporting-beam and trestle, for the purpose of allowing slight lateral motion to the track, substantially as herein shown and described.

96,128.—George Lowden, Brooklyn, N. Y.—*Velocipede.*—October 26, 1869.

Claim.—1. In combination with a velocipede, the ratchet-wheel E, pawls *f* and *g*, and yokes *h* and J, arranged and operating on the axle A, substantially as described.

2. In combination with the ratchet-wheel E and weighted yokes *h* and J, the reach M, post O, brake S, and rods *r*, arranged substantially as described, for the purposes set forth.

96,129.—Daniel Lucas and James Lucas, Green Bay, Wis.—*Wash-Boiler.*—October 26, 1869.

Claim.—In combination with a wash-boiler, the conical false bottom A, tubular stands B B, and perforated tube C, constructed arranged, and operating substantially as described, for the purposes specified.

96,130.—John Marston, Saratoga Springs, N. Y.—*Railway-Car Coupling.*—October 26, 1869.

Claim.—The combination of the stock A, links D E and springs K, when the link D is jointed to the stock, and all arranged substantially as specified.

96,131.—Louis Martaresche, Pittsburgh, Pa.—*Molding and Casting Pipe.*—October 26, 1869.

Claim.—1. Providing the flask A with curved feet *e*, so pivoted to the table B as to admit of the flask being opened substantially in the manner shown and set forth.

2. Providing the swinging door S, of the flask A, with a circular flange or rim, *n*, on its face or upper side, for the purpose of holding in place the small flask T, as shown and described.

3. In combination with the swinging door S, the use of the small flask T, for holding sand to give form to the lower end of the pipe, as described.

4. The bulb or enlargement C, on the lower end of the core bar K, in combination with the flask A, provided with a swinging door, S, for the purposes hereinbefore set forth.

5. The use of a stove, D, placed in a vertical line beneath the flask A, when so attached thereto, by means of the table B and its legs *g g*, as to be moved with the flask A, as described.

96,132.—John A. McClelland, Louisville, Ky.—*Mode of Producing Useful Articles from Collodion and its Compounds.*—October 26, 1869.

Claim.—The production of useful and ornamental wares or objects, of compounds as herein described, by the application thereto of heat, substantially as described.

96,133.—Robert McKenzie, New Orleans, La.—*Tool for Expanding Boiler-Tubes.*—October 26, 1869.

Claim.—The annular and slotted plates A A′, screw-bolts and nuts B C, constituting a frame, substantially as described, in combination with a series of sets of rolls of different sizes, each with one journal only, the projecting pins H, lever I, and tapered mandrel E, all constructed and arranged substantially as set forth.

96,134.—James McMorries, Columbus, Miss.—*Combined Knife and Fork.*—October 26, 1869.

Claim.—The arrangement of the circular revolving blade F, operated toward the hinged fork-shank M, of Fig. 1, and the arrangement of the circular revolving blade F, operated parallel with or alongside the pivoted fork R, of Fig. 2, substantially as figured and described, and for the purposes set forth.

96,135.—John McNeight, Wakefield, Mass.—*Coal-Stove.*—October 26, 1869.

Claim.—1. The gas-mixing chamber, formed by gas-ring *c* and plate P, with dampers D D, substantially as set forth.

2. The combination of gas-mixing chamber, described, with gas-ring *c*, as set forth.

3. The combination of gas-mixing chamber, described, fire-box B, and gas-ring *c*, substantially as herein set forth.

4. The combination of fire-box B, ring *c*, gas-mixing chamber, described, cold-air passages E E and K K, and draught-passages *i i*, as herein set forth.

5. The combination of dampers D D and D′ with fire-box B and plate P, as herein described.

6. A gas-utilizing stove, formed by the combination of all the parts named above, arranged and operating substantially as specified.

96,136.—Thomas Metzler, Wooster, Ohio.—*Pump.*—October 26, 1869.

Claim.—1. The combination, with the pump A, of the squeezers D, arranged for operation substantially as specified.

2. The platforms C′ and H, connected by braces or supports I K, and combined with the pump and operating-devices, substantially as specified.

96,137.—Alfred A. Mixer, Hamilton, Ohio.—*Pedals for Pianos, &c.*—October 26, 1869.

Claim.—1. An auxiliary adjustable pedal for pianofortes, organs, &c., constructed and operating substantially as and for the purposes described.

2. The combination of the loop B, angular bar A, and adjustable part D H, applied and used in the manner and for the purpose substantially as described.

96,138.—Monroe Morse and Charles H. Morse, Franklin, Mass.—*Grate-Bar for Steam and other Enginery.*—October 26, 1869.

Claim.—In combination with a grate-bar, the false bar or rider C, constructed and arranged substantially as and for the purposes described.

96,139.—J. Nicolai and J. Ph. Rinn, Boston, Mass.—*Folding Chair.*—October 26, 1869.

Claim.—The combination of the loops P Q P′ Q′ with the seat C, rung L M, and legs A A′, substantially as described, and for the purpose set forth.

96,140.—A. P. Odholm, Bridgeport, Conn.—*Spirit-Level.*—October 26, 1869; antedated October 16, 1869.

Claim.—As a new article of manufacture, the spirit-level and plumb, constructed, as described, of the hard-rubber box B, (which contains the alcohol,) shrunk upon the glass plates *e e*, one of which is provided with the disk *g*, in the manner described, for the purpose specified.

96,141.—Richard Orford, Dowagiac, Mich.—*Saccharine Evaporator.*—October 26, 1869; antedated October 12, 1869.

Claim.—The combination and arrangement of the furnace B, with its bars H, rivets *j*, dampers E and F, brackets S, and bar G, with the pan A of a saccharine evaporator.

96,142.—Henry O. Peabody, Boston, Mass.—*Centrifugal Machine for Extracting Honey from the Comb.*—October 26, 1869.

Claim.—1. So constructing a centrifugal machine that a single revolving vessel shall serve the purpose of both the revolving basket and stationary tub, as heretofore constructed, substantially as described.

2. The use, in centrifugal machines, of the portable wire-gauze frames I, or their equivalents, constructed and applied substantially as described, for the purpose specified.

3. The combination, with the revolving vessel E, of the central opening L, the annular groove B, and the discharge-orifices C C, substantially as described.

96,143.—A. E. Peck, Brooklyn, N. Y.—*Fire-Cracker Holder.*—October 26, 1869.

Claim.—An improved cracker-holder, formed in two sections A B, substantially as specified.

96,144.—Benjamin W. Putnam, Boston, Mass.—*Flower-Pot.*—October 26, 1869.

Claim.—A flower-pot constructed substantially as

described, that is to say, with a centrally-arranged water-reservoir, and one or more earth vessels, situated concentric thereto, the wall intervening between the reservoir and earth-vessel or vessels being of porous material to admit of the percolation of the water through the same, for the purpose specified.

96,145.—William Quail, New York, N. Y.—*Printers' Galley.*—October 26, 1869.

Claim.—1. The parallel bars I D, connected with each other by the arms J, and combined with the side and end of an ordinary printers' galley, in such a way that the longitudinal movement of the bar D may give a lateral movement to the bar I, substantially as herein shown and described.

2. The combination of the spring pawl F H and rack-bar G with the sliding bar D and side B of the galley, substantially as herein shown and described, and for the purpose set forth.

96,146.—Matthew Quinn, Wataga, Ill.—*Railway-Car Coupling.*—October 26, 1869.

Claim.—1. The detachable incline a', in combination with the bumper-head A, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the coupling-pins or catches B and slides C with each other, and with the bumper-head A, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the coupling-pins or catches B, slides C, bars E, connecting-bar F, and guide-bar or pin G, provided with a spring-catch, H, with each other, and with the bumper-head A, substantially as herein shown and described, and for the purpose set forth.

96,147.—F. M. Ranons, Little Shasta Valley, Cal.—*Gate-Latch.*—October 26, 1869.

Claim.—The catch E, constructed as described, in combination with the hooked slide-latch A, and springs D and G, all arranged and operating substantially as herein shown and described, for the purpose specified.

96,148.—Christian S. Rauh, Boston, Mass.—*Compound for Making Water-Proof Paper.*—October 26, 1869.

Claim.—The application and use of the above ingredients, or their equivalents, when compounded substantially in or about the proportions set forth, and in the manner and for the purpose described.

96,149.—Erastus W. Scott, Wauregan, Conn.—*Shutter-Worker.*—October 26, 1869; antedated October 16, 1869.

Claim.—1. The combination and arrangement of the sleeve D, slotted and recessed, as described, with the knob E, the spindle C, the stud *c*, the arm *g*, the slotted plate *i*, and the spring-latch F, to operate with catches I K, applied to the window-frame A and the building, as explained.

2. The arrangement of the latch F, the pawl G, the arms *n p*, and the two springs *o q*, applied to the said arms, latch, and pawl, as set forth.

3. The combination of the spindle C, its arm *g*, and the slotted plate *i*, with the pawl G, the spring *q*, ratchet H, arm *v*, and bar *t*, the whole being applied to the blind and the window-frame, substantially in manner and for the purposes as set forth.

96,150.—Louis A. Seward, New Orleans, La.—*Key-Face for Concertina.*—October 26, 1869.

Claim.—The making of the outward faces of the key boards of concertinas in the way herein described and shown on the drawing.

96,151.—Louis A. Seward, New Orleans, La.—*Apparatus for Teaching Music, &c.*—October 26, 1869.

Claim.—1. The combination of an upright supplemental key board, with the ordinary horizontal keyboard of piano-fortes or other like instruments, when the former is used in connection with vertical standards, C C, on which are fixed transverse bars D E F G H, and front elastic strips *d e f g h*, provided with mechanical appliances for attaching removable notes, rests, &c., and means of connection with the horizontal keys of the instrument, substantially as herein described.

2. The combination of an upright key-board with the bars D E F G H, with or without the front strips *d e f g h*, when these parts are constructed substantially as herein described, and applied to the purposes specified.

96,152.—William C. Shipherd, Willoughby, Ohio.—*Shoe-Last.*—October 26, 1869.

Claim.—The combination of an instep-plate, B, formed with a hollow recess, G, extending through to the outer end, with the eccentric-notched plate A and spring-catch E, arranged as shown and described.

96,153.—Joseph J. Singley, La Fayette, Ind.—*Potato-Digger.*—October 26, 1869.

Claim.—1. The combination, with the plow and plow-beams, of the reciprocating cutters M, substantially as specified.

2. The combination, with the carrier-screen, of the earth-receiving plate R and discharger S, substantially as specified.

3. The arrangement of the plow-beam H, cords I, adjusting-shaft K, and cords L together, and with the frame, substantially as specified.

4. The combination, with the carrier-screen, of the revolving brush V, when arranged substantially as specified.

5. The combination, with the carrier-screen, of the fixed cutter X, substantially as specified.

96,154.—R. H. Sipes, Bloody Run, Pa.—*Washing-Machine.*—October 26, 1869.

Claim.—Fluted roller-crank *c*, small rollers N, spring K, pendent hook H, checks F, hooks *o*, slits E, and screw P, when combined and arranged as described.

96,155.—Evan Skelly, Plaquemine, La.—*Machine for Bleaching Cane-Juice.*—October 26, 1869.

Claim.—1. Combination, with the furnace A, of the air-conductor C, valve D, arranged for operating to vary the supply, the hopper H, and revolving recessed feeding-valve I, all substantially as specified.

2. The combination, with the furnace A, and the distributing-wheel and trough, of a gas-cooler, arranged substantially as specified.

3. The combination, with a closed agitating trough arranged for passing the liquid through it, of a revolving agitating-wheel, arranged for receiving the gas from a furnace, or over or through water, and for exhausting the air from the said agitating-chamber, and delivering the gas to the liquid therein, substantially as specified.

4. The combination, with the trough, of the pendent plates C^1, and float-valves E^1, substantially as specified.

5. The combination, with the air-valves D, of the valve F^1, when connected and arranged substantially as described.

6. The combination, with the agitating-trough and wheel X, of the perforated plate A^1, substantially as specified.

7. The mode of increasing or diminishing the capacity or area of the burning-surface, by the employment, in combination with the said furnace, of pans B, in which to burn the sulphur, substantially as specified.

96,156.—H. Sloat, Watertown, N. Y.—*Saw-Set.*—October 26, 1869.

Claim.—1. A saw-set, consisting of the shank B, fixed jaw C, movable jaw E, levers D H, and punch F, all combined and operating substantially as herein shown and described.

2. The notched plates I, arranged in combination with the movable jaws E and punch F of a saw-set, substantially as herein shown and described.

96,157.—Edward Smeeth, Chicago, Ill.—*Condenser for Alcohol-Stills.*—October 26, 1869.

Claim.—One or more overflow-pipes applied to a still, in such manner as to retain part of the liquid resulting from condensation of vapor in the lower portions of such condenser, and allow the surplus liquid to escape back into the still, substantially as described.

96,158.—A. D. SMITH, Grafton, Ohio.—*Faucet.*—October 26, 1869.

Claim.—1. The combination of the bloek E with the gate B and body of the faueet A, for the purpose set forth.

2. The combination of the screw D with the body of the faueet A, when so arranged, in relation to their adjoining parts, that, by turning in the screw D, the gate B is pressed against the opposite side of the aperture C from the screw D, for the purpose set forth.

96,159.—D. N. SMITH, San Bernardino, Cal.—*Gopher-Trap.*—October 26, 1869.

Claim.—A gopher-trap, eonsisting of the tube A, lever C, slides D E, pin *i*, trigger-pin F, and springs *c*, all arranged and operating substantially as herein shown and deseribed.

96,160.—EARLE HARRY SMITH, Bergen, N. J.—*Sewing-Machine.*—October 26, 1869; antedated October 13, 1869.

Claim.—The eombination of the looper, the brush-returner, or its equivalent, and the take-up, the whole operating together substantially as described.

96,161.—GEORGE SMITH, Providenee, R. I., assignor to himself and J. C. DE LANG, Detroit, Mich.—*Apparatus for Unloading Hay.*—October 26, 1869.

Claim.—1. A eentral-discharging hay-sling, eomposed of two detachable flexible sections, when the sections are arranged as shown, and conneeted together by one of their respective ends, and the free end of one of the sections is provided with a pulley or its equivalent, and the free end of the other section is provided with a ring or eye, substantially as described.

2. An attaching and a releasing-device, consisting of spring-jaws, a locking and tripping-dog, or its equivalent, and a bar a^1, with headed fingers applied to it, eombined substantially as and for the purposes described.

3. The combination, with a sectional or central-discharge hay-sling, of loop D, ring C, and a detachable fastening and compressing rope, S, substantially as and for the purposes described.

4. The arrangement of the traveling pulley-block K, fixed pulley-bloeks J J, and elevating and compressing-rope S, in combination with the sling T T′, which opens and discharges at the center, substantially as described.

96,162.—R. HALE SMITH, Springfield, Mass.—*Hand-Stamp.*—October 26, 1869.

Claim.—The application of indicating-eharacters to the front side of two or more printing-wheels, when said wheels are so constructed that each has its own bearing upon the eentral shaft or axis, in combination with radial openings through the front wheel or wheels, for the purpose of exposing to view that portion of eaeh wheel whieh bears the said indicating-characters.

96,163.—AUGUST STEINBÖK, New York, N. Y.—*Match-Safe.*—October 26, 1869.

Claim.—The self-igniting wick B, in combination with the closed case A, having the sliding eover C, ratchet *a*, and adjustable candle-holder E, all arranged as deseribed, for the purpose specified.

96,164.—E. H. STEWART, Philadelphia, Pa.—*Halter Clasp.*—Oetober 26, 1869.

Claim.—A halter-elasp, when eonstrueted and operated in the manner and for the purpose above set forth and deseribed.

96,165.—AUGUSTA N. THOMPSON, Holyoke, Mass.—*Blacking-Brush.*—October 26, 1869.

Claim.—An improvement in "stove-blacking brush," the arrangement and connection of the sponge with its staple *a*, knob *b*, in combination with brush B, as shown and described.

96,166.—THEODORE R. TIMBY, Saratoga, N. Y.—*Thimble.*—Oetober 26, 1869.

Claim.—As a new article of manufaeture, the thimble herein deseribed, provided with grooves or eorrugations *a c* and apertures *d*, eombined and arranged substantially as set forth.

96,167.—DUDLEY W. TRAVIS, Enfield, N. Y.—*Corn-Cultivator.*—October 26, 1869; antedated October 12, 1869.

Claim.—1. The eombination of the adjustable plows G and H frame D F F′, and rods C, substantially as described.

2. The arrangement of the lever L, in eombination with the plows, frame, rods, and carriage, as set forth.

3. The eonstruction of the spring K, in eombination with a earriage plow frame, as set forth.

4. The combination of the whole, made by the two-wheeled carriage A, eross-bar B, rods C, longitudinal pieces D, posts E, adjustable plows G and H, seat I, spring K, and lever L, arranged and operating together, substantially as set forth.

96,168.—B. W. TUTTLE, Galena, Ill.—*Water-Wheel.*—October 26, 1869.

Claim.—1. The penstock C and tubular extension B, provided with the lateral openings E, and extending above the water, when arranged as specified.

2. The combination, with the wheel A, of a tubular extension, when provided with an air chamber, and arranged as and for the purpose specified.

3. The air-chamber D, formed in the bottom of the wheel, substantially as specified.

4. The combination, with the buckets, of the shaft I, disk sleeve K′, worm-shaft N, shaft O, gearing with the shaft I, all substantially as speeified.

5. The detachable rings Q, let into the top and bottom plates of the wheel, substantially as and for the purpose specified.

6. The penstock C and tubular extension B, when arranged substantially as represented.

7. The combination, with the wheel A, of the fixed wheel R, substantially as specified.

8. The combination, with the wheel A, of the secondary buckets T, substantially as specified.

9. The arrangement of the packing-rings U and V, tubular extension B, and penstock C, all substantially as specified.

96,169.—WILLIAM E. VAN SCHAICK, Delavan, Wis.—*Sleigh-Coupling.*—October 26, 1869.

Claim.—The combination of the roller on the front of rear bob with adjustable chains, adjustable reaeh, swiveled at each end, and eonnecting-staples on front bob, as and for the purpose specified.

96,170.—JOHN P. VAN SICKLE, Geneva, N. Y.—*Harvester.*—October 26, 1869.

Claim.—1. The main frame C, of harvesters, when so constructed that a portion earrying the countershaft *c* is elevated above the rear part, and the portion to which the tongue is attached is still further elevated, as and for the purpose set forth.

2. Suspending the bar L, by the hanger K, from the main frame C, and from the angle-lever *r*, by the vertically moving connecting-rod *x*, pivoted eye-bolt *u*, and yoke *y*, as herein deseribed, and for the purpose set forth.

3. The hinged finger-bar P, and pivoted arm d', in combination with the handle R, when said handle is adjustable longitudinally and transversely to the machine, as and for the purpose set forth.

4. The vertically adjustable arm m^4, pivoted foot-rest n^3, in combination with the horizontal adjustable seat r^2, as herein shown and for the purpose set forth.

5. The seat r^2, in combination with the springs q^2, constructed as herein shown, and for the purpose set forth.

6. The pivoted traek-cleaner c^3, in eombination with the adjustable shoe a^3, as herein shown and deseribed.

96,171.—ADOLPH VELGUTH, Milwaukee, Wis.—*Blind-Hinge.*—October 26, 1869.

Claim.—A blind-fastening hinge, when eonstructed with fastening-bar C, with a joint at E, with projection F, so arranged, that when closed, that part of the fastener C, inside of the joint E, hooks on over F, and fastens the hinge together, and, when open, that part of fastener C, at H, shall hook over projection F, and keep it open, substantially as described.

96,172.—Moses N. Ward, Bangor, Me.—*Car-Starter.*—October 26, 1869.

Claim.—1. The combination and arrangement of the two ratchets, E E, the draw-pawls G G, the main levers F F, the cross-lever N, and the pedals I I, the whole being connected together and applied to the carriage-axle and body, so as to operate as set forth.

2. The combination of the hand-lever K and its pitman or rods L L with the pedals G G, the levers F F, the cross-lever N, the draw-pawls G G, and the ratchets E E, the whole being applied to the carriage in manner and so as to operate as hereinbefore explained.

3. The combination of the draw-pawl lifting mechanism as described, with the ratchets and with the draw-pawls, provided with mechanism, as set forth, for operating them, so as to effect the rotary movements of the ratchets.

96,173.—Chauncey E. Warner, Syracuse, N. Y.—*Horse Hay-Fork.*—October 26, 1869; antedated October 16, 1869.

Claim.—1. In connection with the curved tines A A′, the toothed segments *a a′* and vertically-sliding loop C *c d d*, all constructed and operating substantially as herein shown, and for the purpose described.

2. In combination with the curved tines A A′, the toothed segments *a a′*, fixed to said tines, and arranged concentrically with the main pivot *b*, and used in connection with a suitable device for engaging or disengaging them at will, for the purpose specified.

96,174.—A. W. White, Boston, and John J. Watson, Gloucester, Mass.—*Chin-Rest for Violin.*—October 26, 1869.

Claim.—The combination and arrangement of the screw *e* with the handle *c* attached, combined and arranged with the holds or shields *d* and *f*, for the purpose of tightening and loosening a chin-rest for the violin and viola.

96,175.—Theophilus Weaver, Harrisburgh, Pa., assignor to J. W. Moffitt, same place.—*Combined Latch and Lock.*—October 26, 1869.

Claim.—1. The traversing spring-retaining yoke L N Y, when made to operate substantially in the manner as and for the purpose herein set forth.

2. In the swinging lever A M, the loop B F, pin *a*, and notch O, all arranged as and for the purpose specified.

3. The combination of yoke L N Y, with lever-arm A B F, when arranged to support the spring in the chord-line E S *w*.

4. The adjustable keeper, consisting of the plates H and I, constructed and arranged as herein set forth.

96,176.—J. R. Webber, Chicago, Ill.—*Weather-Strip.*—October 26, 1869.

Claim.—The slotted springs J, attached to the edges of the door T, in combination with the strip A, provided with a friction plate, L, elbow-lever E G, rod H, plate P, and adjustable set-screw I, the latter being used to regulate the distance which the strip A is to project from the bottom of the door T, as and for the purpose set forth.

96,177.—Frank A. Wells, Memphis, Tenn.—*Cotton-Seed Hulling-Machine.*—October 26, 1869.

Claim.—1. The cylinder A, having knives B, shaped and applied as specified, in combination with the corresponding knives C, of the concave shell, all operating together, substantially in the manner described.

2. The combination of revolving knives B with cutters C, arranged at a pitch below the center of the cylinder, and having an independent radial adjustment, by means of set-screws or their equivalents, substantially as set forth.

3. The improved concave clamp E, provided with means for the separate adjustment of each square-ended tool, with its cutting-edge at a pitch below a radial line, and removable at the extremities of the concave, all as shown and described.

96,178.—Homer Wright, Pittsburgh, Pa., assignor to himself, Henry H. Collins, and Benjamin F. Collins, same place.—*Means of Attaching Tops to Jugs, Cruets, &c.*—October 26, 1869; antedated October 9, 1869.

Claim.—As a new article of manufacture, attaching tops to jugs and cruets by the use of the flange A, in combination with the groove or convex E, ring, or flaring mouth or lip B, on the jug or cruet, when attached together, substantially as described.

96,179.—C. C. Williams, Brooklyn, N. Y.—*Apparatus for Preserving Fruit.*—October 26, 1869.

Claim.—1. An improved boiler-apparatus, consisting of boiler proper A and steam-chest D, screwed thereon, and having a perforated bottom, as shown and described.

2. The removable steam-chest D, with apertured bottom, in combination with a series of pipes, F H, and air-excluding sleeves G, as and for the purpose specified.

96,180.—Enoch S. Yentzer, Ottawa, Ill.—*Attachment for Sewing-Machines.*—October 26, 1869.

Claim.—1. An instrument for producing the seam herein described, consisting of parts A, *a′*, B, D, *d*, and *s′*, constructed so as to operate substantially as set forth.

2. The adjustable lapping-hook *d* and turner or guide C, combined with a gauge, *s′*, substantially as described.

3. The lapping-hook *d*, the turner or guide C, the guide *t*, and the follower-plate B, constructed and combined substantially as described.

96,181.—L. J. Adams, Hoosick Falls, N. Y., assignor to himself, William Hyland, and A. B. Miller, same place.—*Clothes-Drier.*—October 26, 1869.

Claim.—The combination, with the panel or frame, composed of the posts A B and bars C, arranged in pairs, of the frames, consisting of the posts D and bars C, when the said bars D are pivoted between the bars C, either to bolts F or the posts A, substantially as specified.

96,182.—J. S. Anderson, Oconomowoc, Wis.—*Water-Wheel.*—October 26, 1869.

Claim.—The combination of a supply-chute, B, and the wheel D, mounted in an oscillating frame, C, so arranged as to adjust the wheel in relation to the chute, substantially as described.

96,183.—John Andrews, New Bedford, Mass.—*Clothes-Line Supporter.*—October 26, 1869.

Claim.—The combination of legs A^1, points E^1, brace C^1, and hinge B^1, as herein described, for the purpose specified.

96,184.—Olney Arnold, Pawtucket, R. I.—*Machine for Cutting Cork.*—October 26, 1869.

Claim.—1. The movable frames A A^1 and cutter-shafts B B′, in combination with the movable parts E E′ and cutter-blades *e* e^1, when constructed to operate substantially as and for the purposes described.

2. The combination of rock-shafts M and N, crank O, slide Q, levers L J, rod J′, and adjustable stop *r*, when adapted to operate together, in the manner described, and for the purposes specified.

3. The arrangement of the cutters *e e*, heads *b b*, shafts B B′, C C′, D, and adjustable gearing *c*, c^1, c^2, c^3, c^4, c^5, *d*, *d′*, when constructed and adapted to operate together as and for the purposes set forth.

4. The arrangement of the cutter-shafts B B′ with the movable boxes *i i*, blocks H H, and screws G G, substantially as and for the purposes indicated.

5. The cutter-blades *e e*, of the form shown in Fig. 4, when employed in connection with the heads *b b* and parts E E′, in the manner and for the purposes set forth.

6. The adjustable table T′, in combination with the rocking-frame T and screws *t t* T″ T‴, substantially as and for the purposes set forth.

96,185.—N. M. Barnes and A. T. Barnes, Tiffin, Ohio, assignors to themselves and Tiffin Ag-

RICULTURAL WORKS, same place. — *Machine for Driving Rake-Teeth.*—October 26, 1869.

Claim. — 1. The hammer F′, provided with a socket in its face to fit the end of a rake-tooth, when used as and for the purpose set forth.

2. The combination of the guide-rests H and I, placed just far enough apart to permit the rake-teeth to pass between them, substantially as and for the purpose specified.

3. The spring-plate J, combined with the lugs *i i*, and arranged and operating, with respect to the rake-head, substantially as set forth.

96,186.—HENRY W. BARTOL, Philadelphia, Pa. —*Centrifugal Sugar-Draining Machine.* — October 26, 1869.

Claim.—1. The segmental bearing D, and cap C, in combination with the pulley P, shaft S, and nuts N N′, when constructed and arranged substantially as and for the purpose set forth.

2. A cone or cylinder, K, in combination with a gate, G, when constructed and operated substantially as and for the purpose described.

96,187. — A. ELY BEACH, Stratford, Conn.— *Method of Transporting Letters and Parcels.*—October 26, 1869.

Claim.—1. The transportation of letters and parcels, by submitting the same to the direct action of air-currents within conveying-tubes, substantially as herein set forth.

2. The combination, with the air-tubes, of a mechanism for depositing the letters or parcels within the air-tubes, so operating as to prevent air-escape, substantially as set forth.

3. The combination, with the air-tubes, of a mechanism which will collect or arrest the contents of the tubes without interrupting the flow of the air-current, substantially as set forth.

4. The combination, with the air-tubes, of a discharging-mechanism, so operating as to prevent air-escape, substantially as set forth.

5. Operating the movable portions of the air-tube by electricity, substantially as and for the purpose set forth.

6. Effecting the return-signals, substantially as set forth.

96,188. — AARON BEARDSLEY, Mount Zion, Iowa.—*Show Counter.*—October 26, 1869.

Claim.—The store-counter, constructed substantially as herein described, with apertures D, through which articles placed in suitable receptacles under or within the counter may be viewed, as set forth.

96,189.—J. D. BECK, Liberty, Pa.— *Vise.*—October 26, 1869.

Claim.—1. The combination of the jaw B with its groove and slot C, as described, the pivot-bolt *a*, bolt *d*, auxiliary jaw L, and bar D, substantially as and for the purpose specified.

2. The combination of the slotted bar H, auxiliary jaw K, bolt *n*, latch R, and plate *l*, arranged, with reference to the extension-bar D and jaw A, substantially as described.

96,190. — CALVIN G. BEITEL, Easton, Pa. — *Steam-Generator.*—October 26, 1869.

Claim. — The construction of the boiler, of sections or boxes A A and B B, of less length than the dimension of the boiler, where they are applied, so that two or more lengths thereof are required to reach the extent of the boiler, and in arranging the said short sections, so that the contiguous courses or layers lap by each other alternately, and connect with different opposite sections in part, substantially as and for the purposes herein specified.

96,191. — R. N. BENNETT, Union Mills, Ind.— *Harrow.*—October 26, 1869.

Claim. — The combination of the land-lever B, chains C C, or their equivalents, with a double harrow, substantially as shown and described.

96,192.—WILLIAM N. BERKELEY, Cedar Rapids, Iowa.—*Horse Power.*—October 26, 1869.

Claim.—1. The revolving wheel or frame F, the shaft D, the drive-wheel I, crank-shaped bearing Q, and wheel K, when constructed, combined, and operating with a rack A, and cog-wheel J, (or equivalents,) as a horse-power, substantially as set forth.

2. The wheel or frame F, shaft D, crank-shaped bearing Q, wheel K, and crank T, when constructed, combined, and operating with a rack, A, and cog-wheel J, (or equivalents,) as a man-power, substantially as described and shown.

3. The brace-strap O, provided with a bearing for the shaft D, and constructed and arranged so as to operate substantially as described and shown.

96,193. — JOEL BOWMAN and JOHN B. OVERMYER, Reading, Ohio.—*Railway Cattle-Gate.* — October 26, 1869.

Claim.—1. In combination with the rails of a railroad-track and the gates H *b*, the parallel bars C, pivoted levers *c d*, and the weighted levers G, or their equivalent, substantially as described, for the purpose specified.

2. The blocks J, in combination with the rails A and the bars C, having their upper surfaces depressed near the center, substantially as described, for the purpose specified.

3. The hooked bars *b*, arranged, as described, upon the oscillating shafts D, when their proximate edges are sharpened, for the purpose specified.

4. In combination with the rails of a railroad-track, the bars C, pivoted levers *c d*, blocks J, gate H *b*, pulleys H, and weighted levers G, all arranged as described, for the purpose specified.

96,194.—JOHN F. BOYNTON, Syracuse, N. Y.— *Lightning-Rod Point.*—October 26, 1869.

Claim.—1. A lightning-rod point, with compound corrugations, and constructed as above described.

2. The compound corrugated point, combined with a swaged ferrule or tube, for connecting it with the rod.

96,195.—EDMUND BROWN, Burlington, Vt., assignor to himself and ARTEMUS PROUTY, same place.—*Boot and Shoe.*—October 26, 1869.

Claim.—1. The stiffening-frame B, composed of the bars or plates *a a b*, when arranged on a gaiter-boot or shoe, as herein described, for the purpose specified.

2. The combination of the plates *e e* with the frame B, having the bars *a a b*, all arranged as herein described, to be applied to a gaiter-boot or shoe, leaving the instep elastic, for the purpose specified.

96,196.—SANFORD S. BURR, Dedham, Mass.— *Cabinet-Bedstead.*—October 26, 1869.

Claim.—1. A cabinet or secretary bedstead, composed of a case or structure, A, and a divided bed-frame, which, while hinged to said case so as to be turned bodily up or down upon its pivot, is also capable of longitudinal expansion and contraction, substantially as and for the purpose herein shown and described.

2. A bed-bottom for cabinet or secretary bedsteads, composed of two end-frames, united by a tongued rail, as explained, or its equivalent, and provided with the transverse slats *e*, secured together by the elastic cords *f*, and provided with the springs *i*, overlaid by the sacking *j*, substantially as and for the purposes herein shown and described.

3. The combination of the pivoted shelf *l* with the hinged and divided bed-frame and the case A, in the manner and for the purposes shown and set forth.

96,197.—CHARLES A. BUSH, New London, assignor, for one-quarter of his right to HENRY P. OSTRUM, New Haven, Conn.—*Mode of Cleaning Gas-Retorts.*—October 26, 1869.

Claim.—1. The combination of salt and shells, and of salt, sulphur, and shells, for the purpose set forth.

2. The combination of salt, sulphur, and limestone, for the purpose set forth.

96,198.—CHARLES A. BUSH, New London, assignor, for two-thirds of his right, to HENRY P. OSTRUM and T. CLIFFORD BUSH, New Haven, Conn.—*Insulator for Telegraph-Wires.*—October 26, 1869.

Claim.—1. The rubber cap or covering for the

bracket or pintle, substantially as and for the purpose hereinbefore set forth.

2. The rubber lining for glass, porcelain, or other non-conducting substance, substantially as and for the purpose hereinbefore set forth.

96,199. — JEAN ARMAND CALLAUD, Nantes, France. — *Galvanic Battery.* — October 26, 1869; patented in France, May 19, 1858.

Claim.—1. The combination and arrangement of the jar A, zinc B, hooks *b' b'*, rod *c*, rubber tubing E, and sheet-copper D, in the manner and for the purpose herein described.

2. The combination and arrangement of the devices above mentioned, in the form and proportions herein described.

96,200.—GEORGE H. CHINNOCK, New York, N. Y., assignor to NEW LAMP-CHIMNEY COMPANY, same place.—*Lamp Burner.*—October 26, 1869.

Claim. —The movable cone *h*, surrounding the draught-plate *e*, in combination with said draught-plate *e*, and a perforated air distributer and chimney-holder, removable from the ratchet-cap *d*, as and for the purposes set forth.

96,201.—GEORGE CLARK, Buffalo, N. Y.—*Distilling and Treating Alcoholic Spirits.*—October 26, 1869.

Claim.—1. In the treatment of the various kinds of liquors, the combined application of a current of air and an exhaust, substantially in the manner and for the purposes set forth.

2. In a distilling or ageing apparatus, consisting of two or more receivers, the combination of an air-exhaust, applied to the extremity of the worm, or equivalent part, with a current of air admitted into the first receiver, at the bottom, substantially as described.

96,202.—LEWIS T. CLEMENT, Smyrna, Tenn.—*Machine for Cleaning Cotton.*—October 26, 1869

Claim.—The combination and arrangement of the feed-table G, feed-aperture *a*, and discharge-spout *a'*, with the revolving screen B, and revolving shaft C, provided with beaters *e*, substantially as shown and described, for the purpose set forth.

96,203. — LORING COES, Worcester, Mass. — *Wrench.*—October 26, 1869.

Claim.—1. The combination and arrangement of the wrench-jaws, shanks thereof, and right and left-handed screws extending transversely to the lengths of the shanks, so that both the said jaws and shanks are caused to separate and approach by turning the said screws, as described.

2. The combination and arrangement of the wrench-jaws, shanks thereof, right and left-handed screws, and guide, as described.

96,204.—B. E. COLLEY, Boston, Mass.—*Piano-Forte Action.*—October 26, 1869.

Claim.—In the class of piano-actions above described, a detached connection between a hammer-head, through its stem or part attached thereto, arranged, or located inside of the point of motion and escape of the jack, and the jack-frame, or any suitable part thereof, for operation, substantially as described, and for the purpose specified.

96,205.—MYRTILLUS A. CRAVATH and ISAAC M. CRAVATH, Bloomington, Ill.—*Snow Plow.*—October 26, 1869; antedated October 16, 1869.

Claim.—1. The construction and arrangement of mold-boards, with hinged joints near the point, and with rack and pinion for operating the same, in the manner and for the purpose herein described.

2. The construction and arrangement of plows with horizontal arms H and I, upright shaft E, journal-boxes *a a*, worm-pin G, and horizontal screw F, for operating the same, in the manner and for the purpose herein described.

96,206.—SAMUEL DANKS, Cincinnati, Ohio.—*Rotary Puddling-Furnace.*—October 26, 1869.

Claim.—1. The annular water, steam, or air collar G, constructed substantially as herein shown and described, for the purpose of preserving a low temperature of one or each of the ends of the rotary refining-chamber of puddling-furnaces, with which the collar is in contact.

2. The water, steam, or air pipe J, located in the arch of the passage from the grate *a* to the refining-chamber A, substantially as and for the purpose set forth.

3. The water, steam, or air casing I, constructed substantially in the manner and for the purpose herein shown and described.

4. The annular water, steam, or air pipe *l*, located in the edge of the shiftable piece K, which is in immediate contact with the mouth of the refining-chamber when a heat is on, as and for the purpose specified.

5. The water, steam, or air chamber *k*, located upon the outside face of the shiftable piece K, as and for the purpose herein set forth.

6. The annular metallic facings L, secured to the conical ends of the rotary refining-chamber A, substantially in the manner and for the purpose specified.

96,207.—H. M. DARLING, Bridgeport, Conn.—*Lathe-Chuck.*—October 26, 1869.

Claim.—In combination with the radial jaws *a*, their respective screws B, with toothed heads *b*, arranged relatively to the jaw, and the internally-threaded ring C, operating in the teeth of the screw-head so as to move the jaws, substantially in the manner as herein set forth.

96,208.—CHARLES E. DAYTON, Meriden, Conn. —*Velocipede.*—October 26, 1869.

Claim.—The bell crank levers C C, provided with the adjustable foot-rests *e e*, pivoted at their angles to the sides of the reach A, and at their upper ends *a* connected to the crank-axle by the rods *b*, all arranged in such a manner, that both arms, *a d*, of the bell-cranks, swing round the pivot, whereby the foot-rests are adapted to operate with an up and down movement, as herein described, for the purpose specified.

96,209.—JACOB DOURSON, Columbus, Ohio, assignor to himself and F. A. COMSTOCK, same place. —*Extension-Table.*—October 26, 1869.

Claim.—1. The metal roller-slides G, consisting of the castings *a*, and one or more rollers, *c*, when constructed substantially in the manner and for the purpose set forth.

2. The cross-pieces C, having a groove formed in each side, and provided with a roller slide, G, upon opposite sides and end, and upon which the slides D are made to open and close, substantially as set forth and described.

3. The cross-pieces C, slides D, roller-slides G, frames H, and rods K, when all are arranged and combined so as to form an extension-table, substantially as described.

96,210.—MILTON L. DRAKE, Rockford, Ill. — *Shaft and Coupling-Shield.*—October 26, 1869.

Claim.—The box A, shield B, box D, and shield C, with hinge *c* and hook *c'*, when combined and arranged as described, for the purpose set forth.

96,211.—JAMES E. EMERSON, Trenton, N. J.—*Rocking-Chair.*—October 26, 1869.

Claim.—1. The combination of the pivot-pieces or supports C with the steps *e*, for forming a rocking connection between the upper and under portions of the chair, as described and represented.

2. The combination of the pivot-pieces, steps, and spring, with the oscillating seat and stationary under portion, as and for the purpose herein described and represented.

3. In combination with the pivot-pieces and steps, the concentric slot and set-screw, for admitting of the rocking motion of the upper upon the under portion, without allowing them to separate when being lifted or carried, as set forth.

96,212.—LEWIS C. ENGLAND, Philadelphia, Pa. —*Tan-Bark Leach.*—October 26, 1869.

Claim.—1. The lower perforated tubes T, T^1, &c., and upper perforated tubes C and C', arranged and operating as herein specified.

2. The arrangement of the outside tube B, upright or side tubes S, S¹, &c., connecting-pipes D, and plugs P and P¹, as and for the purpose specified.

3. The arrangement of the steam pipe E, placed in the bottom of the vats, and on top of the perforated tubes T, T¹, &c., as and for the purpose specified.

96,213.—William R. English and Jason McClure, English Centre, Pa.—*Wagon-Seat.*—October 26, 1869.

Claim.—The combination, with the grooved bottom of the seat B, of the upper and lower wood-springs A C, wedges D D, metal cross-pieces E E, and bolts *a a*, all constructed, arranged, and operating substantially as set forth.

96,214.—Samuel Epley, McGrawsville, Ind.—*Tuyere.*—October 26, 1869.

Claim.—1. The construction of the air-passage D D′ having the tubes d^2 and d^3, and annular passage d^4, substantially as and for the purpose set forth.

2. The arrangement of the flanged ring C, and annular air passage d^4, with reference to the cylinder B, substantially as shown and described.

96,215.—James M. Ferguson, Summit, Miss.—*Medical Compound for the Cure of Fever and Ague.*—October 26, 1869.

Claim.—The several ingredients forming the compound for the cure of ague and chills and fevers, as herein specified.

96,216.—E. R. Ferry, New Haven, Conn., assignor to himself and P. Ferry, same place.—*Spring Perch for Carriages.*—October 26, 1869.

Claim.—In combination with the side-springs E E of a carriage, the two arms F F of the perch, extending from the axle to the socket H, the extension G passing through the socket H, and provided with a spring, to operate upon the said extension, as described.

96,217.—Kasson Frazer, Syracuse, N. Y.—*Mode of Plating, Coating, and Ornamenting Articles of Iron and Steel.*—October 26, 1869.

Claim.—1. The herein-described method of plating and coating articles made as herein described, the said process consisting in first coating or varnishing, then removing the coating or varnish from the parts to be plated, and afterward plating the same, substantially as described.

2. The new article of manufacture made by the process herein described.

96,218.—P. L. Gibbs, Dunleith, Ill.—*Lock-Nut.*—October 26, 1869.

Claim.—The nuts D, having a rebate around their inner face, in combination with the washer E, having an angular opening to fit said rebate for operation in connection with the grooved plates B B′, as shown and described.

96,219.—Samuel Gibson, Safe Harbor, Pa.—*Scrubbing Brush.*—October 26, 1869.

Claim.—The combination of the brush A, L-shaped bar B, socket D, and one or more rubber strips C, connected to the brush-body by the screws *a*, all constructed and arranged as shown and described.

96,220.—Nathan Goddard, Boston, Mass., assignor to himself and D. B Saunders, same place.—*Machine for Splitting Whalebone.*—October 26, 1869.

Claim.—1. The rectangular clamp B, provided with the screws *a a* and *b b*, in combination with the knives *k k* and rollers *d d*, all the parts constructed substantially as described and for the purpose specified.

2. In combination with the above, the presser-roller *l*, constructed and operated as shown and described.

96,221.—E. A. Goodes, Philadelphia, Pa., assignor to Francis M. Wood, Henry F. Hays, Samuel Allen, Joseph S. Brown, Theodore E. Weidersheim, and Thomas S. Keyser, same place.—*Treadle-Motion.*—October 26, 1869.

Claim.—The combination of the pendulum A, disk B, or its equivalent, pivot-bolt C, treadle C, connecting-rod F, and a holding-device, E, substantially as specified.

96,222.—Solomon H. Greenbaum, New York, N. Y.—*Hat-Tip.*—October 26, 1869.

Claim.—1. A hat, or other article of head-dress, in the interior of which is formed or arranged a closet or box, closed by a door, substantially as and for the purposes herein shown and described.

2. A hat tip, furnished with a closet or box, closed by a door, substantially as herein shown and described.

96,223.—John Grimm, Saint Louis, Mo.—*Air-Blast Engine.*—October 26, 1869.

Claim.—The apparatus for forcing air and heating the same, composed of the cylinders B, operated by a beam, E, and connecting with the diaphragms H, pipes I, the heater K, and blast-tube L, when arranged substantially as and for the purposes set forth.

96,224.—J. P. Grosvenor, Lowell, Mass.—*Method of Adjusting Circular Saws.*—October 26, 1869.

Claim.—The described construction and combination of the swinging plate E, capable of being fixed by means of the slot *e′ e′* and pin *n*, the plate D, having the projection D′, as described and shown, the mandrel M, the saw S, and the frames C D, all constructed and operating together in the manner and for the purpose herein set forth.

96,225.—John A. Hafner, Commerce, Mo.—*Horse-Power Connection.*—October 26, 1869.

Claim.—1. The casing A, constructed as described, with a dome-shaped projection, B, in the center, substantially as and for the purposes herein set forth.

2. The clutch C, constructed as described, so as to fit over and turn freely on the dome B, substantially as and for the purposes herein set forth.

3. The cover G, having a recess, *f*, and stops *g g*, in combination with the lug or stop *h*, on the clutch C, substantially as and for the purposes herein set forth.

4. The combination of the casing A, dome B, clutch C, spring F, and cover G, all constructed as described, and operating substantially in the manner and for the purposes herein set forth.

96,226.—Peter L. Hains, Freeburgh, Pa.—*Extension-Scaffold.*—October 26, 1869.

Claim.—The upright shafts *b*, extension *j*, pulleys *i*, *h*, *g*, and *f*, ropes *m* and *n*, and platform *d*, all constructed, arranged, and operating substantially as herein described, and for the purpose set forth.

96,227.—John Hale, Scranton, Pa.—*Drilling-Machine.*—October 26, 1869.

Claim.—The arrangement of the frame A, the drill-spindle B, extension-bar C, set-screw D, casing E, plunger *b*, spiral spring *c*, and face-plate *d*, all substantially as shown and described.

96,228.—Albert Hallowell and Abel T. Atherton, Lowell, Mass.—*Gas Flat-Iron.*—October 26, 1869.

Claim.—The combination, with a hollow flat-iron, as described, of a series of gas-burners, constructed, arranged, and applied, substantially in the manner and for the purpose specified.

96,229.—Cornelius A. Haring, Peoria, Ill.—*Bag-Fastener.*—October 26, 1869.

Claim.—An improvement in bag-ties, consisting of the segments A B, when provided on their concave surfaces with spurs *c*, and united together by link *d*, said parts being constructed and arranged together, as and for the purposes herein shown and set forth.

96,230.—A. V. Hartwell, Chicago, Ill.—*Lock for Car-Door.*—October 6, 1869.

Claim.—1. The bolt F, inserted through a hole in the wall, and secured therein by a spring-latch on the inside, said bolt bearing against, or being located in rear of the sliding door of a car, substantially as described.

2. In combination with said bolt, the pivoted latch B, with its incline *n*. the sliding bar C, with its guard *a*, and the tumblers D, all constructed and arranged within a case, A, substantially as described.

96,231.—GEORGE W. HATFIELD, Dayton, Ohio. —*Manufacture of Putty.*—October 26, 1869.

Claim.—As an article of manufacture, putty compounded from the ingredients named, and as set forth.

96,232.—VIRGIL HAYES, Tekonsha, and LEWIS CUATT, Eckford, Mich.—*Pruning-Shears.*—October 26, 1869.

Claim.—The pruning-shears, herein described, consisting of the hook B, pivoted blade C, link E, lever D, rod F, curved hand-lever L, pole A, and bent handle H, with guard G, all constructed, arranged, and operating substantially as set forth.

96,233.—JOHN A. HEMBERGER, Reading, Ohio. —*Gutter for Door-Sill.*—October 26, 1869.

Claim.—1. The provision of the gutter C and flap or deflector E to a door-sill, substantially as set forth.

2. The arrangement of the door-sill gutter C, hinged flap or deflector E, lever F, and bolt or other projection G, substantially as set forth.

3. In the described combination with the elements C, E, and F, the bolt G and slot H, or their equivalents, for the objects designated.

96,234.—JAMES HIGGINS and JOHN W. HIGGINS, Orth, Ind.—*Plow Clod-Fender.*—October 26, 1869.

Claim.—The clod-fender herein described, having wooden beam and bent plate, as specified, together with the bent teeth *v*, chain D, and adjustable bar E, constructed and arranged as set forth.

96,235.—GEORGE M. HOFFMAN and PETER HERMAS, Jr., Rahway, N. J.— *Wind and Tide Alarm.*—October 26, 1869.

Claim.—The combination, with the alarm A, of the locking and tripping lever *b*, arranged for operation, as described, in connection with the connecting-cord *f* and the sinker H, whereby the said alarm is released by the drifting or change of position of the boat, substantially as set forth.

96,236.—THOMAS HUNT, New York, N. Y.—*Traveling-Trunk.*—October 26, 1869.

Claim.—Hanging the lower portion of the section *e* to the front of the trunk at *f*, and applying the lock or hasp at the upper portion, so as to be covered by the lid *w*, when the trunk is closed, substantially as set forth, and, in combination therewith, the drawer *l* and sliding cover *i*, arranged in the manner and for the purposes specified.

96,237.—JOHN JOHNSON, Brooklyn, E. D., N. Y. —*Rubber Compound for Packing.*—October 26, 1869.

Claim.—A compound composed of the ingredients and made in substantially the manner herein specified.

96,238.—ABRAHAM JONES, Clinton, Ill.—*Hand-Loom.*—October 26, 1869.

Claim.—1. The lever B, connecting-bar C, arm D, main shaft E, and fly-wheels K K, all constructed as described, and arranged to operate the lay, substantially in the manner herein set forth.

2. The main shaft E and pulley F, connected by a cross-belt to the ratchet-pulley G on the treadle-shaft I, constructed and arranged as shown, to operate the treadle-shaft.

96,239.—VINCENT E. KEEGAN, Boston Highlands, Mass.—*Process of Reducing Wood and Woody Fibers for Paper-Pulp.*—October 26, 1869; antedated October 20, 1869.

Claim.—The process for reducing wood and woody fibers, for the manufacture of paper-pulp, with alkalies, in the manner of the process as described, or its substantial equivalent.

96,240.—JACOB J. KISER, Middletown, Ind.— *Railway-Car Brake.*—October 26, 1869.

Claim.—1. The combination of a hand-lever, L, with a foot-lever, P, when arranged to operate simultaneously, to rotate the shaft J, substantially as before described.

2. A hand-lever, L, arranged to move in the arc of a circle, and a foot-lever, P, arranged to move vertically, when the latter is connected, by the intermediate lever N, with the double-cranked rock shaft J, substantially as before described.

3. The foot-lever P, when arranged to operate the hand lever L, so as to bring the latter toward the lever P, and within the grasp of the attendant, in braking the cars, substantially as before described.

4. The combination and arrangement of the double-crank rock-shaft J, with the single toggle-joint *g*, when the latter is located between the central timber E of the truck and the body of the car, and connected to the braking-bars by the double-cranked studs *b*, substantially as before described.

5. The combination of the double-cranked rock-shaft J, the single toggle-joint *g*, with its connecting-rod *f*, and the hand and foot levers L P, constructed, arranged, and operating substantially as before described.

6. The arrangement of the hand-lever L, in connection with the double cranked rock-shaft J, in such manner, that when the brake is released, the weight of the hand-lever L, and its inclined position, will not only keep the brakes from the wheels, but the foot-lever P elevated, ready for action, substantially as before described.

96,241.—WILLIAM KOEHLER, Norwalk, Conn., assignor to JOHN M. PENDLETON.—*Method of Recovering Grease from Waste Soap-Liquor.*—October 26, 1869.

Claim.—1. The use of a solution of alkali and salt as an agent in assisting to recover grease from waste soap-liquors.

2. The pressing of the jelly-like mass, which is obtained from soap-liquors, while immersed in boiling water, substantially in the manner and for the purpose specified.

96,242.—CHARLES LAUTH, Paris, France.—*Coloring Material for Dyeing and Printing.*—October 26, 1869.

Claim.—The process herein described for dyeing animal and vegetable fibers or fabrics, aniline black.

96,243.—C. EDWARDS LESTER, New York, N. Y.—*Fuel for Metallurgic Purposes.*—October 26, 1869.

Claim.—1. Desulphurizing and dephosphorizing coal or its refuse, when placed in union with any other substance or substances, for the purpose described.

2. The production of a solid hydrocarbon, substantially as herein set forth, that is to say, by the union of hydrogenous and carbonaceous substances, when said substances are treated chemically and mechanically, substantially in the manner and for the purposes described.

96,244.—JOHN S. LEWIS, Elkader, Iowa.—*Harrow.*—October 26, 1869.

Claim.—1. The colter H, arranged and employed substantially as set forth.

2. In combination with the colter H, the handle I, as and for the purpose described.

3. The combination, in a harrow, of a frame, A B B D E F G, teeth C, colter H, handle I, and clevis K, constructed and arranged as herein represented and described, for the purposes set forth.

96,245.—WILLIAM R. LOUNT, Austin, Texas.— *Compound for Treating the Human Hair.*—October 26, 1869.

Claim.—The compound, substantially as herein described, prepared by combining the oil of the wild cucumber, (or *Acuminata*,) with either or all of the other materials herein named, or their equivalent.

96,246.—EGBERT MACY, Brooklyn, N. Y.—*Safe.* —October 26, 1869.

Claim.—1. A safe, having its depositing-chamber constructed within or incased by a combination-lock, substantially as specified.

2. The chamber A and the lid B, provided with notched locking-bars C, in combination with lock-

ing-rings, arranged around the exterior of the safe, substantially as set forth.

96,247.—S. T. McDougall, Brooklyn, N. Y.—*Washing Machine.*—October 26, 1869.

Claim.—The combination and arrangement of the connecting-rod F, levers G and K, pounders H, and pushers J, with the shaft W and box A, when constructed as and for the purpose set forth.

96,248.—William Mills, New York, N. Y., assignor to himself, G. A. Lilliendahl, and J. J. Detwiller, same place.—*Explosive Compound.*—October 26, 1869.

Claim.—1. In the formation of an explosive compound, the combination of carbolic acid, nitric acid, potassa, and aloes, substantially as and for the purposes described.

2. The use of carbolic acid in an explosive compound, substantially as described.

3. The use of aloes in an explosive compound, substantially as described.

96,249.—Robert B. Mitchell, Chicago, Ill.—*Kerosene-Stove.*—October 26, 1869.

Claim.—1. The combination of the chimneys J and plates D and K, when constructed and arranged in a kerosene-stove, substantially as and for the purposes specified and shown.

2. The projections or ribs O, on the upper surface of the plate K, in combination with the chimneys J, in a kerosene-stove, when constructed and arranged substantially as and for the purposes described.

3. The ring S, in combination with the rim or ring P, when constructed and operating substantially as and for the purposes set forth.

4. The combination of the plate D, flange E, and perforated plate or diaphragm F, when constructed and arranged substantially as and for the purposes specified and shown.

96,250.—F. B. Morse, Plantsville, Conn.—*Die for Forming Thill-Irons.*—October 26, 1869.

Claim.—The dies, constructed as herein described, for forging thill-irons.

96,251.—F. B. Morse, Plantsville, Conn.—*Series of Dies for Forming King-Bolts.*—October 26, 1869.

Claim.—The series of dies C D, E F, and G I, constructed as described, to form king-bolts for carriages.

96,252.—F. B. Morse, Plantsville, Conn., assignor to himself and H. D. Smith and Company, same place.—*Carriage-Clip.*—October 26, 1869.

Claim.—Carriage-clips, as an article of manufacture, constructed and formed substantially as herein described.

96,253.—F. B. Morse, Plantsville, Conn., assignor to himself and H. D. Smith and Company, same place.—*Slat-Iron for Carriages.*—October 26, 1869.

Claim.—The herein-described slat-iron, consisting of the base E, with its arms A′, B′, &c., corresponding to and combined with the irons A B, &c., when the said irons and arms are constructed and jointed together, substantially in the manner herein set forth.

96,254.—F. B. Morse, Plantsville, Conn., assignor to himself and H. D. Smith and Company, same place.—*Top-Prop for Carriages.*—October 26, 1869.

Claim.—1. The combination of the threaded stud C, with the sleeve F, on which said sleeve a bearing is formed for the joint G, and its outer end fitted to receive the nut H, substantially as set forth.

2. In combination with the subject-matter of the first clause of claims, the bolt I, constructed and applied substantially as set forth.

96,255.—F. B. Morse, Plantsville, Conn., assignor to himself and H. D. Smith and Company, same place.—*Bolt for Whiffletrees.*—October 26, 1869.

Claim.—As an improved article of manufacture, the herein described whiffletree-bolt, the head B having fins *a* formed at the end, upon the under side of the head, substantially as and for the purpose set forth.

96,256.—F. B. Morse, Plantsville, Conn., assignor to himself and H. D. Smith and Company, same place.—*Carriage-Shackle.*—October 26, 1869.

Claim.—1. A carriage-clip, having the bar D forged thereon, in one and the same piece, for the purpose of coupling the shackle thereto.

2. In combination with the bar D, the grooved cylinder E, coupling L, and bolt-key F G, constructed so as to operate in the manner described.

96,257.—Charles Müller, Albany, N. Y.—*Cigar-Machine.*—October 26, 1869.

Claim.—The combination of the fixed grooves *a*, knife-slats N, and open or reticulated slats O, with revolving cylinder M and hopper H, substantially as and for the purpose hereinbefore set forth.

96,258.—Georg Müller, New York, N. Y., assignor to himself and Francis Burnet, same place.—*Carpenters' Plane.*—October 26, 1869.

Claim.—The arrangement of the stationary box H, pivoted to the plane-stock, and fitting closely the throat thereof laterally, in combination with the cap-iron D, which is moved and adjusted beneath the said box, substantially as and for the purpose herein specified.

96,259.—John G. Murdock, Cincinnati, Ohio.—*Lavatory-Attachment for Railroad-Cars.*—October 26, 1869.

Claim.—1. The described lavatory-attachment for railway-cars, consisting of a waste-way basin H I J, a tank, B, and a pump, N, constructed and arranged substantially as shown and set forth.

2. The pipe M, adapted to form the overflow of the tank, and the waste-way of the basin, as set forth.

96,260.—Hiram B. Musgrave, Cincinnati, Ohio.—*Gas-Heater.*—October 26, 1869.

Claim.—The provision, in a gas-heating stove, of one or more heating-tubes E F F′, provided with a longitudinal partition or partitions, as and for the purpose set forth.

96,261.—Thomas Nelson, Philadelphia, Pa.—*Tool for Cutting Tubes.*—October 26, 1869.

Claim.—Constructing a pipe-cutting machine of the several pieces A B B′, the screw C, knife D, and jaw-facings E E′, in the manner set forth.

96,262.—Alfred Colerick Pilliner and James Charles Hill, Oakfield Works, near Newport, England.—*Steam-Enginery for Motive-Power.*—October 26, 1869; patented in England, January 28, 1868.

Claim.—1. The combination of the casing with the double-headed rocking partition, constructed with fixed heads, the whole constructed to operate substantially as before set forth.

2. The combination of the casing, the double-headed rocking partition, the crank-pin, the crank-arm, and the crank-axis, passing through the front of the casing, the whole constructed to operate substantially as before set forth.

3. The combination of the casing, the double-headed rocking partition, the filter-plate, and the dash-plate, the whole constructed to operate substantially as before set forth.

96,263.—J. C. Pinner, Newbern, Tenn.—*Screw-Driver.*—October 26, 1869.

Claim.—The instrument above described, consisting of the handle A, ferrule A′, having rib *a*; block D, having notch *d*; stem B, having gains *b b*; blade C, having shoulders *c c*; spring-jaws E E, shaped as described, and having grooves *v v*, and sliding clasp or strap S, all constructed substantially in the manner and for the purposes herein set forth.

96,264.—D. J Powers and Henry B. Stevens, Madison, Wis., assignor to D. J. Powers, assignor to Buffalo Agricultural-Machine Works.—*Sugar and Sorghum Mill.*—October 26, 1869.

Claim.—1. The combination and arrangement of the driving-shaft B and the pinions F and H thereon, with the lower rollers D E, and their respective pinions G and I, so that the shaft extends underneath,

the length of the rollers, and its pinions P and H gear respectively into the pinions G and I, at opposite ends of the rollers, thereby to enable the rollers to be located close together, for the purpose herein specified.

2. In combination with the above, the arrangement of the bagasse-carrier, so that its belt is driven by the pinion G, or the rear lower roller G, by means of two pinions *n* and *o*, around the shaft of which latter the carrier turns for adjustment, thereby bringing the belt in close proximity and proper relation to the said roller, as herein set forth.

3. The sliding shoe P, of the carrier, arranged and operating substantially as and for the purpose herein specified.

96,265.—SILAS G. RANDALL, Providence, R. I.—*Pneumatic Diaphragm Water-Elevator.*—October 26, 1869.

Claim.—In a compartment-pump, in which the matter to be forced or elevated is separated from the operative mechanism, the combination of the pipes *b* and *c*, and the alternating valve *l*, connected to and operated by the reciprocating compartment, substantially as shown and described.

96,266.—R. M. REEBY, Worcester, Mass.—*Lounge and Sofa-Bed.*—October, 26, 1869.

Claim.—1. The combination of the folding parts C B D with the frame A, under the arrangement substantially as described, so that when the said parts are folded up, the latter two will be received within the frame, and the former will rest on top of the frame, and form the sofa-seat, as set forth.

2. A lounge or sofa-bed, the parts of which are constructed and combined together substantially as shown and described.

96,267.—PATRICK REILLY, Reading, Pa., assignor to SEYFERT, MCMANUS AND COMPANY, same place.—*Furnace for Heating Tubes.*—October 26, 1869.

Claim.—The arrangement, substantially as described, of the furnace A, fire-places D D, and outlet-flue *a* to the chimney.

96,268.—WILLIAM S. REYBURN and F. J. MARTIN, Philadelphia, Pa.—*Lightning-Rod.*—October 26, 1869.

Claim.—As an article of manufacture, a section of lightning-rod, composed of a sheet-zinc center, bent upon itself in webs, and a copper covering, similarly formed, substantially in the manner and for the purpose described.

96,269.—LAWRENCE ROY, Plattsburgh, Mo., assignor to himself and CHARLES J. NESBITT, same place.—*Medicine for Cancer.*—October 26, 1869.

Claim.—1. The combination of a caustic-potash plaster, a spikenard-poultice, and a powder formed of salt, saltpeter, alum, and copperas, each of said three instrumentalities being prepared and applied at the times and in the manner hereinbefore specified, for the treatment of cancer.

2. A compound formed of lead and sulphur, in the respective proportions of two to one, and made to combine in the manner set forth, for the purpose of drawing cancers to a head, in the manner described.

3. A compound formed of burnt common salt, alum, saltpeter, and copperas, in the respective proportions of 3, 1, 1, 1, all mixed and prepared in the form of a powder, as specified, for the purpose of loosening the cancer in its socket.

96,270.—DANIEL W. SAWYER, Booth Bay, Me.—*Lace-Leader for Sails.*—October 26, 1869.

Claim.—A lace-leader, consisting of a perforated portion, B, and right-angular stay-portions C C, substantially as described.

96,271.—SILAS C. SCHOFIELD, Chicago, Ill.—*Combined Cultivator and Seeder.*—October 26, 1869; antedated October 16, 1869.

Claim.—1. The combination of the main beams F and angle-beams H, when constructed and operated substantially as and for the purposes specified.

2. The elbow-plates I, when constructed substantially as described, and used for the purpose of adjusting the angle of the beams B and H, substantially as specified.

3. The swivel-plate J, when constructed and operating substantially as and for the purposes described.

4. The metallic stall P, when constructed and operating substantially as and for the purposes specified.

5. The combination of the treadle T, chain R, and metallic stall P, when arranged and operating substantially as set forth.

96,272.—SILAS C. SCHOFIELD and A. JUDSON WISE, Chicago, assignors to SILAS C. SCHOFIELD and WILLIAM D. ANDREWS, Rockford, Ill.—*Horse-Rake.*—October 26, 1869.

Claim.—1. The transverse slots or notches in the axle B, and cap C, in combination with the coil of the rake-tooth, for the purposes of securing the rake-teeth, substantially as and for the purposes specified.

2. The combination of the plates F, provided with the notches H, the crank-axle I, and bolt J, when constructed and arranged substantially as and for the purposes specified.

96,273.—ALFRED L. SEABURY and DAVIDSON MORRIS, Norfolk, Va.—*Blind-Hinge.*—October 26, 1869.

Claim.—Connecting the upper and lower hinges of shutters, when the hinges are used for holding the shutters in any desired position, by means of a rod, or its equivalent, substantially as shown and described.

96,274.—CONRAD SEIMEL, Brooklyn, N. Y., assignor to CHARLES PRATT, New York City.—*Oil-Can Stopper.*—October 26, 1869.

Claim.—1. A stopper for oil-cans, or other receptacles for liquids, provided with an opening or spout for outflow of the liquid, in combination with a vent-opening or tube, substantially as shown and described.

2. The combination of the body of the stopper with the vent and outflow-tubes, and the disks for holding the body and tubes together, substantially as shown and set forth.

96,275.—LOUISE F. SHAW, New York, N. Y.—*Imitation Hair for Ladies' Head-Dress.*—October 26, 1869.

Claim.—The head-dress, prepared from twisted glazed thread, treated with glycerine, substantially as described.

96,276.—E. R. SHEPARD, Scranton, Pa.—*Compound Rail.*—October 26, 1869; antedated October 16, 1869.

Claim.—1. A compound rail, consisting of a lower permanent portion, B, and an upper detachable and reversible portion, A, adjusted to an inclined position on the base, substantially as and for the purpose described.

2. A compound rail, consisting of two portions, A and B, the latter having a base, a flange, and a recess, *e*, rounded to the arc of a circle, and the former being reversible, and having a head, *a*, and a flange, *b*, the lower edge of which is rounded to fit the recess *e*, substantially as and for the purpose described.

96,277.—ISAAC SILVERNAIL, Byron, Mich.—*Burglar-Alarm.*—October 26, 1869.

Claim.—1. The wire H, constructed or bent as described, so as to form the coil spring *f* and hammer *g*, substantially as and for the purposes herein set forth.

2. The arrangement of the wheel E, provided with pins *i i*, wheel or pulley D, cords *b e*, spring F, and pulley C, all substantially as and for the purposes herein set forth.

3. The combination of the gate or door A, hinge B, pulleys C D, wheel E, with pins *i i*, cords *b e*, spring F, bell G, and wire H, all constructed as described, and for the purposes set forth.

96,278.—FREDERICK H. SMITH, Baltimore, Md., assignor to SMITH, LATROBE AND COMPANY, same place.—*Bridge.*—October 26, 1869.

Claim.—1. The combination, in a beam-truss, of

the strut or post with the adjusting-devices herein described, or their mechanical equivalent, applied directly to the foot or base of said post, for the purpose of contracting or elongating its working-length, substantially as set forth.

2. The arrangement of the chord-bars, provided at their upper edge or edges with flanges or stiffening-irons, for the purpose specified, and jointed to the pins upon which their ends are supported, substantially as shown and set forth.

3. The attachment of the lateral-bracing systems to the joint-pins, by means of the bolt, which at once combines the pin, strut, loops, and adjustable ties into a hinged joint in the lateral plane of the truss, substantially as shown and specified.

4. The combination, with the feet of the struts or posts, of the adjusting-loops and joint-pins, with which the lateral-bracing system is connected, substantially as herein shown and set forth.

96,279.—J. A. SMITH, Lacon, Ill.—*Cultivator.*—October 26, 1869.

Claim.—1. The frames D D, when provided with plates *g g*, and adjusting-holes at top and bottom, substantially as and for the purpose described.

2. The combination of the beams B B with the vertical cylindrical bars *h h*, when said bars are provided with the plates G and F, the plates being pivoted together substantially as and for the purpose specified.

3. The double-tree H, provided with pendants *m m*, in combination with rods I I, or their equivalent, the said rods being connected with a pulley, *t*, on double-tree H, in the manner and for the purpose set forth.

96,280.—JAMES L. SMITH, Passaic, N. J.—*Apparatus for Elevating and Distributing Water in Buildings.*—October 26, 1869.

Claim.—The within-described apparatus, composed of the cylinder or case B, with suitable valves, piston C, adjustable load D, and elevating means, all arranged relatively to each other, and to the tank A and delivery-system J, with means, substantially as shown, for restraining or allowing the delivery at will, as and for the purposes herein set forth.

96,281.—MICHAEL M. SMITH, Saint Louis, Mo.—*Self-Feeding Boiling and Evaporating Apparatus.*—October 26, 1869.

Claim.—1. The heater-pipe B′, combined with the feed-pipe C, and its stop-cock or valve *c*, operating substantially as set forth.

2. The boiler A, pipe B, heater-pipe B′, feed-pipe C, when operating substantially as and for the purpose set forth.

96,282.—ANSON P. STEPHENS, Brooklyn, N. Y., assignor to himself, MELVIN STEPHENS, and NATHAN STEPHENS, same place.—*Base for Bench-Vises.*—October 26, 1869.

Claim.—The base *a*, with a conical edge, in combination with the turn-table *c*, that is attached to the vise, and provided with a circular flange, having an inclined inner surface, to be clamped to the base *a*, and the screw *f*, substantially as and for the purposes set forth.

96,283.—HENRY B. STEVENS, Buffalo, N. Y., and D. J. POWERS, Madison, Wis., assignors to GEORGE L. SQUIER, Buffalo, N. Y.—*Cane-Mill.*—October 26, 1869.

Claim.—The turn-plate P, constructed substantially as described, and arranged with its semi-circular groove, and rod *p*, fitting therein, and the adjusting-screw *s*, in combination with the minor rollers of the vertical cane-mill, substantially as and for the purpose herein specified.

96,284.—EDWARD SULLIVAN, Pittsburgh, Pa.—*Steam-Engine-Piston Packing.*—October 26, 1869.

Claim.—Providing the packing-ring A with the laps C and B, said ring and laps being constructed and arranged substantially as herein described.

96,285.—GEORGE TANGYE, Birmingham, England.—*Copying-Press.*—October 26, 1869.

Claim.—The combination of the hollow uprights *c c* and rods *e e*, for carrying the lower and upper platens or surfaces, respectively, of the press, the said uprights and rods being so jointed to the base-plate of the press, that on turning them on their joints, the said platens are made to approach to or recede from one another, substantially in the manner and for the purpose shown and described.

96,286.—J. C. THOMPSON, Charlestown, assignor to himself and JOHN H. ROGERS, Boston, Mass.—*Hose and Pipe Coupling.*—October 26, 1869.

Claim.—The combination of the hose *a* with the coupling-neck *c*, by means of the ring *b*, applied and operating substantially as described.

96,287.—R. M. THOMPSON, Coshocton, Ohio.—*Wrench.*—October 26, 1869.

Claim.—The improved wrench herein described, consisting of the standard B, with jaw A, corrugated face C, and slots J and K, movable jaw D, with corrugated face E, neck L, and head F, and the retaining-wedge G, with headed malleable arms I I and thumb-piece H, the several parts being constructed and combined substantially as and for the purpose specified.

96,288.—GEORGE T. THORP, Philadelphia, Pa.—*Fish-Bait.*—October 26, 1869.

Claim.—The fish-bait made of one or more of the within-mentioned ingredients, and used substantially in the manner herein described.

96,289.—J. S. VAN BUREN, Green Island, N. Y.—*Summer-Furnace.*—October 26, 1869.

Claim.—The summer-furnace herein described, having diving-flue Y, dumping-plate H, and cap G, constructed and arranged to operate in connection with an ordinary cooking-stove, or independently, substantially as specified.

96,290.—ELISHA WALKER and JOSIAH J. PLATT, La Porte, Ind.—*Cultivator.*—October 26, 1869.

Claim.—The double-tree A, provided with the stirrup-shaped iron frames E E, with the pivoted regulating-bars F F and the chains K K, when combined and operating upon a cultivator, substantially as described and shown.

96,291.—WILLIAM M. WALTON, Newark, N. J., assignor to himself and JOSEPH J. WALTON, same place.—*Sash-Holder.*—October 26, 1869.

Claim.—The hinged pressure-pad *b*, united to the plate *a* by hooks, as shown, in combination with the cam *c*, acting directly against the back of the pad *b*, as specified.

96,292.—EDWARD L. WILSON, Philadelphia, Pa.—*Photographers' Rest.*—October 26, 1869.

Claim.—1. The base A of a photographers' rest, when recessed on its under side for the reception of a movable plate, C, for the purpose specified.

2. The plate C, with its wheels *f*, contained within the recess of the base A, and so connected to the frame of the apparatus, and operated by a rod, H, and lever I, or their equivalents, that it may be sufficiently depressed to raise the said base, all substantially as and for the purpose herein described.

3. The combination of the bolt *p* with the clamps M and M′, when the latter are adapted for attachment to the rods of a photographers' rest, substantially as and for the purpose set forth.

96,293.—LEWIS C. WITT and W. F. JONES, Boston, Ind.—*Fender for Corn-Plows.*—October 26, 1869.

Claim.—1. A fender, constructed in the manner described, in combination with the two slotted bars B and C, the vertical rod I, and chain W, the whole being arranged and operated substantially as herein set forth.

2. In combination with the fender, as described, the lever K, ratchet-bar M, and spring N, the whole being constructed and operated substantially as set forth.

96,294.—JAMES R. WOODWORTH, Nunda, N. Y.—*Pruning-Implement.*—October 26, 1869.

Claim.—1. The slotted bed-piece P, in the handle *k*, in combination with the lever J and rod *g*, by means of which the shears are operated, substantially in the manner described.

2. The pruning-shears, composed of bed-piece *r*, slotted arm *c*, and knife *b*, when operated by means of a lever J, and rod, *g*, fastened to said lever, and secured thereto by a screw, working in the slotted arm-handle, substantially in the manner and for the purpose described.

96,295.—J. C. YOUNG, Toledo, Ohio.—*Sash-Holder.*—October 26, 1869.

Claim.—The adjustable pinion and axle, with the tooth-bar and spring, when the latter is arranged to act upon the pinion, so as to lock the sash, in the manner substantially as described.

96,296.—THOMAS N. YOUNG, Richmond, Ind.—*Straw-Cutter.*—October 26, 1869.

Claim.—1. The sliding head-block F and inclined groove I, constructed as described, and used in combination with the knife G and swinging arm P, in the manner and for the purposes specified.

2. The pivoted bar D, pawls *n n*, adjusting-hook L, and head-block F, when constructed and operated in combination, substantially as described.

3. The combination of the feed-rollers with the springs *a*, the guide-board K, and compressing-board Y, when constructed and arranged to operate as described.

96,297.—HUMPHREY CALDER and GEORGE BURGESS, Richmond, Va.—*Shoemakers' Last-Holder.*—October 26, 1869.

Claim.—1. A last-attaching stem, G, having, in addition to the movement permitted by an intermediate ball-and-socket adjusting-joint, *e' e'' g*, a rotary movement on a horizontal axis, *e*, to enable the holder to be adjusted, so as to be worked at either in a sitting or standing posture, substantially as herein described.

2. The combination, with the ball-and-socket adjusting-joint *e' e'' g*, of the joint *b' e*, adapted to permit independent horizontal adjustment, as described.

3. The combination, with the ball-and-socket adjusting-joint *e' e'' g*, of the joint *b e*, adapted to permit separate horizontal adjustment, as described.

96,298.—ALBERT F. ALLEN, Providence, R. I.—*Shot-Pouch.*—November 2, 1869.

Claim.—The combination of a gate with a many-chambered shot-pouch and charger, whereby the mouths of all but one of the chambers are closed, either of which may be opened at will by means of the movable neck or charger and spring-catch, substantially as specified.

96,299.—BRUNO BEUCHEL, Kalamazoo, Mich., assignor to himself and W. RODIGER, same place.—*Hoisting-Jack.*—November 2, 1869.

Claim.—The combination of screw G, lifting-bar, Fig. 2, gears J, K, L, M, and latch O, in the manner and for the purpose set forth.

96,300.—WILLIAM B. BILLINGS, Chicago, Ill.—*Mode of Making the Beds of Billiard-Tables.*—November 2, 1869; antedated October 29, 1869.

Claim.—1. The molding of billiard-beds out of artificial slate, stone, concrete, ashlar, or cement of any kind, substantially as described and set forth.

2. The combined use of the said artificial slate, stone, concrete, ashlar, or cement, with wood or metal, substantially as and for the purposes set forth.

3. The metallic or wood border B, attached to a billiard-bed, substantially as described, and for the purposes set forth.

96,301.—HENRY BLAKE, Rindge, and AMOS J. BLAKE, Fitzwilliam, N. H.—*Machine for Shaping Wooden Trays.*—November 2, 1869.

Claim.—1. Hanging the cutters C C, and tracing-wheel E, a sufficient distance below the swinging frame D, to allow a free passage of the carriages R' and R'', while carrying the tray-blocks I I and model F underneath the same, substantially as herein shown and described, and for the purpose set forth.

2. The arrangement of the adjustable table or rest O, in combination with the carriage R', substantially in the manner herein shown and described, and for the purpose set forth.

96,302.—FRANK BLECKA, Elgin, Ill.—*Cheese-Box.*—November 2, 1869; antedated October 22, 1869.

Claim.—The application of the wooden plates or slivers to pasteboard hoops, as hereinbefore described, for the purpose set forth.

96,303.—JOHN BOUSFIELD, Cleveland, Ohio.—*Match-Box.*—November 2, 1869.

Claim.—The box or holder described, provided with an adjustable lappel C, and sanded or roughened surface, being a new article of manufacture, substantially as and for the purposes set forth.

96,304.—JOHN FREDERICK BRINJES, Fieldgate street, Whitechapel, England.—*Centrifugal Machine.*—November 2, 1869.

Claim.—1. The general construction and arrangement of what are known as "centrifugal machines," whereby they may be worked without stoppages, and so as to admit of the continuous introduction and discharge of the substances to be operated upon, substantially as hereinbefore described, and illustrated by my drawings.

2. The mode of driving or actuating the wire gauze, or other suitable straining-medium of centrifugal machines, when applied in the form of endless traveling bands, moving either in a horizontal or vertical direction during the revolution of the drum, substantially in the manner and for the purpose hereinbefore described.

3. The application of the wire gauze, or other suitable straining-medium of centrifugal machines, in the form of cylinders, composed of wire gauze, perforated metal, or other equivalent material, such cylinders being caused to rotate on their own axis during the revolution of the drum, substantially in the manner and for the purpose hereinbefore described.

4. The combination, in centrifugal machines, of endless traveling band, of wire gauze or other equivalent material, or of rotary cylinders, composed of the same material, with suitable discharge-openings disposed at intervals round the drum, substantially as and for the purpose hereinbefore described.

5. The application and use of the radial spouts or channels, for directing the substances which are fed into the drum against one end or portion of the endless traveling bands or rotating cylinders of wire gauze, or other suitable straining-medium, substantially as hereinbefore described.

96,305.—IRA S. BROWN and CHARLES N. BROWN, Providence, R. I., assignors to themselves and J. MASON GROSS, same place.—*Saw.*—November 2, 1869.

Claim.—The employment or use, in combination with a saw-plate, A, of one or more teeth, B B', whose planing-edges are furnished with back-irons, *c*, substantially as described, for the purposes specified.

96,306.—HARMON W. CORNELL, Owego, N. Y.—*Corn-Sheller.*—November 2, 1869.

Claim.—1. The combination of cylinder E, corrugated as described, and cylinder D, constructed with grooves and spiral corrugations, as shown, said cylinders being arranged parallel to one another, and running at different velocities, for the purpose specified.

2. The arrangement of wheel A, shafts *n d k*, and fly-wheel C, in combination with the corrugated shelling-cylinders D and E, when constructed and arranged in the manner and for the purpose herein specified.

96,307.—WILLIAM N. CHAMBERLAIN, Van Buren, Mich.—*Pump.*—November 2, 1869.

Claim.—1. The pipe A, with a piece or part A' at its lower end, and holding the valve E on its top, in combination with the cylinder B, and its valve G, substantially as and for the purposes set forth.

2. The combined whole, made by the pipes A A', cylinder B, valves E and G, frame F F', and lifting-rods D D', arranged substantially as set forth.

96,308.—James B. Clark, Plantsville, Conn.—*Bolt-Blank.*—November 2, 1869.

Claim.—A round bolt-blank, consisting of the round ends A and C, and the round taper B, substantially as shown and described, and for the purposes set forth.

96,309.—Lucas C. Clark, Plantsville, Conn.—*Teapot-Handle.*—November 2, 1869.

Claim.—1. A tea or coffee pot handle, constructed with the waves *a*, substantially as described, and for the purpose set forth.

2. The combination and arrangement of the connecting-tubes B B and button *d*, substantially as described, and for the purposes set forth.

96,310.—John Cleary, Brooklyn, N. Y.—*Thread-Holder and Cutter.*—November 2, 1869; antedated October 16, 1869.

Claim.—The thread-holder and cutter, composed of the vertical spool-axles *a a'*, with the horizontal axle fitted thereto, as described, the thread-guide *b* and the fixed and movable cutting-blades C C', arranged for operation substantially as herein set forth.

96,311.—William Cogswell, Ottawa, Ill., assignor to himself and William H. W. Cushman.—*Harvester.*—November 2, 1869.

Claim.—1. In combination with the shaft C and driving-gearing *d d' e*, the box I, eccentric to the said shaft C, and adapted for independent motion or adjustment thereon, substantially as and for the purposes explained.

2. The flange J', formed on the cap J of the bearing of the eccentric-box I, and provided with the holes or sockets *j* j*' j*''*, for the engagement of the catch of the shifting-lever in the three positions of the gearing, substantially as set forth.

3. The flange J', constructed with the separate adjustable sections or slides *j'*, for the reception of the holes or sockets *j*' j*''*, substantially as described, for the purposes set forth.

4. The combination, with the shoe Q, of the upturned front end *q*, having a vertical slot for the reception of the drag-bar, and transverse perforations *q**, for the reception of an adjusting-pin, as set forth.

96,312.—Solomon Darkess, Deerfield, Ind.—*Millstone-Driver.*—November 2, 1869.

Claim.—The millstone-driver E, composed of the parts *e e e'*, pivoted together, and operating with the bail D, in the manner and for the purpose set forth.

96,313.—Edwin Dayton, Meriden, Conn.—*Apparatus for Coating Cement Pipes.*—November 2, 1869.

Claim.—The within-described apparatus for covering or coating the outside of cement water-pipes, by passing them through a funnel-shaped tube, either with or without the internal guides, substantially as herein shown and described.

96,314.—Edward Fales, Lancaster, Mo.—*Stump-Extractor.*—November 2, 1869.

Claim.—1. The arrangement, upon the bed A, having side-beams D D, of the pivoted tail-piece B, stationary shaft E, with cylinder F, and revolving drum G, provided with beveled teeth *a a*, all substantially as shown and described.

2. The sweep H, around the shaft E, and having projections *e e* on its under side, in combination with the pin *b*, slotted lever J, and notched standard K, all substantially as and for the purposes herein set forth.

3. The tackle-pole L, provided with wheels *m m*, and pulley *h*, in combination with the rope or chain *f*, pulley *i*, and drum G all substantially as and for the purposes herein set forth.

96,315.—William H. H. Gloker, Southold, N. Y.—*Apparatus for Extracting Oil from Fish.*—November 2, 1869.

Claim.—1. The combination of the stationary platen K, sliding press-box H, and bed L.

2. The combination of the bed L, press box H, and lugs *b* and *c*.

3. The combination of the revolving frame G, stationary platen K, bed L, and sliding press-box H.

4. The combination of the stationary filling-table F, revolving frame G, sliding press-boxes H, platen K, and elevating-bed L.

5. The combination of the revolving frame G and press-boxes H, the latter being constructed in the form described, so as to utilize the available space of the revolving frame, substantially as hereinbefore set forth.

96,316.—Marcus A. Hardy, Cambridge, Mass.—*Mechanical Movement.*—November 2, 1869.

Claim.—The arrangement of wheels F F', gearing together upon the opposite ends of the rocking-arm E, and each of them alternately meshing with pinion B, substantially as and for the purpose described.

96,317.—John T. Harris, Tyngsborough, Mass.—*Cattle-Food.*—November 2, 1869.

Claim.—A compound for cattle-feed, composed of gluten, obtained as herein set forth, and compounded with the other ingredients described, in the manner specified.

96,318.—William H. Hawley, Utica, N. Y.—*Axle and Shaft.*—November 2, 1869.

Claim.—The combination of four or more, or fewer, iron or steel bearings B B B B, upon all sorts of shafts, and upon all sorts of axles, whether used in machinery, or in carriages or vehicles of any sort whatsoever, with the metal bearings A' A, substantially as and for the purpose hereinbefore set forth.

96,319.—Jacob C. Hazen, West Independence, Ohio.—*Combined Corn-Planter and Cultivator.*—November 2, 1869.

Claim.—The combination of the detachable seed-hopper K, and tube M, the standard B, the shears E G G, and adjustable roller H, the several parts being constructed and arranged as specified.

96,320.—John G. Henderson, Keokuk, Iowa.—*Loom.*—November 2, 1869.

Claim.—1. The pattern-cylinder, placed on the top of the loom-jacks *e e*, rod *b*, pulleys *f g h*, and connecting-cords, and the lever *c*, all combined and arranged as shown, to form the shed.

2. The arrangement, with the jacks and harness-frames, of the looped cord *r u*, to adjust the position of the harness, to form a small or large shed without untying the strings, as described.

96,321.—James Hogben, Cleveland, Ohio.—*Bluing-Compound for the Manufacture of Paper.*—November 2, 1869.

Claim.—The herein-described compound, prepared and used substantially as and for the purpose set forth.

96,322.—David E. Holt, Wilkinson County, Miss.—*Combined Cultivator and Seed-Planter.*—November 2, 1869.

Claim.—1. The curved bars I, in combination with the plows F F', and a frame, consisting of parts A and A', that are connected together by bolts 1 and 2, when all the parts are constructed, arranged, and operate substantially as herein described, for the purpose set forth.

2. The above combination, in combination with a trench-opening plow, H, that is provided with an adjusting-bar, J, and with a hopper, M, that is provided with adjustable supplemental sides N, a cylinder that will plant cotton-seed or corn, and an agitating-cylinder above the same, which are driven by a shaft, O, and suitable gearing connected therewith, and with the wheel E, when all the parts are constructed and arranged with respect to each other, and operate substantially as described, for the purpose set forth.

96,323.—David E. Holt, Wilkinson County, Miss.—*Corn and Cotton-Seed Planter.*—November 2, 1869.

Claim.—1. The supplemental adjustable sides *a b* with the hopper F, when the latter is provided with

stirrer-shaft G and cylinder H, substantially as herein described, for the purpose set forth.

2. The combination of the hopper F, when provided with supplemental adjustable sides *a b*, with the shaft I, and its adjuncts and the gearing connected therewith, when all the parts are arranged and operate substantially as herein described, for the purpose set forth.

96,324.—SAMUEL EVAN JOHNSON, Jr., Brooklyn, N. Y.—*Troche.*—November 2, 1869.

Claim. — The manufacture or preparation of a compound, which I denominate "I. D. Smith & Co. Troche," of the ingredients, in the proportions, and for the purposes set forth.

96,325.—PETER KEFFER, Berks County, Pa., assignor to himself, I. S. HOYER, and SOLOMON A. STOUT, same place.—*Sash-Supporter.*—November 2, 1869.

Claim.—The double bracket B, constructed of a single piece of metal, and provided with slots *b*, spring-slides C C, and rollers D D, in combination with the jambs A A, when arranged to operate in relation to the upper and lower sashes as hereinbefore described.

96,326.—ANTON KIRN, Buffalo, N. Y., assignor to himself and JOHN E. KRASSELT, same place.—*Meat-Cutting Machine.*—November 2, 1869.

Claim.—In a meat-cutting machine, in which the cutting-knives are connected to a horizontal crank-shaft, and operate upon a circular block revolving around a central pivot, the system of levers and rods H I J K, in combination with the crank-shaft C, pawls E and E′, and circular ratchet-bar G upon the block D, all these parts being arranged and operating substantially as herein described.

96,327.—KELLEY LE BEAU, Chicago, Ill.—*Ore-Washer.*—November 2, 1869.

Claim.—The combination of the washing-box S A, provided with a partition, M, perforated pan E, provided with covering F, hopper C, provided with a grate, D, trough I, provided with gate K, and pump B U V W X, as and for the purpose set forth.

96,328.—WILLIAM H. LEE and CHARLES M. HARDENBERGH, Minneapolis, Minn.—*Hot-Air Furnace.*—November 2, 1869.

Claim.—1. The diaphragm *n*, in combination with check-valve H, in smoke-box G, for distributing, equalizing, and controlling the combustion, according to circumstances, as set forth.

2. In combination with the diaphragm and check-valve, as claimed under the preceding clause, the valve E, horizontal tubes F and I, and smoke-box G, substantially as set forth.

3. In combination with the valves, tubes, and smoke-box claimed in the manner set forth in the preceding clause, the fire-box A and cylinder K, operated as and for the purposes set forth.

4. The construction of the ends of the furnace of cast iron in a single casting, with flanges *a′ a′ a* upon each figure, and to receive at once cylinders and flues F I J, the whole drawn together smoke-tight.

96,329. — THOMAS LING, Hartford, Conn.—*Pump-Valve.*—November 2, 1869; antedated October 27, 1869.

Claim.—The pump-valve, composed of the rod A, with the flange perforated at *x*; the core B, with the openings *m* and the lugs *o*; the rim C, in sections, with the notches for lugs *o* and the thin webs *y*; the cap *s* and screw *i*; the leather ring *r*, and the wire spring *n*, all arranged and constructed as described, for the purpose described.

96,330.—GEORGE LITTLE, Rutherford Park, N. J.—*Apparatus for Perforating Paper for Telegraphing.*—November 2, 1869.

Claim.—1. A wheel for feeding along a strip of paper to be perforated, in combination with an armature swinging on the same axis as the feed-wheel, and an electro-magnet, substantially as set forth.

2. The punch *i* and presser-plate *c*, in combination with the feed-wheel *b*, die *c*, and sleeve *f*, substantially as and for the purposes set forth.

3. The magnets *h* and *l*, arranged as specified, in combination with the lever *g*, on the fulcrum 7, that is one pole of the magnet *h*, and with the circuit-changer *n*, substantially as and for the purposes set forth.

4. An apparatus for composing telegraphic communications, consisting of a magnet, lever, punch, and die, to perforate or emboss the paper, in combination with a feed-wheel and an electro-magnet, to move said feed-wheel progressively, substantially as set forth.

5. Mechanism for feeding the paper by magnetism, and mechanism actuated by an electro-magnet, for perforating the paper, in combination with mechanism for closing the circuits to the respective magnets in such an alternate manner as to compose a telegraphic communication on a strip of paper, substantially as set forth.

6. The tablet *t*, formed of conductors, arranged substantially as set forth, in combination with a movable stylus or circuit-closer that is to be moved, in contact with the conductors of the tablet, to produce alternate pulsations of electricity for feeding the paper and punching the same by magnetism.

96,331.—GEORGE LITTLE, Rutherford Park, N. J.—*Apparatus for Perforating Paper for Telegraphing.*—November 2, 1869.

Claim.—1. The circuit-closer *p* in the groove of the cylinder *o*, in combination with the band *s*, key n^3, and finger *v*, substantially as and for the purposes set forth.

2. The feeding-disk *c* on the shaft *b* of the cylinder *o*, in combination with the frictional connection *d*, and holding magnet m^2, for moving the paper by the direct action of the cylinder *o*, and arresting the movement of the paper when the punch is acting, substantially as and for the purposes set forth.

3. The magnet *l*, in combination with the magnet *h*, lever *f*, punch *n*, and circuit-changer *m*, for perforating the paper, and then drawing back the punch by magnetism, substantially as set forth.

4. The circuit-changer *m*, in combination with the magnets *h* and *l*, and lever *f*, to direct the electric current, substantially as set forth.

96,332.—GEORGE LITTLE, Rutherford Park, N. J.—*Electro-Magnetic Motor.*—November 2, 1869.

Claim. — 1. An electro-magnetic motor, formed with armatures upon a spindle, in combination with stationary magnets and governor-balls, applied in substantially the manner specified, to communicate an end movement to the spindle, and regulate the speed by the friction resulting from such end movement, substantially as set forth.

2. The cylinder *k*, collar 5, sleeves *n* and *q*, and governor-balls *p*, arranged and applied substantially as set forth, in combination with the spindle *d*, armatures *e*, and electro-magnets *b c*, substantially as set forth.

3. The adjustable step *l* and spring 6, in combination with the spindle *d*, carrying the armatures *e* and friction-collar 5, so that the spindle *d* and its parts are sustained or balanced by the said spring 6, for the purposes and as set forth.

96,333.—GEORGE LITTLE, Rutherford Park, N. J.—*Automatic Telegraph-Apparatus.*—November 2, 1869.

Claim.—1. The adjustable brush 20, in combination with the roller *b′* and stylus, substantially as and for the purposes set forth.

2. The stylus, formed of a disk, with a platina or non-corrosive edge, in combination with the arm *n′* and roller *b′*, as and for the purposes set forth.

96,334.—HENRY P. MCCLEAVE, Tomales, Cal.—*Gang-Plow Cultivator.*—November 2, 1869.

Claim.—The frame A, constructed substantially in the manner described, with parallel braces B B B, diagonal strap J, through which the ends of the standards pass, and the draught-rod D, attached to the rear cross-beam B, as specified, for the purpose set forth.

96,335.—THOMAS MCDONOUGH, Newburgh, N. Y.—*Hot-Air Engine.*—November 2, 1869.

Claim.—1. The arrangement of the shaft directly over the cylinder, substantially as described.

2. The combination of the two cylinders with the balls and shaft to form an air-engine, substantially as described.

96,336.—Samuel Meadows, Toronto, Canada, assignor for one-half to Thomas Kearton Morgan, same place.—*Reflector.*—November 2, 1869.

Claim.—1. The adjustable concave reflectors E, combined with the case A, having the corrugated reflectors B, and all arranged substantially as specified.

2. The combination, with the reflector A, of the inverted reflector G, the former being adapted to receive an adjustable reflector, as and for the purpose specified.

3. The sectional glass-supporting plates, joined together by the recessed flanges *a*, projections *b*, and links or ties C, all substantially as specified.

96,337.—David Metz, Washington, D. C.—*Axle-Box.*—November 2, 1869.

Claim.—1. The clamp *b* and prolonged equalizing-beam *a*, arranged as described, and for the purpose of holding the axle-box within the pedestal, as set forth.

2. The packing-box *g*, with perforations for the passage of lubricating-material, within an exterior box or reservoir for holding oil, said packing-box having also a grooved, inclined, and channeled bottom, *h i*, constructed and arranged as described, and for the purposes set forth.

3. The projection *k* or double lid, for closing the whole box at the same time, constructed as described.

4. Constructing the bearing with a groove, connecting the tallow-cells, and with flanges *m m'*, arranged as described, and for the purposes set forth.

96,338.—George Rodney Moore, Philadelphia, Pa.—*Oven.*—November 2, 1869.

Claim.—1. The construction of oven-doors and sides, with casings of paper and wood, or their equivalents, substantially as and for the purpose herein set forth.

2. The pyrometrical levers A B C, arranged as herein shown with oven-doors and sides incased, as above shown.

96,339.—Byron W. Nichols, Canton, Ohio, assignor to Canton Malleable-Iron Company, same place.—*Shears.*—November 2, 1869.

Claim.—The construction of the blades of shears, with a groove, cavity, or recess, as and for the purpose set forth.

96,340.—Person Noyes, Lowell, Mass.—*Apparatus for Measuring Liquids.*—November 2, 1869.

Claim.—1. A pumping and measuring apparatus, as described, all the parts of which are constructed, combined, and arranged in the manner and for the purpose specified.

2. The tank A, in combination with the pump-tube *a* and the return-tube *b*, having outlets 3 and gates *g*, as described, and for the purpose specified.

3. The return-tube *b*, having outlets 3 and gates *g*, when combined with the pump-tube *a*, in the manner and for the purpose specified.

4. The combination, with the tank A and with the tube *b*, having outlets 3 and gates *g*, or with the return-tube I and the tube *u* of the removable pump, and with the conical cover D, constructed and adapted for the purposes described, of a platform grating, C, in the manner and for the purpose specified.

96,341.—Canceled.

96,342.—James Old, Pittsburgh, Pa.—*Fire-Place Grate.*—November 2, 1869.

Claim.—1. The link-piece *m*, keyed, or fastened in other equivalent manner, to the bars *a*, and carrying, by bearings *s*, a tilting-bar, *e*, the parts named being combined substantially in the manner set forth.

2. The arrangement of the link-pieces *m* with the grate-bars *a*, so as to effect the pivoting of the bearings *s* above the grate-bars, instead of below.

96,343.—Charles Page, Boston, Mass.—*Creasing-Attachment for Sewing-Machines.*—November 2, 1869.

Claim.—1. The combination of a sewing-machine, A, and a pair of rollers, C D, composed of long cylinders arranged therewith, substantially in manner and for the purpose described, that is, to operate to prevent the cloth, while passing between them, from becoming puckered or gathered.

2. The combination and arrangement of the creasing-rib *n*, and groove *m*, with the pair of smoothing-cylinders C D, and a sewing-machine, A, arranged together in manner and so as to operate substantially as described.

3. The arrangement and combination of the socketed roller-carrier B, and the joint piece *i* hinged thereto, with the journals *h h'*, and the rollers C D thereof, the whole constituting an apparatus or mechanism to be applied to a sewing-machine, for the purposes as set forth.

96,344.—Francis L. Perry, Canandaigua, N. Y.—*Cultivator.*—November 2, 1869.

Claim.—1. The arrangement of a series of cultivating-teeth, in front of and in combination with the horizontal knife or cutter S, which follows the teeth.

2. Arranging the points of the teeth, which run in advance of the horizontal cutter, lower than the cutter, to protect the cutter from stones and other obstructions.

3. Curving the ends of the horizontal cutter, as shown and described, so as not to cut too deep near the rows of plants cultivated.

4. Making the horizontal cutter adjustable higher or lower on the frame, substantially as described.

5. In combination with the stirring-teeth and horizontal cutter, the hilling-shares, arranged in rear of the horizontal cutter, substantially as described.

6. The combined clevis and gauge-wheel stand or plate, arranged to vibrate in the end of the beam, and provided with a notched segment and spring-latch, so that the workman can release, adjust, and lock the clevis and gauge-wheel in the position required while the cultivator is at work or in motion.

96,345.—John Pickles, Wigan, England, assignor to James Foley, John T. Harris, and Willard W. Harris, Montreal, Canada.—*Solid or Dry Extract of Bark for Tanning, &c.*—November 2, 1869.

Claim.—As an article of new manufacture, the liquid or semi-liquid extract of bark, when reduced to a powdered condition or dry state, substantially in the manner and for the purposes herein described.

96,346.—J. D. Pratt, Cleveland, Ohio.—*Bed-Bottom.*—November 2, 1869.

Claim.—The combination of the section C, attached to ring or loop E, and having ribs *a* and pin *c*, section D having hook *b*, with the rods F F, all constructed to operate in the manner and for the purpose described.

96,347.—Thomas J. Price, Macomb, Ill.—*Seed-Sower.*—November 2, 1869.

Claim.—A seed-sower, having distributer P, pulley *m*, wheel B, valve *s*, slide *n*, shaft R, and hopper *o*, constructed and arranged to operate substantially as specified.

96,348.—Silas S. Putnam, Dorchester, Mass.—*Self-Lubricating Axle-Box.*—November 2, 1869.

Claim.—A chamber *a*, with its slots, in combination with openings *b*, constructed substantially as described.

96,349.—Silas S. Putnam, Neponset, Mass.—*Thill-Coupling.*—November 2, 1869.

Claim.—The mechanical arrangement described, for tightening the thill-iron G on its connecting-bolt C, for the purpose set forth.

96,350.—Amos Rank, Salem, Ohio.—*Harvester.*—November 2, 1869.

Claim.—1. The relative arrangement, as set forth, of the finger-beam, the rocking-bar, the platform-sections, connected with the rocking-bar at the front ends only, and the supporting-brackets underlapping but not united to the finger-beam.

2. An oscillating grating or clearer on the divider-side of the platform, in combination with overlapping slatted platform-sections, turning on axes transverse to the finger-beam, as set forth.

3. The combination of a vibrating clearer, with its adjacent platform-section operated by means of cranks, and a slotted link, substantially as set forth.

4. The bar n^2, connecting the rear ends of the platform-sections with the clearer, as set forth.

5. A vibrating grating or cleaning rake, turning on an axis transverse to the finger-beam, and located at the divider-end of the platform, substantially in the manner described.

96,351.—AMOS RANK, Salem, Ohio.—*Harvester.*—November 2, 1869.

Claim.—1. The combination, with the driving-gearing of a harvester, of a wheel having external teeth on one side and internal teeth on the other, whereby the speed of the cutters is varied simply by reversing the wheel on its shaft, as set forth.

2. The combination of the crank-shaft and its pinion with the counter-shaft and its reversible gear-wheel, all constructed to operate substantially as set forth.

96,352.—AMOS RANK, Salem, Ohio.—*Harvester.*—November 2, 1869.

Claim.—1. The combination of the hollow slotted shaft, the loose pinions thereon, the slide-rod, and its locking-pin, all constructed to operate as hereinbefore set forth.

2. The combination of the shipping-lever, its sliding sleeve, the locking-plate, the slide-rod, and the pinions, all constructed to operate as hereinbefore set forth.

96,353.—AMOS RANK, Salem, Ohio.—*Harvester-Rake.*—November 2, 1869.

Claim.—1. The combination of the guide-cam and its switch p, with the rock-shaft for opening the switch passing through the axis of rotation of the rakes, substantially as hereinbefore set forth.

2. The arrangement, as set forth, of the guide-cam, the switch p, the lug p^2, and the closing spring p^3.

3. The arm O, bifurcated, for the attachment of alternate rakes and beaters, substantially as set forth.

4. The combination of the guide-cam, the switch p, the bifurcated arm O, the friction-roller o', and its arm o, all these parts being constructed to operate as set forth.

96,354.—JAMES BRADEN, Indianapolis, Ind., administrator of the estate of JAMES SCANLAN, deceased.—*Circulating-Grate for Steam-Generators.*—November 2, 1869.

Claim.—1. The combination of the feeding-pump or the pipe connected therewith, the pipe which conducts the water to the grate, the tubular grates, the waste-pipe, and the mud-drum or generator, substantially as shown and described.

2. The combination of a reservoir, feed-pipe, tubular grates, and waste-pipe, substantially as and for the purpose set forth.

3. The combination of a waste-pipe, having in it a cock or valve for permitting a portion of the water to be wasted through such valve or cock, and a series of tubular grates, when the feed-water is passed through such grates previous to its entering the generator, substantially as and for the purpose specified.

96,355.—CHARLES M. SHAW, Portland, Me.—*Floor-Set.*—November 2, 1869; antedated October 22, 1869.

Claim.—The floor-set as described, having the different parts herein set forth.

96,356.—GERARD SICKELS, Boston, Mass.—*Folding Bedstead.*—November 2, 1869.

Claim.—The head and foot boards A B, folding rails C C′, and upwardly-folding bed-bottom, in combination with bars h h', brackets G G′, and cam-blocks i i', in the manner and for the purpose substantially as described.

96,357.—FREDERICK H. SMITH, Baltimore, Md.—*Column or Tube.*—November 2, 1869.

Claim.—A column or tube, for engineering and other purposes, composed of two or more concentric layers of wrought-iron, steel, or other metallic segments, united substantially as described, and arranged so that the segments of one layer shall break joint with those of the other.

96,358.—HAMILTON E. SMITH, New York, N. Y.—*Perforated Wearing Apparel.*—November 2, 1869.

Claim.—As a new article of manufacture, the inner garment above described, made of buck or partially tanned skins, perforated, as and for the purpose specified.

96,359.—HAMILTON ERASTUS SMITH, New York, N. Y., assignor to MARY JANE SMITH, same place.—*Clothes-Mangle.*—November 2, 1869; antedated October 16, 1869.

Claim.—A clothes-mangle, consisting of the revolving drum or shaft A, and of the shell C, fitted around it, said shell being held in place by springs or their equivalents, as set forth, so that a roller, carrying the articles to be smoothened, can be introduced between the drum and shell, to operate as set forth.

96,360.—HAMILTON ERASTUS SMITH, New York, N. Y., assignor to MARY JANE SMITH, same place.—*Clothes-Mangle.*—November 2, 1869; antedated October 22, 1869.

Claim.—1. The combination of the swinging frame D′, rollers F F′, and springs j, with the stationary frame A, rollers C C, and springs K, substantially in the manner described, for the purpose set forth.

2. The swinging frame D, in combination with spring K, treadle E, and spring-catch I, substantially as and for the purpose specified.

3. The rollers F and F′, journaled in the boxes G, whereby they are adapted for both vertical and horizontal adjustment, substantially as herein shown and described, for the purpose indicated.

4. The clothes-mangle, consisting of the stationary frame A, carrying the rollers C, of the pivoted frame D, carrying the rollers F, and of the treadle E, and springs K and l, all made and operating substantially as herein shown and described.

96,361.—HAMILTON ERASTUS SMITH, New York, N. Y., assignor to MARY JANE SMITH, same place.—*Clothes-Mangle.*—November 2, 1869; antedated October 22, 1869.

Claim.—The plates l, on the swinging frame D, in combination with the plates m, on the stationary frame A, when arranged to support and hold the ends of the roller J, upon which the articles to be rolled are wound, as specified.

96,362.—JOHN W. STREET, Marshalltown, Iowa.—*Railway Cattle-Car.*—November 2, 1869.

Claim.—1. Dividing a car for the transportation of animals into stalls, by swinging gates or partitions, hinged, with detachable hinges, at both ends, so that either end can be swung around to admit the animal, or to release him from the stall, and so that both ends of the gate may be detached, to clear the car for common freight, substantially as described.

2. Arranging a store-room or feed-bin in the top of the car, provided with doors or hatches in the roof, for filling the same, and with openings through its floor, at the side of the car, for dropping the feed into mangers or feed-boxes in the ends of the stalls below, substantially as described.

3. The arrangement of the reservoir O in the side of the car, at a suitable height to supply water to the drinking-troughs or basins, without the use of a pipe and stop-cock, substantially as described.

4. The arrangement of the troughs L, with reference to the reservoir O, whereby the water may be allowed to flow freely through openings in the side of the reservoir into the troughs, and stand at the same level in both, substantially as described.

5. The arrangement of the reservoir O, whereby it is made to convey water from end to end of the car, without obstructing the doorway, by passing under the same, substantially as set forth.

96,363.—JAMES A. THORN, Chicago, Ill.—*Window-Screen.*—November 2, 1869.

Claim.—In the construction and arrangement of

adjustable screens, the guide-pieces K J, provided with tongues *f* running in grooves *h*, in combination with the plates I, said parts being used to facilitate the adjusting of the frames C D E and F G H, and shut the space between the rail G and sash B, and between the rail H and sill Z, as described.

96,364.—JOEL TIFFANY, Albany, N. Y.—*Apparatus for Carbureting and Applying Air for Lighting and Heating.*—November 2, 1869.

Claim.—1. The shallow basins *a a a a a*, in combination with the feeding-chamber *f f*, substantially in the manner and for the purpose herein set forth.

2. Said basins, or either of them, or their equivalent surface, in combination with the tube *d d d*, arranged substantially in the manner and for the purposes herein set forth.

3. The vessel, Fig. 1, as a generator, in combination with its burner, stop-cock, and tube *d d d*, for the purposes herein set forth.

4. The above-described method, or its substantial equivalent, of charging the basins, as a safe mode of operating said apparatus, substantially as set forth.

5. The above-described device to prevent blowing at the burner, consisting in the use of a pipe of small capacity, in the manner herein set forth.

6. The combination of the above device for generating gas, or its equivalent, with desks, tables, melodeons, sewing-machines, and other similar furniture, instruments, and machines, substantially as described.

7. The burner for a stove, constructed substantially in the manner and for the purpose herein described.

96,365.—BENJAMIN C. TILGHMAN, Philadelphia, Pa.—*Making Tanning and Dyeing Extracts.*—November 2, 1869; antedated October 30, 1869.

Claim.—The process of extracting tanning and dyeing materials from roots, barks, woods, and other vegetable substances, by digesting them with a solution of sulphurous acid, in water, with or without the addition of sulphites, either in close vessels, at a high temperature and pressure, or at temperatures not exceeding 212° Fahrenheit, and at atmospheric pressures.

96,366.—CLARK L. TYLER, Ithaca, N. Y.—*Pencil-Attachment to Compass.*—November 2, 1869.

Claim.—The combination and arrangement of the double-tubed socket A B, united by the open web C, with the variable block or frame, formed of the two parts D and E joined together, the pin or axis of which plays in the transverse slot G″ of the said web C, substantially as described.

96,367.—CALVIN WARDWELL, Painesville, Ohio, assignor to himself and H. H. COE, same place.—*Ring Stopper Nipper.*—November 2, 1869.

Claim.—The combination of the mortise B in the cat-head A, sheave C, toothed cam D, pin F, and lock-lever G, to be used in combination, for the purpose as described.

96,368.—JAMES D. WARNER, Brooklyn, N. Y.—*Steam Water-Elevator.*—November 2, 1869.

Claim.—1. The combination, with a heater and condenser, arranged substantially as described, of a cut-off valve, arranged to be operated by the action of water and gravity for opening and closing the passage from the generator to the condenser, substantially as specified.

2. The combination, with the generator and condenser, of one or more pistons, to urge and regulate the return of the water to the generator, either with or without the valves, guides, and weight, or any of them, substantially as described.

3. The combination of the generator, condenser, automatic valve-device, and pistons, either with their valve and weight V or not, substantially as specified.

96,369.—HORATIO B. WEAVER, Hartford, Conn.—*Lock.*—November 2, 1869.

Claim.—The combination of disk *a*, ring *a′*, connection F, with the circular notched tumblers 1, 2, 3, 4, and the fences C and D, the whole operating together in the manner and for the purpose specified.

96,370.—GEORGE W. B. YOCOM, ROBERT J. WALKER, and ELIAS SHARP, Arcata, Cal.—*Potato-Digger.*—November 2, 1869.

Claim.—The potato-digger described, consisting of the plow E, with open throat and double shares, hinged arms D^2, cam D^1, cutters I′, and windlass H, the whole being combined and arranged as described, for the purpose set forth.

96,371.—MORTIMER WILLIAMS, Middletown, Ohio.—*Compound for the Cure of Cancer.*—November 2, 1869.

Claim.—The several articles, put in solution, in the manner and substantially as specified, for the purpose described.

96,372.—JOSEPH B. WIGGENHORN, Saint Louis, Mo.—*Machine for Threading Bolts, &c.*—November 2, 1869.

Claim.—1. Laterally-adjustable guides F F, in combination with screw-thread swaging-dies L, substantially as described.

2. The stops *p p*, in combination with guides and screw threading swaging-dies, substantially as described.

96,373.—FRIEDRICH WOHLGEMUTH, New York, N. Y.—*Cartridge.*—November 2, 1869.

Claim.—A metallic cartridge-shell, consisting of a plain parallel tube open from end to end, fitted with a screw-thread and a hollow screw breech-piece, as shown and described.

96,374.—OTTO WUTH, Pittsburgh, Pa.—*Manufacture of Carbonate of Soda.*—November 2, 1869.

Claim.—1. The process, hereinbefore described, of producing commercially pure monohydrate of carbonate of soda from the soda-ash of commerce.

2. The process, hereinbefore described, whereby, from the residual liquor of the process first described, (for obtaining the monohydrate of carbonate of soda,) sal-soda and a low grade of soda-ash are procured, thereby avoiding any loss of soda in the process.

96,375.—GEORGE W. B. YOCOM and EDWARD COWAN, Arcata, Cal.—*Railway-Car Brake.*—November 2, 1869.

Claim.—1. The brake A, consisting of two arms, A′ A′, with beveled ends, and joint B, constructed and arranged substantially as described, and for the purpose set forth.

2. The crank-axle F with arms F′, by which connection is made with the brake by the link G, in combination with the said brake A, substantially as specified.

96,376.—MOSES ADAMS, Chilmark, Mass.—*Combination-Lock.*—November 2, 1869.

Claim.—1. The employment of the tongue-bolts G G, in combination with the sets of ratchet-wheels T and T′, constructed and operating substantially as above set forth.

2. The movable frame, composed of the plates K and N, and their supports U U, in combination with the key-bolt X, constructed as and for the purpose above set forth.

3. The key-bolt X, in combination with the cog-wheel E, the mortise-block B, the spindle S, the tongue-bolts G G, the sets of ratchet-wheels T and T′, and the lock-bolt H, constructed and operating substantially as above set forth.

96,377.—JAMES C. ANDERSON, Webster, Pa.—*Weather-Boarding.*—November 2, 1869.

Claim.—An outer weather-boarding and inner lining for buildings, when constructed of boards, having formed upon their surface projections in the board or boards, in the nature of panels or pillars, in the manner and for the purpose herein described.

96,378.—WILLIAM H. ANDERSON, Brooklyn, N. Y.—*Machine for Grinding Seats of Valves.*—November 2, 1869.

Claim.—1. In combination with a vertical or horizontal stand or pipe, A, the slide-bar E, to which are fitted a lathe-head and spindle, substantially as shown and described.

2. In combination with the sliding bar, lathe-head,

and spindle H, the pressure-spring L, arranged to act upon the spindle longitudinally, substantially as shown and described.

3. In combination with an adjustable sliding bar, lathe-head, and spindle, the clamp C, with its clamp-screws D, substantially as shown and described, for the purposes specified.

96,379. — WILLIAM T. BAKER, Lancaster, Texas.—*Cultivator.*—November 2, 1869.

Claim.—1. The cases C, in combination with the frame E, for supporting and guiding the beams and stock of the plow, arranged substantially as described.

2. The combination of the springs K, rod J, and levers G, arranged as described.

3. The foot-piece J and springs K, by which the plows may be simultaneously thrown from the ground.

4. The clevises O, arranged substantially as shown and described, in combination with the stock *m*, of the plow, for regulating the depth of the plow, substantially as described.

5. The combination of the rods F, having, at either end, adjustable screw-bolts and nuts, as shown, with the levers G and beams D, all arranged, as described, to regulate the depth and angle of inclination of the several plows, in the manner set forth.

6. In combination with a cultivator, the double-tree A, constructed and arranged substantially as and for the purposes herein shown and described.

96,380.—M. H. BARNES, Peoria, Ill., assignor to himself and ENOCH P. SLOAN, same place. — *Safety-Can.*—November 2, 1869.

Claim.—1. The tube B, opening out of the bottom of the can A, and provided at its lower end with the coils *a*, substantially as and for the purpose set forth.

2. The hollow plug C, provided with the vent-hole *c* and porous material *c''*, and arranged in respect to the can A, substantially as described.

96,381.—PETER BARRY, Newark, N. J.—*Machine for Wiring Blind-Slats, &c.*—November 2, 1869.

Claim.—1. The cut-off jaws *e*, provided with recesses *f*, in combination with the feed-guide E and tapering plunger D, substantially as set forth.

2. The vertical rack *p*, secured to the slide *c*, which carries the plunger D, in combination with the segment *q*, and horizontal rack H, carrying the pawl *t*, when the parts are combined and arranged to operate together, as described.

3. The arrangement of the jaws *e*, feed-guide E, tapering plunger D, racks *p* H, segment *q*, feed-pawl *t*, and screw *u*, substantially as and for the purpose described.

96,382.—E. CHARLES BEAN and FRANCIS N. WELDEN, Rockford, Ill.—*Cultivator.*—November 2, 1869.

Claim.—1. The combination of the bent metal bars, the axle, the pole, and the braces, to form the main frame of the machine, substantially as described.

2. The combination of adjustable foot-rest R with eye *r*, having the slot r^1 and recess r^2, with the standard S, having the projection *s*, as and for the purpose described.

3. The combination of the flanged bearing-block with the recessed bearing-plate, as described, for the purpose set forth.

4. The combination of the flanged bearing-block, recessed bearing-plate, and hook-bolt, with the shovel-beam and standard, as described, for the purpose set forth.

5. The band O, provided with the staple-shaped projection o^1 o^2, as and for the purpose described.

6. The employment of wings or arms, or their equivalents, substantially as described, for the purpose set forth.

96,383.—W. G. BECKWITH, Lowndesborough, Ala. — *Fastening Plowshares to Plow-Stocks.* — November 2, 1869.

Claim.—1 The rectangular socket B, when constructed as and for the purpose set forth.

2. The socket B, when furnished with projection C, knob *g*, and wedge *d*, in combination with plow-share H, the whole being constructed in the manner described.

96,384.—CALEB H. BENNETT and WILLIAM A. DAGGETT, South Vineland, N. J.—*Ironing-Board.*—November 2, 1869.

Claim. — The combination of the hinged and movable board A, hinged brace B, with notch *a*, button *b*, board C, strip D, notched hinges *d d*, and pins *t t*, all substantially as set forth.

96,385.—J. G. BERGER, Nuremberg, Bavaria.—*Apparatus for Emptying Privy-Vaults.*—November 2, 1869.

Claim.—1. The combination and arrangement of the driving-shaft H, with its gear-wheel M, crank-shaft L', with its wheel L and eccentric X, and valve-rod K, provided with the yoke and friction-rollers *x x*, as herein described.

2. The sharp inclined-edged steel plate O, secured to the cylinder at the inlet-ports, in combination with a similarly-edged plate *e'*, upon the face of the valve, whereby the said plates are made to operate like shear-blades, to cut or separate any substances that may tend to choke the ports, substantially as described.

96,386.—JOSHUA F. BISHOP, Afton, Iowa.—*Portable Fire-Wall.*—November 2, 1869.

Claim.—1. A fire-shield, or wall, constructed with an air-space between the walls or sheets thereof, substantially as and for the purpose set forth.

2. The combination of the sections A A', bolts or rods E, and bars D, for securing the sections in position, substantially as shown and described.

3. The arrangement of the nut or bar *a* with reference to the sections to which they are secured, substantially as shown and described.

4. The arrangement of the anchor G G', with reference to the shell A A', in such a manner as to prevent it from being toppled over, substantially as shown and described.

96,387.—LOUIS BLACK, Detroit. Mich.—*Spectacle.*—November 2, 1869.

Claim.—The bow A, open at both ends, but held at the inner by branches on the nose-piece B, as shown in Fig. 3 of drawing.

96,388.—JOHN I. BOSWELL, Christiansville, Va. — *Fertilizer-Attachment for Plows.*—November 2, 1869.

Claim.—1. The hopper D, constructed as described, with removable bottom *b*, stop-plate *d*, spring *e*, and wire *f*, all substantially as and for the purposes herein set forth.

2. Securing the hopper D to the plow-beam A, by means of the iron frame *a*, substantially as herein set forth.

3. The spring-bar F, provided with wheel H I, and pulley J, and connected to the plow-beam A, substantially in the manner and for the purposes herein set forth.

4. The stirrer *h i*, belt *m*, pulleys E J, arm *n*, and roller *o*, all constructed and arranged substantially in the manner and for the purposes herein set forth.

5. In combination with a plow, a fertilizer-attachment, constructed substantially as herein shown and described.

96,389.—JOHN BROUGHTON, New York, N. Y.—*Lubricator.*—November 2, 1869.

Claim. — The arrangement, relatively to the central filling-orifice F, of the oblique valve-stem D, guided above by an obliquely-disposed tube or nipple, and constructed to form a valve *d*, at its base, under the control and steadying action of a screw-thread, *e*, arranged to fit an internal screw-thread, *c*, substantially as specified.

96,390.—A. P. BUSSEY, Westernville, N. Y.—*Milk-Cooler.*—November 2, 1869.

Claim.—The improved cooling-vessel B, formed by the combination of a body and cover, with pipe *i* and ice-holder J, all substantially as shown and described.

96,391.—JOHN S. BUTLER, Silver City, Idaho Territory.—*Copy-Holder.*—November 2, 1869.

Claim.—1. The case A B C, constructed with two compartments or passages, as described, the roller D provided with a rubber friction-band, E, or equivalent, and the pressure-roller F, in combination with each other, said parts being constructed substantially as herein shown and described, and for the purpose set forth.

2. In combination with the partition C, the guide H, attached loosely to arms projecting from the ends of the holder, all arranged as described, whereby the guide may be turned back out of the way, as and for the purpose hereinbefore described.

96,392.—GEORGE D. CHANDLER, West Concord, Vt.—*Sap-Feeder.*—November 2, 1869.

Claim.—1. The comb of the faucet A, hollow stem E, float F, hinged stem G, and stopper H, when arranged to regulate the flow of sap self-actingly, substantially as specified.

2. The hollow hinged stem G, cup I, hollow stem E, and faucet A, all arranged as specified.

96,393.—STEPHEN CHANDLER, New York, N. Y. —*Furniture-Caster.*—November 2, 1869; antedated September 21, 1869.

Claim.—The suspended wires *f*, carrying the rod on which the friction-rollers are mounted, and continued into fingers *h*, in combination with lugs *b*, having open cavities to receive said rod, when the parts are constructed and operate together as described.

96,394.—WILLIAM P. CLARK, Medford, Mass.—*Faucet.*—November 2, 1869.

Claim.—1. The faucet, as made, with its body in two parts, united by screw-threads, packed at the joint by the ring *c*, which forms the valve-seat, and is confined, as described, from spreading and from removal, by the action thereon of the valve, and which can be moved, and another substituted, by dismemberment of the body of the faucet.

2. A faucet having a packing-ring, arranged, as described, with reference to the valve and valve-spindle, so as to be pinched between a shoulder on the valve and a shoulder on the faucet-body, to prevent leakage around the valve-stem when the valve is drawn off from its seat.

96,395.—MELVILLE CLEMENS, Springfield, Mass. —*Apparatus for Transmitting Rotary Motion.*—November 2, 1869.

Claim.—1. Transmitting, from one revolving shaft of machinery to another, equal and uniform rotary motion and power at all points of a revolution of them, whether the shafts are set in lines at right angles to each other, or at various other angles of divergence from each other, by means of one or more pairs of pivoted crank-arms, which are employed and adapted to connect the shafts together, and to produce thereby substantially the same mechanical action as that described in the described transmission of rotary motion and power from the shaft *a* to the shaft *b*.

2. The employment of one or more pairs of pivoted crank-arms, for connecting together two revolving shafts of machinery, and the adaptation of each pair of crank-arms to their shafts and to each other, substantially as set forth, so that the shafts so connected may be adjusted and set in lines at right angles to each other, or at various other angles of divergence from each other, and equal and uniform rotary motion and power be transmitted thereby from one shaft to the other, at all points of a revolution of them, substantially as set forth.

3. Joining together the outer ends of the crank-arms by the described connections, or by other connections which enable the described or equivalent rotary and pivot movements of the outer ends of the crank-arms, for the purposes set forth; and I further claim said outer-end connections of the crank-arms, in combination with the described inner-end connections of them to their shafts, or with other inner-end connections, which enable the described inner-end rotary and pivot movements of them, for the purposes set forth.

4. The one pair of crank-arms *h* and *k*, or their equivalents *i* and *l*, in combination with the shafts *a* and *b*, when the said pair of crank-arms is connected together and to the shafts *a* and *b*, substantially as described, and for the purposes set forth.

5. The two pairs of crank-arms *h k* and *i l*, in combination with the shafts *a* and *b*, when said crank-arms are connected together and to the shafts *a* and *b*, substantially as described, and so as to enable thereby a balanced transmission of rotary force from one shaft to the other, substantially as described.

6. The weights *m' n'* and *o' p'*, in combination with the crank-arms *h i* and *k l*, when employed substantially as described, and for the purposes set forth.

7. The supporting-plate *g*, in combination with the described shaft-coupler, with the curved slots *i'' i''* and *k'' k''*, substantially as described, and for the purposes set forth.

8. The crank-arms *u'* and *w'*, with their similar and connected crank-arms *y'* and *a''*, when constructed substantially as shown and described, and adapted in their combination together and with the shafts *a* and *b*, for transmission of rotary force from one shaft to the other, as described, and so as to balance each other on their shafts, substantially as described.

9. Extending each crank-arm of the described shaft-coupler across its shaft, so as to be thereby balanced on its shaft, substantially as described, and for the purposes set forth.

10. Extending each crank-arm across its shaft, so that the two parts of the two crank-arms lying on the one side of their shaft shall balance, as required and described, the two parts of the same crank-arms lying on the other opposite side of their shaft.

11. Balancing the crank-arms on their shafts, by means of weights, adjusted on and attached to the crank-arms, substantially as described.

12. Constructing the crank-arms substantially as shown and described, so that one crank-arm of one shaft shall balance, as described, the other opposite crank-arm of the same shaft.

13. The pivoted crank-shaft coupler, consisting of the hubs *c* and *e*, pivot-pins *j* and *m*, pivoted crank-arms *h i* and *k l*, ball-and-socket joints *r s* and *t u*, and balancing-weights *m' n'* and *o' p'*, all supported in journal-boxes *d* and *f*, and connecting the shafts *a* and *b*, substantially as described, and for the purposes set forth.

96,396.—JOHN C. CLINE, Philadelphia, Pa.—*Child's Carriage and Velocipede Combined.*—November 2, 1869.

Claim.—1. Combining, with a velocipede, a detachable carriage-body, and thus forming a vehicle, capable of being arranged either as a carriage or velocipede for children, substantially as set forth.

2. Making said vehicle, when used as a velocipede, adaptable to children having different lengths of legs, by shortening or lengthening the brace *b*, substantially as described.

3. The combination of the removable handle *g* with the seat *f*, carriage-body *n*, and running gear, all substantially as described and shown, for the purposes specified.

96,397.—JOHN D. CONNER, Bloomington, Ill.—*Washing-Machine.*—November 2, 1869.

Claim.—1. The wheel E, with the buckets F, and perforated cylinder H, in combination with the flue K, when arranged and operated substantially as described.

2. The reservoir L, with the door C and valve V, in combination with flues K and I and perforated cylinder H, when arranged as herein described.

3. The combination and arrangement of the wheel E, valves K and I, perforated cylinder H, and secondary bottom B, substantially as described.

96,398.—HENRY H. COVERT, New York, N. Y. —*Hatchway-Guard.*—November 2, 1869.

Claim.—1. The folding hatchway-guard E or F, arranged in combination with the floor and wall, for adjustment in front of the hatchway, or for folding up against the wall, substantially as specified.

2. The combination of the vertically-sliding spring-rails H H^1 H^2, hinged floor T, and dogs M, when arranged in the floors for guarding the hatchway, substantially as specified.

3. The combination, with the folding rails E or F, of the vertically-sliding spring-rails H H^1 H^2, substantially as specified.

96,399.—Michael C. Cox, Bennettsville, S. C.—*Plow.*—November 2, 1869.

Claim.—The convertible plow, harrow, guano and seed sower and planter, having frame E. block G, plows and harrows, Figs. 3, 4, 5, 6, 7, 8, and 9, funnel C, and box D, with bolts, openings, and straps, as described, constructed and arranged substantially as specified.

96,400.—William Dawes, Kingston Grove, Leeds, England.—*Cut-Off-Valve Gear.*—November 2, 1869; patented in England, January 5, 1869.

Claim.—The "governable" expansion movement or "gear," whereon the traveling cut-off plate or plates or valves are actuated or influenced (worked) by the use of the "ogee"-wedge or wedges and rollers, with the bell-crank or right-angled levers, either inside or outside the steam-chest.

96,401.—Adolph Delkescamp, Brooklyn, E. D., N. Y., assignor to James D. Bacon, for one-third, and John North, for one-third.—*Machine for Making Eyelets.*—November 2, 1869.

Claim.—1. The combination, in an eyelet-machine, of a stationary die, a corresponding punch, for cutting out the planchets, an intermittingly-sliding die, and a forming-punch, corresponding thereto, for roughly shaping the eyelet, a stationary die, and a forming-punch, corresponding thereto, for completing the form of the eyelet, and a device for cutting off the closed end of the eyelet, the combination being and operating substantially as described.

2. The combination of the several dies specified in the foregoing clause, with mechanism for transferring the planchet to the first forming-die, and mechanism for transferring the partly-formed eyelet from said first forming-die to the last or finishing-die, the combination being and operating substantially as described.

3. The combination of the former *b*, with the preparatory cupping-die *u*, and seeondary cupping-die *e*, in the intermittently-reciprocating bar J, substantially as described.

4. The discharger *t* and incline W, in combination with the sliding bar J, and die *e*, formed therein, essentially as herein set forth.

5. The sliding die *e* and stationary die *s*, in combination with the driver K and removing-device T, substantially as described.

6. The sliding die *e*, discharger *t*, and die *s*, in combination with the removing-device T and knife M, substantially as described.

7. The combination of the dischargers *t* and *q*, dies *e* and *s*, punch *c*, removing-device T and cutter M, substantially as described.

96,402.—William B. Deuel, Ithaca, N. Y.—*Grinder for Harvester-Cutters.*—November 2, 1869.

Claim.—1. The arrangement of the arm D, formed of the horizontal part D, provided with slot L, and the two clasping perpendicular parts D″ and D‴, and set-screw E, in combination with the sides F′ and F″, of a common grindstone, for the purpose of holding a harvester-knife holder to any one of the corners of the stone, for the grinding of the said knives, substantially as set forth.

2. The combination of the holder H and its hooks I′ and I″, stud J, and its bolt, with its set-screw K on the lower end thereof, with the slotted arm D, substantially as set forth.

3. The combination of the holder H and hooks I′ I″, stud J, bolt and set-screw K, adjustable by the slot L in the arm D, the arm D clasping, by the set-screw E, the sides F′ F″, arranged substantially as and for the purpose set forth.

96,403.—Charles E. De Valin, Baltimore, Md.—*Machine for Threading Bolts.*—November 2, 1869.

Claim.—1. The combination of the die-box D, and its recessed ring *e*, flange or collar *d*, plate *c*, and sliding carrier-bar *b*, with the springs *i i*, and cutting-dies *a a*, all constructed as described, and operating substantially in the manner and for the purposes herein set forth.

2. The combination of the main shaft A and collars *g g*, with the yoke F, screw G, half nut *h*, and pins or arms *o o*, all constructed as described, and operating substantially in the manner and for the purposes herein set forth.

3. In combination with the yoke F and half nut *h*, the bent levers *l l*, constructed as described, and operating substantially in the manner and for the purposes herein set forth.

4. In combination with the bent levers *l l*, the springs *u u*, secured to the rear main-shaft bearing B^2, substantially as and for the purposes herein set forth.

5. The guide *k*, constructed as described, of two parallel bars, secured to a side-plate that runs parallel with the main shaft, substantially as and for the purposes herein set forth.

6. In combination with the guide *k*, the spring *m*, operating upon the rear bar of said guide, substantially in the manner and for the purposes herein set forth.

7. In combination with the guide *k*, the projection or flange *n*, and spring *p*, constructed as described, and operating substantially in the manner and for the purposes herein set forth.

8. The arrangement of the gear-wheels H, J, K, and L, arbor or oscillating plate I, screw-stud *r*, nut *s*, and washer *t*, all constructed as described, and operating substantially as and for the purposes herein set forth.

9. In combination with the main shaft A and die-box D, the oscillating tumbler-stop R, and adjustable stop S, constructed as described, and operating substantially in the manner and for the purposes herein set forth.

10. The face-plate V, constructed as described, with the openings *w w*, dovetailed recesses *y y*, rim *x*, and circular plate W, all substantially as and for the purposes herein set forth.

11. In combination with the face-plate V, the dovetailed dies *z z*, and radial set-screws *a′ b′*, all constructed as described, and operating substantially in the manner and for the purposes herein set forth.

12. The combination and arrangement of the face-plate shaft T, ratchet-wheels A′ D′, pallets *c′ h′ k′*, springs *d′ g′ i′ l′*, bar *e′*, and stirrup-strap *f′*, all constructed as described, and operating substantially in the manner and for the purposes herein set forth.

13. The feeding-bar *o′*, constructed as described, with its rear end beveled, and provided on its upper side with an adjustable bar, *p′*, and operated by means of the arm *n′*, on the yoke F, substantially in the manner and for the purposes herein set forth.

96,404.—Virgil Dresser, Leavenworth, Kans.—*Propelling Small Boats.*—November 2, 1869.

Claim.—1. The combination of a lever, D, fulcrumed at its center, weighted at each end, and vibrating upon an elevated shaft, E, with reacting springs *g*, one or more pawls, *b c*, and one or more ratchet-wheels, *a*, each of said parts being arranged upon a boat, in the manner described.

2. The arrangement, upon the vibrating-lever D, of the spring *e e*, in the position shown, and for the purpose set forth.

96,405.—William Dripps, Coatesville, Pa.—*Process of Restoring and Preserving Decaying Railroad-Ties.*—November 2, 1869.

Claim.—The process, herein described, of restoring and preserving partially-decayed railroad-ties or sills to a valuable condition, substantially as described.

96,406.—Wilfred P. Dugdale, Goshen, Ind.—*Shaft-Coupling.*—November 2, 1869; antedated October 30, 1869.

Claim.—The universal coupling-joints, consisting of the blocks A, mortised or recessed as described, and the enlarged ends B, of the shafts, fitted thereto, all substantially as specified.

96,407.—Ben. F. Dunklee, Concord, N. H. assignor to A. S. Gear, New Haven, Conn.—*Step for Vertical Spindle.*—November 2, 1869.

Claim.—1. The combination of the two chambers D and C, constructed together in one and the same piece, with the step B, arranged in one of the said

chambers, and with the passages *a c d*, all operating as and for the purpose set forth.

2. In combination with the above, the plug F, as and for the purpose specified.

96,408.—JOHN H. EDWARD, Polo, Ill.—*Lifting-Jack.*—November 2, 1869; antedated October 22, 1869.

Claim.—1. The standard A, having a concave serrated surface, in combination with the reciprocating adjustable lifting-bar B, having a convex serrated surface, and the shifting diagonal supporting-link *d*, substantially as shown and described.

2. The combination of the slips *g g'* with the standard A, and of the hooks *b b'*, with the reciprocating bar B, in the manner shown and described.

96,409.—ALONZO FARRAR, Boston, Mass.—*Process of Producing Carbon Pigments.*—November 2, 1869.

Claim.—A pigment made from the spent acids of oil-refineries, common tar, coal-tar, carbon-oil, and all hydrocarbons, by a process substantially as herein shown and described.

96,410.—SAMUEL B. FAY, New York, N. Y.—*Tag.*—November 2, 1869.

Claim.—The perforated plate B, made of metal, or other suitable material, as a substitute for the ordinary metal eyelet in the manufacture of tags, &c., substantially as herein set forth.

96,411.—THOMAS FLINN, Birmingham, Mich.—*Self-Supporting Fence.*—November 2, 1869.

Claim.—The combination of the base A, posts B, keys *b'*, bars C, and cap D, all constructed and arranged substantially as shown and described.

96,412.—FRANCIS FLYNN, Woonsocket, R. I.—*Soles of Rubber Boots and Shoes.*—November 2, 1869.

Claim.—Attaching oak-tanned leather soles to soles of rubber boots and shoes, substantially in the manner described, and then causing them to adhere to rubber boots and shoes by the ordinary means of vulcanization.

96,413.—L. P. FOLLETT, Clifton Springs, N. Y.—*Washing-Machine.*—November 2, 1869.

Claim.—The combination and arrangement of the box A, rails C C, slats D D, curved blocks H H, frame or carriage E, rollers G G, slats I I, and bar J, all constructed as described, and operating substantially as herein set forth.

96,414.—CHARLES H. FOSTER, San Francisco, Cal.—*Butt-Hinge.*—November 2, 1869.

Claim.—The application, in an ordinary iron butt, of the brass bushing in the socket D, and brass pintle C, of the hinge, to prevent the socket from rusting and adhering to the pintle of the hinge.

96,415.—PETER J. FRANK, Ashford, N. Y.—*Instrument for Conveying Medicine to Diseased Parts.*—November 2, 1869.

Claim.—The combination of the tube A, scraper D, revolving cover E, and rod G, when arranged substantially as specified.

96,416.—JOSEPH FRANKLIN, Springfield, Ohio, assignor to himself and JOSEPH WHITELEY, same place.—*Ax.*—November 2, 1869.

Claim.—The within-described ax, which combines, in its construction, the peculiarities set forth, and substantially as shown in the drawings.

96,417.—RALPH L. FRASER, Westernville, N. Y.—*Snap-Hook.*—November 2, 1869.

Claim.—A snap-hook, consisting of the hook A, spring *f*, tongue D, elongated body B, and the recessed back for receiving the strap, so as to form a flushed joint between the back and strap, the whole constructed substantially as described.

96,418.—RALPH L. FRASER, Westernville, N. Y.—*Snap-Hook.*—November 2, 1869.

Claim.—The rotating sleeve C, formed with arm *c*, and encircling the cylindrical shank B, in combination with said shank and the hook A, cast therewith, and the retaining-spring *i*, when the parts are constructed and adapted to operate together, substantially as described.

96,419.—D'ALEMBERT T. GALE, Poughkeepsie, N. Y.—*Mechanical Movement.*—November 2, 1869.

Claim.—1. The two ratchet-wheels K L, two pawls O P, and cross-bar N, arranged and operating in connection with the shafts E J M, substantially as herein shown and described, and for the purpose set forth.

2. The combination of adjustable weights S T, with the pawls O P, that play upon the ratchet-wheels K L, substantially as herein shown and described, and for the purpose set forth.

96,420.—JEROME B. GARDNER, New York, N. Y.—*Base-Burning Cooking-Range.*—November 2, 1869.

Claim.—1. The arrangement of the grate A within the water-case B, forming the walls of the lower portion of the within-described range, substantially as specified.

2. The combination of the fuel-supply pipe C, the grate A, and the water-case B, essentially as shown and described.

3. The combination, with the water-case B, of the boiler F, and fuel-feed pipe C, let into or arranged to run through the latter.

4. The arrangement, within the boilers F and G, fitted with pipes to keep up a free circulation, of the ovens J J, in combination with draught-flues *k k*, essentially as shown and described.

5. The combination, in a base-burning range, of the water-case B, the grate A, arranged therein, the steam and hot-water boilers F G, and the ovens J J, substantially as specified.

96,421.—CHARLES T. GILMOR, Baltimore, Md.—*Tobacco-Prize.*—November 2, 1869.

Claim.—1. The combination, with the horizontal plunger K, of the lever L, having a fixed fulcrum in line with the transverse center of the stem of said plunger, the perforations *k k*, and pins P P, employed and operating substantially as described, for the purpose set forth.

2. The provision, in the stem of the plunger K, operated by the lever L, as described, of two or more longitudinal rows or series of the perforations *k* on each side of its transverse center, at different distances therefrom, as described, for the purpose set forth.

3. In combination with the lever L, employed and operating substantially as described, the support F, and ground-wheel M, substantially as and for the purposes set forth.

96,422.—CHARLES T. GILMOR, Baltimore, Md.—*Tobacco-Press.*—November 2, 1869.

Claim.—1. The combination, with the plunger or follower B and lever C, of the racks *r*, constructed with teeth of decreasing length from their inner to their outer ends, pull-pawls *p p*, attached to the lever, on the respective sides of its fulcrum, and springs *s s*, for pressing the pawls into mesh, being so arranged as to engage with them only at the moment they are to be thrown, as herein set forth.

2. The racks *r*, constructed separately from the plunger B, of increasing thickness from their inner to their outer ends, and applied and secured by diagonal bolts or rods 5, substantially as shown and described, for the purposes set forth.

96,423.—HARRY EDMOND GOTLEB, New York, N. Y., assignor to HENRY WINSLOW.—*Rendering Animal Fat.*—November 2, 1869.

Claim.—The use of the compound (chlorosulphuric) acid, substantially in the manner and for the purposes as above set forth, the neutralization of said acids, in the manner as above set forth, by the use of an alkaline earth, or some compound of those substances.

96,424.—WILLIAM M. GREENWOOD and BENOIT ROUX, Cincinnati, Ohio, assignors to M. GREENWOOD AND COMPANY, same place.—*Metallic Frame for Music-Stand.*—November 2, 1869.

Claim.—The arrangement of hooks C C', mortises D D', sockets E, and lugged housings G H of casters I, as set forth.

96,425.—Philip M. Gundlack, Belleville, Ill.—*Horse Hay-Rake.*—November 2, 1869.

Claim.—1. The thimbles *a*, constructed and applied to the rake-head, and having combined with them the draught eye-pieces *b*, substantially as described.

2. The adjustable tooth-carrying spring *s*, brace J, screw J′, rake-handle F, and grooved collar G, constructed and operating substantially as described.

96,426.—Fayette Hardenbergh, Providence, R. I.—*Tool-Post.*—November 2, 1869.

Claim.—A tool-post, A, B, constructed substantially as described, and combined with interchangeable tool-holding blocks C, as specified.

96,427.—Dennis Harrigan, Somerville, assignor to John H. Wiggins, Boston, Mass.—*Oil-Cup for Movable Bearings.*—November 2, 1869.

Claim.—The combination, with the discharge-tube of an oil-cup, such as described, of a disk fitting over the mouth of the same, and provided with an orifice for entrance of oil to the tube, and a valve for opening or closing said orifice, constructed and arranged in the disk as herein shown and set forth.

96,428.—David Harrison, Fayette, Miss.—*Railway Supply-Apparatus.*—November 2, 1869.

Claim.—1. The suspended pivoted bucket C, for supplying a moving train with water, fuel, &c., substantially as herein shown and described.

2. The posts A, cross-bars B, suspended pivoted buckets C, trip-arms E, projection F, provided with a rubber block, and hopper I, with each other and with the engine G and tender H of a moving train, substantially as herein shown and described, and for the purpose set forth.

96,429.—Charles W. Hermance, Schuylerville, N. Y.—*Cooking-Stove.*—November 2, 1869.

Claim.—1. Attaching a water-reservoir upon the front of a high-hearth cooking-stove or range, and providing the same with an outer chamber or flue, substantially as specified.

2. In combination with a water-tank or reservoir, placed upon the front of a high-hearth cooking-stove, with the exterior chamber E, an interposed chamber between said reservoir and the front of the oven, substantially as set forth.

3. In combination with the fire-box B, chamber H, and reservoir C, the employment of one or more vertical chambers I I′ on one or both sides of the fire-box and ash-pit, which communicate with the fire-box, and convey hot air to the chambers E and G, for heating the reservoir, substantially as set forth.

4. In combination with the reservoir C and its chamber E, the oven-bottom flue G, communicating with the flue or chamber E, substantially as specified.

5. The arrangement on each side of the vertical flue on the rear of the oven A, of one or more vertically-hinged doors S S, opening into the air, for the purpose of tempering the heat in the said oven, substantially as set forth.

6. The combination, in a high-hearth stove, of the fire-box B, chamber H, water-reservoir C, chamber E, chamber G, and oven A, with the various communicating-flues and parts, all constructed and arranged to operate substantially as described.

96,430.—Edward Hewett, St. Leonard's-on-Sea, England.—*Chimney-Cowl.*—November 2, 1869.

Claim.—1. A chimney-cowl, provided with an air-tube and smoke-pipe, whose outlets are nearly in the same vertical plane, as shown and described.

2. A chimney-cowl, provided with the tube I, to preserve it in its exact vertical position, as set forth.

3. A smoke-tube, provided with a base, attached to the chimney by two intermediate beveled flanges, J J, to make a tight joint, as set forth.

96,431.—Canceled.

96,432.—David O. Holman, Adams, N. Y.—*Turbine Water-Wheel.*—November 2, 1869.

Claim.—1. The bucket H, for turbine water-wheels, herein described, having a thick serpentine base and thin outer edge, and constructed with the conical-shaped curve, as specified.

2. The flaring or bell-shaped body G, in combination with the curved bucket H, as described, so arranged as to dispense with a lower shrouding, as specified.

96,433.—Lawrence Holms, Paterson, N. J.—*Wooden Pavement.*—November 2, 1869.

Claim.—1. Wooden paving-blocks, formed with overlapping portions *a a′*, and shoulders *b b′*, when so cut and adapted to each other as to form longitudinal or transverse channels *c c′* or both, to be filled with concrete or cement, substantially as herein described.

2. A pavement constructed of wooden blocks, having overlapping portions at the ends and sides, with channels, either longitudinal or transverse, or both, between them, which are filled with cement, said blocks resting on a layer of semi-elastic cement, laid over a concrete substratum or foundation, substantially as herein described,

96,434.—Gilbert L. Hudson, Romeo, Mich.—*Carriage-Seat.*—November 2, 1869.

Claim.—In combination with a seat for vehicles, cars, &c., the hinged bars B B, back C, springs D D, arm-pieces E E, and bars F F, or their equivalents, all constructed as described, and arranged to operate substantially in the manner and for the purposes herein set forth.

96,435.—George W. Hunter, Versailles, Ind.—*Fence.*—November 2, 1869.

Claim.—The arrangement, in a worm-fence, of the rails C, D′, E, and F, in the manner shown, and for the purpose described.

96,436.—John H. Hunter, Versailles, Ind.—*Gate.*—November 2, 1869.

Claim.—The combination and arrangement of levers E E′, C, *a*, bars D D′, bolt *b*, and gate B, arranged to operate as herein described and shown.

96,437.—Theodore Jarvis, New York, N. Y.—*Salve.*—November 2, 1869.

Claim.—A salve composed of the ingredients, in the proportions and for the purpose set forth.

96,438.—Elijah K. Jenner, Healdsburg, Cal.—*Method of Uniting Artificial Teeth on Rubber Bases to Metallic Plates.*—November 2, 1869.

Claim.—The combination of a limited vulcanite base, B, holding the teeth and gum-work, with two metallic plates, *a* and *a′*, substantially as shown and described.

96,439.—Charles Jordan.—East Bridgewater, Mass.—*Hulling-Machine.*—November 2, 1869.

Claim.—1. The combination of the yielding pads and bars *i i h* with the vertically-reciprocating hulling-plate E, eccentric pin, *d*, and arms *e e′*, when said parts are constructed and arranged as described.

2. The reversible hulling-plate, shown in Fig. 4, when constructed in the manner and for the purpose set forth.

3. The square steel bars *g g*, set into the bed of plate E, and placed one above the other, in combination with vertically-reciprocating plate E, when constructed and arranged substantially as set forth.

4. The reciprocating frame G, provided with adjustable cap *g′*, in combination with the yielding pads and bars *i i h*, eccentric *d*, and arms *e e′*, when said parts are constructed and arranged as shown and described.

96,440.—Roswell Judson and John P. Schenck, Jr., Matteawan, N. Y.—*Tin Can.*—November, 2, 1869.

Claim.—The arrangement under the downward-projecting circumferential flange, of the cap B, and, upon the upper surface of the can-top A, of the wire D, all as shown and described.

96,441.—Wesley L. Jukes, New York, N. Y., assignor to himself, Frederick McLewee, Prentice H. Putnam, and Bronson Murray, same place.—*Gas-Burner.*—November 2, 1869.

Claim.—1. In a revolving gas-burner, forming a gas-tight joint between the revolving tube *a* and

the fixed tube *d*, by the use of a ring attached or fitting closely to the tube *d*, and so nearly touching the inner or outer side of the tube *a* as to secure the adhesion thereto of so much liquid as will fill the space between the ring and tube or tubes, or its equivalents.

2. The use of the lip *g* attached to the tube *d*, or its equivalent, as and for the purposes described.

3. In a revolving gas-burner, in combination with the ring *f* or *k*, extending the tube *a* beyond the arms *b b* in any desired form, as and for the purposes hereinbefore described.

96,442.—WILLIAM G. KELLY, Oneida, N. Y.—*Case and Sample-Card for Spooled Silk, &c.*—November 2, 1869.

Claim.—A show-box for spooled silk, provided with ease A B, handle E, transverse partitions, anti-rolling separators D, and tray C, each of said parts being constructed and arranged, with respect to the others, in the manner described.

96,443.—LEWIS A. KIMBERLY, New Haven, Conn.—*Stilt.*—November 2, 1869.

Claim.—As a new article of manufacture, the stilt, having an adjustable step, made in the form and operated in the manner substantially as herein shown and described.

96,444.—SAMUEL M. KING, Lancaster, Pa.—*Shingle-Machine.*—November 2, 1869.

Claim.—The arrangement of a shingle-machine, provided with two beds M B, in a line with each other, made separately adjustable between the side rails C, when the bed B is supported on springs E, or their equivalent, and carries the planer I and riving-knife K, as shown, together with the spring-tongue or holder G suspended, and all operating jointly, substantially in the manner and for the purpose specified.

96,445.—HORACE W. KNIGHT, Seneca Falls, N. Y.—*Copy-Holder for Printers.*—November 2, 1869.

Claim.—The use of joints and set-screws *i* and *e*, to hold the frame on which the copy rests in different elevated positions, and the slots *c* and *d*, to allow the frame to fit on the partitions of the case, the rudder-band *a*, and the raised notch *f*, substantially as described, and for the purposes specified.

96,446.—F. F. LAHM, Chicago, Ill.—*Spring-Bed Bottom.*—November 2, 1869.

Claim.—1. In combination with a bed or couch-bottom, the springs E and F, confined together and to the rails of the bottom by adjustable bands, as shown and described.

2. The combination of the rails D C and slats G with the springs E F, arranged and operating substantially as described and for the purposes set forth.

96,447.—ALEXANDER N. LAPIERRE, New York, N. Y.—*Screw-Cap for Can.*—November 2, 1869.

Claim.—1. The vent-pipe D, provided in a can, A, for the entrance and discharge of air, and to be closed by the flange *e* of the screw-cap, substantially as herein shown and described.

2. The screw-cap C, when made of a sheet-metal tube, containing the flange *e* and washer *f*, and of the solid metal head *d*, substantially as and for the purpose herein shown and described.

96,448.—WILLIAM LAWYER, Macomb, N. Y.—*Machine for Making Hoops.*—November 2, 1869.

Claim.—The combination of a bed, C, adjustable bar D, a racking-lever, E, and an actuating-lever, F, all arranged and co-operating in the manner specified, to rack hoops.

96,449.—BENJAMIN F. LEET, Dayton, Nevada.—*Compound Wheel and Axle.*—November 2, 1869.

Claim.—The combination, with the axle B and wheel A, permanently connected thereto, of the loose wheel C, and stem, collar F, and sleeve H, the stem D or wheel being either provided with friction-rollers or not, all substantially as specified.

96,450.—JOSEPH F. LETTELLIER and ADOLPH LEITELT, Grand Rapids, Mich.—*Sawing-Machine.*—November 2, 1869.

Claim.—1. In combination with a machine constructed substantially as herein described, a dial-wheel for determining the position of the saw or saws upon their shaft, and the width of the strip to be cut from the board or plank.

2. The combination and arrangement of the dial-wheel E^4 with the gear-wheel E^1, rack F^1, sliding frame F^3, and arm F^2, for moving the saws upon the shaft, substantially as and for the purpose set forth.

3. The within-described arrangement of the saws upon their mandrel, it being such that two strips may be cut from a board or plank at one and the same time, one of which will be of a fixed width and the other of any desired width, the latter being dependent upon the position of the movable saw with reference to the fixed saw.

96,451.—D. M. LOCKRIDGE, Otto, N. Y.—*Clamp for Butter-Firkins.*—November 2, 1869.

Claim.—A screw-clamp, C, with packing-block or blocks D, for closing the inspection-hole or holes B, substantially as herein shown and described.

96,452.—HENRY S. LOPER, New Haven, Conn., assignor to himself and HENRY S. PARSONS, same place.—*Shoe for Cripples.*—November 2, 1869.

Claim.—A shoe for cripples, when constructed of a cork sole or ball, and connected with the heel by an elastic shank, C, substantially as specified.

96,453.—JOHN LYLE, Newark, N. J.—*Leather-Punch.*—November 2, 1869.

Claim.—The combination with the jaws A B, of the hub D and thumb-screw E, when the said hub is provided with the punches and the projections F, the latter being arranged, relatively to the jaw B, substantially as specified.

96,454.—MYRON H. MATSON, Horseheads, N. Y.—*Water-Wheel.*—November 2, 1869.

Claim.—The combination of the cap A, curb C, consisting of a number of tiers, between which the chutes E are hinged at one end, and the wheel C, all constructed to operate substantially as set forth.

96,455.—J. MATTISON, Oswego, N. Y.—*Packing-Auger and Spiral Conveyer.*—November 2, 1869.

Claim.—1. An auger for packing fibrous materials in suitable cases or packages, provided with a series of wedge-shaped blades, formed and disposed thereon, substantially as herein set forth.

2. The combination of a spirally-disposed projecting flange, with the spirally-inclined blade of a packing-auger, substantially as and for the purpose herein set forth.

96,456.—G. MAYER, Sullivan, Ill.—*Truss.*—November 2, 1869.

Claim.—The arrangement of waistband A, front straps D, back straps G, pad straps E, and detachable strap I, all constructed and shaped with respect o each other, in the manner described.

96,457.—JOHN C. MCCARTHY, New York, N. Y.—*Horse-Power Engine for Extinguishing Fires.*—November 2, 1869.

Claim.—1. The combination of the endless apron, the crank-shaft and piston, and the pump, all being arranged upon the truck A, as and for the purpose specified.

2. A carriage-frame, provided with the folding plate F, to turn down, and form a pathway for the horse to the endless apron, in the manner set forth.

96,458.—JOSEPH C. MCCORMICK, Smicksburg, Pa., assignor to himself and GEORGE STITELER, same place.—*Machine for Making Chair-Seats.*—November 2, 1869.

Claim.—1. The bit, constructed in the form shown in Fig. 3, having its cutting-edge scalloped out on the left side, so as to leave a sharp, curved point, *a a*, the rivet-hole *r*, and transverse slot *s*, near the widened end of the bit, and opposite the cutting-point, substantially as described.

2. The rotating disk *c*, having the cam-shaped projections *m* m^1 m^2 m^3, with their left edges beveled off, in combination with the bit above claimed, substantially as described.

3. In connection with the cutter-head C, having the bits M, the fixed head or rest E, having the steps *e e e e*, substantially as and for the purposes described.

96,459.—JOHN C. MELOY, Hastings, Minn.—*Bag-Tie.*—November 2, 1869; antedated October 23, 1869.

Claim.—The oblong box *a*, slotted and beveled, as shown and described, and provided with the pivoted serrated tongue *b* and cord *y*, all constructed and operated as and for the purposes set forth.

96,460.—SAMUEL P. MERVINE, Jr., Philadelphia, Pa., assignor to himself and W. W. LOWER, Washington, D. C.—*Rectum-Supporter.*—November 2, 1869.

Claim.—1. The adjustable or rocking carriage A, formed with perforations *a a* through it, in combination with a table or support, B, constructed or arranged to establish an air-space or passage between them, essentially as and for the purposes herein set forth.

2. The arrangement of the straps D D D D with the main or body-band E and table B, provided with angularly-arranged loop-wires C C, substantially as shown and described.

96,461.—LORAN MINER, San Francisco, Cal.—*Carpet Beating Machine.*—November 2, 1869.

Claim.—1. The series of elastic whips C, attached to the arms E, and operated by the cams J, together with the springs K and the elastic cushion S, substantially as and for the purposes herein described.

2. A carpet-beating machine, constructed with a series of whips, having a motion from side to side transversely to the direct action of the whips, substantially as herein described.

3. The device, consisting of the guides *c c*, sliding bar L, bent lever M, connecting-rod N, and crank O, giving a transverse motion to the whips, substantially as herein described.

4. The device, consisting of the shaft F, with the curved groove or notch *a*, and the pin *b*, passing through the arm, allowing motion in every direction without displacement, substantially as herein described.

96,462.—BENJAMIN J. MOORE, Dresbach, Minn.—*Hay-Loader.*—November 2, 1869.

Claim.—1. The combination, on the three-wheeled truck, constructed as described, of the elevator D, rake E, crane, and a hay-fork G, substantially as described.

2. The elevator D, suspended on the swinging arms S of the transverse shaft T, and the toothed wheels U, all arranged for adjustment substantially as specified.

3. The rake-teeth pivoted to the shaft I, spring wires M, slotted bars L L, when combined and arranged together and with the swinging supporting-arms N, all as specified.

4. The frame A, swiveled on the axle of the wheels B, the driving-wheel C, and detachable platform A′, all arranged as specified.

96,463.—GEORGE F. MORSE, Portland, Me.—*Steam-Engine Puppet-Valve.*—November 2, 1869.

Claim.—The double-puppet throttle-valve, as described, having the valve of smaller area to operate first, and the valve of larger area to operate subsequently, substantially in the manner described.

96,464.—CHARLES W. MOSELEY, Onondaga, N. Y.—*Implement for Destroying Quack-Grass.*—November 2, 1869.

Claim.—The steel cutter A and C, in connection with a frame B *d*, substantially as herein set forth, and for the purpose specified.

96,465.—GEORGE M. MOWBRAY, Titusville, Pa.—*Compound for Priming Electric Fuses.*—November 2, 1869.

Claim.—The manufacture or preparation of a compound, which I denominate "Mowbray's safety-priming for electric fuses," of the ingredients, in the proportions substantially as described, and for the purposes set forth.

96,466.—BERNARD H. MUEHLE, Buffalo, N. Y., assignor to himself and NICHOLAS JONES, same place.—*Velocipede.*—November 2, 1869; antedated October 30, 1869.

Claim.—The arrangement of the main frame C, seat-standards, frame E, spring K, and steering-apparatus, seat D, and spring F, substantially as and for the purpose described.

96,467.—D. MURILLESS, Holyoke, Mass.—*Lathe-Bath and Sponge-Holder for Dentists' Use.*—November 2, 1869.

Claim.—The water-trough A, supported so as to be adjustable beneath the corundum wheel, and having ears *a a*, in combination with the sponge-holders H H H^1 H^2, stems E, and set-screws *s*, the whole constructed and arranged substantially as setforth.

96,468.—H. K. NELSON, Penn Yan, N. Y.—*Plant-Protector.*—November 2, 1869.

Claim.—The arrangement and combination of the hinged cap or ventilator *v*, hoops or frame *a b*, transparent or translucent covering *c*, standard *s*, and wire socket *f*, substantially as and for the purposes set forth.

96,469.—GEORGE NOCK, Monmouth, N. J., assignor to himself and ZADOC STREET, Salem, Ohio.—*Mold for Welding Steel to Iron.*—November 2, 1869.

Claim.—1. The mold, herein described, provided with screws D D, or their equivalent, for pressing the iron slab against the face of the mold, or against the steel itself, all substantially as set forth.

2. The devices, herein described, whereby compound iron and steel slabs, for railway rails and other uses, are produced, by confining the iron within the mold, and welding the steel to it, in the act of casting, with screws D D, or their equivalent, for applying pressure to the iron, as set forth.

96,470.—E. D. NORTON, Cuba, N. Y.—*Door Spring.*—November 2, 1869.

Claim.—The removable and reversible spring D, formed of coiled wire, placed upon the standard C, and connected to the spring F by the link E, all as and for the purpose set forth.

96,471.—F. I. NORTON, Fremont, Ohio.—*Apparatus for Drying Lumber.*—November 2, 1869.

Claim.—1. The lumber drying apparatus, consisting of the kiln A, which has the pipe B, with the branches *a b*, or either, and in which the swinging plates or doors are arranged to form and close chambers *e*, substantially as and for the purpose herein shown and described.

2. The sponge-plugs C, applied to the perforations in the cover F of a lumber-drying apparatus, substantially as described, for the purpose specified.

3. The plates D, for closing the steam-chambers *e*, when provided or connected with strings, or their equivalents, so that they can be opened or closed from the outside, substantially as herein shown and described.

96,472.—PETER OSTERSPEY, Mechernich, Prussia, assignor to ADOLPHUS MEIER AND COMPANY, Saint Louis, Mo.—*Apparatus for the Discharge and Preparation of Granular Ore and Coal, and Similar Materials.*—November 2, 1869.

Claim.—1. The gate-box K and its gate K^1, the latter arranged with ∧-recesses, and adjusted by a rod *k*^{1}, and hand-wheel, or similar device, substantially as set forth.

2. The arrangement of the hydraulic separator or jigger with several wells, each of which has its sieve and gate-box and adjustable gate in connection with each other, so as to separate the ore, coal, or other matter into granules of varying fineness, substantially as set forth.

96,473.—H. PACKER and G. W. PACKER, Sandwich, Ill.—*Wash-Boiler.*—November 2, 1869.

Claim.—The combination and arrangement of the bottom A, having notches *a a* and pieces *b b*, center tube B, perforated tube or cylinder C, and rack D, all constructed as described, as and for the purposes herein set forth.

96,474.—James A. Park, Lansing, Mich., assignor to himself and William Woodhouse.—*Horse Hay-Fork.*—November 2, 1869.

Claim.—1. The combination, in a hay-fork, of a fixed prong, A, rigidly attached to the cross-bars B B^1, a swinging prong, A^1, which is pivoted to said cross-bars and to the locking-frame, and a lever for unlocking the swinging prong, all constructed and operating substantially as and for the purpose set forth.

2. The combination of the cross-bars B B^1, the swinging-prong A^1, corner irons B^2, frame C, lever C^1, and rope or chain C^4, substantially as and for the purpose set forth.

3. The combination and arrangement of the corner-irons B^2, and cross-bars B B^1, substantially as and for the purpose set forth.

4. The arrangement of the frame C, lever C^1, and spring C^2, with reference to the swinging prong A^1, it being such that when the hoisting rope is made to draw on the fork, the parts are thereby locked to each other, but not to the cross-bars, substantially as and for the purpose specified.

5. The frame C, constructed substantially as and for the purpose set forth.

6. In combination with the frame C and cross-bars B B^1, the stop C^4, substantially as and for the purpose set forth.

96,475.—A. N. Parkhurst, Knoxville, Ill.—*Pump.*—November 2, 1869.

Claim.—The baked-clay chamber B, having its upper end united to the stock A by clamps *b*, provided with open jaws *i i*, to receive the bolts, and its lower end, or base, united to the collar C, having its lower interior edge tapering, and provided on its outer edge with the annulet *m*, when the said collar is arranged and driven on the stock D, so that the main connection of the pump may be made at the point of location of valve *g* thereon, substantially in the manner and for the purpose as shown and described.

96,476.—Daniel Pease, Floyd, N. Y.—*Smut-Mill.*—November 2, 1869.

Claim.—1. As an improvement in smut-mills, forming the spaces *b*, Fig. 1, between the metal pieces A, which compose the cylinder, by making the required projections, *c c*, Fig. 4, for forming said spaces B all on one side of said pieces A, substantially as shown.

2. Constructing the pieces A, with eyes *b* C, Fig. 8, on each end thereof, for the reception of the vertical rods or bolts D D, Fig. 2, when said parts are arranged as herein shown and described.

96,477.—Calvin Peck, Marshall, Ill.—*Mode of Purifying Rancid Butter.*—November 2, 1869.

Claim.—Treating rancid butter by the particular process herein described.

96,478.—James H. Perkins, Omaha, Nebraska.—*Cut-Off for Pipes.*—November 2, 1869.

Claim.—The sections A and B, obliquely shaped at their contiguous ends, and so arranged, one within the other, as to form an opening for the chute D, which is hinged to the part A by the link E, all constructed and arranged as specified, whereby said chute will, when open, impinge at its inner end on the inner surface of the pipe A, or curved end *a* of pipe B, and lap over the pipe B when closed, as herein shown and described, for the purpose indicated.

96,479.—Charles Peters, Trenton, N. J.—*Melting and Decarbonizing Iron.*—November 2, 1869.

Claim.—1. Melting iron at or near the top of the stack or cupola, down through which the blast, with the products of combustion, is forced, substantially as described.

2. Dropping the melted iron from the melting-bed, through the blast and heated products of combustion in the stack or cupola, substantially as described.

3. Dropping the melted iron on to a cone or hard substance, for bursting the globules, substantially as described.

4. Furnishing the melted iron, when in the finely-divided state, (caused by the bursting of the globules,) with oxygen, by means of a blast through pipes or tuyeres, substantially as and for the purposes described.

5. The combination and arrangement of the fire-chamber B, melting-bed D, stack or cupola A, and cone J, substantially as and for the purposes described.

6. The exit-flue H, near the bottom of a melting-stack or cupola, substantially as shown.

96,480.—James N. Phelps, Brooklyn, assignor to himself and Joseph Bayley, New York, N. Y.—*Printing-Press.*—November 2, 1869.

Claim.—1. The construction of distributing-rollers *d d* with spiral surfaces, substantially as and for the purpose herein set forth.

2. The combination of the hinged type-bed B, the reciprocating impression-roller C, and the detached reciprocating frame P, furnished with inclined planes K K, the whole operating substantially as and for the purpose herein specified.

96,481.—William Price, Cincinnati, Ohio.—*Dumping-Car for Grading.*—November 2, 1869.

Claim.—1. A single car-body, dumping on either side of the truck which supports it, as herein described.

2. Placing the supporting and dumping-device on the outside ends of the car-body, as and for the purpose herein specified.

3. The cam-trunnions D D, as constructed, in combination with the supporting-frames B B, car-body C, and truck A, all arranged to operate substantially as herein set forth.

96,482.—Era Rose, Vernon, Ind.—*Device for Removing Dust from Thrashing-Machines.*—November 2, 1869.

Claim.—The attachment to thrashing-machines herein described, when constructed and operating as set forth, that is to say, having the small pipe B *b b'*, the large pipe C, the fan E, and the partial-discharge pipe D, with damper *d'* and screen *d*, all arranged and operating in connection with each other, as and for the purposes specified.

96,483.—Isaac M. Ross, Petersburgh, Ind.—*Apparatus for Turning the Leaves of Music.*—November 2, 1869.

Claim.—1. The concave slide B, provided with a zig zag groove, for the purpose of operating the rollers C C, substantially as herein set forth.

2. In combination with the concave slide B, the rollers C C, having arms D D and projections *i i*, all constructed as described, and operating within the frame A, substantially as and for the purposes herein set forth.

3. The combination of the frame A, grooved concave slide B, rollers C C, arms D D, frame E, having a notched groove, and the slide F, all constructed and connected as described, and operating substantially in the manner and for the purposes herein set forth.

96,484.—Benoit Roux, Cincinnati, Ohio, assignor to M. Greenwood and Company, same place.—*Shovel and Tongs-Stand.*—November 2, 1869.

Claim.—As a new article of manufacture, the shovel and tongs-stand herein described, having its cast base A B *b*, and cast stem C, connected by a wrought-iron screw, D, cast in the stem, and a nut, E *e e*, beneath the base, all as shown and described, for the purpose set forth.

96,485.—George D. Sanford, Peekskill, N. Y.—*Coal-Stove.*—November 2, 1869; antedated May 2, 1869.

Claim.—The construction and arrangement of notches and hooks on the adjustable frame and body of a stove, substantially as and for the purpose described.

96,486.—Charles C. Savery, Philadelphia, Pa.—*Water-Cooler and Refrigerator.*—November 2, 1869.

Claim.—1. The construction of the stationary com-

bined water-cooler and refrigerator, having the air-chamber A, of iron, enameled on the interior surface, and its bottom *d* inclined from the door, in its front side backward, and the water-tank B, of iron, enameled both on the interior and under surface, and secured upon the top of the air-chamber as herein specified.

2. In combination with the foregoing, the semicircular or equivalent opening *c*, in the inclined top *a* of the air-chamber, beneath the bottom of the water-tank, for the purpose set forth.

97,487.—CHARLES C. SAVERY, Philadelphia, Pa., assignor to BARROWS, SAVERY AND COMPANY, same place. — *Bread and Cake Receptacle.* — November 2, 1869.

Claim.—The general construction of the bread and cake receptacle, with iron body A and cover C, both enameled on the interior surface, and the wooden base B attached to the body A, all substantially as herein specified.

96,488. — A. W. SCHARIT, Saint Louis, Mo., L. A. HUDSON, Syracuse, N. Y.,, and DARIUS LYMAN, Parkman, Ohio. — *Electro-Magnetic Gas-Lighting Apparatus.*—November 2, 1869.

Claim.—1. A gas-lighting and extinguishing apparatus, combining in its construction a series of gear-wheels, to be driven by a spring or weight, a cup or other vessel containing pyrophorous material, a cam for elevating such cup or vessel, a match-rod for inserting the match into the pyrophorous material, and afterward bringing it in contact with the gas-jet, an elastic chambered valve for controlling the flow of gas to the burner, and a wheel, having a cam-shaped or serrated surface, for controlling the movements of such valve, all arranged to operate substantially as and for the purpose set forth.

2. In combination with the elements of the preceding clause, the armature of an electro-magnet, for the purpose of releasing such parts from the control of the spring or weight, and thus allowing the gas to be shut off from the burner, substantially in the manner set forth.

3. The described construction of the elastic chambered valve, substantially as and for the purpose set forth.

96,489.—PAUL SCHUMACHER, New York, N. Y. —*Ice-Cream Freezer.*—November 2, 1869.

Claim.—The arrangement of the receiving-vessels E E, in a suspended position about the shaft C and above the bottom of the chamber A, so as to rotate in and agitate the cooling-liquid, all as shown and described.

96,490. — H. E. SHAFFER, Rochester, N. Y. — *Fruit-Jar.*—November 2, 1869.

Claim.—The construction of the top of the jar with the two exterior shoulders *f m* and raised flange *h*, and of the cover with the vertical flange *d* and deep-stepped groove *g*, having the threaded shoulder *k*, the whole so arranged that the packing-ring is inclosed on the sides by the flanges *d h*, and at the top and bottom by the shoulders *k m*, being thereby perfectly embedded in the glass, and removed from outside friction with the clamping-ring, as well as inside contact with the contents of the jar, as herein set forth.

96,491. — SAMUEL SHEPHERD, Nashua, N. H.— *Paper-Collar Machine.*—November 2, 1869.

Claim.—1. The arrangement of the rolls C C′, for feeding the collar-strip, the rolls L L′, for feeding the patch-strip transversely to the collar-strip, and the punches *k k′*, for cutting out the patches, substantially as herein specified.

2. The combination, with the patching-devices, of feeding-devices operating to feed the patched strips intermittently, substantially as and for the purpose herein described.

3. The combination, with the rising and falling feed or pressure-roll C′, of the clamp H, operating intermittently on the collar-strip, substantially as and for the purpose herein specified.

4. The combination, with the rising and falling feed or pressure-roll C′, of the cam or cams W W^1 W^2 W^3, adjustable substantially as and for the purpose herein set forth.

5. The combination of the feed-rolls L L′, and clamping-rolls I I′, for feeding the patch-strip, the punch-stock Q, with its punches *k k* and their relative dies, the collar-strip feed-rolls C C′, and the clamp H, the whole operating together substantially as and for the purpose herein described.

96,492.—H. A. SHIPP, London, England, assignor to himself and ABNER A. GRIFFING, New York.— *Machine for Punching Metals.*—November 2, 1869.

Claim.—1. The combination and arrangement of the block A, the lever B, and arm I, the punch O and the screw-threaded bolt F, the lever B being operated by the right-and-left screws *g h*, connecting said levers to the arm, and the whole operating as explained.

2. The combination, with the stationary arm and movable jaw or lever, of the right-and-left hand screw connecting the same, and the swivel-nuts, arranged in said arm and lever, to receive the ends of the screw, as shown and set forth.

3. In a hand punching-machine, constructed as above described, the employment of a loose punch, substantially as explained.

4. The combination of the screw-threaded bolt F with the movable jaw or lever to which it is connected, and the stationary arm and the screw-rod by which said lever is actuated to produce the endwise movement of the bolt, as shown and set forth.

96,493. — JOSEPH SIMPSON, Newark, Ohio. — *Door-Spring.*—November 2, 1869.

Claim.—1. In combination with the tube A and spring B, the movable screw E, provided with a tenon on its outer end, as and for the purposes set forth.

2. The combination of the hinge-piece D, grooved arm C, tube A, spring B, tenoned screw E, and knob F, all constructed and operated as and for the purposes set forth.

96,494. — JAMES J. SMITH and SAMUEL WOOD, Cleveland, Ohio. — *Draught-Regulator.*—November 2, 1869.

Claim.—1. The use of mercury in an open column, substantially as and for the purposes described.

2. The construction and arrangement of the mercury-chamber L, at the base of an open column, substantially as described, and for the purposes specified.

3. The arrangement of the mercurial tube and the devices co-operative therewith, in the manner described, and for the purposes set forth.

96,495.—MARTIN LUTHER SMITH, Battle Creek Mich.—*Ladder.*—November 2, 1869.

Claim.—The construction of the platform C, with its forked legs G, pins M, post R, and hook S, when arranged as herein described and for the purposes set forth.

96,496. — JOHN SNOW, Grand Rapids, Mich. — *Catarrh Remedy.*—November 2, 1869.

Claim.—The composition of a powder, for the cure of catarrh, bronchitis, and other like affections, from the ingredients named above, compounded and prepared substantially as set forth.

96,497.— ASA SNYDER, Richmond, Va.— *Cooking-Stove.*—November 2, 1869.

Claim.—In combination with the hollow-walled fire-chamber and hollow grate herein described, the separation-plate *c*, arranged and operating substantially as described.

96,498.—FRANK J. STEINHAUSER and HENRY M. SHREINER, Lancaster, Pa.—*Railroad-Car Heater.* —November 2, 1869.

Claim.—1. The arrangement of the ash-funnel C D, with its valve F and weighted rod G, guides H H, in combination with the tank B *b b′*, in the manner and for the purpose specified.

2. The arrangement of the disk A, in combination with the tubes or pipes L M, with their hinged valves *l*, constructed substantially in the manner and for the purpose set forth.

3. The combined arrangement of the tank B, disk A, spouts or pipes L M, ash-funnel C D, and valve F, in connection with a stove adapted thereto, operating substantially in the manner and for the purpose specified.

96,499.—William M. Stevenson, Sharon, Pa.—*Balance Slide-Valve.*—November 2, 1869.

Claim.—The arrangement and combination of the two chambers B B, their packing-grooves E E, packings *h*, and openings *c d*, with the balance-valve, having the chamber *s* open at top and bottom, and the grooves F and their packings *f*, the whole being substantially as described.

96,500.—Zadok Street, Salem, Ohio.—*Cattle-Car.*—November 2, 1869.

Claim.—1. A cattle-car, with removable transverse partitions or gates E, hinged adjustably to the car-side, constructed with open spaces e^2, and downwardly-projecting bars e^3, and adapted to operate substantially as and for the purposes set forth.

2. In combination with the gates E, the yoke-bars G, for fastening the animal, as explained.

96,501.—Overton J. Styner and John Egan, La Fayette, Ind.—*Railroad-Car Ventilator.*—November 2, 1869.

Claim.—1. The deflectors I I′, so arranged as to be thrown into and out of action by the movement of the car, or to be held in an inoperative position, substantially as described.

2. In combination with the deflectors I I′, the hinge D E F *f f′* G, substantially as described.

96,502.—Edwin Swasey, Milford, Mass.—*Wheel.*—November 2, 1869.

Claim.—1. The peculiar joint at the two abutting ends of portions of the felly, the same consisting of the overlapping clasp *g*, inclosing the ends of the felly, as explained, and the spoke B, with its washer *d* and tenon *e*, the whole being combined and arranged in manner and for the purpose as herein shown and explained.

2. A carriage-wheel, composed of the hollow spokes and fellies jointed together, as specified in the preceding clause, in combination with the metallic hub provided with flanges *a*, rib *b*, and lubricating-chamber *c*, as and for the purposes herein shown and described.

96,503.—James M. Taft, Arcadia, Wis.—*Harvester-Cutter.*—November 2, 1869.

Claim.—1. The cutting-blades B, constructed as described, and pivoted on the detachable pins, having a square body and journals at each end, said pin being held in place by the bar F and plate D, all substantially as herein set forth.

2. The block *d*, pivoted to the reciprocating bar C, and having the dovetail recess, for the reception of the end of the cutting-blade, as herein described.

96,504.—Alfred D. Tate, Peekskill, N. Y.—*Car-Seat.*—November 2, 1869.

Claim.—1. The construction and arrangement of a seat or stool, in the manner and for the purpose herein specified.

2. The combination of the supporting-post *a*, guiding-bar or brace *c*, and hinged bar *d*, with the seat or stool, in the manner and for the purpose herein described.

96,505.—O. H. Taylor, Brooklyn, N. Y.—*Bit-Stock.*—November 2, 1869; antedated October 23, 1869.

Claim.—The socket D D, with opening G and lip C, when all the parts are constructed as described, and for the purposes specified.

96,506.—J. Thayer, Palmyra, Wis.—*Butter-Package.*—November 2, 1869.

Claim.—The combination of a removable wooden butter-receptacle, having a series of apartments, with two surrounding metallic chests, each constructed as described.

96,507.—Levi Till, Sandusky, Ohio, assignor to himself, B. W. Wells, and J. C. Butler, same place.—*Window.*—November 2, 1869.

Claim.—The combination of the pocket *a* with sashes hung upon slides, in the manner and for the purpose specified.

96,508.—Joseph C. Tone and Henry A. Clum, Rochester, N. Y., assignors to Theobald W. Tone, same place.—*Hand-Stamp.*—November 2, 1869.

Claim.—1. The combination, in a hand-stamp, of two type-wheels, one within the other, the outer having fixed lettering or numbering on its periphery, and the inner having movable types, which, when forced out, form, in conjunction with the outer, a complete indication of date, substantially as described.

2. The arrangement, with the jointed slide *f*, of the hinged knob *k*, substantially as described.

3. The arrangement, with the knob *k′*, and shaft E, of the movable pin *n*, operating in the manner and for the purpose specified.

4. The combination, with the stamp-rod H, of the adjusting-cylinder K, whereby the stroke of said rod is changed, substantially as described.

5. The combination of the dry ribbon M with the inked ribbon P, operating in the manner and for the purpose specified.

96,509.—James S. Totten, Lebanon, Ohio.—*Culinary Boiler.*—November 2, 1869.

Claim.—The vessel C, constructed as described, in combination with a tank, B, substantially as described.

96,510.—Adam Towberman and John Keys, Washington, Ill.—*Corn and Fertilizer Dropper.*—November 2, 1869.

Claim.—1. The dropper-wheels E and F, with holes *k k k k*, of different sizes, and slots O O O, in combination with pins *p p*, constructed and arranged substantially as described.

2. The slide D, with pins *p p*, in combination with the slots O O O, of dropper-wheels E and F, and valves, constructed and operating substantially as described.

3. In a corn and fertilizer dropping machine, the wheels E and F, boxes A and B, and shanks C, of runners K K, so constructed as to require only one box for discharging the corn and fertilizer, the box having a simple division in the center thereof, substantially as described.

4. The combination of the stirrers in boxes A A with the dropper-wheels E and F, constructed substantially as described.

96,511.—Ambrose Tower, New York, N. Y.—*Clothes-Wringer.*—November 2, 1869.

Claim.—A combined washer and wringer, having board A, wringer D, springs E, set-screws H, guards *u*, hooks *c*, and hand-rest S, constructed and arranged substantially as specified.

96,512.—Ambrose Tower, New York, N. Y.—*Wash-Board and Wringer-Frame.*—November 2, 1869.

Claim.—The wringer-frames H, and blocks *c* and *s′*, when constructed as herein described, and combined with a wash board, substantially as specified.

96,513.—Edward A. Uehling, Richwood, Wis.—*Land-Roller.*—November 2, 1869.

Claim.—1. The devices employed for supporting the weight of the driver, and causing it to bear equally upon the inner ends, of the rollers D and D, consisting of the standard F, supporting the seat E, and pivoted at its lower end to the equalizer-bar G, resting upon the boxes *c′ c′*, substantially as herein shown and described.

2. The within-described land-roller, containing the rollers D D and H, journaled within frames composed of the strips A and A, cross-bars B and B, standards C, strip I, cross-bars K and K, strip L, bar N, braces O and O, and brace P, and, in combination therewith, the seat E, standard F, and equalizer-bar G, all constructed and arranged substantially as and for the purpose specified.

96,514.—Manuel Van Slyke and D. W. Wood, Rome, N. Y.—*Car-Coupling.*—November 2, 1869.

Claim.—The combination of the double catch I, with the bar J and lever G, whereby the coupling-hook D may be held in an elevated position, or its undue elevation by combined weight of said bar and lever be prevented, all constructed as hereinbefore shown and described.

96,515.—HEINRICH VOELTER, Heidenheim, Wurtemberg.—*Wood-Pulping Machine.*—November 2, 1869.

Claim.—In wood-pulping machines, the use of assorting-sieves with oblong meshes, constructed as herein shown and described.

96,516.—BENJAMIN D. WALLACE, Boston, Mass.—*Broom and Brush Holder.*—November 2, 1869.

Claim.—The arrangement of the clamps *b* and *h*, spring *c*, projection *e*, in combination with frame A and screw *k*, as shown and described.

96,517.—ELISHA WIARD WALTON and ANDREW JACKSON BROWN, Stockton, Cal., assignors to MATTESON AND WILLIAMSON, same place.—*Hay-Fork.*—November 2, 1869.

Claim.—Fastening the teeth to the head by the band or clip B, provided with a socket C, and a score in the head A for the shank of the tooth D, so arranged that the shank prevents the clip from turning on the head A, substantially as shown and described.

96,518.—CYRUS WATERMAN, Providence, R. I.—*Steam Culinary Vessel.*—November 2, 1869.

Claim.—The arrangement and combination of the steam-chamber A, provided with the downward-projecting flange B, and partially-perforated bottom, with the close-covered inner vessel D, when all the parts are constructed so as to operate as described.

96,519.—WILLIAM WEAVER, Nashua, N. H.—*Faucet.*—November 2, 1869.

Claim.—The upward-acting lifter C, with valve *b*, slot *e*, and notch *i*, in combination with the latching-pin *o*, tube B, and stem A, all substantially as herein shown and described.

96,520.—JOHN WEEKS, Buffalo, N. Y., assignor to himself and BUFFALO AND NIAGARA SCALE-WORKS.—*Weighing-Scale.*—November 2, 1869.

Claim.—As an improvement in grain-scales, the diagonal arrangement or "spread" above and below the main beam B of the series of beams C D E, the beams B C D designating both weight and measure, but of different capacities, and the beam E being the unit-beam thereof, all beams having a common fulcrum, and by the diagonal arrangement exposing their faces simultaneously to view from a common stand-point, as and for the purpose set forth.

96,521.—JAY WHEELOCK, San Francisco, Cal.—*Bale-Tie Lock.*—November 2, 1869.

Claim.—The bale-tie lock, composed of the slide M, with its interior flange or shoulder L, in combination with the band or strap having the folded end A, and double-lapped and curved end B, when said parts are constructed, arranged, and applied together, in the manner and for the purpose herein shown and described.

96,522.—J. A. WHITMAN, Auburn, Me.—*Water-Wheel Governor.*—November 2, 1869.

Claim.—1. The combination, with the vibrating or reciprocating sleeve or yoke, the driving-shaft of a governor, and a ratchet-wheel, arranged to move the gate, of a vibrating pawl-arm, a double-acting pawl, and a crank, or other device on the said driving-shaft for imparting vibrating motion to the pawl-arm, when the governor-sleeve or yoke is arranged for changing the pawl upon the said ratchet-wheel for working it in opposite directions, all substantially as specified.

2. The combination, with the sleeve X of a governor, of the pendent wings T, crank-shafts S, and suitable connecting-rods M, all substantially as specified.

96,523.—HENRY WHITTEMORE, New York, N. Y.—*Ornamental Covering for Floors, Walls, &c.*—November 2, 1869.

Claim.—Marquetry floor and wall covering, constructed by cutting and fitting thin pieces of wood, and gluing them to a back of canvas or other suitable material, substantially as set forth.

96,524.—FREDERICK WILCOX, Waterbury, assignor to H. B. WILCOX, Portland, Conn.—*Process of Refining the Waste from German Silver and other Metals.*—November 2, 1869; antedated October 29, 1869.

Claim.—The process, herein described, for decarbonizing the wastes of German silver and similar metals.

96,525.—FREDERICK WILCOX, Waterbury, assignor to H. B. WILCOX, Portland, Conn.—*Process of Utilizing the Waste Formed in Cleaning Copper and Brass Goods.*—November 2, 1869; antedated October 29, 1869.

Claim.—The process, herein described, of utilizing the waste formed from cleaning copper and brass.

96,526.—WILLIAM W. WILLIS, Chicago, Ill.—*Passenger-Register for Street-Cars.*—November 2, 1869; antedated October 30, 1869.

Claim.—1. The spring-pinion *a b d*, as and for the purpose set forth.

2. The combination of the spring-pinion *a b d*, wheels T H, hands *f*, ratchet and pawl I, shafts E, G, gate L, and spring Z, as described.

96,527.—A. WILMOT, Cleveland, Ohio.—*Oiler-Holder for Sewing-Machine.*—November 2, 1869.

Claim.—As an article of manufacture, the herein-described oiler-holder, consisting of the rest A, lug C, and their connection B, combined with the clasp for holding the oiler therein, substantially as set forth.

96,528.—MARK L. WINN, San Francisco, Cal.—*Shampooing-Apparatus.*—November 2, 1869.

Claim.—The above-described shampooing-apparatus, consisting of the rim A, standards D, and trough B, substantially as set forth.

96,529.—JUDSON WOLFE and WILSON WOLFE, Harveyville, Pa.—*Sleigh-Brake.*—November 2, 1869.

Claim.—The combination of the buttons *b*, bar D, rods F F, curved bars G G, pivoted and connected together, bar E with loop *a*, and sliding tongue C, all substantially as specified.

96,530.—GEORGE F. WOOLSTON, Marshalltown, Iowa.—*Ribbon-Case.*—November 2, 1869.

Claim.—The spools B, with the pulleys C, the adjustable driving-pulley E, on the shaft F, and the band D, in combination with the case A, constructed, arranged, and operating as and for the purposes described.

96,531.—HENRY C. WORK, Philadelphia, Pa.—*Knitting-Machine.*—November 2, 1869.

Claim.—1. The combination of the hooks *a* and pins *b*, when connected as described, so that both are operated by the same cam, and so that each pin operates upon the loop of yarn on the hook next to that one to which the said pin is connected, substantially as specified.

2. The arrangement, in the crank-handle, of a yarn-guide, substantially as specified.

96,532.—JOHN A. FULLER, Rockford, Ill.—*Fire-Kindler.*—November 2, 1869.

Claim.—1. The cup A, cast as described, in one piece, with the socket B, and provided with flange *a*, rim *b*, and standard D, all substantially as and for the purposes herein set forth.

2. In combination with the cup A, constructed as herein described, the wire sieve *e* and perforated cover *d*, substantially as and for the purposes herein set forth.

96,533.—ALBERT H. SHIPMAN, Arcadia, N. Y.—*Extension-Table Slide.*—November 2, 1869.

Claim.—1. The metallic slides C, made thicker at one side than at the other, and provided with tongues *a*, shoulders *c*, and notches or recesses *f*, in combina-

tion with bars A B, having grooves *b* and pins *g*, as herein described, for the purpose specified.

2. The bars A B, separated and held apart by means of a common round-headed pin, *i*, for the double purpose of presenting a convex bearing-point for the adjacent bar, and admitting adjustment, as described.

96,534.—Samuel Anderson and Thomas J. Folan, Stapleton, N. Y.—*Mode of Securing Type in Forms.*—November 9, 1869.

Claim.—Securing type in the forms by plaster of Paris, or other similar substance, cast while in a plastic state around the same, and solidified therein, substantially as specified.

96,535.—John Annear and W. J. Gordon, Philadelphia, Pa.—*Double-Acting Press for "Blanking" and "Forming up" Sheet-Metal.*—November 9, 1869.

Claim.—1. The combination of the levers C and D, and the plunger E and F, substantially as and for the purpose hereinbefore set forth and described.

2. The dies *n'* and *n''*, constructed and arranged together, so as to operate in combination with the respective plungers E and F, substantially as and for the purposes hereinbefore set forth.

3. The combination of the stripping-blocks 6 6 and lower die *n''*, substantially as and for the purpose hereinbefore set forth.

4. The combination of the adjusting-screw I with the levers C and D and plungers E and F, substantially as and for the purpose hereinbefore set forth.

96,536.—Albert Armitage, Phelps Township, and John H. Olmsted, Arcadia, N. Y.—*Portable Fence.*—November 9, 1869.

Claim.—1. The posts A or B, provided with the grooved or notched top, and with the cleats G, in combination with the rails C and D, or their equivalents, shown in Fig. 3, substantially as and for the purpose specified.

2. The rounded ends of the rails C, substantially as shown, and for the purpose set forth.

96,537.—Joseph H. Baddeley, Greensborough, Pa.—*Apparatus for Shaping Earthenware.*—November 9, 1869.

Claim.—1. The combination, with a molding-jar, of a scraper, E, and clefted tool C D, all as shown and described.

2. The clefted tool C, in combination with notched bar F, oscillating post G, dog I, and slotted post G, all arranged as set forth.

96,538.—Charles W. Bailey, Boston, Mass.—*Detachable Boot and Shoe Heel.*—November 9, 1869.

Claim.—1. The detachable heel, made of wood, with the grain of the wood presented endwise to the wearing-surface, and providing with the connecting-devices, and otherwise constructed as herein described, as a new manufacture.

2. The combination of the exterior plate C, which is attached to the sole, and the interior plate D, which is attached to the heel, and fits closely into said exterior plate, so that both are in the same plane, and the latches or catches E, for confining the two plates together in said plane, in a direction perpendicular to it, substantially as described.

3. In the construction of detachable heels, as described, the making of the recesses in the heel to receive the connecting-devices by indenting the wood, instead of cutting it out, substantially as described.

96,539.—John Bannihr, Hempstead N. Y.—*Gas-Heater.*—November 9, 1869.

Claim.—A portable stove, combining the metallic chimney G, with holes in their sides, and isinglass shutters, the double-walled oven J, and frame-work A B, oil-reservoir D, and burners E, each of said essential elements being constructed and arranged, with respect to the others in the manner described.

96,540.—Henry Benett, Linden, Cal.—*Ditching-Machine.*—November 9, 1869.

Claim.—1. The spading-drum A, constructed substantially as specified, and provided with the followers D, and combined with the scraper and guide G, and the eccentric rings F, all substantially as described.

2. The combination, with the spading-drum, of the chute H, elevators I K, and spout N, substantially as specified.

3. The arrangement of the spading-drum, elevator-frame, and front axle and wheels, all substantially as specified.

96,541.—Samuel Bonser, Dover, N.H.—*Steam-Trap.*—November 9, 1869.

Claim.—The arrangement of the tubes E F, and the tubular spindle A, in combination with the cylinder G, triangular pins A and B, and the rods D, substantially as and for the purposes described.

96,542.—Marcus S. Borthwick, Montana, Iowa.—*Railway-Car Brake.*—November 9, 1869.

Claim.—1. The combination, with the brakes A, levers B and C, and rods E' and E, of the jointed winding-shaft G H' and sliding friction-wheel I, substantially as specified.

2. The combination, with the wheel I and its shaft, of the convex-headed slide K, concave-faced lever N, and rods O, substantially as specified.

3. The combination, with the slide K and wheel I, of the spring P, substantially as specified.

96,543.—William Boyrer, New York, N. Y.—*Organ-Stop Handle.*—November 9, 1869.

Claim.—An organ-stop handle, provided with an oblique surface, for displaying the notice applied to the same, as set forth.

96,544.—Edward Brady, Philadelphia, Pa.—*Fastening for Buttons.*—November 9, 1869.

Claim.—The swiveled bar B, constructed with stops *b*, in combination with a suitable button, A, substantially as and for the purposes set forth.

96,545.—Thomas H. Brady, New Britain, Conn.—*Faucet-Connection.*—November 9, 1869.

Claim.—The conducting-tube B, when provided with shoulder or collar *b* and a squared tenon, *c*, or its equivalent, in combination with the thimble-nut C, barrel A, and recess *a*, the whole combined and arranged so as to prevent the rotation of the tube B, substantially as described.

96,546.—James Campbell, Harrison, Ohio, assignor to himself and William Campbell, same place.—*Seed-Planter.*—November 9, 1869.

Claim.—1. The gear-disk D, forming the center or hub of the ground or drive wheel, and separable therefrom, as shown and described, for the purpose set forth.

2. The rearward extension *s* of the lid or top S of the seed-hopper, for the purpose of protecting certain operative parts of the seeding-mechanism, and the upper end of the seed-spout, as set forth.

3. The pivoted gravitating forwarder or drop-finger M *m m' m'' m'''*, constructed, and having its pivot arranged relatively to the seed-slide, as represented and described, for the purpose set forth.

4. The reversible gauge-plate K *k k'*, as and for the purpose described.

96,547.—George W. Carpenter, Butler, Ind.—*Water-Elevator.*—November 9, 1869.

Claim.—1. Attaching the crank *c* to the shaft B, in such a manner as that the crank may be operated as a lever to shift the shaft endwise, substantially as described.

2. The combination of the shaft B, provided with its collar *e*, with the blade *h*, rod *h'*, and bar *h''*, as and for the purpose described.

96,548.—Jefferson Chase, Orange, Mass.—*Chair.*—November 9, 1869.

Claim.—The combination of the chair-seat with the curved bar *c* to which it is hinged, the bar *f*, which serves as a support and stop for the seat in its horizontal and inclined positions, and the spring *i*, connected with the front of the bar *f* and seat as specified, said parts being constructed and arranged as shown and set forth.

96,549.—H. W. Clapp, Northampton, Mass.—*Hoeing-Machine.*—November 9, 1869.

Claim.—1. The combination, on a truck, of two or more hoes or spades, E E, arranged for operation by motion derived from the wheels of the truck, as herein shown and described.

2. The combination, with a pair of spades or hoes, operating as described, of a guard or shield, Q, moving and adjustable vertically, as described.

3. The combination, with the spades or hoes, arranged for operation as described, of the vibrating cultivators V V, as specified.

4. The combination, with the spades or hoes, of the cultivators V V and V^1 V^2, as specified.

5. The combination, with the spades or hoes E E, of the chains M, rollers N, levers O, and spring-catches P, as specified.

6. The combination of the spades or hoes, cultivators V V, V^1 V^2, and H^1, all as specified.

96,550.—Samuel Clark, New York, N. Y.—*Kite.*—November 9, 1869.

Claim.—1. So attaching a kite to its check-line *e*, that the kite will present different angles to the currents of wind, according to the force of the wind, substantially as described.

2. A spring, *d*, or its equivalent, interposed between the check-line *e* and the kite A, in combination with a line, *f*, or its equivalent, substantially as described.

3. The combination of the line B with a kite, which is constructed substantially as described.

96,551.—Thomas J. Coulston, Springville, assignor to E. S. Shamtz and Joseph Johnson, Royer's Ford, Pa.—*Hinge for a Door or Window Frame of a Stove.*—November 9, 1869.

Claim.—A hinge, *a' b'*, constructed, applied, and operating substantially in the manner and for the purpose described.

96,552.—Patrick H. Coyle, Newark, N. J.—*Boiler-Tube Cleaner.*—November 9, 1869.

Claim.—1. A tube-cleaner having short sectional scrapers, each secured upon a bowed spring, and held to place by it only, and in such manner that the heads may be adjusted nearer to each other, to increase the bulge of the springs, without obstruction from the scrapers, substantially as shown and described.

2. The combination, with the springs and scrapers, of the disks G, the stationary head C, or its equivalent, and an adjustable head, E.

96,553.—Ezekiel K. Davis, New York, N. Y., assignor to Duckworth & Sons, Pittsfield, Mass.—*Jacquard-Mechanism for Looms.*—November 9, 1869.

Claim.—1. The T-levers, in combination with the suspension-board and trap-boards, when arranged and constructed so as to produce the mode of operation hereinbefore described.

2. In combination with the card-prism and its reciprocating mechanism, the bent arm *p* and the T-lever, arranged and constructed to operate in the manner described.

96,554.—William Edward Davis, Jersey City, N. J.—*Electro-Magnet.*—November 9, 1869.

Claim.—An electro-magnet, which has the wire wound in alternate layers upon the spools or cores, so that it will pass back and forth between them, substantially as and for the purposes herein shown and described.

96,555.—Edwin Dayton, Meriden, Conn.—*Lateral or Diverging Connection for Cement Water-Pipes.*—November 9, 1869.

Claim.—The box or shell A, provided with one or more branch collars, C, extending therefrom at any required angle, for jointing cement water-pipes, in the manner and for the purpose as herein specified.

96,556.—James Dempster and Henry Holcroft, Media, Pa.—*Carding-Machine.*—November 9, 1869.

Claim.—1. The conducting-roller *h*, in combination with the feed-rollers 5 and 6, as described, for the above purpose.

2. The tumblers *g g*, in combination with the cylinder E, as described, for the above purpose.

96,557.—T. S. E. Dixon, Janesville, Wis., assignor to himself and William H. Payne, same place.—*Street-Car Starter.*—November 9, 1869.

Claim.—1. The curved arm or segmental wheel F and weighted pawl H, in combination with a ratchet-wheel attached to the axle or wheels of the vehicle, substantially as and for the purpose set forth.

2. The pivoted draught-bar I, formed with an arm, *i'*, when used in connection with the arm or segmental wheel F, and pivoted weighted pawl H, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the pivoted and weighted lever-catch L with the draught-bar I, and the frame of the car, substantially as herein shown and described, and for the purpose set forth.

96,558.—Johnson Dodge, New Orleans, La.—*Coffee-Pot.*—November 9, 1869.

Claim.—A steam coffee-maker, provided with an outer chamber for holding water, a perforated cup, or filter for holding the ground coffee, and an inner chamber or receptacle for the liquid coffee, when constructed and operating substantially as shown and described.

96,559.—William Donoghue and Frederick L. Charlton, Philadelphia, Pa.—*Hose-Bridge.*—November 9, 1869.

Claim.—The sides A B, having the hose-openings K, transverse tie-rods C D E, having the tenon-ends *c*, the mortises *d*, on the sides A B, and the movable adjustable floor F G H, carried by the transverse tie-rods C D E, the whole combined and arranged substantially as shown and described.

96,560.—David Dorman, Wheatland Furnace, Pa., assignor to himself and Thomas Johnston.—*Balance Slide-Valve.*—November 9, 1869.

Claim.—The arrangement of a series of packing-strips between the upper and lower portions of a quadrangular divisional slide-valve, said strips being of such construction and shape as will admit of a passage or steam-way underneath the same, and being so relatively arranged that they will form a perfect joint with each other, substantially as described and set forth.

96,561.—Joseph G. Downer, Auburn, N. Y.—*Fence.*—November 9, 1869.

Claim.—The elongated screw-bolt *d*, in combination with a fence or panel thereof, constructed substantially as described, and operating as and for the purpose specified.

96,562.—Robert I. Draughon, Claiborne, Ala.—*Cotton-Cultivator.*—November 9, 1869.

Claim.—1. The combination, with the frame A and wheels C, of the oscillating frame F, the two sets of rotary cutters S, adjusting-shaft M, arms K L, connecting-rods H I, and adjusting-catches, substantially as specified.

2. The combination, with the frame A and wheels C, of the oscillating frame G, rotary cutters W, arranged to work across the rows, the adjusting-shaft N, arms and connecting-rods, substantially as specified.

3. The combination, on one frame, A, and wheel C, of the two sets of cutters S, and the one set W, when arranged on oscillating or adjustable supports, and to act upon both sides of the row, and transversely thereof, substantially as specified.

96,563.—Charles Drew, Newark, N. J.—*Harness-Pad.*—November 9, 1869.

Claim.—Uniting the binding D to the lining C, by stitching it simultaneously with the stitching of the lining to the top, and by the same operation, substantially as specified.

96,564.—James Duckworth, Pittsfield, Mass., assignor to Duckworth & Sons, same place.—*Loom for Weaving Tape, &c.*—November 9, 1869.

Claim.—1. In combination with filling-thread carrier, the comb-beater for beating up the filling-threads, having the mode of operation substantially as herein described.

2. In combination with the belt-shipper, the thread-protector and the levers and cams which con-

stitute the mechanism for releasing the belt-shipper, to stop the loom, substantially as described.

96,565. — CLEVELAND F. DUNDERDALE, New York, N. Y.—*Apparatus for Generating and Carbureting Gases.*—November 9, 1869.

Claim. — The sloping or funnel-shaped bottom, with drain-conduit and cock, as shown at A, B, and D, when used in a gas-generator, constructed substantially as described, and operating as and for the purposes set forth.

96,566. — FRANCIS W. EBERMAN, West Salem, Ill.—*Envelope*—November 9, 1869.

Claim.—Securing the flap C, and an intervening strip, A or A′, to the part B, so that the edge of the flap and the said strips will be unattached for the distance of a space sufficient to be taken hold of for tearing the envelope open, whether the said strips be a part of the flap or separate strips pasted thereto, or to the part B, all substantially as specified.

96,567.—THOMAS A. EDISON, New York, N. Y., assignor to SAMUEL S. LAWS, same place.—*Printing-Telegraph Apparatus.*—November 9, 1869.

Claim.—1. The stationary pins *e f g h*, in combination with the clicks *b c*, actuated by the armature-levers E F, and acting on the ratchet D, substantially as and for the purpose described.

2. The combination of a separate electro-magnet with the unison-lever L, substantially as set forth.

96,568. — JACOB EDSON, Boston, Mass.—*Capstan.*—November 9, 1869.

Claim.—1. The capstan-pawl *o*, as made with the lip *p*, arranged to relieve the center-pin from strain as described, such lip being for other purposes, as explained.

2. The arrangement of the plug *t* and the lines *q*, with the pawls *o* and the capstan-head E.

3. The combination, as well as the arrangement, of the journal *l* with the capstan-head E, the pinion *k*, and the rotary gear-frame or spider D, arranged within the capstan, as set forth.

4. The arrangement of the auxiliary pawl or pawls *h* and the ratchet *i*, with the spindle C, the rotary spider D and its gears, the capstan-head and its pinion and pawl or pawls, and the capstan-barrel and its internal gear.

96,569.—SAMUEL ENSIGN, New Franklin, Ohio.—*Bridge.*—November 9, 1869.

Claim.—1. The combination, with two exterior and two interior bars *a a* and *b b*, shaped as described, of the shouldered bolts C, secured by the nuts *d*, all as set forth.

2. The improved bridge above described, each of its parts being shaped, fitted, and arranged in structure with respect to the others, as shown and described.

96,570.—LEVI FERGUSON, Lowell, Mass.—*Loom for Weaving Pile-Fabrics.*—November 9, 1869.

Claim.—1. The combination and arrangement of the double slotted bent lever D, with the lay and the loom-frame, and with the shuttle box, pivoted at its outer end to the lay; the said lever being applied to the shuttle-box, the lay, and the frame of the loom, substantially in manner and so as to enable it to operate therewith, and effect the movements of the shuttle-box, as explained.

2. The arrangement of the stationary guard *o′*, with the wire-stall H, as described, and with the hooked arm of the driver K, arranged in and to operate with the carrier as explained.

3. The carrier I, in combination with the hooked arm L, having a projection thereon that moves within the carrier, and prevents the hook from rising out of engagement with the wire-head, while the latter may be in movement within the said carrier.

4. The combination of the slide-rod *k′* and the "compound joint," as set forth, or their mechanical equivalent or equivalents, with the driver K, and the carrier I, to operate as set forth, and with a wagstaff *i′*, pivoted to, and so as to be actuated by a rock-shaft, *h′*, as described; the purpose of such slide-rod and compound joint being to so connect the driver with the wagstaff as to allow the driver to move within the carrier, and to be moved by it and such wagstaff, substantially in manner as specified.

96,571. — LEONARD ASA FLEMING, New York, N. Y.—*Ear of Wooden Buckets.*—November 9, 1869; antedated November 1, 1869.

Claim.—Attaching the bail to wooden vessels by means of disks *b*, expanded within recesses in the wood, substantially as and for the purpose shown and described.

96,572.—JOHN FOX, New York, N. Y.—*Manufacturing Shovels.*—November 9, 1869.

Claim. — 1. The combination of the corrugated female die E with the correspondingly corrugated male drop die D, operating together as and for the purpose specified.

2. An improved fire-shovel, A, corrugated at the back or point of strain, in the manner shown and described.

96,573. — J. G. FREDENBURH and WILLIAM V. ANDREWS, Newcastle, Cal.—*Water-Wheel.*—November 9, 1869.

Claim. — 1. The buckets A, provided with the spiral concave faces B, and combined with the rim, substantially as specified.

2. The buckets, having faces formed as described, provided with flanges C, and secured to the rim, substantially as specified.

96,574. — JOHN FRYMIRE, Orangeville, Pa.—*Fly-Net.*—November 9, 1869.

Claim. — A fly-net, composed of cylindrical ribs, and threads secured thereto by a half stitch through apertures at right angles to each other, or nearly so, in the manner substantially as shown and described.

96,575.—CONRAD FURST, Chicago, Ill.—*Colter for Plows.*—November 9, 1869.

Claim.—1. The arm, or pendant B, having a curved or angular back, and a cylinder or bearing, C, on the side thereof, in combination with a bent fork, E H, substantially as and for the purposes specified.

2. The combination and arrangement of the adjustable clamp F G, with the beam A, arm B, when provided with a curved or angular back, and a side bearing C, stop *a b*, bent wheel-fork E, and wheel D, all constructed and operating substantially as specified.

96,576.—HORATIO GALE, Albion, Mich.—*Horse Hay-Rake.*—November 9, 1869.

Claim. — The lever L, having the stirrup *i*, and pivoted to the standard E, as shown, when provided with the hand-lever L′, adjustable by means of the disks *d d*, and when adjustably connected, by means of the pivoted perforated links *b b*, with the arm F attached to the rake-head, all being constructed and arranged substantially as herein described, whereby the rake-teeth are held down, either by the pressure of the foot, at *i*, or by carrying the links *b* out of line with the lever L, as set forth.

96,577. — MERRITT GALLY, Rye, assignor to ALLEN CARPENTER, Rochester, N. Y. — *Printing-Press.*—November 9, 1869.

Claim. — 1. The plate C, used either as bed or platen of a printing-press, when said plate is supported upon a rocker or rockers and rocker-seat or rocker-seats, or their equivalents, whether said rocker-seat or rocker seats are made fixed or adjustable, substantially as herein set forth.

2. The arms D and D″, in combination with stop *g*, or their equivalents, forming a slipping-toggle, substantially as herein set forth.

3. The pulley K, strap, cord, or chain M, and flanged slip-gear I J, combined and constructed as herein described, and for the purpose herein set forth.

96,578. — MERRITT GALLY, Rye, assignor to ALLEN CARPENTER, Rochester, N. Y. — *Printing-Press.*—November 9, 1869.

Claim.—1. A platen for a printing-press having two opposite faces A A′, in combination with rack

and pinion R W, and clutch N^5, substantially as herein described, and for the purpose herein set forth.

2. The yoke-shaped rod and spring S, journal-box *t*, and nuts *n n'*, in connection with the body of a roller-carriage, when combined and constructed as herein described, and for the purpose herein set forth.

96,579. — MERRITT GALLY, Rye, assignor to ALLEN CARPENTER, Rochester, N. Y. — *Printing-Press.*—November 9, 1869.

Claim. — 1. The plate A, used either as a bed or platen of a printing-press, in combination with the friction-roller or rollers, or equivalent, studs, stops, or lugs P', flange V, or its equivalent, and curved support or rocker R, substantially as herein described and for the purpose herein set forth.

2. The spring C, in combination with a toothed rocker-seat or plain rocker-seat and rack, combined substantially as herein described, and for the purpose herein set forth.

3. The supporting frame-work G, or combined frame-work and bed G B, when the sides of said frame-work or combined frame-work and bed are depressed for letting in the cranks or crank-wheels F, substantially as herein described, and for the purpose herein set forth.

4. The levers T T, when said levers are pivoted behind the cranks or crank-wheels F F, in the line with said cranks, and so curved as to allow full sweep of cranks F F without contact of said cranks and levers, substantially as herein described, and for the purpose herein set forth.

5. The levers T, in combination with the slotted fulcra S, substantially as herein described, and for the purpose herein set forth.

6. The levers H and H', and weight W, combined and arranged substantially as herein described, and for the purpose herein set forth.

7. The method herein described for perfectly balancing or varying the counterpoise of plate A, used either as bed or platen of a printing-press, avoiding the necessity of the use of counterweight, springs, or the application of force, for the purposes specified, substantially as herein set forth.

8. A changeable ink-fountain, with changeable linings, shells, or tanks, for different kinds or colors of ink, whether constructed in the precise manner herein described, or in any other manner to produce the same result.

9. The combination of rod and springs *t t*, nuts or stops *m m'*, griper-bar S^2, with lever d^4, and swivel-eye *m''*, substantially as herein described, and for the purpose herein set forth.

10. The draw-bars D, with slots C^5 in combination with crank-pins d^5, substantially as and for the purpose set forth.

96,580. — O. H. GARDNER, Fulton, N. Y. — *Vise.* — November 9, 1869; antedated November 1, 1869.

Claim.—1. The offset *c*, formed on the rear shank b^1, for the purpose of carrying its lower end perpendicularly in line with the center of the upper plate D, substantially as herein shown and described.

2. The offset *e*, formed on the shank *g'* of the front jaw, to carry the ball H perpendicularly in line with the face of the jaw, substantially as and for the purpose herein shown and described.

3. Making the aperture *h* through the shank *g'* of the front jaw of tapering form, for the purpose of giving greater freedom of motion to the said jaw, as set forth.

4. The prolonged hub *i*, formed on the shank of the front jaw, for the purpose and in the manner substantially as herein shown and described.

5. The rib *d*, formed on the rear shank b^1, to work in or against the plate E, substantially as and for the purpose herein shown and described.

96,581. — JOSEPH GAWLER, Washington, D. C.—*Head-Brace for Coffins.*—November 9, 1869.

Claim. — The within described head-brace to square-headed wooden burial-cases.

96,582. — AMBROSE GIRAUDAT, New York, N. Y. — *Machine for Branching Artificial Flowers.* — November 9, 1869.

Claim. — 1. The tube D, guiding the wire and inner thread *t*, and supporting the rotary spool or spools, by which the outer thread is applied to the stem of an artificial flower, substantially as herein shown and described.

2. The rotary frame H, arranged on the guide-tube D, to support the covering-spool or spools, substantially as herein shown and described.

3. The frame J, arranged to receive two or more spools L, and to be locked to the rotary frame H, in the manner set forth.

4. The wire *n*, arranged on the frame J, to lock the spools L thereto, and to lock the said frame J to the rotary frame H, substantially as herein shown and described.

5. The spring *o* and screw *p*, in combination with the frame H, to regulate the tension of the covering-thread, substantially as herein shown and described.

6. The rotary spools for applying the covering-thread, arranged in combination with the wire *s* for the stem, which is fed along without being turned.

7. The belt G and clamp P, arranged in combination with each other, substantially as and for the purpose herein shown and described.

8. A machine for branching artificial flowers, arranged substantially in the manner herein shown and described, and to operate as set forth.

96,583. — HENRY GROSS, Middletown, Pa. — *Manure-Hook or Drag.* — November 9, 1869; antedated October 26, 1869.

Claim.—The compound lever B C and spring *d*, when the same are arranged and work in combination with the tine-shaft E, substantially as described, as and for the purpose specified.

96,584. — J. M. HALE, Georgia Plains, Vt. — *Butter-Tub.*—November 9, 1869; antedated November 1, 1869.

Claim. — The couplings B, constructed as described, having hooks or key-seats *e*, and keys *i*, or their equivalents, for the purpose of locking the sections of a butter-tub together, in combination with the said sections, substantially in the manner and for the purpose set forth.

96,585. — J. M. HALE, Georgia Plains, Vt. — *Pipe-Coupling.*—November 9, 1869.

Claim.—The coupling A, provided with a tubular projection, B, and division-plate C, or their equivalents, substantially as and for the purposes herein set forth.

96,586.—JAMES A. HAMRICK, Parnassus, Va.—*Corn-Planter.*—November 9, 1869.

Claim.—1. The construction of axle A, with a vertically-perforated and horizontally-slotted beam upon one side, substantially as and for the purposes described.

2. Slides *a* a^2, cam-plates E F, levers E' F', and springs *c*, combined and operating substantially as described.

3. The levers E' F', applied to their respective cams, E F, and to the axle A, substantially as described.

4. Segmental runners P, applied to the machine, and constructed substantially as described.

5. The segmental slides *s*, applied to runners P, and operated by lugs *d*, on wheel C, acting through the medium of arms *s*, shaft D, and stirrup *d'*, substantially as described.

6. The rolling weights *k*, applied to rear extensions of the teeth R, substantially as and for the purposes described.

7. The combination, in a seeding-machine, of the sides *a* a^2, and *s*, arranged and operating as set forth.

96,587.—E S. HARRIS, Philadelphia, Pa.—*Manufacture of Artificial, and Preservation of Natural Flowers.*—November 9, 1869.

Claim.—The process herein described, of preserving the substance of natural flowers, by the application of rice-paper.

96,588. — DAVID HATHAWAY, Troy, N. Y. — *Stove-Grate.*—November 9, 1869.

Claim.—1. The grooved arms, substantially as and for the purpose specified.

2. The compound lever, constructed and acting as set forth.

3. The connection and operation of the sliding bars by means of the compound lever, in combination with the grooved arms, as set forth in the specification.

96,589.—R. H. HAWKINS, Akron, Ohio, assignor to himself and THOMAS H. DODGE, Worcester, Mass.—*Sled.*—November 9, 1869.

Claim.—1. The combination of the metallic knees and their cylindrical tops or projections *f*, with the grooved beams A B, (with or without their metallic lining-pieces *n*,) and the clasps or other binding-devices, for holding together said knees and beams, substantially as shown and described.

2. The construction of the metallic knee with a projection to enter a corresponding recess in the beam, or with a recess to receive a corresponding projection on the beam, and with a mortise to receive the tenon of the rave *b*, as and for the purposes described.

3. The combination of the beams and the runners with the metallic knees, connected with and held to said parts, substantially in the manner shown and set forth.

4. The herein-described combination, with the mortised metallic knees, of the tenoned raves *b*, constructed substantially as shown and specified.

5. The combination of metal clasps or bands with the knee and beam, to secure the union of the knee and beam in an independent runner-sled, as shown and described.

96,590.—AUGUST HITSCHERICH, Milwaukee, Wis.—*Beer-Cooler.*—November 9, 1869.

Claim.—1. Tub A, water-tanks B C and D E, with their connection G, water-pipes M, N, and O, substantially as described.

2. Water-tanks B C and D E, connections G, and handles and openings I and K, substantially as described.

96,591.—JOHN HOPE, Providence, R. I., assignor to HOPE AND COMPANY, same place.—*Diamond-Holders for Engraving Printers' Rollers.*—November 9, 1869.

Claim.—In combination with a curved and slotted diamond-holder, the curved weight, fitted thereto, and connected with the diamond-stem G, substantially as shown and described.

96,592.—FRANKLIN HOYT, Montpelier, Vt.—*Water-Wheel.*—November 9, 1869.

Claim.—1. The wheel A, constructed substantially as described, with laterally and vertically curved buckets *a*, and the band *a''*, in combination with the bottom plate *b* of the casing B, as and for the purpose specified.

2. The grates D D, in combination with the chutes *f f*, pivoted links *c' c'*, and ring C, the whole arranged and operating substantially as and for the purpose described.

96,593.—JAMES B. HUNTER, Ashley, Ill.—*Gang-Plow.*—November 9, 1869.

Claim.—1. The slotted plates F and draught rod G, in combination with the plow-beams D E, substantially as herein shown and described, and for the purpose set forth.

2. The adjustable frame C c^1 c^2, in combination with the axle B, plow-beam D, and tongue M, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the bent crank-lever L with the frame C and plow-beam D, substantially as herein shown and described, and for the purpose set forth.

4. The combination of the draught-rod O with the tongue M, double-tree N, and plow-beam D, substantially in the manner herein set forth and described.

96,594.—WILLIAM H. IVENS and WILLIAM E. BROOKE, Trenton, N. J.—*Punching and Shearing Machine.*—November 9, 1869.

Claim.—The combination of the shafts B, having eccentric wrists *d*, sliding boxes *e*, with the heads J, eccentric gears D E, and driving shaft G, substantially as set forth.

96,595.—JOHN JOBSON, Derby, England.—*Explosive Projectile.*—November 9, 1869.

Claim.—A projectile, formed of a base, *a*, concentric rings *b c*, stud-ring *d*, cup *n*, packing *m l*, the rings e^1 f^1, e^2 f^2, e^3 f^3, e^4 f^4, e^5 e^6, the chambered piece *g*, and plug g^1, all constructed and arranged, with respect to one another, in the manner described.

96,596.—NELSON JOHNSON, Jasper, N. Y.—*Saw-Swage.*—November 9, 1869.

Claim.—1. In combination with the stock A and sliding swage-pin B, the adjustable rest C, adapted to bear upon the edge of the saw, substantially as described, and rendering unnecessary a foundation upon the hub or mandrel.

2. The swage-pin B, extending longitudinally through the stock, for the purpose of adapting it to receive the blow direct, substantially as described.

3. A swage-pin, B, having a point, b^3, composed of a plurality of bevel-surfaces of the same or different angles, substantially as described, for the purposes set forth.

4. A swage-pin, extending longitudinally through the stock, so as to be acted on direct by the blow of the hammer, when tapered so as to prevent its movement in the stock, substantially as represented and described.

96,597.—J. A. KEMMIS, New Orleans, La.—*Pencil-Case.*—November 9, 1869.

Claim.—The improved pencil and rubber holder, having the spring-clamping holders C, rings E D, spring-hooks F, and screw-cap B, all arranged substantially as herein specified.

96,598.—J. GARDNER KENYON, Ferndale, Cal.—*Fountain-Pen.*—November 9, 1869.

Claim.—1. In combination with the ink-case A, the cavity *g*, by means of which a receptacle is provided for the sediment deposited by the ink, and a narrow edge formed around the stem, as a seat for the valve *b*, substantially as described.

2. In combination with the stem C, carrying the valve *b*, the arrangement of the rubber spring *d*, attached to the removable cone B, and regulated by the adjustable screw-nut *e*, substantially as specified.

96,599.—GEORGE V. LEICESTER, Boston, Mass.—*Toilet-Bedstead.*—November 9, 1869.

Claim.—1. The combination and arrangement of the two lifter-arms G H, their shafts I K, and the spiral springs applied thereto.

2. The combination and arrangement of the bureau B, its extension E, the ears C C, the case D, the bed-frame A, and the lifter-arms, their spring *h l*, and the shafts I K, the whole being substantially as described.

3. The combination of the spring tension-regulating mechanism, viz, the capstan-head, ratchet, and retaining-pawl, with the springs and their shafts, with the arms G H, combined with the bed-frame and the case, connected with a bureau, as set forth.

96,600.—JOHN LIPPINCOTT, Pittsburgh, Pa.—*Metal-Rolling Apparatus.*—November 9, 1869.

Claim.—Constructing rolls, for metal-rolling mills, hollow, and adapting, to said hollow rolls, tubes, or other appliances, by which a stream of water may be constantly kept flowing through them, substantially as described, for the purpose set forth.

96,601.—H. LOMBARD, San Francisco, Cal.—*Rotary Steam-Valve.*—November 9, 1869.

Claim.—The combination of the seat B, valve A, and auxiliary valve G, when provided with ports and passages, and arranged for operation, substantially as specified.

96,602.—CHARLES B. MACLAY, Delavan, Ill.—*Corn-Harvester.*—November 9, 1869.

Claim.—1. The combination of the guides K K', revolving troughs *a a a a*, (armed with cutting-edge,) and cover *b*.

2. The combination of revolving troughs *a a a a*, apron *o*, and husking-rolls *m m'*.

3. The apron *o* and husking-rolls *m m'*, in combination with revolving troughs *a a a a*, cover *b*, and guides K K'.

4. The construction and arrangement of guides K, K', revolving troughs *a a a a*, cover *b*, frame *p*, apron *o*, rollers *m m'*, and elevator *f*.

96,603.—JAMES MAHONY, Newport, R. I.—*Paddle-Wheel.*—November 9, 1869.

Claim.—The specific arrangement herein set forth; that is, placing them obliquely in half lengths, arranged so that the half lengths alternate in position, while each half length sets with the plane of its face passing through or near the axis of the shaft, all substantially as and for the purposes herein set forth.

96,604.—C. J. MILLER, Jr., Richmond, Ky.—*Churn.*—November 9, 1869.

Claim.—The fluted churn, in combination with the double-winged dasher, whose wings revolve in contrary directions, substantially as herein shown and described.

96,605.—JOHN C. MILLIGAN, Brooklyn, N. Y.—*Biscuit-Pan.*—November 9, 1869.

Claim.—Biscuit-pans united in clusters, by lapping and riveting the flanges, and either provided with the stiffening-wires or bars at the edges, or not, substantially as specified.

96,606.—ROBERT MORRIS, Salem, Ind.—*Harvester.*—November 9, 1869.

Claim.—1. The driving-wheel B, toothed rim G, wheel E, with toothed hub F, shaft D, and crank-shaft A, all combined and arranged substantially as specified.

2. The combination of the tilter K and weighted arm X with a hood, L, and guard M, all constructed and arranged as and for the purpose specified.

96,607.—JAMES O. MORSE, Englewood, N. J., and GARDNER D. HISCOX, Brooklyn, N. Y.—*Steam-Radiator.*—November 9, 1869.

Claim.—1. The diaphragm *a*, forming a separate compartment, at one side or end of the base.

2. The use of a separate compartment, formed at one end or side of the base, whether by means of the diaphragm or otherwise, and communicating with the innermost of the pairs of tubes composing the radiator, by means of a series of tubes proceeding from it, in which tubes said inner tubes are inserted, substantially as described.

3. The small openings *g*, for the passage of the drip from the first to the second chamber.

96,608.—M. MURPHY, Charlotte, N. C.—*Governor for Steam and other Enginery.*—November 9, 1869.

Claim.—1. The arrangement of the sliding spool B, connected to the weighted arms, the wheels D C G, worm H, and toothed sector I, all substantially as specified.

2. The combination of the sleeve B, of a governor carrying the wheels D C, and connected to the weighted arms, as specified, and the wheel G, when arranged for adjustment relatively to the said wheels C D, substantially as specified.

96,609.—HARRISON OGBORN, Richmond, Ind.—*Straw-Cutter.*—November 9, 1869.

Claim.—1. The described mode of attaching two knives to the radial arms of the balance-wheel of a straw-cutter, in combination with the devices for adjusting the knives to the face-plate J, as herein set forth.

2. The combination of the pin G, holes *c c*, and slotted hole X, for the purpose of retaining the balance-wheel in any desired position upon the shaft, or of permitting of the adjustment of the knives, as described.

3. The adjustable spring Z, in combination with the pressure-board R, when arranged as described, for the purpose of holding the straw and fodder compactly, as described.

4. The combination of the spring-bar Q, when made adjustable, as described, hooked rod P, and roller V, as and for the purposes described.

96,610.—ANSON W. PAYNE, Maine, N. Y.—*Whiffletree.*—November 9, 1869.

Claim.—The combination of the hook C, swivel *d*, plate B, the whiffle-tree A, all constructed as herein set forth.

96,611.—WILLIAM H. PERRY, Ripley, Ohio.—*Thrashing-Machine.*—November 9, 1869.

Claim.—1. The upper shoe A of a grain-thrashing machine, when provided with the inclined bottom *a*, the inclined screen B, the side-delivery spout *b*, and the discharge-opening *c*, arranged as described, for the purpose specified.

2. In combination with the above, the cover C, substantially as described, for the purpose specified.

96,612.—GEORGE B. PHILLIPS, Poughkeepsie, N. Y., assignor to A. M. CORNELL AND COMPANY, same place.—*Rock-Drilling Machine.*—November 9, 1869.

Claim.—1. The combination and arrangement of the segment-gear P, rack R, carriage G, lifter H, and wedge I, for raising and dropping the drill, substantially as described.

2. In combination with the devices above claimed, the springs V V and yoke W, for forcing down the drill-bar, substantially as described.

3. The combination and arrangement of the collar *a*, with its spring *e* and arm *c*, latch *i*, and spring *b*, arranged to operate substantially as described, for the purpose set forth.

96,613.—S. MONTGOMERY PIKE, Cincinnati, Ohio.—*Heat-Radiator.*—November 9, 1869; antedated October 23, 1869.

Claim.—The radiator, consisting of pipe *a* and flanges, the arrangement of said flanges in the position and angles herein shown and described.

96,614.—WILLIAM R. POOL, Havanna, Ala.—*Plow.*—November 9, 1869.

Claim.—1. The combination, with the mold-boards B, either provided with plates C, or projections formed by notches D, and the stocks A of the yoke E, clamping-plate F, and set-screws, when arranged substantially as specified.

2. The combination of the same, when the stock A is provided with the socketed plate for the set-screws and the notched plate H, and the mold-boards are provided with projections I, substantially as specified.

96,615.—NELSON READ, Jewett City, Conn.—*Mode of Transmitting Motion.*—November 9, 1869.

Claim.—The combination of a lever, F, swiveled to a block, I, with a grooved and fixed guide, H, the two disks D E, and the link G, as and for the purpose specified.

96,616.—SAMUEL REED, Rising Sun, Md.—*Window-Sash Fastening.*—November 9, 1869.

Claim.—1. The combination of the catch F, slotted plate D, and shooting or sliding bolt E, substantially as set forth.

2. The arrangement of the bearing-guards J at the upper end of sash B, and lower end of sash C, to prevent their lateral displacement in sliding up and down, all as set forth.

96,617.—JOHN E. REGAN, Chicago, Ill.—*Boiler-Tube Cleaner.*—November 9, 1869.

Claim.—1. Cleaning two or more flues of a steam-boiler or generator simultaneously, by discharging steam, directly from the boiler, into one end of the flues, by the means set forth, substantially as herein shown and described.

2. The frame-work of tubes, consisting of the parallel pipes E, nozzles F, and pipe C, in combination with a steam-boiler or generator and its flues B, substantially as herein shown and described.

96,618.—CLAUDE RENARD, MICHEL PERRET, and JULES CÉSAR VOITURET, Mâcon, France.—*Tap-Cock.*—November 9, 1869.

Claim.—The combination and arrangement of the disks and washers within the chamber of the cock, so that on the chamber filling with liquid, the pressure of this liquid pushes the disks against the wash-

ers, closing the chamber, top and bottom, and forming a perfectly water-tight cock, substantially as described.

96,619.—James Rice, Prairie Creek, Ind.—*Hand-Spinning Machine.*—November 9, 1869.

Claim.—The arrangement of case A, driving-wheel E, vertical axis F, hand-crank G, the intermediate shaft and pulley and spindle I, with the adjustable stand B C and pin D, all constructed as described.

96,620.—Emry Rooks, Trenton, Tenn.—*Axle-Skein.*—November 9, 1869.

Claim.—The skein A, provided with an orifice having a straight lower side, for the support of a cast-iron axle, and combined with the collar E, likewise having a straight lower side, in continuation with that of the orifice of the skein A, and also having its upper side inclined upward and outward, to fit it for the reception of the tapering end of the wooden bed-piece, in the manner set forth.

96,621.—Erastus B. Sample and John Sparks, Brooklyn, N. Y.—*Making Toy-Torpedoes.*—November 9, 1869.

Claim.—The metal-foil covering, and the mode of combining the fulminating-powder with the plaster of Paris, substantially as described, thereby producing a safe, reliable, and cheap hand toy-torpedo.

96,622.—A. A. Scank, Nyack, N. Y.—*Steering-Apparatus.*—November 9, 1869.

Claim.—1. The herein-described arrangement, with the hulls of vessels driven by single-screw propellers, of two rudders in advance of the propellers, one under each quarter, substantially as specified.

2. The arrangement of the rudder-posts B and braces C D with the hull, substantially as specified.

96,623.—Eilert O. Schartau, Philadelphia, Pa.—*Gas-Heater.*—November 9, 1869.

Claim.—1. The tubular coffee or tea pot, with hot-air chambers.

2. The combination of this kettle with the lower half of the jointed glass chimney for lamps and gas-burners, and also of the holder or receptacle for tea or ground coffee, which is attached to the said kettle in the manner and for the purpose herein set forth and specified.

96,624.—George A. Seaver, New York, N. Y.—*Latch.*—November 9, 1869.

Claim.—1. The follower, made for the reception of the spindle, with a recess, substantially as described, one part of which fits the spindle, and the other permits the spindle to turn freely therein.

2. The combination of a latch with the sliding follower, so that the latch may be reversed without removing the spindle.

3. The combination of a sliding follower with the mechanism of a lock, operated by the key, in such manner that the turning of the key connects or detaches the spindle and the latch, as may be required.

96,625.—Thomas J. Secor and Charles E. Shumway, Phelps, N. Y.—*Weeding-Hook.*—November 9, 1869; antedated October 26, 1869.

Claim.—The herein-described weeding-hook, having its points arranged in lines forming two sides of a triangle, as specified.

96,626.—Franklin Skinner, Cleveland, Ohio.—*Oil-Can.*—November 9, 1869.

Claim.—The cap B, provided with a recess, C, tube D, and wick E, as arranged, in combination with an oil-up or can, F, in the manner substantially as and for the purpose set forth.

96,627.—Thomas J. Sloan, Bronxville, N. Y.—*Door-Knob.*—November 9, 1869; antedated October 30, 1869.

Claim.—The shank *e*, with the serrated fins *d d*, in combination with the vitrified knob *a*, cavity *b*, and dowels *c c*, substantially as and for the purposes set forth.

96,628.—Jasper Snell and John M. Crosland, Pottsville, Pa.—*Railway-Rail Splice.*—November 9, 1869.

Claim.—The railway-rail clutch or splice, formed by the angular channel-bar plate A and the side-plates B B, constructed and applied as set forth.

96,629.—H. S. Stewart, Yreka, Cal.—*Endless-Chain Water-Wheel.*—November 9, 1869.

Claim.—1. A chain for power water-wheels, composed of plain links D, and inclined links C, the latter holding the buckets off from frictional contact from the former, as shown and described.

2. The chain, composed of links C D, in combination with polygon-shaped shafts F G, each side of said polygons corresponding in width to the length of one of said links, as and for the purpose specified.

3. The arrangement of the buckets B upon the inclined faces of the links C, in the manner set forth, so that when the links C D are aligned, one bucket will be within another, as described.

96,630.—Jacob Stroop, Joliet, Ill.—*Grain-Cleaner.*—November 9, 1869.

Claim.—1. The lining or facing the burrs, shown in Figs. 2, 3, 4, and 5, with metal plates, having triangular teeth or projections, constructed, operating, and arranged substantially as described.

2. The annular partitions 8 8 on the burr P, operating and arranged as and for the purposes set forth.

96,631.—Isaac H. Sutton, Coon Rapids, Iowa.—*Wind-Wheel.*—November 9, 1869.

Claim.—The combination, with a wind-wheel, of a gate, B, arms C, vane D, cord, and weight, when arranged substantially as specified.

96,632.—Charles L. Thiery, Boston, Mass.—*Manufacture of Watch-Cases.*—November 9, 1869.

Claim.—The manufacture of watch-cases, in the manner shown and described.

96,633.—Alois Thoma, New York, N. Y.—*Process and Apparatus for Converting Cast Iron into Steel.*—November 9, 1869.

Claim.—1. The arrangement of the swinging plate *l*, between the converting-chamber B and adjacent part of shaft A, as and for the purpose specified.

2. The combination of the generators C, heated-air channels *e*, water-chamber *g*, and channel *b*, with the mixing-channel *d*, whereby a combined gas is produced, by which the pig-iron may be converted into steel, as set forth.

3. The arrangement, in converting-chamber B, of the protecting-bars *p p*, to break the fall of metal, as it slides from incline *q*, after the removal of bars *n n*.

4. The arrangement, with respect to each other, of the metal-feeding shaft E, inclined channel *m*, and converting-chamber B, as described, the first to feed the crude iron by gravity, the second to decrease its pressure, and the third to contain the converting-gases.

5. The arrangement of the air-heating case D′, in the outer wall of the chamber *i*, for the purpose set forth.

6. The method, above described, of converting crude pig-iron into steel, by conveying, through separate channels intensely-heated carbonic oxide, highly rarefied air, and superheated steam, into a common mixing-channel, from whence the combination of gases is transmitted to the converting-chamber.

96,634.—William S. Thomas, Carbon Cliff, Ill.—*Enamel or Glaze for Pottery, Brick, Tiles, &c.*—November 9, 1869.

Claim.—1. An enamel, or glaze composed of cryolite, felspar, flint, and kaoline, made substantially as herein specified.

2. An enamel composed of cryolite, flint, oxide of lead, felspar, kaoline, and enamel-sand, made substantially as herein specified.

96,635.—Robert William Thomson, Edinburgh, Great Britain.—*Wheel for Self-Moving Carriages.*—November 9, 1869; patented in England, April 21, 1868.

Claim.—The constructing of the wheels of self-moving carriages with rubber tires, substantially in

the manner and for the purposes hereinbefore described.

96,636.—George N. Tibbles, Hudson City, N. J.—*Traction-Engine.*—November 9, 1869.

Claim.—1. The combination of drive-wheel O and traveler Q, with connecting-rods E E, operating as described, to give motion in either direction.

2. The combination of the lever Y, pulley Z, and shaft which rotates it, with band X, all arranged as described, to shift the rods E E′ to a forward or backward motion, or to disconnect them altogether.

3. A traction-engine, constructed, arranged, and operating in the manner and for the purpose substantially as herein shown and described.

4. In combination with slotted lever, the rack, pinion, detent, and hand-lever G, to change the fulcrum H, in the manner specified.

5. The combination, with the piston of a steam-cylinder, of an actuating-lever, D, moving upon a fulcrum readily adjustable by the driver, in the manner specified, whereby the power may be easily increased or diminished, without changing the pressure of steam.

96,637.—David Todd, Detroit, Mich.—*Signal-Lantern.*—November 9, 1869.

Claim.—1. The slide D, constructed as set forth.

2. The cone B, in combination with the slide D, arranged and operating as set forth.

3. The latch E, in combination with the slide D.

4. The frame K, operating as set forth.

5. The platform I, provided with a slot, as set forth.

6. The reservoir F, provided with the aperture F′, as set forth.

96,638.—S. D. Tripp, Lynn, Mass.—*Machine for Shaping Boot and Shoe Soles.*—November 9, 1869.

Claim.—1. The combination, with a last, arranged to oscillate as described, of a former, oscillating in unison therewith, and against the face thereof, and provided with a longitudinal convexity, fitting the hollow of the last when oscillating thereon, and concavities at the ends, fitted to work upon the heel and toe of the said last, substantially as specified.

2. The combination of the same, when the former is concaved transversely, and arranged to oscillate on its longitudinal axis, and the face of the last is made convex, to correspond therewith, substantially as specified.

3. The elastic washers L L, arranged on the rods F F, between the cross-head G and binding-nuts M M, to operate in conjunction with the rocker K and former I, as shown and described.

4. The combination of the rocker B and last A, substantially as specified.

96,639.—S. D. Tripp, Lynn, Mass.—*Device for Molding Soles of Boots and Shoes.*—November 9, 1869.

Claim.—1. The combination of the actuating-levers E F and stationary bed B, each having upon its end-faces corresponding cams, with a rotating traveler, G, each of said parts being shaped and arranged, with respect to the other, in the manner specified.

2. In combination with the lever B F, bed B, and traveler G, the elbow-lever H K, strap L, spring O, and bar N, all arranged, as described, to form a train of mechanism through which foot-power can be applied, as set forth.

96,640.—S. F. Van Choate, Boston, Mass.—*Distilling Alcoholic Liquors.*—November 9, 1869.

Claim.—The application of practically pure oxygen-gas to alcoholic vapors, for the purpose specified.

96,641.—Silvanus Frederick Van Choate, Boston, Mass.—*Cable and Testing-Post for Subterrancan Telegraphs.*—November 9, 1869.

Claim.—1. A conducting-cable for telegraphic purposes, in which a layer of clean, dry, fibrous material is interposed between the conducting-wire and the insulating-coating, in the manner and for the purposes set forth.

2. The construction of the testing-boxes for telegraph-purposes, whereby access of moisture is prevented, substantially as hereinbefore described.

3. In the construction of testing-boxes of telegraph-wires, affixing suitable characters for designating individual wires as well as the boxes themselves, substantially as before described.

4. The combination, with telegraph-conductors, of ground-wires, located at the test-boxes of the same, substantially as and for the purposes specified.

5. The combination, with subterranean telegraphic conductors and test-boxes, of ground-wires, substantially as and for the purposes specified.

96,642.—William Vine, Norwalk, Conn.—*Knife-Cleaner.*—November 9, 1869.

Claim.—1. The disk B, provided with serrated or corrugated ribs C, when used in connection with the wedges F, for fastening the leathers to the ribs, constructed and arranged to operate as herein described, for the purpose specified.

2. In combination with the above, the adjustable and removable fulcrum-blocks D H, and leather bearing G, constructed as herein described, for the purpose specified.

96,643.—Hiram L. Wanzer, Lanesville, Conn.—*Crank for Harvesters.*—November 9, 1869.

Claim.—1. In combination with a crank-pin, C, which has an eccentric projection, the set-screw *d*, arranged to lock the pin in any desired position, substantially as herein shown and described.

2. The pitman-wheel A of a harvester, when notched for receiving the set-screw *d*, substantially as herein shown and described.

96,644.—Otis Ward, Sunderland, Vt.—*Window-Frame.*—November 9, 1869.

Claim.—The combination and arrangment of the adjustable plate F, provided with one or more clamp-screws, as described, with the sashes, the window-frame, and the adjustable guides D D.

96,645.—William Westlake, Chicago, Ill.—*Lamp-Burner.*—November 9, 1869.

Claim.—1. The application of a pin or hook to a lamp-burner or collar, substantially as and for the purpose mentioned.

2. The hook or pin *a*, in combination with the socket or catch *d*, when applied to lamp-burners, substantially as specified.

96,646.—James B. Westwick, Galena, Ill.—*Mangle.*—November 9, 1869.

Claim.—1. The combination of the table D, rollers C, driving-shaft O, wheels P, racks E, pressing and mangling roller F, sliding bearing G, levers H L, connecting-rods K, and weights N, when all arranged substantially as specified.

2. The combination, with the driving-shafts O and T, of the disk R, toothed rack Q, guide X, pinion S, and sliding bearing U, all substantially as specified.

3. The combination, with the frame A, and the subject-matter of the second claim, of the slotted plate V, supported on the bolts W, substantially as specified.

96,647.—E. L. Yancy, Batavia, N. Y.—*Hay-Elevator.*—November 9, 1869.

Claim.—The combination and arrangement of the slides *b*, hinges F, bar E, and rope C, substantially as and for the purpose set forth.

96,648.—McClintock Young, Frederick, Md.—*Crank-Axle for Velocipedes.*—November 9, 1869.

Claim.—A velocipede-axle, formed of two pieces, A A, fastened together by a socket-joint and lock-pin, *d*, as shown in Fig. 1 of drawing.

96,649.—John Adams, Rochester, N. Y.—*Apparatus for Carbonizing Peat.*—November 9, 1869.

Claim.—The carbonization of peat, by means of the apparatus, consisting of the furnaces A A, retorts B B, and boiler C, said parts being provided with pipes *f g g h h*, connected by swing-pipe D, the whole arranged as described, and operating in the manner and for the purpose specified.

96,650.—Robert A. Adams, New York, N. Y.—*Compound Veneer and Ornamental Covering for Articles.*—November 9, 1869.

Claim.—The elastic veneers, composed of glue,

or analogous material, made and ornamented substantially in the manner herein set forth.

96,651.—P. A. ALTMAEIR, Harrisburgh, Pa.—*Sash-Lock.*—November 9, 1869.

Claim.—The sash-fastener or holder, composed of the pivoted bolt E, and the pivoted two-pronged tumbler, so arranged that no direct pressure can push back the bolt until the pronged tumbler is rotated.

96,652.—P. A. ALTMAEIR, Harrisburgh, Pa.—*Fishing-Reel.*—November 9, 1869.

Claim.—1. The combination of the catch *m n o* with the holders *s s'* and revolver F A F', when made to operate as herein described and set forth.

2. The holders *s s'*, so arranged that the reel can be inserted in a continuous line with the rod, as described.

96,653.—WILLISTON I. ALVORD, Bridgeport, Conn.—*Centering-Tool.*—November 9, 1869.

Claim.—The combination of the frame D, jaws E, F, and G, sliding circle or disk B, cylinder A, and center C, when they are constructed and arranged substantially as herein described and set forth.

96,654.—A. C. ANDREWS, New Haven, Conn., assignor to THE WATER-PROOF SOLE COMPANY, same place.—*India-Rubber Packing.*—November 9, 1869.

Claim.—Gaskets of India rubber, or any of its allied gums, molded and supported by embedding therein one or more rings or lines of metal, or other suitable material, substantially as herein set forth.

96,655.—RUSSELL B. ANDREWS, Poland, Me.—*Composition-Panel for Doors.*—November 9, 1869.

Claim.—An improved panel for doors, made of paper or junk-board, substantially as herein described.

96,656.—SIMEON ATHA, West Liberty, Ohio.—*Carriage-Wheel.*—November 9, 1869.

Claim.—A wheel-hub, consisting of two sets of boxes, C D E F, not contiguous to each other, and secured substantially as and for the purposes set forth.

96,657.—ALBERT M. BACON, Boston, Mass.—*Motive-Power.*—November 9, 1869.

Claim.—A series of wires, arranged either singly or in groups, and connected by suitable gearing, substantially as and for the purpose set forth.

96,658.—VOLNEY BARKER, Otisfield, Me.—*Green-Corn Sheller.*—November 9, 1869.

Claim.—1. The adjustable knives *l*, in their connection with arms H, in combination with the springs and cutters S, when arranged within the disk G, substantially as shown and described.

2. The green-corn cutting-machine, as described, having frame A, crank D, driving-wheels B and C, and knives *l* and N, arms H, and springs S, in combination with the devices for holding the cob A', *c*, and *d*, arranged in holder E, as specified.

96,659.—A. T. BARNES and N. M. BARNES, Tiffin, Ohio, assignors to themselves and TIFFIN AGRICULTURAL WORKS, same place.—*Wood-Turning Lathe.*—November 9, 1869.

Claim.—1. The steadying-rest herein described, consisting of the standard D and divided movable ring M, as and for the purpose specified.

2. The movable ring M made in two parts, *m* and *m'*, fastened together by the key *o* and lug *n*, substantially as described.

3. The combination, with the removable ring M, of the annular segment P and set-screws Q, as and for the purpose specified.

4. The described arrangement of the spindles C C', slides I, plates G, steadying-rests D M, and bed-plate A, as and for the purpose specified.

96,660.—SAMUEL D. BATES, Lewisburgh, Pa.—*Harvester.*—November 9, 1869.

Claim.—In combination with a front-cut hinged-bar harvester, a lateral-curved rear brace, suspended by a chain from the main frame, for supporting the platform, substantially as described.

96,661.—FREDERICK BECK, New York, N. Y.—*Process for Coloring Muslin, Paper, &c.*—November 9, 1869.

Claim.—1. The within-described process for coloring muslin, paper, and other materials, by first coating them with a compound of glue, chalk, and soap, and then drawing them through a solution of alum or other suitable agent, substantially as set forth.

2. A water-proof coating for paper, muslin, and other materials, produced by first applying thereto a mixture of glue, chalk, and soap, and then drawing it through a solution of alum or other suitable sulphate, substantially as described.

96,662.—WILLIAM BEERS, Milan, Ohio.—*Wagon-Seat.*—November 9, 1869.

Claim.—The adjustable-seat spring-holder C, herein described, having middle tenon *l*, rear tenon *n*, and front or key-tenon *k*, each projecting from a bearing-plate or shoulder, *z*, in combination with a row of slanting mortises, B B, arranged in the top of a wagon-box, as specified.

96,663.—M. J. BENDALL, New York, N. Y.—*Caloric Street-Roller.*—November 9, 1869.

Claim.—The arrangement of a fire-grate in the interior of a street-roller, substantially as and for the purpose set forth.

96,664.—NEWTON BENEDICT, Washington, D. C.—*Lamp.*—November 9, 1869.

Claim.—1. The sliding clamp *a b c*, forming, for the wick, a slitted cap or covering, attached and operating in the manner and for the purposes hereinbefore set forth.

2. The construction, in the wick-passage, of the press-gauge *f d g*, substantially as and for the purpose hereinbefore set forth.

96,665.—A. BENNETT, New York, N. Y.—*Corset-Spring.*—November 9, 1869.

Claim.—The lapping or bending the ends of the outer steels over the ends of the inner steels, or *vice versa*, for the purpose herein described.

96,666.—A. L. BOGART, New York, N. Y.—*Gas-Range.*—November 9, 1869.

Claim.—1. The within-described range, provided with the ovens E and I, the warming-closet L, the burner F provided with the mixing-chamber G, and the upward burners, M, O, P, and R, (or either, separately,) all constructed and arranged to operate substantially as and for the purpose specified.

2. The employment of the openings and slide, *l* and *l'*, respectively, within and upon the partition D, substantially as and for the purpose described.

3. In combination with the ovens E and I, and closet L, connected by means of the openings *l* and slide *l'*, the downward burner F, (either with or without the central opening *f*,) provided with the mixing-chamber G, substantially as herein described, and for the purpose specified.

96,667.—WILLIAM H. BOTT, York, Pa.—*Corn-Plow.*—November 9, 1869.

Claim.—1. The curved standard O, when constructed with the lateral spread, and with the series of holes *o o o* on each side, and employed in connection with the guides N N, and beam A, substantially as and for the purposes set forth.

2. The arrangement of the two wheels R R, and curved standards S S, in connection with the cross-beam B, longitudinal beam A, drag-bars I I, plows G G, cross-bar H, and handles E E, substantially as and for the purposes described.

96,668.—D. BURBANK, Lexington, Ky.—*Bee-House.*—November 9, 1869.

Claim.—1. A bee-house, having its sides lined with a water-proof material, its floor or bottom double, with an opening and slide to admit air for ventilation, and with its top or roof removable, and provided with a chamber and with a ventilator, all constructed and arranged substantially as herein described.

2. In combination with a bee-house thus constructed, the hives G and strips H, with the devices for ventilation, and entrance for the bees, all constructed and arranged substantially as herein described.

96,669.—Levi L. Burdon, Providence, R. I.—*Jewelry-Box.*—November 9, 1869.

Claim.—The jewelry-box herein described, consisting of the body A, the partition D, and the covers B and C, arranged as shown.

96,670.—Upson Bushnell, Cleveland, Ohio.—*Coupling for Vehicles.*—November 9, 1869; antedated October 27, 1869.

Claim.—1. The bevel-shaped joint B E, constructed as described, so as to give the head-block and axle a bearing upon the joint with its center and king-bolt outside of said axle and head-block, substantially as herein set forth.

2. The manner of oiling the joint B E, by having an enlargement or chamber in the lower portion of the upper section, and grooves in the top of the lower section, substantially as herein set forth.

3. The combination and arrangement of the axle A, joint B E, cap-plates C I, head-block G, springs H H, screw king-bolt D, nut J, and brace K, all constructed as described, substantially as and for the purposes herein set forth.

96,671.—John Butterworth and James Butterworth, Trenton, N. J.—*Carding-Engine.*—November 9, 1869.

Claim.—The arrangement, with and between a ring-clothed doffer and condensing-rollers, of a series of toothed sliver-dividing disks, or their equivalents, having their teeth pointing in an opposite direction to the travel of the material, and revolving in the direction of the travel of the material, but at a slower speed, so as to separate the material into slivers, and press the diverging fibers toward the respective strands entering between the condensing-rollers, as described.

96,672.—James Campbell, Founders' Court, London, England.—*Floating Dock.*—November 9, 1869.

Claim.—1. In combination with the deck of a tray or pontoon for supporting a vessel shored thereon, the lower transverse ribs, supporting the deck, and dividing the hull into several water-tight compartments, and the upper transverse water-tight bulkheads, above the deck, substantially as described.

2. A tray or pontoon, as distinguished from a floating dock, for carrying vessels, with their cargoes, over shoals, with cutwaters to facilitate the towing thereof, substantially as described.

3. A floating dock, with only two sets of water-chambers transversely, one set on each side of a longitudinal center partition, thus dispensing with the upper or load-chambers and the lower or air-chambers described in my said former patent, the same being constructed substantially as herein described.

4. As an improvement upon the belt described in my said former patent, to facilitate the repairing of docks or trays, the large end tanks, with one or more transverse water-tight bulkheads in each, substantially as described.

5. The combination and arrangement of reservoir P, pipes Q, gauge S, and air-pump T, substantially as and for the purpose herein set forth.

96,673.—W. E. Carlile, New York, N. Y.—*Inkstand.*—November 9, 1869.

Claim.—The combination of weighing-devices with the cover and rack of an inkstand, substantially as described and for the purposes set forth.

96,674.—Edward Colson, Fort Wayne, Ind.—*Saw-Teeth.*—November 9, 1869.

Claim.—A saw-tooth, having two downward-projecting tongues, secured to a saw-blade, having an upward-projecting tongue, by a rivet, when there is a space left entirely around the tongue *b*, as and for the purposes set forth.

96,675.—George W. Cretors and Enos Hoover, Clinton County, Ind.—*Weather-Strip.*—November 9, 1869.

Claim.—The combination and arrangement of the arm *c*, lever *b*, and slide *a*, with its inclined head, when applied to strips A B, substantially as and for the purpose set forth.

96,676.—George Crompton, Worcester, Mass.—*Shuttle for Looms.*—November 9, 1869.

Claim.—The combination of a locking-device, substantially as described, with an expansive split spindle and spindle-head, for the purpose set forth.

96,677.—George Crompton, Worcester, Mass.—*Shuttle for Looms.*—November 9, 1869.

Claim.—1. The combination of the notched spindle, the bar-lever, and its spring, constructed substantially as described, so that the spindle cannot be raised without manipulating the bar-lever.

2. The combination of the bar-lever, its pressure-spring, the notched spindle, bobbin-head, catch, and spring, all constructed and operating as described.

96,678.—R. M. Dalbey, Springfield, Ohio.—*Sash-Holder.*—November 9, 1869.

Claim.—In the above-described construction of fastener, fastening the dog into its face-plate by means of the hook *d*, passing through the opening on the plate, and dispensing with trunnions and journals, substantially as herein set forth.

96,679.—Daniel F. Dietrich, Noblesville, Ind.—*Slaw or Cabbage Cutter.*—November 9, 1869.

Claim.—The combination and arrangement of the frame A with hopper B, cylinder C, gudgeon D, crank E, adjustable knives I I, screw *b b*, and gauges G G, all constructed and operating in the manner and for the purposes herein set forth.

96,680.—H. B. Durfee, Decatur, Ill.—*Plow.*—November 9, 1869.

Claim.—In combination with the standard and beam of a plow, the bolts *d g*, and slotted plates *e i*, so arranged in connection therewith that the beam may be adjusted on the plow, as and for the purpose herein described and represented.

96,681.—Thomas A. Edison, New York, N. Y.—*Automatic Electrical Switch for Telegraph-Apparatus.*—November 9, 1869.

Claim.—1. An electro-mechanical switch, constructed substantially as described, in combination with two or more electro-magnets, placed in two or more distinct branches, 15 and 16, of the circuit containing said switch, all connected and operated substantially as described.

2. The springs *d d'*, in combination with the vibrating armature, and the points *c c'* for maintaining the continuity of the same circuit, substantially as set forth.

96,682.—Jacob Edson, Boston, Mass.—*Hose-Pipe.*—November 9, 1869.

Claim.—1. The handles *c c*, joined together at *c''*, and to the ring *b* at *c' c' c''*, in combination with the ring *d*, for the purpose set forth.

2. The rings *k* and *m*, one or more, with sharp edges, and larger spaces beyond, in the body of the pipe, for the purpose of cutting the jet of water sharp and clean, as set forth.

96,683.—Theodor G. Eiswald, Providence, R. I.—*Sad-Iron.*—November 9, 1869.

Claim.—The improved sad-iron herein described, consisting of the hollow iron body, filled with slag, sand, or other similar substance, and provided with a polished shoe, composed of a non-corrosive metal, possessing the requisite heat-conducting qualities, constructed as described, for the purposes specified.

96,684.—George D. Emerson, Calumet, Mich.—*Device for Bending Railroad-Rails.*—November 9, 1869.

Claim.—1. The employment of the eccentric roller B and lever C, in combination with the connecting-links or arms *f f*, press-bars *g l*, and screw-sleeve *m*, or equivalents, substantially as herein set forth.

2. The main triangular frame A, the same having the hooked bearings or jaws *a a*, and the internal or secondary stiffening-frame *b*, in combination with

the press-bar and devices for operating the same, substantially as described.

96,685.—JOHN L. FITZPATRICK, Waterbury, Conn.—*Corset-Steel.*—November 9, 1869.

Claim.— In corset-springs, combining, with each principal spring, two auxiliary springs, C D, the extreme end of each rigidly secured to the principal spring, the other ends of the said auxiliary springs meeting near the center of the principal spring, and slotted, and secured in position on the principal spring, substantially as set forth.

96,686.—JULIUS FOX, Albion, Mich.—*Spring-Bed Bottom.*—November 9, 1869.

Claim.—A spring-bed bottom, consisting of the cross-bars A, side-bars B, and springs *a*, with the slats C, held in place by the cords *c* and *c* applied thereto, and all arranged as herein described.

96,687.—EDWARD P. FURLONG, Portland, Me.—*Paper Bosom.*—November 9, 1869.

Claim.—The paper bosom, constructed and capable of being folded for transportation, as herein described.

96,688.—GILMAN B. GARLAND, Gardiner, Me.—*Composition for Manufacture of School-Slates.*—November 9, 1869.

Claim.—Applying the within-described composition for slating, in the manner and about in the proportions herein specified, for the purposes set forth.

96,689.—BENENDIKT GEIGER and HERMAN WOCHER, Philadelphia, Pa, assignors to themselves and JOHN JOSEPH CHARLES SMITH, same place.—*Fastening for Buttons.*—November 9, 1869; antedated November 4, 1869.

Claim.—As a new article of manufacture, the button-fastening B C, consisting of a hollow washer and a locking-pin or key, constructed as herein described, and adapted for use with common shank-buttons.

96,690.—WILLIAM F. GILBERT, Birmingham, Conn.—*Martingale-Ring.*—November 9, 1869.

Claim.—Martingale-rings, as an article of manufacture, the body of which is formed from wood or other material, inclosed by a sheet-metal ring, substantially as set forth.

96,691.—FREDERICK GLESSNER, Cincinnati, Ohio, assignor to himself and JOHN STANTON, same place.—*Photography.*—November 9, 1869.

Claim.—1. The sky-plate B, made as described, with the light parts of clouds, or such other light objects as the artist wishes to produce above the horizon, painted on it, the rest of that part used for producing the sky being left clear.

2. The shade C, or its equivalent, when used for photographic or other actinic printing of graded skies, either with or without a sky-plate, as above explained.

3. The perforated and movable shade D, when used as described, to impart the desired shade or depth of tone to certain parts of the picture.

4. The shade E, for printing by diffused light, when used with or without sky-plates.

96,692.—THOMAS HALL, Brooklyn, N. Y.—*Bobbin-Winder for Sewing-Machine.*—November 9, 1869.

Claim.—The combination of the roller A, winder-wheel B, hanger E, pressure-spring G, and lifting-rod, all arranged for operation, in connection with the driving-wheel C, substantially as set forth.

96,693.—MILTON A. HAMILTON, Detroit, Mich.—*Churn-Dasher.*—November 9, 1869.

Claim.—The series of disks A A A A, made concave on their lower side, and convex on their upper side, when two or more are connected at their centers to the stem B, placed a short distance apart, and perforated by the holes *a a*, substantially as shown and for the purpose specified.

96,694.—JESSE HAMME, York, Pa.—*Pushing-Jack for Railroads.*—November 9, 1869.

Claim.—1. The detachable lever F, in combination with the sliding bar D and pivoted bar C, substantially as shown and described.

2. The sliding bar D, in combination with the pivoted bars C and B and clamp A, substantially as shown and described.

96,695.—GEORGE HAVELL, Newark, N. J.—*Machine for Bending Bag-Frames.*—November 9, 1869; antedated November 1, 1869.

Claim.—1. A machine for bending bag-frames, so constructed that the metal forming the side of the frame is held or passed between two plates or in a groove, while it is being bent, substantially as herein set forth.

2. The "former," constructed as described, of a center, I, having wings I′ I′ pivoted or hinged to its outer ends, when the said "former" is grooved, or made of two plates, leaving a space along the front edge for the insertion of the metal forming the frame, substantially as herein set forth.

3. The combination of the carriage E, bed H, and "former" I′ I′, with a mechanism for causing the blank to bend, or constructed and arranged to operate substantially as herein set forth.

4. The cogged and flanged rollers *e e*, in combination with the cogged bed H, substantially as and for the purposes herein set forth.

96,696.—CHARLES HEDGES and CHARLES S. STRAYER, Bloomington, Ill.—*Washing-Machine.*—November 9, 1860.

Claim.—1. The cylinder B provided with buckets C C, open from the outside, and with inside zigzag buckets D D, as and for the purposes herein set forth.

2. In combination with a wash-boiler, the cylinder B, having the buckets C C and D D, as and for the purposes herein set forth.

96,697.—NOAH F. HERSH, Round Hill, Pa.—*Sawing-Machine.*—November 9, 1869.

Claim.—The frame A, double crank-shaft D, fly-wheels F F, pitmen E E, saw-beams B B, saws C C, guide-pins *b b*, rack *d*, pivoted bar G, and lever H, all being constructed and arranged to operate in the manner and for the purpose set forth.

96,698.—JOHN HEUERMANN, Davenport, Iowa.—*Fire-Escape.*—November 9, 1869.

Claim.—1. The brace C, constructed as described, of parts $c\ c^1\ c^2\ c^3$, as and for the purpose set forth.

2. The arrangement of the wheel I, pulleys, equalizer J, and levers h^2, as and for the purpose described.

3. The spring-roller bar *o*, when constructed and arranged as described, for the purpose set forth.

4. The machine described, consisting essentially of the frame A, body B, mast E, extensions E′, system of levers h^2, car G, wheel I, and equalizer J, when combined and operated as described, for the purpose set forth.

96,699.—S. D. HICKS, New London, Wis., assignor to himself and J. C. WILCOX, same place.—*Upset, Punch, Shears, and Saw-Gumming Device.*—November 9, 1869.

Claim.—1. The arrangement, on one portable bed A, of the upsetting, punching, shearing, and saw-gumming devices, substantially in the manner herein described.

2. The arrangement of the hand-lever R, relatively to the projection Q′, of the movable shear, for operation, substantially as specified.

3. The combination of the hand-lever R, movable shear Q, sliding gumming-punch, and the gumming-die W, all substantially as specified.

96,700.—LEONARD D. HOWARD, Saint Johnsbury, Vt.—*Tool for Opening Boxes.*—November 9, 1869.

Claim.—The implement herein described, having chisel A, with its shoulder *c*, and claw B, constructed substantially as and for the purposes specified.

96,701.—JOSHUA HOWLAND, Ashland, Ohio.—*Sash-Holder.*—November 9, 1869.

Claim.—1. The slotted plate E, in combination with the spiral spring d^2 and bolt d^1, substantially as described.

2. The spiral springs D, in combination with the

adjustable brackets *d*, as and for the purpose set forth.

96,702.—G. P. JOHNSON, Webster's Grove, Mo.—*Book-Holder.*—November 9, 1869.

Claim.—1. In combination with the book-holder proper, herein described, the arrangement of the jointed arm D, brace *c*, bar *e*, spring *d*, and set-screw F, as and for the purpose specified.

2. The arrangement, herein shown and described, of the thumb-screw *h*, the book-holder proper, the guide-bar H, the spring K, and handle P, as and for the purposes set forth.

96,703.—EDWARD P. JONES, Shell Mound, Miss.—*Detaching Horses from Carriages.*—November 9, 1869.

Claim.—The combination of the whiffletree A, cleats *c c*, levers B B, and strap C, when constructed and operating substantially as shown and described.

96,704.—PATRICK KELLY, Dayton, Ohio.—*Machine for Supplying Air to Carbureters.*—November 9, 1869.

Claim.—1. A machine for operating air-pumps, and for other purposes, constructed and operated substantially in the manner herein set forth.

2. The combination of a driving-mechanism with the clutch E, sheave F, catch F′, slide G with arm G′, lever I and disk H, all arranged to operate substantially in the manner set forth.

96,705.—HENRY JAMES HOGG KING, Glasgow, Great Britain.—*Pressure-Gauge.*—November 9, 1869.

Claim.—1. The application to spring pressure-gauges of a hook, or equivalent device, connected with the spring, upon which a given weight may be hung, for testing, at any time, the accuracy of the spring, substantially as described.

2. In combination with a testing-device, as set forth, the application of a three-way cock to the entrance-tube of the pressure-gauge, arranged to open the same to the atmosphere, as and for the purpose herein described.

96,706.—PETER W. KNISKERN, Fort Smith, Ark., assignor to himself and JOSIAH S. TILTON, Springfield, Mo.—*Spring-Bed Bottom.*—November 9, 1869.

Claim.—The spring-bed bottom, consisting of the spring-bars C and transverse end bars D, supported upon the frame A B B by means of the crossed end springs F, resting with their free ends upon the boards B′, and the springs E resting with their inner ends upon the central board B′, all arranged as described, for the purpose specified.

96,707.—J. H. KRAMER and ALOIS BURGER, New York, N. Y.—*Street-Lamp.*—November 9, 1869.

Claim.—1. A street-lamp, composed of three frames A, B, and C, which are fastened together by screw-rods *a b*, substantially as shown and described.

2. The arrangement of a central bolt, *f*, passing through the cap D, in combination with the top frame C, as set forth.

96,708.—GUSTAV LAUTENSCHLAGER, Cincinnati, Ohio, assignor to himself and ALEXANDER S. PATERSON, same place.—*Rocking-Horse.*—November 9, 1869; antedated October 29, 1869.

Claim.—The progressive rocking-horse, made and operating substantially as herein set forth and described.

96,709.—WILLIAM A. LIGHTHALL, New York, N. Y.—*Apparatus for Warming and Cooling Apartments.*—November 9, 1869.

Claim.—The combined heater and refrigerator for heating or cooling rooms, constructed, operated, and applied as and for the purpose herein set forth.

96,710.—ALBERT LOTZ, Franklin, Tenn.—*Fire-Ladder.*—November 9, 1869.

Claim.—1. The carriage A B C, provided with reel E and frame G, substantially as and for the purposes herein set forth, in combination with bag M.

2. The combination and arrangement of the pole K with pulleys and endless rope, hook *d*, and ladder L, all substantially as and for the purposes herein set forth.

3. The bag M, made in sections, and provided with hooks *e e*, substantially as and for the purpose herein set forth.

4. In combination with the sectional bag M, the stand H, substantially as and for the purposes herein set forth.

96,711.—CHARLES H. LOW, Cleveland, Ohio.—*Ash-Pan.*—November 9, 1869.

Claim.—An ash-pan, constructed with flaring sides, when two opposite sides are furnished with tapering projections B and adjustable handles C, in the manner and for the purpose substantially as described.

96,712.—GEORGE W. LOWRY, Lavansville, Pa.—*Bee-Hive.*—November 9, 1869.

Claim.—1. The top *p*, hinged at *q*, to the front edge of the stationary front *a b′*, in combination with the swinging sides *c e*, and the removable cover *r*, inclosing the boxes *s t*, but allowing easy access to the same and to the frames *m*, from above, as set forth.

2. The pins *o o*, and hook 14, combined with the hinged frames *m m*, for retaining said frames in position, as specified.

96,713.—JUCIUS LYON, New York, N. Y.—*Sewing-Machine.*—November 9, 1869.

Claim.—The combination of the eccentric-rod D, or its equivalent, the ball-and-socket joint G S, the shuttle-lever E, link H, and adjustable arm I, with the vertical rock-shaft J of the shuttle-carrier, substantially as shown and described.

96,714.—JOHN G. MAIER and C. W. SCHAEFFER, Baltimore, Md.—*Machine for Cutting off the Ends of Cigars.*—November 9, 1869; antedated October 29, 1869.

Claim.—The device herein described, consisting essentially of the block A, chambered, as shown at B, C C, the casting D, also chambered, as shown at *c* c^1 c^2 c^3 c^4, and provided with the lateral openings *o o*, the vertical blade *m*, stem G, spring F, and handle E, all constructed and operating in connection with each other, as and for the purposes set forth.

96,715.—CYRUS MARSH, 2d, Natchez, Miss.—*Cracker-Machine.*—November 9, 1869.

Claim.—The triangular followers *k* k^1, &c., with their connecting-rods *d* d^1, &c., bars *e*, &c., and operating-cams *h h′*, &c., arranged for the purpose of removing the scrap between the cutters, disposed as shown, and constructed and operating substantially as described.

96,716.—ROBERT MCCLARY, Crestline, Ohio.—*Pad-Saddle.*—November 9, 1869.

Claim.—1. The strap B, when the same is so arranged and secured between the skirt and lining as to afford a suitable bearing for the girth-billet or strap C, and stirrup-strap D to be attached, substantially as described.

2. The bearing-straps B E, when the same are secured within a pad-saddle, the whole being so arranged as to operate substantially as described, as and for the purpose specified.

96,717.—BERNARD H. MENKE, Cincinnati, Ohio.—*Pattern for Stove-Castings.*—November 9, 1869.

Claim.—1. The stove-bottom with projection A and recess B, in combination with the dovetail piece D, constructed and arranged substantially as described.

2. The piece D, composed of two duffs, permanently attached to each other, as and for the purpose described.

3. The stove-bottom, with projection A′, in combination with the duffs D, constructed and arranged substantially as described.

96,718.—RUFUS N. MERIAM, Worcester, Mass—*Belt-Tightener.*—November 9, 1869.

Claim.—The connection of the lever H, carrying the tightening-pulley G, with the frame A′, carrying

the movable arbor, substantially as herein described, whereby the adjustment of the movable arbor is made to effect a corresponding adjustment of the tightening-pulley.

96,719.—CYRUS MILNER, Des Moines, Iowa.—*Fence.*—November 9, 1869.

Claim.—1. The fence-butt or foundation A, made of burned clay or equivalent material, with an orifice at each end, and a projection, *a*, in its center, substantially as shown and described.

2. A burned-clay, or equivalent foundation for a fence, whether placed on the surface of the earth or provided with a prolongation which is inserted into the earth, and with a suitable device for stationing the fence-panel upon, all substantially as herein shown and described.

3. In combination with a burned-clay or equivalent foundation for a fence-post, securing the panels by means of braces which pass through the foundation, and are connected by suitable mechanism to the ends of the fence-panels, substantially for the purposes specified.

4. A fence-panel, B, composed of a series of bars *c'*, and uprights *c*, which project beneath the under surface of the lower longitudinal bar *c'*, and over an upward projection *a*, upon a suitable foundation, substantially for the purposes set forth.

5. Clamping the upper surface of a fence-panel, B, under a cross-bar, *e*, at each end of the panel, when said bar is held close upon the surface by device or devices which extend to or under the earth, substantially as herein specified.

6. Bracing the fence-panel B by the bars *d*, whether made in one or two pieces, from the upper surface of the fence to a burned-clay or equivalent foundation A, substantially as set forth.

7. The combination of a burned-clay or equivalent foundation A, with projection *a*, and a single or double brace, *d*, which passes through the ends of the block A, substantially as set forth.

8. The arrangement, under the fence-panel B, composed of the horizontal bars *c'* and upright bars *c*, of the block A, with a central projection *a*, and secured by the braces *d d*, substantially for the purposes set forth.

96,720.—JOSEPH L. PARRY, Philadelphia, Pa., assignor to himself and SAMUEL ZANE; assignors to themselves and EBENEZER H. BAILEY, same place.—*Anti-Friction Box.*—November 9, 1869.

Claim.—An anti-friction box containing a series of rollers, constructed, adapted, and proportioned in respect to an axle or shaft, and cylinder or box, substantially as set forth.

96,721.—C. C. PARSONS, New York, N. Y.—*Process for Purifying Pyroligneous and Acetic Acids.*—November 9, 1869; antedated October 27, 1869.

Claim.—1. Purifying the vapors of either acetic or pyroligneous acid, by passing them through a mass composed of small pieces of some suitable neutral substance kept wet with suitable purifying-solutions, substantially in the manner and for the purpose as herein described.

2. Using the above-described process in combination with that invented and patented by me on February 23, 1869, No. 87,193.

96,722.—EDWARD PAYNE and J. D. CLEGHORN, Chicago, Ill.—*Railway Cattle-Car.*—November 9, 1869.

Claim.—1. The employment, in connection with a trough or troughs, located upon the exterior of the car, of sliding slat-frames, combined with the stationary slats of the car, for operation substantially as herein described and shown.

2. Providing a cattle or stock car, with a series of independent slings for relieving the cattle of a portion of their weight, said slings being connected with windlasses, or equivalent elevating-apparatus, arranged in the upper part of the car, substantially as herein shown and specified.

96,723.—ELIAB PERKINS, Fond du Lac, Wis.—*Window-Shutter.*—November 9, 1869.

Claim.—The reflector B, applied to a metallic shutter, substantially as and for the purpose herein described.

96,724.—ALFRED EDDY PIERCE, Gilroy, Cal.—*Excavator.*—November 9, 1869.

Claim.—1. The tipping-buckets V, in combination with the outside ring U, on which they hinge, and the inside ring U', on which they rest, these rings being secured, by straps, or otherwise, to the radiating arms, for the purposes as set forth, and substantially as herein described.

2. The combination of the rods X, attached to the back of the buckets, the bell-crank Y, with the projecting stem *z* and the adjustable revolving disk or wheel Z, for the purposes as set forth, and constructed and arranged substantially as herein described.

3. The spring-beam M, to which the carriage-wheels O are attached, in combination with the screw R, for the purpose as set forth, and arranged substantially as described.

4. The shape given the mold-board of the plow, with its guiding side-flanges, for the purposes as set forth, and constructed substantially as herein described.

96,725.—HENRY F. POND, Franklin, Mass.—*Dish-Drainer.*—November 9, 1869.

Claim.—The above-described device for supporting dishes, knives, and spoons, while draining, such device consisting of the inclosing frame *a* and bars *b b*, when supported upon the feet *c c*, and provided with the trough *d*, in manner and for the purpose as herein explained.

96,726.—CHARLES RAGGIO, Memphis, Tenn.—*Faucet-Attachment or Cask-Stopper.*—November 9, 1869.

Claim.—The screw-plug S, provided at its inner end with a valve, *d*, and at its outer end with an elastic packing-ring, *i*, so that the same may be used in connection with an ordinary smooth faucet, *e*, as set forth.

96,727.—WILLIAM H. RAND, Brooklyn, N. Y.—*Elevated Railway.*—November 9, 1869.

Claim.—1. The column A, constructed with the two tubular piles *a a*, united at *i i* and at *a'*, all in one casting, substantially as and for the purposes set forth.

2. In connection with said column A, having the recesses *m m* in its top, separated by the ridge *n*, the arrangement of the stringers M M, packing *o o*, rails R R, and eccentric-headed pins *r r*, all constructed and adapted to each other, in the manner and for the purposes specified.

3. In an elevated railway, the employment of curved cross-ties *a' a'*, connecting the tops of the piles *a a*, and also connecting the stringers at suitable distances, substantially as and for the purposes set forth.

4. In connection with the railway, substantially as described herein, the employment of cars or trucks constructed with the deep body, as shown at T, and the side flanges *v v*, the rail R being inclosed between the parts T and *v* when the car is in position, substantially as and for the purposes set forth.

96,728.—ASA R. REYNOLDS, Auburn, N. Y.—*Machine for Rolling Plane-Irons.*—November 9, 1869.

Claim.—The arrangement, relative to the rolls, of the supporting-table *a*, gauge *b*, connecting-rod *c*, lever *d*, and catch-bar *f*, as and for the purpose described.

96,729.—FRANK RHIND, Brooklyn, N. Y.—*Rotary Steam-Engine.*—November 9, 1869; antedated November 3, 1869.

Claim.—The arrangement of the valve H, with reference to the inlet-passages K K^1 K^2, piston D, and abutments E E^1 E^2, substantially as shown and described.

96,730.—JOHN RICH, Painesville, Ohio.—*Lathe-Chuck.*—November 9, 1869.

Claim.—1. The construction of a chuck, composed of two plates, A and B, the plate A sliding on

the plate B, and secured by the bolts D D, springs E E, and bevel washers F F; said chuck, while revolving, finds its own center, and operates as above described.

2. The combination and arrangement of the plates A and B, attached to stem G, jaws C, bolts D D, springs E E, beveled washers F F, and nuts H H, the whole combined and arranged for the purpose as described.

96,731.—GEORGE RICHARDS, Richland Center, Wis.—*Wagon-Standard.*—November 9, 1869; antedated October 30, 1869.

Claim.—1. The bolster A, provided at its ends with a metal cap, B, constructed as described, and beveled as shown, substantially as and for the purposes herein set forth.

2. In combination with the bolster A and metal cap B, the plate C, provided with a horizontal extension at its upper edge, and with a circular projection, *a*, on its inner side, through which the screw *b* passes, all substantially as shown and described.

3. Securing the stake D to the horizontal extension of the plate C, by means of a dovetail, screw, and nut, substantially as shown and described.

4. The arrangement of the cap B, pivoted plate C, and spring-bolt *e*, with thumb-piece *i*, substantially as and for the purposes herein set forth.

96,732.—JASPER N. ROBBINS, Goshen, Ohio.—*Car-Coupling.*—November 9, 1869.

Claim.—The draw-head A, pad B, and holder C, when combined as and for the purpose described.

96,733.—RICHARD B. ROBBINS, Adrian, Mich.—*Sulky-Cultivator.*—November 9, 1869.

Claim.—1. The arrangement, herein shown and described, of the parts R and R′, I, N N′, J, and H, and the bolts *r*′, as and for the purposes specified.

2. The shifting-device *e*, used in connection with the chains *c* and *c*′, rollers *t* and *t*′, slides *p* and *p*′, for the purposes set forth and described.

3. The foot-rest *o* and *o*′, in connection with the slides *p* and *p*′, in the manner set forth and described.

4. The stirrups *a* and *a*′, in connection with the guiding-rods *h* and *h*′, chains *i* and *i*′, rollers *v* and *v*′, constructed in the manner set forth and described.

5. The arrangement, herein shown and described, of the rocking double-tree K, chains *d* and *d*′, rollers *v* and *v*′, single-trees P and P′, and the ways *y*, as and for the purposes specified.

96,734.—WILLIAM D. ROBINSON, Buffalo, N. Y.—*Apparatus for Raising Sunken Vessels.*—November 9, 1869.

Claim.—The arrangement, as a whole, consisting of the air-tight deck *d d e*, the cable-compartments F F, and the longitudinal partition E, the whole operating in the manner and for the purpose specified.

96,735.—S. FRANKLIN SCHOONMAKER, New York, N. Y.—*Submarine Rock-Drilling Machine.*—November 9, 1869; antedated November 3, 1869.

Claim.—1. In submarine apparatus, supporting a rotary rock-drill, fitted with diamond cutting-edges, upon or within a tube, open or otherwise, one end of which rests upon or near the rock to be drilled, while the other extends above the surface of the water, in manner as and for the purpose specified.

2. A tube or hollow cylinder, when forming a base or support for a steam or other motor engine, the two being combined in a fixed relation to each other, and forming parts of a submarine rock-drilling machine, substantially as and for the purpose specified.

3. The combination of the engine, hollow cylinder, and a rotary drill, when related to each other, and operating in manner and effect substantially as shown.

4. Providing the lower end of the said hollow cylinder with adjusting-screws, in effect, as and for the purpose herein explained.

5. In apparatus for submarine operations, a tripod or multipod, whose legs, inclining inward and upward toward each other, have each independent means of adjustment, vertically, in substance as shown.

6. In submarine rock-drilling apparatus, adjustable legs, when having anchors or weights attached at or near their lower extremities, substantially as and for the purpose specified.

96,736.—HENRY SHAW, Cincinnati, Ohio.—*Grinding or Hulling Plate for Grinding or Hulling Mills.*—November 9, 1869.

Claim.—An improvement in the grinding or hulling plates for grinding or hulling mills, consisting in the dress composed of the projections and recesses shown and described, when arranged as shown and described.

96,737.—OLNEY L. SMITH, Providence, R. I.—*Shield for Arms of Railway-Car Seats.*—November 9, 1869.

Claim.—As combined with the arm-cushion D of a car-seat, a shield, *m* or its equivalent, as described, for the purpose specified.

96,738.—JAMES SPENCE, Newcastle-upon-Tyne, Great Britain, assignor to JOHN CHALMERS, New York City.—*Composition for Preventing Radiation and Conduction of Heat.*—November 9, 1869.

Claim.—The composition herein described, composed of the ingredients or elements set forth, or the equivalents thereof, upon the principle, in the manner, and for the purposes herein set forth.

96,739.—SPENCER SPRINGSTEAD, Westchester, N. Y.—*Hoe.*—November 9, 1869.

Claim.—A hoe whose teeth are parallel to each other, with spaces C terminating angularly, the sides of the teeth and the angular terminations being made sharp, as and for the purpose described.

96,740.—SPENCER SPRINGSTEAD, Westchester, N. Y.—*Weeding-Implement.*—November 9, 1869.

Claim.—1. My improved propelling weeder, having a tapering blade A, with lateral teeth on each edge F, made and arranged substantially as described.

2. The front tooth C, in combination with the lateral teeth F, substantially as described.

96,741.—JOSEPH A. TALPEY, Somerville, Mass.—*Hay-Tedder.*—November 9, 1869.

Claim.—1. A machine for tedding hay, and other purposes, as specified, in which a series of teeth or forks is arranged to revolve around one or more centers, substantially in the manner herein shown and described, so that, when in operation, they, although not actuated by the wheels upon which the machine runs, shall move continuously in the same direction with, but at a slower rate than said wheels, as and for the purposes set forth.

2. The combination, substantially as herein shown and described, in a hay-tedder, of a series of teeth or forks, mounted upon an endless belt, which moves around two rollers or axes, the forward roller being mounted on or making part of the axle on which the wheels of the machine are mounted.

3. The combination of the endless fork-belt with the two rollers around which it moves, when the rearmost roller is supported in a frame hinged or arranged in an equivalent manner, so as to be capable of an oscillatory movement around the axis of the other roller, substantially as and for the purposes specified.

4. The combination, substantially as described, of the endless fork-belt and the two rollers around which it moves, the one roller being capable of an oscillatory up-and-down motion upon the axis of the other, as specified, with means for elevating or lowering said oscillatory roller, and thus determining the position of the teeth, and their distance from the ground.

5. The combination of the tedder-teeth and the axis or axes about which they revolve with the carriage and a ratchet and pawl, or their mechanical equivalents, mounted upon the wheels and axle respectively, under the arrangement described, so that as soon as the teeth begin to take up hay, or meet with resistance, they will be held to their work by

the engagement of the ratchet and pawl, and allowed to fall to the rear slowly, and to turn and drop the hay as the machine moves forward.

96,742.—JOHN TIDMARSH, Twickenham, England.—*Apparatus for Clipping Horses and other Animals.*—November 9, 1869; patented in England, December 2, 1868.

Claim.—The employment, in apparatus for clipping or shearing horses and other animals, of combs, segmental in shape, having teeth whose central lines are parallel to one another and to the line in which the instrument is moved forward when in action, in combination with a plate, (to which a to-and-fro motion is imparted,) also segmental in shape, and carrying cutting-blades or teeth, which do not radiate from a common center, but have, when at rest, their central lines parallel to those of the teeth, all substantially as hereinbefore described, and illustrated in the accompanying drawings.

96,743.—CHARLES TRUESDALE, Cincinnati, Ohio, assignor to himself and WILLIAM RESOR AND COMPANY, same place.—*Stove-Grate.*—November 9, 1869.

Claim.—1. In the described combination with the shaking-grate E, the concavities *d''*, on the front bars, for the purpose set forth.

2. The described combination of shaking-grate E and concavities *d''* and *c*.

3. The devices *f* and K, or their equivalents, for restricting the oscillation of a shaking or dumping grate, substantially as set forth.

4. A grate-bottom, adapted to be tilted in the planes of its bars, and about an axis parallel with the grate-front, said bars being unconnected at their front extremities, and having contiguous thereto, and in the same plane, a series of pendent front bars, whose lower extremities are likewise disconnected from each other.

5. In combination, or for use with a tilting grate-bottom, the convertible handle and lifter J *j j'*.

96,744.—J. L. TUSTEN, Winona, assignor to Mrs. E. S. TUSTEN, Carrollton, Miss.—*Animal-Trap.*—November 9, 1869.

Claim.—The combination, in a case, A, having two compartments, of the door D, crank E, jointed arms F G, weighted arm N, rod M, platform I, door S, link T, and catch-bar U, constructed and arranged to operate as herein described.

96,745.—JAMES TWAMLEY, New York, N. Y.—*Whip-Socket.*—November 9, 1869.

Claim.—The whip-socket, composed of the lower socket, or holder, and the upper locking-clasp or retainer, the whole arranged and operating substantially in the manner and for the purposes described.

96,746.—A. VAN GUYSLING, West Albany, N. Y.—*Mechanical Movement.*—November 9, 1869.

Claim.—1. The oscillating lever A, constructed as described, with beveled end, and a slot through the same, substantially as and for the purposes herein set forth.

2. The three-cornered block *a*, provided with springs *b b*, substantially as and for the purposes herein set forth.

3. The combination of the lever A, block *a*, springs *b b*, pin *e*, and cylinder D, all constructed as described, and for the purposes set forth.

4. The combination and arrangement of the oscillating lever A, with the block *a*, springs *b b*, and pin *e*, the cylinder D, and shaft B, all constructed as described, and operating substantially in the manner and for the purposes herein set forth.

96,747.—JOSEPH E. WATTS, Lawrence, Mass.—*Valve-Protector.*—November 9, 1869.

Claim.—A "valve-protector," so called, consisting of the chamber or case *a*, and the foraminous or gauze diaphragm or screen *c*, the case being provided with inlet and outlet pipes or passages for attachment, and with a "blow-off" cock, for cleaning the diaphragm of all foreign substances which may collect thereupon, and the whole being in manner and for the purpose as explained.

96,748.—WILLIAM N. WEEDEN, Boston, Mass., assignor to GEORGE MERRITT, New York City.—*Pencil-Sharpener.*—November 9, 1869.

Claim.—1. In combination with the point-receiving socket or socket-piece *a*, the hinged blade *d*, constructed and applied thereto, so as to serve as a sharpener when closed and as an eraser when open.

2. A pencil-sharpener, having such a hinged sharpening and erasing blade, and a rubber, *i*, applied to its shank or handle *h*, all substantially as shown and described.

96,749.—DAVID G. WHITMORE, Bridgewater, assignor to himself and OSBORN WILSON, Monterey, Va.—*Car-Coupling.*—November 9, 1869.

Claim.—1. The wing H, secured to the rod E, and operating substantially in the manner and for the purposes herein set forth.

2. The combination of the bar D, rod E, handle G, and wing H, all constructed as described, and operating substantially as and for the purposes herein set forth.

3. The combination and arrangement of the draw-head A, rock-shaft B, coupling-bar C, bar D, rod E, and wing H, all constructed as described, and operating substantially in the manner and for the purposes herein set forth.

96,750.—GEORGE WIDDICOMB, Grand Rapids, Mich.—*Bed-Bottom.*—November 9, 1869.

Claim.—The combination of the slats C with their central perforated blocks *x*, and their curved springs B B, and helical cone-shaped springs H, on the piece G, and with their upper ends formed with pins which pass into the perforated blocks *x*, all as set forth.

96,751.—JACOB WIDMER, Newark, N. J.—*Fire-Arm.*—November 9, 1869.

Claim.—The arrangement, below the receiver C, of the open piece O, forming the medium for grasping and holding the fire-arm, and assisting to secure the receiver, when constructed and operating as described.

96,752.—HYMAN AUGUSTINE WILDER, Millville, assignor to GEORGE L. SQUIER, Buffalo, N. Y.—*Centrifugal Machine for Draining Sugar.*—November 9, 1869.

Claim.—1. The basket D, when made conical or with flaring sides, substantially in the manner and for the purposes set forth.

2. A hopper, so arranged as to feed the mush continuously to the bottom or near the bottom of the basket, substantially as set forth.

3. The spiral G, or its equivalent, for the purpose of securing a uniform feed, substantially as described.

4. In combination with the basket, a receptacle for receiving the sugar as it falls over the edge of the basket.

96,753.—BENJAMIN J. WILLIAMS, Philadelphia, Pa.—*Window-Screen and Blind.*—November 9, 1869.

Claim.—The combination of Venetian blinds D with a stationary or an adjustable window-screen, either with or without supplemental screens B, substantially as described.

96,754.—BENJAMIN J. WILLIAMS, Philadelphia, Pa.—*Adjustable Window-Screen.*—November 9, 1869.

Claim.—The stationary screen A, with supplemental screens B B, having the outer side-bars of the frames thereof provided with tongued edges *b*, in combination with grooved strips C, substantially as set forth.

96,755.—CHARLES D. WILLIAMS and WILLIAM H. NOBLES, Saint Paul, Minn.—*Reducing Ores.*—November 9, 1869.

Claim.—1. The stirrer or generator I, constructed as described, to be worked by hand, or stationary, substantially as and for the purposes herein set forth.

2. The furnace A and retort B, constructed as described, for desulphurizing metallic ores and chlorizing the precious metals, substantially by the means and in the manner herein set forth.

3. The application of an artificial light in the bottom of the retort containing the ores, for the purpose of increasing the action of the chlorine-gas, and rendering it more effective in chlorizing metallic ores, substantially as set forth.

96,756.—JOHN B. WILSON, New York, N.Y.—*Machine for Grinding Corrugated Knives.*—November 9, 1869.

Claim.—A machine, in which the opposite faces of the knife may be cut in precisely the same irregular form, and at an angle to each other in cross-section, without reversing the position of the knife, by means substantially such as and in the manner hereinbefore set forth.

96,757.—CALVIN J. WOODS and JOSEPH A. PHILLIPS, Centreville, Ind.—*Plow and Cultivator-Comb.*—November 9, 1869.

Claim.—The plow herein described, having beams and plows A, B, and C, bolt *a*, set-screws *d*, handles H, and sliding frame F, constructed and arranged as specified.

96,758.—THOMAS T. WOODWARD, Ansonia, Conn., assignor to T. B. SMITH MANUFACTURING COMPANY, same place.—*Knife-Guard.*—November 9, 1869.

Claim.—A blade-guard, consisting of parts A B C D E, constructed and operating substantially as and for the purposes herein shown and described.

96,759.—WILLIAM ZIMMERMAN, Lebanon, Pa.—*Combined Bag-Holder and Scale.*—November 9, 1869.

Claim.—The bag-holder herein described, having fender *q* and adjustable support *l*, in combination with the truck A, having braces C C and platform-scale G, constructed and arranged to operate substantially as specified.

96,760.—OTTO ZWIETUSCH, Milwaukee, Wis.—*Pump.*—November 9, 1869.

Claim.—A pump, when constructed with cylinder B, brake C, working without a pin in its end, enlargement D, piston-rod E, inlet-pipes F F, and pipes and faucets G G, valve H, piston I, valve K, valve L, cover M, connection N, valve-seat O, top P, plug Q, fulcrum S, support T, and frame A, all arranged substantially as described.

96,761.—H. C. ALEXANDER, New York, N. Y.—*Can-Opener.*—November 16, 1869.

Claim.—A can-opener, constructed as above described.

96,762.—FREDERICK D. ALTHAUSE, Morrisania, and JOHN F. ALLEN, Tremont, N. Y.—*Horseshoe-Machine.*—November 16, 1869.

Claim.—1. The combination of the stationary guide-standard M′, slotted as shown, the sliding die-stem L′, dies J′ and K′, and sliding die-plate H′, substantially as herein shown and described, and for the purpose set forth.

2. The device for operating the sliding feed-bar J, formed by the combination of the cam Q q^1 q^2, push-bar U, cross-head connecting-bar T R, and connecting-bar S with each other and with the said feeding-bar J, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the die J′ K′, constructed and arranged to operate as described, with the die N′ and sliding frame or plate H′, substantially as herein shown and described, and for the purpose set forth.

4. Combining, in a single machine, the dies for cutting off the bar, forming the calks, punching the nail-holes, forming the toe-scarf, and bending and finishing the shoe, substantially in the manner herein shown and described.

5. The hollow punch V′, for forming the toe-scarf, in combination with the other parts of a horseshoe-machine, substantially as herein shown and described.

96,763.—WESLEY ANDERSON, Pittsburgh, Pa.—*Reversible Die-Box for Nut-Machines.*—November 16, 1869.

Claim.—A reversible die-box, made substantially as described, with two or more cavities intersecting each other at or near the middle of the box, so as to give in each die-box four or more matrices, *c*, in which to punch and compress the nut-blanks.

96,764.—EMERY ANDREWS, Portland, Me., and WILLIAM TUCKER, Philadelphia, Pa.—*Machine for Making Match-Blocks.*—November 16, 1869.

Claim.—The combination of the saws *b b′*, the notching-cylinder A in the trough *a*, operating as herein described, and either with or without the lips or shoulders *e h*, as herein set forth.

96,765.—E. C. ANDREWS, Seneca Falls, N. Y.—*Filter-Rack.*—November 16, 1869.

Claim.—A filter-rack, composed of wires A, coiled near the middle, rings B, and cap C, all constructed and arranged, with respect to one another, in the manner described.

96,766.—JOEL N. ANGIER, Titusville, Pa.—*Tubing-Clutch.*—November 16, 1869.

Claim.—A tubing-clutch, with perforated base-plate *a*, and hinged valves *b b*, arranged upon the driving-pipe or casing, and operating substantially as and for the purposes set forth.

96,767.—AUGUSTUS FRASER BAIRD, Pimlico, England.—*Earth-Closet.*—November 16, 1869.

Claim.—The weighted chute-flap or valve A, arranged in earth-closets or urinals, in conjunction with a chute-trough, *e*, to operate substantially as herein shown and described.

96,768.—ANTONIO BARLI.—Canceled.

96,769.—JASON T. BARTLETT, Boston, Mass. assignor to himself and EDWARD E. BATMAN, same place.—*Railway-Rail Splice.*—November 16, 1869.

Claim.—The described arrangement of the slotted plate and its springs, with the screw-bolts and the nuts thereof, the plate under the said arrangement being supported on the bolts, and serving as an abutment or bearing for the nut or nuts.

96,770.—JOSEPH BELKNAP, Adrian, Mich.—*Potato-Digger.*—November 16, 1869.

Claim.—The arched screen or net-work D, as constructed with connecting-supports, in combination with the curved tines 1, 2, 3, 4, and tine-supporters C, and handle A, when constructed as shown, substantially as and for the purpose set forth.

96,771.—GEORGE F. BISSELL, Oneonta, N. Y.—*Farm-Gate.*—November 16, 1869.

Claim.—1. The combination of staples G on the rails, with horns F, arranged on the post B, in the manner described.

2. The combination of staples G, arranged on that side of the center nearest to the front thereof, and the horns F with the hinge and post, said parts co-operating to swing the gate at right angles to its ordinary direction.

96,772.—WILLIAM H. BONNELL, Buffalo, N. Y.—*Lantern.*—November 16, 1869.

Claim.—1. Constructing and securing together wires of wire frames by passing one wire through the other, substantially as and for the purposes specified.

2. In combination with a lantern, the deflecting-base C, to be constructed and to operate substantially as described and set forth.

96,773.—W. C. BURNHAM, Blooming Grove, N. Y.—*Stove-Pipe Shelf and Clothes-Drier.*—November 16, 1869.

Claim.—A compound shelf and clothes-drier, composed of shelf A, rim B, bars F, hook G, rod D, and thumb-nuts, all arranged and attached to a stove-pipe, in the manner described.

96,774.—GEORGE W. CARPENDER, Butler, Ind.—*Combined Seed-Planter and Cultivator.*—November 16, 1869.

Claim.—1. The combination, with the seed-box, of the broadcast sower *b*, planter *b′*, sliding plate *i*,

swinging partition C, toothed segment k'', toothed wheel, with shaft, armed with hooks M″, all arranged and operating substantially as described.

2. The combination of the seeder, planter, cotton-seed dropper, and cultivator, D D, adapted to either seeding, plantiug, covering the grain, or cultivating, as set forth.

96,775. — Denison Chase, Orange, Mass.— *Water-Wheel.*—November 16, 1869.

Claim.—1. In combination with the buckets C, arranged at their upper edges in a nearly radial line, and thence curving downward, the rims A and B, of unequal length, set at an inclination to the shaft and also to each other, substantially as herein shown and described, and for the purpose specified.

2. The valves E, arranged to be operated substantially as shown and described, for the purpose of regulating the flow of water.

3. The chairs I, having circular cavities for the reception of the rounded ends of the bridge-tree K, whereby the latter may be adjusted both laterally and longitudinally, by means of but two set screws L, and detachably connected to the base M, to permit the lowering of the bridge-tree, as described and shown.

96,776.—J. W. Close, Buffalo, N.Y.—*Combined Screw and Pipe-Wrench.*—November 16, 1869.

Claim.—1. The stationary jaw *b*, formed with the serrations 1, 2, 3, and 4, on its upper face, in combination with the adjustable clasp-hook D and openings *i h*, for the purpose described.

2. The angular pin *p*, and spring *k*, cast together, in combination with the hook D, and the jaws of a wrench, for the purpose described.

3. The opening *j*, in the face of the stationary jaw, in connection with the removable serrated block E, or pipe-cutter F, having projection *m*, for the purpose set forth.

96,777.—Maggie Clyde, Brady Post-Office, Pa. —*Umbrella.*—November 16, 1869.

Claim.—1. An umbrella or parasol, whose handle is provided with joints *m m*, locked, opened or closed, by the latches J J, plates K, and springs O, said parts being arranged and operating substantially as herein desired, for the purpose set forth.

2. The runner H, provided with notches in its lower end, for holdiug the top or roof of the umbrella in any described fixed position, as set forth.

96,778.—Nicholas Collignon and Claudius O. Collignon, Closter, N. J.—*Folding Chair.*—November 16, 1869.

Claim.—1. The seat D, pivoted to the front legs B, and at its rear end to the back legs C, whereby the several parts are adapted to be folded together, as herein shown and described, for the purpose specified.

2. In combination with the above, the brace E, arranged to operate substantially as described.

96,779.—Solon Cooley, Caro, Mich., assignor to himself and Ceylon M. Kelly, same place.—*Apparatus for Tying Fleeces.*—November 16, 1869.

Claim.—The arrangement of the hinged leaves C, the stem D, the table A, with a suitable opening for the stem D, the treadle-lever E, and the notches *b*, in one of the standards B, when constructed, combined, and operating as and for the purpose specified.

96,780. — Herrmann Cramer, Sonora, Cal.— *Washing-Machine.*—November 16, 1869.

Claim.—In combination with the tub A and the cylinder B, the furnace, composed of the parts L and M, all constructed and arranged as and for the purposes specified.

96,781.—John Dable, Chicago, Ill.—*Apparatus for Unloading Cars.*—November 16, 1869; antedated November 5, 1869.

Claim.—1. The swinging frame A′, consisting of the arms I, rods P Q and R S, lugs K O, and braces Y, in combination with the standards W, W Z, bars X, and pulleys 14, rope 16, drum C, and shaft B, as set forth.

2. The combination of the frame A′, frame M V, supporting-pulleys 15, rope 16, lever F, bar H, arm J, nut E, and screw-cylinder *a*, for laying the rope on the drum C, as set forth.

3. The combination of the frame A′, frame M V, standards W, W Z, bars X, pulleys 14, ropes 16, C′ C′, lever F, bar H, arm J, nut E, and screw-cylinder *a*, as set forth.

96,782.—Frederick W. Davidson, Cleveland, Ohio.—*Machine for Rolling Car-Coupling Pins.*— November 16, 1869.

Claim.—The rollers B B, having grooves *a a* formed around them, with the spaces *a′* and projections *b* to form the heads, and the projections *a″* to form the points on shackle-pins, substantially in the manner shown and for the purpose set forth.

96,783.—John R. Davis, Covington, Ga.—*Gate.* —November 16, 1869.

Claim.—In combination with a gate, which swings either in one or both directions, the rods E and J, arranged and operating substantially as and for the purposes herein shown and described.

96,784.—Augustus Day, Detroit, Mich.—*Track-Clearing Car.*—November 16, 1869.

Claim.—1. The reversible wings F, adjustable to various widths laterally, by means of the cranks *g*, pinions *f*, racks *e*, and bars H, substantially as and for the purposes described.

2. The arrangement of the bolts and set-screws *a*, *d*, and *h*, the metallic flanges G, and the bars H, when operated for the purpose of reversing the wings F, as above shown.

3. The bolts or set-screws *a*, *d*, and *h*, collars *i*, and nuts *b*, in connection with the metallic flanges G, when constructed, arranged, and operating substantially as set forth, for the purpose of vertically adjusting the wings F.

4. The bolts or set-screws *m*, provided with similar collars and nuts, by means of which the vertical adjustability of the snow-plows D is secured, substantially as specified.

5. The arrangement of the snow-plows D, and the reversible wings F, in connection with the bed-frame A, as and for the purpose specified.

96,785.—G. W. Dickerson, Prairietown, Ind.— *Water-Elevator.*—November 16, 1869.

Claim.—The combination, with a bucket, swinging and emptying spring, rope, and revolving shaft, of the disk H, detent I, ratchet G, spring K, lever K, and spring *n*, all arranged and operating substantially as described.

96,786.—Isaac Erb, Lancaster, N. Y.—*Washing-Machine.*—November 16, 1869.

Claim.—1. The combination of the hinged cover J, arms K, and cross-bar L, with the tub A, levers C, and presser-arms I, substantially as herein shown and described, and for the purposes set forth.

2. An improved washing-machine, formed by the combination of the tub A, levers C, handle D, lugs or bearings E, pins G, presser-plate H, arms I, hinged cover J, arms K, cross-bar L, detachable cover M, and device O P Q, with each other, substantially as herein shown and described, and for the purpose set forth.

96,787.— D. M. Estey, Brattleborough, Vt.— *Bedstead.*—November 16, 1869.

Claim.—1. The slots D and D′, formed in the inner sides of a bedstead, the latter being lengthened and also narrowed, to form shoulders for holding the contiguous ends of the slats, substantially as herein shown and described.

2. The combination of hooks F with the slats and grooved or slotted rails of the bedstead, substantially as herein shown and described, and for the purpose set forth.

96,788.—Alexander J. Forbes, San Francisco, Cal.—*Cabinet for Ladies.*—November 16, 1869.

Claim.—The combination and arrangement of the cabinet, as described, consisting of the desk *a b c*, narrow drawers *f f*, work-table *g*, basket or bag *h*, and fire-screens *k k*, in the manner described, for the purpose set forth.

96,789.—Robert B. Forbes, Boston, Mass.—*Rigging Ships.*—November 16, 1869.

Claim.—1. The bending of the square sails of vessels by the foot to the yards next below, in such manner that they can be reefed and furled without starting the foot, and without lowering the yard above.

2. Spars attached to the foot of courses, in combination with courses arranged to reef and furl, as herein described.

3. Slinging and parreling the yards of vessels to their masts above the eyes of the rigging and back-stays, and above the fore-and-aft stays.

4. Jack-stays arranged before or abaft the sails, for conducting them to their positions.

5. The arrangement for reefing and furling sails and courses, without starting the foot, and without lowering the yard above, consisting of yards slung and parreled to the mast above, instead of below the eyes of the rigging and back-stays, and fore-and-aft stays, sails bent by the foot, courses attached by the foot to spars, and coming down on deck to furl and reef, and jack-stays for conducting the sails.

6. Attaching spars to the head of the sails bent by the foot.

7. The space C, in combination with square sails, bent at the foot, as described.

96,790.—Alfred I. Frick and Jean Baptiste Le Clerc, San Francisco, Cal.—*Process for Reducing Rebellious Ores of the Precious Metals.*—November 16, 1869.

Claim.—1. The use of the within-described ingredients when mixed or compounded with the ore in about the proportions and in the manner herein specified, for the purpose set forth.

2. The use of acids and alkalies when mixed with the mortar or ore before burning, and subjecting the same to a high degree of heat, to produce the results described, for the purpose set forth.

3. Perforating the bricks or adobes before burning or roasting, substantially as and for the purpose set forth.

96,791.—Henry A. Gage, Manchester, N. H.—*Machine for Cutting Pasteboard.*—November 16, 1869.

Claim.—1. The movable knife *a*, when adjusted and operated by levers or cranks of different lengths, or their equivalents, from main shaft, so as to produce a shear-cut, substantially as described, and for the purpose set forth.

2. The combination of the lever *e*, the slide *d*, the cam *g*, and the rod *f*, with spring for clearing the card after it is cut.

96,792.—Daniel J. Gale, Sheboygan Falls' Wis.—*Calendar-Clock.*—November 16, 1869.

Claim.—1. A calendar-attachment for clocks, comprising the above-described trains of mechanism, constructed and arranged with reference to one another in the manner specified, so as to indicate, by appropriate notations upon a face or dial-plate, the day, the week, and month, the date on which each week commences, the number of weeks expired, and the phases of the moon, all operated by the same actuating-power, and automatically, as set forth.

2. The wheel F, having twenty-nine teeth, the wheel E, having fifty-six teeth, and the wheel C, having fifty-five teeth, combined, arranged, and operated as and for the purpose specified.

3. The arrangement of pins h h^1 h^2, hinge X, wheel I, and the eighteen pins thereto attached, arms k K, and the shafts O i, to adapt the movement of indicator to the difference in the length of the several months, as specified.

96,793.—Richard J. Gatling, Indianapolis, Ind.—*Beam.*—November 16, 1869.

Claim.—An improved beam or girder, formed of two iron plates, bolted to each other, and so shaped as to form recesses in one or both edges, to receive timbers, substantially as herein shown and described, and for the purpose set forth.

96,794.—Thomas R. George, West Dryden, N. Y.—*Gavel-Fork.*—November 16, 1869.

Claim.—1. The combination and arrangement of a gavel-fork, formed by the concave tines F, their angular bend at and resting on the head B, horizontal insertion in and through the head B, the broad head B, the handle A, set obliquely to the head B, and banded to the same by the strap D, substantially as set forth.

2. The combined whole, formed of the handle A, the broad head B, the braces C′ C″, the metallic cap E, the band D, the angled and concave tines F, the same arranged as and for the purpose set forth.

96,795.—D. W. Glassie, Nashville, Tenn.—*Sewing-Machine Fan.*—November 16, 1869.

Claim.—1. The combination of a pulley, A, attached to the balance-wheel of a sewing-machine, with pulley D, shaft E, bed C *c c*, bevel-gears F I, support H, and shaft G, all arranged to operate a fan, J J, in the manner described.

2. The combination of said pulleys A and D, located as described, with the bevel F, reversed, the crank O, crank-pin *h*, supporting-shaft G, all arranged to swing the fan L on its pivot in a vertical plane, as shown and described.

96,796.—Luman M. Godfrey, Colon, Mich., assignor to himself and George S. Sheffield.—*Wind-Wheel.*—November 16, 1869.

Claim.—The combination of the hollow bearings B, within which are sleeved the arms C, to which are secured the sails D, with the shaft A, when constructed, arranged, and operating substantially as and for the purposes herein specified.

96,797.—A. H. Graton, Lawrence, Kansas.—*Dress and Skirt Protector.*—November 16, 1869.

Claim.—The dress-protector herein described, when composed of the parts A B, united as shown, provided with a distending-ring, *a*, and adapted to be attached to the person of the wearer by the outer straps C and waist-belt E, and the short interior straps D, and their hooks *e*, by which they are attached to the lower portion of the skirt, all as hereinbefore shown and described.

96,798.—Clements A. Greenleaf, Indianapolis, Ind.—*Grate-Bar.*—November 16, 1869.

Claim.—A furnace-grate bar, constructed, as herein described, of longitudinal side plates, separated by intermediate cross-pieces, bent or curved in a horizontal plane, with their upper edges flat, substantially as herein set forth.

96,799.—James Grimes, Portsmouth, Ohio.—*Cooking-Stove.*—November 16, 1869.

Claim.—1. The air-tubes K and L, the latter passing through the stove, either above or below the oven-top plate, and the former communicating therewith, and supporting the inner ends of the divided cross-center J J, substantially as described.

2. The arrangement (in an inclined or angular position) of the flue-plates beneath the oven, and at the back of the oven, substantially as and for the purposes deserbed.

96,800.—Milburn Gunn, Jeffersontown, Ky.—*Machine for Tenoning Spokes.*—November 16, 1869.

Claim.—The described arrangement of the shaft K N, adjustable collar L M, cutter I J, frame A A, with braces C C, gauge E, set-screws B B D D, and thumb-nuts F F, all constructed to operate substantially as herein set forth.

96,801.—A. J. Grush, Springfield, Ill.—*Corn-Cultivator.*—November 16, 1869.

Claim.—1. The tongue or beam A, made in two parts, connected by a detachable joint, A′, and provided with the axles B D, substantially as specified.

2. The combination, with the plow-beams H′ and the tongue or beam A, of the bar M and lever O.

96,802.—Charles Godfrey Gumpel, Leicester Square, England.—*Door-Lock.*—November 16, 1869.

Claim.—1. The bolt-shifter, the fixed and guide-plates and bolt, or the auxiliary bolt, provided with perforations extending transversely through them, and having divided pins or sliders inserted therein, all arranged to operate as set forth, whereby, when the bolt is shot, the divisions of said pins shall be distributed in the perforations of the various parts as herein shown and described, for the purpose specified.

2. The arm or stud 9 carrying the pivot-pin 8, the bolt-shifter 5, provided with an arm carrying a pin, 6, working in the slotted connecting-link 7, and the spring-stop pins, or studs 17, all combined, constructed, and arranged with reference to the bolt 1, to operate as and for the purpose set forth.

96,803.—James S. Hamlet, Portsmouth, Ohio.—*Machine for Bending Thills.*—November 16, 1869.

Claim.—1. The combination of the removable central form E, flexible heel strap G, blocks *c c*, and retainers F F′, *g*″, all constructed and arranged as herein described, and for the purposes set forth.

2. The levers C C′ herein described, in combination with the sheaves M O and drum P′, arranged for the reception of a single operating-cord, N, as set forth.

3. The combination of the forms *c* E Z, levers C C′ I′, plate G, and follower H, cords J N, and drums K and P′, as and for the purpose stated.

4. The combination of the journal shafts K′ P S with drums K P′, and spur-wheels Q R S′ with the treadle and brake frame U U′ V *v* W, as herein described, and for the purpose specified.

96,804.—John E. Hawkins, Lansingburgh, N. Y.—*Bread-Machine.*—November 16, 1869.

Claim.—The combination of the conical tube A *a*, provided with a hopper, B, shaft D, screw-blade C, knife F, and endless belt H, when constructed and arranged to operate as herein described, for the purposes specified.

96,805.—Lewis Hazlett and Samuel D. Hazlett, Winfield Township, Pa.—*Portable Fence.*—November 16, 1869.

Claim.—1. In a portable fence, an interlocking joint, consisting of the ends *a*′, cleats *c*, and cross strips *b d*, all arranged and used substantially in the manner set forth.

2. The subject-matter of the foregoing claim, in combination with the cross-strip *e*, notches *o*, and sliding catch *g*, all arranged and operated substantially as set forth.

96,806.—Charles Hempel and Joseph Schatz, Detroit, Mich.—*Heating-Stove.*—November 16, 1869

Claim.—1. The radiating-case A, provided with registers *a*, door *b*, ash-pan B, sunken pan C, and diaphragm E, or their known equivalents, when arranged to operate as herein set forth.

2. The cylindrical stove F, whose base is the diaphragm E, and whose top is provided with the drum I and wings *d*, when constructed substantially as shown.

3. In a heating-apparatus, the combination of the case A and stove F, when each is constructed as herein described, and when both are arranged and operate substantially as herein described.

96,807.—Reuben C. Higgins and Abraham Fuller, Boston, Mass.—*Carpet-Sweeper.*—November 16, 1869.

Claim.—The construction and arrangement, with the case of the carpet-sweeper, of the adjustable brush-shaft and its driving-pinion, and the trundle-gear *i*, in the manner shown and described.

96,808.—C. L. Horack, Willimantic, Conn.—*Button.*—November 16, 1869.

Claim.—In combination with the stud or button A, the post B, tube D, and arms C, E, and F, constructed, arranged, and operating substantially as and for the purposes described.

96,809.—E. Howell, Ashtabula, Ohio.—*Hemmer for Sewing-Machines.*—November 16, 1869.

Claim.—The hemmer or folder A, when formed of the piece of metal B D E G, in the manner described, having tension-spring H and arm I, by which it is attached to the sewing-machine, all constructed and arranged to operate substantially in the manner and for the purpose described.

96,810.—Amos B. Hunt, Matteson, Mich.—*Horse Hay-Fork.*—November 16, 1869.

Claim.—1. The toggle-joint *b* and its lever *b*′, in connection with the handle A, the hinge B, and the hole C, when constructed, arranged, and operating as and for the purpose set forth.

2. In combination with the toggle-joint *b* and its lever *b*′, the bail I and radius-arm J, when constructed, arranged, and operating as and for the purpose specified.

96,811.—John S. Hyde, Pent Water, Mich.—*Lath-Mill.*—November 16, 1869.

Claim.—The feed rollers E, constructed as described, when used for the purpose of separating the laths, as set forth.

96,812.—Werner Itschner, Philadelphia, Pa.—*Apparatus for Preventing Horses from Kicking in the Stable.*—November 16, 1869.

Claim.—The apparatus, consisting of a suitable number of balls, *a a a a a a a a*, or their equivalents, the string *b*, and the hooks *c c*, substantially in the manner and for the purposes as set forth.

96,813.—John D. Kerrison, New York, N. Y.—*Railway-Car Coupling.*—November 16, 1869.

Claim.—The combination, with a draw-head and weighted lever, E, of the horizontal slide D, having the pins *g g* upon its side face, as shown and described.

96,814.—Andrew Kull, Jr., Bloomfield, Wis.—*Fence.*—November 16, 1869.

Claim.—A fence, when constructed with parts A, B, and D, the parts B and D forced into the ground, substantially as described.

96,815.—Charles Kuttler, West Hoboken, N. J.—*Manufacture of Plastic Veneer.*—November 16, 1869.

Claim.—1. The process, hereinbefore described, of preparing wood, or any ligneous material, in the manner described, so as to render it capable of being embossed, pressed, and stamped out in any desired form or design, in the direction of the grain of the wood, and preserving the appearance of wood of natural growth.

2. The material so made by my process, herein described, which I call composite plastic veneer, and which, when soft and fresh, is plastic, and capable of being embossed, pressed, and stamped out in any desired form or design, in the manner hereinbefore described.

96,816.—Leo Laley, Goshen, Ind.—*Railway-Car Coupling.*—November 16, 1869.

Claim.—In combination with the bumper A and the standards C, attached to it, the pin B, provided with a slot, L, rounded edge G, and notch F, and operated by the crank D, as and for the purpose set forth.

96,817.—Richard C. Lambart, Raynham, assignor to David Whittemore, North Bridgewater, Mass.—*Heel-Cutting Machine.*—November 16, 1869.

Claim.—1. Constructing the pattern with a detachable heel-plate, substantially as described, for the purposes specified.

2. The knife R, hung so as to allow its edge a rocking motion to and from the heel, in the manner described.

3. The combination of the cam D, with the rocking knife B, for the purpose set forth, in the manner specified.

4. The combination of the pattern, the guide *y*, the cam, and the rocking knife, substantially as described.

5. Securing the knife-stock to the machine by means of the hole *s* and slot *t*, to allow an adjustment for changing the bevel of the heel.

96,818.—William A. Lewis and George W. Butler, Joliet, Ill.—*Machine for Cutting Fellies.*—November 16, 1869.

Claim.—1. The combination and arrangement of the shaft *z*, cutter-head *m*, cutting-bits *v*, levers 2 and 3, step 4, elliptic spring 1, table *b* and *c*, dogs *e* and *l*, levers *i*, *g*, and *h*, gauge *f*, and main frame *a*, constructed and operating as and for the purposes set forth.

2. The combination and arrangement of the dogs *e* and *l*, levers, *i*, *g*, and *h*, gauge *f*, slide *q*, set-screw *r*, and adjustable table *b* and *c*, as and for the purposes set forth.

96,819.—THOMAS G. LUCAS, Middletown, Conn.—*Flask for Molding.*—November 16, 1869.

Claim.—The mold, composed of the parts B C, and plates E *d*, constructed and arranged as described.

96,820.—HANNAH LUCHS, Washington, D. C.—*Fluting Machine.*—November 16, 1869.

Claim.—The combination and arrangement of the adjustable handles D and D′, the heater C, and corrugated roller B, of a fluting-machine, substantially as and for the purpose specified.

96,821.—WILLIAM LUKER, Kalamazoo, Mich.—*Animal-Trap.*—November 16, 1869.

Claim.—The hinged curved knives A B, provided with screw K, in combination with the spring F G and screw L, constructed and arranged to operate as herein described.

96,822.—E. J. MARSTERS, Shaw's Flat, Cal.—*Field-Press.*—November 16, 1869.

Claim.—1. A method of making divisible bales of hay and any like product, by placing, in the press-chamber, two or more portions of the loose article, at separate times, and inserting between the same a partition or plane of division, the said partition being withdrawn before the follower is actuated, all substantially as above set forth.

2. A divisible bale, made on the above method, as an article of manufacture.

3. The improved train of mechanism for actuating the follower, consisting of the sliding crab M, the loose crab-sleeve L, cord K, pulleys *d k*, strap J, and toggles I, all arranged in the manner described.

4. The combination of the door F and follower H, with the cord *f* and pulleys P, whereby the act of opening the door withdraws the follower, all as shown and described.

96,823.—JOHN MATTHEWS, Jr., New York, N. Y.—*Soda-Water Draught-Apparatus.*—November 16, 1869.

Claim.—1. A tumbler-guide, F, constructed and applied or arranged for use, substantially as specified.

2. The turned-up edge or border *x*, around the openings provided in the bottom of the sirup-tank stall, for the reception of the tank-nozzles and the elastic envelope I, and the opening or openings *z*, at or near the bottom of the tank-stall, all arranged substantially as herein set forth, for the purpose of preventing leakage around the tank-nozzles, and permitting the escape of any liquid collecting in the stall.

96,824.—JAMES W. MCGEHEE, Fayetteville, Texas.—*Ditching-Machine.*—November 16, 1869.

Claim.—1. The combination, with a truck-frame, of a ditching-auger and elevator, either with or without a trough, when arranged substantially as specified.

2. The combination, with the frame, the auger, and the trough, of the crane A′ and grappling and hoisting apparatus, substantially as specified.

3. The arrangement, with the driving-shaft M, of the clutch-plates O, chain-wheels N, spirally-grooved tubes R, crotches S, and operating-shaft Q, all substantially as specified.

4. The combination, with the augers and elevator-cups, of the spring-plates *a*, substantially as specified.

5. Suspending the trough and auger by detachable connections, substantially as specified.

96,825.—WILLIAM H. MOORE, Jr., Blooming Grove, Ind.—*Grain-Drill.*—November 16, 1869.

Claim.—The combination of the central hopper L′, adjustable hoppers L L″, horizontal arm P, connecting-rods O O, shaft Q, and hand-lever R, with the wheel B, crank D, rods E H I J, disks F G, and seed-slides K, all constructed and arranged to operate as and for the purposes specified.

96,826.—W. N. MOORE, Neenah, Wis.—*Cooking-Stove.*—November 16, 1869.

Claim.—1. The extension-top B, attached behind the escape-flue *k*, and providing the same with a hot-air chamber, *d*, flue *g*, dampers *h* and *i i*, when attached to a cooking-stove, for the purposes set forth.

2. The extension-top B, hot-air chamber *d*, flue *g*, dampers *h* and *i i*, when arranged relatively to the stove A, provided with damper *o*, flues *e e e′ e′ f′* and *f*, or other accessories of a similar or equivalent character, as and for the purposes set forth.

96,827.—CHARLES MOTIER NES, York, Pa.—*Manufacture of Pig-Iron.*—November 16, 1869.

Claim.—1. The use of the concentrated blow-pipe blast in furnaces, for the production of iron from the ore, or in puddling-furnaces, in the manner and for the purposes herein described.

2. The use of the concentrated blow-pipe blast, in combination with electricity, in the manner herein shown and described, to facilitate the melting and purification of the iron in blast, cupola, or puddling furnaces, as set forth.

3. The employment, in the blast or other furnace for reducing iron-ore, of a perforated bottom or partition of soapstone, or other suitable material, to separate and keep free the molten metal from the cinder, ore, and other impurities, as herein set forth.

96,828.—CONSTANTINE NESSI, San Francisco, Cal.—*Beverage.*—November 16, 1869.

Claim.—The within-described ingredients, mixed or compounded in about the proportions set forth, substantially as and for the purpose specified.

96,829.—JOHN W. NEWTON, Geneva, Wis.—*Drag.*—November 16, 1869; antedated November 1, 1869.

Claim.—The straight, rigid-toothed drag, consisting of the stock A, teeth *a a*, braces *c c*, and curved bow or handle C, all constructed, arranged, and operated in the manner and for the purpose set forth.

96,830.—HENRY NUSTEDT, New York, N. Y.—*Sample-Card for Liquids.*—November 16, 1869.

Claim.—Frame A, consisting of bottom, top, and side strips, in combination with glasses B B and slide C, substantially as specified.

96,831.—AMOS D. OWEN, Thorntown, Ind., and JOHN D. SHERMAN, Paw Paw, Mich.—*Propelling-Apparatus for Vessels.*—November 16, 1869.

Claim.—In combination with the pins J and rods F, the links L, arms K, toggle-levers M, rods N, cam-levers O, and pivots *e*, sliding in the slots *f* of the hangers P, in connection with the tappets *g*, the guides G, vibrating beam C, and connecting-rod E, the whole constructed, arranged, and operating substantially as and for the purpose herein shown and set forth.

96,832.—EDWARD LIVINGSTON PERRY, New York, N. Y., assignor to COMBINATION RUBBER COMPANY, same place.—*Rubber-Hose.*—November 16, 1869.

Claim.—As a new manufacture, vulcanized India-rubber hose for steam fire-engines, and other purposes, in which the rubber is combined with a suitable number of plies of fine canvas, such as described, made of hard twisted and closely-woven threads or yarns, substantially as and for the purpose set forth.

96,833.—HIRAM S. PHILLIPS, Sewickley, Pa.—*Barrel-Filling Apparatus with Whistling Indicator.*—November 16, 1869.

Claim.—1. The arrangement, in connection with a barrel-filling inlet-pipe, of a whistling-tube, *i*, the lower orifice *o* of which is a little above the lower orifices of the air-passages *e e′*, substantially as and for the purposes set forth.

2. The arrangement of a tube, *e′*, with its lower orifice *o′* intermediate between the orifice *o* of the whistling-tube, and the orifices of the air-passages *e*, substantially as and for the purposes set forth.

3. The basin *d*, in combination with air-passages *e e′*, arranged substantially in the manner and for the purposes set forth.

96,834.—EDGAR M. POTTER.—Suspended.

96,835.—GEORGE W. PRENTICE, Whitinsville, Mass.—*Mechanism for Raising Top-Roller Weights in Spinning-Machines.*—November 16, 1869.

Claim.—1. In combination with the bridge I, or

other equivalent device for holding the weight-levers B, the cam-lever H, arranged to raise the weights, and to support them of itself, when raised, by the position it then assumes, substantially as described.

2. In combination with the lever H, the bridge I and adjustable standard F, constructed and arranged substantially as described.

96,836.—ELIJAH J. PRESTON, Eureka, Mo.—*Harrow.*—November 16, 1869; antedated November 1, 1869.

Claim.—1. The within-described device for cleaning the harrow, when used in the manner and for the purpose set forth.

2. In combination with the cleaners R, the divided harrow O, lever W, rod K, and plows D, when used in the manner and for the purpose set forth.

96,837.—ERNEST QUAST, Freedom, Mo.—*Ax.*—November 16, 1869.

Claim.—Ax-polls, constructed in two parts A, shaped and secured as described, and the bits, joined thereto by a tongued and grooved connection, all substantially as specified.

96,838.—S. G. RAYL, Agency City, Iowa.—*Combined Double-Shovel and Two-Horse Cultivator.*—November 16, 1869.

Claim.—1. Connecting the inner shovels B to the plow-beams A, by a curved standard, C, in such a way that the top of said shovels may be unobstructed, substantially as herein shown and described, and for the purpose set forth.

2. The shield F, constructed and connected with the plow-beams A, substantially in the manner herein shown and described, and for the purpose set forth.

3. Connecting the handles N and P, either or both, to the plow-beams A, by a system of detachable braces, substantially as herein shown and described, and for the purpose set forth.

4. The pivoting rods Z, perforated swinging plates B′, clevises C′, and bars D′, with each other and with the plow-beams A and carriage T U V, substantially as herein shown and described, and for the purpose set forth.

5. The carriage T U V X Y, constructed substantially as herein shown and described, that is to say, in such a way that the forward ends of the plow-beams A may project in front of the cross-beam U and knees V, as and for the purpose set forth.

96,839.—PHILIP ROLLHAUS, Port Chester, N. Y.—*Cooking-Range.*—November 16, 1869.

Claim.—The plate B, covering the lower tier of an elevated oven-range, and provided with an aperture, *b*, through which the pipes E can be reached, substantially as herein shown and described.

96,840.—GEORGE W. SANDERSON, Shirley, Mass.—*Stable-Hook.*—November 16, 1869.

Claim.—The stable-hook, composed of the hook A and spring-latch D, constructed and operating so that said latch opens outwardly, substantially as described.

96,841.—JOSEPH SAWYER, Sebewaing, Mich.—*Detachable Buoyant Ship's Deck.*—November 16, 1869.

Claim.—1. The detachable double-walled buoyant deck D, provided with compartments for receiving air-vessels, cork, or other buoyant material, and secured to the stanchions or cabin-walls, in any convenient manner that will permit of its being readily detached therefrom.

2. In combination with the deck D, a locker or receptacle, G, formed therein, for the purpose specified.

96,842.—IRA W. SHALER, Brooklyn, N. Y.—*Apparatus for Carbureting Air.*—November 16, 1869.

Claim.—1. The combination, with the air-reservoir, of the bellows for supplying air to the same, and the oscillating arm and connecting rods, through the medium of which motion is imparted to the bellows from the crank of the spring-power or other actuating-mechanism, said parts being constructed and arranged for joint operation, as set forth.

2. The employment, in the carbureting-chamber, of separate cylinders, or other-shaped tubes, of wire gauze, with a filling of cotton, wool, or other suitable absorbent, for operation, substantially as and for the purposes set forth.

96,843.—A. D. SMITH, Grafton, assignor to DAVID ROSE, Rawsonville, Ohio.—*Trunk-Tie and Clasp.*—November 16, 1869.

Claim.—1. The combination, in a trunk-tie, of straps 1, 2, 3, 4, and bands A B C D, joined together in any suitable manner, substantially as described and for the purpose set forth.

2. In combination with a trunk and tie, the adjustable screw-clasp, constructed substantially as described and for the purpose set forth.

3. The combination of said clasp with the trunk-tie strap G, substantially as described and for the purpose herein shown and set forth.

96,844.—CHARLES SPIRO, New York N. Y.—*Watch-Winding and Setting Attachment.*—November 16, 1869.

Claim.—The combination of fusee-post, fixed and movable clutch-sleeve *b*, and arranged for winding and setting the watch, substantially as described.

96,845.—CHARLES B. STEPHENS, Riverton, Conn.—*Envelope-Opener.*—November 16, 1869.

Claim.—1. The eraser-blade A, (with one or more points B,) in combination with a grooved handle, and operating substantially as described, for the purposes set forth.

2. In combination with the blade A and handle C, the lead-pencil eraser F, substantially as described.

3. The combination of an ink and lead eraser with an envelope-opener, substantially as described.

96,846.—CLEMENT ST. JAMES, Pittsfield, Mass.—*Fifth-Wheel for Carriages.*—November 16, 1869.

Claim.—1. The circle E, made with offsets at its sides, so that one of its parts may be the arc of a smaller circle than the other, substantially as herein shown and described, and for the purpose set forth.

2. Connecting the upper and lower half circles G H with each other adjustably, by means of the lugs *g′ h′*, substantially as herein shown and described, and for the purpose set forth.

3. The stay-arm or bracket L, for connecting the forward part of the circle E with the wagon-body, substantially as herein shown and described, and for the purpose set forth.

4. The combination of the socket M and pivot N with the bolster C, axle A, circle E, and half circles G H, substantially as herein shown and described, and for the purpose set forth.

96,847.—JAMES SWAN, Seymour, Conn.—*Die for Forming Bits and Augers.*—November 16, 1869.

Claim.—The die, for swaging auger-bits, constructed in two parts, B and C, and otherwise, as described and shown.

96,848.—GILLESPIE SWEENEY, New York, N. Y.—*Combined Umbrella, Cane, and Seat.*—November 16, 1869.

Claim.—1. The combination of a cane, umbrella, and seat in one article, substantially in the manner described.

2. The arrangement, with the stalk of an umbrella, of the arms E, braces F, and canvas or other web G, all substantially as specified.

96,849.—A. VAN CAMP, Washington, D. C., and M. M. HODGMAN, Saint Louis, Mo.—*Wood Pavement.*—November 16, 1869.

Claim.—The grooved blocks A A, when they are seated and secured in a concrete bed, B, and cemented together by concrete *b*, as shown and described.

96,850.—A VAN CAMP, Washington, D. C., and M. M. HODGMAN, Saint Louis, Mo.—*Concrete for Pavements and for other Purposes.*—November 16, 1869.

Claim.—1. A concrete composition for paving, roofing, flooring, &c., when the same is composed of asphaltum or the residuum of pitch or coal-tar, sand, and decomposed silex, substantially as described.

2. Laying the composition, herein described, for a

pavement or walk by means of hot tamps and hot rollers, substantially as described.

3. A water or drain pipe, when the same is composed of the composition herein described.

96,851.—PETER SPOHN VAN WAGNER, Saltfleet Township, Canada.—*Holdback for Carriage-Thills.*—November 16, 1869.

Claim.—The holdback B B, made of malleable cast iron, or other suitable metal, containing a spring, C, tumbler D, hook G, as above described applicable to any purpose for which it may be used.

96,852.—PETER SPOHN VAN WAGNER, Stoney Creek, Township of Saltfleet, Canada, assignor to himself and ALFRED E. CARPENTER, same place.—*Adjustable Trace-Fastening.*—November 16, 1869.

Claim.—The trace-fastener herein described, consisting of the grooved socket A, arrow-head E, and spiral spring F, so constructed that the arrow-head has only sufficient longitudinal movement to allow it to be turned round in the socket, substantially as specified.

96,853.—ALONZO WARREN, Boston, Mass.—*Water-Wheel.*—November 16, 1869.

Claim.—1. An inner and an outer casing, so constructed and arranged, that when the inlet-passages are fully open, the line of the inside of the inner casing and the adjacent line of the inside of the outside casing form nearly or exactly one and the same extended curved line, substantially as and for the purpose set forth.

2. In combination with the above, an unobstructed inlet-passage, the inside of which is formed by the union of the adjacent outside lines of the guiding-curves of the inner and outer casing, substantially as and for the purpose set forth.

96,854.—ASA WATERS, Mobile, Ala.—*Tube-Well.*—November 16, 1869.

Claim.—In combination with a tube-well, the wire-cloth covering B, and the perforated shield C, constructed and arranged substantially as and for the purposes described.

96,855.—GEORGE WELLHOUSE, Akron, Ohio.—*Cooking-Stove.*—November 16, 1869.

Claim.—1. The plates E F, as arranged in relation to each other, so as to form an arch-like central flue G, in combination with the rib *c*, side-flues D D, and oven C, substantially as and for the purpose set forth.

2. The plate I, as arranged in relation to the flues D and G′, in combination with the damper I′, for the purpose specified.

3. The oscillating bars N, semicircular plates O, in combination with the shaft M and frame L, in the manner substantially as and for the purpose described.

4. The shelves P P′, as arranged, in combination with the stove A, for the purpose specified.

96,856.—JAMES WHITE, Cleveland, Ohio.—*Fruit-Box Crate.*—November 16, 1869.

Claim.—The fruit-crate, composed of the slats A B, studs C, and right-angled solid wood corner-pieces F, when constructed in the manner and for the purpose substantially as described.

96,857.—GEORGE W. WILSON, Freeport, Ill.—*Wash-Boiler.*—November 16, 1869.

Claim.—The cover B, when provided with one or more partitions C and valve E, in combination with boiler A, constructed as herein described, for the purpose specified.

96,858.—JOHN WINSBORROW, Livermere Road, Dalston, England.—*Liquid-Meter.*—November 16, 1869.

Claim.—A meter, for measuring liquids, combining two vessels, *d d*, open at the bottom and arranged in different chambers on the same level, pistons *e e*, operated by the pressure of the liquid, a double crank-shaft, *h*, operated by the pistons, a registering-device, operated by the worm *p*, and a valve-gear, operated from shaft *h*, which allows the vessels *d* to be alternately filled and emptied, in the manner described.

96,859.—STEPHEN A. WOOD, Cardington, Ohio.—*Fence.*—November 16, 1869.

Claim.—1. The wire links or hooks C, in fences constructed substantially as herein set forth.

2. The picket B, provided with notches *d*, in combination with the wire links or hooks C, when constructed and operating substantially as herein described.

96,860.—J. ZIMMER, Jr., Halfday, Ill.—*Harness-Pad Block.*—November 16, 1869.

Claim.—The flexible clamping-bow D, arranged to clamp the leather equally to the long sides of the block A, in combination with said block, the bar G, links H, screw F, and plate B, as set forth.

96,861.—JOHN AHERN, Baltimore, Md.—*Composition for Destroying Insects on Flowers, Plants, and Bushes.*—November 16, 1869.

Claim.—The composition compounded of the above-named ingredients, and applied for the protection of trees, vines, and plants, substantially as set forth.

96,862.—ALBERT F. ALLEN, Providence, R. I.—*Hose-Pipe Nozzle.*—November 16, 1869.

Claim.—1. The hose-pipe nozzles lined with a flexible rubber bushing, for the purposes specified.

2. In combination with a hose-pipe nozzle, the flexible-rubber bushing C, and compresser B, provided with suitable screw-connections and an annular inclined plane, for the purposes specified.

96,863.—ALBERT F. ALLEN, Providence, R. I.—*Hose-Ladder Strap.*—November 16, 1869.

Claim.—As a new article of manufacture, the hose and ladder strap, herein described, consisting of the strap A, provided with hooks, sliding band, and handle, for the purposes specified.

96,864.—WILLIAM ARNOLD, Pawtucket, R. I.—*Washing-Machine.*—November 16, 1869.

Claim.—1. The arrangement and combination of the crank B, gears C C, wash-wheel A, with its projecting pins *a a*, and center-piece F, with its step O, as specified.

2. The combination of the wash-wheel A, center-piece F, step O, in combination with rolls *b b b*, or corrugated corner-boards *d d*, as described.

96,865.—BENJAMIN BACON, Morrison, Ill., assignor, by mesne assignments, to NATIONAL WATCH COMPANY.—*Reversible Safety-Pinion for Watches.*—November 16, 1869.

Claim.—In the train of a watch, the combination and arrangement of the separate nut D, and the coupling, substantially as described, with the pinion A and the arbor B, its screw and gear C, the whole being to operate as specified.

96,866.—JOHN AUGUSTUS BALL, Grass Valley, Cal.—*Chain-Elevator and Bucket.*—November 16, 1869.

Claim.—Operating elevator-buckets by means of the rods *b b′ b″ c*, and the jointed arms *d d*, which automatically raise and lower the guard and guard-rods at the proper point, in combination with the flap-door F, guard F′, and said guard-rod *c*, the whole constructed and arranged substantially as described.

96,867.—CHARLES E. BANCROFT, Montpelier, Vt.—*Seaming-Machine.*—November 16, 1869.

Claim.—1. The upright shaft *e*, arranged with a cam or bend in its upper part, and supporting the horizontal disk of a double seaming machine, as described.

2. In combination with the horizontal disk of a double-seaming machine, the automatic cam-shaft *e*, having elevating-screw P and stop *h*, as shown and described.

3. The double-seaming machine herein described, having the slotted base A, standards B D, vertical disk C, clamp-wheel F, horizontal disk E, made removable, and upright cam shaft *e*, stepped in the head of the elevating-screw P, and having the stop *h*, all constructed and arranged to operate as specified.

96,868.—Simon Barnhart, Chillicothe, Ohio.—*Saw-Mill.*—November 16, 1869.

Claim.—1. The removable parts C and D, arranged relatively to each other, and to the frame A and saw B, as and for the purposes herein set forth.

2. In combination with a portable saw-mill, A B, substantially of the character herein described, the end-supports H′ and J′, with means, as specified, for adjusting them, not only outwardly and inwardly, but up and down, at will, substantially as and for the purposes herein set forth.

96,869.—Edwin Bennett, Baltimore, Md.—*Fruit-Jar.*—November 16, 1869.

Claim.—A vitreous or earthen jar, provided with an annular interior recess in its neck, and a cover fitting therein, the annular joint between the neck and cover being covered by a packing-ring, held to duty by a screw-cap or similar clamping and retaining device, substantially as described.

96,870.—Albert Betteley, Boston, Mass.—*Wood Pavement.*—November 16, 1869.

Claim.—A wood pavement, composed of cylinders or cylindroids, the adjacent rows of which are scored on one or both sides, and are interlocked and inclined in opposite directions.

96,871.—Virgil W. Blanchard, Bridport, Vt.—*Preserving Fruits, Meats, and other Substances.*—November 16, 1869.

Claim.—1. The use of an alkaline solution of pyrogallic acid, substantially as and for the purpose set forth.

2. The combination of the cover B, elastic packing C, movable cup F, and sponge G, or their equivalents, substantially as and for the purpose described.

3. The combination of the vessel A, cover B, elastic packing C, cup F, sponge G, and the alkaline solution of pyrogallic acid or its equivalent, substantially as and for the purpose set forth.

96,872.—Virgil W. Blanchard, Bridport, Vt.—*Furnace and Process for Treating and Reducing Ores, &c.*—November 16, 1869; antedated November 6, 1869.

Claim.—1. The tube L and rod M, in combination with the furnace and blast-pipe C, substantially as and for the purpose specified.

2. The injection of prepared fuel and ore into the interior of a furnace, at such a point as to be exposed simultaneously to the heat of the molten metal in the hearth of the furnace and to the action of the gaseous elements contained in the blast, substantially as and in the manner set forth.

3. The tube L and rod M, constructed as described, in combination with the chamber H, substantially as and in the manner described.

4. The injection of coal-oil or coal-tar, in combination with the ore, into a furnace, at or near the point where the blast is applied, substantially in the manner and for the purpose specified.

5. The injection of coal-oil or pulverized coal, or any other suitable substance, into the interior of a furnace, at or near the point where the blast is applied, substantially as and in the manner specified.

6. The injection of iron-ore, in combination with prepared fuel and the chloride of sodium, or any other suitable substance, into the interior of a furnace, at or near the point where the blast is applied, substantially as and in the manner set forth.

7. The injection of prepared fuel into the interior of a blast-furnace, at or near the point where the blast is applied, substantially as and for the purpose specified.

8. The slide P and rod M, or their equivalents, in combination with the injecting-tube L, as and for the purpose set forth.

9. The injecting-tube L, constructed as described, in combination with the blast-pipe C, substantially as and in the manner specified.

96,873.—Eliam Boorse, Philadelphia, Pa.—*Fastening for Fruit-Jars.*—November 16, 1869.

Claim.—As a new article of manufacture, the locking-cap for screw-necked jars, constructed with engaging-arms D D^1 D^2 D^3 of unequal lengths, whereby the hooked ends of said arms engage under the same thread and hold at different points thereon, substantially as represented and described, and for the purpose specified.

96,874.—James M. Bottum, New York, N. Y.—*Process and Apparatus for Annealing Metals.*—November 16, 1869.

Claim.—The process and apparatus for annealing metals, substantially as herein described.

96,875.—Worden J. Boyce and George W. Haines, Maine Prairie, Cal.—*Gang-Plow.*—November 16, 1869.

Claim.—1. The machine described, consisting essentially of the frame *a b*, tongue *c*, adjusting-devices *e g i k*, wheels *n*, and lever *p*, the whole being combined and arranged for the purpose set forth.

2. The sliding stirrup *e*, moving in straps or ways *f f* at the top of the frame, and held in place by a pin, *g*, or their equivalents, substantially as set forth.

3. The lifting-bar *i*, with its movable fulcrum *k*, on the plate *k′*, so that by its link-connection with the end of the tongue the draught-pole can be thrown to the right or left, or the end raised and lowered, substantially as set forth.

96,876.—John F. Boynton, Syracuse, N. Y.—*Fire-Extinguisher.*—November 16, 1869.

Claim.—The combination of the vessel A with the generator *a* and capsule *b*, substantially as herein described.

96,877.—Charles B. Bristol, New Haven, Conn.—*Washing-Machine.*—November 16, 1869.

Claim.—1. The combination of the two rollers D and E with the slotted posts A and B, the springs *k* and *l*, and caps *f* and *g*, when constructed, arranged, and fitted for use, as herein described and set forth.

2. The combination of the lower roller D, with the bar *a b*, while sustaining its India-rubber plate C, when they are constructed and arranged as herein described and set forth.

96,878.—Thomas Brocket and Joseph J. Brown, Davenport, Iowa.—*Grain-Meter.*—November 16, 1869.

Claim.—1. The combination of the stationary hopper *e* with its apron *e*, the revolving hopper *d*, supported on the vibrating frame *i*, and having its partitions arranged to engage with the spout *f* and stop *h*, all constructed and arranged to operate substantially as described.

2. The arrangement of the dial *l* with its index, operated by the hook or pawl *k*, attached to the vibrating frame as set forth.

96,879.—George W. Brown, Providence, R. I.—*Snow-Shovel.*—November 16, 1869; antedated November 10, 1869.

Claim.—The cutter *a*, so attached to the shovel-blade A, by means of soft rivets or screws, that the cutter may be removed when the shovel is required for uses other than shoveling snow.

96,880.—Daniel Bull, Amboy, Ill.—*Carriage-Jack.*—November 16, 1869.

Claim.—1. The reciprocating rack-bars A′ A′, arranged on the standards to afford alternate support to the fulcra of the lever G of a lifting-jack, as specified.

2. The double fulcrum-lever G, with its dogs L L, when combined with double standards having ratchets, as described, and when arranged to operate as set forth.

3. In combination with the spring *s*, lifting-bar D, and double fulcrum-lever G, having dogs L L working on the rack-bars A′ A′, the sliding spring V, constructed and arranged to operate as specified.

96,881.—Calvin L. Butler, Greenfield, Mass.—*Bit Brace.*—November 16, 1869.

Claim.—The jaws D E, constructed to operate in inclined guides *d e*, by means of a conical female-screw socket H, so as to be at all times parallel with each other, and to seize the bit by its cylindrical portion in front of its head.

96,882.—J. K. CALDWELL, Allegheny City, Pa.—*Drying-Car.*—November 16, 1869.

Claim.—1. In a drying-car, for drying brick, fruit, grain, or other articles, the supports A A, having inclines *a a*, semicircular recesses *b b*, and projections *c c*, constructed and used substantially as shown and described.

2. The combination of the tables B B, half hinges C C, supports A A, inclines *a a*, semicircular recesses *b b*, and projections *c c*, in a drying-car for drying brick, fruit, grain, or other articles, when constructed and arranged substantially as specified.

96,883.—JOSEPH PATTEN CAMPBELL, Danville, Pa.—*Corn-Planter.*—November 16, 1869.

Claim.—1. The combination and arrangement of the removable cams *n*, disk *i*, levers H and *u*, with the seed-box E, base-board A, and vibrating bar *d*, as and for the purposes specified.

2. The bars *n*, *u*, and *v*, adapted to receive the conduits X, plows, Fig. 3, and rakes, Fig. 5, constructed and arranged as described.

96,884.—L. M. CAPRON, Worcester, Mass., assignor to ALEXANDER BIGELOW and GEORGE BARBER, same place.—*Stripper for Carding-Machines.*—November 16, 1869.

Claim.—The combination, with the main and doffer cylinders of a breaker carding-machine, of an adjustable stripping or cleaning cylinder E, arranged and operated substantially as and for the purposes set forth.

96,885.—GEORGE CLARK, Buffalo, N.Y.—*Steam-Boiler.*—November 16, 1869.

Claim.—Dividing the water-space of a drop return-flue boiler by one or more diaphragms, and arranging the feed-mouth of the water-pipe near the uptake, so as to compel a circulation of the water back and forth along the flues, in a direction reverse from that of the draught therein, substantially as and for the purposes hereinbefore set forth.

96,886.—P. J. CLEVER, Goliad, Texas.—*Sewing-Machine.*—November 16, 1869.

Claim.—1. The combiuation of the treadle A and clamp A^2, with the frame, so that the treadle may be adjusted to either side or one end of the table, according to the direction of the feeding-movement, substantially as specified.

2. The arrangement of the hinged supporting-frame B, the cam-dog B^3, and the spring B^4, substantially as specified.

3. The combination and arrangement of the vertically-adjustable driving friction-wheel A^{11}, loose friction-wheel B^7, ratchet-clutch B^{11}, spring B^{12}, fly-wheel B^{13}, friction-lever B^{14}, rod B^{16}, and finger-presser B^{17}, all substantially as specified.

4. The combination, with the shuttle, of the tension spring D^8, set-screw D^{10}, and guards D^{11}, when arranged substantially as specified.

5. The combination of the feed-shoe E, vertically-sliding plate E^1, adjusting-spring E^5, set-screw E^3, carrier E^2, and cam E^7, all substantially as specified.

6. The combination, with the feed-carrier E^2 and notched bar F, of the inverted V-shaped frame F^2, stud-pins H, spring H^1, vertical slide F^4, and cam F^7, all substantially as specified.

7. The combination, with the vertical slide F^4 and stud-pin F^6, of the bent arm H^3 H^4, and adjusting-screw H^7, substantially as specified.

8. The combination, with the tension-spring K, provided with the points K^1, and connected to the needle-arm support, as described, of the right-and-left threaded screw K^2, disk K^4, and friction-block K^5, substantially as specified.

9. The spooling-device L, consisting of the vertical stock, arm L^4, grooved pulleys L^1 and L^2, and arranged relatively to the table and friction-wheel B^7, all substantially as specified.

96,887.—ISAIAH A. CLIPPINGER, Newton, Iowa.—*Carriage.*—November 16, 1869; antedated November 8, 1869.

Claim.—The wrought-iron bolt A, in combination with the reach-head C, constructed and arranged substantially as herein described, for the purpose of protecting the spring against lateral and longitudinal strain, as set forth.

96,888.—GEORGE COMBS, Utica, N. Y.—*Washing-Machine.*—November 16, 1869.

Claim.—1. The arrangement and combination of the pitmen N N, and springs G G, with the washboards, substantially as and for the purposes herein described and set forth.

2. The combination of the self-adjusting washboards F F with the springs G G, reel E K, shaft I, crank H, pitmen N N, and shafts M M, in the manner as and for the purposes herein specified and shown.

96,889.—EDWARD T. COVELL, Brooklyn, N. Y.—*Bail or Handle for Pails, &c.*—November 16, 1869; antedated November 10, 1869.

Claim.—1. The combination of a guard or guard-piece, A, with the handle or bail of a can, pail, box, or other vessel, to form a handle for the same, by means of metal clamp-plates, partially embracing the wire and guard, substantially as herein set forth.

2. The combination of a longitudinally-divided and flatteued or cylindrically or polygonally-shaped guard E, with a metallic bail, B, and with metal clamps to secure and unite the two divisions of the guard, substantially in the manner herein set forth.

96,890.—EDWARD T. COVELL, Brooklyn, N. Y.—*Manufacture of Nozzle and Screw-Caps for Oil-Cans, &c.*—November 16, 1869.

Claim.—A separate threaded ring or ferrule, A, in combination with a nozzle or cap of thin or soft metal, substantially in the manner and for the purpose herein set forth.

96,891.—WILLIAM H. COX and THEOPHILUS LAROUCHE, Williamstown, N. Y.—*Thill-Coupling.*—November 16, 1869.

Claim.—1. The improved draw-iron A, having a chamber inclosed on all sides except the end which is covered by the cap *e*, as shown and described.

2. The combination of screw H and jam-nut *i*, with the draw-irou, and a shank provided with the cylindrical groove S, arranged as set forth, to prevent "rattling."

96,892.—THOMAS C. CRAVEN, Albany, N. Y., assiguor to WILLIAM L. and HENRY K. BOYER.—*Hay-Tedder.*—November 16, 1869.

Claim.—1. The stationary girt C, snpporting the rotating continuous sleeve or central tubular shaft D of the skeleton reel, in combination with the frame B B B′ and wheels A A, substantially as set forth.

2. The combination of the girt C, continnous sleeve or tubular shaft D, arms *d* and d^1, and ribs E, substantially as set forth.

3. The combination, substantially as described, of reel-arm *d* d^1, central continuous tubular shaft D, mounted upon a girt which connects the sides of the frame with the stationary gear-rim mounted on the frame, driving-wheels A A, and a system of gears, connecting said driving-wheels with the reel.

96,893.—JOHN J. CRAWFORD, Glasgow, Scotland.—*Steam Cloth-Press.*—November 16, 1869.

Claim.—The combination of the follower or plunger *d*, movable racks *g*, and sockets *j*, when said parts are constructed and arranged to operate as and for the purpose herein shown and described.

96,894.—JEPTHA CUMMINS, and CAREY E. CUMMINS, Perry, Mich.—*Horse Hay-Fork.*—November 16, 1869.

Claim.—1. The handle A, provided with the loop B, notched slot C, and apertures in its lower end, so as to regulate the tines, substantially as set forth.

2. The handle A, constructed as described, in combination with the clevis G, tines D, and trigger H, when combined to form a horse hay-fork, substantially as shown.

96,895.—HENRY CURTNER, Anna, Ohio, assignor to himself and ELI RAGON, same place.—*Water-Governor.*—November 16, 1869.

Claim.—The combination and arrangement of the float R, axial rod O, pitmen N and J, and rock-shaft

M L K, vertical guiding-stem I, ball-valve H, and removable seat-block H′, all substantially as and for the purpose described.

96,896.—William G. Davis and Levi T. Davis, McMinnville, Oregon, assignors to Daniel McCreary, J. B. Davis, and Levi T. Davis.—*Combined Harvester and Thrasher.*—November 16, 1869.

Claim.—1. The combination of the main frame A A′, and the frame C, the latter pivoted by the arms C¹ to the rear part of the frame A′, substantially as described.

2. The levers E and F, pivoted to the frame A′, and connected to the swinging frame C, in the manner set forth, to enable the operator upon the rear platform to regulate the height of the cutting-apparatus at will, as described.

3. A combined header and thrasher, constructed substantially as described, and having arrangements for attaching teams both at front and rear, substantially as set forth.

96,897.—Cyrus Dean, Buffalo, N. Y., assignor to John Alexander Blake, Port Robinson, Canada.—*Lantern.*—November 16, 1869.

Claim.—1. The device herein described, consisting, essentially, of the lamp, the glass, the sliding shield, the signal-glass, and door, and adapted to be used as an ordinary lantern, a signal-lantern, or a dark-lantern, when these parts and their adjuncts are constructed as herein shown.

2. In combination with the above, the match-lighting attachment E F, constructed and applied as shown.

96,898.—D. D. Decker, Saugerties, N. Y., assignor to himself and W. B. Dubois.—*Carriage Fifth-Wheel.*—November 16, 1869.

Claim.—1. A fifth-wheel, having a groove in its under face, of substantially the form shown and described, and adapted to turn on supporting-brackets, as and for the purposes described.

2. The employment, in combination with a fifth-wheel, of adjustable stops, for varying the throw or extent of turning of the mechanism, as and for the purposes explained.

96,899.—John Otto Donner, Jersey City, N. J.—*Kiln for Revivifying Bone-Black.*—November 16, 1869.

Claim.—1. The arrangement, relatively to each other, of a series of fire-places A A, the body of the kiln made up of two or more stories in communication at their ends, so as to form return-flues for the gaseous products of combustion, and the pipes or retorts L L, substantially as specified.

2. The arches B B, arranged to extend over and in rear of the fire-places, and provided with distributing-apertures *a a*, for the heated air and gases through them, in combination with the retorts L L, arranged, in relation to the fire-places A A, essentially as described.

3. The combination, with the retorts L L, of the beams N N, formed with sockets to receive the upper ends of the retorts, and the feeding-nozzles or thimbles O O, substantially as and for the purpose or purposes herein set forth.

96,900.—John Otto Donner, Jersey City, N. J.—*Vacuum-Pan and Similar Apparatus.*—November 16, 1869.

Claim.—The combination and arrangement, with the vacuum-pan or vessel A, and relatively to the escape-pipe B, for the vapor generated within said vessel, of the tapering or curved funnel-shaped rim C and cup D, constructed to leave an annular opening, *b*, between them, substantially as and for the purpose or purposes herein set forth.

96,901.—Thomas H. Eulass, Mason City, Ill. — *Hemmer for Sewing-Machine.* — November 16, 1869.

Claim. — As a new article of manufacture, the hemmer herein shown and described, consisting of plate A A′, B C G, formed as described, and having slots *c g*, scales *c′ c′*, and adjustable edge-turning block E, and set-screw F.

96,902.—Michel G. Fagan, Troy, N. Y., assignor to himself and Joseph B. Wilkinson, same place.—*Base-Burning Stove.*—November 16, 1869.

Claim.—1. The fuel-chamber A′, supported by the cylinder B at a point between the exit-pipe *c* and the grate *e′*, situated and used as and for the purpose as described and set forth.

2. The draught-aperture *b*, with its cover *b′*, in combination with the outlet connection-pipe *c*, and its air-tight damper *c′*, situated, constructed, and used as described and set forth.

3. The chamber *f*, with its dampered ingress-apertures *g*, and outlet *h*, constructed, situated, and used as described and set forth.

4. The chamber *i*, with its dampered ingress-apertures *j*, and outlet-apertures *k*, constructed, situated, and used as described and set forth.

5. The chamber *l*, with its ingress-apertures *m*, and outlet-apertures *n*, constructed, situated, and used as described and set forth.

6. The chamber C, in combination with the upper chamber A′, (and supporting the same,) situated and used as described and set forth.

7. The perforated bottom plate, or its equivalent. *r*, with the perforated damper S, operated by the handle S′, constructed, situated, and used as described and set forth.

8. The dampered aperture *t*, in combination with the outlet *u*, and the perforated plate *r*, constructed, situated, and used as described and set forth.

9. The illuminating-apertures *p*, covered or closed with mica, or its equivalent, and situated below the grate and above the base of a stove, as and for the purpose described and set forth.

10. The employment and construction of the lever G′, or any equivalent thereto, for the purpose of causing the fuel to drop downward, substantially as described and set forth.

96,903. — Edward Faron, Chester, Pa., assignor to Reaney, Son and Company, same place. —*Link-Motion Device for Steam-Engines.*—November 16, 1869.

Claim.—1. A solid link, A, arranged to slide in a disk, *b*, which is adapted to, and can oscillate in the cross-head of a valve-spindle, substantially as set forth.

2. The plate *d*, interposed between the disk *b* and the cross-head, and held to the latter by a pin, E, concentric with the said disk, all substantially as set forth.

96,904. — Cyrus Fisher, Canton, Mass., assignor to himself and Augustus G. Fisher, New York City.— *Carriage-Thill Coupling.* — November 16, 1869.

Claim.—The combination and arrangement of the separate clips B B, trunnioned block *b*, having conical-ended trunnion, and strap-bolt *a′*, all constructed and operating in the manner and for the purpose specified.

96,905.—Friend P. Fletcher and Virgil W. Blanchard, Bridport, Vt.—*Manufacture of Iron and Steel.*—November 16, 1869.

Claim.—1. The use and employment of a tilting, rocking, or revolving converting-vessel or bath, for the purpose of exposing the melted metal contained therein, in a globular or atomic state, a greater or lesser number of times, to a jet or jets of gaseous element or elements, substantially as and for the purposes set forth.

2. The repeated forcible reduction or dispersion of the molten metal into a globular or atomizing condition by the same jet or jets of a gaseous element or elements, substantially as and for the purposes specified.

3. The introduction, into the blast of a reverberating furnace, when such furnace is combined with a converting-vessel or bath, in which the molten metal is reduced to a globular or atomic state, any gaseous or volatile element or elements that will by chemical affinity eliminate or remove any deleterious element contained in the molten metal, or assist in the production of the desired product.

4. The use and employment of a tilting, rocking, or revolving converting vessel or bath containing two apartments or pockets for holding the molten

metal during the process of conversion or purification.

5. The exposure of the molten metal, in a globular or atomic condition, to the flame, or the products of combustion from a reverberating furnace, substantially as and in the manner specified.

6. A puddling-vessel, with its reverberating furnace, in combination with the converting-vessel, or bath, in which the molten metal may be reduced to a globular or atomic condition, substantially as and for the purpose set forth.

7. The introduction of wrought or cast iron, or any variety of iron ore, into a converting-vessel or bath, in which the molten metal is reduced to a globular or atomic condition within the effect or in the presence of a flame or products of combustion from a reverberating furnace, substantially as and for the purposes described.

8. The arrangement of blast-pipes, with their necessary valves, connected with the apartment of the converting-vessel, in combination with such vessel, and the reverberating furnaces, for the purpose of supplying and regulating the jet of gaseous elements required to reduce the metal to a globular or atomic state, and to supply and regulate the necessary blast for the reverberating furnaces, substantially in the manner specified.

9. The introduction of *spiegel eisen*, spathic ore, or any suitable substance containing a greater or lesser per cent. of carbon into a converting-vessel or bath combined with a reverberating furnace, and in which the molten metal is reduced to a globular or atomic condition by a jet or jets of gaseous elements, substantially as and for the purpose set forth.

10. The introduction of any hydrocarbon, vapor, or any gaseous or volatile element containing a greater or lesser per cent. of carbon, into the jet or jets by which the molten metal is atomized or globularized within the converting-vessel or bath, substantially as and for the purposes described.

11. The openings at each extremity of the converting-vessel, for the purpose of the exit of the products of combustion, and for the introduction of any suitable instrument for the removal of the scoria or slag from the molten metal, or for working the metal with a puddling-tool, substantially in the manner set forth.

12. The lever Q, or its equivalent, for tilting, rocking, or revolving the converting-vessel, substantially as and in the manner specified.

13. The forcible dispersion of a stream of molten metal into a globular or atomic state in the production of any desired grade or variety of product between the carburet of iron, or what is commonly known as cast iron and steel, substantially as and in the manner described.

14. Rising and falling pockets or apartments for holding the molten metal during the process of conversion or purification, substantially as and for the purpose set forth.

15. The use of the valve *a* in the depression M of the converting-vessel A, substantially as and for the purpose specified.

16. The use of the stationary disk D, in combination with the apartment F and blast pipe E, when used in connection with a converting-vessel, in which the molten metal is reduced to a globular or atomic state, substantially as and in the manner set forth.

17. In a tilting, rocking, or revolving converting-vessel, to which are attached reverberating furnaces, and in which the molten metal is repeatedly reduced or dispersed into a globular or atomic state by the same jet or jets of a gaseous element or elements, the purification or refinement of any other molten metal besides iron, substantially as and for the purposes specified.

96,906. — J. M. FLETCHER, Sidney, Ohio. — *Churn-Dasher.*—November 16, 1869.

Claim.—1. The adjustable wedges *e*, when constructed and operated in the manner and for the purpose substantially as set forth.

2. A churn-dasher, furnished with arms *b b*, fliers *d c*, and dovetailed wedge *e*, the whole being constructed and operated as and for the purpose substantially as described.

96,907.—ASAHEL FRANKLIN, Springfield, Ohio. | *Plow.*— November 16, 1869.

Claim.—1. Constructing the mold-board of a plow from a pattern laid off substantially in the manner and for the purposes herein set forth.

2. The mold-board A, having the curve F in the upper portion running from the point of the plow backward, as shown and described, for the purposes set forth.

3. Changing the draught of the plow, by means of notches, ratchets, holes, or their equivalents, on the back or rear to the main post, for the confinement of the end of the draught-rod, so that in lowering the end upon the post, the rod will form a brace to strengthen the plow when used in hard or sod ground.

96,908.—JOEL G. GARRETSON and OLIVER S. GARRETSON, Buffalo, N. Y.—*Sash-Holder.*—November 16, 1869.

Claim.—1. The eccentric D, and the slotted and cam-headed bolt B, when so constructed and arranged that the pivot of the former shall pass through the slot in the latter, and form a common pivot for both, substantially in the manner set forth.

2. The lug *b*, at the outer end of the bolt B, arranged with the cam D, so that the latter in releasing the bolt shall engage with the lug, and withdraw the bolt from contact with the casing, as hereinbefore set forth.

96,909.—E. P. GLEASON, New York, N. Y.—*Lamp-Shade-Holder.*—November 16, 1869.

Claim.—The combination of the wires B, having a flattened and half-round formation, with the ring A, provided with the straps *a*, when the same shall be constructed substantially as and for the purpose specified.

96,910. — JOHN JAMES GRANT, Northampton, Mass., assignor to CHARLES H. STOCKBRIDGE, same place.—*Machine for Cutting Threads on Bolts.*—November 16, 1869; antedated November 6, 1869.

Claim.—The tool *d*, constructed as described, in combination with the holder *e*, having a male screw on its periphery, and the rest *f* with a corresponding female screw, all arranged and operated together, substantially in the manner described.

96,911.—JAMES F. GUTHRIE, Somerville, Mass. —*Casting Copper Tubes.*—November 16, 1869.

Claim.—1. The combination and arrangement of the current-divider *f*, with the nose-piece or spout *e*, and the mold *a*.

2. The arrangement of the current-divider *f*, the spout *e*, the stay-piece *c*, the mold *a*, and the core *b*.

96,912. — SAMUEL HALLIWELL, New Haven, Conn.—*Tube-Cutting Machine.*—November 16, 1869.

Claim.—The revolving mandrel B, constructed with the shoulder *f*, combined with the revolving arbor E provided with the cutter L, and with the guide N and collar *s n*, arranged so as to govern the length of the cuts, the whole constructed and operating in the manner described.

96,913.—MOSES HAWKINS, Birmingham, Conn., assignor to himself, ROYAL M. BASSETT, and THEODORE S. BASSETT, same place.—*Friction-Clutch.*—November 16, 1869.

Claim.—1. The arrangement of the sliding bars D D on the friction-plate C, combined with the spiral grooves or slots *a* in the pulley, substantially as and for the purpose set forth.

2. In combination with the bars D on the plate, and slots or grooves *a* in the pulley, the arms E, arranged upon the shaft relative to the bars D, and so as to operate the said bars substantially in the manner and for the purpose set forth.

3. In combination with the plate C and bars D arranged thereon, and operated by the arms E, the slots *e*, constructed so as to serve the double purpose of drawing in the said arms, and withdrawing the plate from the pulley, substantially as set forth.

96,914.—ROWLAND HILL, East Boston, Mass.—*Pipe-Coupling.*—November 16, 1869.

Claim.—The pipe-coupling, as hereinbefore described, as composed of the right and left or annular screws C C, the tubular nut D, and the duplex tapering thimble E, the whole being to operate with and

couple two pipes, substantially in the manner as specified.

96,915.—David Hirschberg, Baltimore, Md.—*Carpet.*—November 16, 1869.

Claim.—The construction of the two pieces of leather, Figs. 1 and 2, by which a carpet is made, of any size or dimensions, and of any color or appropriate pattern, as herein described.

96,916.—John P. Hisley, Syracuse, N. Y., assignor to himself and Henry L. Duquid, same place.—*Method of Lining Rings, Buckles, &c.*—November 16, 1869.

Claim.—The method, herein described, of fitting and swaging linings upon the interior surfaces of rings, buckles, and like objects.

96,917.—Henry W. Holcomb, Northville, Mich., assignor to himself and W. Frank Hughes, same place.—*Horse-Rake.*—November 16, 1869.

Claim.—1. The arrangement of the cross-bar C, parallel with and in front of the axle A, provided with the plates *a* and the single rod *b*, to which are hinged all the rake teeth I, which are extended over the axle A and kept in position by the plates *f* and rods *i i*, and springs *e e*, all substantially as set forth.

2. The combination of the axle A, bar E, adjustable plates F, pins *i i*, springs *e e*, plates *f*, teeth I, bar C, catch H, and shafts G G, all constructed and operating substantially as herein set forth.

3. The spring-latch H, when attached to the rake, in the manner and for the purposes herein set forth.

96,918.—Phineas Howard, San Francisco, Cal., assignor to J. S. Josselyn, William B. Lake, and B. F. Josselyn, same place.—*Wooden Pavement.*—November 16, 1869; antedated November 3, 1865.

Claim.—In a wooden pavement, constructed with semi V-shaped openings, the employment of the key C, in the manner and for the purpose described.

96,919.—O. P. Humber, Greenville, N. C.—*Cotton-Seed Planter.*—November 16, 1869.

Claim.—1. The sliding valve K, and devices for operating the same, in combination with the cylinder E, substantially as and for the purpose set forth.

2. The sliding valve K, in combination with the lever L, spring *t*, shaft M, and pins *o* of the driving-wheel H, substantially as described, and for the purpose specified.

3. The slide *s*, in combination with the cylinder E and valve K, when operating substantially as and for the purpose set forth.

96,920.—David J. Hunter, Exeter, N. H.—*Brick-Machine.*—November 16, 1869.

Claim.—1. The combination, with the mold-box and its sliding cover and vertical plunger, operating in relation to each other as specified, of a plunger, arranged to move at right angles with the vertical plunger, and to feed the clay into the side of the mold, substantially as shown and described.

2. The employment, with the mold-box of a brick-machine, of two plungers or followers, operated substantially as described, the one to feed the clay into the side of the mold, and to exercise a lateral pressure upon the mass therein, the other to exert an upward or vertical pressure upon the clay, and to lift the formed brick from the mold, substantially as set forth.

3. The construction and arrangement of the vertical plunger, the peculiar-shaped cam, which imparts to the same its varied movements, and the devices for connecting said cam and plunger, substantially as shown and set forth.

4. The combination of the drum F, and the segmental flange which it carries, with the clay-hopper, and one or more feed-openings formed in that portion of its bottom intervening between the peripheries of the drum and the hopper, and arranged over corresponding feed-plungers, which carry to the molds the clay delivered at regular intervals by the said segmental flange, substantially as shown and described.

5. The sliding cover for the mold, and oscillating lever for operating the same, in combination with the wiper, cam, and forked arm, which actuate said lever, to produce the reciprocating movement of the mold-cover, said parts being constructed and arranged substantially as shown and described.

6. The scoring or grooving the upper surfaces of the flanges J J′, to permit of return of surplus clay, when the same are employed in connection with the filling-wing *c*, the whole being as before explained.

7. As a machine for molding and pressing bricks, the general arrangement and organization of individual features hereinbefore alluded to in detail, the same consisting mainly of the hopper A, with its orifices *d d′*, and provided with the drum F and segmental wing *c*, molds I I′, provided with the dually-arranged plungers J′ M′, and gates or covers *k k′*, the said flanges being operated by the cams O O′, and the gate by the rocker-shaft *m*, forked arm *p*, and vibratory lever *l*, and the whole operating in manner and to produce results before set forth.

96,921.—Thomas A. Hunter and John Blewitt, New York, N. Y.—*Facing for Buildings.*—November 16, 1869.

Claim.—A facing for buildings, made of glass, and prepared in the manner specified, as a new and useful article of manufacture.

96,922.—Peter H. Jackson, New York, N. Y.—*Iron Front for Buildings.*—November 16, 1869.

Claim.—1. The cast-iron shell *a*, forming plain, rustic, or ashlar facings for buildings, in combination with the bars *b*, that unite said shells into sections, substantially as and for the purposes set forth.

2. The filling-plates *o*, in combination with shells *a* and bars *r*, substantially as and for the purposes set forth.

96,923.—John C. Jewett, Buffalo, N. Y.—*Water-Filter.*—November 16, 1869.

Claim.—1. The arrangement of a removable filtering-cup, G, within a vessel, E, sunk in the permanent filtering-bed, substantially as set forth.

2. With a removable filtering-cup, G, embedded vessel E, and permanent bed of a filter, arranged as hereinbefore described, the outlet *e*, arranged near the top of the vessel E, as and for the purpose set forth.

3. The arrangement, with the division-plate *f* and removable filter, of the curb or flange *m*, in the manner and for the purpose specified.

96,924.—William H. Johnson, Sr., Clayton, Ind.—*Door-Check.*—November 16, 1869.

Claim.—The door-arrester herein described, having escalloped segment C and spring-wheel D, constructed and arranged to operate substantially as specified.

96,925.—Charles H. Knowlton, Camden, N. J.—*Mechanism for Operating the Jacks in Looms.*—November 16, 1869.

Claim.—A rigid reciprocating frame, sliding on a loom, and having one or more arms G, vibrated substantially as and for the purpose described.

96,926.—Benjamin Kuhns, Dayton, Ohio.—*Grain-Drill.*—November 16, 1869.

Claim.—1. The construction of arm H, substantially as and for the purpose set forth.

2. The combination and arrangement of the arm H, guide G, spring G′, having its stop-pin, and lever F, substantially as and for the purpose specified.

3. The combination of the lever F, ratchet F, gear-wheels E, E^1, E^2, E^3, E^4, E^5, and E^6, arranged to govern the discharge of the seed, as specified.

96,927.—Alfred Lawton, Philadelphia, Pa.—*Raising and Moving Coal, &c.*—November 16, 1869.

Claim.—1. The moving and raising of coal or other granular material by means of a car or suitable vessel, arranged to move in a chamber which extends beneath the platform upon which is deposited the coal or other material to be raised, and beneath a shaft, or its equivalent, so that the said material will of itself pass into the vessel, and so that the latter when filled may be raised in the said shaft, or its equivalent, all substantially as herein set forth.

2. In combination with the said chamber extending beneath the platform of deposit, the openings *i* in the latter, each furnished with a suitable door, *j*.

3. The arrangement, at the bottom of the chamber C, of the tracks *b* and *b'*, or any equivalent arrangement of tracks, whereby the ear or conveyer F can be conducted from the elevating-shaft to any of the openings *i* in the platform of deposit, or *vice versa*.

4. An elevating-shaft, consisting of a lower permanent portion, and of an upper movable portion, substantially as described, and as represented in Figs. 2 and 5 in the drawing.

5. The arrangement, substantially as herein described, in respect to the chamber C and elevating-shaft, of the platforms A and B.

96,928.—FRANZ LEHMANN, Riverside, Ill.—*Horse-Shoers' Hoof-Parer.*—November 16, 1869.

Claim.—The horse-shoers' hoof-parer, composed of the blade A *a* and the handle, constructed substantially as and for the purpose specified.

96,929.—M. T. LINCOLN, Washington, D. C., assignor to himself and WILLIAM ROBINSON, same place.—*Galley-Rest.*—November 16, 1869.

Claim.—1. The movable board B, ratch *c*, and pawl *d*, in combination, all constructed and arranged substantially as and for the purposes specified.

2. The detachable galley-head C, in combination with the rest B, constructed substantially as and for the purposes described.

96,930.—G. H. LINK and C. D. CURTIS, Syracuse, N. Y.—*Broiler.*—November 16, 1869.

Claim.—The double reversible gridiron A *a a*, in combination with the suspending-rim D and cover C, when the said bars *a a* are grooved, and made in circles, arranged concentrically, as herein shown.

96,931.—H. W. LITTLE, Muncie, Ind.—*Needle-Polisher, Sharpener, and Lubricator.*—November 16, 1869.

Claim.—The within-described device, consisting of the supporting-frame A, carrying an emery-cushion, E, whet or sandstone, B, and soapstone or French chalk, D, the said parts being arranged substantially as shown and described.

96,932.—FRANK B. LORD, Cincinnati, Ohio.—*Railway-Car Coupling.*—November 16, 1869.

Claim.—1. The swiveling reversible coupling-bar C, provided with link E and expansion jaws D D', operating substantially in the manner and for the purpose specified.

2. The pins *h*, spring H, and apertures *i i'*, for the purpose specified, in the described connection with the reversible bar C.

3. In connection with the jaws D D', the winged key L apertures *a' c*, and notches M, operating as described, and for the purpose explained.

96,933.—JAMES W. LOVELESS and CHARLES H. SHAFFER, Clark's Hill, Ind.—*Grain-Binder.*—November 16, 1869; antedated November 3, 1869.

Claim.—1. The combination of the bent teeth I^1, for compressing the gavel resting upon its supports, and the teeth g^2, which, projecting through the shelf B, serve to support the grain carried over, while the sheaf is being bound, substantially as set forth.

2. The shelf B and supports C C', when combined with teeth g^2, for supporting the grain on the shelf, and with mechanism for allowing it to fall from the shelf upon the supports C C', at the will of the binder.

3. The standards M, composed of the slotted plates *m*, bent rods, and spiral springs m^1, and fingers m^2, for supporting the band, substantially as set forth.

4. The combination of the supports C C', fork P, and operating-mechanism, for throwing the sheaf from the machine, substantially in the manner set forth.

5. The band L, composed of the loop *l* and hook *l'*, substantially as and for the purpose described.

6. In combination with the binder's seat, a series of treadles for compressing the sheaf on the supports, while the accumulating grain is retained upon the shelf, and for throwing the sheaf from the machine, substantially as described.

96,934.—CLOVIS LOWE, Randolph, N. H.—*Fence.*—November 16, 1869.

Claim.—The combination of the post-foot A, the dowel-pin B, post C, constructed with a hole, D, in the base, and panel E, substantially as and for the purpose set forth.

96,935.—JOHN MADDEN and UPSON BUSHNELL, Cleveland, Ohio.—*Thill-Shackle.*—November 16, 1869.

Claim.—The thill-shackle, composed of the parts A and B, bolt G, and nut H, the parts A and B constructed and arranged in the manner and for the purpose substantially as described.

96,936.—GEORGE ALBERT MARINER and FOLSOM DORSETT, Chicago, Ill.—*Composition for Preventing Oxidation of Metallic Water or Gas Pipes.*—November 16, 1869.

Claim.—The within-named composition, compounded as described, and applied to iron pipes, as and for the purposes set forth.

96,937.—CHELTON MATHENY, Greensburgh, Ind.—*Hand-Spinning Machine.*—November 16, 1869.

Claim.—The combination, in a hand-spinning machine, of a spindle-carriage and guide-track, with the bell-crank J K *k* connected to and operated by the treadle, substantially as and for the purpose set forth.

96,938.—WILLIAM M. MAYALL, Gray, Me., assignor to himself and JOHN C. MAYALL, Boston, Mass.—*Corn-Sheller.*—November 16, 1869.

Claim.—1. The wheels R, to the shelling-jaws, for the purpose specified.

2. The clamp A^4, constructed with slit G^2, and holes I^2 and J^2, substantially as described, for the purpose set forth.

3. The combination and arrangement of the flange L, shellers N, rollers R, guide-rods O, springs Q, rolls V, springs Y, and gear-wheels C E, substantially as herein represented and described.

96,939.—JAMES MCCORMICK, Boston, Mass.—*Brewing Ale, Beer, &c.*—November 16, 1869.

Claim.—In the process of brewing, subjecting the wort or mash-liquid to charcoal, or its equivalent, either alone or in combination with other materials, and either in combination or not with a screen or screens, substantially as and for the purpose described.

96,940.—JOHN MCNEVEN, New York, N. Y.—*Vapor-Bath Apparatus.*—November 16, 1869.

Claim.—1. The perforated base-plate E, in combination with case A, and with the pan C and the boiler or boilers D, substantially as described.

2. The pipes *d d e*, provided with stop-cocks *f*, in the interior of the case A, in combination with the pan C and base-plate E, and boiler or boilers D, substantially as set forth.

3. The arrangement of the hinged partition-plate G, between the steaming or heating apparatus, at the base of the case A, and the exhaust at the top thereof, substantially as and for the purpose described.

4. The combination of the swinging interior vessel *l*, the outer vessel *k*, provided with exhaust-port *m'*, and the case A, substantially as set forth.

96,941.—JAMES MCPHAIL, Charles City, Iowa.—*Bag-Holder.*—November 16, 1869.

Claim.—1. The combination and arrangement of the bed-piece A, grooved standard B, notched sliding bar C, and arm D, all substantially as and for the purposes herein set forth.

2. The arrangement of the rods *a a*, levers *d d*, rod *o*, lever H, and ratchet-bar I, all substantially as and for the purposes herein set forth.

3. The combination and arrangement of the bed-piece A, grooved standard B, sliding bar C, arm D, jaws G G, rods *a a*, hooks *e e*, levers *d d*, rod *o*, lever H, and ratchet-bar I, all constructed as described, and operating substantially as and for the purposes herein set forth.

96,942.—HENRY W. MILLAR, Utica, N. Y.—*Cheese-Hoop.*—November 16, 1869.

Claim.—The packing-rings D E, of rubber or similar elastic material, when applied as herein described in the pressing of cheese.

96,943.—Samuel J. Miller, Economy, Ind.—*Medical Compound from Oak Bark.*—November 16, 1869.

Claim.—The medical compound herein described, compounded of the materials and in the manner substantially as specified.

96,944.—Daniel Mills, New York, assignor to Charles Goodyear, Jr., New Rochelle, N. Y.—*Sewing-Machine for Boots and Shoes.*—November 16, 1869.

Claim.—1. In combination with a mechanism for sewing boots and shoes, of otherwise ordinary or suitable construction, the stationary and movable jaws, arranged for operation substantially as herein shown and described, the movable jaw being actuated positively by a cam, or its equivalent, to hold and firmly clamp the outer sole to the welt while in process of being sewed together, the pressure between said jaws being released while the feed is performing its function.

2. The combination of the movable, positively-actuated jaw and the feed-mechanism with the stationary jaw and sewing-mechanism, under the arrangement and for operation substantially as herein shown and set forth, so that the former may be raised bodily in relation to the latter, to admit of the introduction of the material to be sewed, and also that the said upper or movable jaw and feed may adjust themselves automatically to various and unequal thicknesses of stock while in the operation of sewing.

3. The arrangement of a ball-and-socket joint, forming the connection between the feed-dog and the feed-lever, substantially as described.

4. The combination of the parts constituting the adjustable feeding-device, substantially as described, and for operation as set forth.

96,945.—Thomas N. Morse, Fairhaven, Mass.—*Method of Warming Railroad-Cars.*—November 16, 1869.

Claim.—1. An air-forcing apparatus, in combination with a pipe leading through the steam and water-space of a steam-boiler, and communicating with pipes which are arranged beneath the car-beds, and which are connected by hollow universal joints, substantially as described.

2. The construction of the flue-boiler B, with an air-pipe arranged within its water and steam space, substantially as and for the purposes described.

3. The combination of balls and sockets *i j*, *i' j'*, telescopic joint *k k'*, springs *h h'*, and pipes D D, constructed and put together substantially as described.

96,946.—Joseph Nampel, Freeport, Ill.—*Animal-Trap.*—November 16, 1869.

Claim.—The combination, as herein set forth, of the box A, adjustable frame B, inclined bottom C, and pivoted false bottom D, all arranged to operate as and for the purpose described.

96,947.—Samuel B. B. Nowlan, New York, N. Y., assignor to James Coleman and William Baxter, same place.—*Pump.*—November 16, 1869.

Claim.—1. The combination of pipe N and chambers I I', as and for the purpose specified.

2. The arrangement of the siphon-pipes G and H, and the oscillating valve-gate J, in combination with a double-acting force-pump, substantially as described.

3. The combination of the double cylinder A B, pistons E E, siphon-pipes G H, valve J, chamber I, and pipe N, with the valves K K, when the same are arranged to operate substantially as and for the purposes described.

96,948.—William Oller, Scenery Hill, Pa., assignor to himself and James D. Ulery, same place.—*Sawing-Machine.*—November 16, 1869.

Claim.—The bars *c*, levers *d d'*, spring-plates *e e'*, and extensible connecting-rods *h*, combined and arranged, in connection with the cross-beam B, substantially as described.

96,949.—Charles R. Otis, Chicago, Ill.—*Seam for Tin Cans.*—November 16, 1869.

Claim.—A seam for tin cans, formed by bending the edges, substantially in the manner herein shown and described.

96,950.—Oscar Paddock, Watertown, N. Y.—*Blind-Slat Operator.*—November 16, 1869.

Claim.—1. The combination of the two gears, fixed to the blind-slats and blind-frame, respectively, with the gear-stop and thumb-piece and spring, to which the same is attached, said parts being constructed and arranged to operate as shown and set forth.

2. A blind-slat opener and fastener, composed of the two gears, fixed to the blind-frame and slats, respectively, and the spring stop, for locking the gears, when the blind-frame gear is provided with a central opening or socket, for the passage of the key, and the spring stop is arranged in rear of said opening, so as to be operated by the key, substantially as shown and described.

96,951.—Lewis A. Palmer, Boston, Mass., assignor to himself and Frank E. Hibbard, same place.—*Corset.*—November 16, 1869.

Claim.—A corset, made in two parts, each of which is composed of four pieces, which are so shaped that the edges, forming the middle seam, shall be of the same length and form, united by a matched seam, and those forming the side seams shall be of equal length and different form, united by drawn seams, substantially as described, and for the purpose set forth.

96,952.—Philip O. Palmer, Swoope's Depot, Va.—*Water-Wheel.*—November 16, 1869.

Claim.—1. The curved gates I I, hung on trunnions *e e*[1], in connection with the slotted arms N, the pins *i*, the sliding ring M, and the rack and pinions *o o*[1] O, all constructed to operate substantially as and for the purposes set forth.

2. The supplemental buckets *a a*, on the outside of wheel D, when arranged with reference to the joint between the wheel and the curb, substantially as and for the purposes specified.

96,953.—Erastus C. Philbrick, Bath, Me.—*Lip-Shield.*—November 16, 1869.

Claim.—A lip-protector, composed of two or more adjustable curved shields, of different sizes, united and connected in the manner and by the means substantially as herein shown and described.

96,954.—Charles Felton Pidgin, Boston, Mass.—*Fabric for Shirt-Collars.*—November 16, 1869; antedated November 3, 1869.

Claim.—As a new and improved material for the manufacture of collars, cuffs, bosoms, &c., the textile fabric of single thickness, substantially as herein described.

96,955.—William P. Pierce, New York, N. Y.—*Weighing-Scale.*—November 16, 1869.

Claim.—1. The pan E, supported on the end of the balance-beam, by means of a point formed on the end of a screw, and slightly eccentric to the axis thereof, for the purpose of linear adjustment.

2. The open loop-piece *e*, to the lower arm of which the balance-weight is connected by a screw *h*, adjustable to form a stop, to prevent the disengagement of said loop from the balance-arm, all substantially in the manner and for the purpose herein set forth.

96,956.—E. J. Pinkham, Portland, Me.—*Hanging Lower Top-Sail Yards.*—November 16, 1869.

Claim.—The shoulder or lip *k*, applied as and for the purposes herein described.

96,957.—Charles Pomeroy, Mattoon, Ill.—*Pipe-Wrench.*—November 16, 1859.

Claim.—The handle A, hook *a*, slide B, swinging lever *b*, spur *b''*, and spring *b'''*, all constructed and arranged substantially as described.

96,958.—Charles Pratt, New York, N. Y.—*Oil-Can.*—November 16, 1869.

Claim.—1. The construction of nozzles for oil-cans, in the manner herein shown and set forth, the same being formed in one piece with the top of the can, by punching and slitting the metal, and then bending and shaping the parts, as herein shown and set forth.

2. The combination of the nozzle sunk within, and formed in one piece with the can, and shaped as

specified, with the soft-metal cap, under the arrangement herein shown and described.

96,959.—Washburn Race and S. R. C. Mathews, Lockport, N. Y., assignors to S. R. C. Mathews.—*Hydrant.*—November 16, 1869.

Claim.—The detached case B, so combined and arranged with hydrant A as to have an end-play or vertical motion of several inches, to compensate for the heaving by frost, the upper part of same passing outside of main stock of hydrant, so that any change in its position can be easily ascertained, and the case driven back to its place without disturbing the hydrant.

96,960.—Thomas Reaney, Chester, Pa.—*Machine for Shearing Angle-Iron.*—November 16, 1869.

Claim.—An angle-iron shearing-machine, having a two-edged shearing-blade, arranged to reciprocate in a course, at an angle of forty-five degrees, or thereabout, to a horizontal plane, in combination with a two-edged stationary blade, when the edges of the said blades are arranged substantially as herein described.

96,961.—J. S. Reid, Orange, Ind.—*Stand for Exhibiting Photographs, &c.*—November 16, 1869.

Claim.—The knob H, rod L, and cylinder I, in combination with the cap G, cylinder F, base C, rod E, and bed-piece A, all constructed as described, so as to form a double revolving photographic stand, or album, containing pictures of different size, substantially as herein set forth.

96,962.—Peter W. Reinshagen, Cincinnati, Ohio, assignor to himself and John H. Buckman, same place.—*Coupling for Hollow Shafts.*—November 16, 1869.

Claim.—1. The winged bush A *a a*, in the described connection with the slotted or notched shafts B B′, arranged and operating substantially in the manner and for the purpose set forth.

2. In combination with the elements of the preceding clause, the conical notched segments C *c*, nuts D D′, and sleeve E, constructed and operating substantially in the manner and for the purpose explained.

96,963.—Joseph Repetti, Philadelphia, Pa.—*Velocipede.*—November 16, 1869.

Claim.—1. The helical springs *r r*, in combination with the axle-sections *b b*, substantially as and for the purpose specified.

2. The combination of the helical springs *r r* with the cams *n n*, substantially as and for the purpose herein set forth.

3. The combination of the helical springs *r r* and cams *n n* with the levers or treadles *m m*, straps *o o*, pulleys *p p*, and support *p′*, together with the springs *r′ r′*, substantially as and for the purpose specified.

4. The arrangement of the bearings *f f g g*, for the axles *b b*, ribs *g′ g*, brace-rods *j j*, and seat *k*, substantially as and for the purpose herein specified.

5. The opening for the brake-cord *z′*, entering the side of the stem *t*, and issuing therefrom at the center of its upper end, substantially as and for the purpose set forth in this specification.

96,964.—T. M. Richardson, Stockton, Me.—*Steering-Apparatus.*—November 16, 1869.

Claim.—The guide K, in combination with the pin *c′*, slide C, springs *s s*, and tiller B, when constructed and arranged to operate as specified.

96,965.—Edward H. Ripley, Boston Highlands, Mass., assignor to himself and John A. Kohl, same place.—*Alarm for Letter-Boxes.*—November 16, 1869.

Claim.—1. The pivoted plate B, and rotating spindle C, for covering the slit in the door, and for operating the alarm-mechanism, substantially as herein shown and described.

2. The combination of the pivoted plate B, rotating-spindle C, coiled spring D, dog or tumbler E, spring-catch F, spring-hammer G, and bell H, with each other, substantially as herein shown and described, and for the purpose set forth.

96,966.—Frederick Robbin, Hudson City, N. J., assignor to himself and Philip Lahr, New York City.—*Writing-Desk.*—November 16, 1869.

Claim.—1. The arrangement of the top A and case B, in combination with the frame C, whereby the desk or the table is formed, as described.

2. In combination with the convertible desk, the sector-plates E, whereby the case B is raised, as described.

3. The supports H, in combination with the rods F and plates E, as and for the purposes set forth.

4. The combination of the plates E, rods F, slotted plates D, case B, and top A, arranged and operating as described, for the purposes specified.

96,967.—Frank L. Roberts, Jacksonville, assignor to James M. McPherson, Ripley, Ill.—*Churn.*—November 16, 1869.

Claim.—The churn-dasher F K, consisting of the horizontal rim K, with holes *k k*, and the hollow cone F, with holes H H, when used in combination with the churn-box A, provided with the expelling-block G, substantially as and for the purpose specified.

96,968.—Charles W. A. Romer, Newark, N. J.—*Hasp-Lock.*—November 16, 1869.

Claim.—1. The adjusting-lever *f*, in combination with the nose of the latch C, and with the tumblers *d* and bolt E, constructed and operating substantially as described.

2. The cavity *g*, in the side of the nose *e* of the latch, to operate in combination with the lever *f* and tumblers *d*, substantially as set forth.

3. The safety-shield *h*, in combination with the adjusting-lever *f* and tumblers *d*, as described.

96,969.—Benoit Roux, Cincinnati, Ohio, assignor to himself and George Haupt, same place.—*Sash-Pulley.*—November 16, 1869.

Claim.—The sash-pulley boxing herein described, consisting of the three members, A, D, and D′, the cheek-plates D D′ being secured together, and to the face-plate A, by stumps C C′ and lips F F, substantially as explained.

96,970.—J. V. Rowlett, Richmond, Ind.—*Straw-Cutter.*—November 16, 1869.

Claim.—1. The lever R, constructed with an extension or handle for the operator, as shown and described, and used in combination with a straight knife, A, and swinging arm P, substantially in the manner and for the purpose set forth.

2. The slotted plate E, when used in combination with the arm P, for the purpose of operating the feeding-mechanism, substantially as described.

3. In combination with the arm P and plate E, the lever D, pawls *d d′*, and spring Y, when constructed and operated as herein set forth.

4. The swinging arm P, having an extension beyond the pivot I, as described, when said extension is used to operate the feeding-mechanism, substantially as set forth.

96,971.—William Sailer, Philadelphia, Pa.—*Clamp.*—November 16, 1869.

Claim.—1. A joist-clamp, consisting of a frame, B, having a head, *h*, and serrations or teeth *k*, and of an arm, B′, hinged to the said frame, and having at its outer end a serrated block, *l*, all substantially as and for the purpose described.

2. The block *m*, connected to the frame B by an adjustable arm, B′, for the purpose set forth.

96,972.—Ernest Santin, New York, N. Y.—*Toy.*—November 16, 1869.

Claim.—As a new article of manufacture, the velocipede-toy herein described.

96,973.—George S. Saxton, Saint Louis, Mo., assignor to himself and John M. Saxton, same place.—*Broiler.*—November 16, 1869.

Claim.—1. A device for broiling and similar purposes, formed of two parts, A and A′, hinged together, and secured at their handles by a ferrule, or in other convenient manner, when each of said parts has an open bottom, and is arranged with an inner grating, substantially as set forth.

2. The parts A and A′, arranged with inclined annular bottoms a^3, having raised edges a^2, and used either with or without a cover, C, substantially as and for the purposes set forth.

96,974.—JACOB SHEETZ, Sunbury, Pa.—*Platform-Ladder.*—November 16, 1869.

Claim.—1. The locks P, placed upon both sides of the standards, and so arranged that they will catch and secure the platform at any desired place, substantially as described.

2. The standards A, joined together by the cross-pieces B, sections D, braces G, arms H, secured together by the cross-piece *a*, platform K, screw L, rope M, friction rollers N, locks P, and hook R, when all are arranged and combined, substantially as specified.

96,975.—GEORGE H. SELLERS, Wilmington, Del.—*Machine for Rolling Tubes.*—November 16, 1869.

Claim.—1. The combination of the suspended mandrel with the shaping and the compressing rolls, adjustable relatively to the axis of the mandrel, the combination being and operating substantially as set forth.

2. The combination, with the rolls, of the mandrel, the clamping-stand, and the rotating-wheel, the combination being and operating substantially as set forth.

3. The combination of adjustable rolls, having reversible rotary motion, with an interposed mandrel, which follows the ingot after it has passed through the roll, the combination being and operating substantially as set forth.

4. The combination, with the rolls, of the tubular following-mandrel, the combination being and operating substantially as and for the purpose set forth.

96,976.—GEORGE SHATSWELL, Waukegan, Ill.—*Railway-Car Coupling.*—November 16, 1869.

Claim.—The catch Z, arranged to have a sliding and swinging movement in the bumper A, and provided with a curved plate M *b*, in combination with the spring L, rope S, and coupling-bars C D D, the latter being provided with a lug, E, as set forth.

96,977.—DANIEL SHERWOOD, Lowell, Mass., assignor to WOODS, SHERWOOD AND COMPANY, same place.—*Hanging Basket.*—November 16, 1869

Claim.—The hanging basket, constructed of twisted wire, provided with suspenders of the same material, and a receptacle within, and of the same conformation as the basket for holding the flowers, &c., substantially as described and set forth.

96,978.—MERRILL B. SHERWOOD, Jr., Buffalo, N. Y.—*Apparatus for Curing Meat.*—November 16, 1869.

Claim.—1. The vessel A, constructed as described, having an opening large enough to admit a full charge of meat or fish at one time, and closing with a tight head, for the purpose of salting meats or fish by vacuum, substantially as herein set forth.

2. The crate or vessel B, constructed as described, to be used as a vehicle to convey meat or fish into the vacuum-vessel, and capable of carrying a full charge at one time, substantially as herein set forth.

3. The arrangement of the platform-car D, having frames *h h* and hinged pieces *i i*, for the purpose of carrying one or more crates to and from the vessel in which the meats or fish are salted, substantially as herein set forth.

4. The above-described process of salting meats or fish, by producing a vacuum on said meats or fish after the brine is on them or covers them, substantially as herein set forth.

96,979.—JAMES SIMPSON, Cordova, Ill.—*Cultivator.*—November 16, 1869.

Claim.—1. The combination of the adjustable plows *d* and *e*, and the shovel *c*, with the beam *a* and handles *b*, all arranged as described.

2. The detachable shovel *c*, and the adjustable stem *l*, constructed and applied to the beam as herein set forth.

3. The reversible brace-rod h^3, in combination with recessed and detachable blocks j^3, arranged to operate as described.

96,980.—CHARLES E. SMITH, Goffstown, N. H.—*Blind-Rack.*—November 16, 1869.

Claim.—The combination and arrangement of the lazy-tongs, and its clamp-screw and nut, with the series of teeth, and the slotted carrier, substantially as specified.

96,981.—EARLE A. SMITH, Waterbury, Coun.—*Buckle for Clothing.*—November 16, 1869.

Claim.—The herein-described buckle for clothing, consisting of the frame B C D, with the tuck-bar F, and hinge-bar G, secured to the frame, substantially as set forth.

96,982.—HIRAM SMITH, Norwalk, Ohio.—*Jointed Pipe-Connection.*—November 16, 1869.

Claim.—The sections of pipe A B, standard D, and swiveled or hinged stem F, as arranged and combined to operate conjointly in the manner substantially as described, and for the purpose set forth.

96,983.—JOHANN M. SCHMIDT, New Albany, Ind.—*Spring.*—November 16, 1869.

Claim.—The combination of the spring C, slotted at the ends, and its leaves held in position as described, with the caps D D and hangers E E, substantially as herein set forth.

96,984.—JOHN W. SMITH, Washington, D. C., assignor to JOHN C. PEDRICK and BENJAMIN FENNER, for five-eighths interest.—*Concrete Compound for Pavements, &c.*—November 16, 1869.

Claim.—The manufacture or preparation of the compound, substantially as herein described, and for the purposes to which the same is found adapted.

96,985.—PETER J. SMITH, Philadelphia, Pa., assignor to himself, CONRAD B. ANDRESS, BENJAMIN F. PINE, HORATIO G. SICKLE, THOMAS WOODS, and JOHN Q. GINNODO, same place.—*Brick-Machine.*—November 16, 1869.

Claim.—1. The external pressure-plate S, supported between levers N N′, by pins *j*, sliding in slots *k*, and operated by cams *m m* upon connecting-bars M M, all constructed and arranged as herein set forth.

2. The combination of the shaft T, having a cam, *m′*, on its inner end, and the lever P connected with its outer end, the said lever being held at its outer end by pins *q q*, whereby the said cam *m′* has a partial turn given it, and produces a second pressure on the bricks in its action on the ends of the piston-rod *e*, substantially as described.

96,986.—ROLAND H. SMITH, Pittsburgh, Pa., assignor to JAMES S. and T. B. ATTERBURY, same place.—*Lamp.*—November 16, 1869.

Claim.—1. A lamp which has a fluid-reservoir, of glass or other vitreous substance, connected to its pedestal by means of a screw-thread, formed on the peg of the said reservoir, and a corresponding thread on the pedestal or sleeve thereof, substantially as described.

2. A lamp reservoir, of glass, or other vitreous substance, produced with a screw-thread upon its peg *e*, substantially as described.

3. A lamp-pedestal, having a screw-socket in it, adapted for receiving the screw-threaded peg of glass lamp-reservoir, substantially as described.

4. A lamp-reservoir, of glass, or other vitreous substance, produced with a screw-thread upon the neck or flange *d*, which surrounds the opening in the reservoir, substantially as described.

96,987.—THOMAS SMITH, Jr., Boston, Mass.—*Top for Sirup-Pitchers.*—November 16, 1869.

Claim.—1. The construction of the encircling ring B for the body of the pitcher, with the spindle or pivot *a*, from one piece of metal, as shown and described.

2. In combination with the encircling ring B, as constructed, the top A, as shown and described.

96,988.—HIRAM F. SNOW and JAMES H. DAVIS, Dover, N. H.—*Composition for Pavements.*—November 16, 1869.

Claim.—1. The employment of sulphuric acid with coal-tar, when used with sawdust, and sand or

gravel, or a mineral matter, in the formation of a composition, as set forth.

2. The employment of sulphuric acid with coal-tar and resin, when used with sawdust and sand, or gravel, or a mineral substitute therefor, in the making of a composition for the purpose as specified.

96,989. — DANIEL E. SOMES, Washington, D. C.—*Means for Ventilating, Cooling, and Warming Beds.*—November 16, 1869.

Claim.—1. A mattress, bed-sack, or pillow, the covering of which is composed of air-tight material, having perforations, or their equivalents, as described.

2. The mattress or bed-sack B or pillow C, ventilated as described, either by drawing air from, or forcing it into the same.

3. In combination with the mattress or bed-sack B, or pillow C, the reservoir D, wherein air may be compressed and stored, as and for the purpose set forth.

4. In combination with the mattress or bed-sack B, or pillow C, the reservoir D, provided with means for warming or cooling the air therein, or both, as described.

96,990. — SAMUEL W. SOULE, Milwaukee, Wis.—*Paging-Machine.*—November 16, 1869.

Claim. — 1. The combination, with the rotary type-disks B C D, of the locking-dog M and feeding-dog N, connected, to slide in unison, by means of the cross-shaft L, and the one of which (N) has also a swinging motion communicated to it, to effect the feed of said disks, substantially as specified.

2. The combination of the bell-crank O, the spring P, the stop R, the cam or guide Q, the locking-dog M, also feeding-dog N, and the rotating type-disks, provided with notches or slots, *i i* and *j j*, for action in concert with a stepped shoulder, *h*, to the feeding-dog, essentially as herein set forth.

3. The combination, with the feeding-dog N, of the reversible cam Q, for changing the direction in feed of the rotary disks, substantially as specified.

4. The arrangement of double sets of units on the unit-disk, in combination with single sets of units on the adjacent type-disks, essentially as herein set forth.

5. The combination of the locking-dog M, the feeding-dog N, the rotating type-disks B C D, the reversible cam or guide Q, the stud or projection *l*, on the feeding-dog, the spring S, the bell-crank O, the spring P, and stop R, substantially as and for the purpose or purposes specified.

6. The combination, with the unit-type disk, having two consecutive sets of units, and adjacent disks having but single sets of unit-types, of a feeding-dog or device common to the several disks, and made reversible in its action as regards the feed of said disks, essentially as described.

96,991.—WILLIAM SPARKS, New York, N. Y.—*Coal-Screen.* — November 16, 1869; antedated November 5, 1869.

Claim. — The screen *k*, the hopper *b*, with a converging bottom, and appendages *d*, *e*, *f*, *g*, *h*, *i*, and *o*, combined, constructed, and operating in the manner described, or their equivalents.

96,992.—HENRY SPLITDORF, New York, N.Y.—*Telegraph-Sounder.*—November 16, 1869.

Claim.—The sounding-box D, elevated on posts F, and having the anvil G secured directly on its top, and openings in its sides to increase the sound and allow the passage of the tightening-spring, substantially as and for the purpose described.

96,993.—WILLIAM M. STEVENSON and AUSTIN PEARCE, Harmony, Pa., assignors to themselves and GEORGE E. HANDY, Boston, Mass. — *Packing for Pistons and Valves.*—November 16, 1869.

Claim.—The arrangement of the auxiliary ring *c* and its chamber or groove *b*, with each or either of the main rings C C′, and with passages *d f*, for leading the steam to the inner periphery of the main ring, and thence into the groove *b* of such main ring, the whole being substantially as and to operate as hereinbefore explained.

96,994.—JOHN STOWELL, Charlestown, Mass.—*Baking-Powder.*—November 16, 1869.

Claim.—1. The use of bitartrate of ammonia, with an alkaline carbonate, substantially as described, for the purpose of raising bread.

2. A baking-powder, made up of bitartrate of ammonia and an alkaline carbonate, substantially as above described.

96,995.—R. STUCKWISCH, Terre Haute, Ind. — *Brick-Machine.*—November 16, 1869.

Claim.—1. The adjustable guides *t t*, constructed substantially as and for the purpose set forth.

2. The platform P, in combination with guides *t t*, when said guides are constructed and arranged substantially as specified.

3. The parts herein mentioned, when all are constructed, combined, and arranged together in a brick-machine, as and for the purpose described.

96,996.—HIROM C. STOUFFER, East Lewistown, assignor to GEORGE SMITH, Lowellville, Ohio.—*Hay-Elevator.*—November 16, 1869; antedated May 17, 1869.

Claim.—The combination of the tube M, rope L, and catch J, with the block E, lever H, and trip I, all constructed and arranged to operate in the manner and for the purpose substantially as described.

96,997.—AUGUSTUS HENRY TAIT, Jersey City, N. J.—*Still for Distilling Naphtha and Petroleum.*—November 16, 1869.

Claim.—The pipe G, with its stop-cock 3, in combination with the pipe C′, ascending worm E, pipe F, and condenser H I, all constructed and operating substantially as herein shown and described.

96,998. — HENRY TAUSZKY, New York, N. Y., assignor to ELI D. BANNISTER and RUDOLPH TAUSZKY.—*Process of Preparing Grain for Distillation.*—November 16, 1869.

Claim. — 1. The process of preparing grain, as and for the purpose set forth.

2. The rollers b^1 b^2, in combination with roller *a* and rollers d^1 d^2, when constructed and arranged substantially as described, and effecting the process specified.

3. In combination with the rollers b^1 b^2, the knives c^1 c^2, as and for the purposes herein described.

4. In combination with the rollers d^1 d^2, the knives n^1 n^2, as and for the purpose herein described.

96,999. — HENRY TAYLOR and JOSEPH M. COALE, Baltimore, Md.—*Safety-Valve.*— November 16, 1869.

Claim.—The combination of the two valves, one large and the other small, with the coiled spring, and the bearing-levers and steam-ways, so that the valve shall be held shut when the steam is below the regulated pressure, and opened by the steam when it rises above the designated pressure, substantially as and for the purpose described and represented.

97,000.—ANSON P. THAYER, Syracuse, N. Y.—*Machine for Grinding the Cutters of Mowing-Machines.*—November 16, 1869.

Claim. — 1. The combination, with a grinding-stone and operating-mechanism arranged on a breast-stock, of one or more adjustable guides, arranged to bear and slide back and forth on the cutters or cutter-bar, substantially as specified.

2. The arrangement, with the breast-stock, of the supports for the stone-mandrel for maintaining the stock in line with the edge of the cutter being ground, while the plane of the stone is perpendicular to the cutter-bar, substantially as specified.

97,001. — ELI THAYER, Worcester, Mass., assignor to himself and MARSHALL COWING, New York City. — *Mode of Collecting and Storing Carbonic Acid for Extinguishing Fires.*—November 16, 1869.

Claim.—The process, substantially as herein described, of extinguishing fires, the same consisting in storing the carbonic-acid gas, or other equivalent gas, in one or more reservoirs, under pressure, and connecting said reservoirs with suitable pipes, as described.

97,002.—Albert Thompson, Norway, Me., assignor to himself and G. T. Wheeler, Ridgway, Pa.—*File.*—November 16, 1869.

Claim. — An improved single-cut flat file, having teeth whose planes of strike or prolongation from the opposite sides shall cross each other, but whose dip or pitch on the two sides shall be shown in longitudinal section, as lying in the same or parallel planes, all as shown and described.

97,003.—James P. Tibbits, New York, N. Y.—*Book-Rack.*—November 16, 1869.

Claim.—The book-rack for pews, composed of the body A, hinged and forwardly-tilting front *b*, elastic straps *c*, cover or covers *g*, hinged to the top-piece *m*, and furnished with a stud or studs, *a'*, to operate in conjunction with a spring-catch or catches, *b'*, the whole arranged as and for the purpose herein set forth.

97,004. — Christian Volckmann, Columbus, Ohio, assignor to Otto Dresel, John Seltzer, and Philip A. Schlapp, same place. — *Artificial Marble.*—November 16, 1869.

Claim.—1. The preparation of the various compounds, and the combining of the same, substantially in the manner as hereinbefore set forth, for the purpose of producing artificial marble.

2. An artificial marble, composed of the above-named ingredients, compounded substantially as hereinbefore specified, and to be used in sheets for ceilings, walls of houses or rooms, or otherwise, or to be molded into mantels, counters, furniture, vases, urns, columns, obelisks, monuments, &c., and useful and applicable for all other purposes to which genuine marble is applied, besides being susceptible of many uses to which genuine marble cannot be practically applied.

3. The process of polishing the marble so produced, substantially in the manner and by means of the ingredients hereinbefore set forth, so as to give it a brilliant and durable gloss, equal if not superior to that of polished genuine marble.

97,005. — A. S. Vorse, Des Moines, Iowa.—*School-Desk.*—November 16, 1869.

Claim. — The combination of the end frames A, having the guides A', and projections *a* and *b*, writing-table D, and levers F, substantially as and for the purposes set forth.

97,006. — Joseph M. Ward, Oxford, Ohio, assignor to himself and Thomas B. White, same place.—*Drier.*—November 16, 1869.

Claim. — The drawers G H, constructed with inclined bottoms I J, and arranged, relatively to the stove D, as herein shown and described, for the purposes set forth.

97,007. — Alexander Warfield, Alexandria, Va.—*Compound Soap.*—November 16, 1869.

Claim.—The compound for soap above described, when made substantially of the ingredients and in the manner herein set forth.

97,008. — Henry P. Watts, Lynchburg, Va., assignor to himself and James A. Cooley. — *Corn-Sheller.*—November 16, 1869.

Claim. — The combination of the standard A, flanged outer rings B, inner revolving ring D, parallel guide-bars E, jaws F, knife I, guide-frames G, spiral or equivalent springs H, and two cranks J, with each other, said parts being constructed and arranged substantially as herein shown and described, and for the purposes set forth.

97,009. — George W. Wheeler, 2d, New Ipswich, N. H.—*Vehicle for Transporting Machines.*—November 16, 1869.

Claim.—A carriage for transporting mowing-machines, composed of the frame *a*, constructed and arranged upon an axle and wheels, substantially as shown and set forth.

97,010. — Charles P. Whitman, Charlemont, Mass., assignor to himself and W. C. Dodge, Washington, D. C.—*Bit-Stock Fastening.*—November 16, 1869,

Claim.—1. A bit-stock, having a socket, *a*, formed in its end, to receive the shank of the bit, with a screw-thread formed on its exterior, and a cap, B, with a corresponding internal screw-thread, with the openings *d e* formed in it, substantially as described.

2. The cap B, having a circular opening in its end, of such a size as to receive the stem of the bit, but not large enough to permit the shoulders of the shank to pass through it, said opening being connected, by lateral passage, with an opening in the side of the cap, of sufficient size to permit the shank of the bit to be inserted therein, substantially as described.

97,011. — T. P. Wilcox, Hebron, Ind.—*Water-Elevator.*—November 16, 1869.

Claim. — 1. In a water-elevator, the combination with a single crank shaft C, of the two drums E F thereon, each furnished with an independent rope or chain, for raising and lowering an independent bucket, and always turning with said shaft, and in the same direction with it, and secured thereto by staples and pin, or other releasing and adjusting mechanism for adjusting the rope or chains to the height of the water in the well, the whole arranged to operate as and for the purpose described.

2. In combination with a single shaft, and the two drums secured thereon by staples and pin, or other releasing and adjusting mechanism, each of said drums containing the rope or chain of one of a pair of alternating buckets, the two hinged and linked pawls, and a single star-ratchet, in which the two pawls work, the whole being arranged to operate in the manner and for the purpose described.

97,012.—Daniel Witt and Aaron Wait, Hubbardston, Mass.—*Handle for Brushes, Cards, &c.*—November 16, 1869.

Claim.—The lower fork *b'*, extended beyond the other, to form a long bearing to receive the strain which is counteracted by the short fork *b*, when the two forks are cast with a body, C, having a socket at the opposite end, and the parts form a cast-metal connection, as a new article of manufacture.

97,013. — David J. Wilcoxson, Milan, Ohio, assignor to himself and A. J. Mowry, same place.—*Mode of Attaching Seats to Wagons.*—November 16, 1869.

Claim.—In combination with the slotted tenon *a*, the key F, for securing it in place, when said key is held by a pin, *h*, sliding in a slot, *k*, substantially as herein set forth.

97,014. — George Baldwin Woodruff and George Browning, London, England, assignors to "The Singer Manufacturing Company," New York City. — *Sewing-Machine for Button-Holes.*—November 16, 1869.

Claim.—1. The combination, in a sewing-machine, of the table thereof, with a cutting-blade, to cut the slit for the button-hole, substantially as before set forth.

2. The combination of the table, cutting-blade, and cutting-block, with mechanism, by which the blade and block are caused to approach each other simultaneously, from opposite sides of the table, substantially as before set forth.

3. The combination of the cutting-blade and cutting-block, by a link, in such manner that the strain of cutting, and holding for cutting, are made to counteract each other, so that the machine is relieved of the strain, substantially as before set forth.

4. The combination of the cutting-blade and the movable stock thereof, with a handle, by means of which the said stock may be brought rapidly into position for cutting, and moved comparatively slowly, but with great force, during cutting, substantially as before set forth.

5. The combination of the under jaw of a forked cloth-clamp, with oscillating movable jaws, which adapt themselves to variations in the thickness of the fabric, substantially as before set forth.

6. The combination of the forks of the jaws of the cloth-clamp, with mechanism for moving said forks apart laterally, after the cloth is clamped, so as to spread the button-hole for sewing, substantially as before set forth.

7. The combination of the forked cloth-clamp with the blade for cutting the cloth so that the cloth may be cut while it is clamped, substantially as before set forth.

8. The combination of the table-plate of the sewing-machine, the forked clamp for holding the material, and the blade for cutting it, so that the work may be cut in the same clamp in which it is sewed, substantially as before set forth.

9. The combination of the clamp with the feeding-mechanism, (for moving it during sewing,) and with a cutting-blade arranged at one side of such mechanism, by means of a pin, by which the clamp may be secured reciprocally in the proper position relatively to the cutting-blade, and in the proper position relatively to the feeding-mechanism, substantially as before set forth.

10. The combination of the needle, carried in the reciprocating guide-box of the sewing-machine with a filling in the throat of the table-plate, to prevent the deflection of the needle, substantially as before set forth.

11. The combination of the table of the sewing-machine with an inclined wall-guide, for the needle beneath the table, so as to guide the point of the needle out of the path of the looper, the whole constructed to operate substantially as before set forth.

97,015.—Solomon H. Woods, Berlin, assignor for one-half to Russell S. Gladwin, West Meriden, Conn.—*Die for Making Shears.*—November 16, 1869.

Claim.—The dies, constructed as shown and described, for forming scissors or shears from a wrought blank, substantially in the manner as herein specified.

97,016.—Harvey A. Wright, Logansport, Ind.—*Signal-Light for Railroad-Cars.*—November 16, 1869.

Claim.—The combination and arrangement of the horizontally-revolving angular arms *h h*, carrying different-colored lights or signals, and the single horizontally-revolving arm *h'*, carrying a light or signal corresponding in color to one of those on the angular arms, the two arms being separated from each other, and serving to indicate, by their relative movements, the direction and speed of the train substantially as described.

97,017.—James J. Johnston, Allegheny, Pa. assignor to himself, Alexander Postley, Samuel H. Nesbit, J. C. Pershing, Lewis Peterson, and Thomas Fawcett, same place, and John Hunter, Alliance, Ohio.—*Process of Manufacturing Steel.*—November 16, 1869.

Claim.—1. Treating the fluid metal in a vessel with the detersive and converting agent herein described, as and for the purpose set forth.

2. Imparting a whirling motion to the fluid metal and nitric oxide, in the mold D, during the process of casting, substantially as described, and for the purpose set forth.

3. The use of copper mold for casting ingots in the process of manufacturing steel, substantially as described, and for the purpose set forth.

4. The use, in the process of manufacturing steel, of nitric oxide, combined with an active current of air, substantially as herein described, and for the purpose set forth.

5. The detersive and converting agent hereinbefore described, when used in the process of manufacturing steel.

97,018.—George L. Witsil, Philadelphia, Pa., assignor to himself and Charles Merrill, Detroit, Mich.—*Washing-Machine.*—November 16, 1869.

Claim.—1. The combination and arrangement of the perforated diaphragms, the oscillating agitator, and the inclosing-vessel, substantially as and for the purpose specified.

2. The combination of the oscillating agitator and the hollow journal, substantially as and for the purpose set forth.

97,019.—George L. Witsil, Philadelphia, Pa. assignor to himself and Ramon D. L. S. Gutgesell, same place.—*Device for Grating Green Corn from he Cob, &c.*—November 16, 1869.

Claim.—The within-described grater or cutter, consisting of the bed A and plate or plates B, with the apertures therein cut at an acute angle, substantially as and for the purpose set forth.

97,020.—A. Van Camp, Washington, D. C., and M. M. Hodgman, Saint Louis, Mo.—*Street-Railway.*—November 16, 1869.

Claim.—The rail A, having a center bearing-surface, A', when the same is laid or embedded in concrete B, substantially as described.

97,021.—Wesley Anderson, Pittsburgh, Pa.—*Horseshoe-Machine.*—November 23, 1869.

Claim.—1. The jaws D D, constructed substantially as described, and in their operation serving to support, convey, bend, fold, and embrace the blank, in the manner described, in combination with the die E for bending the horseshoe-blank, substantially as described.

2. The jaws D D, constructed, operated, and subserving the functions, substantially as described, in combination with adjustable guides *e e*, for securing the requisite compound motion for bending the bar or blank around a former, substantially as described.

3. The slide *u*, and the mechanism for actuating the same, in combination with the lower die E and jaws D D, arranged and operated substantially as described.

97,022.—Alexander P. Baldwin, Newark, N. J.—*Mouth-Piece of Bridle-Bits.*—November 23, 1869.

Claim.—A bridle-bit, provided with an elbow or rule-joint, so that it may be used as a jointed or barbit, substantially as herein described.

97,023.—John F. Beazel, Uniontown, Pa.—*Welding Iron and Steel.*—November 23, 1869.

Claim.—The employment of caustic soda for welding iron and steel, substantially as specified.

97,024.—Max E. Berolzheimer, New York, N. Y.—*Key-Guard.*—November 23, 1869.

Claim.—A lock, provided with a perforated spindle, A, a slide, B, with flanges, and a pin, C, upon one end, a cap, E, and a grooved guide, D, all constructed and arranged, with respect to each other, in the manner described.

97,025.—Cephus Beucus, Waupun, Wis.—*Scoop and Sifter for Flour, &c.*—November 23, 1869.

Claim.—In combination with the body A of the scoop and sifter, the bail D, when its ends are extended to allow lateral movement of the instrument, substantially as herein shown and described, for the purpose specified.

97,026.—Bentley C. Bibb, Baltimore, Md.—*Magazine for Base-Burning Stoves.*—November 23, 1869.

Claim.—1. The section A, constructed with a closed top, in which is the feed-door B, said section being adapted to fit loosely upon and be held in place by a lower section, C, substantially in the manner and for the purpose herein set forth.

2. The top-feeder magazine, for a fire place stove, made of two independent sections, A C, the lower section slanting back, and both sections constructed and adapted for use, substantially in the manner and for the purpose described.

97,027.—Bentley C. Bibb, Baltimore, Md.—*Fire-Place Stove.*—November 23, 1869.

Claim.—A vertically-movable pivoted or swinging fender-rail section, C, substantially as and for the purposes described.

97,028.—Bentley C. Bibb and Philip Klotz, Baltimore, Md.—*Fire-Place Stove.*—November 23, 1869.

Claim.—A divided sliding screen, applied directly to, and supported by the frame of a fire-place stove, substantially as described.

97,029.—Bentley C. Bibb and Philip Klotz, Baltimore, Md.—*Fire-Place Stove.*—November 23, 1869.

Claim.—1. The perforated diaphragm *g*, at the

base of chamber P, provided with a movable perforated plate, *h*, substantially as and for the purposes described.

2. The opening through the case A, leading into chamber P, and provided with one or more doors D, substantially as and for the purposes described.

97,030.—WILLIAM J. BIRDSALL, Newark, N. J.—*Chisel Holder for File-Cutting Machines.*—November 23, 1869.

Claim.—1. The combination of the eccentric *c*, shaft *f*, intermediate *b*, lever-handle *g*, segment *h*, chisel *a*, and frame A, all constructed and arranged substantially as specified and shown.

2. The combination of the springs *d*, semicircular block B, and frame A, in a file-cutting machine, in the manner and for the purpose shown.

97,031.—H. S. BLOOD, Jefferson Parish, La.—*Sleeping-Car.*—November 23, 1869.

Claim.—The combination, with my patented improved railroad-car seats, as shown on the drawings, of an overhanging platform, when the latter is sustained upon rods B B B′ B′, by means of jointed sleeve-brackets *c c c′ c′*, substantially in the manner herein described.

97,032.—S. W. BROCK, Niantic, Ill.—*Cultivator.*—November 23, 1869.

Claim.—The curved slotted strap H, pin or key I, bar F, and adjustable bolts E with each other and with the slotted plow-beams G and slotted standards C attached to the cross-beam A, substantially as herein shown and described, and for the purpose set forth.

97,033.—JESSE BROWN, San Francisco, Cal.—*Stench-Trap.*—November 23, 1869.

Claim.—The trap described, consisting of the box A, with cover B, trapping-pipe D, and pipe E, when combined as described, for the purpose set forth.

97,034.—GEORGE BROWNLEE, Princeton, Ind.—*Picture-Case.*—November 23, 1869.

Claim.—The combination of the clamping-device D J D with a picture-receptacle, A, constructed as described.

97,035.—ISAAC C. BRYANT, Washington, D. C.—*Drain-Pipe Machine.*—November 23, 1869.

Claim.—The improved arrangement, in the drain-tile machine above described, of the parts herein shown, consisting of the vertical tapering clay-hopper or pug-mill G, with its flanges H, ring K, grooves L, the vertical shaft C, with flanged screw D, flanges I, grooved tapering screw E, and removable mouth-piece M, when said parts are all constructed, arranged, and operating as herein described, and for the purposes set forth.

97,036.—GUSTAV A. BUCHHOLZ, Shepherd's Bush, England.—*Manufacture of Semolina.*—November 23, 1869; patented in England, November 19, 1862.

Claim.—1. A blade, for flour-mills, fastened in its holder by means of bands *g*, and notches or recesses in the working-edge thereof, all as shown and described.

2. The combination of two ripping-rolls *a a′*, having teeth formed by the intersection of oblique, deep-cut lines on their peripheries, with the feeding-mechanism shown and described.

3. The combination of two or more pairs of rubbing-surfaces *a c′*, arranged one above another, with circular plates C′, having radial openings *d* to pass the grain from one pair to another, in the manner set forth.

4. The combination of transverse bar *c*, having inclined faces, frame having shouldered inclines *b*, screw-shaft *d*, disk *e*, and catch *f*, all arranged as and for the purpose specified.

97,037.—GUSTAV A. BUCHHOLZ, Shepherd's Bush, England.—*Manufacture and Means of Assorting Semolina and Flour.*—November 23, 1869; patented in England, March 28, 1867.

Claim.—1. The converging-funnels I I^1 I^2, arranged around the rotating shaft B, to receive, convey, and discharge into separate receptacles, the different sizes of ripped grain in the manner described.

2. The said funnels I I^1 I^2, in combination with a centrifugal spreader, conical valve, and delivery-tube, all arranged and operating together in the manner set forth.

3. A centrifugal spreader, D, provided with a series of steel blades, F, arranged around its beveled inner surface, as shown and described.

97,038.—GUSTAV A. BUCHHOLZ, Shepherd's Bush, England.—*Machine for Manufacturing Semolina and Flour.*—November 23, 1869; patented in England, September 4, 1867.

Claim.—1. The method of manufacturing semolina, by passing the grain through successive pairs of ripping-rolls, and sifting out the finer parts between each pair, in the manner described.

2. The arrangement, between the sets of rollers, of shaking perforated troughs E E^1 E^2 E^3, inclined alternately in opposite directions, to carry the fragments of grain, and to sift the fine dust through, in the manner described.

3. The combination of inclined and perforated shaking-troughs E E^1 E^2 E^3 with trays *e*, to carry the pulverized grain.

4. The cylindrical brushes *a*, arranged with respect to the perforated troughs E E^1 E^2 E^3 of a flour-mill, and operating in the manner described.

5. The axles and axle-boxes of brushes *a*, connected together in sets by tie-rods, in combination with slotted frames *b*, and slotted rock-levers K, having fixed fulcra, and operated by crank-plates L, in the manner described, to give a transverse motion to the brushes in their guides.

97,039.—GUSTAV A. BUCHHOLZ, Shepherd's Bush, England.—*Hulling-Machine.*—November 23, 1869; patented in England, August 12, 1868.

Claim.—The combination of a series of radial rotating blades, *e*, and a series of corresponding stationary blades, *d a*, arranged as set forth, with ring-plates, having discharge-holes a^3, therein, each set of said hulling-tools being located one above another, and operating successively upon the grain, in the manner described.

97,040.—MARTIN BUCK, Lebanon, N. H., assignor to himself and AARON H. CRAGIN, same place.—*Blind-Mortising Machine.*—November 23, 1869.

Claim.—1. A blind-mortising machine, provided with slides C, and ratchet-bars C′, having notches thereon of different pitch, as and for the purpose specified.

2. A blind-mortising machine, provided with vibrating arms E, for varying the throw of the carriages, as shown and described.

97,041.—FREDERICK BURGHARDT, Curtisville, Mass.—*Machine for Making Wood-Pulp.*—November 23, 1869; antedated November 15, 1869.

Claim.—1. A revolving wheel, with one or both sides provided with a grating, filing, rasping, or roughened surface, substantially as and for the purpose herein shown and described.

2. The adjustable block J, with the filing, grating, rasping, or roughened surfaces K, in combination with the wheel B, substantially as described.

97,042.—G. E. CALKINS, Rock Island, Ill.—*Wash-Boiler.*—November 23, 1869.

Claim.—A boiler-bottom, consisting of a sectional rim-base, B, curvo-convex plates C, and ribbed braces E, said parts being shaped and fitted together in the manner described.

97,043.—CYRUS C. CARTER, Exeter, Ill.—*Wagon-Seat Spring.*—November 23, 1869.

Claim.—The adjustable sliding bar F, in combination with the springs C, arranged substantially as and for the purposes set forth.

97,044.—H. W. CASS, Lodi, Wis.—*Draw-Bridge.*—November 23, 1869.

Claim.—A draw-bridge, provided with the chords A B, counter-chords C, braces D, and rods E F G, all constructed and arranged, with reference to each other, in the manner specified.

97,045. — ALFRED H. CASTLE, Ann Arbor, Mich.—*Compound for Insulating.* — November 23, 1869.

Claim. — An insulating-compound, composed of bitumen, argillaceous earths, and quicklime, when the ingredients named are compounded and used for the purpose herein described.

97,046. — LUKE CHAPMAN, Collinsville, Conn., assignor to COLLINS COMPANY, same place.—*Manufacture of Cast-Metal Dies.*—November 23, 1869.

Claim.—The improved method herein described of making patterns from which to mold, in sand, in the ordinary way, metal dies to be used for swaging axes; that is to say, obtaining the pattern by compressing two or more pieces of lead around and upon a finished ax, so as to obtain thereof the exact impression of the ax.

97,047. — M. H. CHRYSLER, Kinderhook, N. Y. — *Vegetable-Cutter.* — November 23, 1869; antedated November 18, 1869.

Claim.—1. The slotted annular revolving cutting-bed D, carrying the cutters E, when arranged on a vegetable-cutter, substantially as described, and constructed with a central opening, all so that the articles to be cut can be cored or not, as may be desired.

2. The weight G, carrying the pin *f*, when combined with the slotted annular revolving cutting-bed D, substantially as herein shown and described.

3. The cylindrical plug or bar H, when arranged in combination with the weight G, and with the slotted annular revolving cutting-bed D, substantially as herein shown and described.

97,048. — JAMES O. CLAY, Hudson, Wis. — *Steam Cooking-Apparatus.*—November 23, 1869.

Claim. — 1. A steam-generator, for cooking-purposes, consisting of a reservoir or base, A, so constructed as to set flat on the top of a stove, and provided with tubes *b*, for conveying steam to the cooking-vessels, and for holding the latter in place, substantially as described.

2. The cooking-vessels B, provided with the concave bottoms *d*, with tube *c* attached, substantially as and for the purpose set forth.

3. The combination of the generator A and the water-supply vessel G, when constructed and arranged to operate substantially as described.

97,049. — NATHAN CLOUGH, Lowell, Mass. — *Combined Butter-Cutter and Stamp.*—November 23, 1869.

Claim. — A combined butter-cutter and stamp, composed of the metallic cutter *b*, with parallel interior and exterior sides secured to the perforated stock *a*, in combination with the piston *c* and stamp *d*, substantially as and for the purpose herein specified.

97,050. — BENJAMIN F. CONLEY, Funnelton, West Va.—*Fire-Place.*—November 23, 1869.

Claim.—A fire-place hearth, formed of a single piece of metal, with rebate B, and moldings C, as shown and described.

97,051.—JOHN B. COOLIDGE, Boston, Mass.—*Mercurial Gas-Regulator for Nitrous-Oxide Apparatus.*—November 23, 1869.

Claim.—1. The use of mercury, operated by the pressure of gas upon the mercury, in combination with the tube A, containing the mercury, and the inlet-tube C, substantially as shown, and for the purpose specified.

2. The adjustable inlet-tube F, combined and arranged with the packing-box B, and a tube, A, holding a column of fluid, substantially as shown, and for the purpose specified.

3. An extra vent, so arranged as to keep the flame burning when the regulator-vent is closed by the mercury, substantially as shown, and for the purpose specified.

97,052.—JOHN B. COOLIDGE, Boston, Mass.—*Mercurial Regulator for Vulcanizing and other Heaters.*—November 23, 1869.

Claim.—1. The application of the expansion of mercury to regulate the heat in vulcanizing rubber, or its equivalent, for dental purposes, substantially as shown.

2. The use of mercury, by expansion, to regulate the heat of ovens, where uniformity of heat is required, in combination with the device C, constructed substantially as shown, and for the purpose specified.

97,053.—JAMES S. CORYA, Dupont, Ind.—*Butter-Mold and Print.*—November 23, 1869.

Claim.—The combination herein shown, of the follower B, mold A, steelyard-bar C, and loop *b*, when combined and arranged in the manner substantially as shown, for the purposes set forth.

97,054. — C. B. COTTRELL, Westerly, R. I.—*Apparatus for Tempering Steel.* — November 23, 1869.

Claim.—1. The employment of the hood A, in connection with a tempering-apparatus, substantially as and for the purpose herein shown and described.

2. The combination of the hood A and basket *d*, substantially as and for the purposes herein shown and described.

97,055.—JEWELL DAVIS, Indianapolis, Ind.—*Hive for Raising Queen Bees.*—November 23, 1869.

Claim.—1. The shields I and I, when constructed and used in manner and form substantially as set forth.

2. The combination of the wire cages with the wooden frame-work A B C D, constructed with the compartments E F G H, and the covered ways L L, L′ L″, and L″ L″, whereby, if it is not desirable to use one cage singly it can be advantageously used in connection with several others, substantially as set forth.

97,056.—ROLLIN DEFREES, Newark, N. J., assigns to JOHN D. DEFREES, ANTHONY DEFREES, and THOMAS PERCIVAL, three-fourths of his right. — *Steam-Engine Governors.*—November 23, 1869; antedated November 19, 1869.

Claim.—1. The combination and arrangement of the spring B with the reservoir E and pump H, whereby the force of the spring shall be uniform, substantially as herein set forth.

2. The combination of the reservoir E, piston F, spring B, pump H, and shaft M, whereby the speed of the engine-governor, through the pressure of a current of oil, or other liquid, driven in a continuous circuit, by means of the pump, will be regulated, in the manner substantially as shown and described.

3. The combination, and arrangement of the devices whereby to suspend the governor-valve between the two forces, without any solid connection between it and any part which receives its motion directly from the engine, so that its position may depend, not upon the speed of the engine, but upon the amount of valve-opening required to maintain the engine at a uniform speed, as herein set forth.

4. The construction and arrangement of the devices for varying the speed of the engine at will, with the adjustable valve in the oil-passages, whereby to regulate the quantity of liquid circulating in a given time through the governor, substantially as shown and described.

5. The construction and arrangement of the rotary pump, with reference to the devices immediately arranged therewith, as shown and described.

6. The construction and arrangement of the governor's steam-valve D, substantially as described.

97,057.—MATHEW DELANY, Virginia City, Nevada.—*Billiard-Table Cushion.*—November 23, 1869.

Claim.—1. The combination, with the cushion A, of wires or cords B, and straining-keys or other straining-devices, arranged to hold the wires under tension, substantially as specified.

2 The combination, with the cushion, wires, or cords, and straining-devices, of the bridges D, substantially as specified.

97,058.—LOUIS A. DE LIME, Saint Louis, Mo. —*Portable Still.*—November 23, 1869.

Claim.—1. A portable apparatus, as described for distilling alcoholic and other materials, consist

ing of tubs A, diaphragms E, coils F, refrigerator J, steam-generator O, the whole constructed and operated substantially as and for the purpose above specified.

2. The combination of a portable steam-boiler with a portable still, substantially as described.

97,059.—Louis A. De Lime, Saint Louis, Mo.—*Apparatus for Obtaining Extractive Matters from Sugar-Cane and other Materials.*—November 23, 1869.

Claim.—1. The apparatus, herein described, for obtaining extracts, the same consisting in the combination of a series of extractors, to operate successively, as described.

2. The combination, with the tubs or vessels *a*, as described, of pipes for liquids and steam, so as to operate as described.

3. The process, herein described, of using steam and water of high temperature, so as to obtain extractive matters from solids, in the manner set forth.

4. The arrangement of pipes and cocks, so that the liquid is forced, automatically, from one vessel to another, as described.

5. The combination of a series of vessels with a revolving table, as described.

97,060.—Joseph Dill and Hubbard E. Jordan, Grand Rapids, Mich.—*Method of Constructing Ornamental Wood-Work.*—November 23, 1869; antedated September 22, 1869.

Claim.—The herein-described method of producing articles of fancy and ornamental wood-work, by first dovetailing together blocks or pieces of different kinds and differently-colored wood, and then turning the same into the desired shape, substantially as and for the purposes set forth.

97,061.—Napoleon B. Dixon and Myron W. Sprague, Rochester, N. Y., assignors to N. B. Dixon.—*Bag for Gathering Fruit.*—November 23, 1869.

Claim.—A fruit-bag, so constructed that the mouth thereof is distended by a hoop, B, provided with a bail, C, yoke *b*, hook H, gathering-cords D, and a lappet, E, all arranged and combined to operate in the manner substantially as described, and for the purpose set forth.

97,062.—G. L. Du Laney, Mechanicsburgh, Pa.—*Harvester-Cutter.*—November 23, 1869.

Claim.—1. The cutter-blade C, when constructed with an eye or socket, as shown and described, and for the purpose specified.

2. The cutter-bar D, when constructed as described, and used in combination with the cutter-blade C.

3. The adjustable heel-piece I, together with the set-screw A, when used in combination with the blade C and bar D, as shown and described, and for the purpose set forth.

97,063.—Abraham Dyson, Saint Louis, Mo.—*Chair and Fan.*—November 23, 1869.

Claim.—The chairs A and B, springs g g^1 g^2 g^3, fans o^1 o^2 o^3, with their actuating spring *h* and cord *k*, arranged on a hinged frame, D, rendered adjustable by an arm, *p*, and spring-bolt *s*, all combined, constructed, and arranged for joint operation, substantially as and for the purpose shown and specified.

97,064.—Thomas Dyson and George Smith, New York, N. Y.—*Steam-Engine Valve-Gear.*—November 23, 1869; antedated November 19, 1869.

Claim.—The supplementary valve E and pistons *b* *b'*, in combination with the rigid connection L, adjustable toes *n*, *n'*, and *p*, and starting-fork T, constructed and arranged as set forth and described.

97,065.—Albert A. Easton, Killingly, and Arnold J. Harrington, Plainfield, Conn.—*Water-Wheel.*—November 23, 1869.

Claim.—The arrangement of the plates, E, E', G, and F, with the plates A B, in combination with the spiral water-box H, substantially as set forth.

97,066.—Richard Eaton, London, England, and Joseph Marks, Boston, Mass.—*Cooking-Stove.*—November 23, 1869.

Claim.—1. The employment, in combination with the oven and the fire-pot of a cooking-apparatus, or in combination with any heating-apparatus, a chamber or passage by means of which oxygen is heated by the escaping gases as they are passing from the fire to the smoke-escape flue, and supplied to the fire, essentially in manner and operating as before explained.

2. In combination with the cylinder J, hereinbefore mentioned, the employment of the auxiliary heating-drum U, substantially as before described.

3. The arrangement of the spaces Q R, and their valves S T, under the arrangement hereinbefore described, whereby a passage of oxygen is regulated and controlled for the purpose before explained.

4. A stove composed in general of the cylinder J, and, as a prolongation thereof, the air-passage L, the interior cylinder U, and the spaces Q R, with their valves S T, when such constituent parts are combined with a fire-pot oven, smoke-discharge flues, and other adjuncts of a stove as now generally constructed.

97,067.—W. A. Elam, Milan, Tenn.—*Bee-Hive.*—November 23, 1869.

Claim.—A hive, provided with a compound tube, having an inner elongated channel for the entrance of the bees, and a surrounding chamber, K, to receive and stop the insects, as they crawl forward from the outside of the hive, all as shown and described.

97,068.—William H. Elliot, New York, N. Y.—*Excavating-Machine.*—November 23, 1869.

Claim.—1. The shield *k*, when suspended from a car by suitable suspending-devices, substantially as and for the purpose set forth.

2. The engine *d'*, in combination with shield *k*, and any suitable devices for raising and lowering the same, substantially as and for the purpose specified.

3. The drop *n*, with its vertically-adjustable ways *o*, when carried upon a car, substantially as specified.

4. The described drop, arranged upon a platform, sliding laterally in a direction across the excavation, as and for the purpose specified.

5. The ways *o*, adjustable vertically on bed-piece *n'''*, suitably held and operated, substantially as set forth.

6. The adjustable bed-piece *n'''*, when hinged to a fixed or movable platform, and held in position by any suitable device, substantially as and for the purpose specified.

7. On the described car, carrying an engine, crane, and drop, the platform for supporting the same, when made adjustable, for the purpose set forth.

8. An excavating-machine, provided with a crane, *l*, shield *k*, and engine for operating the same, all constructed and arranged substantially as and for the purpose specified.

97,069.—Jim B. Fuller, Norwich, Conn.—*Lamp-Burner.*—November 23, 1869.

Claim.—1. Arranging two stationary flat wicks around a central tube, having side passages for supplying air to the interior of the central tube, so as to produce an argand-flame, and having an outside tube, for regulating the exposure of one side of the wicks to the action of the flame, said wicks being kept even with the upper end of the central or wick-tube, the whole being constructed and arranged substantially as and for the purpose set forth.

2. The tubes A and B, the case C, the cone D', and the tube B', or their equivalents, when used in connection with two stationary wicks, in the manner substantially as herein described, and for the purpose specified.

3. The check-plate F, or its equivalent, substantially as shown and described.

4. The lips *g* and aperture *g'*, as and for the purpose specified.

5. The cup *f* and aperture *f'*, when arranged substantially as shown and described, so that the oil returning through the aperture into the case shall pass between the wicks.

97,070.—JOHN GARDINER, Philadelphia, Pa.—*Grain-Conveyer.*—November 23, 1869.

Claim.—1. The construction of the carriage B, Fig. 3, with the adjustable arms C C and the unloading-pulleys D D, and their combination with the grain-conveyer, substantially in the manner herein described, and for the purpose set forth.

2. The use of the tram-ways A A, Fig. 1, and the device for unloading the conveyer at any point intermediate between the two ends, either by reversing the bag or twisting the belts or bag, so as to unload the conveyer on either or both sides.

3. The construcion of the bows M, with the projection *m*, the bases N, and the hinge-joint *m n*, and their attachment to the upper surfaces of the parallel belts of the grain-conveyer, substantially in the manner herein described, and for the purpose set forth.

4. The arrangement and combination of the rotating brushes H H with the grain-conveyer, substantially in the manner herein described, and for the purpose set forth.

97,071.—JOHN GARDNER, San Francisco, Cal.—*Ticket-Punch.*—November 23, 1869.

Claim.—In combination with a punch or nipper, the receptacle or ticket-holder *a*, substantially as described.

97,072.—CHARLES H. GATCHELL, Oldtown, Me.—*Blacking-Box.*—November 23, 1869.

Claim.—As an improved article of manufacture, blacking-boxes, provided with sharp points or tacks projecting from the bottom, and adapted for holding the box on a board or table when rubbing the brush on the blacking, as specified and shown.

97,073.—I. N. GATES, Burnside, Ill.—*Cultivator.*—November 23, 1869.

Claim.—The knuckle D and adjustable knuckle-holder E e^1, constructed and operating in connection with the plow-beam and truck-frame of a cultivator, substantially as herein shown and described, and for the purpose set forth.

97,074.—MARIE GETHER, Saint Louis, Mo.—*Hand-Guide for Pianos.*—November 23, 1869.

Claim.—A hand-guide, fastened to the bottom of the piano-case, in such a manner, that it may be folded down and stored away, without detaching it from the piano, when not used, materially as above described.

97,075.—A. J. GIBSON, Cincinnati, Ohio.—*Combined Roller and Ice-Skate.*—November 23, 1869.

Claim.—1. The foot-board A, having upon its under side a curved rib, H, and a circular bearing-plate at each end, in combination with circle-plates B, H, and C, adapted to receive rollers.

2. The foot-board A, having depressions in each end, concave washers F, and screw-bolts E, in combination with the circle-plates or hangers B D and C D, or with the runners K L, as and for the purpose described.

97,076.—EZRA T. GILLILAND, Cincinnati, Ohio, assignor to himself and PETER NEFF, Jr.—*Dial-Telegraph Apparatus.*—November 23, 1869.

Claim.—The provision, in a "dial"-telegraph, of the shaft C, ratchet F, pawl G, and arm H, or their equivalents, said shaft and arm being so arranged as to impinge at the termination of each stroke of the latter, as and for the purpose set forth.

97,077.—WASHINGTON L. GILROY, Philadelphia, Pa.—*Digester for Coffee-Pots.*—November 23, 1869; antedated November 12, 1869.

Claim.—1. Making the capacity of the chamber E adjustable, substantially in the manner described, for the purpose specified.

2. In combination with the said receiving-chamber E, the enlarged mouth at the upper end of the frustum A B, and the relatively shortened height of the frustum C D, the said parts being constructed to operate together, substantially as and for the purpose described.

97,078.—JOHN C. GOULDING, Trenton, N. J.—*Baby-Walker.*—November 23. 1869.

Claim.—The arrangement of fabric C, broad belt D, and buckling strap *a*, upon the frame A B, as shown and described.

97,079.—JOHN PEVEAR GREELY, Boston, Mass., assignor to himself, RUSSELL ARNOLD BALLOU, SANFORD GREELY, and JONATHAN PIERCE, same place.—*Fire-Proof Safe.*—November 23, 1869.

Claim.—1. My improved manufacture or safe, as having its heat-resisting stuffing composed either of lamp-black alone, or such in mixture with plaster of Paris or other equivalent material.

2. The employment of lamp-black as a stuffing for a safe, whether it (such lamp-black) be used alone for such, or in connection or mixture with plaster of Paris or other material.

3. The employment of lamp-black as a heat non-conducting stuffing for the jacket of a steam-boiler, pipe, or other article exposed or to be exposed to heat.

4. As my invention, and an improvement in a safe, the employment therein of a mass of lamp-black, and the compacting of it, substantially as described, whereby a stuffing of a superior character, tending to render the safe practically fire-resisting, is produced.

5. As of my invention, a safe having its stuffing composed of lamp-black, compacted substantially as described.

97,080.—JOHN GRIMM, Darlington Township, Pa.—*Coal-Drilling Machine.*—November 23, 1869.

Claim.—1. The sliding standard A, having perforations B, or bearings E upon its face, in combination with the screws A^3 and pawls A^4, constructed and operating substantially as and for the purpose described.

2. The screwed spindle D and crank D^3, in combination with the pivoted jointed nut C^2, brackets C, and pin C^3, substantially as and for the purpose set forth.

3. The combination of the above parts in the construction of a coal-drill, whereby the drill can be set at any angle, and its feed regulated by the revolution of the spindle D, substantially as described and set forth.

97,081.—VICTOR M. GRISWOLD, Peekskill, N. Y.—*Clip or Paper-Holder for Photographers.*—November 23, 1869.

Claim.—1. The clamp or clip, formed of the two parts or legs A A, twisted together at the top, crossed obliquely at *a a*, for the purpose specified, and brought together to form jaws at the bottom, substantially as and for the purpose specified.

2. The combination with the said clip, formed as described, of the hook *d*, substantially as set forth.

3. The coating or covering of the jaws B B, to protect them from the action of corrosive substances, substantially as hereinabove set forth.

4. The combination, with the legs A A, portions *a a*, and portions *b b*, of the jaws B B, bent up nearly at right angles with the portions *b b*, to prevent the said jaws from passing each other, and to obtain a better and larger bearing-surface, substantially as specified.

97,082.—VICTOR M. GRISWOLD, Peekskill, N. Y.—*Photographers' Dripping and Drying Rack.*—November 23, 1869.

Claim.—1. The supports B B, arranged in pairs, in a series, and set upon, or into, or secured to a suitable frame or backing, substantially as and for the purpose set forth.

2. The combination, with the supports B B, of the trough A, substantially as set forth.

3. The combination, with the body of the rack, of the legs or braces D, substantially as and for the purpose specified.

4. The rack described, formed of one piece of sheet-metal, substantially as and for the purpose set forth.

97,083.—THOMAS J. HALL, Bryan, Texas.—*Coffee-Roaster.*—November 23, 1869.

Claim.—The removable coffee-stirrer, when constructed with the stirrers B, attached to and depending from the under side of cover A, and operating in

the manner and for the purpose substantially as described.

97,084. — JOSEPH D. HARDEN, Troy, N. Y. — *Cooking-Stove.*—November 23, 1869.

Claim. — 1. The employment, in a cooking-stove wherein the products of combustion escape direct, of a current of air, first heated by the fire of the stove, and thence caused to circulate around or around and through the stove-oven, for producing the baking-heat therein, substantially as herein specified.

2. In a cooking-stove constructed as described, the passage of a current of air, similarly heated, through a space or spaces in contact with a hot-water reservoir, for heating the water therein, substantially as herein set forth.

3. In a cooking-stove constructed as described, the employment of the current of air, thus heated and thus previously utilized, to furnish a hot draught to the fuel in the fire-box, substantially as herein specified.

97,085.—A. M. HARDING, Oregon City, Oreg.—*Turbine Water-Wheel.*—November 23, 1869.

Claim.—1. The case C, with its lower plate c^2, that forms the bottom of the chutes c^1, inclined upward and outward, to partially close the periphery of said case, substantially as herein shown and described, and for the purpose set forth.

2. The hoop-gate D E F, substantially as herein shown and described, in combination with the case C, c^1 c^2, and tube G, as and for the purpose set forth.

3. The combination of the inclines H, case C, arms E, gate D, and shafts A G, when arranged substantially as shown and described.

4. The spiral rack I and pinion-wheel J, in combination with the hoop-gates D E F and case C c^1 c^2, substantially as herein shown and described, and for the purpose set forth.

5. The wheel B, consisting of a concavo-convex top, on which are formed the buckets b^1, connected at the bottom by the strengthening-ring b^2, and having the form described, whereby to obtain the full effect, and, at the same time, allow the free escape of the water, as set forth.

97,086. — B. B. HERRICK and C. W. WICKER, Duquoin, Ill.— *Post-Hole Digger.* — November 23, 1869.

Claim. — The arrangement of the expansive D-shaped cutter F P, plunger D, shaft L, arm C, and spring S, with the handle A and band M, all constructed to operate substantially as set forth.

97,087.—FRANK N. HOPKINS, Baltimore, Md.—*Composition-Fuel.*—November 23, 1869.

Claim.— The composition of matter formed by combining Ritchie mineral and Albertite, or either, or their chemical equivalents, with anthracite or bituminous coal, either with or without using the flux aforesaid, in the manner substantially as and for the purpose herein described.

97,088.—FRANK N. HOPKINS, Baltimore, Md.—*Conglomerate for Paving, Roofing, and Similar Purposes.*—November 23, 1869.

Claim.—The use of pine-tar, in combination with Ritchie mineral or Albertite, either or both, and sand, gravel, or other equivalent substance, to form a conglomerate for paving, roofing, and analogous purposes, prepared in the manner substantially as herein set forth.

97,089.—FREDERICK HOWER, Brooklyn, N. Y. —*Whooping-Cough Plaster.*—November 23, 1869.

Claim.—A medical compound, composed of the ingredients herein specified, and in about the proportions named.

97,090.—W. H. HOWLAND, San Francisco, Cal. —*Knife-Sharpener.*—November 23, 1869.

Claim.—The disks E F, holder B C, and screw D, constructed and arranged as described, and for the purpose specified.

97,091.—JONATHAN J. HOYT, Chelmsford, Mass. —*Lubricator.*—November 23, 1869.

Claim.—1. The adjustable regulating-plug, when constructed, applied, and arranged to operate substantially in the manner and for the purpose specified.

2. The combination of all the effective parts specified, viz, the adjustable regulating-plug, having a flattened shank, B, and a tapering lower end, A, the socket *c* and screw-plug D, the half nuts F, and the washer *e*, and the glass globe, all constructed, combined, and arranged for action and effect, as and for the purpose specified.

97,092.—NICHOLAS JENKINS, New York, N. Y. —*Paneling-Machine.*—November 23, 1869.

Claim.—1. The clamp E^1 E^2, in combination with the paneling-cutter *b*, constructed and arranged for gauging by the face of the wood, substantially as herein set forth.

2. Supporting both the cranks E^4 and F^{11} on the carriage F, and providing the connections F^9, &c., or their equivalents, so as to operate and traverse forward and back together, relatively to the paneling-cutter *b*, as herein set forth.

3. The means E^5 E^6 E^7, or their equivalents, for changing the crank E^4 around on the shaft at will, in combination with the table E, herein described, and with the paneling-cutters *b*, and their connections, as herein set forth.

4. The sub-support F^1, for the carriage F, running on the rail or way *a*, constructed and arranged as herein set forth.

5. The stops K M, separately adjustable, as specified, arranged as represented, in combination with the cutters *b*, and the other parts, as herein set forth.

6. The turning-ring P, the spring-clip Q, or its equivalent, and steadiment O, arranged, relatively to each other and to the cutting-arbor B^1, as herein set forth.

7. The device G, reaching through from the front, and penetrating the back, with the spring *g*, arranged as represented, to lock and unlock the cutter-carriage C^1, as herein set forth.

8. The telescopic blast-pipe U^1 U^2, arranged as represented, relatively to the carriage A^3, the movable cutting-arbor B^1, and fixed blower U, for the purposes herein set forth.

9. The pins N and rollers *n*, arranged to operate relatively to each other, and to the arbor B^1, and to suitable lifting-devices on the pattern, as herein set forth.

97,093.—T. D. KEITH, Mayville, Wis.—*Plate-Lifter and Bread-Toaster.*—November 23, 1869.

Claim. — A compound plate-holder and toaster, consisting of rods A A, hooks B B, slide E, and handle C D, each of said parts being constructed and arranged, with respect to the others, in the manner described.

97,094.—PHILIP KLOTZ, Baltimore, Md.—*Fire-Place Stove.*—November 23, 1869.

Claim.—A screen, or part of a screen, fixed to and movable with the cover to the feed-passage of a top-feed fire-place stove, substantially as described.

97,095.—LUCIUS J. KNOWLES, Warren, Mass. —*Machine for Winding Thread on Bobbins, &c.*— November 23, 1869.

Claim.—1. The combination and relative arrangement, with the screw-shaft P and pulleys B and C, of the shipper R and wheel T, substantially as and for the purposes set forth.

2. The combination, with the adjustable cam H, of the vibratory winding-guide I, its pivot J, and slotted hanger, in which such pivot is held and adjusted, substantially as and for the purposes set forth.

3. The combination of the frame E and weighted arm L, having the recessed disk M, with the pin *q*, said parts being constructed and arranged substantially as and for the purposes set forth.

4. The combination, with the frame E, of the projection V and forked arm W, hinged or pivoted to said projection, so as to admit of the turning of the quiller-frame, according as it is used upon a right or left-handed loom, substantially as and for the purposes set forth.

5. A quiller, the parts of which are constructed, combined, and arranged, in relation to each other, as shown in the drawings, and above described.

97,096. — RAMSEY LAWSON, Shelburne Falls, Mass.—*Lathe for Turning Ovals.*—November 23, 1869.

Claim. — An improved attachment for lathes, formed by the combination of the center A, recessed and grooved sliding plate B, oval plate C, grooved plate D, pin E, and rubber or equivalent spring F, with each other, substantially as herein shown and described, and for the purpose set forth.

97,097. — HENRY B. LEACH, Boston, Mass.—*Fluid-Meter.*—November 23, 1869.

Claim.—1. The arrangement, in fluid-meters, of two measuring-cylinders, placed end to end, with their axes in the same line, and each provided with a piston, and suitable water-passages communicating with a valve-chamber common to both, so that the fluid may be admitted to either end of either cylinder, and move either piston, while the other is stationary, whether said cylinders be cast in one piece or separately, substantially as described.

2. In combination with two cylinders and their pistons, constructed and arranged as set forth, the arrangement of the valve-rods G and G^1, the brackets, or arms F and F′, and the arms G^2 and G^3, substantially as described.

3. In combination with two cylinders and their pistons, constructed and arranged as set forth, the arrangement of the water-passages and ports *g*, *h*, *i*, *j*, *k*, and *l*, substantially as described.

4. The pistons D and D′, having their motions controlled so as to insure the completion of the stroke of each piston before it commences its return-stroke, by locking one valve by the motion of the other valve, substantially as described.

97,098.—THOMAS LORING, Blackwoodtown, N. J.—*Grindstone.*—November 23, 1869.

Claim.—The grindstone F, with hub or bushing *d*, arbor and pinion E, driving-wheel D, and the case A B, with jaws *a a*, all constructed and arranged as described.

97,099.—JOEL MANCHESTER, New York, N. Y.—*Combination Pocket-Rule.*—November 23, 1869.

Claim.—The combination of the pocket-rule, consisting of the two parts B and C, pivoted together, and provided with the several cutting-edges, and constructed as herein shown and described, constituting a combined implement adapted to the various uses specified and set forth.

97,100.—FREDERICK MARRIOTT, San Francisco, Cal.—*Aerial Steam-Car.*—November 23, 1869.

Claim.—1. A spindle, having conical ends B and D, and a space, C, in the middle, between the conical ends, for the motive-power, attendants, passengers, and freight.

2. The rigid or stationary wings or planes E, arranged upon the sides of the spindle of an aerial or flying machine, for the purpose set forth, substantially as described.

3. And, in combination with the rigid or stationary wings or planes E, on the sides of a flying-machine, the adjustable plane G, arranged to operate substantially as described.

4. In combination with a flying-machine, a four-vaned rudder or tail, I, arranged to vibrate in either direction, substantially as described, for the purpose of steering the machine.

5. And, in combination with the four-vaned rudder or tail I, the adjustable planes G, arranged to co-operate with the rudder, when required to steer the machine.

97,101. — JOHN MCDONALD, New York, N. Y.—*Combined Bed and Musical-Instrument Board.*—November 23, 1869.

Claim.—1. The combination of folding bed, upright frame, and key-board, when said key-board is permanently connected with the said folding bed.

2. The combination of guides and stops with the treadle-rods E, to compel them to always drop into position upon the treadles F when the case A is raised into a vertical position, as herein shown and described, and for the purpose set forth.

3. The combination of springs H with the treadles F, to hold them in proper position to receive the treadle-rods E when the case A is raised into a vertical position, as herein shown and described, and for the purpose set forth.

97,102. — ALEXANDER MCLEOD, Black River Falls, Wis.—*Stump-Extractor.*—November 23, 1869.

Claim.—1. The combination of the pawls E, oscillating bar F, levers G, chain J, wheel I, and frame C A, with each other, and with the wheel and axle D B, arranged and operating substantially as and for the purposes described.

2. The combination of the hoisting-lever R, trucks U, cable P, axle and wheel B D, pawls E, oscillating bar F, chain J, wheel I, and frame C A, substantially as shown and described, for the purposes set forth.

97,103.—FRIEDRICH MILLER, Frostburgh, Md.—*Churn.*—November 23, 1869.

Claim. — The churn-body, having two compartments, one for the cream and the other for the gear-wheels, in combination with the dasher B, wheel G, pinion H, and lock-bar K, all arranged as specified.

97,104. — JOHN H. MILLER and F. A. PICKERING, Niantie, Ill.—*Harrow.*—November 23, 1869.

Claim.—1. The combination of the toothed bars C C, central bar A, jointed connections D E B, and windlass G, substantially as described.

2. The windlass G, and the mode of raising the sides of the harrow, substantially as described.

97,105.—GEORGE R. MOORE, Philadelphia, Pa.—*Water-Closet.*—November 23, 1869.

Claim. — The water-closet hopper, having a removable cover, with suitable lugs to rest down perpendicularly upon the pan-shaft, which is journaled in the sides of the hopper, while at the same time the cover fits within the top part of the trunk, so as to bring the joint between them and the top, substantially in the manner and for the purpose herein set forth.

97,106. — WILLIAM MURKLAND and JOHN W. MURKLAND, Lowell, Mass.—*Power-Loom for Weaving Ingrain Carpets.*—November 23, 1869.

Claim. — 1. The levers j^1 j^2, combined with and operating both the trap-boards and the journals, substantially as described.

2. The combination, with the sliding cylindrical boxes, of the stationary double-hooked pawl and lever n^2, controlled by the jacquard, for revolving such boxes, substantially as described.

3. The vertical and cylindrical boxes *p p* and *q q*, substantially as described, when arranged and operating with the lathe, as and for the purposes set forth.

4. The lay and its springs f^i f^1, in combination with the shuttle-box frame S S, arranged within the openings of the lay I, for lessening the jarring of the boxes by the movement of the lay, as specified.

97,107. — JOHN NAUGLE, Moresville, Ind. — *Tire-Bending Machine.*—November 23, 1869; antedated November 10, 1869.

Claim. — 1. In combination with a tire-bending machine, a series of interchangeable collared rollers, as and for the purpose specified.

2. Forming grooves in the rollers adjacent to the collars, as and for the purpose specified.

3. In combination with the frame A, the pivoted latch H, arched support I, and roller C, as and for the purpose specified.

4. In combination with the frame A, and rollers B and C, the carriage F, racks *f f*, pinions *g g*, and shaft G, as and for the purpose specified.

97,108. — CHARLES M. O'HARA, New York, N. Y.—*Covering for Steam-Boilers.*—November 23, 1869.

Claim.—The application of ashes as a non-conductor of heat, substantially as shown and described, and for the purpose specified.

97,109. — CHARLES MELSOM O'HARA, Bolivar, Tenn.—*Hand Corn-Sheller.*—November 23, 1869.

Claim. — The improved hand corn-sheller herein described, consisting of the hinged plates provided

with concave inner surfaces bearing shelling-corrugations, as shown and described.

97,110. — JOSEPH IVES PEASE, Stockbridge, Mass.— *Velocipede.*—November 23, 1869.

Claim.—1. The elongated yoke or frame K, extending diametrically across and supporting the guide-wheel J, and pivoted in the dash-board H, and stepped in the shoe I, together with the braces *p q r*, holding said shoe in place, the arm M, projecting from and at right angles to the turn-post, traversing over and locking into the semicircle N, substantially as described.

2. In combination with cone-pulleys *b b*, the belt-shifter and brake D, the fast and slow gears *e c c e*, combined and used together, as and for the purposes set forth.

3. The treadles *g g*, hinging upon the frames or yokes *h h*, and attached to the cranks, as described.

4. The wheels shod with rubber tubing, which tubing is held secure within a grooved tire or felly, by a metallic rod, passing through its entire length, and tightened by a right-and-left screw, or its equivalent.

97,111.—J. A. PECK, Taunton, Mass., assignor to himself and WILLIAM L. WHITE, jr., same place.— *Fifth-Wheel for Carriages.*—November 23, 1869.

Claim.—The fifth-wheel of a carriage, composed of a continuous strip of wood, bent into a circle, or an arc of a circle, then the same, or its bearing bed or support, is plated with hardened steel, or its equivalent.

97,112. — WILLIAM PENNY, Milton, Fla.—*Saw-Mill.*—November 23, 1869.

Claim.—1. The frame A, of a gang-saw mill, constructed as described, and provided with flanges or brackets, R, between the cylinder C and the saw-frame F, substantially as described, so that it is suspended and properly balanced in the manner specified.

2. The cylinder C, provided with flanges *a*, to brace the plates B, of the frame A, and to become portion of said frame, substantially as herein shown and described.

97,113.—DAVID PIERCE, Almont, Mich.—*Bending-Machine.*—November 23, 1869.

Claim.—1. The combination of the grooved rectangular former A, yielding bearing-levers C, springs *f*, and roller *h*, when arranged substantially as specified.

2. The combination of the ogee reciprocating former B, and roller-formers C, D, and E, when arranged substantially as specified.

3. The combination of the grooved roller I, roller K, lever-bearings L, foot-piece N, and spring-lever O, when arranged substantially as specified.

97,114.—JACOB W. PIPER, Chicago, and WILLIAM J. HANGER and JACOB S. HANGER, Taylor, Ill. —*Derrick.*—November 23, 1869.

Claim.—The cam E, provided with collar H, in combination with the two-part collar F G, provided with rollers V W, standard A, latch *x*, arm M L, and link Q, as set forth.

97,115.—THOMAS PLACE, Alfred Centre, N. Y. —*Machine for Making Wheels.*—November 23, 1869.

Claim.—1. The turn-table B, adapted for adjustment upon the carriage A, in any required plane, with reference to the rest O, or boring-tool, by means of the set-screws L and adjustable eye-bolt M, arranged to operate as herein shown and described.

2. The slotted adjustable rest O, provided with the vertically-adjustable slide-rest P and the felly-support, in combination with the carriage A and turn-table B, as herein described, for the purpose specified.

97,116.—THOMAS O. POTTER, Boston, Mass.— *Suspender.*—November 23, 1869.

Claim.—As a new article of manufacture, the suspender and shoulder-brace combined, above described, consisting of two loops, each provided with straps, as described, and connected together behind by an adjustable strap, all substantially as described.

97,117.— ABRAM REESE, McClure Township, Pa.—*Machine for Rolling Bars for Horseshoes.*— November 23, 1869.

Claim.—1. In a machine for rolling bars for horseshoes, the malleable-iron die-rings C and *e*, and creaser *d*, combined with the rolls, as described.

2. A malleable-iron ring, C, having cylindrical and beveled parts *c c'*, made separate from the roll, as described, and for the uses set forth.

3. The construction, herein described, of the tongue or collar *n* and groove *o* of the rolls *m m'*, in virtue of which there results a space between the working faces of the tongue and groove, of the form substantially as described, and substantially as shown at *o'*.

4. As a step in the manufacture of horseshoes, rolling a bead, *s'*, along the edge of one face of the bar, preparatory to creasing, substantially as described.

5. The delivery-guide *g*, having a lug, *g'*, entering the groove *e'*, substantially in the manner and for the purposes set forth.

6. The combination of the adjustable guide-rests *p p'*, with the malleable-iron die-rings C and D, and the rolls *b b'*, substantially as described.

97,118. — JACOB REESE and ABRAM REESE, Pittsburgh, Pa.— *Horseshoe-Machine.* — November 23, 1869.

Claim.—1. The arrangement of the former *m*, pair of forming-plates *i i*, and double forming-rollers *e e'*, substantially as described.

2. The double rollers *e e'*, arranged on a stem, *d*, which operates in a box, *d'*, substantially as and for the purposes set forth.

3. The raised portion of the die underlying and surrounding the former *m* with its narrow point *n'* and broad part *n*, in combination with the collar *z* on the roller *e*, as and for the purposes set forth.

4. The clearing-plates *l*, with its projection *l'* and pins *u*, in combination with its clearing-arm *u'*, substantially as and for the purposes set forth.

5. The arrangement of a series of formers, two or more, with the ends on which are formed the toes of the shoes turned in opposite directions, in connection with a corresponding arrangement of forming-plates *i* and forming-rollers *e*, so as to bend shoes at both strokes of the machine.

97,119.—C. RENNE and F. LANDENBERGER, New York, N. Y.— *Weighing-Basket.*—November 23, 1869.

Claim. — A weighing-basket, formed of willow twigs or metal, and provided with a movable bottom, springs, guide-rollers, index, and scale, each of said parts being constructed and arranged, with respect to the others, in the manner described.

97,120.—THOMAS C. ROBINSON, Boston, Mass. —*Paper-Cutting Machine.*—November 23, 1869.

Claim.—1. The combination of the knife K with the toggle-mechanism, for operating the clamp, substantially in the manner described.

2. The combination and arrangement of the bar S, springs *q q'*, toggle-mechanism, and knife K, substantially as described, for the purpose of throwing up the knife at the completion of its downward stroke, as stated.

97,121.—JOHN A. ROCKWOOD, Kinderhook, Ill., assignor to himself and S. MORRIS, same place.— *Combined Planter and Cultivator.*—November 23, 1869.

Claim.—The combination of the harrow N O P with the beam A, dropping-device G H I J K L M, handles F, and rear or covering-plows D E, whether used with or without the furrowing-plow B C, substantially as herein shown and described, and for the purpose set forth.

97,122.—MARCUS A. ROOT, Philadelphia, and JACOB D. CUSTER, Norristown, Pa.—*Portable Gas-Apparatus and Carbureter.*—November 23, 1869.

Claim.—1. The box or case A, cast in one piece with its partitions *a b*, so as to comprise within it the two chambers 1 2, made and arranged for the purpose and in the manner described.

2. In combination with a carbureting-apparatus, the blowing-wheel D, composed of winged buckets, with deflecting surfaces, as and for the purpose herein described and represented.

3. In combination with the blowing-wheel D, constructed and operating as herein described, and revolving in a well partially filled with a hydrocarbon, the lifting-cups 7, on said wheel, for carrying up from the well the hydrocarbon that is to supply the carbureting-chamber, and flowing it therein or thereto, substantially as described.

4. In combination with a carbureting-apparatus, in which the air is subjected to two distinct charging-operations, a burner and cock, connecting with each interior chamber, and an exterior communicating-pipe, with a cock for each burner, so that the air differently charged in the interior may be separately burned or mixed before coming to the flame, as and for the purpose deseribed.

97,123.—Ernest Sandoz, Hudson City, N. J.—*Securing the Cannon-Pinions of Watches.*—November 23, 1869; antedated November 15, 1869.

Claim.—The arbor *c*, with a neck, 2, in combination with the spring-tube of the cannon-pinion *d*, formed with the internal collar 3, substantially as and for the purposes set forth.

97,124.—Riley Sanford, Marion, N. Y.—*Bee-Hive.*—November 23, 1869.

Claim.—The vibrating bottom F, transverse passage-way J, in combination with the form of the hive A, sliding-valve I, insulated boxes D, frame B, and metallic box L, all being constructed as herein described and represented, for the purpose set forth.

97,125.—Henry C. Sergeant, Newark, N. J.—*Fluting-Machine.*—November 23, 1869.

Claim.—The bracket, for carrying the upper roll B, connected with the standard by means of the face-plates A A^1, pivoted together eccentrically, the movable one being provided with a lever extending laterally and on the opposite side from said eccentric pivot, substantially as and for the purpose shown and described.

97,126.—William H. Seymour, Brockport, N. Y.—*Mowing-Machine.*—November 23, 1869.

Claim.—1. The adjustable main frame C, connected at its rear end with the main axle on opposite sides of the inner drive-wheel, in combination with a hinged cutting-apparatus, arranged in line with the tread of the drive-wheels, as described.

2. The vibrating main frame C, and gear-plates D D′, arranged relatively to each other and to the main drive-wheel axle, substantially as and for the purpose set forth.

3. In combination with a hinged cutting-apparatus connecting with the main frame in line with the tread of the drive-wheels, the arrangement, substantially as described, of the gearing on the main frame and drive-wheel axle, outside of the hub of the inner main drive-wheel.

4. The finger-bar hinged to the frame in line with the tread of the driving-wheels, in combination with the pivoted hand-lever O, and link or loop N, arranged and operating as described.

5. The combination of the adjustable frame C, pivoted coupling or brace-rods K and L, hinged shoe I, and link or loop N, arranged and operating as described.

6. The carrying-wheel M, applied to the independently-hinged rear brace K, in combination with the hinged cutting-apparatus, arranged substantially as described.

97,127.—Thomas Slaight, Newark, N. J.—*Padlock.*—November 23, 1869.

Claim.—The bolt D, constructed with the hook *i*, projections *j k*, stump *l*, and part *k′*, when used in connection with the ordinary shackle B, tumblers C, and spring *e*, all being constructed, arranged, and operated substantially as herein described.

97,128.—Charles W. Small, Worcester, Mass.—*Work-Box and Desk.*—November 23, 1869.

Claim.—A combined work-box and writing-desk, composed of the box A, cover B, plate C, and rods D D, all arranged to operate as herein shown and described.

97,129.—Austin S. Smith, Lawrence, Mass.—*Device for Packing Eggs for Transportation.*—November 23, 1869.

Claim.—A duplicate egg-pocket, A, formed of a single piece of stiff paper, in the manner specified, and for the purpose set forth.

97,130.—Cyrus W. Smith, Morrisville, N. Y.—*Apparatus for Building Sod Fences.*—November 23, 1869.

Claim.—1. The winches *b b*, in combination with, and arranged as described with relation to the guys, crane A *a*, and frame B, whereby the crane can always be readily kept in vertical position, even if the ground is uneven, as herein described.

2. The herein-described apparatus for building sod fence, consisting of the crane A *a*, adjusting-guys, and winches *b b*, the sod-fork D, frame B, and a vehicle, C, all constructed, arranged, and operating as hercin described.

97,131.—P. W. Strong, Evans's Mills, N. Y.—*Apparatus for Manufacturing Cheese.*—November 23, 1869.

Claim.—1. The combination of the automatic device R, or equivalent, the water-supplying pipe *c*, vat-tank E, and funnel *n*, substantially as described.

2. The arrangement of the water-chamber C, constructed to operate as described, heater M, vat F, and tank E, all constructed and combined substantially as described.

3. The arrangement of the perforated pipes P and *t*, vat F, tank E, funnel *n*, and water-supply chamber C, constructed as described, in the manner and for the purpose described.

4. The combination of an air-supplying apparatus with a vat, F, and tank E, substantially as described.

5. The combination of air-supplying agitators with vat F and tank E.

6. One or more pipes leading from an air-supplying apparatus beneath the rack in a curd-sink, I, substantially as described.

97,132.—Josef Stuehler, Brooklyn, N. Y.—*Stair-Rod.*—November 23, 1869.

Claim.—A stair-rod, slotted near its ends, and provided with a slotted cap, B, pin D, spring *d*, and perforated block *b*, all constructed as described, to lock the said rod upon the hooks E, in the manner specified.

97,133.—Henry R. Swan, Norwalk, Conn.—*Buckle.*—November 23, 1869; antedated November 8, 1869.

Claim.—Providing the part *a*, of the frame A, with holes *n*, arranged as and for the purpose specified.

97,134.—George S. Thompson, Philadelphia, Pa.—*Balancing Millstone.*—November 23, 1869.

Claim.—The horns D, the upper and lower upwardly and downwardly projecting screws H K, the nuts L, with their tenons *d*, and the housings F, with their mortises *e*, substantially as shown and described.

97,135.—Charles True, Pecatonica, Ill.—*Close Stool and Closet.*—November 23, 1869.

Claim.—1. The combination of horizontally-sliding covers with a vertically-moving seat, substantially as described, for the purpose set forth.

2. The closet described, consisting of the box, seat, flexible band, sliding covers, springs, pulleys, standards, and bands, when combined and arranged as described, for the purpose set forth.

97,136.—William I. Tustin, San Francisco, Cal.—*Windmill.*—November 23, 1869.

Claim.—1. The table F, with its projecting segmental rack *e*, turning on the flange *a*, in combination with the wheel E and rudder D, substantially as and for the purpose herein described.

2. The vertical connecting-rod I, with its gear-wheel Q and pinion *i*, when used for connecting adjusting-gears on the lower end of the vertical shaft C, either with the table F, or directly with the wheel E or rudder D, substantially as and for the purpose herein described.

3. The pulley G, with its toothed pinion *g*, and under-projecting lugs or pins *n*, the same being raised by means of the curved lever L, and operated by the endless cord *v*, passing over pulleys N and O, and kept taut by the weight P, substantially as described, for the purpose herein set forth.

97,137.—W. A. VAN BRUNT, Horicon, Wis.—*Seeding-Machine.*—November 23, 1869.

Claim.—1. The adjustable seeding-cylinder, with radial flanges B^1, of about one-eighth of an inch radius less than the bearing part A of the cylinder, or sufficient to allow the grain to pass without crushing, said radial flanges running lengthwise of the cylinder, substantially as and for the purpose specified.

2. In combination with the adjusting seeding-cylinder, above claimed, so arranging the opening C^1 for receiving, and the opening C^2 for discharging the grain, that the latter shall be received and discharged on opposite sides of the vertical diameter of the seeding-cylinder, substantially as and for the purpose set forth.

97,138. — HERMANN VON SCHLAGINTWEIT-SAKÜNLÜNSKI, Munich, Bavaria.—*Revolving Scale.*—November 23, 1869.

Claim.—The combination of the graduated scale C, at the extremity of the handle A, with the pointed spur-wheel B, formed and operating substantially as described.

97,139.—DAVID F. WAGNER, West Hanover, Pa.—*Corn-Planter.*—November 23, 1869.

Claim.—1. The frame A A^1 *a*, connected to the axle of two transporting-wheels, by means of the casings B, in which turn the hoppers F, substantially as described.

2. The bar D, from which the seed-tubes are hung, applied to the rear overhanging ends of straps *a a*, when these straps also serve to connect together the two beams, A A^1, and when these two beams are sustained by the cylindrical hopper-casings B, substantially as described.

3. The pivoted draw-rods *j*, hooked on their front ends and pivoted to the pendants *h*, by means of wooden pins *i*, in combination with the catch-pins *t*, arranged below pins *i*, substantially as described.

4. The double perforated rotating hopper F, applied upon axle C, and combined with a stationary case, B, and an adjustable slide, E, all constructed substantially as described.

5. The tubular eyes V, on the rear end of draw-rod J, applied to the axle V′ of wheels *s s*, and to flange *g′* of tube E, substantially as described.

97,140.—F. L. WALKER, Boston, Mass.—*Paper-Cutting Machine.*—November 23, 1869.

Claim. — The combination and arrangement of mechanism for effecting the downward and forward movement of the cutter, substantially as described.

97,141. — WILLIAM WICKERSHAM, Boston, Mass.—*Machine for Making Nails for Horseshoes.*—November 23, 1869.

Claim.—1. In horse-nail machines, two series of pairs of working-rolls, one series placed at right angles to the other, each with a progressive increase of size from the beginning pair, and formed and constructed with longitudinal-grooved surfaces, as described, so that they shall have the same size and form throughout their whole length, and having working-surfaces such, that each pair shall work on the opposite sides only, or opposite edges only, of the nail, while it is being formed, as it passes between them, substantially in the manner described, and for the purpose set forth.

2. The combination of the cutting-rolls G G′, transferring-rolls *b b′*, and press-gears, as described, and for the purpose set forth.

3. In machines for making nails for horseshoes, the intermittingly rotary press-gears N and N′, operating in conjunction to form a series of dies, in which to straighten and incline the point of a nail, otherwise completed, substantially as set forth.

4. In horse-nail machines, the irregular screw *f*, in combination with the press-gears N and N′, for imparting to said gears an alternate motion and rest, as and for the purpose set forth.

97,142. — ISAAC WILLIAMS, Bucyrus, Ohio.—*Wagon-Ladder.*—November 23, 1869.

Claim.—The combination, in a wagon-ladder, of the following devices: First, a tight bottom, having rectangular holes to receive posts of the wings or sides of the ladder, having dowel-pins to insert in holes in the posts of said wings, and having slotted cross-ties fitting to the bolsters and standards of wagons, substantially as set forth; second, wings, having for their support posts, with beveled lower ends, supporting each other, with the tenoned end posts held by mortised clamps, substantially as set forth.

97,143.—CHARLES ABRESCH, New York, N. Y.—*Process for Brewing Beer.*—November 23, 1869.

Claim.—The within-described process for brewing beer, by mixing barley-malt with rice or ground starch, about in the proportion above stated, and treating the mixture substantially in the manner herein set forth.

97,144.—ISAAC ADAMS, Jr.—Suspended.

97,145.—REUBEN A. ADAMS, Cambridge, Mass.—*Curing and Preserving Fish.*—November 23, 1869.

Claim.—The use of saltpeter in the process of curing fish, in the manner and for purposes substantially as described.

97,146.—JOSEPH F. ALEXANDER, New York, N. Y.—*Propelling-Apparatus.*—November 23, 1869.

Claim.—The blade E, situated below the water-line, and connected to two cranks B C, situated at a suitable angle toward each other, substantially as shown and described.

97,147.—N. I. ALLEN and JAMES C. MOODY, Brunswick, Me.—*Spindle for Loom-Shuttles.*—November 23, 1869.

Claim.—The improved shuttle-spindle herein described, that is, made of malleable cast iron, and having the inclined beards or ridges on the surface formed from the body of the spindle itself, and on one side thereof only, as herein described.

97,148.—EDWIN R. AUSTIN, Elmira, N. Y.—*Step-Ladder.*—November 23, 1869.

Claim.—A clasp, composed of the band B, jaws C and F, crank D, and pivots E, all constructed, arranged, and operating in the manner described, and for the purpose set forth.

97,149.—D. W. BAILEY, Chelsea, Mass.—*Concrete Pavement.*—November 23, 1869.

Claim.—A pavement for streets, &c., composed of materials, deposited in successive layers, substantially as hereinbefore explained.

97,150. — S. R. BAILEY, Bath, Me. — *Sleigh.*—November 23, 1869.

Claim.—Elongating the sides of the sleigh-body, so as to cover the bottom, side, and rear rails, to which the runner cross-bars are affixed, substantially as herein shown and described.

97,151.—D. H. BALL, Sinnamahoning, Pa.—*Machine for Sawing Shingle-Bolts.*—November 23, 1869.

Claim.—The arrangement, upon the frame A, of the posts E, shaft K, with its fly-wheel, pulley, and saw, in connection with the traveling-table D, when constructed as herein shown and described, and for the purpose set forth.

97,152.—JAMES BALL, Brooklyn, N. Y.—*Knife and Fork.*—November 23, 1869.

Claim.—The combination, with a knife or fork, of a skewer-clamp, substantially as set forth and described.

97,153.—ROBERT L. BARCLAY, Brooklyn, E. D., N. Y.—*Progressive Reciprocating Motion for Stamping and other Machines.*—November 23, 1869.

Claim.—1. The eccentric *f*, in combination with the eccentric *i* and connection *g*, arranged and operating substantially as set forth, whereby the progressive reciprocation is effected by the rotation of both eccentrics, as set forth.

2. The flange *m*, of the eccentric *i* and pins *n*, in combination with the escapement *s t*, and eccentric *f*, substantially as and for the purposes set forth.

97,154.—Francis H. Barnard and Walter L. Brace, Hartford, Conn.—*Pocket-Knife.*—November 23, 1869.

Claim.—A pocket-knife, *a*, with spring *b*, thumb-latch *b'*, and thumb-piece *b''*, blade *c*, awl *e*, screw-driver *d*, with the rough enlargement *a'* constructed and arranged as described, substantially as set forth.

97,155.—Joseph B. Bidwell, Grand Rapids, Mich., assignor to himself and John C. Knoblock, South Bend, Ind.—*Confection from Raisins.*—November 23, 1869.

Claim.—As a new article of confectionery, raisins coated by a compound composed of the ingredients, and substantially in the proportions set forth.

97,156.—William H. Blake, Waterbury, Conn.—*Method of Forming Sleeve-Button Shanks.*—November 23, 1869.

Claim.—The improved method, herein described, of forming the shank *d*, with its cup-shaped disk *f*, in one and the same piece of metal.

97,157.—Olpha Bonney, Jr., San Francisco, Cal.—*Horse-Rake.*—November 23, 1869.

Claim.—1. The combination of the thumb-screw and interposed plate with the knee or shank, for connecting the tooth of the rake to the bar, and for adjusting the tooth in the knee or shank, as herein recited.

2. The arrangement of the central bars *e* in relation to the bars *o*, *q*, and *r*, and foot-bar *t*, whereby the entire series of gangs may be operated, as herein set forth.

3. The double adjustment of the bars *e*, upward and downward, and forward and backward, as and for the purposes herein recited.

97,158.—Jesse L. Branson, Pittsburgh, Pa.—*Loom.*—November 23, 1869.

Claim.—1. A hollow cam-shaft, within which the main shaft revolves, each shaft having its own independent bearings or supports, and each having movements independent of the other, substantially as described.

2. The journal-boxes H, constructed each of a single piece, provided with two concentric bearings, of different sizes, in combination with a hollow cam-shaft, within which revolves another shaft, substantially as shown and described.

3. The arrangement of the lever-clutches K L, on opposite sides of the cam-shaft, and so that as one of the clutches moves back, it shall partially revolve the cam-shaft, and cause one of the leaves of the cam to depress a heddle, and as the other clutch moves forward it shall, by a further movement of the shaft, relieve the heddle of such depression, substantially as set forth.

4. In combination with the lever-clutches, arranged on opposite sides of the shaft, the adjustable clutches M M, by means of which the shed may be kept open a greater or lesser period, at option.

5. The combination of the main shaft with the reversible tappet-shaft, which impart the picker-movements, by means of a chain and sprocket-wheels upon the shafts, substantially as described.

97,159.—Martin Briggs, Rochester, N. Y.—*Safe.*—November 23, 1869.

Claim.—A safe, consisting of the inner plates A, the outer panels B, screws *a*, and angle-irons C C, covering the angles of the sides and top and bottom, said irons being connected together by mortise-and-tenon joints, the whole constructed and arranged as set forth.

97,160.—Charles H. Burleigh, Worcester, Mass.—*Pipe-Trap.*—November 23, 1869.

Claim.—1. The combination, with the body of a pipe-trap, of an aperture for cleaning the interior thereof, arranged in the side of the trap, as shown and described.

2. The combination, with the lower partition C, of a drain stop-screw or plug, as above described.

3. The combination, with the body of the trap, of the net or strainer D, substantially as and for the purposes set forth.

4. The combination, with the body or globe of the pipe-trap, of a projecting stem, H, and socket G, having male and female screw-threads of the same size, substantially as and for the purposes set forth.

97,161.—R. P. Buttles, Mansfield, Pa.—*Bee-Moth Instrument.*—November 23, 1869.

Claim.—As new articles of manufacture, a set of instruments, substantially as herein described, for use in the rearing and management of bees.

97,162.—Francis M. Caldwell, New York, N. Y.—*Plow.*—November 23, 1869.

Claim.—1. The adjustable stem B, when constructed and arranged in the manner and for the purpose herein described.

2. The combination and arrangement of the stem B with the plow-sweep A A, bolt *c*, and lug *e*, in the manner and for the purpose herein described.

97,163.—Frederick J. Calhoun, Boston, Mass.—*Railway-Frog.*—November 23, 1869.

Claim.—The employment, in a railway-frog, of one or more hardened and water proof sheets of pulp, made from paper or other fibrous material, substantially as and for the purposes herein set forth.

97,164.—Henry Carter, Cleveland, Ohio.—*Ditching-Machine.*—November 23, 1869.

Claim.—1. The pronged wheel D, as arranged to operate in combination with the adjustable plow E, in the manner substantially as described, and for the purpose specified.

2. The conductor or chute L and fingers N, as arranged, in relation to and in combination with the wheel B and prongs *b*, in the manner as and for the purpose set forth.

3. The adjusting-standard F, arm G, gnide H, and plow E, all combined and arranged to operate in the manner as described, and for the purpose set forth.

4. The combination and arrangement of the wheel B, plow E, frame K, and platform I, substantially as and for the purpose specified.

97,165.—Peter F. Cederholm, Stillwater, Minn.—*Syringe.*—November 23, 1869.

Claim.—The syringe, having a separate suction-pipe, C, formed around the central discharge-pipe B, and provided with valves *c c*, substantially as and for the purpose herein described.

97,166.—H. P. Chapman, Essex, assignor to the Centre Brook Manufacturing Company, Centre Brook, Conn.—*Extension-Bit.*—November 23, 1869.

Claim.—1. The head or fixed cutter, constructed so as to form a gouge-lip or cutter, *a*, in combination with a cutter, C, made adjustable in the head above said gouge-lip *a*, substantially as set forth.

2. In adjustable bits, the cutter C, when constructed with the slot *f*, with its inclined edges, and combined with the conical-headed set-screw D, so that the said screw will spread each side from the slot, to bind the cutter into its seat, substantially in the manner and for the purpose set forth.

97,167.—A. A. Chassepot, Paris, France.—*Breech-Loading Fire-Arm.*—November 23, 1869.

Claim.—As an improvement on the fire-arm described and claimed in Letters-Patent, No. 60,832, dated January 1, 1867, the combination with the sliding and rotating breech-bolt, which contains the percussion-pin T, of the metallic piston, constructed as described; that is to say, centrally perforated, for the passage of said percussion-pin, and provided with a stud to actuate the cartridge-retractor, and held in a chamber formed in the end of the said bolt, in the manner shown and set forth.

97,168.—William R. Clark, Indianola, Ill.—*Fruit-Drier.*—November 23, 1869.

Claim.—A fruit-drier, combining, in its construction, a receptacle for the fruit, the walls of which have formed within them steam-spaces, said receptacle being also provided with horizontal and vertical partitions, having steam-spaces within them, the

vertical ones being for the purpose of dividing the receptacle into two compartments, and a steam-induction pipe, arranged, as described, so as to serve as an induction-pipe for the steam, and an eduction-pipe for the water of condensation, substantially as and for the purpose set forth.

97,169. — BENJAMIN ROWLAND CROASDALE, Philadelphia, Pa.—*Bag for Guano, Phosphates, and other Fertilizers.*—November 23, 1869.

Claim.—A bag, coated and saturated with substantially such materials as are herein described, for the purpose set forth.

97,170.—WILLIAM DEERING, Louisville, Ky.—*Baling-Press.*—November 23, 1869.

Claim.—1. The combination of the nut B, screw C, and eccentric L, or its equivalent, when employed with intermediate mechanism, substantially such as is herein described, to give simultaneous movement to the upper and lower platens of a press, substantially in the manner set forth.

2. The combination and arrangement of the eccentric L, frame M, with its arms or guides N, hooks J, and lever P^2, substantially as and for the purpose described.

3. The combination and arrangement of the cam-wheel Y, roller Z, pulley *p*, and bent arms *r*, substantially as shown and described.

97,171. — JOHN J. DE GRUMMOND, Knoxville, Ill.—*Horse Hay-Fork.*—November 23, 1869.

Claim.—A hay-fork, having forks A, levers B, blocks *n* and *v*, and pulleys *s* and *y*, constructed and arranged substantially as specified.

97,172.—GEORGE DENIS and GEORGE GRASSAL, Osceola, Iowa.—*Hay-Rack.*—November 23, 1869.

Claim.—The pivoted upright frame or end-rack A and the pivoted notched standard D, in combination with the folding hay-rack B, substantially as described.

97,173.—WILLIAM DENNISON, Cambridge, Mass.—*Machine for Making Chains.*—November 23, 1869.

Claim.—1. The method herein described, of welding and forming chain-links, that is to say, by forcing them into dies C C by means of die *m*, as herein described.

2. The combination of dies C C, with bridge-slot within, substantially as set forth.

3. The segment-gear K, rods L angle-lever M, follower I, and tube H, all arranged as shown, in combination with dies C C, as and for the purposes set forth.

4. The combination of the cross-slatted cylinder N, with mechanism, substantially as set forth, for rotating it and moving the chain intermittently, as the same is formed.

5. The combination of the vise E, connecting-rod J, segment-gear K, pinion Q, ratchet V, pawl *d*, shaft P, crank R, rod S, segment-gear T, with segment-gear U, attached to the cylinder N, in the manner and for the purpose set forth.

6. The wheel *h*, gears *f f'* Z Y X, cylinder O, ratchets *j j'*, pawls *i i'*, in combination with the cylinder N, constructed in the manner and for the purpose set forth.

7. The vise E, dies C C *m*, tube H, follower I, cylinder N, and wheel *h*, combined in the manner and for the purpose substantially as described.

97,174.—ELIAS DILDAY, South Pass, Ill.—*Fruit-Drier.*—November 23, 1869.

Claim.—1. The dry-house A, constructed as described, and divided into two compartments by means of the movable partitions G G, and having slides H H and guides *d d*, all substantially as and for the purposes herein set forth.

2. The combination and arrangement of the dry-house A, furnace B, flue C, chimney D, frame J, and drawers I I, all constructed as described, substantially as and for the purposes herein set forth.

97,175. — GEORGE DUCKWORTH, WILLIAM DUCKWORTH, JAMES DUCKWORTH, and JOHN C. DUCKWORTH, Pittsfield, Mass.—*Loom.*—November 23, 1869.

Claim.—1. In combination with the pickers of a loom having shifting shuttle-boxes, a protecting-mechanism, substantially as described, whereby the loom is stopped when a picker fails to withdraw from a shifting shuttle-box at the proper time to permit it to be shifted.

2. In combination with the lay-swords, the adjustable connections and adjusting-screws, substantially as described.

97,176.—WRIGHT DURYEA, Glen Cove, N. Y.—*Velocipede-Wheel.*—November 23, 1869; antedated November 12, 1869.

Claim.—A velocipede-wheel, constructed in or around its periphery with one or more flutes, bound or bordered by corrugated edges, substantially as specified.

97,177.—THEODORE DUVAL, Hartford, Conn.—*Carpenter's Grooving-Plane.*—November 23, 1869.

Claim.—As an article of manufacture, a "dado" or grooving-plane for carpenters' use, when constructed in two parts, and made adjustable in the manner substantially as shown and described, and for the purpose specified.

97,178. — RUDOLPH EICHEMEYER, Yonkers, N. Y.—*Machine for Pouncing Hats.*—November 23, 1869.

Claim.—1. A pouncing-cylinder or emery-wheel, consisting of an elastic rubber body or holder, provided with means of circumferential distension, and a sleeve or cover of emery-paper or emery-cloth, or its equivalent, substantially as described.

2. The arrangement and combination of a rotating pouncing-cylinder with a vertical supporting-horn, substantially as described, whereby the supporting-horn may be used to support the tip, side crown, or brim, during the operation of pouncing the hat.

3. In combination with a rotating pouncing-cylinder, and a rest or supporting-horn, a swiveling feeding-mechanism, substantially as described, whereby the hat may be drawn between the pouncing-cylinder in different curves, or directly forward, as required.

4. In combination with the rotating pouncing-cylinder and supporting-horn, the hinge and set-screw, whereby the supporting-horn is adjusted to the inclination of the sides of the pouncing cylinder.

5. In combination with the pouncing-cylinder and the supporting-horn for the hat, the horizontal treadle-lever and adjusting-screw, whereby the supporting-horn is adjusted vertically to various sizes of pouncing-cylinders, or various thicknesses of hat-bodies.

97,179. — EDWIN R. EMBRY, Richmond, Ky.—*Churn.*—November 23, 1869.

Claim. — The dasher D, formed with spirally-curved blades or wings, in combination with the detachable breakers, when constructed and operating as herein shown and described.

97,180.—EPHRAIM C. EVENS, Forrest Hill, Ind.—*Liniment.*—November 23, 1869.

Claim. — A liniment, composed of the within-described ingredients, and substantially in the proportions specified.

97,181.—JOHN O. FAIRBAIRN, Milwaukee, Wis.—*Dinner-Pail.*—November 23, 1869.

Claim. — 1. A dinner-pail, consisting of the compartments B, C, and D, and cover E, all constructed as herein described, so that they may be arranged upon each other, or compactly folded up, as shown and set forth.

2. The compartments B, C, and D, and cover E, provided with the hooks *k*, in combination with the cord or chain *d*, when constructed so as to be arranged as herein shown and described, and for the purpose set forth.

97,182. — LEVI S. FALES, New York, N. Y., assignor to THE AMERICAN FERTILIZER COMPANY.—*Mode of Recovering the Spent Acid from Oil-Refineries.*—November 23, 1869.

Claim.—The within-described method of purifying or recovering the spent acid of oil-refineries, &c., by

means of the ammoniacal liquors from gas-works, either with or without the use of the sulphate of soda, ammonia, or potash, substantially as herein set forth.

97,183.—E. L. FOREMAN, Rantoul, Ill., assignor to EDWARD FOREMAN, same place.—*Ditcher and Grader.*—November 23, 1869; antedated November 15, 1869.

Claim.—The arrangement of the hinged side B and plow A upon the frame, as shown and described, when said parts A B are formed of sheet-metal, curved as shown, and extend beneath the wood-work to which the plates are attached, substantially as set forth.

97,184.—WARREN GALE, Peekskill, N. Y.—*Vegetable-Cutter.*—November 23, 1869.

Claim.—1. In a vegetable-slicer, a cylinder, made whole or in sections, of any suitable form, when provided with a straight knife fastened across the cylinder, with an opening between the knife and cylinder to govern the thickness of the slice, and with a depression or space on the cylinder, below the knife, made wider at its back part, so the slices will pass under the knife, and be discharged without going into the cylinder, substantially as described.

2. In a vegetable-slicer, a cylinder, of any suitable form, made with an outside metal surface, when said cylinder is armed with one or more knives, of any suitable form, and is also made with a space between said knife and metallic surface, made wider at its back part, substantially as described.

3. A cylinder of a vegetable-slicer, composed of detachable sections, and attaching the knives to said sections, in such manner that the knife, or knives, and sections can be removed without disturbing the other parts of the cylinder, substantially as described.

4. So constructing the detachable sections of the cylinder, that a space will be left between the sections and the knives, which shall be wider at its back than its front, substantially as and for the purpose set forth.

5. Providing the detachable sections of a cylinder in a vegetable-slicer with a bend or projection, at or near its end, to which the knife is attached, and also with a projection, extending around the cylinder, substantially as and for the purpose described.

6. The combination of the cylinder A, constructed substantially as herein set forth, with the hopper H, and arranged in the frame F, in such a manner that the vegetables will only come in contact with about one-fourth of the circumference of the cylinder, substantially as described.

7. In a vegetable-slicer, a detachable throat-piece, P, in combination with a detachable section, D D, so the throat-piece can be removed without removing the section, substantially as described.

8. A vegetable-slicer, constructed with a detachable section, D, to which the knife, or knives, or cutters, of whatever form, are attached, in combination with a slotted head-piece, G, to which the section is fastened, all substantially as and for the purpose set forth.

97,185.—MERRITT GALLY, Rochester, N. Y., assignor to ALLEN P. CARPENTER, same place.—*Printing-Press.*—November 23, 1869.

Claim.—1. In a printing-press, such a construction of the ways in or on which the wheels or guides of the inking-rollers run, as shall raise such inking-rollers free from the distributing-cylinder or cylinders when approaching or leaving the same, substantially as and for the purpose described.

2. The traverse-cam C, whether attached to the crank-pin as a cap or forming part of the crank-wheel when used in connection with the stud or pulley G, for the purpose set forth.

3. The positively-moving lever L, the lever K, and connection M, combined for the purpose of giving motion to the inking-rollers, arms, or lever *s*, substantially as described.

4. The lever N *g*, combined with the connection M, for the purpose of disconnecting the levers L K, substantially as explained.

5. The latch P, combined with the levers L K, for the purpose of holding lever K and hook-connection M in position for reconnection, and preventing the release of lever N at an improper time, substantially as specified.

6. The wedge or sleeve $i\ i^2$, pin, trunnion, or journal I, box or bearing M^8, and adjusting-bar T, combined substantially as and for the purpose set forth.

7. The set-latch L^2 W, combined with a handle, V, as and for the object explained.

8. In combination with such set-latch, the projection or bar T, of the wedge or sleeve $i\ i^2$, as and for the end specified.

9. The use of rubber packing, or other elastic material, for the purpose of relieving the cut-off of the ink-fountain from the direct pressure of the set-screws, substantially as set forth.

10. The additional lug S, placed on the lever-projection of support R, in combination with the flange Y, as and for the purpose described.

11. The type-bed B, inclined backward at any angle between the vertical and forty-five degrees, in combination with the vibrating, rocking, or oscillating platen A, constructed substantially as herein set forth.

97,186.—JOSEPH GARDNER, Jr., Boston, Mass.—*Indicator for Mainspring of Watches.*—November 23, 1869.

Claim.—As a means of determining the degree of tension of the mainspring of a time-piece, the organization and arrangement of the tubular arbor and the rod *g*, the pawl *i*, the toothed wheel *k*, spring-catch *r*, or its equivalent, and the index-pointer and scale, the stop-pawl being accessories to such parts, and the whole operating in manner and for the purposes herein shown and explained.

97,187.—HIRAM GARY, Croton, N. J.—*Loose-Grain Fork.*—November 23, 1869.

Claim.—The tongue or spring A, constructed either of wood or metal, for loose-grain forks, secured to the stale or handle, as herein described, for the purposes set forth.

97,188.—A. S. GEAR, New Haven, Conn.—*Molding-Machine.*—November 23, 1869.

Claim.—1. In combination with the driving-shaft C and jointed swinging frame G and I arranged thereon, carrying the cutter-spindle L, the table A, and pattern P, arranged so as to clamp the work W upon said table, and so that the said spindle may be moved over the surface of the work, as described, guided by the said pattern, substantially as and for the purposes set forth.

2. In combination with the above, the adjusting-lever E, operating so as to vary the elevation of the spindle L, substantially as set forth.

97,189.—WILLIAM W. GLENTWORTH, Philadelphia, Pa., and WILLIAM H. GANDEY, Lambertville, N. J.—*Paper Felt or Wadding.*—November 23, 1869.

Claim.—1. The paper felt, produced in the manner and by the process substantially as above described.

2. The process, substantially as herein described, for producing our new manufacture, by taking the material up on the making-cylinder, while in the condition of half stuff, and subsequently drying it with little or no pressure.

97,190.—LOUIS GODDU, Boston, Mass., assignor to ELMER TOWNSEND, same place.—*Machine for Nailing Shoe-Soles with Wire.*—November 23, 1869.

Claim.—1. The arrangement, as well as the combination of the hand-lever E, and its operative spring *k*, with the stock A, and the mechanism for advancing the wire, the said mechanism consisting of the pawl *i*, the ratchet *g*, and the feed-wheel D, arranged in and applied to the stock, and the wire passage thereof, as explained.

2. The combination of the stop *p*, and its adjusting-lever F, and rack G, with the stock A, and the hand-lever E, applied to the feeding mechanism, as set forth.

3. The arrangement of the transferrer C with the stock A and the shank B of the nail-driver carrier, in manner so as to be moved in one direction by the said shank while descending, as set forth, the move-

ment of said transferrer in the opposite direction being effected by a spring, or its equivalent.

4. The arrangement of the movable knife-carrier or lever H with the stock A and the shank B of the nail-driver carrier, in manner so as to be moved in one direction by the said shank while descending, as set forth, the movement of the said knife-lever in the opposite direction being effected by a spring, or its equivalent.

97,191.—Louis Goddu, Boston, Mass., assignor to Elmer Townsend, same place.—*Machine for Nailing Shoe-Soles with Wire.*—November 23, 1869.

Claim.—The combination of the cammed projection or arm G, or its equivalent, with the shank B of the nail-driver *a*, and with other mechanism, substantially as described, or its equivalent, for feeding the strip of nail-wire along, the whole being so constructed, that during each downward movement of the said shank, the percussive force or blow employed for effecting such movement shall put in operation the feeding-mechanism, so as to cause the wire to be fed forward, as explained.

97,192.—Louis Goddu, Boston, Mass., assignor to Elmer Townsend, same place.—*Machine for Nailing Shoe-Soles with Wire.*—November 23, 1869.

Claim.—1. The combination, as well as the arrangement, substantially as described, of the stationary cutter *w*, the movable cutter *x*, the transferrer *b'*, their concentric fulcra or shafts *z a'*, the slotted tails *c' i*[1] thereof, the movable "T-piece" M, and its operative cam-wheel E, the whole being applied to the stock or frame, and connected with mechanism for advancing the wire, severing it, and driving it, all substantially as specified.

2. The arrangement of the slide-gauge *r*, as set forth, with the handle B of the stock A, and with the stop-pin *s* of the pawl-lever of the wire-feeding mechanism.

3. The combination and arrangement of the slide-gauge *r*, as set forth, its stops *u u*, and operative spring *v*, with the stock A and its handle B, and the stop *s* and operative lever *o* of the wire-feeding mechanism.

97,193.—John B. Hall, Cheshire, N. Y.—*Animal-Power.*—November 23, 1869.

Claim.—The arrangement of the loose eye *b*, bearing *a*, and removable and adjustable bar C, when employed in connection with the tread-wheel B and friction-wheel E, in the manner and for the purpose specified.

97,194.—Randolph Hayden, Middletown, Conn., assignor to himself and James C. Ferrel, same place.—*Shutter-Fastening.*—November 23, 1869.

Claim.—In a blind-fastener, the combination of a double fastening-hook, *a a*, hinged upon one fulcrum, *b*, with an actuating-spring, *g*, and screw cylindrical case, substantially as set forth.

97,195.—Horace P. Hayward, Fitchburgh, Mass., assignor to himself, Henry C. Mahurin, Ira Holt, Levi Sherwin, Luther J. Brown, and Charles N. Wilson, same place.—*Mode of Cutting Shoes.*—November 23, 1869.

Claim.—1. The main piece of a shoe-upper, cut in the manner shown in Fig. 1; that is, the lacing-slit commencing at *h*, in the center line of the upper, and running at an angle thereto, substantially as described.

2. A boot or shoe, having its upper formed of one main piece *a*, and the small goring-piece *l*, when the main piece is cut with the lacing-slit, commencing at *h* in the center line of piece *a*, and running at an angle thereto, substantially as described.

97,196.—Alexander Inglis, Indianapolis, Ind., assignor to himself, Charles W. Tyer, and John Inglis, same place.—*Lock.*—November 23, 1869.

Claim.—The combination, with the separate key-holes *g* and *h*, of the bolt C, with three notches on its upper and lower edges, guard I, tumbler D, and spring *f*, whereby the bolt may be thrown out by one turn of the inside key, the door locked, and the outside key-hole left open, and by two turns of said inside key the outside key-hole may be closed, all substantially as specified.

97,197.—John Jacobs, Oneida, Ill.—*Neck-Yoke.*—November 23, 1869.

Claim.—1. The longitudinally-grooved bolt B, provided with the clip C, in which the leather holdback D is secured, substantially as shown and described.

2. The plate or washer E, provided with lugs or projections *a a*, and pins *b b*, substantially as and for the purposes herein set forth.

3. The combination and arrangement of the yoke A, bolt B, clip C, holdback D, plates or washers E G, and nut H, all substantially as and for the purposes herein set forth.

97,198.—Alva F. Jennings, Fredonia, N. Y.—*Braid-Holder.*—November 23, 1869; antedated November 11, 1869.

Claim.—The holder A, made in one piece of wire, so bent as to form spring sides, with retaining stops, all constructed and operating in the manner and for the purpose set forth.

97,199.—Alfred J. Johnson, Louisville, Ky., assignor of one-half his right to James Wilheim, same place.—*Evaporating-Pan for Sorghum-Juice.*—November 23, 1869.

Claim.—1. Sugar-pans, made with a cast-iron bottom and wooden sides, substantially as and for the purpose herein described.

2. The herein-described method of preventing leakage, by securing the wooden sides of the pans between ribs *a a*, cast with the bottom, and provided with packing, all substantially as set forth.

3. The bottoms, cast with depressions *c d*, and the gate, with lip *i*, sinking into the depression *c*, substantially as described, for the purpose specified.

4. The finishing pan, constructed with the inclined depression *h*, covered channel *o*, and gate *p*, all substantially as described.

97,200.—Daniel Keethler, Mount Oreb, Ohio.—*Corn-Planter.*—November 23, 1869.

Claim.—1. The flanged segmental plates D E F, secured to the sides of the furrowing-wheels B B', in such manner as to have radial adjustment thereon, substantially as described.

2. In combination with the furrowing-wheels B and seed-tubes T, the concave-faced pressure rollers S, and mounted caster-frames R, as described, for the purposes set forth.

3. The combination of parts J K L M N O P Q, serving to operate the seed-slides I, substantially as shown and described.

97,201.—Abraham B. King, Camden, Ohio.—*Cultivator.*—November 23, 1869; antedated November 17, 1869.

Claim.—1. The pivoted shield *f*, in combination with the beam D, as and for the purpose described.

2. The beam D, with its brace *d*, constructed and arranged substantially as described.

3. The break C', in combination with the brace d^1 and projection d^2, arranged and operated as and for the purpose set forth.

4. The plow described, having the weed-break, cultivator, and shield, combined and arranged as described, for the purpose set forth.

97,202.—Francis L. King, Worcester, Mass.—*Boring-Machine.*—November 23, 1869.

Claim.—The revolving brace B, formed with its shoulders, and the washers C C, hand-wheel A, or other similar projection, right and left-hand screws D D, and nuts E E, formed with their projections on their inner faces, in combination with the uprights H H and semicircles F F, all constructed and operating substantially as shown and described, and for the purpose specified.

97,203.—William La Banister and Charles W. Ricker, Charlestown, Mass., assignors to Charles W. Ricker and Samuel S. Wilson, same place.—*Flier for Spinning.*—November 23, 1869.

Claim.—The combination of the head A, foot B, uprights C C, and bosses or projections D D, when said projections are formed in one piece with the up-

rights, and said uprights are oval above, and semicircular below said projections, substantially as and for the purposes herein set forth.

97,204.—BENJAMIN S. LAWSON, New York, N. Y.—*Car-Replacer.*—November 23, 1869.

Claim.—The portable frog, herein described, having flanches C and D, beveled base H and projecting portion I, constructed and arranged to operate as specified.

97,205.—JOHN LERCH, Uhlersville, Pa.—*Combined Harrow and Cultivator.*—November 23, 1869.

Claim.—1. The arrangement, in front of the harrow-teeth *f f*, of inclined scrapers *g*, as set forth.

2. The scrapers so combined with a flanged plate, *j*, secured to the former, as to be adjustable thereon.

3. The lifters *h*, constructed and applied to the frame of the implement, substantially as set forth.

4. The combination of the said lifters with the innermost adjustable cultivator-teeth.

97,206.—FRANK MARQUARD, Newburyport, Mass.—*Composition Boot and Shoe Heel.*—November 23, 1869.

Claim.—1. The above-described composition, made of the materials and in the manner substantially as hereinbefore described.

2. As an improved manufacture of my invention, a heel or other article, when made of such composition, by the use of the mold and heat and pressure, as set forth.

97,207.—GEORGE MARTZ, Pottsville, Pa.—*Coal-Car and Track.*—November 23, 1869.

Claim.—1. A motive-truck, so constructed and adapted to the coal-car that its platform shall serve as a cover to the car.

2. A coal-car and motive-truck, constructed and adapted to each other, so as to automatically connect and disconnect themselves, substantially as and for the purpose specified.

3. The described arrangement of coal-car and motive-truck with each other, and with the tracks *a b*, which are constructed as described, whereby the car is propelled forward by means of the motive-truck, substantially as and for the purpose set forth.

97,208.—CHARLES MAUS, Danville, Pa.—*Car-Coupling.*—November 23, 1869.

Claim.—1. The arrangement, upon the side of the draw-head B, of the tube C, coupling-pin D, and spring *a*, in combination with drop E, all constructed and operating substantially as and for the purposes herein set forth.

2. The combination and arrangement of the draw-head B, tube C, pin D, spring *a*, drop E, guide H, block I, and spring *b*, all substantially as and for the purposes herein set forth.

97,209.—SEYMOUR MAY and JOHN HOOPER, Waterloo, N. Y.—*Cable-Slide.*—November 23, 1869.

Claim.—The arrangement of the wooden block D, forming the frictional surface of the bars, when combined with the double guide-tongues C C, on opposite sides, for steadying the same, the whole operating in the manner and for the purpose specified.

97,210.—WILLIAM MCCONNELL, Clarksville, N. J.—*Molding-Machine.*—November 23, 1869.

Claim.—The disk H, uprights J, arm K, adjustable wrist L, and bearings *o o*, in combination with the shaft or spindle D, substantially in the manner and for the purposes herein set forth.

97,211.—LEWIS MICHAELS, Cincinnati, Ohio.—*Locomotive Head-Light.*—November 23, 1869.

Claim.—As a new article of manufacture, the piece or casting A, *a ai aii aiii aiv, av, avi, avii*, for the purpose herein designated.

97,212.—JOSEPH T. MIDDLETON, Harveysburgh, Ohio, assignor to himself and M. M. Harvey, same place.—*Car-Coupling.*—November 23, 1869.

Claim.—1. The link A, having the upturned points or horns B B′ *b*, the apertures C, and stud F, all arranged as shown and described.

2. The detent I, constructed with arms J K, projecting forward, and arms L L′, projecting backward, and adapted to operate substantially as herein described.

3. The combination of the detent I, link N, crank O *o*, rock shaft P, and weighted lever Q *q* S, as described.

97,213.—HENRY MILLER, Roadside, Va., assignor to himself, S. P. H. MILLER, J. G. H. MILLER, H. H. MILLER, and J. H. KITE.—*Shovel-Plow Plate and Points.*—November 23, 1869.

Claim.—1. The mold A, having a face concave lengthwise, and plane crosswise, and having seats at its ends, substantially as and for the purpose set forth.

2. The combination of the mold A, having seats at its ends, with the removable reversible points A′ A″, substantially in manner and for purpose described.

97,214.—JAMES MONTGOMERY, New York, N. Y.—*Inhaling-Apparatus.*—November 23, 1869.

Claim.—The "portable inhaling-apparatus," composed of a box fitted at each end with covers, and with wire-gauze or perforated bottoms, and a sponge or equivalent material for holding the medical agent to be inclosed, all constructed as and for the purposes set forth.

97,215.—M. H. MOSMAN, Waterbury, Conn.—*Buffer for Inserting Coiled Wire around the Edges of Lamp-Deflectors.*—November 23, 1869.

Claim.—The buff or buffer A, when constructed substantially as described, for operation, essentially as and for the purpose or purposes herein set forth.

97,216.—CHARLES D. NEWTON, Troy, N. Y.—*Cooking-Range.*—November 23, 1869.

Claim.—The employment of the movable fender I, provided with the hooks *i* and *i*, upon the front of a cooking-stove or range, substantially as and for the purpose specified.

97,217.—MILTON V. NOBLES, Elmira, N. Y.—*Gridiron.*—November 23, 1869.

Claim.—The improved sectional gridiron herein described, provided with handles filled with mortar of gypsum, and having loop *c* and tongue *s*, substantially as specified.

97,218.—M. V. NOBLES, Elmira, N. Y.—*Device for Forming the Shed in Weaving Wire.*—November 23, 1869.

Claim.—The wire-weaving machine herein described, having, in combination with the spring-treadles *l l′*, the removable arc *d′*, with rings *c* and guard-plates *e*, and the elevating-ares D D′, provided with the rods *b b′* and rings *a a′*, all constructed and arranged to operate as specified.

97,219.—AARON B. NOTT, Fairhaven, Mass.—*Kitchen-Sink.*—November 23, 1869.

Claim.—1. The flanged pipe F, held in place and secured tightly by means of the ring D and screw-cap C, substantially as described.

2. Ring D, constructed as described, and fitted upon a lip, *i*, rising from the depression E, in combination with a perforated screw-cap and its annular rib *c′*, substantially as described.

3. The strainer B, constructed with a curtain, *b′*, so as to form a stench-trap in the depression E, substantially as described.

97,220.—NELSON ORCUTT, Syracuse, N. Y., assignor to DAVID D. GREGORY, same place.—*Manufacture of Soap.*—November 23, 1869.

Claim.—1. The improvement in soap-making herein described, consisting in uniting glue or gelatine to soap-compounds, by means of starch, treated substantially as described.

2. The new article of soap, made by the combination of alkali fats or rosin, and gelatine and starch, substantially as described.

97,221.—ELISHA S. ORMSBY, New York, N. Y.—*Machine for Printing and Embossing Paper-Hangings.*—November 23, 1869.

Claim.—1. The combination of the sizing-rollers

b c, embossing-rollers *n l*, and printing-rollers *m n n*, when the same are arranged and operate substantially as herein described.

2. In combination with the above, the bronzing-apparatus *d e f g h*, when arranged substantially as herein shown and described, between the rollers *k l*, *b c*.

3. The arrangement of the sizing-rollers *b c*, embossing-rollers *h l*, printing cylinder *m*, and rollers *n n*, and the bronzing-apparatus *d e f g h*, all operating substantially as herein described.

4. A printing and embossing machine for paper and other materials, consisting of a rotary size-printing apparatus, *c d*, a rotary embossing-apparatus, *k l*, and a rotary water-color printing-apparatus, *m n*, substantially in the manner shown and described.

97,222.—ENOCH OSGOOD, Boston, Mass.—*Machine for Hulling Rice, Coffee, &c.*—November 23, 1869.

Claim.—1. The cone or roller C, herein described, when constructed with yielding surfaces of thin metal plates, *d*, or their equivalent, set edgewise, arranged and applied as described, and resting upon or against a rubber bed, in the manner and for the purpose substantially as herein set forth.

2. The cone or roller C, herein described, when constructed with a yielding surface of rubber and cloth, or leather, set edgewise, substantially as and for the purpose herein set forth.

3. The cone or roller C, herein described, with a yielding surface of metal pins passing through a perforated metal plate, and resting upon or against a rubber bed, substantially as and for the purposes herein set forth.

4. The combination of the cone C, herein described, with the shell A, having an unyielding serrated surface, *a*, and yielding surfaces H, and brush I, constructed in the manner and for the purpose substantially as herein set forth.

5. The fan G, constructed of plates of thin sheet-metal, having slots through them, forming, when bent, mortises and corresponding tenons, and held together by a pin or arbor, substantially as herein set forth.

97,223.—ENOCH OSGOOD, Boston, Mass.—*Hoisting-Apparatus and Derrick.*—November 23, 1869.

Claim.—1. The traveling of the hoisting-gears over racks, or their equivalent, for the purpose of hoisting or driving machinery, and for other purposes, arranged substantially as and for the purposes herein set forth.

2. The shifting-apparatus to common derrick, substantially as and for the purpose herein set forth.

97,224.—JOHN H. PHILLIPS, Washington, D. C.—*Construction of Railway.*—November 23, 1869.

Claim.—The wrought-iron tie-bar *d*, in combination with the rail, and bed-block A, constructed and arranged as and for the purpose specified.

97,225.—W. E. PRALL, Washington, D. C.—*Steam Water-Elevator.*—November 23, 1869.

Claim.—The combination of a steam-generator, A, a hot-water cylinder, D, siphon-pipes E and F, and a tubular condenser, when constructed and arranged substantially as set forth.

97,226.—W. E. PRALL, Washington, D. C.—*Steam Water-Elevator.*—November 23, 1869.

Claim.—The within-described arrangement of the pipes K and L, substantially as and for the purpose specified.

97,227.—FRANZ PROCKERT, New York, N. Y.—*Lock.*—November 23, 1869.

Claim.—1. In a door-lock, in which the bolt is thrown to two different distances, a series of tumblers in combination with an adjusting-piece, J, for setting the tumblers, to allow the locking or throwing of the bolt B into its secondary or double outermost position, all substantially as and for the purposes herein set forth.

2. The tumblers M M^1 M^2 *m*, adjusting-piece J, cam-lever G, acting spring F, and knob-device D D′, combined and arranged as represented, relatively to each other, and to a bolt, B B^1 B^2, adapted to be thrown out to two different distances, according as it is allowed to move out with or without setting the tumblers, all substantially as and for the purposes herein set forth.

97,228.—HENRY REYNOLDS, New Haven, Conn., assignor to REYNOLDS AND COMPANY, same place.—*Low-Water Indicator.*—November 23, 1869; antedated November 12, 1869.

Claim.—In a low-water detector, constructed as described, the arrangement of the two cross-heads B and E, with the rods *a* and *b*, each cut with a right and left-hand thread, and the cross-heads tapped accordingly, as herein specified.

97,229.—JOHN W. RICKETTS, Charleston, Ill.—*Corn-Planter.*—November 23, 1869; antedated November 13, 1869.

Claim.—1. A corn-planter, arranged upon a frame, and supported upon driving-wheels O O when said wheels are connected to a crank-axle B, which forms the furrows by said wheels, and operates the dropping-mechanism, substantially as set forth.

2. The arrangement of the frame A, wheels O O, crank axle B, bifurcated rod K, boxes E E, slides L L, shovels N, and rollers I, the several parts being constructed to operate substantially as specified.

97,230.—CÆSAR A. RODNEY, Wilmington, Del.—*Machine for Making Wood-Screws.*—November 23, 1869.

Claim.—1. The combination of the reciprocating feed-box D, containing the mechanism for clamping the wire, and the mechanism for clamping the wire above the feed-box, by which the wire is suspended, and drawn through the feed-box when released by the latter, substantially as set forth.

2. The combination of the feed-box D, bar D^1, rod D^2, collars d^2, and perforated plate D^3, respectively, constructed substantially as and for the purpose set forth.

3. The combination of the pointed bar D^2 and plates E and E^1, arranged to operate substantially as and for the purpose set forth.

4. The wheel B^9, constructed with projections b^3 and b^4, of different altitudes, in combination with the feed-box substantially as set forth.

5. The shear F, with a perforated head *f*, in combination with the cam F^2 and the clamps for holding the end of the wire D^4 against the lower end of the wire which has been cut from the coil, and is retained in the hole f^2, substantially as set forth.

6. The shear *f*, when so constructed that the length of the hole f^2 shall be equal to the throw of the elevating-mechanism, which projects the length of wire necessary to form a headed screw-blank.

7. The wheel G, when so constructed that its hub F^2 shall form a cam for operating the shear F, substantially as described.

8. The wheel G, in combination with the mechanism for clamping the screw-blank, and with the mechanism for giving to it an intermittent motion, substantially as set forth.

9. The combination of the wheel H and stud-pin, bell crank lever G^7, rod G^6, rock-shaft G^5, clutch G^4, and pinion G^3, with the intermediate wheels for giving the intermittent motion to the wheel G, substantially as described.

10. The clutching-mechanism attached to the wheel G, consisting of the rollers G^1 and jaws G^2 G^3, by which the blank is held, while subjected to the successive operations of heading and finishing, substantially as set forth.

11. In combination with the wheel G, an upper plate K, which forms bearings for the journals of the rollers G^1, substantially as set forth.

12. The plate K and wheel G, when constructed with swells K^2, to form bearings for the journals of the rollers G^1, and when those on the wheel are arranged to sweep cuttings from the grooves in the bed-plate I, substantially as set forth.

13. In combination with the rollers G^1, a stationary jaw, G^3, and an oscillating jaw, G^2, the latter having an arm, g^5, which, by the action of a cam-plate, I^1, may be made to compress or release the screw-blank, substantially as and for the purpose set forth.

14. The jaws G^2 and G^3, when constructed with

slots, to permit the action of the cutters S^1 upon the screw-blank.

15. The rollers G^1 when beveled upon their edges, to give form to the under side of the head of the screw, substantially as set forth.

16. The blocks I^4 and Q^1, in the plates I and Q, for compressing the journals of the roller, substantially as and for the purpose set forth.

17. The shaft L, when used for supporting the blank, and having both a vertically-reciprocating and rotary motion, in combination with a device for upsetting the head, substantially as and for the purpose set forth.

18. The combination of the shaft L, the toggle-joint, with the cam b^5, in the wheel B^9, and the intermediate connecting parts, substantially as set forth.

19. The arrangement of the reciprocating shaft L, pinion L^1, and wheel L^2, upon the shaft B and toggle-joint and cross-head L^3, so as to give a continuous rotary and intermittent reciprocating motion to said shaft L, substantially as set forth.

20. The combination of the pinions M^5 and M^4, upset M, toggle-joint M^1 M^2, eccentric h^1, and spring M^3, for giving a continuous rotary and intermittent reciprocating motion to the upset M, substantially as and for the purpose set forth.

21. The combination of the shafts L and M, when each has both a rotary and reciprocating motion, and respectively constructed with indentations *l* and *m*, substantially as and for the purpose set forth.

22. The combination of the shafts L and M and rollers G^1, when the former compress the head of the blank upon the latter, and at the same time give to it a rotary motion, substantially as set forth.

23. The combination, in a screw-cutting machine, of mechanism for causing the blanks to revolve, with other mechanism for compressing the head at the same time, substantially in the manner set forth.

24. The combination of the wheel G with a projection, g^4, and the bolts N^1, oscillating frame N, cam-plate N^2, slide N^8, and pointed rod N^3, for throwing up the blank, substantially as and for the purpose set forth.

25. In combination with the oscillating frame N, slide N^8, and rod N^3, the rod N^4, for tripping the rod N^3, when the rod N^4 encounters the frame, substantially as set forth.

26. The combination of the frame N, spring N^7, and levers N^5 and N^6, for detaching the bolt N^1 from the projection g^4, and causing the frame to return to its original position, substantially as set forth.

27. The hollow revolving arbor O, containing the cutters *o* o^1, for turning off the top and edge of the head of the blank, substantially as set forth.

28. The combination of the arbor O, rod O^2, oscillating yoke O^3, grooved collar O^4, and yoke O^5, connected with the cam O^8, for bringing the revolving cutters into action upon the head of the screw-blank, substantially in the manner set forth.

29. In combination with the cam O^8, lever O^7, and yoke-plate O^5, the adjustable connecting-screw O^9, arranged substantially as and for the purpose set forth.

30. The combination of the hollow tapering-pointed arbor O, bevel-pivoted stock O^1, and cutters *o* o^1, substantially as and for the purpose set forth.

31. The arrangement of the shaft B, sliding bevel-wheel P^3, bevel-wheel P^2, mandrel P^1, saw P, and reciprocating frame P^4, substantially as and for the purpose set forth.

32. The combination of the reciprocating frame P^4, carrying the saw P, and the adjustable rod P^5, lever P^6, connecting-rod P^7, and toggle-joint M^1 M^2, substantially as and for the purpose set forth.

33. The combination of the cam R^3 and spring R^2, for giving a reciprocating motion to a screw-driver, R, which turns the screw-blank, and a corresponding cam, b^1, which simultaneously raises and lowers the blank while subjected to the action of cutters forming the thread, substantially as set forth.

34. The combination of the screw-driver R, block R^4, well Q^1, jaws r^4, and springs r^2, when respectively constructed and arranged to operate substantially as set forth.

35. The cutters S^1 and stocks S, in combination with the adjustable connecting-plates T and cam U, substantially as set forth.

36. The connecting plates T, when held in place by a button U^1, or equivalent device, and pivoted at *t*, in grooves in the wheel G and plate K, so as to permit their displacement to swing the cutters outside of the periphery of the wheel and plate, substantially as set forth.

37. In combination with the cam U, rock-shaft U^2, and arm U^3, the elevator V, and arm V^1, when the elevator is attached to the wheel, and revolves with it, substantially in the manner set forth.

38. In combination with the elevator V, the rods V^4 and V^5, and tripping-arm V^8, attached to the rock-shaft V^9, arranged to operate substantially as and for the purpose set forth.

39. The combination of the plate X, sliding-plate X^1, ratchet X^2, pawls X^3 and X^4, for giving a gradually-increasing motion to the rod W, which operates the rock-shaft, and through it, by intervening mechanism, the cutters for regulating the feed of the latter, substantially as set forth.

40. The combination of the reciprocating feed-box D, to which is attached the cam-track D^7, the oscillating plate X, and suitable intermediate mechanism for controlling the action of the cutters, according to the form of the track, substantially as set forth.

41. The well Q^4, when constructed with an opening to receive a reciprocating pan, Y, and with depressions Q^6, to permit the fall of the screw from the jaws of the driver, substantially as set forth.

42. The combination of the pan Y, pin Y^5, sliding extension Y^7, lever Y^6, rod Y^2, and reciprocating plate Y^3, operated by the cam R^3, substantially in the manner and for the purpose set forth.

43. In such a machine the combination of the following groups of elements: a feed-mechanism which feeds the wire to be cut into lengths proper to form a blank; a revolving wheel which carries the wire after being cut off, and has an intermittent motion during the pauses in which the blank is; by successive operations, submitted to the action of mechanism, by which the head is upset and trimmed, the nick in the head cut, and the thread formed, and the screw finally delivered from the machine in a completed state, substantially as set forth.

97,231.—JOHN B. ROOT, New York, N. Y.—*Reciprocating Steam-Engine.*—November 23, 1869; antedated November 12, 1869.

Claim.—1. The combination of the internally-projecting cylindrical sleeve C, operating as an interior guide to the piston E, and trunk D, with the cylinder A, and external trunk-guide B, at the opposite end of said cylinder, substantially as specified.

2. The connection of the pitman or rod F with the trunk D of the piston, by ball-and-socket joint, through a ball-formation *c*, on the end of the rod, made to fit half or partial sockets J K, arranged within the trunk, and the one of which is made loosely or freely adjustable therein, essentially as shown and described.

3. The combination with the half socket K, arranged to loosely or freely fit a screw-thread *e*, in the trunk, of the follower G, to the packing *b*, made adjustable by a nut *m*, and screw-pin or projection *n*, from said half socket as a bearing or base, substantially as specified.

4. The lower half box J, constructed and arranged as described, with an oblong slot, S, through it, for play of the pitman, essentially as herein set forth.

97,232.—JACOB RUMMEL, Jr., New Middletown, Ohio, assignor to himself and F. V. FLOOR, same place.—*Method of Renovating the Cutting-Edges of Harvester-Guards.*—November 23, 1869.

Claim.—The method, herein described, of renovating harvester-guards.

97,233.—JACOB RUPERTUS and THOMAS R. WRIGHT, Philadelphia, Pa.—*Sewing-Machine.*—November 23, 1869.

Claim.—1. A sewing-machine, in which the shuttle is caused by the mechanism herein described, or any equivalent to the same, to pass twice through the loop of needle-thread, and once through a loop of its own thread, during one complete movement of the needle, all substantially as set forth.

2. The combination of the cog-wheels *c c'*, proportioned and operating as described, with the shuttle traveling in a vertical annular race, as specified.

3. The hooked arms G and G′, acted on by suitable springs, and so arranged in the path of the shuttle, that they shall be turned and operated by the same, substantially in the manner described.

4. The plate g', having projections h h', and traveling in a circle, operating in combination with a shuttle, F, having openings i i, and traveling in an annular race, substantially as described.

5. The tubular slotted guard I, inclosing the needle-bar, and constructed and operated by the arm C and spring m, as described.

6. The spring-rod J, having a vertical and a turning motion, in combination with the lugs s and r, and the arm C, and operating as described.

7. The combination of the lugs s, arm P, and pin r', of the spring-rod J, when the whole are arranged for joint operation, substantially as herein set forth.

97,234.—Frederick J. Seymour, Wolcottville, Conn.—*Machine for Spinning Tubes of Sheet-Metal.*—November 23, 1869.

Claim.—1. The slides g h, carrying the tools m n n, and actuated simultaneously by the lever k, or its equivalent, in combination with a former, revolved and sustaining the article that is being operated upon, substantially as set forth.

2. The shape or pattern, o, and adjustable stops p and q, in combination with the aforesaid slides and tools, substantially as and for the purposes set forth.

97,235.—Canceled.

97,236.—John Shelly, Saint Louis, Mo., assignor to John J. Grimsley, same place.—*Side-Saddle Tree.*—November 23, 1869.

Claim.—As a new article of manufacture, a side-saddle tree, having the side-bars and seat made separate and then united, substantially as and for the purpose shown and specified.

97,237.—Edwin Sheppard, Philadelphia, Pa.—*Steam-Generator.*—November 23, 1869.

Claim.—The horizontal pipes or chambers a, connected by large tubes b and small tubes b', arranged substantially as described.

97,238.—William H. Shock, Baltimore, Md.—*Spring Turnbuckle for Wire Rigging.*—November 23, 1869.

Claim.—The apparatus, consisting of the tubular case A, having the screw-rod D and stirrup C, secured thereto, and provided with the bolt B, having the rubber springs or disks b fastened thereon, all constructed and arranged to operate substantially as and for the purpose set forth.

97,239.—W. S. Shoemaker, Towsontown, Md., and E. H. Shoemaker, Columbus, Ohio.—*Railroad-Spike.*—November 23, 1869.

Claim.—1. A railroad-spike, having a tapered portion, c, a rounded shoulder e, and a double-beveled entering-end, f, substantially as described.

2. The tapered sides c, parallel sides d, shoulder c, and double-beveled entering-end f, with or without the fins g, substantially as described.

3. As a new and improved article of manufacture, a railroad-spike, constructed as herein shown and described.

97,240.—William Simpson and Alfred Gardner, Ilford, England.—*Mechanism for Converting Reciprocating Motion into Rotary Motion.*—November 23, 1869.

Claim.—The double parallel tie and guide-rods D and E, embracing the circular-grooved boss I, upon the axis of the eccentric plate C, or the shaft G, as its equivalent, in combination with the parallel cross-heads A B, arranged to bear against the periphery of said eccentric C, throughout its revolution, at diametrically opposite points thereof, and with suitable piston-rods or pitmen, H, connected to said cross-heads, all substantially as herein set forth.

97,241.—H. Julius Smith, Boston, Mass.—*Electric Fuse.*—November 23, 1869.

Claim.—1. Securing the ends of the insulated wires within the shell of the fuse by a disk, substantially as described.

2. Uniting the two parallel insulated wires by a non-conducting thread, substantially as described, to allow the wires to be separated, as specified.

97,242.—A. Lewis Spear, Flint, Mich., assignor to himself, John Stephens, Jr., and Royal L. Lewis, same place.—*Railway-Car Coupling.*—November 23, 1869.

Claim.—The coupling-bolt C, made of a single piece, with its head arrow-shaped, its rear end heaviest on its under side, and provided with a neck, in combination with the frame A, having a vertical oblong flaring head, a bearing cross-piece, G, with a hinged locking cross-piece, G′, all constructed and arranged as herein described.

97,243.—James B. Speed, Louisville, Ky.—*Lime-Kiln.*—November 23, 1869.

Claim.—1. The distributer C, to be placed over the mouth of the kiln, when constructed substantially as and for the purpose specified.

2. The combination and arrangement of the kiln A, distributer C, and car B, substantially as and for the purpose set forth.

97,244.—John A. Straight, Albion, N. Y.—*Plate for Artificial Teeth.*—November 23, 1869.

Claim.—The combination of the hard base-plate A, for the roof of the mouth, and the soft elastic edge B on the rear part of the same, substantially as and for the purpose described.

97,245.—Esau D. Taylor and David Cohn, Hornellsville, N. Y.—*Clothes-Mangle.*—November 23, 1869.

Claim.—The arrangement of the crowning guide-table or base B, the angular journal-box frames C C, and a series of calender-rollers a a a', all combined to operate as and for the purposes herein set forth.

97,246.—Nathan Thompson, Brooklyn, E. D., N. Y.—*Lantern.*—November 23, 1869; antedated November 10, 1869.

Claim.—The combination, with the cage-ring D, having claws or clamps a a, of the outwardly bent-over rim B, to the base part A, with its turned down portions or depressions b b, intermediate clipping edges or inclines f f, stops c c, and suitable apertures or formations for locking the cage, by means of a spring-bolt or other fastening, substantially as specified.

97,247.—Howard Tilden, Boston, Mass.—*Gas-Machine.*—November 23, 1869.

Claim.—1. The combination of the cylinder A, the chamber D, and the gas-holder H, substantially as and for the purposes specified and set forth.

2. The combination and arrangement of the chamber D, the basin B, the tube F, and the hydrocarbon-vessel E, as and to operate as described and illustrated.

3. The telescopic gas-conduit, leading from hydrocarbon-vessel E to gas-holder H, formed by the manner of arranging and combining the pipes G and I.

97,248.—Robert Tompkins, Clarksville, Tenn.—*Animal-Trap.*—November 23, 1869.

Claim.—The cylinder A, provided with the partitions a'' and combined with the standards a a', arms b b', rib c, and stops c' b'', in connection with the box D, in the manner and for the purpose set forth.

97,249.—Elmer Townsend, Boston, and Louis Goddu, Lowell, Mass.—*Machine for Nailing Shoe-Soles with Wire.*—November 23, 1869.

Claim.—1. The combination of the mechanism for regulating the length of the nail (to be cut) to the thickness of a sole at the place where such nail is to be driven, such mechanism being the stop-slide I and the lever i, with the mechanism for feeding the nail-strip along, the mechanism for severing each nail from the strip, and the mechanism for driving such nail, so cut off, into a sole, the whole being substantially as hereinbefore specified.

2. The arrangement and combination of the slot c^2 and the spring k with the stop-slide I and the lever i, combined with a nailing-machine or mechanism, substantially as explained.

97,250. — HENRY B. VERRIE and DANIEL G WIGHTMAN, North Kingston, R. I.—*Car-Coupling.* —November 23, 1869.

Claim. — The drum A, bunter *a*, the disks D D^2, the rack P, the arm *h*, and eatches *k* k^2, in combination with the key or coupling-shaft G, and link C, all arranged and operating substantially as and for the purposes described and set forth.

97,251.—DAVID WALDHAUER, New York, N. Y. —*Harness.*—November 23, 1869.

Claim.—1. The clamps *b*, attached to the saddle, and supporting the shafts, substantially as described.

2. The sleeve C, working on the shaft, in combination with the clamps *b*, substantially as set forth.

3. The projection *f* on the sleeve, in combination with metallic traces or draught-rods, substantially as described.

4. The oblong slots in the lugs of the whiffletree, to operate in combination with the metallic traces or draught-rods substantially as set forth.

5. The shaft-band *c*, sliding through loops *l* on the body-band B, in combination with the clamps *b*, substantially as described.

6. The detaching-catch *k*, in combination with the whiffletree, the metallic traces, and sleeves C, substantially as set forth.

97,252. — BENJAMIN WALTON, Farisburgh, Ill. —*Dumping-Machine.*—November 23, 1869.

Claim.—A dumping-device, having bin A, doors B and C, levers E and K, standards F, G, and H, and spring *s*, constructed and arranged substantially as specified.

97,253. — JOHN WEEKS, Buffalo, N. Y.—*Scale-Beam.* — November 23, 1869; antedated November 9, 1869.

Claim. — 1. The combination, in a weighing-machine, of two or more scale-beams A G, when the numbers thereon form a progressive series from one to the other, so as to operate as one continued scale, substantially as and for the purpose hereinbefore set forth.

2. The saddles H H, constructed as described, when arranged with the scale-beams A F G, substantially in the manner and for the purpose hereinbefore set forth.

97,254.—DANIEL WESTLEY, Corry, Pa., assignor to himself and E. W. BUSS, same place. — *Machine for Polishing Wood.*—November 23, 1869.

Claim.—1. The reciprocating gate C, constructed and arranged to operate substantially as shown and described, and for the purpose set forth.

2. The supporting-frame E E^1 E^2, constructed substantially as shown, in combination with the carrying-frame or gate C.

97,255.—JOHN WETTSTEIN, Baltimore, Md., assignor to himself and JOHN THOMAS HENNAMAN, same place.—*Cigar-Machine.*—November 23, 1869.

Claim.—1. The combination, with the filler-strip forming and feeding-devices C D E E′ F, filler lump, severing-knife I *i*′, and mold L L′ M M′ N, of the lump-receiver B′, arranged and employed substantially as represented and described, for the purpose set forth.

2. The knife I *i*′, constructed of rotary form, and arranged to sever the filler-lumps by oblique or diagonal cuts, for the purposes set forth.

3. The combined feed-operating pinion and knife I, constructed and adapted to operate substantially as set forth.

4. The combination of the supporting-points or rollers L L′ and M M′ respectively, movable and fixed belts or lining N, lever S, and weights O, substantially as represented and described.

5. In combination with the vertical mold, composed of supporting-points or rollers L L′ and M M′, respectively, movable and fixed, and belts or lining N, weighted and operated as described, the guide-slot R serving to support the two sides of the lining independent of the supporting-points to form the bottom of the mold, as shown.

6. In combination with belt or belts N, and rollers or supporting-points L L′ M M′, the weight or weights O, applied to said belt or belts, substantially as described, for the purpose set forth.

7. In combination with the belt or belts N and rollers or supporting-points L L′ M M′, forming the mold, the regulator V V *v v*, constructed and employed substantially as represented and described, for the purposes set forth.

8. The combination, with the belt or belts N, rollers or supporting-points L L′ M M′, and sliding rod U′, for opening and closing the mold, of the lever O′, substantially as and for the purpose set forth.

9. In combination with the movable rollers or supporting-points L L′, mounted in separate pivoted frames T T′, as described, the cam U adapted to operate said frames, substantially in the manner described.

10. In combination with the mold N L L′, M M′, constructed substantially as described, the header W, provided with the bell-shaped matrix w^4, and slot w^5, substantially as and for the purpose set forth.

11. In combination with the mold N L L′ M M′, constructed substantially as described, the header W, provided with the slot w^5 and sockets w^3 w^3 for the reception of the upper rollers or supporting-points L M, as set forth.

12. The header W, and supporting-stud or pin X, combined and arranged substantially as described, and adapted to be simultaneously advanced and retracted, substantially as set forth.

13. The combination, with the header W, of the pin Y′, substantially as and for the purpose set forth.

14. In combination with the mold or rolling-apparatus, constructed substantially as described, the rounded plate Y, substantially as and for the purpose set forth.

97,256.—HENRY H. WHEELER and OLIVER H. REED, Lowell, Mass.—*Shuttle-Spindle.*— November 23, 1869.

Claim.—The actuating-pin *c*, constructed as described, with a beveled lower end, and applied to the head *b*, forward of the pivot *g*, in combination with the spring *a*, provided with the beveled end, and with the top plate *d*, in the manner and for the purpose set forth.

97,257.—A. R. WIGGS, Iuka, Miss.—*Combined Cotton and Corn Planter.*—November 23, 1869.

Claim.—1. In combination with the harrow-frame A, the heel B, plow-point C, hopper D, toothed shaft *q*, shaft *d*, (provided with teeth *m* and *f*, and opening *t*,) and concave roller *u*, constructed and arranged to operate as herein described.

2. The hopper D, when provided with the block H, in combination with the shaft *d*, having teeth *f* and opening *t*, concave roller *u*, heel B, and plow-point C, constructed and arranged to operate, in connection with the harrow-frame A, as herein described, for the purpose specified.

97,258.—JUDSON E. YAGER, Barboursville, Va. —*Curry-Comb.*—November 23, 1869.

Claim.—The curry-comb, consisting of the handle A running through the plates and blocks, the bent plates B B, serrated, and provided with sockets for the reception of the handle, the blocks C C, arm D, and screw-nut E, the whole constructed and arranged substantially as described.

97,259.—J. M. WATSON, Sharon, Mass.—*Plant-Protector.*—November 23, 1869.

Claim.—1. A plant-protector frame, composed of the hoop *a*, and bows *b* and *e*, such bows being pivoted together, and the former pivoted to the hoop, and the whole being combined and operating as explained.

2. In combination with the above, the gauze covering, or shield, and the elastic band or loop, the whole arranged and operating substantially as described.

97,260.—WILLIAM WICKERSHAM, Boston, Mass. —*Wire for Fastening Soles to Shoes, &c.*—November 23, 1869.

Claim.—As an article of manufacture, wire made round or oval in its cross-section, with a succession of indentations around it, having its prominent portions rounded, making its diameter successively larger and smaller, without angular projections, substantially in the manner and for the purpose set forth.

97,261.—Frederick Wittram, San Francisco, Cal.—*Device for Releasing Standing Rigging.*—November 23, 1869.

Claim.—The combination and arrangement of devices, as herein described, or any equivalent means, by which two or more shrouds, or other parts of standing rigging, can be simultaneously released or "let go," as specified.

97,262.—Cyrus S. Moore, Erie, Pa.—*Lubricating-Compound.*—November 23, 1869.

Claim.—1. The mode, herein described, of producing a lubricating-oil from the residuum left after refining petroleum.

2. The composition of matter, herein described, as a new article of manufacture.

97,263.—James C. Anderson, Webster, Pa.—*Sash-Balance.*—November 30, 1869.

Claim.—The combination of the conical-formed cylinder D, having within its largest end the cup G, to retain and hold the spring F, with the adjustable plate *h'*, and the shaft C, in the manner and for the purpose herein set forth.

97,264.—Lawrence Angster, Newark, N. J.—*Refrigerator for Condensing Vapors from Fermenting-Vats in Breweries.*—November 30, 1869.

Claim.—A brewers' refrigerator, provided with ice and fermentation chambers E O, condensers G K, pipes P P R, and vault S, constructed, arranged, and operating substantially as described and set forth.

97,265.—Charles W. Armstrong, Detroit, Mich., assignor to himself and Thomas H. Armstrong, same place.—*Compress.*—November 30, 1869.

Claim.—As a new article of manufacture, the compress A, divided into the chambers *b* and *c*, by means of the diaphragm B, and provided with suitable inlet and outlet openings, when constructed, arranged, and operating substantially as set forth and shown.

97,266.—Joseph Banigan, Smithfield, assignor to Woonsocket Rubber Company, Woonsocket, R. I.—*Vulcanizing-Press.*—November 30, 1869.

Claim.—1. The application of gas for heating the bed and platen of a vulcanizing-press, substantially as set forth.

2. The combination, with the bed of a vulcanizing-press, of a number of gas-jets, substantially as and for the purpose set forth.

3. The combination, with the platen of a vulcanizing-press, of a number of gas-jets, substantially as and for the purpose set forth.

97,267.—Albert R. Baxter, Peck Post-Office, Mich.—*Logging-Sled.*—November 30, 1869.

Claim.—1. In logging-sleds, the double reach F, provided with cross-bar *e*, and connecting the bolster D with the forward bend of the rear sled, when constructed, arranged, and operating as and for the purpose set forth.

2. In logging-sleds, securing the double-tree G to the sand-board E, in connection with the tongue and roll *f*, for the purposes specified.

3. The adjustable chucks H, upon the bolsters, when constructed and operating as and for the purposes described.

4. The chain *i*, link *j*, hook or pin *k*, and ring *m*, in connection with the chucks and bolsters, for the purposes set forth.

5. The construction of the runners *a*, provided with concave shoes, benches *b*, raves *c*, bolsters C D, sand-board E, reach F, roll and tongue *f*, chucks H, chains *i*, links *j*, hook or pin *k*, and ring *m*, when constructed and arranged substantially as herein set forth and described.

97,268.—William Gibson Bell, Charlestown, Mass.—*Mode of Curing Bacon, Hams, and Shoulders.*—November 30, 1869.

Claim.—As an improved article of manufacture, a ham or leg, treated by the processes of boning and curing, or boning, curing, and smoking it, substantially as hereinbefore explained.

97,269.—Harrison Berdan and John Bantly, Wayne, Mich.—*Ventilating Window-Blind.*—November 30, 1869.

Claim.—1. Providing the upper stationary section B with an interior screen, C, in the manner and for the purpose set forth.

2. In combination with the foregoing, the sliding, movable slatted blind D, arranged and operating substantially as and for the purposes specified.

97,270.—Charles Bradway, Maquoketa, Iowa.—*Fastening for Bedsteads.*—November 30, 1869.

Claim.—The construction of the metallic fastening A, with its inclined dovetail mortises between the side flanges E E, and double-tapered center aperture B, as herein described, and for the purposes set forth.

97,271.—George V. Bunker, Yankton, Dakota Territory.—*Lamp-Extinguisher.*—November 30, 1869.

Claim.—The two pieces of metal, as herein described, for the purpose of extinguishing the light of kerosene-oil lamps, or any other lamp to which it may be applied.

97,272.—Charles Canfield and Henderson Willard, Grand Rapids, Mich.—*Device for Clearing Land of Stumps.*—November 30, 1869; antedated November 18, 1869.

Claim.—The metallic cup, constructed substantially as described, and for the purpose set forth.

97,273.—John B. Catey, Williamsburgh, Ind.—*Combined Roller and Cultivator.*—November 30, 1869.

Claim.—1. In combination with the frame A, the adjustable bearing-rollers B and C, which serve to regulate the depth penetrated by the teeth, and also assist in pulverizing the soil, substantially as described.

2. In combination with the above, the draught-rods M M, link O, and standard P, substantially as described.

3. In combination with the frame A, and rollers B and C, the adjusting-blocks 1, 2, 3, and plates E, when constructed and arranged substantially in the manner and for the purpose set forth.

97,274.—Edward S. Cavnah and David Yeagley, Bourbon, Ind.—*Pump.*—November 30, 1869.

Claim.—In combination with the cylinder A, and pipe, tube, stock, or water-passage, extending upward therefrom, the openings D F in the heads of the cylinder, and the openings *g* in the plunger, when said openings are controlled by the circular valves *a d h*, operating in the manner and for the purpose described and represented.

97,275.—Lorenzo D. Cogswell, Lowell, Mass.—*Fruit-Picker.*—November 30, 1869.

Claim.—1. The movable cutters *m* and *n*, and continuous spring *w*, in combination with the receiver *a*, when operating as described and specified.

2. The arrangement and construction of the cutters *m* and *n*, continuous spring *w*, rims *b* and *c*, receiver *a*, guide *o*, and adjustable hinged joint, all when combined and operating as described and specified.

97,276.—Francis L. Daniels, Boston, Mass.—*Dust-Pan.*—November 30, 1869.

Claim.—The combination of the circular trough and the inclined curved lip, at one end thereof, with the body of the pan, substantially as and for the purposes specified.

97,277.—Major E. Davis, Rome, Ga.—*Combined Revolving Hoe and Cotton-Cultivator.*—November 30, 1869.

Claim.—The herein-described construction of the gear-wheel E F, revolving hoes G, supporting-wheels H, and shares I I', when arranged and combined with the main wheels C, frame B, and shaft D, as specified

97,278.—David L. De Golyer, Chicago, Ill.—*Wood Pavement.*—November 30, 1869.

Claim.—A pavement, composed of wooden blocks, saturated with any known material, and by any known process, for preventing rot or decay, set on end upon a proper foundation, with spaces, interstices, or cells between them, filled with self-cementing gravel, or broken stone, as above described, without the admixture of tar, or any other pitchy material, or artificial cement.

97,279.—AUGUST DIETZ, New York, N. Y., assignor to FRANK N. HOPKINS, Baltimore, Md.—*Machine for the Manufacture of Artificial Fuel, and for Compressing Conglomerate Substances into Compact Masses.*—November 30, 1869.

Claim.—1. The endless chain of bottomless molds M, jointed or connected together, and constructed and arranged so as to work over polygonal rollers R R′, with a view to thus discharge by the cogs or pistons *e e*, substantially in the manner as and for the purpose herein set forth.

2. The regulating-gate P, fitted to the hopper F, and adjusted by the screw V, or its equivalent, in combination with the agitator *a*, and the filling or charging devices *a′ a′*, all constructed and arranged substantially as set forth.

3. The presser I, constructed substantially as shown, in connection with the endless chain of molds M, constructed and arranged for joint operation, substantially as herein shown and described.

4. The endless resting or bearing band N, when used in combination with the endless chain of molds M, for the purpose specified.

5. The projections *e*, on the roller R′, when applied to an endless chain of molds M, to discharge the compressed substance therefrom, substantially as and for the purpose set forth.

6. The combination of the endless chain of molds M, presser I, and the resting or bearing band N, all arranged for joint operation, substantially as and for the purpose specified.

97,280.—EVERD C. DODGE, Edgecomb, Me.—*Boring-Machine.*—November 30, 1869; antedated November 13, 1869.

Claim.—1. The combination of the pivoted fingers D D, the bars E, having the inclines *b* and the tubes A, also provided with inclines *b*, substantially as described, for the purpose specified.

2. The adjustable tool-holding carriage I, and adjustable frame B C, in combination with the tubes A, having the pivoted fingers D and bars E, substantially as described, for the purpose specified.

3. The tool-holder H, in combination with the toothed bar K, having the wedge-shaped bridges , formed between some of its teeth, and with the sliding clutch-pinion *g*, substantially as described for the purpose specified.

97,281.—JOHN R. DREW, San Francisco, Cal.—*Pitch-Board.*—November 30, 1869.

Claim.—The above-described pitch-board, for stairs, formed of the two parts A and B, connected by slides C, when said parts are respectively provided with extension-pieces E E and F F, and the whole device is constructed and arranged to operate substantially as set forth.

97,282.—F. R. DUFOUR, Vevay, Ind.—*Hay-Elevator.*—November 30, 1869.

Claim.—The arrangement, in combination with the horse-power B C D, of the hoisting-rope *b*, hook *c*, pulleys *d e f*, and crank E, having pulleys *g* and *h*, substantially as shown and described.

97,283.—CLEAVELAND F. DUNDERDALE, New York, N. Y.—*Apparatus for Carbureting Air.*—November 30, 1869.

Claim.—1. The tube herein described and shown, attached to the lower side of chamber C, so constructed and arranged that its lower open end shall extend downward below the flame of the burner, substantially as and for the purpose specified.

2. In combination with an air-carbureter, constructed as described, the corrugated lens-chimney I, constructed and arranged substantially as described.

97,284.—CLEAVELAND F. DUNDERDALE, New York, N. Y.—*Apparatus for Producing Illuminating-Gas.*—November 30, 1869.

Claim.—1. The combination of a blowing-wheel, wet gas-meter, or a similar device for forcing air and carbureting it at the same time, with a reservoir attached to supply a given quantity automatically of hydrocarbon-liquid, as herein described and shown.

2. The combination of reservoir C, valves E, floats H, mixer L, valve M, compartment F, holes G, sifter I, strata of hydrocarbon-liquid floating on surface of water, with each other, and with a wet gas-meter or air-blowing wheel of similar device, substantially as herein shown and described, and for the purposes set forth.

97,285.—H. F. EBERTS and JOHN FANNING, Detroit, Mich.; said EBERTS assigns his right to said FANNING.—*Gas-Machine for Carbureting Air.*—November 30, 1869.

Claim.—1. The combination of the carbureting-chamber A, provided with the shelves C and with the opening *a*, the blower D, the spur-wheel E, the blast-pipe *d*, the eduction-pipe B, provided with an air-cock, the gasometer F, provided with the main *f*, the standard *j*, the pulleys *i*, the cord *h*, and the weight *g*, when constructed, arranged, and operating as and for the purposes above set forth.

2. In carbureting-chambers, providing the eduction-pipe with an air-cock, through which atmospheric air may be drawn by raising the gasometer, for the purpose of increasing the illuminating power of the gas.

97,286.—JACOB EDSON, Boston, Mass.—*Boot-Crimper Screw.*—November 30, 1869.

Claim.—The combination of the screw *a*, nut *b*, crimpers *c*, having a number of square cavities on their outside, with the points *k k*, inside the India-rubber springs *e e*, all combined and acting together with the house *d*, as fully set forth and described.

97,287.—JOSEPH ENTHOFFER, Washington, D. C.—*Plate-Printing for Colors.*—November 30, 1869.

Claim.—1. The mode of printing chromos from engraved plates, by the use of gauges on the register A, substantially as set forth.

2. In combination with the above, the mode of holding the margin of the paper during the process of changing the plates.

97,288.—SAMUEL FREET, Upper Strasburgh, Pa.—*Gate.*—November 30, 1869.

Claim.—The movable brace A, mortised rail C, and latch-rails E E, constructed, arranged, and combined as shown and described.

97,289.—PETER GANTZ, Albany, N. Y., assignor to himself and MARTIN FRYER, same place.—*Bracket for Conductors.*—November 30, 1869.

Claim.—1. In a bracket for conductor-pipes, the clasping-arms *a a*, pivoted to the spike A, substantially as and for the purpose set forth.

2. The binding-piece *g*, provided with the hole *c′*, and secured in the manner substantially as and for the purpose set forth.

3. In combination with the heels of the clasping-arms *a a*, the wedging-key *f*, holes *c* and *c′*, substantially as and for the purpose set forth.

97,290.—JOHN H. GARRIGAN, Sacramento, Cal., and FRANCIS L. HALL, Reno, Nevada.—*Faucet-Attachment to Cans.*—November 30, 1869.

Claim.—In combination with a faucet-pipe or other tube, the combination of the hollow screw B, the oval head C having an oval projection, D, and the oval, hollowed-out, or concave flange or cap G, substantially as and for the purpose set forth.

97,291.—R. D. GRANGER, Providence, R. I.—*Cooking-Range.*—November 30, 1869.

Claim.—1. The magazine, in combination with elevated ovens, substantially as set forth.

2. The location of the magazine between the flues to the elevated ovens.

3. The construction of the front fire-box with the grate *a*, for removing the cinders, ashes, &c., in combination with a magazine, as herein recited.

4. In a range of the general construction herein shown, the arrangement herein set forth of the horizontal-sliding plate or grate, between the fuel, below

the bottom of the magazine or fuel-reservoir, and the fuel in the dumping-grate, as and for the purposes recited.

5. The air-pipes *n*, and their location and application, substantially as described.

6. The arrangement of the magazine in relation to the ovens herein described, by which the top of the magazine projects beyond the oven-front or line of the ovens, for the purposes herein set forth.

97,292.—William Hall and Emanuel J. Bennett, Boston, Mass.—*Machine for Forming Cigars and Plug-Tobacco.*—November 30, 1869.

Claim.—1. Combining, with the plunger D^6, the hinge-piece *d*, and the flexible apron *d'*, working substantially as described, and for the purpose set orth.

2. The combination of the plungers C^1 C^2, the valve C^3, and bent arm C^4, operating substantially as described, and for the purpose set forth.

3. The valve Q, operating substantially as described, and for the purpose set forth.

4. The combination of the automatic mold O O^1 O^2, &c., with the endless chain or belt N^5, working substantially as described, and for the purpose set forth.

97,293.—L. B. Harberger, Philadelphia, Pa.—*Fruit-Jar.*—November 30, 1869.

Claim.—The locking-piece, constructed with ears *g g*, and the central bearing-projection *h*, in connection with the cover B and the inclined grooves *a*, in the inner face of the mouth or neck of a jar, substantially as and for the purpose described.

97,294.—E. K. Haynes, Boston, Mass.—*Lamp-Shade.*—November 30, 1869.

Claim.—A lamp-shade and reflector, made in the form and manner described, for the purpose specified.

97,295.—Charles Birmingham Hogg, Boston, Mass.—*Pad or Housing for Harness-Saddles.*—November 30, 1869.

Claim.—The arrangement and combination of the spring *c* with the pad A and its loops B, the whole being substantially as described.

97,296.—Marcus L. Horton, Windsor, Vt.—*Boiler or other Furnace.*—November 30, 1869.

Claim.—1. The combination and arrangement of the channeled partition B, the chamber C, the receiving-conduit or space F, the two hollow grates D D, and the chamber or space G surrounding them, and opening into the central chamber C, as set forth, the whole being constructed substantially as explained.

2. The tubular grate-bars, with the male and female branches extending from them, constructed and arranged as specified.

97,297.—Stephen Inman, Rockford, Ill.—*Brick-Mold.*—November 30, 1869.

Claim.—1. The combination of the longitudinal turning-rods B with the transverse rods *b b*, when operated as described, for the purpose set forth.

2. The combination of the mold A, followers *a a a*, rods *b b* B B, and handles b^2, in the manner described, for the purpose set forth.

3. The follower described, consisting of the face D, with vibrating pins *d'*, in combination with the slotted backing E, as described, for the purpose set forth.

97,298.—Melvin Jincks, Wallace, N. Y.—*Lamp-Burner.*—November 30, 1869.

Claim.—1. A lamp-burner, having an additional tube alongside of the wick-tube, when said additional tube is provided with an automatic cleaner, substantially for the purposes herein set forth.

2. The forked lever *f*, pivoted within the tube *b*, and operated by means of the worm *i*, substantially as and for the purposes herein set forth.

3. The combination of the wick-tube *a*, additional tube *b*, shaft *e*, pinions *d d*, worm *i*, and forked lever *f*, all substantially as and for the purposes herein set forth.

4. So constructing and arranging the wick-raiser, consisting of twisted wheel or worm *i*, shaft *e*, and pinions *d d*, that the wick will move from side to side, as it is turned up or down, substantially as described.

5. The combination of the perforated base A with wick-tube *a*, additional tube *b*, and the wick-raising and cleaning mechanism, as herein described, tube *g*, and cone B, all constructed and operating substantially in the manner and for the purposes herein set forth.

6. The combination of the perforated base A with wick-tube *a*, additional tube *b*, and the wick-raising and cleaning mechanism, as herein described, tube *g*, cone B, and a suitable number of spring-catches C C, all constructed and operating substantially in the manner and for the purposes herein set forth.

97,299.—Joseph G. Knapp, Madison, Wis.—*Steam-Plow.*—November 30, 1869.

Claim.—1. A machine for plowing or cultivating the soil, having its mechanism so arranged as to propel the machine, and operate the plows alternately, at intervals, substantially as described.

2. The combination of the toggle-joint R R' with the sliding gate E and crank *r*, when said parts are arranged to operate in connection with the frame A of a machine mounted on wheels, substantially as set forth.

3. Arranging a plow, N, in connection with an intermittently forward-moving machine, in such a manner that said plow shall move to and fro in the arc of a circle, horizontally, substantially as described.

4. The combination of the mechanism, consisting of the shaft *a*, wheel F, shaft *n*, mounted in the sleeve *t*, and carrying the wheels G and H, and the wheel J, with its partial row of teeth and the guards *b*, all arranged as set forth, for operating the plows.

97,300.—Leander W. Langdon, Northampton, Mass.—*Applying Steam-Power to Street-Railway Cars.*—November 30, 1869.

Claim.—1. A street-railway steam passenger-car, having a boiler at each end, arranged to balance the car, and operating in connection or independently, as set forth.

2. In a street-railway steam passenger-car, having the described arrangement of boilers, the arrangement of the propelling-engine beneath the car and between the pairs of wheels, as and for the purpose set forth.

3. A street-railway steam passenger-car, provided with condensers F F, one or both, arranged upon or within the roof, and in combination with water-tanks E, arranged beneath the seats, and with proper pipe-connections between them, as and for the purposes set forth.

4. In a street-railway steam passenger-car, having the described arrangement of boilers and engines, the double reversing-apparatus, with the reverse-lever, or equivalent device, arranged at each end of the car, as set forth.

5. In like combination, the throttle-valves, and their operating-connections arranged at each end of the car, as set forth.

6. In the described steam street-car, the independent pump, arranged to operate as set forth.

7. The pipe *f'*, connecting the condenser F with the smoke-stack, as set forth.

97,301.—Cook C. Lawrence and James Lewis, Marengo, Mich.—*Rest for Carriage-Tops.*—November 30, 1869.

Claim.—The arm-rests D, furnished with concave seats *d*, and flaring side *l*, when constructed and arranged substantially as shown and described, and adjustably fitted on the prop-irons B of a shifting or stationary carriage-seat rail, substantially as and for the purpose set forth.

97,302.—C. Leffingwell, Zanesville, Ohio, assignor to himself, H. Blandy, and F. Blandy, same place.—*Head-Block for Saw-Mills.*—November 30, 1869.

Claim.—The arrangement of the levers I I K, double-faced ratchet-wheels H, and pawls J, in the manner shown and described, and for the purpose specified.

97,303.—HIRAM L. LOCKWOOD, Denmark, Iowa.—*Railway-Car Coupling.*—November 30, 1869.

Claim.—The coupling-pin B, notched as shown at B′, in combination with the slide A, constructed as described, for the purposes set forth.

97,304.—MOSES LOEB, Chicago, Ill.—*Curtain-Fixture.*—November 30, 1869.

Claim.—1. The plate E, arranged on the outer end of the bracket E′, so as to project at right angles on either side, as herein described, and for the purpose set forth.

2. The curtain-fixture, provided with bracket E and its plate L, cord F, adjustable bar H, with its roller I and socket M, in combination with grooved pulley G, roller D, constructed and arranged as shown and described.

97,305.—WILLIAM B. MACK, Detroit, Mich.—*Steam-Generator.*—November 30, 1869; antedated November 11, 1869.

Claim.—The circulator-attachment above described, the inner space of which is divided into communicating compartments by the divisional bars or stays, for the purpose of causing the water to circulate backward and forward, in its passage from the inlet-pipe or pipes to the delivery-pipe, substantially as shown.

97,306.—DAVID MANUEL, Dedham, Mass.—*Foundation for Spring-Bed Bottoms.*—November 30, 1869.

Claim.—The combination of rails B B B with the springs D D D′ D′, braces E E E E, and the spiral springs and bed-frame A A, in the manner and for the purpose as described.

97,307.—STEPHEN MARTIN, Detroit, Mich.—*Fire-Place.*—November 30, 1869.

Claim.—The chambers B, lined with tin, provided with cold-air pipe D and hot-air conductors E, in combination with grate-recess C, provided with corrugated cast-metal back H and sides F, provided with ears G, when constructed and arranged to operate as and for the purpose set forth.

97,308.—BERNARD MCENALLY and EDWARD FARRELL, Detroit, Mich.—*Tool for Molding Dovetails.*—November 30, 1869; antedated November 13, 1869.

Claim.—The arrangement of the lugs B, the arms C and D, the cross-bars E, the cross-heads F, the thumb-levers G, the bifurcated arm H, the set-screws I, and the springs J, in connection with the frame A, when constructed and operating as and for the purpose above described.

97,309.—T. M. MITCHELL, Philadelphia, Pa.—*Press for Compacting the Waste Particles of Coal into Blocks for Fuel.*—November 30, 1869.

Claim.—The combination of the overhead lever N, the yoked arm L, the eccentric *e′*, and the main shaft E, the said parts being constructed and arranged to operate together, substantially as set forth and described, for the purpose of raising and lowering the gates M M, in the manner described.

97,310.—SAMUEL NEWMAN, Cleveland, Ohio, assignor to himself and JOHN NEWMAN.—*Stave-Machine.*—November 30, 1869.

Claim.—A stave-sawing machine, having alternating segmental saws C C′, frame H, dogs J, sliding tables I I′, and frame A, all the parts being constructed and arranged in the manner substantially as described, and for the purpose set forth.

97,311.—J. H. PATTEE, Monmouth, Ill.—*Vapor-Burner.*—November 30, 1869; antedated November 20, 1869.

Claim.—1. The combination of the vaporizing-chamber A with the pipe C, when the chamber A surrounds the pipe C, in a manner to bring the oil from the reservoir in direct contact with the pipe C, as and for the purpose set forth.

2. The hollow pipe H, combined with and operating between the pipes C and Y, for the purpose of regulating the admission of the air into the pipe C, as and for the purpose set forth.

3. The globe J, with flange L and jets S S S, combined with the pipe C, substantially as described and for the purpose set forth.

97,312.—W. P. POWERS, North La Crosse, Wis.—*Metal Belting.*—November 30, 1869; antedated November 24, 1869.

Claim.—1. Constructing a metal belt by twisting the ends of each link around the base of each succeeding link, substantially as described.

2. The Z-shaped wires *a*, twisted around the centers of each base of the links, substantially in the manner and for the purpose described.

3. The wires *c c*, twisted as described, in combination with Z-shaped wires *a*, substantially in the manner and for the purpose described.

97,313.—TURNER C. PURINGTON, Lincoln, Cal.—*Grape-Crusher and Stem-Separator.*—November 30, 1869.

Claim.—The beater T, lever D, pivoted toothed segments A, and B B B, when constructed, arranged, and operating together as and for the purpose herein set forth.

97,314.—TURNER C. PURINGTON, Lincoln, assignor to himself and ANTOINE MAYOUX, Marysville, Cal.—*Chair-Spring.*—November 30, 1869.

Claim.—In combination with the spiral spring, the nut A, provided with an inner screw-thread B, outer incline-groove D, and shoulder C, substantially as and for the purpose set forth.

97,315.—P. H. RANDOLPH, Leavenworth City, Kansas.—*Baby-Walker.*—November 30, 1869; antedated November 13, 1869.

Claim.—The padded seat E, in combination with the adjustable straps F and annular rod B, arranged and hung as described, for the purpose specified.

97,316.—ANDREW ROGERS, Worcester, Mass.—*Snow-Guard for Roofs.*—November 30, 1869.

Claim.—The standard A, formed, as described, of twisted bar, adapted to the slating and boards of the roof, and fitted with bars B B B, all as described.

97,317.—J. S. ROWELL, Beaver Dam, Wis.—*Seeder.*—November 30, 1869.

Claim.—The sliding shell-cylinder C, constructed with radial slots, and arranged upon the feed-cylinder F and shaft B, so that the adjustment is effected by the horizontal movement of the shell C, while the feed-wheel F remains stationary as regards the case H. M.

97,318.—ALFRED G. SAFFORD, Saint Albans, Vt.—*Telegraph-Insulator.*—November 30, 1869; antedated November 17, 1869.

Claim.—1. Extended covering-caps B, in combination with the insulators of air-line telegraphs, when said caps are so formed and secured as to cover and fully inclose the insulators independently thereof, substantially as and for the purpose herein set forth.

2. A line-supporting hook, A, combined with and dependent from a barrel-insulator, substantially as and for the purpose herein set forth.

97,319.—ALEXANDER SHAW, Monmouth, Ill.—*Cultivator.*—November 30, 1869; antedated November 22, 1869.

Claim.—The cutter C, with series of holes *c c c*, for regulating the depth, when combined with the mold-boards A, point B, handles L, bow J, and the plate D, substantially as described, and for the purpose set forth.

97,320.—FRANKLIN SIMMONS, New Orleans, La., assignor to H. DUDLEY COLEMAN, same place.—*Machine for Dressing Millstones.*—November 30, 1869.

Claim.—1. The shaft B, when provided with the hollow arm L, the bar M, the brackets or clamps N N′, and the other necessary appliances connected with it, as herein described, in combination with the shafts K and V, when the latter are provided with gears J X Y W, the platform O, block P, axles *e e′ e″ e‴*, and wheels *d*, when all the parts are constructed, arranged, and operate substantially as herein specified, for the purpose set forth.

2. The above combination, in combination with the frame R, the wheels S, and the curved rails T T′, substantially as herein described, for the purpose set forth.

3. The last above-mentioned combination, in combination with a frame, A, and any suitable motor for operating the machine, as herein described.

97,321.—D. N. Smith, Boston, Mass.—*Stove Stand.*—November 30, 1869; antedated November 27, 1869.

Claim.—The griddle E, with rod B, and platform C D, and foot A, for the purpose as specified.

97,322.—Stephen J. Smith, Farmington, N. Y.—*Hay-Rack for Wagons.*—November 30, 1869.

Claim.—The within-described hay-rack, consisting of the parts a a^1 a^2, bars b b b, and side-boards B B, in combination with the body A, when said body and rack are secured together by means of loops c c and staples i i, all arranged as and for the purpose set forth.

97,323.—W. Smith, San Francisco, Cal.—*Water-Closet Pan.*—November 30, 1869.

Claim.—1. A water-closet receiver, having the inward and outward projecting flange A, in combination with the pan C, in the manner described.

2. The lapped joint F F, constructed so that the pan can be taken out and replaced through the opening in said joint, substantially as described.

3. The pan C, secured to the shaft D, with the screws i i, socket e, and arm g, as and for the purpose set forth.

97,324.—Robert Spear, New Haven, Conn.—*Governor.*—November 30, 1869.

Claim.—1. The case A, constructed as described, so as to form the chamber B, having inlet C and outlet D, the cylinder E, and chamber G, substantially as and for the purposes herein set forth.

2. In combination with the case A, constructed as described, the cover H and cap I, forming the chamber W, substantially as and for the purposes herein set forth.

3. In combination with the case A, cover H, and cap I, the piston-rod J, piston K, and valve L, all constructed as described, and arranged to operate substantially in the manner and for the purposes herein set forth.

4. The arrangement of the semicircular guide-bars P P, piston-rod J, beam M, connecting-bars N N, levers O O, and weights R R, all substantially as and for the purposes herein set forth.

5. The elastic cover a, secured to the piston-rod J by the thumb-screw b, or other suitable means, and operating substantially as and for the purposes herein set forth.

6. The arrangement of the pipes S and T, whereby the steam or fluid is conducted from the boiler or power-source to the chambers G and W, substantially as and for the purposes herein set forth.

7. The entrance to the chamber B, formed in the shape of an inverted cone, in combination with the valve L, operating substantially as and for the purpose described.

97,325.—Alfred Stevens, Georgetown, assignor to Josiah Starling, Manheigan, Me.—*Machine for Puttying Seams of Vessels.*—November 30, 1869.

Claim.—1. The part G, which carries the scraper, finishing-smoother, and refuse-box, when connected to the main part A by means of pivoted links, substantially as herein described and shown, for the purpose specified.

2. In a seam-puttying machine, the spring attached to the lever F, and pressing on the block G, substantially as described, for the purpose set forth.

3. The seam-puttying machine herein described, composed of the part A, with rounded ends, and a receiving-cavity of the form described, the gauge, adjustable tires, followers E E, with levers F, and springs, the presser D, part G, with refuse-box, scraper, and finishing-smoother, and the pivoted links i, and spring k, all combined and arranged to operate substantially as herein shown and described.

97,326.—L. A. Sunderland, Madison, Ohio.—*Can-Handle.*—November 30, 1869.

Claim.—The round shank B, having the lugs c d, plate A, the handle C, constructed and arranged as described, and for the purpose set forth.

97,327.—Enoch B. Turner, Providence, R. I.—*Horseshoe-Blank.*—November 30, 1869; antedated November 13, 1869.

Claim.—A projecting rib or notch, placed on the inner edge of the creased surface of the blank, to mark its middle, and to indicate the point at which it is to be bent, substantially as described.

97,328.—Harmon Vanbuskirk, Vienna, Mich.—*Carpenters' Plow.*—November 30, 1869; antedated November 24, 1869.

Claim.—The right and left-hand screw D, when used in the construction of carpenters' plow-planes, as herein described, in combination with stock A and guide B, all operating substantially as herein set forth.

97,329.—Zadock Washburn, Hopedale, assignor to Hopedale Furnace Company, Milford, Mass.—*Railway-Car Wheel.*—November 30, 1869.

Claim.—The improved manufacture, as described, consisting of a cast-iron wheel or body thereof, and a rolled or hammered cast-steel tire or re-enforce combined or welded together by the process of heating the re-enforce, and applying to it a welding-composition, and subsequently raising it to a welding-temperature, and finally casting against its inner surface the cast-iron body, as specified.

97,330.—Orin Weeman, Lynn, Mass.—*Channel-Opener for Boot and Shoe Sewing-Machines.*—November 30, 1869.

Claim.—1. The spring-arm B, attached to the presser-foot of a sewing-machine, as shown, and having shoulder or point c, and share or mold-piece d H, substantially as herein set forth.

2. A channel-opener, formed by the combination of spring-arm B, shoulder or point c, share or mold-piece d H, substantially as set forth.

3. The combination of the above-described channel-opener and the presser-foot A, substantially as set forth.

97,331.—Philo S. White, Providence, R. I.—*Fastening for Neck-Ties.*—November 30, 1869; antedated November 24, 1869.

Claim.—The improved neck-tie fastening herein described, consisting of the wire yoke C, in combination with the perforated plates A and B, all constructed and arranged substantially as shown, for he purpose specified.

97,332.—Mahlon J. Woodruff, New Britain, Conn., assignor to Russell and Erwin Manufacturing Company, same place.—*Latch.*—November 30, 1869.

Claim.—The combination of a swivel-jointed spindle, whose two portions, A and B, are of unequal size, with a divided hub, C D, cast separately from the spindle, when such spindle and hub are arranged in the lock, so that the former cannot be pushed through the latter from the outside of the door to which such lock is applied, substantially as herein described.

97,333.—E. H. Woodward, New York, N. Y.—*Tile or Slab for Flooring and Wainscoting, and for the Manufacture of Furniture.*—November 30, 1869.

Claim.—A slab or tile, formed of sheets of material, laid together as specified, and cut off so as to present the ends of the layers at the surface of such tile or slab, as specified.

97,334.—William L. Yantis, Brownsville, Mo.—*Railway-Switch.*—November 30, 1869.

Claim.—The block C C′, constructed substantially as described, in combination with the rod D and the rails of the main and switch track, all arranged and operating substantially as and for the purpose specified.

97,335. — W. N. ABBOTT, Boston, Mass., assignor to himself, G. W. BOYLE, and F. N. TERRENT, Baltimore, Md. — *Lubricating Compound.*— November 30, 1869.

Claim.—A lubricant for machinery, composed of the ingredients, in the proportions and manner substantially as herein described.

97,336. — JOSEPH ALBERT, Munich, Bavaria.— *Printing Photographs.*—November 30, 1869.

Claim.—1. The process of preparing photographic plates, for printing with fatty inks, by subjecting a film of chrome-gelatine, or other suitable material, spread upon glass, or other transparent substance, to the action of the light upon the surface in contact therewith, while protecting the outer surface from such action, and subsequently applying thereto a second or sensitive film, to receive the photographing image, substantially as herein set forth.

2. The employment of glass plates, for the printing of photographic pictures in fatty inks, when prepared by the process herein described.

97,337. — C. C. ANSLEY, Americus, Ga.—*Plow.* —November 30, 1869.

Claim. — 1. The hinge E F, constructed as described, in combination with the standard C and beam A, substantially as herein shown and described, and for the purpose set forth.

2. The brace-rod G, having a screw-thread cut upon each end, and adjustably secured to the beam A and standard C, by the nuts g^1 g^2 g^3 g^4, substantially as herein shown and described, and for the purpose set forth.

3. An improved plow, formed by the combination of the beam A, standard C, hinge E F, brace-rod and nuts G g^1 g^2 g^3 g^4, and handles H I J, with each other, substantially as herein shown and described, and for the purpose set forth.

97,338. — B. W. ARNOLD, Des Moines, Iowa.— *School-Desk and Seat.*—November 30, 1869.

Claim. — 1. A hinged seat, B, having recess H therein, in combination with a bracket, having pivot-pin E, forming a part thereof, both being constructed and operating together as described.

2. The part D of the desk, jointed to the end-frames, so as to slide in the direction of the axis of the joints, arranged to clutch with the end-frames, and provided with the spring M, and either with the lever N, or not, substantially as specified.

97,339. — L. AUGUSTUS ASPINWALL, Albany, N. Y. — *Machine for Planting Potatoes.* — November 30, 1869.

Claim. — 1. A spear or spears, provided with trips.

2. Operating the trips, substantially as described.

3. The V-shaped concave C, constructed and used in the manner described.

4. Swinging the plow and coverers from the main frame, substantially as described and for the purpose set forth.

97,340.—SYLVESTER M. BAILEY, Cottage Grove, Minn.— *Velocipede.*—November 30, 1869.

Claim.—1. The pivoted sail and sun-protector G, arranged on a velocipede, substantially as and for the purpose herein shown and described.

2. The arrangement of the crank-axle J, and steering-post, in the manner described, to admit of their use for steering or propelling purposes.

97,341. — JOSEPH BARKER, Chicago, Ill., assignor to himself, A. L. BROWN, and T. H. BROWN, same place.—*Middlings Separator.* — November 30, 1869; antedated November 17, 1869.

Claim.—1. The combination of the case K, provided with a partition, L, and fan M N, with the partition *d*, pipes E G E′ F F′, and case B, provided with sieves 1, 2, 3, 4, 5, &c., as set forth.

2. The discharge-pipe T U V, provided with a perforated covering *b*, back-board X, and sieve W, in combination with the case K and fan M N, as described.

97,342. — ELISHA TRASK BARLOW, San Francisco, Cal.—*Anchor.*—November 30, 1869.

Claim.—1. The shanks C C, secured together at one end by the crown-pieces B, and at the opposite end by the metal plates D, substantially as and for the purpose herein described.

2. In combination with the flukes A of an anchor, the crown-pieces B, attached to the oppositely-moving shanks C, substantially as and for the purpose herein described.

3. Constructing an anchor with the two shanks C C, which, by their opposite longitudinal movement, shall move the flukes to the proper position for taking hold of the ground, substantially as herein set forth.

97,343.—G. T. BEAUREGARD, New Orleans, La. —*Machinery for Propelling Cars.*—November 30, 1869.

Claim.—1. The combination, with a car or other vehicle, or a boat or other vessel, and a constantly moving cord A, suspended above or at the side of the car or vessel to be propelled, of the reciprocating block E′, clamping-jaws E, right and left-threaded screw-piston H, and spring K, substantially as specified.

2. The combination of the cord A and clamping-jaws of the elevating-roller, cranked shaft P, and operating-cord R, substantially as specified.

3. The combination, with the clamping-jaws E and operating-screw L, of the pulleys M and operating-cord, arranged substantially as specified.

4. The arrangements of the suspending-brackets C and the brackets G, for carrying the clutch above the cord, substantially as specified.

97,344. — MAX E. BEROLZHEIMER, New York, N. Y.—*Canceling-Punch.*—November 30, 1869.

Claim. — A series of adjustable punches, constructed and operating together, as and for the purpose described.

97,345. — BENJAMIN BISSELL, New London, N. Y.—*Liniment for the Treatment of Neuralgia, Rheumatism, &c.*—November 30, 1869.

Claim.—The manufacture of a compound, which I denominate "Magnetic Balm," of the ingredients, in the proportions and for the purposes set forth as above.

97,346. — EDOUARD BOURQUIN, New York, N. Y.—*Stem-Winding Watch.*—November 30, 1869.

Claim.—1. The disk *m* on the arbor G, and the pin *n*, on said disk, in combination with the notched curved plate *o′*, which carries the thicker portion *o*, and moves eccentric to the arbor, substantially as herein shown and described, so that the winding-action will be arrested by the edge of the disk *m*, substantially as herein shown and described.

2. The V-shaped spring I, arranged to lock the escapement-regulator, and also the hair spring stud *p*, substantially as herein shown and described.

97,347. — ROBERT BOYD and JAMES C. HART, Rochester, N. Y.—*Hot-Air Furnace.*—November 30, 1869.

Claim.—1. A draught-opening and flue N, arranged over the entrance-way to the ash-pit of the furnace, and communicating with flues G′ G′ formed on either side of said entrance-way, in combination with an air-space, H, extending under the bottom of the ash-pit, and a flue-chamber, G, completely surrounding the same, and from whence the heated draught is discharged under the grate-bars of the furnace, all substantially in the manner herein set forth.

2. The side draught-openings M M, communicating directly with said side-flues, G′, and combined with the said lower air-space H, and encircling chamber G, substantially as herein described.

3. The chamber G, completely inclosing the sides of the ash-pit A, when combined with the air-space H below, and provided with a series of suitable inlet-apertures, W W, below, and discharge-vents above, substantially as herein described.

4. The graduated damper having the edges of one or more of the plates, (either stationary or movable,) controlling the admission of air, serrated, substantially as herein described.

97,348.—E. K. Breckinridge, West Meriden Conn.—*Window-Button.*—November 30, 1869.

Claim.—The projection *a* on the keeper-plate C, combined with the corresponding recess *d* in the lever-plate, constructed and arranged so as to operate substantially as described.

97,349.—Catherine Bruner, Marshall. Mo.—*Preserving Eggs and other Articles.*—November 30, 1869.

Claim.—For preserving eggs, when prepared as above described, and preserving other articles from frost in freezing weather, the use of flax-seed, substantially as described.

97,350.—John C. Bryant and Andrew W. Turner, Gardner, Mass.—*Machine for Turning Wooden Ware.*—November 30, 1869.

Claim.—In combination with the foundation A, the slides C C′, bearing the cutters B, the guide *m*, and the levers E and I, arranged and operating substantially as described, for the purposes set forth.

97,351.—O. C. Burdict, Providence, R. I.—*Bolt-Heading Machine.*—November 30, 1869.

Claim.—The combination of the upsetting-die M, with the swaging-dies *f f* and *f′ f′*, when the said die M is arranged so as to pass between the swaging-dies, so as to upset the head, in the manner substantially as set forth.

97,352.—P. Burns, Indiana, Pa.—*Plow.*—November 30, 1869.

Claim.—The construction of the mold-boards, land-sides, and points or shoulders of cast-metal plows in three separate sections, as herein described, for connecting together, by bolts and nuts, when the mold-board is provided with the notch H and V-groove L, and the point or spreader, with the projections fitting therein, all substantially as specified.

97,353.—A. S. Cameron, New York, N. Y.—*Sectional Steam-Generator.*—November 30, 1869.

Claim.—1. The arrangement of flat surfaces on the heads A, bearing against soft-metal rings placed into grooves in the adjoining surfaces, so as to allow said heads to accommodate themselves to the expansion and contraction of the tubes, without rendering the joints leaky, substantially as described.

2. The rims *c*, on the heads A′, in combination with the soft-metal rings interposed between two adjoining-heads, substantially as set forth.

97,354.—A. S. Cameron, New York, N. Y.—*Lubricator.*—November 30, 1869.

Claim.—1. The reservoir B, cast solid with the valve-chest A, or with a part thereof, and provided with a closely-fitting cover or plug, *b*, and with an aperture, *d*, leading into the valve-chest, substantially as described.

2. The mud-box *c*, forming a part of the reservoir B, cast solid with the valve-chest A, or a portion thereof, substantially as set forth.

3. The stop-valve *e*, in combination with the reservoir B, cast solid with the steam-chest A, or a part thereof, substantially as described.

97,355.—Joel T. Case, Barkhamstead, Conn.—*Water-Wheel.*—November 30, 1869.

Claim.—1. The bonnet gate-ring *c*, constructed as described, arranged over corresponding openings a^1, upon a cone-shaped cover *a′*, for admitting, cutting off, or regulating the flow of water, substantially as set forth.

2. The combination of the screw *m*, angle-lever *h*, connection *j*, with the ring *c*, substantially as and for the purpose set forth.

3. The combination of the wheel B with the case *a a′* and ring *c*, substantially as set forth.

4. The slitted step D, in combination with key L and bridge H, substantially as and for the purpose set forth.

97,356.—Cyrus Chambers, Jr., Philadelphia, Pa.—*Cut-Off for Brick-Machines.*—November 30, 1869; antedated November 20, 1869.

Claim.—1. The box for catching the particles of dirt from the severing-knife, when used in combination with the cut-off, constructed as described.

2. The open corner B, in combination with the opening O, constructed as and for the purpose set forth.

3. The combination of the knife-edge of the bottom plate with the straight knife *s* upon the lower part of the curved side-guide N, when constructed as and for the purpose set forth.

97,357.—Thomas E. Chandler, Indianapolis, Ind.—*Saw-Mill.*—November 30, 1869.

Claim.—The arrangement, herein described, of levers P S, shaft I, and hollow shaft I′, in connection with levers O, pawls H H′, ratchet G, and pinion D, for actuating the knees B, as set forth.

97,358.—Eben Simpson Chase, Eau Claire, Wis.—*Lamp-Chimney.*—November 30, 1869.

Claim.—The herein-described sectional chimney, composed of two or more sections A A, formed with circumferential shoulders at the top and bottom, and with projections and recesses, and held together by the flexible bands B B, substantially as specified.

97,359.—George P. Cole, Hudson, Mich.—*Neck-Yoke.*—November 30, 1869.

Claim.—1. Securing the eye-bolt of a neck-yoke to the yoke itself, by means of the ferrules and the nuts embedded in the yoke, substantially as herein set forth.

2. The combination of the yoke A, metal bands *a a*, eye-bolts *b b*, and nuts *e e*, all constructed substantially as and for the purposes herein set forth.

3. The combination of the yoke A, eye-bolts *b b*, nuts *e e*, staples *c*, rings B B, rollers *d d*, and pole-ring D, all constructed and connected substantially as described, and for the purposes set forth.

97,360.—Edward Conley, Cincinnati, Ohio.—*Music-Stand.*—November 30, 1869.

Claim.—The music and book stand, consisting of the tubular support A, stem B, arc *e*, pivoted plate C, candle-support E, and leaf D, swiveled thereto by pin *g*, all arranged and combined as herein shown and described.

97,361.—Silas Cook, Magnolia, assignor to himself and Henry Ford, Sioux City, Iowa.—*Automatic Boiler-Feeder.*—November 30, 1869.

Claim.—1. The combination of the exhaust-port of an engine with the pipes P N, heating-chamber B, and water-chamber D, to heat the water, preparatory to conveying it into the boiler, as set forth.

2. The combination of water-chamber D, chamber *z*, having aperture *a*, and chamber Y, to raise the valve-float B′ at the time specified, and for the purpose set forth.

3. The combination of a boiler, and eduction-pipe *m*, attached thereto, near the desired water-line, with a chest U, valve V, port *f*, and chamber Y, to depress the valve-float and let in a supply of water to the boiler at the time needed, and in the manner set forth.

4. The float B′, operated in the manner described, in combination with the shaft C′, arm J′, and weighted wheel K′, having pins *r r′ s s′* thereon, to operate the valve-gear, in the manner specified.

97,362.—George W. Cretors and Enos Hoover, Clinton County, Ind.—*Weather-Strip.*—November 30, 1869.

Claim.—The weather-strip A, in combination with the spring *m*, bar *a a*, bent levers *b b*, and covering D, all constructed and arranged substantially as described.

97,363.—A. P. Critchlow, Northampton, Mass.—*Button.*—November 30, 1869.

Claim.—A button, having a diametrical groove in its back, and a pin, *b*, arranged transversely thereto, to form a thread-holding eye, as described and shown.

97,364.—W. A. Crocker, Norfolk, Va.—*Peanut-Picker.*—November 30, 1869.

Claim.—1. The combination, with the chain-carrier, constructed as described, of the permanent screens E and H, substantially as specified.

2. The combination, with the carrier and screen

H and E, arranged as described, of the discharge-wheel A, substantially as specified.

3. The combination of the chain-carrier, screens E and H, and the scouring-reel Q, and permanent wire-screen shell P thereof, substantially as specified.

4. The combination, with the carrier, screens E H, scouring-reel Q, and permanent screen P, of the fan-blower G, substantially as specified.

97,365.—JOHN GALLEMORE DALE and EDWARD MILNER, Warrington, England.—*Mode of Producing White-Lead.*—November 30, 1869.

Claim.—The manufacture of carbonate of lead, by the action of acid carbonates of the alkalies on litharge, hydrated oxides of lead, and insoluble basic salts of lead, either by direct addition, as described in our first part, or indirectly by the mixture of the lead oxides, &c., with the caustic alkalies or their monocarbonate or acid salts, and their conversion into bicarbonates during the time they are in contact with the litharge, hydrated oxides, or insoluble basic salts of lead.

97,366.—D. F. DODGE, Lowville, N. Y.—*Two-way Cocks.*—November 30, 1869.

Claim.—The plug F, having two apertures, *a b*, and arranged in a case, A, to connect either one of two supply pipes with the suction-pipe of a pump, substantially as herein shown and described, and for the purpose specified.

97,367.—J. P. DORMAN, Galesburgh, Ill.—*Arbor or Fence-Post.*—November 30, 1869; antedated November 25, 1869.

Claim.—1. The base or point A, with arms B B′, to which the post E is secured by bolts C C and band D, substantially as described, and for the purpose set forth.

2. The plate J, rings F, with arms H and ring Z, combined and operating with the point A, with its arms B B′, bolts C C, and band D, for the purpose of securing the post E against withdrawal or oscillation, substantially as described, and for the purpose set forth.

97,368.—A. F. DUCKWITZ, New York, N. Y.—*Combined Rake, Weeder, and Smoother.*—November 30, 1869.

Claim.—The implement formed by the combination, with the bar or back B, of the teeth A and cutter C, said parts being constructed and arranged as shown and described.

97,369.—SAMUEL G. DUGDALE, Richmond, Ind.—*Clothes-Sprinkler.*—November 30, 1869.

Claim.—The vessel A, water-chamber B, sponge C, or its equivalent, partition *f*, valve *d*, and holes *g g*, when arranged in the manner and for the purpose above set forth.

97,370.—ELLIS EVES, Millville, Pa.—*Support for Elliptic Springs.*—November 30, 1869.

Claim.—The combination of the extended rod D, bent in an oblique manner at its front, and the post E, with the springs A B, and wagon-bottom C, all substantially as shown and described.

97,371.—JOHN FAIRCLOUGH, Saint Joseph, Mo.—*Feed-Water Heater.*—November 30, 1869.

Claim.—The combination of two heaters, A and B, and any number of filtering-vessels, K, when connected and arranged, substantially in the manner specified.

97,372.—JOHN FAIRCLOUGH, Saint Joseph, Mo.—*Boiler-Flue Cleaner.*—November 30, 1869.

Claim.—The metallic pipes D F K, and nozzle L, so jointed together, and to the dome B of the boiler, that they may be compactly folded back upon the latter, out of the way, and so that the steam may be discharged into the ends of the flues at any desired angle, as specified.

97,373.—JOHN FAIRCLOUGH, Saint Joseph, Mo.—*Millstone-Dress.*—November 30, 1869.

Claim.—1. The furrows *a*, describing tangential lines at their inner ends, and thence curving slightly toward the periphery, where they terminate in radial lines, as and for the purpose set forth.

2. In combination with the furrows *a*, as described, the short furrows *c*, formed in the ribs between *a a*, and made of corresponding form throughout their length, as shown.

97,374.—MOSES G. FARMER, Salem, Mass, assignor to THE AMERICAN COMPOUND TELEGRAPH-WIRE COMPANY, New York City.—*Submarine-Telegraph Cable.*—November 30, 1869.

Claim.—1. As an article of manufacture, an improved submarine-telegraph cable, consisting of a strengthening-core conductor, and insulator, surrounded by a jute or hempen buoy, arranged, one upon the other, in the order specified.

2. The method of constructing submarine-telegraph cables, by winding spirally about a tenacious steel strengthening-core a ribbon of copper, to form the electrical conductor, and by surrounding the compound metallic wire thus formed with any suitable insulator, and this with some buoyant material, all in the manner specified.

97,375.—J. N. FARNHAM, Hartford, Conn., assignor to WOVEN-WIRE MATTRESS COMPANY, same place.—*Bedstead-Frame.*—November 30, 1869.

Claim.—1. The inclined double-end bars C, of a bedstead-frame, arranged substantially as and for the purpose herein shown and described.

2. The standards B, arranged longitudinally adjustable on the side-bars of a bedstead-frame, to permit the inclined side-bars to be set a suitable distance apart, as set forth.

97,376.—O. L. FENNER, Rochester, N. Y.—*Bench-Clamp.*—November 30, 1869.

Claim.—An improved screw-stock, for the movable jaw of a clamp, with a base, E E, ears *a b*, and removable fastening-yoke F, the said parts being constructed, combined, and adjusted to the bench, in the manner described.

97,377.—JAMES FERGUSON, Huntley Grove, Ill.—*Cultivator.*—November 30, 1869.

Claim.—1. The beams D′, when provided with joints *d d²* at front and rear, as described, for the purpose set forth.

2. The standard H, bar I, and spring *h′*, when constructed substantially as described, for the purpose set forth.

3. The standard H, bar I, and spring *h′*, when combined with the beams D′, substantially as and for the purpose set forth.

4. The machine described, consisting of the frame A *a a a′*, wheels B B, pole C, beams D D′, shovels L, rock-shaft E, hand-lever F, standard H, bar I, spring *h′*, the whole being combined and arranged as described.

97,378.—E. L. FOREMAN, Ranteul, Ill., assignor to EDWARD FOREMAN, same place.—*Road-Grader.*—November 30, 1869.

Claim.—The combination and arrangement of the sides A A, with steel bars C C, cross-bar B, braces D D, tongue E, lever F, knee G, and bar H, all substantially as shown and described.

97,379.—H. G. FOUGEN and A. C. FOUGEN, Cape Girardeau, Mo.—*Egg-Beater.*—November 30, 1869.

Claim.—The combination of the platform A, handle B, shaft C, weighted cross-arms D E, cord G, and mixer F, with each other, substantially as herein shown and described, and for the purpose set forth.

97,380.—JOHN V. B. FRANCE, Boscobel, Wis.—*Combined Seeder, Roller, and Drag.*—November 30, 1869.

Claim.—1. A combined seeder, roller, and drag, arranged and operating substantially as herein shown and described.

2. The seed-frame E, when fastened, by means of two bolts *b c*, to the roller-frame, and partly supported on a caster-wheel, so that it can, by removing one bolt, be swung back of the roller, substantially as herein shown and described.

97,381.—LOUIS FRÜHINSFELD, Newark, N. J.—*Hinge.*—November 30, 1869.

Claim.—As a new article of manufacture, the hinge A, composed of two pieces only, B being cast entire with pintle and screw-bolts, and C of malleable iron, bent around B, all as and for the purpose specified.

97,382.—AARON FULLER, Marietta, Ohio.—*Pump.*—November 30, 1869.

Claim.—The piston *c*, constructed as described, and provided with the ring-packing *c'*, when used in connection with the cylinder D, and combined with the rod *a*, working in the sleeve *a'*, as described, for the purpose set forth.

97,383.—SAMUEL M. FULTON and WILLIAM M. FULTON, Pittsburgh, Pa.—*Rotary Bell-Head.*—November 30, 1869.

Claim.—The annular flanged cavity in the crown-piece of the bell, around the central hole for the clapper-bolt, for the reception of the heads of the bolts, by which the crown of the bell is attached to the yoke, and is thus rendered capable of being rotated, relatively to the yoke, substantially as hereinbefore described.

97,384.—WARREN GALE, Peekskill, N. Y.—*Feed-Cutter.*—November 30, 1869.

Claim.—1. In the construction of feed-cutters, a slotted knife-shaft, constructed with a space between the rings or caps *b b*, that hold the knives *a a a* in place, and the journal-boxes *d d*, in which the shaft runs, so when the rings, or either of them, are released, they can be moved on the shaft, so as to release the knives, so they can be removed or replaced without removing the shaft or journal-boxes, substantially as described.

2. A slotted knife-shaft, provided with knives beveled on the back side, and provided with caps or rings of unequal diameter, so the knives cannot be reversed, substantially as described.

97,385.—PERRY G. GARDINER, New York, N. Y.—*Packer for Railway-Car Springs.*—November 30, 1869.

Claim.—1. The holding and securing the spiral spring, for packing, by means of a cylindrical shell or holder, divided in halves, and provided with the interior female-screw thread, or the points or studs to hold the coils and prevent their being pressed together under the pressure of the filling or packing process, arranged and operating substantially as described.

2. The removable and adjustable hollow cylinder or filler G, in combination with the holder and spring, arranged and operating substantially in the manner and for the purposes described.

3. The combination of follower or plunger with the filler and holder and spring, constructed, arranged, and operating substantially as described.

97,386.—F. J. GARDNER, Washington, N. C.—*Bed-Spring.*—November 30, 1869.

Claim.—An improved bed-spring, formed by the combination of the three springs or slats, A C D, and pins or standards B with each other, substantially as herein shown and described, and for the purpose set forth.

97,387.—REDMAN GAY, Richmond, Va.—*Fire-Box.*—November 30, 1869.

Claim.—In combination with the flanged pipe C, secured, as described, to the inner sheet of the fire-box A, the stay-rod D, conical plates E E, provided with slots *f f*, and the hand-hole plates *h h*, all substantially as and for the purposes herein set forth.

97,388.—JAMES R. GILBERT, Wootens, Ga.—*Plow.*—November 30, 1869.

Claim.—1. The plow-foot C, constructed as described, of the wooden beam *a* and iron bar *b*, secured to the beam A, and regulated by means of the nuts *c c*, substantially as and for the purposes herein set forth.

2. In combination with the plow-foot C, constructed as described, the subsoil-share D, substantially as and for the purposes herein set forth.

3. The plow-foot C and the double foot E, so constructed as to be interchangeable with each other, as specified.

97,389.—WALTER W. GILBERT, New York, N. Y.—*Steam-Pump.*—November 30, 1869; antedated November 24, 1869.

Claim.—1. An elongated piston arranged relatively to the ports *a b* of the steam-actuated valve, and provided with the exhaust-passages *e f*, also arranged relatively to the said ports, *a b*, all substantially as specified.

2. The cylindrical pump-valves A B, and concave-slotted seats C D, arranged substantially as specified.

97,390.—KINGSTON GODDARD, Richmond, N. Y.—*Mode of Constructing Water-Pitchers and other Vessels.*—November 30, 1869.

Claim.—An improved ice-pitcher, or other vessel, formed by electro-plating, with one or more metals, a body made of wood or other suitable non-conducting material, substantially as herein shown and described, and for the purpose set forth.

97,391.—HENRY E. GRAHAM and RICHARD D. CHILD, Boston, Mass.—*Combined Watch-Key and Toothpick.*—November 30, 1869; antedated November 24, 1869.

Claim.—1. A combined watch-key, H, and toothpick G, when the latter slides within the winding-tube of the former, substantially as and for the purpose set forth.

2. The projection E, for containing a pencil, combined with the watch-key H and toothpick G, when they are formed as above described.

97,392.—W. D. GUSEMAN and E. C. BRIGHT, Morgantown, West Va.—*Insulator for Telegraph-Wires.*—November 30, 1869.

Claim.—1. The narrow ridge or point in the insulator, formed by the grooves, or a groove extending downward from the wire-aperture, on which ridge the wire rests, substantially as described.

2. The sloping grooves, (one or more in number,) extending from the wire-aperture, for discharging the water and forming a ridge for the wire to rest on, substantially as described.

3. The insulator A, constructed with the aperture C and slot D, arranged at an angle with each other, as shown, either with or without a cap to protect it from the weather.

97,393.—E. R. HALL and WILLIAM H. TOWN, Syracuse, N. Y.—*Sawing-Machine.*—November 30, 1869.

Claim.—1. In combination with the pendent guide M, slide-bar H, and pitman *z*, the adjustable right-angled lever V, constructed and arranged to operate as specified.

2. The arrangement herein shown, of the double-rim annular wheel K, pinions *l*, and *u*, crank-shaft *s'*, and crank L, for operating a crosscut-saw, as specified.

3. The sawing-machine, herein described, having the pinions *l* and *u* gearing with the double-rim annular wheel K, crank-shaft *s'*, pitman *r*, right-angled lever V, adjustable pitman *z*, sliding bar H, and pendent sliding guide M, with lifting-lever F and spring-catch S, all constructed and arranged to operate a crosscut-saw, as specified.

97,394.—W. N. HAMILTON, Odessa, Del.—*Grain-Drill.*—November 30, 1869.

Claim.—1. A cast-iron bottom for the seed-boxes of grain-drills, formed substantially as shown and described.

2. The metallic bottom, when cast with a cut-off projection or lip at each discharge-opening, substantially as shown and set forth.

3. The combination of the cut-off projection or lip cast on the bottom of the seed-box, and formed as specified, with the slotted adjusting-slide, substantially as herein described.

4. The employment, in combination with the adjusting and cut-off slides, of the frames or holders, applied and secured to the bottom of the seed-box at the discharge-openings, under the arrangement described, so that the slides, while held in and maintained by said holders, shall be free to slide back and forth upon each other, as and for the purposes set forth.

5. The combination of the hinged seed-box, with

the large open spouts supported upon the frame of the machine, and arranged under and at suitable distance from the discharge-apertures in the feed-box, substantially as and for the purposes shown and set forth.

97,395.—JAMES R. HAMMOND, Sedalia, Mo.—*Combined Hay-Rake, Thrasher, Loader, and Stacker.*—November 30, 1869.

Claim.—1. An improved hay-rake and loader, formed by the combination of the frame A, wheels B, inner frame C, wheels and shaft D E, teeth or fingers F, guard-bar G, and carrier M N, with each other, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the gleaner H I, arm J, and catch-bar K, with the frames C and A, rake-teeth or fingers F, and carrier M, substantially as herein shown and described, and for the purpose set forth.

3. The thrashing-device R S S′ T U, in combination with the frame and carrier of a hay-rake and loader, substantially as herein shown and described, and for the purpose set forth.

4. The combination of the hopper or guide Z, screen A′, and seed-box B′, with the frame C, carrier M, and thrashing-device R S S′ T U, of a hay-rake and loader, substantially as herein shown and described, and for the purpose set forth.

5. The combination of the looped ropes G′ and detachable pole F′, with the rack D′, substantially as herein shown and described, and for the purpose set forth.

6. The combination of the truck-rack D′ E′, looped ropes G′, and detachable pole F, with the frame C and carrier M of the hay-rake and loader, substantially as herein shown and described, and for the purpose set forth.

97,396.—H. W. HARKNESS, New Britain, Conn., assignor to himself and ANDREW TURNBULL, same place.—*Lantern.*—November 30, 1869.

Claim.—The metal rings *b b*, cast in one piece, having the part *b′*, in combination with the segmental hinged part *b′*, guard *c*, and supporting-wire *d*, substantially as set forth.

97,397.—B. F. HERR, Livingston, Ala.—*Paper-File.*—November 30, 1869.

Claim.—1. The arrangement of the slotted springs D D, so as to work over the pins E to protect the former against lateral displacement, and to make them direct and uniform in their vertical action, as and for the purpose specified.

2. The arrangement of the several hooks B at the points specified, and with inclined recesses as shown and described, so that they may not only hold the file together, but retain the springs in subjection when the file is opened, all as shown and described.

97,398.—GEORGE W. HERRING, Bangor, Me.—*Auger-Handle.*—November 30, 1869; antedated November 27, 1869.

Claim.—The arrangement, on the handle A, of the collar C, slotted washer or ring E, pins *b b*, and nut D, all constructed and operating substantially as and for the purposes herein set forth.

97,399.—DANIEL M. HOLMES, Watkins, N. Y.—*Instrument for Pulling Weeds.*—November 30, 1869.

Claim.—As a new article of manufacture, the herein-described instrument, consisting of serrated and longitudinally-grooved jaws, oblique shanks, and handles parallel, or nearly so, to the plane of the blades, as described.

97,400.—JOHN DOUGLAS HOPKINS, London, England.—*Sash-Balance.*—November 30, 1869; patented in England, November 20, 1868.

Claim.—The combination of the balanced sashes *a b*, the winding-cords and the winding-drums, with the weights *p p*, substantially as and for the purpose described.

97,401.—CHARLES H. HORNE, Astoria, Oregon.—*Belly-Band Fastener.*—November 30, 1869.

Claim.—An improved sinch or belly-band fastener A, B, D, E, F, constructed and operating in connection with the strap or lattigo C, substantially as herein shown and described, and for the purpose set forth.

97,402.—HENRY HOWARD, Springfield, Mass.—*Combined Stove and Water-Heater.*—November 30, 1869; antedated November 20, 1869.

Claim.—1. The boiler F, constructed with partition 8 and aperture 9, substantially as herein described.

2. The dumping-grate E, composed of a series of separate bars *u u*, &c., connected laterally by a dovetail device, and secured at one end by a rod, V, as herein specified.

3. The stove-cover *r*, provided with a continuous groove *s′*, as herein specified.

4. The removable fire-box or lining G, made of any suitable material, in combination with the boiler F, substantially as herein specified.

5. The radiator H, provided with two connection-apertures o^1 o^2, and connecting-bolt *n′*, arranged, with reference to pipes *n* and *o*, as herein specified.

6. The series of heating-pipes 1, 2, &c., when constructed and arranged, with reference to pipes *n* and *o*, and to the boiler F, as herein specified.

7. The central partition *y′*, in combination with the funnel B, horizontally-sliding damper *d*, oven and casings C C′ C″, as herein specified.

97,403.—CHARLES H. HUDSON, New York, N. Y.—*Extension-Crib and Bedstead.*—November 30, 1869.

Claim.—1. The bedstead described, capable of both lateral and longitudinal extension, substantially as set forth.

2. The sliding or rolling guard, for barring the progress of a child in any given direction, constructed and operating substantially as set forth.

3. The combination of the two parts V and W, forming an extensible guard, substantially as and for the purpose specified.

97,404.—WILLIAM HUFFMAN, Oshkosh, Wis.—*Paddle-Wheel.*—November 30, 1869.

Claim.—1. Duplex helical floats, Fig. 5, in combination with lining *b* and flanges *a a*, provided with air-passages *e e*, in either flanges or floats, or both.

2. The air-passages *e e*, provided with flanges *e′ e′*, in combination with paddle-wheels, substantially as and for the purposes set forth.

97,405.—CHARLES HUGHES, Yng Flor De Cuba, Colen, Cuba.—*Steam-Condenser.*—November 30, 1869.

Claim.—1. The condensing-vessel A and the annular tank B, inclosing the condenser, arranged substantially as described.

2. In combination with the condenser A, the perforated ring-pipe G, arranged substantially as described.

97,406.—CHARLES HUGHES, Yng Flor De Cuba, Colen, Cuba.—*Condenser-Valve.*—November 30, 1869.

Claim.—The valve C, constructed, arranged, and operating substantially as herein shown and described.

97,407.—LEWIS B. HUNT, Leverett, Mass.—*Railroad-Car Wheel.*—November 30, 1869.

Claim.—1. The combination, with the hub D, fixed to the axle, and a sliding rim A, of the series of independent elastic cylinders, arranged in the space between said two parts, and operating as herein described.

2. A wheel, consisting of two similar flanged cylinders B C D, connected together, and firmly keyed to the axle, in combination with the sliding rim A, having a space between them, receiving the elastic cylindrical packing E, and with the packing F interposed between the flanges of the hub and the sides of the rim, the whole operating together as and for the purpose herein described.

97,408.—JOHN C. JOHNSON, Golconda, Ill.—*Wagon-Skein.*—November 30, 1869.

Claim.—The combination and arrangement of a wrought-iron or steel skein, B, with a wooden axle-

tree, A, secured by an iron hurter-band or collar, *c*, and the iron bolt *d*, with the combination of the nut E, with the bolt *b* passing through the box C, secured by the iron ring D, and the solid end of the axle-tree A, in the manner and for the purposes herein specified.

97,409.—P. C. JOHNSON, Central City, Colorado Territory, assignor to MARY JOHNSON, same place. —*Clothes-Line.*—November 30, 1869.

Claim.—The double pulley or carriage D, with its pulleys *e e*, in combination with the knot *d*, cord A, posts B and C, and pivoted holders *h*, with their pulleys *a a*, as shown and described.

97,410.—WILLIAM C. JOHNSON, Fort Madison, Iowa, assignor to himself and AARON JOHNSON, same place.—*Railway-Car Coupling.*—November 30, 1869.

Claim.—1. The slides B, moving back and forth in the top of the bumpers, and having their front ends extending out beyond the bumpers, as described, in combination with the arms C, when used substantially as set forth.

2. In combination with the slides B and arms C, the spring D, when used substantially as shown.

97,411.—WILLIS H. JOHNSON, Springfield, Ill. —*Velocipede.* — November 30, 1869; antedated November 27, 1869.

Claim.—1. The carriage C, constructed and arranged with the oval-shaped circular side-pieces *e e*, and cross-beams *f f*, grooved wheels *d d d*, driving-wheel F, connecting-belt *g*, cranks *h h*, stirrups *i i*, and seat E, substantially in the manner herein described, and for the purposes set forth.

2. The combination of the carriage C, constructed as described, with the braced wheel A, also constructed as described, substantially as and for the purposes set forth.

97,412. — JOSEPH JOHNSTON, Chicago, Ill.—*Weather-Strip.*—November 30, 1869.

Claim.—A weather-strip, made of rubber cloth, or other suitable material, folded and sewed together, and applied substantially as shown and described.

97,413.—JACOB KLINGENSMITH, Warren, Ohio. —*Churn.*—November 30, 1869.

Claim. — The arrangement of the double cranks with the jointed links J J′, provided with thumb-screws or nuts, in combination with the sectional dasher and churn, operating conjointly in the manner and by the means substantially as described.

97,414.—L. W. LANGDON, Northampton, Mass., assignor to himself and EDWIN R. LOCKE, Keene, N. H.—*Stove-Damper.*—November 30, 1869.

Claim.—1. The employment of a tube, B, in such a manner that its expansion and contraction shall operate to open and close the valve, substantially as herein described.

2. The adjusting-lever P, when connected to an automatic heat-regulator, placed inside the pipe, substantially as herein described.

3. The combination of the ring A, tube B, valve C, rod D, lever F, casting E, and lever P, all operating substantially as herein described.

4. In combination with the above, the indicator O, arranged substantially as herein set forth.

97,415.—CHARLES E. LEWIS, Northfield, Vt.—*Device for Grinding Saw-Gummer Burrs.*—November 30, 1869.

Claim.—The frame A and wheels b^1, in combination with the pivoted arm B, longitudinally-adjustable carriage B, screw E, nuts *e*, and wheel A^1, the whole arranged and operating substantially as set forth.

97,416.—SAMUEL H. LINTAN, Burrows, Ind.—*Harrow.*—November 30, 1869.

Claim.— A harrow, provided with one series of perpendicular teeth in front, another series behind, and a series of clod-crushers in the middle, so that the clods may be brought to the surface by the first, crushed or mashed by the second, and pulled to pieces or pulverized by the third, all as shown and described.

97,417.—ALSON A. LOTHROP, Nepouset, Mass. —*Metallic Solution for Coating Iron and Steel.*—November 30, 1869.

Claim.—A solution, composed of the ingredients set forth, for coating iron or steel.

97,418.—HENRY ALEXANDER LYMAN, Cheapside, London, England, assignor to THOMPSON, LANGDON AND COMPANY, New York City.—*Corset.*—November 30, 1869.

Claim.—A corset, composed of the pieces A B C D, shaped and fitted together in the manner described.

97,419.—L. J. MARCY, Newport, R. I.—*Photographic Printing-Apparatus.*—November 30, 1869.

Claim. — 1. A photographic printing-apparatus, consisting of a lamp and printing-frame, arranged and operating together substantially as described.

2. The lamp A, provided with a curved wick-tube, substantially as and for the purpose described.

3. The case B of the lamp, when provided with a slotted diaphragm, substantially as herein shown and described.

4. The inclined perforated plates *b b*, formed on the lamp, for the purpose of steadying the flame, as set forth.

5. The changeable perforated slides C, or their equivalent, arranged and operating substantially as and for the purpose herein shown and described.

6. The printing-frame F, made substantially as described, to carry the negative and the sensitive plate, as described.

97,420.—THOMAS F. MAYHEW, Port Norris, N. J.—*Oyster-Dredge.*—November 30, 1869.

Claim.—1. The use, in an oyster-dredge, of a bag, *f*, of wire gauze, or its equivalent, for the purpose specified.

2. The guards or fenders *i i*, arranged, in respect to the bag *f*, substantially in the manner described.

3. The tooth-bar B and the bag *f*, and its frame, so hinged to the bars A A of the dredge, and so connected to the same by chains *m m*, or their equivalents, that the said tooth-bar and bag may be tilted, for the purpose of emptying the latter, substantially as herein set forth.

4. A frame for oyster-dredges, consisting of two bars A A, connected together, and hinged to the tooth-bar B, substantially in the manner described.

97,421.—CHARLES A. MAYNARD, Saint Louis, Mo.—*Velocipede.*—November 30, 1869.

Claim.—The combination of the levers F H with the seat and foot support, and with the straps or bolts *j p h*, collars K, ratchet-wheels *m*, springs *l*, catches *n o*, and main wheels I, all combined and operating substantially as herein shown and described.

97,422.—R. Y. MCCONNELL and GEORGE PRINGLE, Rochester, N. Y.—*Street-Sprinkler.*—November 30, 1869.

Claim.—1. The sprinkler E, constructed, as described, of hydraulic tubing or gas-pipe, and provided with one row of holes, drilled a little above the center, and closer around the circle and at the ends than in the center, substantially as and for the purposes herein set forth.

2. The sprinkler E, taking the water in at each end, thereby giving the pressure at the side where it is wanted, substantially as herein set forth.

3. The flexible tubes D D, connected to the water-tank by means of a supplementary block, C, secured to the bottom of the tank, substantially as herein set forth.

4. The double valves, placed inside of the water-tank, so as to be able to let on water at either side, or together, at pleasure, substantially as herein set forth.

5. The screws H H, in the ends of the sprinkler E, for the purpose of cleaning, substantially as herein set forth.

6. The combination and arrangement of the bottom A, valves B B, supplementary blocks C, flexible tubes D D, sprinkler E, joints G G, and screws H H, all constructed as described, and operating substantially as and for the purposes herein set forth.

97,423. — WILLIAM MCFARLAND, Williamsburgh, N. Y.—*Safe.*—November 30, 1869.

Claim.—A burglar-proof safe, composed of outer shell A, inner ribbed or serrated shell B C, and angular plates E, constructed, arranged, and fitted together in the manner described.

97,424.—MATTHEW MCMILLIAN, Caney, Ark.—*Cotton-Seed Planter.*—November 30, 1869.

Claim.—An improved cotton-seed planter, formed by the combination of the block A, opener B, grooved roller D, band E, dropping-cylinder F, spout G, and coverer H, with each other, said parts being constructed, arranged, and operating substantially as herein shown and described, and for the purpose set forth.

97,425.—DANIEL E. MCSHERRY, Dayton, Ohio.—*Dropping-Device for Seeding-Machines.*—November 30, 1869.

Claim.—1. The cap E, constructed with a concavo-convex curtain, *e*, and with its anterior edge *z* in or in rear of a vertical plane intersecting the axis of shaft C, substantially as and for the purposes described.

2. While not claiming broadly a cap to a rotary seed-dropping wheel, I do claim so constructing the curtain *e*, of such a cap, that it will lie closely to the back of a spirally-grooved wheel, D, and prevent the escape of seeds over such wheel through its spiral grooves, substantially as and for the purposes described.

97,426.—RUFUS S. MERRILL, Cambridge, Mass.—*Printing-Type.*—November 30, 1869.

Claim.—A hollow printing-type, as a new manufacture

97,427.—M. W. MONTGOMERY and E. H. VOTAW, Springfield, Mass.—*Sad-Iron.*—November 30, 1869.

Claim.—An improved detachable sad-iron handle, formed by the combination of the pivoted bars B, handle C, having cams or inclines formed upon one or both ends, and spring D, with each other, as herein shown and described, and for the purpose set forth.

97,428.—JOEL MOULTON, Boston, Mass.—*Mode of Covering Elastic Rolls.*—November 30, 1869.

Claim.—The mode of covering elastic rolls hereinbefore explained, that is to say, in first depositing the thin tubular covering or casing within the receiver *a*, next placing over it the roll, and smearing one or both with cement, and then depressing the roll within the casing by means of the plunger *c*, the whole being arranged and operating in manner as hereinbefore explained.

97,429. — NELSON NEWMAN, Springfield, Ill.—*Corn-Harvester.*—November 30, 1869.

Claim.—1. A cutter, having a reciprocating movement, in which the position of the same is changed at each end of the stroke by a partial revolution of the cutter-bar upon its axis, so that said cutter advances and returns in different paths, substantially as described.

2. The devices used for changing and controlling the position, radially, of the cutter E, consisting of the guides N and O, the rod *e*, and the springs *n* and *o*, all combined substantially as shown, and for the purpose specified.

3. The means employed for imparting a reciprocating motion to the cutter E, consisting of the rod F, the link G, the bar H, the shaft I, the crank K, the gear-wheel M, and the pinion L, in combination with the cutting-devices herein described, substantially as and for the purpose specified.

4. The means employed for securing the doors R in a horizontal position, and releasing the same therefrom when desired, consisting of the bars T, provided with the beveled portions *u* and *u'*, the spiral springs *t*, the pin *x'*, the catch U, and the lever V, all combined substantially as described, and for the purpose shown.

5. In combination with the securing and releasing devices above named, the means employed for forming and depositing the shock, consisting of the traps or doors R, the spring-gates *s*, and the forked rod Y, substantially as shown and described.

97,430.—ROBERT NICHOLSON, Pleasantville, Pa.—*Wrench.*—November 30, 1869.

Claim.—1. The combination, with the open wrench, of the detent-spring, operating as set forth.

2. The combination, with the wrench, of the detent-spring, its guide-pin, and recess, all constructed to operate as set forth.

3. The combination of the wrench with the pivoted supporting-band, as set forth.

4. The combination of the wrench, the pivoted supporting-band, and the detent-spring, substantially as set forth.

97,431.—WILLIAM R. OATLEY, Rochester, N. Y.—*Stove-Leg.*—November 30, 1869.

Claim.—1. The dovetailed lug *d*, in combination with the slotted flange of the leg A, for the purpose set forth.

2. In combination with the side lugs *b*, the central lug *d*, arranged to act conjointly, for the purposes set forth.

97,432. — GEORGE S. ORMSBY, Xenia, Ohio.—*Map-Drawing Apparatus.*—November 30, 1869.

Claim. — 1. A graduated frame, A, for slate or black-board, provided with the parallel spaces *a b c d e*, suitably marked, for indicating the proper positions of parallels and meridians on maps to be drawn, combined with the arm B constructed with centers as described; also, with the center at N A, either with or without the projections at that point, substantially as set forth.

2. The combination of the frame A, constructed as described, its arms and centers as described, and the compound rulers for making the lines of longitude, substantially as set forth.

3. The graduated circular frame, constructed as described, for drawing the hemispheres, combined with the adjustable arm, with fixed centers for the parallels and meridians, substantially as set forth.

97,433.—JOSHUA T. OWEN, Philadelphia, Pa.—*Railway-Car Wheel.*—November 30, 1869.

Claim.—A car-wheel, constructed substantially as set forth.

97,434. — JOHN OWENS, Salford, England. — *Method of Weaving Fabrics.*—November 30, 1869.

Claim.—The method above described of weaving pile or other fabrics, namely, by forming the pile or face-surface of the fabric from the weft alone, interlocked with the warp, as set forth, so that the weft-face appears only on the face, being protected and secured by the back-weft, and each warp-thread serving to hold a pile-weft and form a cutting-race, in the manner specified.

97,435.—CHARLES PAGE, Boston, Mass.—*Tuck-Creasing Mechanism for Sewing-Machines.* — November 30, 1869.

Claim.—1. The combination and arrangement of the tuck-marker with the presser-foot, and the grooved wheels disposed therein, as set forth.

2. The rotary tuck-marker, provided with the screw-arbor, in combination with the presser and the grooved rotary rear wheel, having an internal screw-thread, by means of which the marker is secured in position and rotated, all as set forth.

97,436.—JOSEPH B. PEDRICK, Columbus, Ind.—*Gauge for Weather-Boarding.*—November 30, 1869.

Claim.—The combination of the mortised bar A, extensions F and L, hook C, slide D, spring M, block B, and points *e* and T, all constructed as described, in the manner and for the purposes herein set forth.

97,437.—JOHN G. PERRY, Kingston, R. I.—*Hay-Tedder.*—November 30, 1869.

Claim.—1. The combination of the thills, the loose driving-wheels, the revolving main shaft, its bevel-wheel, the revolving disk, the revolving ring, the cranked rock-shafts carrying the teeth and the cam-groove, all constructed and operating substantially as set forth.

2. The combination of the revolving disk, the revolving ring, the cranked rock-shaft carrying the teeth, the fixed disk, and the cam-groove, all constructed and operating as set forth.

3. In a hay-tedder, the cam-groove L, in combination with the cranked rock-shafts K, these parts being constructed to operate as and for the purposes specified.

97,438.—JOHN G. PERRY, Kingston, R. I.—*Hay-Tedder.*—November 30, 1869.

Claim.—1. The combination of two parallel rotating cranked shafts, with stocks carrying the rake-teeth, all constructed to operate substantially as set forth.

2. The combination of the stocks, and their parallel cranked shafts, with the adjustable disks, mounted on the axles of the driving-wheels, all these parts being constructed for joint operation, as set forth.

3. The combination of the adjustable disks, the crank-shaft F, and the shipping-mechanism, mounted on the disks, and constructed as set forth.

4. The combination of the recessed driving-wheels, the gearing, the adjustable disks, and the cranked shaft F, all these parts being constructed and operating as set forth.

97,439.—GEORGE M. PETTEE, Detroit, Mich.—*Composition for Cleaning Millstones.*—November 30, 1869.

Claim.—The composition made of the ingredients in the manner herein specified, and applied for dressing millstones, as set forth.

97,440.—JOHN L. PIPER, Pittsburgh, Pa.—*Turn-Table.*—November 30, 1869.

Claim.—1. The arrangement, in a pier which supports the turn-table at or near its center, of a series of spherical balls within a confining-cap or rim, *c*, substantially as described.

2. A series of flat circular disks or cylindrical balls, arranged to operate on the one side or edge against the main pivoting-stem, and on the other against a shoulder in the revolving cap or other equivalent device, substantially as described.

97,441.—HAMILTON PRAY, Sharon, Conn.—*Operating Grindstones.*—November 30, 1869.

Claim.—A grinding-apparatus, composed of grindstone A, bench-timbers B C, hinged pedals D, crank-disks G, connecting-rod F, rest I, and shaft J, all constructed and arranged, with respect to one another, in the manner described.

97,442.—PASCAL A. QUINAN, Baltimore, Md.—*Sailing-Vessel for Storing and Transporting Petroleum and other Oils.*—November 30, 1869.

Claim.—1. The combination of the hull A, deck C, fore and aft vertical bulkhead D, transverse bulkheads E E E, with the water-reservoir F, provision-hold S, hatchway *b*, fresh-water pump *a*, all constructed and arranged, and for the purpose described.

2. The combination of the oil-reservoirs T with the bilge-pumps B, floating register *f*, register-pipe *g*, the circular holes *c*, with the screw-caps *c*, with the hull A and deck C, all constructed and arranged, and for the purpose described.

3. The escape-pipe *d* and valve *e*, as fitted to mast, with valve *e* as screwed into tubular iron mast, all constructed and arranged, and for the purpose described.

4. The safety iron transport, or sailing oil-vessel, with the parts A B C D E F S T *a b c d e f g h*, all combined, arranged, and constructed substantially as and for the purpose described.

97,443.—DAVID REYNOLDS, Rockford, Ill.—*Holder for Check-Reins.*—November 30, 1869.

Claim.—1. A lever, supporting the terret-bar, when pivoted above the line of the draught of the check-rein, and operated by means of the driving-rein, in the manner described, for the purpose set forth.

2. The device described, consisting of the lever A, bearing-arm B, standard *c*, and terret-bar D, when combined as described, for the purpose set forth.

97,444.—REUBEN M. REYNOLDS, Oakville, Mich.—*Lifting-Jack.*—November 30, 1869.

Claim.—The lifting-jack herein described, having posts A, B, and D, staple H, lever K, block S, and bent rod R, constructed and arranged to operate substantially as specified.

97,445.—VAN BUREN RYERSON, New York, N. Y.—*Machine for Pulverizing Ores and Rock.*—November 30, 1869.

Claim.—1. The combination of the two cases, with their rotating beaters, by means of connecting-pipes from or near the center of the first, and delivering to the second, between the center and the periphery, substantially as described, the first case being provided with a feeding-tube and the last with discharge-pipes, when all these parts are constructed and arranged as described.

2. The arrangement of the two beater-wheels D D′, in combination with the arrangement of the feeding-tube *l*, and the two pipes *m m*, for the passage of the material from the inside of the first to the inside of the second case, when constructed and arranged substantially as shown, and for the purpose specified.

3. Making the faces of the beaters each of a separate plate, secured by a bolt, or equivalent means, to projecting flanches on the rotating disks D D′, when constructed and arranged substantially as described, so that they can be readily replaced when worn.

97,446.—JOHN M. SHAW, Water Valley, Miss.—*Seed-Planter.*—November 30, 1869.

Claim.—1. The iron plate A, constructed and operating substantially as herein shown and described, and for the purpose set forth.

2. The combination of the slotted opener B, with the concaved plate A, substantially as herein shown and described, and the purpose set forth.

3. The combination of the hopper D with the plate A, substantially as herein shown and described, and for the purpose set forth.

4. The combination of the toothed wheel C, toothed wheel E, and stirrer-pins F, with the hopper D and plate A, substantially as herein shown and described, and for the purposes set forth.

5. Arranging the stirrer-pins F in a circle, to adapt them to serve as a pulley for the carrier-belt I, substantially as herein shown and described.

6. The combination of the bar G and pin or pins H with the hopper D and wheel E, substantially as herein shown and described, and for the purpose set forth.

7. The combination of the carrier-belt I K and conductor-spout L, with the hopper D, stirrer-pins F, wheels E and C, and plate A, substantially as herein shown and described, and for the purpose set forth.

8. The combination of the cutter M with the plate A, substantially as herein shown and described, and for the purpose set forth.

97,447.—JOHN SILSBY, New York, N. Y.—*Sewer.*—November 30, 1869.

Claim.—1. The mud-box D, sunk into the bottom of the tunnel B, and connecting at one end with the main sewer-pipe A, and at the opposite end with the house-connection C, substantially as shown and described.

2. The mud-box E, in combination with the main sewer-pipe A, substantially as set forth.

97,448.—JOHN SILSBY, New York, N. Y.—*Exterior Casing for Sewer, Gas, and Water Pipes.*—November 30, 1869.

Claim.—The arrangement of a tube, A, containing two compartments, one compartment to form the house-connection of the sewer-pipe, and the other compartment to form a case, to inclose the house-connections for the gas and water pipes, substantially as shown and described.

97,449.—SAMUEL G. SIMPSON, Mill Creek, Pa.—*Horse Hay-Fork.*—November 30, 1869.

Claim.—A hay-fork, consisting of the tines A A, shank B, yoke D, bent bar F, having eye K, spring-catch G H, and perforated bent bar L M, all combined, constructed, and arranged in the manner described.

97,450.—W. H. SINGER, Pittsburgh, Pa.—*Machine for Rolling Metals.*—November 30, 1869.

Claim.—The tapering rolls B′ B′, combined with the sliding rest C, substantially in the manner and for the purpose set forth.

97,451.—W. H. SINGER, Pittsburgh, Pa.—*Plate for Blanks of Cultivator-Teeth.*—November 30, 1869.

Claim.—As an article of manufacture, the rolled plate herein described, tapering from the center to the edges on one or both sides, and suited to be the material whence blanks for cultivator-teeth, plow-shovels, &c., may be cut.

97,452.—GEORGE SMITH, Omaha, Nebr.—*Clapboard-Gauge.*—November 30, 1869.

Claim.—The clapboard-gauge and holder, as herein described, consisting of the single graduated bar B, formed with the offset at its upper end, and provided with the spur E, sliding clip C, and lever D, all constructed and arranged as set forth.

97,453. — CHARLES P. SNOW, Freeport, Ill. — *Lamp-Trimmer and Extinguisher.*—November 30, 1869.

Claim. — The lamp-trimmer and extinguisher herein described, having springing plate B, with cutting-ledge *b'* and levers C, constructed and arranged to operate substantially as specified.

97,454.—DANIEL SPILL, Paradise Terrace, Hackney, England.—*Dissolving Xyloidine for Use in the Arts.*—November 30, 1869.

Claim.—The preparation and use of solvents of xyloidine, such as have been before described, so as to render xyloidine more easy of conversion into compounds containing xyloidine, which are suitable for applications in the arts, and for industrial purposes.

97,455. — AUGUSTUS STANLEY, New Britain, Conn.— *Bit-Stock.*—November 30, 1869; antedated November 20, 1869.

Claim.—As a new article of manufacture, the herein-described brace, consisting of the head B, body A, socket *a*, inverted pawl *b*, arms *h h*, spring *c*, and pivot *i*, the whole constructed and arranged substantially as shown and described, and for the purposes set forth.

97,456.—MONROE STANNARD, Hartford, Conn.—*Steam Slide-Valve.*—November 30, 1869.

Claim.—1. The combination, with the described balance-valve, of anti-friction rolls, substantially as hereinbefore set forth.

2. The combination of the ring *n*, the steam-communications *o*, and the yielding packing *m*, with the piston *d* and cylinder *e* of a balance-valve, substantially as above specified.

97,457.—AMOS STEVENS, Fitchburgh, Mass., assignor to himself and HENRY C. MAHURIN.—*Apparatus for Generating and Carbureting Illuminating-Gas.*—November, 30, 1869.

Claim.—1. The combination of two hydrogen-gas generators, in such a manner that the exhaustion of one brings the other automatically and instantaneously into action, by means of a partially-revolving gas-cock, with shaft and arms, operated by wheel and weight, or equivalents, substantially as herein set forth.

2. The double cone-shaped tank, placed in the center of the gasometer, with the pipe L' coiled around the top, by which the gas is passed up through the water, as herein set forth.

97,458.— WILLIAM A. SWEET, Syracuse, N. Y. —*Elliptic Spring.*—November 30, 1869.

Claim.—The combination, in an elliptic spring, of the concave washers *t t* and rivet C, when clamping the outer leaf of springs, whose curls are formed substantially as described.

97,459.—A. AGNEW THOMSON, Newburgh, Pa. —*Medical Compound.*—November 30, 1869.

Claim.—The sirup above described, composed of the ingredients named, each being in proportion specified, and all being prepared and mixed in the manner set forth.

97,460.—ORSON O. THWING, Martinsville, Ind. —*Truss.*—November 30, 1869.

Claim. — The combination of the inelastic metal clasp, encircling the ilium only, the astringent pressure-pad, and the elastic band, all these parts being constructed as set forth, for the purposes specified.

97,461.—GEORGE W. TOWNSEND, Galesburgh, Mich.—*Stump-Extractor.*—November 30, 1869.

Claim.—1. Placing the frame upon the rollers B, when arranged in the manner and for the purpose specified.

2. The double-crank axle I, when provided with a large and a small wheel, K and L, substantially as and for the purpose specified.

3. The manner of placing the wheel C upon the bar D, so that it can be tilted from one side to the other, substantially as set forth.

4. The wheel C, in combination with the lever E and spring F, when used in the manner specified.

5. The manner of attaching draught-rod G to the axle H, in the manner and for the purpose specified.

6. In combination with the double-crank axle I, the two bars M and lever O, when used substantially as specified.

7. The arrangement and combination of the wheels C, K, and L, lever E, crank-axle I, bars M, slide N, and spring F, when all are used to form a machine in the manner and for the purpose described.

97,462.—FRANCIS C. VIBERT, Hockanum, Conn. —*Fruit-Slicer.*—November 30, 1869.

Claim.—The upright oscillating frame-work F, and follower G, in combination with a reciprocating fruit-holder D, operated by gearing K, crank L, connecting-rod M, and table A, with double-edge cutter C, constructed and arranged as herein described, and for the purpose set forth.

97,463.— GUSTAVUS WEDEKIND, Philadelphia, Pa.—*Lamp-Shade.*—November 30, 1869.

Claim.—A shade, of argentine paper, the interior or reflecting surface of which is embossed according to any ornamental design, the overlapping edges of the paper being secured together by metallic buttons, all substantially as set forth.

97,464.—J. W. WESTON and M. H. WESTON, Windsor, Ill. — *Ditching-Machine.*— November 30, 1869.

Claim.—An improved ditching-machine, formed by the combination of the mold-board A, landside B, cross-bars or beams C, caster-wheel G H, lever I, and guide-bar J, with each other, said parts being constructed, arranged, and operating substantially as herein shown and described, and for the purposes set forth.

97,465.—A. W. WILKINS and S. T. ESKRIDGE, Rome, Ga.—*Expanding-Plow.*—November 30, 1869.

Claim.—1. Adjustably supporting the lower ends of the plow-standards C, by means of the brace-rods E, nuts *e'*, rods or bolts F, nuts *f'*, and brackets G, said parts being constructed, arranged, and operating substantially as herein shown and described, and for the purposes set forth.

2. The combination of the rods and nuts D *d'*, rods and nuts E *e'*, rods and nuts F *f'*, and brackets G, with each other and with the beam A and standards C of the plow, substantially as herein shown and described, and for the purpose set forth.

97,466.—GEORGE HENRY WILSON, London, England, assignor to HENRY WILLIAM DEE and LOUIS DEE, same place. — *Watch-Winding Attachment.* — November 30, 1869.

Claim.—1. The rotating disk, forming part of the ordinary hinged or swinging back or cap of a watch, and the medium for winding the watch, as described.

2. In combination with the rotating back, as described, the toothed friction-plate *d*, as and for the purpose set forth.

3. In combination with a projecting plate or disk, *x*, whereby the hand can be set and adjusted, a detent *u*, spring *v*, and projecting arm *w*, as shown in Fig. 11, arranged and acting in the manner and for the purpose herein described.

4. A snail-piece, 8, with stop 12, on the main-spring arbor, in combination with a bearing-spring, *q*, with stop 13, (Figs. 13 and 14,) as and for the purpose described.

97,467.—THOMAS WILSON, Garton, England.— *Combined Planter and Cultivator.*—November 30, 1869.

Claim.—1. The adjustable cultivator *r*, planter *s*, and coverers *r' s'*, when arranged as and for the purposes described.

2. The cam *i'*, in combination with the lever *u'*, for the purposes specified.

3. The lever *v*, for the purposes as herein described.

4. The adjustable slides *q q* and *p' p'*, in combination with the sweeps *o' o'*, for the purposes as described.

5. In combination with the planter *s*, the cylinders *m m'* and *n n'*, all when arranged and combined as described.

6. In combination with the cultivator *r* and coverer *r'*, the shaft *f'* with pins *g g*, and the scoops *j' j'* with spout *k*, combined and arranged as described.

97,468. — NICKOLAS ZINS, Evansville, Ind.—*Bedstead-Fastening.*—November 30, 1869.

Claim.—A bed-fastening, A, having two or more bolt-holes, two beveled flanges a^1, and two inclined projections, a^2, each of said parts being arranged, with respect to the other, as set forth.

97,469. — HENRY G. DAYTON, Dayton, Ohio.—*Compound for Disinfecting and Deodorizing.*—November 30, 1869.

Claim.—The within-described compound.

97,470.—DAVID ADAMSON, New York, N. Y.—*Lubricator.*—December 7, 1869.

Claim.—A lubricator-cup, containing a piston, and connected with a steam-supply pipe, through which steam can be brought to bear upon said piston, as set forth.

97,471. — JAMES L. ALBERTSON, New London, Conn. — *Baling-Press.* — December 7, 1869; antedated November 25, 1869.

Claim.—1. The pedestal A, provided with two plates or flanges, and forming the connection and support between the press-frame and the ground, when used in combination with the gear-wheel C, revolving about it, and transmitting the power applied to other machinery for working the press, all arranged substantially as described.

2. In combination with the above arrangement, the vertical screws D D' and pinions B B', arranged and operating substantially as described.

97,472. — HENRY ASHFIELD, Chicago, Ill. — *Safety-Valve.*—December 7, 1869.

Claim.—1. The valve I, constructed as shown and described, and operating as and for the purpose set forth.

2. In combination with the valve I, and rigidly attached to its outer upper part, the jacket V, constructed as shown and described, and operating as and for the purpose set forth.

3. In connection with the valve I, and attached to it, the valve-stem Q, playing loosely in the sleeve M, supported by the brace B, and provided with the head R, all constructed as shown and described, and operating as and for the purpose set forth.

4. In combination with the sleeve M, the washer N, when constructed as shown and described, and operating as and for the purpose set forth.

5. In combination with the sleeve M, the nut L, the washer N, and the spiral spring K, when constructed as shown and described, and operating as and for the purpose set forth.

6. The braces B, cast into and with the valve-seat plate, as shown and described, and for the purpose set forth.

97,473.—W. F. BEECHER, Morristown, N. Y.—*Steam-Generator Smoke-Stack.*—December 7, 1869; antedated November 24, 1869.

Claim.—1. The arrangement of the walls D E and pipe A, in combination with space *a* and an exhaust-pipe, G, which extends above the plane of said dampers, substantially as described.

2. In combination with such arrangement, the diaphragm C, located over space *a*, and arranged above the lower end of pipe A, substantially as described.

3. The crown-plate B and diaphragm C, arranged above the lower end of pipe A, and above space *a* and inner wall E, substantially as described.

97,474. — GOTTLIEB BEER, Grafton, Wis. — *Snow-Plow.*—December 7, 1869.

Claim.—The combination of the sled A, frame C, backward-projecting tongue B, and shaft E, with the swinging point D, and adjustable wings F F, all arranged to form a snow-plow, substantially as herein shown and described.

97,475. — HARRISON BLACKBURN, Bedford County, Pa.—*Construction of Preserving-Houses.*—December 7, 1869; antedated November 20, 1869.

Claim.—The combination, in an ice-house, of the case A, the ice-room B, provided with the doors D D, for putting in the ice, and obtaining access to the case A, respectively, and false partition E, and the packing-room F, with door 2, substantially as shown and set forth.

97,476.—JEROME B. BROWN, Lowell, Mass., assignor to himself and NELSON F. LIBBY, same place. —*Planing-Machine.*—December 7, 1869.

Claim.—The arrangement of the elastic pressers *f f f f*, in combination with the endless platform *n'*, with sunk beds *n n*, all when arranged and operating as described.

97,477. — EDWARD CARD, Pawtucket, R. I.—*Stove-Grate.*—December 7, 1869.

Claim.—1. A spiral or auger-shaped bar, either movable or stationary.

2. A "right-and-left hand" spiral bar, which turns or revolves the other bars on either side.

3. A grate, formed of spiral or auger-shaped parallel bars, all as shown, and operating substantially as described.

97,478. — WHEELER CASE, Russia, assignor to himself and JAMES H. READ, Jr., Utica, N. Y.—*Boot-Jack.*—December 7, 1869; antedated November 27, 1869.

Claim.—A boot-jack, having a loop, B, and rest A, hinged at the center, or thereabout, constructed and adapted for use as herein shown and described.

97,479.—A. MORRELL CORY, New Providence, N. J. — *Buggy-Top.* — December 7, 1869; antedate November 20, 1869.

Claim. —1. The base C, or its equivalent, permanent in its relation to the top, movable with the top on an axis, G, in its relation to the body or seat, the posts G, and the bars B, or their equivalents, substantially as and for the purposes specified.

2. In the support or limitation and action of the top, the tumblers H, connected by the bolt I, also the stops or pawls K, the keys L, the guards Q, and loops S, or their equivalents, substantially as and for the purposes specified.

97,480.—R. A. COWELL, Cleveland, Ohio, assignor to himself and E. N. KEYS, same place.—*Pushing-Jack for Railroad-Cars.* — December 7, 1869.

Claim.—The self-adjusting dogs E F, and head-block B, in combination with the lever A and the walking-staves C D, having the sharp-edge metal feet I and springs *b b*, all arranged as herein set forth.

97,481.—HENRY COWGILL, Fredonia, Del., administrator of the estate of JOHN H. C. COWGILL, deceased. — *Sewing-Machine Table.*— December 7, 1869.

Claim.—1. The combination, with a sewing-machine, of an inclined table or support, substantially as and for the purposes described.

2. The combination, with a sewing-machine, of a table or support that is movable or adjustable to any inclination desired, substantially as and for the purpose described.

3. The combination, with a sewing-machine, of an inclined top or support, and rests for the arms of the operator, substantially as and for the purpose described.

4. The combination, with a sewing-machine, of an adjustable slipper-bar, substantially as and for the purpose described.

5. The combination, with a sewing-machine, of an inclined table or support, and an adjustable slipper-bar, substantially as and for the purpose described.

6. The combination, with a sewing-machine, of an inclined adjustable table or support, an adjustable slipper-bar, and rests for the arms of the operator, substantially as and for the purposes described.

97,482.—HUGH H. CRIGIE, New York, N. Y.—*Basin-Trap.*—December 7, 1869; antedated November 25, 1869.

Claim.—The trap *d*, with the coupling *e* and socket *g*, in combination with the segment *h* and screw *i*, as and for the purposes set forth.

97,483.—BIRAM C. DAVIS, Binghamton, N. Y.—*Post-Office Letter-Box.*—December 7, 1869; antedated November 22, 1869.

Claim.—The combination and arrangement of the series of sliding letter-boxes, having guides B B, with the detent-pawls D and E, and the actuating-pawl F, operated by the sliding door G, substantially as and for the purposes herein described.

97,484.—CALVIN S. DAVIS, Orono, assignor to himself and THOMAS N. EGERY, Bangor, Me.—*Clapboard-Machine.*—December 7, 1869.

Claim.—The combination, with a circular saw, of adjustable sappers *f g*, lying in transverse grooves in the collars, and flush with its surface, and set-screws to hold them to place against the face of the saw, all substantially as shown and described.

97,485.—WALTER DAWSON, Scranton, Pa.—*Safety-Valve.*—December 7, 1869.

Claim.—The combination, with the flat valve and seat, of the inverted socket *e*, and pintle *c*, substantially as herein shown and described.

97,486.—JULIUS DOLLMANN and FREDERICK WILLIAM CLAESSENS, Boston, Mass.—*Compound for Lining Textile Hose.*—December 7, 1869.

Claim.—1. The manufacture of a compound, composed of caoutchouc, gum-asphaltum, and benzine, in proportions as set forth, and prepared in the manner described.

2. The application of the compound for lining textile hose, to make it steam, water, and air tight, substantially as described.

97,487.—WILLIAM DYATT, New York, N. Y.—*Hoisting-Apparatus.*—December 7, 1869.

Claim.—The arrangement of two drums, F and E, in combination with their wheels G and H, worked both simultaneously by a pinion J, placed between said wheels and one continuous rope or chain passing over the double pulley B and pulley C, substantially as and for the purpose hereinbefore set forth.

97,488.—JAMES EDGAR, New York, N. Y.—*Ore-Concentrator and Separator.*—December 7, 1869.

Claim.—The imparting of the vertical motion to said cylinder or other shaped vessel *a a*, which contains the ore, and thereby destroying the adhesion of the particles, and, while in this condition, bringing upon them a pressure of air, which may be supplied by bellows, or pump, or in any other way found convenient.

97,489.—WILLIAM EDSON, Boston, Mass., assignor to E. H. ASHCROFT, same place.—*Elevator.*—December 7, 1869.

Claim.—1. The shafts I, having a series of screws or bosses, R, arranged thereon, substantially as and for the purpose described.

2. In combination with the shafts I, having the bosses R secured thereon, the plates J, having the semicircular grooves, with screw-threads cut therein, said parts being arranged for joint operation, substantially as described.

97,490.—C. A. EDWARDS, Chatfield, Minn.—*Sulky-Plow.*—December 7, 1869.

Claim.—The levers A and B, posts C, C, and D, post E, iron rod F, bed-timber G, axle I, plow-beam J, and chain or rope M, all constructed, combined, and arranged as set forth.

97,491.—A. R. FENNER, Cold Brook, N. Y.—*Saw-Set.*—December 7, 1869.

Claim.—1. The combination, with the jaws A and B, the one of which is extended to form a handle, *b*, of the angle-bar E, constructed and arranged as herein described.

2. The combination of the set-regulating screw *e*, the angle-bar E, the jaws A and B, the levers or handles *b b'*, the strap F, with its screw C, and the spring *c*, essentially as shown and described.

3. The combination of the gauge D with the jaws A B, and angle-bar E, substantially as specified.

97,492.—LEONARD FISCHER, Sonora, Cal.—*Wind-Wheel.*—December 7, 1869.

Claim.—The self-regulating apparatus described, consisting essentially of the shafts S^1 S^2, the miter-gear G G, the vanes *v v' b b'*, and the weighted arm a^2, the whole being combined substantially in the manner and for the purpose described.

97,493.—J. HYDE FISHER, Chicago, Ill.—*Fruit-Box.*—December 7, 1869.

Claim.—A fruit-case, made up of several boxes or sections, when the same are combined, arranged, and secured together in the manner shown and described.

97,494.—CALVIN H. FITCH, Syracuse, N. Y.—*Machine for Polishing Stone.*—December 7, 1869.

Claim.—1. The rubbers E E', attached to a rotary disk or balance-wheel, D, and made adjustable thereon, substantially in the manner and for the purpose herein described.

2. The springs *f f*, interposed between the rubbers E E' and rotary disk or balance-wheel D, in combination with said rubbers and wheel, substantially as herein described, for the purpose set forth.

3. The combination of the triangular frame A *a*, with standards B B *b* and a handle H, horizontal rotary balance-wheel D, with shaft *d*, adjustable rubbers E E', springs *f f*, and gearing C *c*, all constructed and arranged to operate substantially as herein described.

97,495.—BENJAMIN APTHORP GOULD FULLER, West Roxbury, Mass.—*Deodorizing-Apparatus for Water-Closets.*—December 7, 1869.

Claim.—1. The dumping-carriage F, as made with or having the gauge G, the opening *c*, and the door *r*, arranged as described, and as combined with the lid or cover of the seat, by means as set forth, whereby such carriage, by and during the movements of the seat, may be caused to operate as explained.

2. The combination of the index-bar *d'* and its stop *e'*, and the series of holes *f*, with the gauge G and the dumping-carriage, combined with the hopper and seat, so as to operate therewith, substantially as set forth.

3. The combination of the scatterer S with the dumping-carriage and the hopper, applied to the seat and its cover, and arranged to operate therewith, as hereinbefore explained.

97,496.—THEODOTUS GARLICK, Cleveland, Ohio.—*Lightning-Rod and Conductor.*—December 7, 1869.

Claim.—In combination with a lightning-rod, the tube A, as shown and described.

97,497.—JAMES GEE, West New Brighton, N. Y.—*Process of Dyeing Black.*—December 7, 1869.

Claim.—1. Combining the dyeing and sizing processes into single operations, substantially as herein specified.

2. The combination of sulphate of copper and logwood with sizing-material, substantially as herein set forth.

3. The combination of bichromate of potash with sizing-matter, to be used substantially as specified.

97,498.—RUDOLPH GESELBRACHT and FREDERICK FREY, Galena, Ill.—*Latch.*—December 7, 1869.

Claim.—The combination of a keeper, of the form described, with the rigid latch and lifter, as and for the purpose specified.

97,499.—FREDERICK M. GIBSON, Chelsea, Mass.—*Boring-Machine.*—December 7, 1869.

Claim.—1. The combination of the slide-rod *p*

with the puppet B and with the collar *g*, and the spring *f* applied to the puppet, and the mandrel C, substantially in manner and so as to operate therewith, as specified.

2. The combination and arrangement of the auxiliary collar *g'* and its adjustable rings *k l*, and their clamp-screws *m n*, with the stirrup *o* and line *m'*, the puppet B, the mandrel C, and the spring *f*, applied to such puppet and mandrel, as specified.

3. The combination and arrangement of the slide-rod *p*, the puppet B, the two collars *g g'*, the spring *f*, and the line *m'*, the whole being to operate together substantially as explained.

4. In combination with the frame A, the puppet B, and mandrel C, mechanism, substantially as specified, whereby the puppet may be adjusted to and sustained in an inclined position on its frame, as and for the purpose of inclining the mandrel, and enabling it to operate while at any such inclination, so as to bore obliquely into a hub or article when placed on the supporting-disk.

97,500.—Dennis Henry Gleeson, San Leandro, Cal., assignor to himself and Dennis Gannon, same place.—*Gang-Plow.*—December 7, 1869.

Claim.—The combination and arrangement of the parts of my gang-plow, as herein described, this combination and arrangement consisting in attaching the draught-pole E, rigidly to the non-extensible axle of the carrying-wheels, the plow-beams being hung on the fulcrum-bolt D, which passes through the forward standards of the driver's seat and the draught-pole in advance of the axle, and which plow-beams are operated by a roller-shaft and attachments, as shown, the whole of the parts being combined and arranged together, in manner substantially as described, and for the purposes as set forth.

97,501.—J. Y. Goode, Water Valley, Miss.—*Well-Auger.*—December 7, 1869.

Claim.—1. A rod, G, attached to the actuating-stock at one end, extending through the tube, and provided near its extremity with a globe or valve, F, all as and for the purpose specified.

2. The combination of the yoke H, long nut I, (slotted at the top,) projection K, key M, and shoulder N, to regulate the exclusion or admission of air to the space below the auger, all as shown and described.

97,502.—Arthur Francis Gregory and Charles H. Ensign, Bridgeport, Conn.—*Sash-Holder.*—December 7, 1869.

Claim.—The combination of the serrated vibrating lever D, with the pusher E and plate C, respectively provided with the projection *g* and lug *h*, as and for the purpose specified.

97,503.—Abram Hagadorn, Canajoharie, N. Y.—*Coal-Ash Sifter.*—December 7, 1869.

Claim.—The hook E, to hold the sifter firmly while being filled, in combination with sifter A, case B, and covers C D, constructed as shown and described.

97,504.—H. L. Hall, Buffalo, N. Y.—*Ditching-Machine.*—December 7, 1869.

Claim.—1. The combination of the toothed plow A, frames B and F, elevator C, rollers D and E, band L, and drive-wheel J, and the transverse carrier G, with each other, substantially as herein shown and described, and for the purpose set forth.

2. Contracting the base-frame B, in the rear of the plow A, and lower end of the elevator C, substantially as herein shown and described, and for the purpose set forth.

97,505.—Thomas S. Hall, Stamford, assignor to Hall's Patent Electric Railway-Switch and Draw-Bridge Company, New Haven, Conn.—*Electro-Magnetic Railroad-Signal.*—December 7, 1869.

Claim.—1. The lever F, connected with the armature D, substantially as herein shown and described for the purpose of retaining the armature A in contact with its magnet B, as long as the current through the magnet E remains open, as set forth.

2. An electric signal provided with a lever, F, which will keep it displayed automatically after the electric circuit through the magnet which set the signal is broken, as set forth.

97,506.—Joseph Hampson, Newburgh, N. Y.—*Boring-Machine.*—December 7, 1869.

Claim.—1. The bushes N N, with shoulders *n n*, in combination with rods G G', head-stocks B B', gearing M^1 M^2 M^3, and hand-wheel L, for altering simultaneously the distance between centers of the drill-spindles C C, as specified.

2. The bolt H with head H^1 and wing-nut H^2, in combination with the head-stocks B B', for holding the spindle stationary, when set right for use.

3. The drilling-machine, composed of frame A, spindle-head stocks B B', revolving spindles C C, with bits D D, rods G G', with bushes N N, gearing M^1 M^2 M^3, hand-wheel L, bolt H H^1, with nut H^2, all combined for the purpose as specified.

97,507.—J. F. Harly, Kipton Station, Ohio.—*Tuyere.*—December 7, 1869.

Claim.—The herein-described tuyere, consisting of the water-chamber B, ash-box I, valve E, ratchet and pinion *a* and G, and pipes H and J, all constructed and arranged to operate as and for the purpose set forth.

97,508.—Henry Haynsworth, Sumter, S. C.—*Garden-Plow and Marker.*—December 7, 1869.

Claim.—The herein-described improved garden-plow and marker, consisting of the beam A, wheel B, plow D, arm F, and marker G, all combined and arranged substantially as specified.

97,509.—William Holcraft and David McLaughlin, Philadelphia, Pa.—*Steam-Generator Smoke-Stacks.*—December 7, 1869; antedated November 20, 1869.

Claim.—The construction and arrangement of the shell E, in the manner and for the purpose herein set forth.

97,510.—George Hopsen, Bridgeport, Conn.—*Machine for Testing Springs.*—December 7, 1869.

Claim.—The spring-testing machine herein described, having means for inducing and continuing the action of the rapidly-moving surface A' on its counter-surface G', a slowly-moving block, D', and connecting-mechanism, arranged as specified, so as to allow the spring to be strained to various degrees between the blocks C' and D', or their equivalents, and the operation to be conveniently repeated and controlled, all substantially in the manner herein set forth.

97,511.—G. E. Hoyt, Hebron, N. H.—*Clothes-Drier and Stove-Pipe Shelf.*—December 7, 1869.

Claim.—1. The ring A, in combination with the center-piece E, as and for the purpose described.

2. The specific device described, consisting of the ring A, clamps B, rods C, and frame D, when used in connection with a stove-pipe, as and for the purpose set forth.

3. The specific device described, consisting of the ring A, clamps B, rods C, frame D, and center-piece E, when used in connection with a supporting-stand, as and for the purpose described.

97,512.—Edward A. Hyde, Ann Arbor, Mich.—*Shot and Bullet Machine.*—December 7, 1869.

Claim.—1. The rotating wheel D, constructed as described, in combination with the cylinder A, as set forth.

2. In combination with the rotating wheel D, the rim C C, provided with the opening F and the cutting-lip G, substantially as set forth.

97,513.—Benjamin F. Irvine and Thomas A. Hitchcock, North La Crosse, Wis.—*Alarm-Lock.*—December 7, 1869; antedated November 27, 1869.

Claim.—The slotted plate B, with projections *a a'*, arranged to operate in connection with the double bolt A, substantially as and for the purpose set forth.

97,514.—Amos A. Jaqua, New York, N. Y., assignor to himself and David Parker, same place.—*Window-Blind.*—December 7, 1869.

Claim.—1. The sockets *c*, for receiving the ends

of the slats, and for the attachment of the cranks or pinions, in combination with the perforated plate G, substantially as herein described.

2. The combination of the plate G, the pivoted sockets *c c*, arms *h h*, rod C, pinions *s*, and rack *f*, the whole forming an apparatus for adjusting the slats within the stile of the blind, substantially as and for the purpose herein specified.

97,515. — JAMES JENKINSON, Williamsburgh, N. Y.—*Sad-Iron Heater.*—December 7, 1869; antedated December 4, 1869.

Claim.—1. The sad-iron C, having the tapering longitudinal hole directly through it, from heel to point, and provided with the rebate at its base, so as to be applied to a heater, in the manner herein set forth and shown, for the purpose specified.

2. In combination with the above, the detachable handle D *d'*, as herein described, for the purpose specified.

97,516.—JOHN S. JENNINGS, Brooklyn, N. Y.—*Chamber-Pail.*—December 7, 1869.

Claim.—1. A pail, provided with a receiving-chamber and spout, formed of one continuous sheet of metal, and shaped as shown and described.

2. A pail, combining a cover, D, extending over the spout, and a receiving-chamber and spout in one piece, each of said parts being constructed, with respect to the others, in the manner described.

97,517.—WESLEY L. JUKES, New York, N. Y., assignor to himself, FREDERICK MCLEWEE, PRENTICE H. PUTNAM, and BRONSON MURRAY, same place.—*Gas-Burner.*—December 7, 1869.

Claim.—1. The use of the tube *d d*, when composed of any material which will not fuse at the temperature required to fuse glass, in combination with the glass arms *c*, as and for the purposes described.

2. Embedding the inner ends of the tubes or tips *d* in the glass arms *c*, or surrounding the ends of the glass arms *c* with the ends of the tubes or tips *d'*, to form secure and gas-tight joints, as and for the purposes described.

97,518.—JEREMIAH KEITH, Brooklyn, N. Y.—*Sewing-Machine for Sewing Shoes.* — December 7, 1869.

Claim. — 1. The combination with the rotating horn, of the slide E, looper D, and detacher *h*, constructed and operating within the horn F, substantially as herein described, for the purpose specified.

2. The combination of the curved back-piece S, pivoted bar T, and swinging bed V, with the horn F and needle-bar, for the purpose of rotating the needle-bar and horn simultaneously, substantially as herein shown and described.

3. The looper D, in combination with the cam K the frame L, connecting-rod N, pivoted lever *m*, short bar *k*, and sliding bar E, the rod N and lever *m* being connected together by a ball-and-socket joint, *o*, all arranged as herein shown and described, and for operating the looper.

4. In combination with the feed-bar *a* and presser-foot *b*, the lever *c*, slotted plate *d*, rod *j*, and its operating-cam, the cam *e*, bar *f*, and springs *i*, substantially as herein described, for the purpose specified.

97,519.—J. KEITH, Brooklyn, N. Y.— *Detachable Tipping-Bail.*—December 7, 1869.

Claim.— 1. A detachable tipping-device, formed of the hoop or band A and bail D, substantially as and for the purposes described.

2. The spring-ears *e*, in combination with a tipping-bail, substantially as and for the purposes described.

97,520.—MOSES A. KELLER, Littlestown, Pa.—*Shaker for Thrashing-Machines.*—December 7, 1869.

Claim. — 1. The bars F, hung upon the crank-shafts G, and carrying the short cross-bars and downwardly-projecting teeth, when provided with the hooks I, projecting into the discharge-spout of the thrasher, for the purpose of guiding the straw to the shaker, as herein shown and described.

2. The opening C and bars D, arranged and operating in connection with the bottom of the shaker, substantially as herein shown and described, and for the purpose set forth.

97,521.—SAMUEL P. KITTLE, Newark, N. J.—*Spring-Bed.*—December 7, 1869.

Claim.—1. A spiral spring, C, made in the form of a truncated cone, the large end of which is adapted to receive a flexible cover or bed, and the small end a securing-button, in combination with said cover or bed and a securing-button, as and for the purpose specified.

2. The combination, with the frame A, of the angle-blocks F and the braces G, when said braces are secured to the angle-blocks by two or more points or screws, so as to prevent the angle-block from turning upon the brace, as hereinbefore set forth.

3. The construction of the catch I, in such a manner that it shall not only form a stop for the ratchet H, but shall also serve as a brace to support the frame against lateral pressure, as hereinbefore set forth.

97,522.—SAMUEL P. KITTLE, Brooklyn, N. Y.—*Folding-Box Spring-Mattress.*—December 7, 1869.

Claim.—1. The combination, in folding-box spring-mattresses made in three sections, of the hinges E E, as and for the purposes set forth.

2. In folding-box spring-mattresses, the sides of the box of less height in the middle than at the ends, in combination with so placing the springs in such central section that the tops of such springs will project over or stand close against the sides of the box, for the purposes set forth.

3. In folding-box spring-mattresses, so made to allow of one end being elevated to form a bolster, bracing the upper row or series of springs in the body of the mattress, by extending a cord from the upper part of such spring forward and downward to or near the bottom of the bolster-section of the box, as and for the purposes set forth.

4. In combination with folding-box spring-mattresses, the use of the hinge E E, for connecting the different sections of the box, constructed as described.

97,523.—HENRY KLIPERD and BENJAMIN NEWBURY, Clarksville, Ohio. — *Combined Shovel and Tongs.*—December 7, 1869; antedated November 30, 1869.

Claim.—The compound lever B *d c b*, when constructed, arranged, and combined with the shovel A *a*, in the manner and for the purpose herein set forth and described.

97,524. — CHARLES KREBS, West Springfield, Mass.—*Mode of Attaching Seats to Carriages.*—December 7, 1869.

Claim.—The piece B, its lower side *h* fitting and bearing upon the base *e'*, said piece B having thereon the hooked projection *t*, the whole forming a lock or fastening-device for carriage-rails, seats, and extension or high backs to seats, all constructed and operating substantially as herein described and for the purposes specified.

97,525.—PERLEY LAFLIN, Warren, assignor to himself and Z. E. CARY, West Brookfield, Mass.—*Attaching Calks to Horseshoes.*—December 7, 1869.

Claim.—1. The combination with the shoe of the hinged cross-braces which carry the calks, and means, substantially such as herein described, for spreading the ends of said braces or projections on the same against the shoe, substantially as shown and set forth.

2. The combination, with the cross-supporting pieces B B', of a hinged bolt-arm, F, substantially as set forth.

3. The combination, with the cross-supporting braces B B', of a conical clamping-nut and hinged-bolt support, substantially as and for the purposes set forth.

97,526.—J. H. LANE and C. D. HOUSE, Lake Village, N. H.—*Knitting-Machine Needle.*—December 7, 1869.

Claim.— The knitting-machine needle herein described, having elongated openings in the sides, to receive the flattened ends of the pivot on which the latch turns, said pivot being flattened after it is passed through the latch, and the latch and its pivot being secured in place in the shank of the needle, by springing the slot in the shank open.

97,527.—Jacques Laurent, New York, N. Y.—*Machine for Drilling and Preparing Watch-Cases for Springing.*—December 7, 1869.

Claim.—1. The combination of the drills F F′, their holders *m m*, drill-stocks I I′, and sliding-boxes K K′, with the right and left-handed adjusting-screw M, substantially as specified.

2. The combination of the drill G, its holder *n*, the drill-stock J, and horizontal adjusting-screw N, with the adjustable drills F F′, and their holders *m m*, essentially as herein set forth.

3. The combination of the adjustable revolving burr H with the adjustable drills F F′, and G, and their holders, substantially as specified.

4. The combination of the vertically and horizontally-adjustable drills F F′, and G, and their holders, the adjustable rotating burr H, and the horizontally-adjustable bed B, made capable of vertical action, and carrying a suitable die, D, essentially as and for the purpose or purposes herein set forth.

97,528.—Samuel Lenher and Hallam H. Spencer, Philadelphia, Pa.—*Mode of Preparing Paper for Printing Postage and Revenue Stamps.*—December 7, 1869.

Claim.—1. The preparation compounded of the ingredients specified, for the purpose set forth.

2. A preparation for printing postage or revenue stamps upon, and from which the mark of cancellation cannot be effaced without disintegrating such preparation, either by chemical action alone, or by chemical and mechanical action combined, substantially in the manner described.

97,529.—George W. Lewin, Worcester, Mass.—*Base-Burning Stove.*—December 7, 1869.

Claim.—1. The combination, with a base-burning stove, of an oven, B, substantially as and for the purposes set forth.

2. The arrangement of the supply-cylinder F, fire-pot E, ash-pit D, oven B, and hot-air chambers or passages C and *a*, substantially as and for the purposes set forth.

3. The combination and relative arrangement, in a base-burning stove, of a perforated air-chamber, *b*, and oven B, as shown and described.

97,530.—John S. Lewis, Elkport, Iowa.—*Broadcast-Seeder.*—December 7, 1869.

Claim.—1. A broadcast-seeder, having a seed-box, A, adapted to receive the seed continuously from the bag during the operation, substantially as herein described.

2. The combination, with the seed-slide E of a broadcast seeder, of scattering-lips *e′*, arranged and operating as herein set forth.

97,531.—Sylvanus D. Locke, Janesville, Wis.—*Grain-Binder.*—December 7, 1869.

Claim.—1. The combination of the cam-arm D′ with the binding-arms I J, substantially as described.

2. The finger *d* and lever *b′*, for supporting the disengaging-part *b*, substantially as described.

97,532.—Sylvanus D. Locke, Janesville, Wis.—*Grain-Binder.*—December 7, 1869.

Claim.—The arrangement of the cam-arm A, pivoted as described, with the cam-block *c c′*, substantially as and for the purpose described.

97,533.—Sylvanus D. Locke, Janesville, Wis.—*Grain-Binder.*—December 7, 1869.

Claim.—1. The combination of the cam-arm A with the spring *d* and spring-arm B, substantially as described.

2. The combination of the cam-arm A, spring *d*, spring-arm B, and segmental gears *k* and C, for the purpose of producing a yielding or elastic, and, at the same time, a reciprocating movement of a compressing-arm of a grain-binder, substantially as described.

97,534.—Sylvanus D. Locke, Janesville, Wis.—*Grain-Binder.*—December 7, 1869.

Claim.—The combination of a rotary tying or twisting device, circular-moving cutting-mechanism, and reciprocating wire or cord holder, substantially as described.

97,535.—Sylvanus D. Locke, Janesville, Wis.—*Grain-Binder.*—December 7, 1869.

Claim.—The arrangement of the part N, and cutting-device *h*, substantially as described.

97,536.—Sylvanus D. Locke, Janesville, Wis.—*Grain-Binder.*—December 7, 1869.

Claim.—The central bolt *h k*, when used to hold and adjust the rotary parts of the wire-holding and wire-cutting mechanism against the face of the fixed part *m*, substantially as described.

97,537.—John Logan and D. W. Eldredge, Boston, Mass.—*Metallic Cartridge.*—December 7, 1869.

Claim.—1. A cartridge-shell, made of a tube of thin sheet-metal, open-ended, and with one end formed into the flange *b*, and breeched with a separate piece of metal, with which the nipple is integral, when the nipple is exposed, so that it can be capped and recapped, as described.

2. A cartridge-shell, in which the breech-piece is made separate from the tube, when combined with a nipple integral with the breech-piece, and bushed, as described.

3. The flange *c*, projecting inwardly, and combined with a nipple contained in a cavity in the rear end of the shell, for the purpose specified.

97,538.—Arthur Love, Saxonburgh, Pa.—*Portable Fence.*—December 7, 1869; antedated November 22, 1869.

Claim.—A portable fence, consisting of panels having the strips *b*, and triangular piece C, secured thereto, and held together by the notched bars D, all constructed and arranged substantially as shown and described.

97,539.—Patrick Magee, Assumption Parish, La., assignor to Felix Thibodaux, same place.—*Sawing-Machine.*—December 7, 1869.

Claim.—The combination of the frame A A′ and B, with braces G G′, shaft B′, lever C′, link D, cranks C and E, clamp E′, and pitman F, when all the parts are constructed, arranged, and operate as herein described for the purpose set forth.

97,540.—John Jacob Märki, Richmond, Ind.—*Cooler for Beer and other Liquids.*—December 7, 1869.

Claim.—The combination of a series of perforated pans with a series of blowers, operating substantially as described.

97,541.—Godlip Meyer, Cleveland, Ohio, assignor to himself and Jacob Wagner, same place.—*Machine for Wiring Blind-Rods and Slats.*—December 7, 1869.

Claim.—The cog-wheels O R O′, pinions Q S, crank-wheels E G, driving-rods D D′, adjustable feather N, spring *c*, lever I, and foot J, all arranged substantially as described, and for the purpose specified.

97,542.—Henry Miller, Roadside, Va.—*Garden-Implement.*—December 7, 1869.

Claim.—1. In combination with the stock A, the polygonal hollow pins *d*, substantially as set forth.

2. In combination with the stock A, the equilateral triangular hoe *e*, substantially as explained.

97,543.—John C. Mills, Palmyra, N. Y.—*Combined Hay-Rake and Tedder.*—December 7, 1869.

Claim.—A combined hay-rake and tedder, consisting of a rake-bar, C, curved tines G, handle D, and detent-bar N, and the shaft H, having teeth I, supported on the horizontal arms J J′, removable by means of slide O and clip P, and operated by wheel L and pulley M, arranged as described.

97,544.—John H. Mooney, San Francisco, Cal.—*Tuck-Creaser for Sewing-Machines.*—December 7, 1869.

Claim.—1. The arm C, having thereon friction-rollers D D′, and operated by the needle-arm in combination with the conical cam E, substantially as described.

2. The adjustable conical cam, in combination

with the ereasing-arm for regulating the forec of the arm on the fabrie, to form the erease, as desired.

3. The eombination, with the arm C and the roeking ereasing-bar F, of the base-plate A, slotted holding-plate G, and rod H, when all are eonstructed and eombined as and for the purpose set forth.

97,545. — JOHN MÜLLER, Philadelphia, Pa. — *Folding-Bedstead.*—Deeember 7, 1869.

Claim.—1. Forming bearings *b b* and reeesses *a a* in the head and foot pieee of a bedstead or erib, to reeeive the ends of journals c^2 c^3 of the side-pieees C C, as shown and described.

2. The supports D D, provided with pins *d d*, in combination with the bottom E and serews F F, eonstrueted and arranged as herein deseribed, for the purpose speeified.

3. The means, herein deseribed, for uniting the several parts of a bedstead or erib, as deseribed.

97,546.—H. OLNEY, Malone, N. Y., assignor to himself, ROBERT A. DELONG, and LUCIUS R. TOWNSEND, same plaee.—*Rotary Steam-Engine.*—Deeember 7, 1869.

Claim.—1. A rotary engine, eontaining a series of radial cylinders in a revolving frame, the pistons of the said cylinders being all conneeted with a ring on a fixed eccentric, substantially as herein shown and deseribed.

2. The eireular valve L, having the apertures *n* and *o*, to automatically conduet the steam into the outer and inner parts of the eylinders as they arrive at eertain positions, substantially as herein shown and deseribed.

3. The tubular axle C, earrying the eceentrie or erank-pin *g* and the valve-disk L, and made reversible, with its appendages, to reverse the whole maehine, as set forth.

4. The handle *j* and serew *i*, or its equivalent, eombined with the tubular axle C, to loek the same, substantially as deseribed, and to serve to reverse the same, as speeified.

5. The pipes *c d*, eonducting the steam from a revolving steam-chest to the outer and inner ends, respeetively, of the eylinders, substantially as and for the purpose herein shown and deseribed.

97,547.—EMERY PARKER, New Britain, Conn. —*Sheet-Metal Key.*—Deeember 7, 1869.

Claim.—1. Making that part of the jointed shank of a sheet-metal key into which the part holding the key proper folds, corrugated or arehed in the line of its axis, substantially as deseribed, for the purpose speeified.

2. Making the split shank of a sheet-metal key with an intermediate transverse braee, *c*, eorresponding in form to the curvature of the sides, substantially as deseribed, for the purposes specified.

97,548.—JOSEPH PARKIN and JAMES H. SMITH, Cleveland, Ohio.—*Window and Door-Cap Molding.* —Deeember 7, 1869.

Claim.—The metal molding, eonstrueted in the manner above deseribed, as a new artiele of manufaeture.

97,549.—GEORGE S. PIERCE, Wilkesbarre, Pa. —*Device for Forming Boilers.*—December 7, 1869.

Claim.—The shaft A, with its two mortises *m m*, segmental plates B B, with arms *c c*, set-serew S, follower D, with its eap and mortise, and fastened with the thumb-serew T, arranged as described.

97,550. — OLIVER E. PILLARD, New Britain, Conn., assignor to FREDERICK H. NORTH, same plaee.—*Permutation-Lock.*—Deeember 7, 1869.

Claim.—The latch B, when seeured to the ease A, and provided with the slide C, arranged to slide longitudinally with the same, substantially as deseribed.

97,551.—SAWYER PORTER, Leominster, Mass., assignor to himself and LEVI W. PORTER, same plaee.—*Machinery for Making Piano-Forte Cases.*— Deeember 7, 1869.

Claim.—1. The above-explained arrangement of the edges or gauges *l m* of the platform G, with the eutter-wheel E, applied to the frame A, aud so as to operate with sueh platform, substantially in manner as speeified.

2. The eombination of the eoncave eutter-wheel E, its frame B, its operative screw C, the vertieal guides *b b*, and the platform G, formed as set forth, and arranged as deseribed, with the said eutter-wheel and its operative mechanism, the whole being as and for the purpose and to operate as speeified.

97,552. — PERLEY PUTNAM, Laeonia, N. H.— *Railway-Car Wheel and Axle.*—December 7, 1869.

Claim.—1. The splines D D and operating-serews E E, applied to and in eombination with the axle A and wheels B B, substantially as and for the purpose herein speeified.

2. The head *d* on the small end of eaeh spline, in eonneetion with the reeess *e* and shoulder *f* in the wheel, for the purpose set forth.

3. The eeeentric or spring-stop *t* on the spline, eonstrueted and arranged, in eonneetion with the wheel-hub, substantially as and for the purpose herein speeified.

4. The spring-band *r*, in eombination with the spline and wheel-hub, for the purpose herein set forth.

97,553.—WILLIAM O. ROBBINS and CHARLES W. STAFFORD, New York, N. Y.—*Machine for Preparing Paving-Blocks.*—Deeember 7, 1869; antedated November 30, 1869.

Claim.—1. In a maehine for dressing and grooving wooden paving-bloeks, the eombination of the following deviees: first, a rotary eutter for redueing the bloeks to a uniform thiekness; seeond, meehanism for holding the bloeks while being eut; third, meehanism for feeding the bloeks through the maehine; fourth, eutters for eutting erosswise of the grain of the wood, and forming a dovetail groove in the sides of said bloeks; and fifth, eutters 13 for removing the upper angle of said bloeks, the parts being eonstrueted, arranged, and operatiug substantially as and for the purposes set forth.

2. In a maehine for grooving wooden paving-bloeks, the eombination of second, third, and fourth of the before-named deviees, for grooving the sides of pavement-bloeks transversely of the grain of the wood, substantially as and for the purposes set forth.

97,554. — WILLIAM O. ROBBINS and CHARLES W. STAFFORD, New York, N. Y.—*Machinery for Preparing Wooden Blocks for Pavement.*—Deeember 7, 1869.

Claim.—The vertieal eutters and spindles *f i*, and horizontal revolving eutters *t* or *u*, in eombination with the reciproeating earriage *g h k*, all the parts being eonstrueted and arranged to operate substantially as described and for the purposes set forth.

97,555. — N. T. P. ROBERTSON and THOMAS NILES, Fairbury, Ill.—*Compound for Destroying Insects.*—December 7, 1869.

Claim.—A eompound, eomposed of the above-named artieles, in or about the proportions speeified, and used for the purposes herein set forth and deseribed.

97,556.—A. SHELINE and E. BURKE, Edon, Ohio. —*Harvester.*—Deeember 7, 1869.

Claim.—1. The arrangement of the gear-wheels A B, elutehes D, on the driving-shaft C, pinions F G, eountershaft E, eluteh-springs *b*, button C′, and hand-lever, all substantially as speeified.

2. The arrangement of the tubular bearing K, shoe I, pitman-shaft H, and braees M, substantially as speeified.

3. The eombiuation, with the truck and the mower-bar, of the shaft O, arms O^1 O^2, segmental-beveled wheels, shaft P, and lever P^2, when arranged substantially as speeified.

4. The arrangement of the belt S^5, shaft S^4, pitman-shaft H, wheels S^8, shaft S^6, belt S^7, with the reel-shaft aud pulley thereon, substantially as speeified.

5. The arrangement of the eurved post T^2, slide T^1, radial bar T^3, and spring-stop T^4, substantially as speeified.

6. The eombiuation, with the elevator, of the eutoff U U^1, dropper V^2, slide V, dog U^2, rod V^1, and rod V^4, all substantially as speeified.

97,557.—Abraham Shenfield, New York, N. Y.—*Suspenders.*—December 7, 1869.

Claim.—The yoke formed of the straps A, A, and D, united at B C, and arranged as specified, in combination with the double buttoning-straps E applied at the sides and back so as to slide through the respective loops by which said straps E are connected to the said yoke, for the purposes and as specified.

97,558.—Samuel W. Shorey, Galesburgh, Ill.—*Boot-Conformator.*—December 7, 1869.

Claim.—1. The combination of the sole-plate A, outside surrounding frame B, and radial bars F, with the adjustable measuring-uprights C, and springs *s*, for measuring the tread or contour of the foot, substantially as specified.

2. The combination, with the adjustable measuring-uprights C, or certain of them, of the vertically-adjustable horizontal bars D, for measuring the height of the foot at certain parts, as well as at its contour or tread, essentially as herein set forth.

3. The combination of the springs *s* with the adjustable measuring-uprights C, operating independently of each other, substantially as and for the purpose specified.

4. The arrangement of a scale or scales on the measuring-uprights C, which carry the vertically-adjustable horizontal bars D, essentially as described.

5. A boot-conformator made up of a sole-plate, A, surrounding hinged or vertically-operating frame B, yielding or adjustable measuring-uprights C, with their markers E and vertically-adjustable horizontal bars D, substantially as specified.

97,559.—Addison Smith, Perrysburgh, Ohio.—*Combined Umbrella and Cane.*—December 7, 1869.

Claim.—The arrangement of the spring-pawl D and ferrule C with the lower detachable section of the standard B, for the purposes herein described, substantially as set forth.

97,560.—Cyrus Smith, Hermon, Me.—*Safety-Lamp.*—December 7, 1869.

Claim.—1. The guards C, with the end-pieces O′ and stops *d*, in combination with the wick-tube B, as and for the purpose set forth.

2. In combination with the above, the lever E, arranged and operating substantially as described.

97,561.—Dexter Smith, Springfield, Mass.—*Manufacture of Cartridge-Shells.*—December 7, 1869.

Claim.—The method herein shown of striking up a solid head upon a metallic cartridge-shell, by means of the punch B, die C, and header A, the parts being constructed, arranged, and operating in the manner and for the purpose shown and set forth.

97,562.—E. N. Snow, Chicopee, Mass.—*Garment-Suspender.*—December 7, 1869.

Claim.—The construction by which the vertical piece of wire C and the elliptical piece are connected, by twisting the end of A around the piece C at E, and in the means of suspending it, as shown and described.

97,563.—Pratt A. Spicer, Marshall, Mich.—*Track-Cleaner for Mowing-Machine.*—December 7, 1869.

Claim.—The upper swath-stick of a grass-divider, formed with a portion ascending from the base or socket *i*, and then deflected downward at any suitable angle of inclination to, or nearly to the ground, such deflected portion standing at the proper angle or curve of lateral divergence from the dividing line, whereby the fallen grass is first raised, and then cleared from the divider, and spread evenly on the swath, substantially as herein described and shown.

97,564.—Edward Sullivan, Pittsburgh, Pa.—*Piston-Packing.*—December 7, 1869.

Claim.—Making a recess in a packing-ring, at its joint, and using, in combination with said recess, a plate, and a metal or alloy filling, as herein described.

97,565.—D. G. Taylor, Campbellsville, Ky.—*Churning-Machine.*—December 7, 1869.

Claim.—The combination of the churn with the platform C, made in two parts, the one, c^1, stationary, the other, c^2, movable, and secured by hooks to the frame D, all constructed and arranged as herein shown and described, for the purpose set forth.

97,566.—Thomas Taylor, Washington, D. C.—*Explosive Compound for Use in Fire-Arms, Blasting, &c.*—December 7, 1869.

Claim.—The combination of ingredients, forming a new explosive, for the purposes set forth and described, substantially.

97,567.—Thomas Taylor, Washington, D. C.—*Gunpowder.*—December 7, 1869.

Claim.—The combination of paraffine with ordinary gunpowder, in all proportions, for the purpose substantially set forth and described.

97,568.—M. P. Thatcher, Pontiac, assignor to Julius A. Foster, Adrian, Mich.—*Combination-Padlock.*—December 7, 1869.

Claim.—1. The dog E, as constructed, with inclined catches, in combination with spring T and slotted bolt G, as and for the purpose specified.

2. The tumblers *m m*, &c., constructed with dished surfaces on one side and projecting rings 1 on the other, as and for the purpose specified.

3. The combination of slotted bolt G, dog E, with inclined catches, spring T, barrel H, tumblers *m m*, &c., heads B and C, screw *t*, and staple A, constructed and operating substantially as and for the purpose specified.

97,569.—George Theobalt, Springfield, Mass.—*Check-Hook.*—December 7, 1869.

Claim.—The construction of the hook A, with projections D and E, and with screw-hole C, whereby it is attached to the saddle by means of the screw-bolt B.

97,570.—William F. Thoms, New York, N. Y.—*Ventilator.*—December 7, 1869.

Claim.—1. The combination and arrangement of the pipes B A C D E and valve F, with each other, when used alone or in connection with the pipes H G I K, said parts B A C D E F being constructed and operating substantially as herein shown and described, and for the purpose set forth.

2. The combination of the pipes H G I K, and valve J, with each other, whether used alone or in connection with the pipes B A C D E, said parts H G I K J being constructed and operating substantially as herein shown and described, and for the purpose set forth.

3. The combination of a charcoal-stove or other heater with the pipes A and G, or either of them, substantially as herein shown and described, and for the purpose set forth.

4. The combination of one or more gratings k^1, with the pipe K of the apparatus G H I J K, substantially as herein shown and described, and for the purpose set forth.

97,571.—Lewis W. Truesdell, Owego, N. Y.—*Instrument for Describing Spiral Lines.*—December 7, 1869; antedated November 30, 1869.

Claim.—1. The peculiar construction of the traverse-wheel E, with its outer ring, J, with rubber band thereon, the inner ring with its plate *m*, and screws holding the tube *n*, with its projecting arm and set-screw *r*, or any arrangement of parts substantially the same as herein set forth and described.

2. In combination with the traverse-wheel E, the screw-shaft F, pencil-carrier *b*, and ring *o*, when these several parts are applied in a compound "spiro-volutograph" for drawing concentric spiral lines, in the manner herein specified.

97,572.—Cornelius Walsh, Newark, N. J.—*Trunk-Hasp.*—December 7, 1869.

Claim.—1. The cushion *g*, confined within a suitable socket in the upper part of the hasp, and bearing downward against a shoulder, *k*, on the lower part, substantially as set forth.

2. The combination, with the face-plate *a* and hasp proper *b*, of the recess *f*, cap *h*, screws *i j*, and projection *k*, formed and arranged as described, for the reception of an elastic cushion, *g*, by which to elevate and support the hasp proper, when released, as set forth.

3. The bent lip *m*, catching against a shoulder on the projection *k*, acting as a stop, to limit the elevation of the hasp, as described.

97,573.—HIRAM J. WATTLES, Rockford, Ill.—*Cultivator.*—December 7, 1869.

Claim.—1. The frame described, consisting of the longitudinal beams A A, transverse beams B *b b*, and braces C C, the whole being combined and arranged as described, for the purpose set forth.

2. The brace M, constructed as described, with the half circle *m* m^1, and hinge m^2, for the purpose described.

3. The machine described, having the frame A B *b* C, lifting-devices E *e* G H, beams J, standards K, the whole combined and arranged as described, for the purpose set forth.

97,574.—MARTIN WESSON, Springfield, Mass.—*Surcingle.*—December 7, 1869.

Claim.—An improved surcingle, consisting of the main web C, the elastic web D, and the clasp *a a'*, all constructed and operating substantially as and for the purpose herein described.

97,575.—SETH WHEELER, Albany, N.Y.—*Shaft-Coupling.*—December 7, 1869.

Claim.—The case *a b*, extending between the bearing-points of A and B, substantially as described.

97,576.—CHARLES F. WHORF, Saint Louis, Mo.—*Ventilator.*—December 7, 1869.

Claim.—The furnace or heater H, with reservoir I, and smoke-pipe D, in combination with ventilating-stack E, pipe or duct G, provided with openings, and pipes or ducts A B C, arranged and operating substantially in the manner and for the purpose described.

97,577.—M. F. WICKERSHAM, Springfield, Ill.—*Railway-Track Cleaner.*—December 7, 1869.

Claim.—1. The cylindrical rotary brushes H, arranged as described, upon the frame A, with relation to the rails of a railroad-track, and hung upon the lever-arms I I', in such a manner as to be raised or lowered simultaneously, or in succession, substantially as herein shown and described, for the purpose specified.

2. In combination with the cylindrical brushes H, and the main frame A, the pivoted inclined aprons or spouts O, and spouts P or P', receiving the dirt directly from the spouts O, substantially as herein shown and described, for the purpose specified.

3. The axle *a a'*, constructed as described, with the plates B, and arranged substantially as and for the purpose specified.

4. The frame A, constructed as described, with removable cases L, and adapted to be guided, with relation to the rails of the track, by means of the truck B B', as herein set forth and shown, for the purpose specified.

97,578.—SAMUEL Q. WILLIAMS, Rutland, Vt.—*Trace-Lock for Whiffletree.*—December 7, 1869.

Claim.—The springs C, in combination with the whiffletree and trace-hooks, when said springs are so constructed as to enter the same eyes of the traces or tugs with the trace-hooks, and hold the said tugs or traces forward upon said hooks, substantially as herein shown and described, and for the purpose set forth.

97,579.—FREDERICK WITTRAM, San Francisco, Cal.—*Seat for Chairs, Sofas, &c.*—December 7, 1869.

Claim.—The combination of the spring-blocks C, with parallel sides, and sliding in contact, the horizontal partition B, the pins D, and the frame A, when constructed and arranged as herein described.

97,580.—JOSEPH S. WOOD, Philadelphia, Pa., assignor to himself and JOHN J. CARBERRY, same place. — *Generating Hydrogen and Hydrocarbon Gas.*—December 7, 1869.

Claim.—1. The double cylindrical vessel A B, for generating hydrogen-gas for illuminating purposes, constructed substantially as described.

2. The supplementary telescopic tube P, constructed with the gas-chamber *p''*, carbureting-chamber *p'*, and pipe R, substantially as described.

3. The combination of the double vessel A B, the telescopic tube P, (containing the carbureting-apparatus,) and the tubes R and G, arranged substantially as described.

4. The construction of the vessel A B, with the tube G adapted to receive the reservoir-tube H, for making hydrogen-gas, or the supplementary tube P, for making hydrocarbon-gas, as herein described.

97,581.—THOMAS B. WORRELL and THOMAS WALKER, Philadelphia, Pa., assignors to THOMAS B. WORRELL.—*Lock.*—December 7, 1869.

Claim.—1. The combination and arrangement of the interlocking-bars D and D', with the pinion F', when the teeth of one bar are of greater width than the teeth of the other, and the pinion has a reciprocating movement inward and outward, so as to be disengaged at pleasure from one of the bars, whereby an unequal movement of the two bars is effected, substantially in the manner and for the purpose hereinbefore described.

2. The construction of the bar D', with teeth, *d*, on both edges, whereby to provide for changing its connection with the pinion F', to make the lock A susceptible of many additional changes, substantially as described.

97,582.—JOHN AMSTERDAM, New York, N. Y.—*Manufacture of Steel.*—December 7, 1869.

Claim.—1. A steel compound, made of cast or Bessemer steel, and cemented steel or steel cementation, substantially in the manner and for the purposes described.

2. A compound, made of cast or Bessemer steel and case-hardened wrought iron, substantially in the manner herein set forth.

3. The within-described process of producing a compound of steel and iron, or of cast or Bessemer steel and blistered steel, by clamping a slab of iron or blistered steel between the closing faces of the mold, and pouring the molten cast or Bessemer steel against it, substantially as set forth.

4. Clamping two slabs of iron or cemented steel, face to face, between the closing edges of the mold, so as to produce two castings of the same mold, substantially as described.

97,583.—BERNHARD ADLER, New York, N. Y., assignor to himself and W. N. DRESCHER, same place.—*Drinking-Cup.*—December 7, 1869.

Claim.—A cup for medicinal or effervescing draughts, divided interiorly by partitions, vertically disposed into compartments, having a common point of discharge, substantially as herein set forth.

97,584.—J. R. ALLEN, Edinburgh, Ind.—*Grain-Separator.*—December 7, 1869; antedated November 27, 1869.

Claim.—The metal plate B, provided with the wings *a a*, and the wings *b b*, placed in rows, and connected to the frame A, substantially as and for the purposes specified.

97,585.—WILLIAM W. ALLMAND, East Boston, Mass.—*Packing for Stuffing-Boxes.*—December 7, 1869.

Claim.—The employment of a ring of wood, or its equivalent, between packing, (composed wholly or in part of rubber,) and the rod, substantially as and for the purpose set forth.

97,586.—JAMES B. AYER, Elizabeth, N. J.—*Driving-Mechanism for Sewing-Machines.*—December 7, 1869.

Claim.—1. The wheel F, constructed as described, and provided with the spring L, shaft H, and ratchet J, in combination with the belt-wheel C and brake N, all arranged and operating substantially as and for the purpose set forth.

2. Constructing the driving-wheel as described, and arranging within the same the power, substantially in the manner and for the purpose set forth.

3. In combination with the driving-mechanism the brake N, for regulating the speed of the belt-wheel, substantially as described.

97,587.—W. M. BAKER, Greenwich Station, Ohio.—*Horse-Collar.*—December 7, 1869.

Claim.—The collar A B, constructed with a stay, E, bar G, trip H, lever J, spring I, and tug-irons K, in the manner substantially as and for the purpose set forth.

97,588. — THOMAS J. BARGIS and JOHN C. UNDERWOOD, Richmond, Ind.—*Fruit-Jar.*—December 7, 1869.

Claim.—1. The construction of a fruit-jar or can with a continuous ledge, or its equivalent, around the lower portion of the interior of the neck of the same, to receive the float, and arrest its movement in a downward direction, as described.

2. The arrangement of the hollow float A, with reference to the ledge or projections *b*, and the permanent cover C, it being such that the movements of said float are controlled thereby, in the manner and for the purpose set forth.

97,589.—BENJAMIN J. BARTON and ROSWELL J. STANLEY, Washington, Iowa.—*Spring for Horse-Collars.*—December 7, 1869.

Claim. — 1. The spring B, constructed as described, and secured around the collar in the manner herein shown and described, for the purpose specified.

2. The staple C, in combination with the spring B and collar A, substantially as herein shown and described, and for the purpose set forth.

3. The staple or staples D, in combination with the spring B and collar A, substantially as herein shown and described, and for the purpose set forth.

97,590.—H. T. BEAM, JOSEPH C. FREEMAN, and D. B. MILLS, Palestine, Ill. — *Hollow Auger.*—December 7, 1869.

Claim. — 1. The combination of the stock A, guide E, spindle F, ring C, and knife D, when constructed and arranged substantially as shown and described.

2. The knife D, when constructed and used substantially as and for the purpose shown and described.

97,591.—E. R. BEARDSLEY, Aroma, Ill.— *Water-Wheel.*—December 7, 1869.

Claim.—The wheel A, having the case or dome E, the buckets B, and annular gate C, all constructed and arranged substantially as described.

97,592. — A. BECKWITH, New Orleans, La.— *Horse-Collar.*—December 7, 1869.

Claim.—As a new article of manufacture, a horse-collar, having a rope foundation for the front rim, but otherwise made like any ordinary collar, substantially as set forth.

97,593.—HENRY BELFIELD, Philadelphia, Pa.— *Railway-Rail.*—December 7, 1869.

Claim.—1. The within-described "truss-rail," consisting of the sections A and A, held apart by the fish-plates E, and connected with each other by means of said plates and the bolts, F, substantially as and for the purpose specified.

2. In a rail composed of vertical longitudinal sections, the connecting together of said sections so as to leave between the same a vertical longitudinal space open at both top and bottom, substantially as and for the purpose shown.

97,594. — THOMAS M. BIDDLE, Fort Wayne, Ind.—*Alarm-Faucet.*—December 7, 1869.

Claim. — 1. The funnel, provided with a float, which, when raised, serves to close the faucet, through which the liquor flows into said funnel, substantially as herein shown and described.

2. The combination of the float I, rod K, lever *h*, rod *g*, chain *r*, shaft *n*, and hammer L, arranged and operating as described, to strike the bell M, as set forth.

3. The swinging tube D, arranged on the plate C, which is suspended from a supply-faucet or tube, substantially as herein shown and described.

4. The arbor *n*, having the cranks *o* and *p*, and connected with the pivoted tube D, when combined with the lever *g*, catch *h*, spring *e*, and float I of the funnel, substantially as herein shown and described.

97,595. — SAMUEL BLACKMAN, Reading, Pa.— *Steam-Gauge Cock.*—December 7, 1869.

Claim.—The casing A, adapted for application to a boiler, having a valve-seat at its inner end, and a packing, *h*, in combination with the sliding rod B, its valve *e*, and passages *b* and *k*, and with the lever F, connected to a projection on the casing, and operating as set forth.

97,596.—NICHOLAS H. BORGFELT, New York, N. Y. — *Machine for Preparing Tobacco-Stems.* — December 7, 1869.

Claim.—In a machine for preparing the stems of tobacco-leaves, the combination of pressing-rollers C and drawing-rollers D, constructed and operating substantially as set forth.

97,597.—JULIUS BRONNER and HERMANN GUTZKOW, Frankfort-on-the-Main, Prussia. — *Process of Treating Asphaltum to Obtain Colors and Dyes.*— December 7, 1869.

Claim.—1. The preparation of anthracene and similar substances out of asphaltos, that is to say, pitch obtained from coal-tar in the manner herein set forth, and the oxidizing of the product which we obtain out of the anthracene, by means of nitric acid or the other substances hereinbefore recited, using, in the said oxidation, the substances above mentioned, or other substances acting in a similar manner, and in the further treatment with alkalies, if necessary to the complete development of the two coloring-matters.

2. Changing anthracene into both coloring-matters in one operation, by uniting or combining the two described processes, the whole substantially as herein set forth.

97,598. — J. G. BURWELL and J. J. WALLS, Crystal Springs, Miss.—*Dumping-Wagon.*—December 7, 1869.

Claim.—The combination, with the front and rear axles A D, of the two parallel rails G G, with hooks *e e*, bolsters B F, with perforated plates *c c*, and arms *f f*, boxes H I, with pivoted and pendant-bars J J, and hooks *d d*, all constructed and operating substantially as set forth.

97,599. — JOHN F. BYLAND, Walton, Ky.— *Corn-Harvester.*—December 7, 1869.

Claim.—1. The provision, in a corn-harvester, of the knives J J′ *j*, and hinged bars I I′, arranged and operated substantially as described.

2. In combination with the knives J J′ and hinged bars I I′, the gathering-arms G G′ and the rest-bar E, substantially as described.

97,600.—HENRI CABANES, Bordeaux, France.— *Apparatus for Dressing Flour.*—December 7, 1869.

Claim.—1. The devices herein described, or any equivalents to the same, whereby an elastic network, or series of elastic cords, *b*, may be drawn back from a bolting-cloth, *a*, and suddenly released, so as to strike the said cloth, substantially in the manner and for the purpose herein set forth.

2. The combination of a bolting-cloth, a fan, or its equivalent, and conducting-tubes, so arranged that a current of air is passed beneath the said cloth, and supports the latter, substantially as described.

97,601.—C. A. CHAMBERLIN, Pittsburgh, Pa.— *Railroad-Ticket.*—December 7, 1869.

Claim.—1. Forming the tickets with a raised number, letter, letters, figure or other mark, to serve as a type to register the station to or from which the ticket is issued, substantially as herein shown and described.

2. Cutting, defacing, or marring the raised number, letter, mark, or figure, upon the ticket, in the act of printing with it, so that it cannot be again used as a type, substantially as herein shown and described, and for the purpose set forth.

3. Printing or impressing upon the tickets, at the time of selling, the name of the station, from or to which the ticket is sold, by the same impression or operation by which the numbers or marks of the two stations are printed upon the register, (the name of the other station having been previously printed upon said ticket,) substantially as herein shown and described, and for the purpose set forth.

97,602.—Bela L. Churchill and George Z. Vanderslice, Philipsburgh, Pa.—*Device for Turning Logs in Saw-Mill.*—December 7, 1869.

Claim.—1. The combination of the lever E, with the rope or chain G attached thereto, and the push-bar F, with the carriage of a saw-mill, all arranged to operate substantially as described.

2. Turning a log on a saw-mill carriage, by the backward movement of the carriage, in connection with the lever E, rope or chain G, and push-bar F, as set forth.

97,603.—D. J. Clark, W. F. Doggett, and S. M. Burr, Columbus, Ohio.—*Wooden Trunk.*—December 7, 1869.

Claim.—A trunk formed of two pieces of bent wood, one piece forming the top and sides, and the other the bottom and ends, substantially as herein set forth.

97,604.—Frances E. Clarke, Flint, Mich., assignor to Thomas D. Clarke, same place.—*Dish-Washer.*—December 7, 1869.

Claim.—The vessel A B C, provided with strainers *c*, wheel E, and adjustable racks F G H *f g*, when constructed and arranged to operate as herein described, for the purpose specified.

97,605.—George Edward Cleeton, New Haven, Conn.—*Folding Chicken-Coop.*—December 7, 1869.

Claim.—The herein-described coop, consisting of the two sides, folding ends, and folding bottom, hinged together, and provided with a detachable top, the whole constructed so as to be folded, substantially as set forth.

97,606.—William Cline, Jr., Clayton, Ind.—*Ditching-Machine.*—December 7, 1869.

Claim.—1. The adjustable foot-piece E, provided at its lower end with the bit F, and running in an inclined position, substantially as and for the purposes herein set forth.

2. The combination and arrangement of the slotted beam A, cutter D, adjustable foot-piece E, and lever G, all constructed as described, and operating substantially in the manner and for the purposes herein set forth.

3. The broad curved scraper I, working up and down on guides *b b*, substantially in the manner and for the purposes herein set forth.

4. The slotted sliding plate or guide J, provided with block K, at its lower end, and moving up and down on the guides *c c*, substantially in the manner and for the purposes herein set forth.

5. The combination and arrangement of the beam A, foot piece E, cutter D, scraper I, and sliding guide J, all constructed as described, and operating substantially in the manner and for the purposes herein set forth.

97,607.—Paul Cousin and Pierre Oury, Paris, France, assignors, for one-third, to N. Washauer, New York City.—*Process for Decorative Oil-Painting.*—December 7, 1869.

Claim.—1. The process, substantially as herein described, of preparing paper, and applying thereto designs in oil-colors, and transferring the same to walls or other surfaces, as set forth.

2. The use of paper, when treated or prepared, as herein described, for the reception and transfer of designs in oil-colors, as set forth.

3. The use of Almacica, Sierra Leone, or similar gums, when treated, substantially as herein described, and combined with oil-colors, for the purpose set forth.

4. The paper, with the design printed thereon, and ready for transfer, as herein described, as a new article of manufacture for mural decoration.

97,608.—Walworth D. Crane, New York, N. Y.—*Railway-Car.*—December 7, 1869.

Claim.—1. The locker A, when arranged within a railroad-car, over the seat, substantially as and for the purpose described.

2. The movable car-seat bottom B, when made to swing upward either way, and combined with a reversible car-seat back, substantially as and for the purpose specified.

3. The speaking-tubes D′ and D, one or both, when arranged in a railroad passenger-car, substantially as and for the purpose specified.

97,609.—Charles Crow, Covington, Ind., assignor to himself and Williamson D. Kerr, same place.—*Plow.*—December 7, 1869.

Claim.—1. A plow, provided with two adjustable mold-boards, which may be moved nearer to or farther from each other, which may be used either as a ditcher or plow, substantially as set forth.

2. The movable land-side L, when used in the manner and for the purpose described.

3. The mold-boards H, cutter M, braces K, N, and O, beam A, plates *a*, screws *c*, and sheath D, when combined to form a plow, substantially as specified.

97,610.—Homer H. Cummings, Enfield, N. H.—*Water-Wheel Scroll-Chute.*—December 7, 1869.

Claim.—A scroll-curb for water-wheel, having a graduating semi-oval top, and a graduating bevel or slightly concave bottom, substantially as shown and described.

97,611.—John Cutlan, Moorestown, N. J.—*Machine for Sewing the Sole and Upper of Boots and Shoes.*—December 7, 1869.

Claim.—The plate P, having a groove or channel *l*, shaft S, feed-wheel F, straight needle N, and presser-foot D, all arranged as described, to sew the channeled sole to the upper while inside out, and leave the stich formed on the inner side of the sole, when the upper is reversed, as herein specified.

97,612.—George W. Dawson, New Haven, Conn., assignor to Willis M. Smith, same place.—*Musical Game.*—December 7, 1869.

Claim.—The herein-described musical game.

97,613.—Gilbert Déclat, Paris, France.—*Apparatus for Treating Croup and other Diseases.*—December 7, 1869.

Claim.—The application, (at a distance, without any operation or medication,) by inhalation, of the vapors of the different ingredients here described, or to be described hereafter, (which vapors are produced by any proper apparatus,) to cure the croup, diphtheria, angina, (malignant and gangrenous,) the diseases of the chest, the generality of the diseases of the skin, &c., or any other, substantially the same, and which will produce the intended effect.

97,614.—Jules Decoudun, Paris, France.—*Machine for Ironing and Stiffening Linen and other Fabrics.*—December 7, 1869; patented in France, May 16, 1868.

Claim.—1. The combination of revolving cylinder D, blanket or apron E, and stationary concave heated surface A, constructed and arranged as set forth.

2. The combination of the treadle M, balance-weight N, and connecting-mechanism, with the shaft of the cylinder, to lift said cylinder, in the manner specified.

97,615.—Abraham C. Depew and John Slatcher, Bridgeport, Conn.—*Metallic Cartridge.*—December 7, 1869.

Claim.—The metallic cartridge-case, herein described, having an interior case or lining, B, with conical chamber B^1, and concave base *e*, and a thin external shell, C, secured to a steel base, A, with concave front, perforated centrally, and having a shoulder, *z*, to receive and support a removable nipple, *a*, having three firing-apertures, constructed and arranged to operate as specified.

97,616.—J. H. Dickason, Hannibal, Mo.—*Tobacco-Machine.*—December 7, 1869.

Claim.—The above-described device for sizing the tobacco, its several parts being constructed and arranged in the manner set forth.

97,617.—Henry Dierkes, New York, N. Y.—*Combined Call-Bell and Table-Caster.*—December 7, 1869.

Claim.—The arrangement of a call-bell, gong, or equivalent instrument of sound, above the handle of a table-caster, substantially as shown and described.

97,618.—William S. Douglass, Richmond, Vt., assignor to W. O. Douglass and A. S. Douglass, same place.—*Carriage-Jack.*—December 7, 1869.

Claim.—The forked standard A, provided with the inclined series of notches *a*, in combination with the self-locking lever B and bands C, substantially as and for the purpose described.

97,619.—Daniel E. Dugan, Springville, Pa.—*Bedstead.*—December 7, 1869.

Claim.—The combination of the rail and post of a bedstead, the fastening-device securing the two together, and a block of rubber or other compressible material, as set forth.

97,620.—Joseph Dunott, Philadelphia, Pa., assignor to himself and George Gibson, same place.—*Car-Coupling.*—December 7, 1869.

Claim.—1. The combination of the revolving keeper C with the swinging keeper D and shaft B, substantially as described, for the purpose set forth.

2. The draw-head A, with shaft B, keepers C D, and slide E, when arranged and operated as described, for the purpose set forth.

97,621.—Samuel Fletcher, Hollis, N. H.—*Sawing-Machine.*—December 7, 1869.

Claim.—The arrangement of the several parts of the device, viz, the handles *a a*, the arms *h h*, operated by springs *g g*, the shaft *f*, the plates *d d* and *e*, the screws *c c*, all constructed and operating in the manner and for the purpose herein shown and described.

97,622.—Samuel Forrester, Allegheny, Pa.—*Axle for Carriages.*—December 7, 1869.

Claim.—Providing the spindle A with the elip-flange *e*, and so constructing the bore of the spindle that it will fit neatly and closely to the upper and lower sides of the axle B, and leave oil-chambers *x* on the back and front sides of it, as herein described, and for the purpose set forth.

97,623.—Samuel Forrester, Allegheny, Pa.—*Carriage-Axle.*—December 7, 1869.

Claim.—The projection *x*, when used in combination with cavity *e*, in the spindle B, wedge *h*, and the metal or alloy filling, as herein described, and for the purpose set forth.

97,624.—James D. Frary, New Britain, Conn.—*Knife-Handle.*—December 7, 1869.

Claim.—A knife, consisting of the blade and tang A, the latter being provided with the hole *a* and recesses *b b*, and tubular cast-metal handle B, the tang and tubular handle being attached by casting, substantially as described.

97,625.—Lamartine R. Fulda and Martin Fulda, San Francisco, Cal.—*Machine for Jointing Staves.*—December 7, 1869.

Claim.—1. In combination with the cutters or saws O, arranged in planes oblique to each other, the device consisting of the adjustable ways C, carriage B, guide I, rack G, and pinion H, for carrying the stave through between the cutters, and, at the same time, raising and depressing it, as required, to give it the proper shape, substantially as described.

2. The arrangement of the hinged frame P with the screws R, for adjusting the cutters O so as to bevel the edges of the staves, according to the size of the casks to be formed, substantially as described.

3. In combination with the carriages Q, supporting the cutters O, the curved removable ways V, for adjusting the cutters to joint staves of different widths for the same cask, or casks of the same diameter, substantially as described.

97,626.—Samuel A. Gardner, Round Hill, Pa.—*Sawing-Machine.*—December 7, 1869.

Claim.—A sawing-machine, consisting of frame A, sliding frame D D′, gate C, fender-posts B, crank-shaft F, lever *h*, and curved bar *m*, the whole constructed, arranged, and operated as and for the purpose specified.

97,627.—Robert Gill, New York, N. Y.—*Gas-Burner Regulator.*—December 7, 1869.

Claim.—The combination, in a gas-regulator, as applied to a burner, of the outside guides *c c*, with the disk C, supply-vent or orifice *a*, and seat or fixed surface *b*, essentially as shown and described.

97,628.—Bernard Goetz, Philadelphia, Pa.—*Corrugated Reflector.*—December 7, 1869.

Claim.—The plate A, having on its surface a series of squares formed by diagonal lines *a*, *b*, *c*, *d*, *e*, *f*, *g*, &c., intersecting diagonal lines a^1, b^1, e^1, d^1. e^1, f^1, g^1, &c., and also having a series of parallel grooves or furrows, *h*, h^1, h^2, and h^3, substantially as and for the purpose set forth.

97,629.—Benjamin J. Greeley, Boston, Mass.—*Attachment for Fastening Overlapping Parts of Garments.*—December 7, 1869.

Claim.—1. The combination of the plate and its cord with the overlapping part of a garment, when the plate is attached to the overlapping part, and one end of the cord is attached to some other part of the garment, the whole combination being and operating substantially as specified.

2. The combination of the two plates and elastic strap with the waist of a garment, when each plate is attached to the waist of a garment, and the strap connects together the two plates, the whole combination being and operating substantially as specified.

97,630.—William Green, Holly, Mich.—*Potato-Digger.*—December 7, 1869; antedated November 27, 1869.

Claim.—1. The spades *c*, in combination with the conveying-bars *c*, as and for the purpose described.

2. The bars *c*, provided with the longitudinal slots *c′* and the recesses *i*, in combination with the pins *k*, as and for the purpose described.

97,631.—Robert Greene, Greenville, N. C.—*Cotton and Hay-Press.*—December 7, 1869.

Claim.—1. Mounting the roller F at the point of junction of levers D D′.

2. The combination of the lever D, roller F, wineh G, lateh H, and pawl K, all arranged and operating substantially as set forth,

3. The combination of levers C C′ and levers D D′ with roller F, wineh G, latch H, and pawl K, adapted to operate said levers by means of a rope or chain, substantially as set forth.

4. The combination of the head-block N, arms N^1, posts A, and pivots *n′*, substantially as and for the purpose set forth.

97,632.—Alexander Hamar, Philadelphia, Pa.—*Mode of Generating Illuminating-Gas.*—December 7, 1869.

Claim.—1. The introduction of jets of steam into the gas-retorts, during the time the gas is being generated, substantially as and for the purpose set forth.

2. The combination of the mouth-piece of the retorts with the steam-pipes, substantially as and for the purpose set forth.

97,633.—Michael Hanstine, Waynesborough, Pa.—*Pump.*—December 7, 1869.

Claim.—A pump, combining in its construction a straight barrel or stock, A, lower or check-valve B, having a bail for lifting it out of its seat, a plunger, C, composed of an upper solid disk, C′, connected to a valve, C″, by bars, as shown, and a piston-rod, D, when all the parts are constructed and arranged as and for the purpose set forth.

97,634.—John H. Harper, Pittsburgh, Pa.—*Portable Furnace.*—December 7, 1869.

Claim.—1. The collar A, provided with a zigzag rim B, constructed as described, substantially as and for the purposes herein set forth.

2. The griddle or lid D, provided with depending flange, having projections *m m* and *n n*, constructed as described, substantially as and for the purposes herein set forth.

3. The ribs *d d*, placed vertically within the collar A, substantially as and for the purposes herein set forth.

4. The combination of the collar A, zigzag rim B, flanges *i i*, ribs *d d*, grate C, notched rim *e*, and griddle or lid D, provided with zigzag teeth, all substantially as and for the purposes herein set forth.

97,635.—Henry H. Hatheway, Clockville, N. Y.—*Grappling-Hook.*—December 7, 1869.

Claim.—In combination with a grappling-hook, A, the sliding collar B, ferrule D, with horizontally-curved and notched arms E E, and pole G, provided with the hook, pin, or projection F, all constructed and arranged to operate as specified.

97,636.—W. E. Hayes, Durand, Wis.—*Spark-Arrester.*—December 7, 1869.

Claim.—1. The combination of the adjustable straps or draw-bands *d d*, and their appurtenances *f g h*, arranged and operating substantially as set forth, with the cap B, flare C, and outer casing D, as specified.

2. The combination, with the stack A, of the perforated body of the outer casing surrounding the upper portion of the stack A, and the flare C, arranged as described.

3. The outer casing of the top of the stack A, consisting of the flare C, cap B, and wire-gauze or perforated body D, arranged as described.

97,637.—Harry M. Heineman, San Francisco, Cal.—*Fastening for Neck-Tie.*—December 7, 1869.

Claim.—The combination of a tie, A, or a tie or scarf-holder, a cord, *a*, and a bar, *b*, connected to the said cord, substantially as and for the purpose described.

97,638.—Charles H. Helms, Poughkeepsie, N. Y.—*Machine for Trimming the Heel of Boots and Shoes.*—December 7, 1869.

Claim. — The double cutter-wheel *h''*, having double-faced shoulder *g''*, and provided with adjustable cutters, substantially as set forth.

97,639.—John B. Hobson and John Middleton, Jr., San Francisco, Cal. — *Water-Closet.*— December 7, 1869.

Claim. — 1. The bowl-discharge valve A, constructed and arranged, substantially as represented and described, to operate in combination with the supply-port valve I, in the manner and for the purpose set forth.

2. The combination, with the valve A, arranged and operating as described, of the flange or disk C, and packing D, as and for the purpose shown.

3. In combination with the supply-port valve I, its stem H, and spring K, the stem or coupling N^1 J, for the connection of the supply-pipe, as constructed and arranged, in the manner shown and described, for the purposes set forth.

4. In the described combination with the other parts of a water-closet washing-apparatus, substantially as herein described, the measuring-cistern or tank Q, as provided with an automatic air-valve, R S, and constructed and arranged as set forth, for the purpose shown.

97,640.—Jacob R. Hoffman, Fort Wayne, Ind.—*Saw-Mill.*—December 7, 1869.

Claim.—The stacks of grooved pulleys A′ and B′, in combination with the intermediate adjustable pulley *f*, when constructed and arranged to operate in the manner and for the purpose substantially as described.

97,641.—Egmont Inger, New York, N. Y.—*Sad-Iron Holder.*—December 7, 1869.

Claim.—A handle-protector for sad-irons, composed of tapering jaws *a*, hinged at their thick ends, while their loose thin ends are capable of overlapping each other, as shown and described.

97,642.—Stephen Inman, Rockford, Ill.—*Brick-Molds.*—December 7, 1869.

Claim.—1. The combination of the longitudinal turning rods C and arms *b*, with the centrally-arranged lever D and rods d^2, as described, for the purpose set forth.

2. The brick-mold described, consisting of the box A, with divisions *a a a*, followers, cross-rods *b*, turning-rods C, levers D, connecting-rods d^2, and catches *e*, when combined and arranged as described, for the purpose set forth.

97,643.—Ludwig Jarchow, New York, N. Y.—*Fastening for Corsets.*—December 7, 1869.

Claim.—As a corset-fastening, the plates *a b*, having on their inner ends the angular hollow projection A, and the solid projection B, adapted to engage with each other, to fasten, or be detached to unfasten the corset, the said parts being constructed and operating substantially as shown and described.

97,644.—John Jay, Jonesborough, Ind.—*Coffee-Roaster.*—December 7, 1869.

Claim.—1. The removable vertical crank-shaft D, and the removable horizontal stirrers G and H I, in combination with the portable case A, substantially as herein shown and described, for the purpose specified.

2. As an improved article of manufacture, the portable coffee-roaster, consisting of the case A, provided with the handle B, hinged cover C, and openings K, and the removable crank-shaft D, and stirring-plates G and H I, all arranged and operating as herein shown and described, for the purpose specified.

97,645.—Charles T. Jeffries, Philadelphia, Pa.—*Car-Spring.*—December 7, 1869.

Claim.—1. A conical spring, composed of two or more conical coils, arranged in nests, or one within the other, with blocks of rubber or equivalent elastic material interposed between them, substantially in the manner and for the purpose described.

2. In combination with the said conical spring, the flanged tubes C and C′, for the purpose specified.

3. In combination with the said spring, a bolt, H, for the purpose set forth.

97,646.—Byron Jennings, Gilroy, Cal., assignor to himself and Henry W. Briggs, same place.—*Gang-Plow.* — December 7, 1869; antedated December 1, 1869.

Claim.—1. The combination, with the arms *b*, on the shaft C, of the plates *d*, provided with holes *e*, for making their connection adjustable, substantially as and for the purpose set forth.

2. The curved arm E, attached to the shaft C, sliding-bar *g*, and guide *h*, substantially as and for the purpose described.

3. The bent lever F, with its slotted inclined lug *i*, together with the bent pin or staple *n*, substantially as described.

97,647.—Samuel B. Jewett, Laconia, N. H.—*Artificial Leg.*—December 7, 1869.

Claim.—The link D, substantially in the manner and for the purposes set forth.

97,648.—Charles Kanzler and Albert Nega, Saint Louis, Mo.— *Sash-Balance.* — December 7, 1869.

Claim.—The rope-lock D^1 *d* d^1 d^2, arranged and combined with the pulley D and rope *c*, substantially as and for the purpose set forth.

97,649.—Charles Kellermann and Peter W. Stauff, Chicago, Ill.—*Stay for Trunks.*—December 7, 1869.

Claim.—The hook-stay C, pivoted to the lid B, in combination with the horizontal loop D, attached to the body of the trunk, when arranged to operate as described and shown, for the purpose specified.

97,650.—S. C. Kenaga, Kankakee, Ill.—*Grain-Drier.*—December 7, 1869; antedated November 27, 1869.

Claim.—The heating-compartments A^1 A^2, with their flues *h* h^1, and flue-spaces *d* d^1 d^2, in combination with the perforated drying-floors B B^1 B^2 of the chambers D D^1 D^2, the centrifugal and centripetal conveyers C^1 C^2 C^3, chimneys *g* g^1 g^2, and ventilating-doors a^3 a^4, all arranged and operating substantially as and for the purpose herein set forth and described.

97,651.—William Kenworthy and John H. Pollitt, Buchanan, Pa.—*Oiling Carriage and Car-Axles.*—December 7, 1869.

Claim.—The combination and arrangement of the oil-chamber B, oil-ways *o*, gum washers *x*, and recess *f*, constructed, arranged, and operating as herein described, and for the purpose set forth.

97,652.—A. M. Laevison, Quiney, Ill.—*Gas-Burner.*—Deeember 7, 1869.

Claim.—The slotted regulating-serew D, in eombination with a gas-burner having an expanding-chamber, substantially as herein shown and deseribed, for the purpose specified.

97,653.—Charles William Lancaster, London, England.—*Shot-Cartridge.*—Deeember 7, 1869.

Claim.—A cased shot-eartridge, in which the powder, shot, and shot-concentrating hollow wad, or its equivalent, are inclosed and held within the shell, substantially as herein deseribed, for the purposes set forth.

97,654.—Charles F. Langford, Brooklyn, N. Y.—*Attaching Knobs to Doors.*—December 7, 1869.

Claim.—The employment of an annular spriug, of rubber or metal, between the rose and shank of the knob, in attaehiug knobs to doors, substantially as herein set forth.

97,655.—N. H. Lebby, Charleston, S. C.—*Centrifugal Pump.*—Deeember 7, 1869.

Claim.—The openings O, in the baek of the wheel P, in combination with tongues and grooves *a b*, on the back of the wheel P, and on the plate B, substantially in the manner and for the purpose speci-fied.

97,656.—Philip Leonard, Sharon, Pa.—*Tool-Holder for Grindstones.*—Deeember 7, 1869.

Claim.—1. The eombinatiou, with the slotted oscillating plate A, provided with journals, and either mounted in adjustable or permanent bearings C, of the carriage E, and the adjustable tool-holder G, substantially as speeified.

2. The arrangement, with the earriage E, of the tool-holder G, and clamp or guide K, substantially as speeified.

97,657.—Reuben Lighthall, Brooklyn, N. Y.—*Mode of Preventing Corrosion in Pipes, Bolts, and Similar Articles of Iron in Sea-Water.*—Deeember 7, 1869.

Claim.—The combination with or application to iron pipes, bolts, and other like bodies, of plates, nnts, sleeves, or washers surrounding them at intervals, and composed of different metals approximating each other and the iron in eorrodibility, substantially as and for the purpose or purposes herein set forth.

97,658.—A. W. Lloyd, North Adams, Mass.—*Water-Wheel.*—December 7, 1869.

Claim.—1. The combination, with the wheel, constructed as described, and the exterior ease D, of the interior cases E, made in two recessed parts, and provided with gates M, operating substantially as speeified.

2. The eombination, with the wheel, and ease D, of the air-conducting tubes or passages V, when arranged substantially as speeified.

3. The combination, with the water-wheel, arranged for operation substantially as herein deseribed, of a water-regulating deviee, for governing the level of the water in the draught-tube, consisting of passage I′, valves K¹ H′ O′, substantially as herein shown and speeified.

4. The combination, with the vessel A′, eonneeted to the wheel-ease and draught-tube, of the float E′, air-tube G′, valve F′, water-tube I′, valves K¹, H′, and O′, when arranged for operation substantially as speeified.

97,659.—Hamilton D. Lockwood, Charleston, Mass.—*Artificial Nipple.*—Deeember 7, 1869.

Claim.—An artificial nipple, (made of elastie material,) having its rim re-enforeed at the seam, substantially as deseribed.

97,660.—Zephaniah Lockwood, Saratoga Springs, N. Y.—*Cooking-Stove.*—Deeember 7, 1869.

Claim.—1. The cooking-attaehment B, for base-burning or parlor stoves, constructed as deseribed, and provided with the feeder-holes for eooking-utensils and boiler, applied and operating substantially in the manner and for the purpose set forth.

2. In eombination with the above, the supplemental fire-box I, eonstructed and operating as and for the purpose set forth.

97,661.—C. M. Lufkin, Alstead, N. H.—*Sled-Brake.*—Deeember 7, 1869.

Claim.—The eombination of the grapples C C, eonneetion-rods *u u*, eross-bar *n*, reach *e*, roeker *f*, and button *p′*, when attaehed to a traverse-sled, substantially as herein set forth, for the purpose specified.

97,662.—Thomas J. Magruder, Marion, Ohio.—*Cock-Eye for Harness.*—Deeember 7, 1869.

Claim.—As an improved artiele of manufaeture, swivel eock-eyes, having the ueeks of the eyes, and the eross-bars to which they are eonneeted, eonstrueted, arranged, and eonneeted together substantially as herein speeified.

97,663.—James W. Maloy, Bostou, Mass.—*Bush-Hammer.*—Deeember 7, 1869.

Claim.—A bush-hammer, formed by the eombination of head A, eonstructed substantially as shown, and elamp B, the parts held together, and securing blades H, substantially as hereiu deseribed.

97,664.—Clark Marsh, Bridgeport, Conn., assignor to Wheeler and Wilson Manufacturing Company, same plaee.—*Machine for Grinding Needles.*—Deeember 7, 1869.

Claim.—1. The combiuation and arrangement of the following instrumentalities, viz, the rotating grinder, the grinder-carriage, the turning-holder, the holder-carriage moving in the direetion of a tangent of the eireular periphery of the grinder, the rest, and eontrolling-mechanism, all eonstrueted to operate substantially as before set forth.

2. The eombiuation of the rotating grinder, the grinder-carriage, the turning-holder, the holder-earriage, moving iu the direction of a tangent of the eircular periphery of the griuder, the rest and stop-mechanism, the whole eonstrueted to operate substantially as before set forth.

3. The combination of the rotating grinder, the grinder-earriage, the turning-holder, the holder-carriage moving in the direetion of a tangent of the eireular periphery of the grinder, the rest, and the traversing-mechanism, the whole constructed to operate substantially as before set forth.

4. The eombiuation of the turuing-holder and the holder-carriage, with a pattern-plate, eonstructed so as to be adjusted laterally, substantially as before set forth.

5. The combination of the rotating griuder and the grinder-earriage, with an adjustable bearing for the pattern-plate, substantially as set forth.

97,665.—Henry P. McCleave, Tomales, Cal.—*Water-Wheel.*—Deeember 7, 1869.

Claim.—A wind-wheel, eomposed of the vanes *a*, formiug the eurve E, and eonstrueted substantially as herein deseribed.

97,666.—James McCullough, Quiney, Ind.—*Wagon-Standard.*—Deeember 7, 1869; antedated December 4, 1869.

Claim.—The eap B and standard C, formed of one piece, and seeured to the bolster by means of the bolts D, or their equivalent, aud provided with the rings E, when combined in the manner and for the purpose specified.

97,667.—David McFarland, Worcester, Mass.—*Cutter for Card-Setting Machine.*—December 7, 1869.

Claim.—1. The eutter E, eonstrueted with the notches, grooves, or serrated edge, and adjustable around its eenter, so as to present different cutting-points aud form a guide for the wire, substantially as deseribed.

2. In combination with the eireular eutter E, the sleeve *a*, with the set screws C and D, for the purpose of adjusting the cutter, substantially as set forth.

3. The arrangement of the vibrating eutter I, in the holder G, made adjustable on the lever F, substantially as set forth.

4. The combination of the fixed vibrating cutters E and I, arranged upon the bar B, so that both may be adjusted, substantially as herein set forth.

97,668.—PETER MCINTYRE, Norwich, Conn.—*Drain-Pipe Machine.*—December 7, 1869.

Claim.—1. The combination of the outer mold with the solid and hollow plungers, for forming and completing the pipe and its bell-mouth at one operation, in the manner and by the means substantially as described.

2. The axial movement of the plunger of the bell-mouth, to break the adhesion between the said plunger and the newly-formed pipe, in the manner and for the purpose substantially as described.

3. The combination of the solid and hollow plungers with the operating-gearing, in such wise as to elevate the hollow plunger to the proper height for the bell-mouth, before the solid plunger has advanced any or much within the pipe-mold, and retaining it in that position till the solid plunger has completed its full stroke, and is withdrawn from the mold, or nearly so, before dropping the hollow plunger, in the manner and for the purposes substantially as described.

4. The combination of the cap-piece B, pins C, and hooks V, with the side parts A A, when constructed and arranged to operate as shown and described, for the double purpose of clamping said parts A A together, and closing and completing the top of the mold around the plunger, in the manner substantially as set forth.

97,669.—A. J. MCMILLEN, Ravenswood, West Va.—*Fruit-Can.*—December 7, 1869.

Claim.—As a new article of manufacture, fruit-cans, provided with the strengthening-hoops B, arranged for clamping tightly around the can, and provided with the lists of names of the fruits, for adjustment, relatively to the seam, or other distinguishing mark, all substantially as specified.

97,670.—CHARLES L. MERRILL, Watertown, N. Y.—*Pump.*—December 7, 1869.

Claim.—In connection with a pump, P, the employment of an air-pump, C R A *a*, to force atmospheric air into the water of the well, said air-pump being worked by the ordinary pump-brake B, substantially as and for the purposes herein described.

97,671.—E. C. MERRILL, Charleston, Vt.—*Abrading and Polishing Wheel.*—December 7, 1869.

Claim.—As a new article of manufacture, factitious abrading-wheels or other tools, having their cutting properties due in whole or in part to the employment in their composition of the material named.

97,672.—WILLIAM M. MICHAEL, Indiana, Pa.—*Pattern for Laying Out Garments.*—December 7, 1869.

Claim.—The combination of the pattern A and scale H, the former having the lines C and central point G delineated thereon, and the latter being graduated as described, the two arranged for joint operation as specified.

97,673.—ROBERT E. MOORE, Navasota, Tex.—*Machine for Operating Pumps.*—December 7, 1869.

Claim.—1. The combination of the escapement C C F, levers H I K, pendulum and rock-shaft D, with the pumps L L, substantially as and for the purpose set forth.

2. In combination with the devices cited in the first clause of claim, the adjustable pendulum rod E, cups P, valves *c c*, operating as described, and for the purpose set forth.

97,674.—EZRA MORGAN, French Creek, N. Y.—*Churn.*—December 7, 1869.

Claim.—The flaring cream-saver B, herein described, having a square end, which extends below the churn-lid A, with openings in its side, and provided with the rectangular metal plate D, when connected to lid A by means of the band C, and the shoulder formed in the cream-saver, all as shown and described.

97,675.—OWEN H. MORRIS, New Haven, Conn.—*Clamp for Embossing Harness-Loops.*—December 7, 1869.

Claim.—The apparatus, consisting of the plate A, fixed bar B, adjustable bar E, arranged in the manner described, so as to relieve the part not to be clamped, and the screws D, for the purpose of holding harness-loops, while being formed, ornamented, and finished, in the manner herein described.

97,676.—WILLIAM A. MORSE, Philadelphia, Pa.—*Pen.*—December 7, 1869.

Claim.—1. Immovably attaching a fountain or ink-retainer to a pen, by passing one end of said fountain entirely through the pen, and clinching it upon the opposite side, substantially as shown at Figs. 1 and 2.

2. A pen-fountain or ink-retainer, made with one or more points or projections turned at right angles, substantially as shown, and for the purpose specified.

97,677.—M. D. MYERS, Frankfort, N. Y., assignor, of one-fourth, to GEORGE W. GATES, same place.—*Hay-Tedder.*—December 7, 1869.

Claim.—1. The oscillating fork-heads applied to revolving reel-disks when operated by means of crank-arms *f*, connecting-rods *e*, and spur-wheels *d* and *c*, substantially as described.

2. The construction of an eye-bearing, E, with two eyes, one to receive a bar, *h*, and the other to receive the fork-bar D, in combination with the lateral hooked offsets *i i*, to receive and gripe the ends *g'* of the teeth, and allow the removal of the teeth by lateral movement, when screw *j* is loosened, substantially as described.

97,678.—R. W. MEYERS, Glen Gardner Station, N. J., assignor to himself, GEORGE GARDINER, WILLIAM GARDINER, and O. L. GARDINER, same place.—*Heating-Attachment for Cooking-Stoves.*—December 7, 1869.

Claim.—1. A heating-attachment for stoves or ranges, adapted for receiving the heat from the top of the stove or from the ovens, or the steams and odors from cooking-vessels inclosed by it, and provided with pipes for conveying the heat to the rooms above, also provided with pipes communicating with the smoke-flue and valves, as described, for discharging the odors of cooking food to the said flue, all substantially as specified.

2. The combination, with the case A, provided with the front openings, of the drawer F and slide G, substantially as specified.

97,679.—ARCHIBALD NIMMO, Philadelphia, Pa., assignor to himself and THOMAS MORAN, same place.—*Mechanism for Operating the Shuttle-Boxes in Looms.*—December 7, 1869.

Claim.—1. A cylinder, on which spirally-arranged pins are combined with a spiral groove, or spiral projecting rib, for laterally controlling the lever, or its equivalent, actuated by the pins.

2. The disk, with its pins arranged on a spiral line, in combination with a lever or its equivalent, operating in connection with the drop-boxes, substantially as set forth.

3. The combination of the said disk and pins with a groove or rib arranged on the disk, for controlling the lever, (or a sliding projection on the latter,) actuated by the pins.

4. The combination of the cylinder, its spirally-arranged pins, rib, and cog-wheel, with the double pawl, which is caused to operate in the manner set forth, by the mechanism herein described, or its equivalent.

5. The said double pawl, in combination with the sliding plate J and its projections *q q'*.

97,680.—FREDERICK NISHWITZ, Brooklyn, N. Y.—*Harrow-Cultivator.*—December 7, 1869.

Claim.—1. The combination, in a harrow-cultivator, of a revolving disk, with a hollow boss, closed at its inner end, substantially as and for the purposes set forth.

2. The combination, in a harrow-cultivator, of revolving disks, independently adjustable, relatively to the line of draught, substantially as set forth.

3. The combination, with a harrow-cultivator frame, of a stud-axle, a thimble, and a clamping-bolt, substantially as set forth.

4. The combination, with a harrow-cultivator frame, of the recessed thimble, the clamping-bolt, and the stud-axle, as set forth, whereby the disk is carried at an angle, both to the line of draught and to the horizon.

5. The combination, in a harrow-cultivator frame, of a revolving disk with a scraper, which keeps the disk on its axle, substantially as set forth.

6. The combination, in a harrow-cultivator, of a loose disk, an adjustable axle, and an adjustable scraper, substantially as set forth.

7. The combination, in a harrow-cultivator, of revolving disks, arranged in two series or gangs, adjustable toward or from each other, substantially as set forth.

8. The combination, in a harrow-cultivator, of an adjustable triangular frame, a leading disk, at the apex of the triangle, and a series of following disks, on each side of the triangle, substantially as set forth.

9. The combination, in a harrow-cultivator, of an adjustable triangular frame, two series of revolving disks, and a seat for the driver, substantially as set forth.

10. The combination, in a harrow-cultivator frame, of a long arm, a short arm, pivoted to the long arm, and the cross-pieces, admitting of the adjustment relatively to the line of draught, substantially as set forth.

97,681.—JOHN NORBURN, Pittsburgh, Pa., assignor to JOHN CHANDOS WOODHEAD and JOSIAH HOLMES, trustees for Universal Manufacturing Company.—*Interchangeable Boot and Shoe Heel.*—December 7, 1869.

Claim.—In an interchangeable boot or shoe heel, the permanent half B, having an embedded plate, S, with its socket *e*, and tapered screw-pin N, in combination with the changeable base A, having an embedded plate C and tenon R, when constructed and arranged substantially as described, and for the purpose set forth.

97,682.—EMILE NOUGARET, Newark, N. J.—*Machine for Washing Wool.*—December 7, 1869; antedated December 1, 1869.

Claim.—A wool-washing machine, consisting of the annular vessel A and elevated reservoir E, all arranged and operating substantially as herein shown and described, so that the leaning liquid will serve to keep the wool in motion within the vessel A, as specified.

97,683.—RENÉ OLIVIER, Paris, France.—*Velocipede.*—December 7, 1869.

Claim.—For the suspension of the wheels of velocipedes, the combination of an auxiliary compensating-fork.

97,684.—HENRY O. PEABODY, Boston, Mass.—*Centrifugal Machine for Extracting Honey from the Comb.*—December 7, 1869.

Claim.—1. The use, in centrifugal machines, of two or more light portable vessels, arranged around a common center, and attached to the arms of a light frame, in such a manner that either or all of them may be removed therefrom, when desired, said frame being mounted upon a central spindle, around which the whole may revolve, and each of the said vessels being adapted to receive a wire screen, and the material to be acted upon, substantially as described.

2. In combination with two or more vessels, arranged as described, the outlet N, inclined conduit *g*, outlet *g'*, annular groove B, and discharge-orifices C C, substantially as described.

97,685.—WILLIAM PEARSON, Windsor Locks, Conn.—*Spring.*—December 7, 1869.

Claim.—A combined or combination-spring, made up of a series of spiral springs connected by tongues and grooves, to act in unison, yet free to operate separately, in a limited degree, substantially as specified.

97,686.—A. W. PERRY, Saint Joseph, Mo.—*Piano-Forte Action.*—December 7, 1869.

Claim.—1. The combination of back-catch, having lip e^1, with lever C, pivoted near its center, upon the adjustable fulcrum B, and operating, in connection with stop *m* and fixed butt E, substantially as and for the purposes specified.

2. The spring S, when applied between the flanch or flanch-rod and the front side of a jack articulated at the stem G at *j*, substantially as and for the purposes specified.

3. The arm L attached to the jack J, and operating in connection with stop *l*, substantially as and for the purposes described.

4. The adjustable stop *n*, supported by a post attached to the butt E, or key-lever, and operating in connection with the jack, substantially as and for the purposes indicated.

97,687.—HANS PETERSON, Red Wing, Minn.—*Feed-Cutter.*—December 7, 1869.

Claim.—1. The frame M, arm L, lever K, pitman H, crank-shaft E, and wheel R, when constructed and arranged to operate as specified.

2. In combination with frame M, and its operating connections, the cylinders F and D, and removable knife T, when constructed and arranged as and for the purpose specified.

97,688.—IMMANUEL PFEIFFER, New York, N. Y., assignor for one-half to HENRI M. BRAEM, same place.—*Apparatus for Cleaning Barrels.*—December 7, 1869.

Claim.—1. A machine for cleaning hogsheads, barrels, and casks, combining in its construction a revolving circular vessel, around the axis of which are arranged (on pivots) one or more revolving frames, in which such hogsheads, barrels, and casks are to be suspended, a stationary sheave, an endless chain for rotating the pivoted revolving frames, and another endless chain for rotating the hogsheads, barrels, and casks around their axis, substantially as and for the purpose set forth.

2. The combination and arrangement of vessel A, main or driving-shaft B, socket C, stationary sheave or ratchet-wheel K, movable ratchet-wheels H, endless chain L, shafts F, ratchet-wheels I, and the revolving frames E, when constructed substantially as and for the purpose set forth.

3. The combination and arrangement of the revolving frames E, consisting of platform E, vertical frames E' and E'', cross-head E''', plate or flange P^1, adjustable thumb-screws P^2, projection P, India-rubber cushions Q, crank or bent rod R, bolt S, lever O, inclined groove friction wheels N, endless chain M', and wheel M, when constructed and operated substantially as and for the purpose set forth.

97,689.—WILLIAM L. PHILLIPS, Normal, Ill.—*Ventilator.*—December 7, 1869.

Claim.—The arrangement of the air-shaft C, smoke-stack or foul-air shaft B, shafts D and E E, and the double floor or sides, constructed substantially as described and for the purposes set forth.

97,690.—MARTIN PRILLAMAN, Tipton, Ind., assignor to himself and ELIZABETH RESSLER, same place.—*Draught-Regulator for Plows.*—December 7, 1869.

Claim.—Plate *a*, plates *b* and *c*, screw *e*, and lever-bar *f*, in combination with half-circle *u*, plate *o*, lever *i*, catch *k*, spring *m*, and draught-rod *p*, substantially as herein set forth, and for the purposes specified.

97,691.—TREAT T. PROSSER, Chicago, Ill.—*Machine for Swaging Threads on Screws.*—December 7, 1869.

Claim.—1. The guides C, when constructed as herein described, and arranged to be adjustable by the screws *c d* and spring *i*, and to operate substantially as and for the purpose set forth.

2. The water-tank D, with the die-roller E mounted therein, constructed and arranged substantially as herein described, and for the purpose set forth.

3. The roller-head K, having the die-rollers J arranged in its periphery, in combination with the die-rollers E, for forming the thread upon the blanks, substantially as set forth.

4. In combination with the shaft T, provided with the guides O, the cam-levers *g*, dogs *h*, and conical tube P, when constructed and arranged to operate substantially as herein described, and for the purpose set forth.

5. In combination with the shaft T, and its feeding-devices, the devices for automatically shifting the belts, consisting of the lever *m*, providing with a weight V, the connecting-rod *o*, and belt-shifter G, when constructed and arranged to operate substantially as and for the purpose set forth.

6. In combination with the shaft T and the devices for holding the bolt, the spiral spring *u*, for throwing the bolt out, after it is released, substantially as and for the purpose set forth.

97,692. — WILLIAM PATTERSON PUGH, High Point, N. C. — *Manufacture of Soap.*—December 7, 1869.

Claim. — The improved soap herein described, made by combining the materials herein named, substantially in the manner described.

97,693.—JOHN P. RECHTEN, New York, N. Y. —*Gun-Harpoon.*—December 7, 1869.

Claim.—1. The combination, with the main stock or handle to a hand-weapon, of the description herein referred to, of a harpoon, connected with the tow-line of the weapon, and arranged to operate as a projectile from a barrel carried by the main stock, and provided with suitable firing-contrivances, substantially as specified.

2. The combination of the barrels C and D, the sliding rod or firing-point E, the harpoon F, for operation in connection with a bomb, H, the tow-line G, and the main stock A, essentially as herein set forth.

3. The combination, with the barrels C and D, and sliding rod or firing-point E, of the screws *b b* and hammers *c c*, substantially as shown and described.

4. The stop *f* on the tow-line G, in combination with the harpoon F and loop or eye *e*, on the main stock A, essentially as and for the purpose herein set forth.

97,694. — FRANK REED, Fitchburgh, Mass. — *Privy-Seat.*—December 7, 1869; antedated November 30, 1869.

Claim.—1. The shaft D, with its pinions *e* and *f*, the sector-bar L, spring *m*, rod *o*, and tread-piece N, in combination with privy-seat, substantially as described and for the purposes set forth.

2. The combination of the shaft *g*, pinion *j*, and double rack *k*, with the shaft D, carrying the valve C, and operated as described, and with the extra seat B, as herein set forth, for the purpose specified.

97,695. — A. F. REEDER, Normal, Ill. — *Piston-Valve.*—December 7, 1869.

Claim.—1. A valve, of the form and construction described, adjustable, by a right-and-left screw, upon the valve-stem, receiving the stem between the two valve or piston heads, and secured and held in position in the inner cylinder by the arms J J, as described.

2. The adjustable lining, or inner cylinder, adjustable by the screw in the outer cylinder and cylinder-head, for the purpose of shifting the lining, and holding it in position, as described.

97,696.—ADAM REID, Buffalo, N. Y.— *Tubular Refrigerator.*—December 7, 1869.

Claim.—As my improvement, the refrigerator B, pivoted to the frame A, and provided with top doors D D and inside doors D′ D′, ice-compartment E, waste-pipe F, vat G, and shelves K K, attached to brackets on the side of the refrigerator, by means of pins H, all constructed as herein described, for the purposes specified.

97,697.—HERMANN RETZLAFF, Saint Louis, Mo. —*Land-Roller.*—December 7, 1869.

Claim.—The frame A, shafts E, and rollers F′, with intermatching beads F, substantially as set forth.

97,698.—ANDREW J. REYNOLDS, Chicago, Ill.— *Atmospheric and Condensing Hydraulic Engine.* — December 7, 1869.

Claim.—1. In combination with the devices employed for connecting together the pistons, the cylinder C, provided with the ports H and side-pipes H′, by means of which steam is admitted to the channel-plate, substantially as and for the purpose specified.

2. The arrangement of the air-valves *o*, the lifter-rods O, the follower O′, the yoke P, with the cross-head F″, the piston-rod F′, and the piston F, to open and close the air-pipes before steam is admitted to the cylinders, and after it is cut off, substantially as set forth.

3. The arrangement of the piston-valves *m*, lifter-rods N, yokes P, poppet-levers *m′*, tappets *n n′*, followers N′, steam-chests M, and piston-rods F′, for admitting steam to and cutting it off from the cylinders C, substantially as described.

4. The channel-plate D, foot-valves I, discharge-pipes J, and clack-valves E K′, in connection with the pipe E and check-valves E′, arranged substantially as herein set forth.

5. An atmospheric and condensing hydraulic engine, wherein two cylinders are employed, with their pistons connected through a walking-beam, and so arranged that the surplus power of one piston is transferred to the other, so as to produce a continuous reciprocating motion, without the use of a crank and fly-wheel, substantially as and for the purpose set forth.

97,699.—QUARTUS RICE, Nevada, Cal.—*Flexible Pipe-Coupling.*—December 7, 1869.

Claim.—1. The combination, with a flexible water-pipe coupling of any suitable construction, the anti-friction wheels E E E, in combination with the inverted circular plane L L L, substantially as and for the purposes set forth.

2. The strap H H, the screw-bolt *g g*, follower O, and spring-box *m*, or their equivalents, for the purposes set forth.

97,700.—JULIUS ROBBINS, Auburn, N. Y.—*Machine for Making Buckles.*—December 7, 1869.

Claim.—1. The intermittently-rotating head-block *r*, constructed with an annular holding-seat, 8, for the buckle-frames, and eyes *s*, and notches 4, for holding the tongues in place during the operation of uniting them with the buckles, substantially as before described.

2. The combination of an intermittently-rotating head-block, *r*, with the toothed detaching-arm *c′*, for the purpose of removing the finished buckle from said head-block, substantially as before described.

3. The combination of the intermittently-rotating head-block *r*, constructed as described, with the horizontal and vertical upsetting and bending tools a^2 *q*, constructed, arranged, and operating, as herein described.

4. In combination with horizontally and vertically reciprocating upsetting and bending tools, the feeding-arm *t*, with its toothed wheel 12, the intermittently-rotating head-block *r*, with its friction-brake *z*, and the detaching spring-toothed arm e^1, the whole arranged and operating as described.

5. The arrangement of the walking-beam *d*, the connecting-arm *v*, and the cams *j* and 2, the bar *e*, link *f*, and arm *i*, for giving motion to the acting-parts of the machine, as herein described.

97,701. — Z. C. ROBBINS and H. A. ROBBINS, Washington, D. C. — *Knife-Sharpener.*—December 7, 1869.

Claim.—1. The four-eared and laterally-grooved body *a c c c c* of our improved knife-sharpener, when the shape thereof is such as will enable it to be placed in a working position upon the tines of a fork, substantially as herein set forth.

2. The combination of the annularly-grooved rollers *b b* with each other and with the peculiarly-shaped body *a c c c c* of our improved knife-sharpener, substantially as herein set forth.

3. The combination of emery or corundum with the highly-tempered metallic ridges of knife-sharpeners, substantially in the manner herein set forth, by which the said gritty substance will act conjointly with the said metallic ridges in the reduction of knives, &c., to sharp-cutting edges.

97,702. — G. ROBINSON, Louisville, Ky. — *Tobacco-Elevator.*—December 7, 1869.

Claim.—The combination, with a pair of endless

elevators, provided with hooks B, of the supplying and discharging jacks, substantially as specified.

97,703. — G. ROBINSON, Louisville, Ky. — *Machine for Rolling, Pressing, and Cutting Tobacco.*— December 7, 1869.

Claim.—The fixed partitions D, feeding-belts *c*, rollers A B E, and the discharger F, slotted to fit in the grooves in the roller B, to guide the tobacco to the cutting-rolls G and H, all combined, constructed, and arranged with relation to each other, as shown and described.

97,704.—WILLIAM A. ROBINSON, Grand Rapids, Mich., assignor to O. B. NORTH AND COMPANY.—*Trace-Buckle.*—December 7, 1869.

Claim.—In combination with the buckle-frame A, constructed with trunnions *a a* thereon, and the cross-bar B, the said cross-bar having the tongue D formed thereon, the clamp, consisting of the bars I and G, with the two sides F F, the said two sides curved, and arranged as described, so as to operate under the trunnions, and clamp the strap between the bars I and B, substantially in the manner herein set forth.

97,705.—TIMOTHY ROSE, Cortland, and PLATT S. BUELL, Windsor, N. Y.—*Coil-Spring and its Attachments.*—December 7, 1869.

Claim.—1. The coil-spring A B, in the form described, that is, with the lower part in a conical form, and the upper part in a cylindrical form, for the uses and purposes set forth.

2. The combination of a conical coil-spring, (whether with or without the cylindrical part,) with the concave depression underneath said spring, when made in the manner described, for the uses and purposes set forth.

3. The combination of the spring A B, the concave depression C C, and the plug or standard I, for the uses and purposes described.

97,706.—IRA MOSHER RUSSELL, Lewiston, Me.—*Spring-Bed Bottom.*—December 7, 1869.

Claim.—The arrangement of each of the bands C or C′ with the spring B, the slats D, and the pins or studs *c* of such slats, such arrangement involving the extension of the band through the several springs thereof, and the pins or studs into the holes of the band, in manner substantially as and for the purpose as described.

97,707. — ANDREW SCHOLLARS, Leavenworth, Kansas. — *Apparatus for Laying out Stair-Rails.*— December 7, 1869.

Claim.—1. The supplementary post G, and arm H, with their points made adjustable in any vertical and horizontal, or inclined plane, substantially as described, for the purpose of supporting the board, (or plank to be cut,) in an inclined position, as specified.

2. The uprights N, and their braces O, and the cross-bar M, with its hinged plates *c c*, arranged substantially as described, for the purpose of securely holding the head of the plank while describing and cutting the required curved piece.

97,708. — WILLIAM SHARKEY, Chico, Cal.—*Horse Hay-Rake.*—December 7, 1869.

Claim.—The combination and arrangement of the hinged plate K, rod *d*, and stirrup or foot-piece *g*, constructed to operate substantially as described, for the purpose set forth.

97,709. — MARY A. SHEAFFER, Elizabethtown, Pa. — *Process for Manufacturing Cheese.* — December 7, 1869.

Claim. — The above-described composition and mode of making my compound scalded cheese, substantially in the manner described.

97,710.—HAMILTON SHERMAN, Waverly, Pa.—*Book-Holder.*—December 7, 1869.

Claim. — The combination, with the adjustable table D, of the clamping-bar I, adjusting-arms F, spring M, and adjusting-slide H, all substantially as specified.

97,711. — JAMES W. SHUBERT and NORVAL DOUGLAS, New Haven, Conn.—*Plate for Holding the Lids of Trunks in Place.*—December 7, 1869.

Claim.—The plates A and B, fastened on the corners of trunks, and operating substantially as and for the purposes herein set forth.

97,712. — JOHN SIMPSON, Cleveland, Ohio.—*Vises for Wood-Working.*—December 7, 1869.

Claim.—The construction and arrangement of the bench-leg A, jaw B, socket C, screw-rack bar F, screw I, jaw H, and socket and lever K, with notch and pawl *e*, all constructed as described, and operating substantially as and for the purposes herein set forth.

97,713. — PETER G. SMITH, Brooklyn, N. Y., assignor to himself and ROBERT DONAHUE, same place.—*Key-Guard.*—December 7, 1869.

Claim.—A key-fastener, composed of the jaws A A and boxes B B, constructed and fastened together substantially in the manner and for the purposes herein set forth.

97,714. — ROBERT W. SMITH, Toledo, Ohio.—*Bridge.*—December 7, 1869.

Claim.—1. The provision, in a bridge, of the inclined lateral ties G G′, extending from the rafters F F′, across the beams D, to the uprights C C′, to which beams and uprights they are bolted, substantially as herein described and for the purpose explained.

2. In combination with the diagonal floor-braces E′, the tie-bolts J K *k k′* L, for the object herein described.

97,715.—SAMUEL B. SMITH, New Haven, Conn.—*Hammer.*—December 7, 1869.

Claim.—The implement composed of the claw *a*, hammer *b*, ice-pick *c*, screw-driver *h*, and handle A, when the whole is constructed and arranged as herein described.

97,716.—WILLIAM H. SMITH, Newport, R. I.—*Boot and Shoe Cleaner.*—December 7, 1869.

Claim. — 1. The upright rotary brushes, geared and combined with the cylindrical corrugated driver B, as and for the purposes described.

2. The scraper C, and brush D, in combination with brushes E, and their driving-cylinder B, as described.

97,717. — CHARLES EDWARD SNEIDER, Baltimore, Md.—*Sight for Fire-Arms.* — December 7, 1869.

Claim.—In combination with the front sight of a fire-arm, a lens, located in close proximity thereto, so as to leave the intervening space between said front sight, or lens, and the rear sight unobstructed, and the natural vision of the user unaffected, until it reaches the lens, or front sight, at or near the front of the barrel, as herein described and represented.

97,718.—HOWARD SPENCER and LAFAYETTE K. SAYLOR, Philadelphia, Pa. — *Manufacture of Iron and Steel.*—December 7, 1869.

Claim.—The process, substantially as described of converting iron-ore directly into steel, or into refined cast iron, at one operation, and in one chamber of a blast-furnace.

97,719.—EBENEZER SPERRY, Saint Louis, Mo.—*Toy Harpoon-Gun.*—December 7, 1869.

Claim.—1. The barrel A, when provided with a slot, *a′*, in its bottom side, for the passage of the cord *c*, as herein described and set forth.

2. The arrow C, when made hollow, for the reception of the cord *c*, and otherwise provided with a notch at c^2, for the passage of the cord to the slot *a*, as herein described.

3. The hollow plunger or follower D, when slotted at *d*, for the passage of the cord *c* to the slot *a*, as set forth and described.

4. The spring-clamp *e* or *e′*, in combination with the barrel A, as described and shown.

97,720.—JOST STENGEL, Croton, Mich.—*Spring-Bed Bottom.*—December 7, 1869.

Claim.—1. The reversible springs C C, provided with movable pieces D D, as and for the purposes herein set forth.

2. The bed-bottom, herein described, composed of the bed-slats E E, cross-slats I I, and springs G G, all as specified.

3. The arrangement, within a bedstead, of the springs C C, pieces D D, bed-slats E E, cross-slats I I, and springs G G, all constructed as described, and operating as and for the purposes herein set forth.

97,721.—SIMON STERNS, New York, N. Y.—*Pleating-Machine.*—December 7, 1869.

Claim.—1. The sliding plate N, arranged to operate substantially in the manner and for the purpose described.

2. The lever P, provided with vertical rod S, to which is attached foot T, operating in the manner and for the purpose set forth.

3. The combination and arrangement of the slotted standards B B, shaft D, with roller E, adjustable shaft H, with roller I, plate N, cams O O and R, lever P, foot T, and table W, all constructed and arranged to operate substantially in the manner and for the purposes herein set forth.

97,722.—WILLIAM STEVENS, Tarentum, Pa.—*Bedstead-Fastening.*—December 7, 1869.

Claim.—The combination of the latch *e* with the parts C and D of the bedstead-fastener, the whole being constructed, arranged, and operating as herein described, and for the purpose set forth.

97,723.—JAMES G. STOWE, Providence, R. I.—*Tool-Rest for Lathes.*—December 7, 1869.

Claim.—The combination of the poppet-block A, tool-rest B, helical cam-block C, screws *d d*, cog-wheel *b*, and cog-rack *e*, or their equivalents, constructed and arranged substantially as and for the purpose described.

97,724.—W. H. STRAUB, Danville, Pa.—*Hay-Loader.*—December 7, 1869.

Claim.—1. The pivoted cross-pieces *b*, grooves or track *d*, and shoes *e*, combined and arranged substantially as and for the purpose described.

2. The slotted adjustable bracket *k'*, standard *k*, inclined frame A, and tongue C, combined and arranged substantially as and for the purpose described.

3. The slotted arms *h*, combined with the crank-axle B' and frame A, in the manner and to discharge the function set forth.

97,725.—THOMAS H. TATLOW, Jr., Newark, Mo.—*Washing-Machine.*—December 7, 1869.

Claim.—1. The laterally-oscillating, backward and forward as well as up and down adjustable rubber, G, of a washing-machine, when arranged to operate against a curved wash-board, substantially as herein shown and described.

2. The combination of the rocking-post C and bar D, with the levers E F, rubber G, hinged guard J, and rod *i*, all arranged and operating substantially as herein shown and described.

3. The above, in combination with slotted plate *a*, carrying the pin *b*, when adjustable on the pivoted end of the post C, for regulating the height of the rubber, substantially as herein shown and described.

4. The removable pivoted guard and partition K, when arranged and combined with the other parts of the machine, substantially as and for the purpose herein set forth and described.

97,726.—JOHN I. TAY, Oakland, Cal.—*Hanging Window-Shades.*—December 7, 1869.

Claim.—The combination of the plate *e*, pawl *i*, ratchet-wheel *g*, loose pulleys *k*, cords D and *l*, and weighted tassel E, when arranged to operate as herein set forth.

97,727.—JOHN I. TAY and LODOWICK L. SAWYER, Oakland, Cal.—*Means for Hanging Window-Shades.*—December 7, 1869.

Claim.—The combination, with an adjustable shade-roller, C, of a fixed pulley, *a*, loose pulley *b*, and endless cord *k*, arranged to operate as herein set forth.

97,728.—JOSEPH TAYLOR, Hudson, N. J.—*Bread-Slicer.*—December 7, 1869.

Claim.—1. The combination of the base A, revolving receiving-case E, and plate C, forming cutters *a'*, substantially as described, for the purpose specified.

2. The cover I, constructed as described, with the plungers J, and adapted to press the contents of the openings H within the revolving case, in contact with the cutters *a'*, substantially as described, for the purpose specified.

3. The adjustable plates K, in combination with the case A, revolving case E, and cutters *a'*, substantially as described, for the purpose specified.

97,729.—JOHN HENRY THOMAS and PHINEAS P. MAST, Springfield, Ohio.—*Grain-Drill.*—December 7, 1869.

Claim.—1. A grain-drill, having two sets of drag-bars, one set being hinged to a stationary bar B, and the other set being hinged to a movable bar, C, the latter being arranged to be secured at the front, or moved back so as to bring the points of hinging of the two sets in line, substantially as described.

2. Attaching the drag-bars D to the under side of the cross-bar B, and the drag-bars E to the rear edge of the movable bar C, so as to bring the drill-tubes all in line, when the bar C is moved back, substantially as described.

97,730.—J. B. VAN DYNE, Nashville, Tenn.—*Railway-Car Brake.*—December 7, 1869; antedated November 30, 1869.

Claim.—1. The tiller-wheel G^2, in combination with the rope or chain G, guide-pulleys *g d* d^3, and movable blocks E, the whole constructed and operating substantially as described, for the purpose of simultaneously applying and releasing the brakes of a railroad-train, as set forth.

2. The brake-shafts F' and ropes or chains F, in combination with the guide-pulleys d^1, blocks E, and pulleys e^2 *e*, substantially as described, and for the purpose of operating the brakes of each car separately, as set forth.

3. The rope or chain H, rods J, and ropes or chains J^1, in combination with the pulley *e*, guide-pulleys d^2, pulleys J^2 *i* i^3, and brake-beams I I', the whole constructed and operating substantially as described, for the purpose of applying the brakes to both sides of the truck-wheels, as set forth.

97,731.—NICHOLAS S. VEDDER, Troy, N. Y.—*Cooking-Stove.*—December 7, 1869; antedated November 30, 1869.

Claim.—The hot-air chamber C, provided with partitions *d e*, openings *f*, and regulating-slide *g*, constructed and arranged as described, whereby the air is first heated, and then passed into the grate at the ends, substantially as and for the purpose set forth.

97,732.—SAMUEL D. VOSE, Milwaukee, Wis.—*Coal-Stove.*—December 7, 1869.

Claim.—1. The local ring-scraper, for cleaning the upright flues of stoves, when constructed and operated substantially as herein set forth and described.

2. The combination of a wire shield or door, A, with a draught-register, when said door is constructed and affixed as above described, and for the purpose of catching sparks.

3. The combination of a safety-button C, when used in connection with a separate latch or turn-key, for the purposes of safety, as above described.

97,733.—CORNELIUS WALSH and JOSIAH WALSH, Newark, N. J., assignors to CORNELIUS WALSH.—*Fastening for Traveling-Bag.*—December 7, 1869.

Claim.— A fastening for traveling-bags, composed of a bracket, 1, clasp 2, 4, 5, 6, and button or stop 3, 7, constructed and arranged to operate in the manner herein represented and described, for the purposes set forth.

97,734.—WILLIAM G. WARD, New York, N. Y.—*Breech-Loading Fire-Arm.*—December 7, 1869.

Claim.—1. The combination of the hammer and firing-pin C, provided with the groove *c*, at the rear end thereof, with the automatic catch *b*, substantially as shown and described.

2. The combination of the bolt A, spring *a*, and pin *b*, with the hammer and firing-pin C, formed with the groove *o* at the rear end thereof, substantially as shown and described.

97,735.—ADDISON G. WATERHOUSE, San Francisco, Cal.—*Pen.*—December 7, 1869; antedated November 25, 1869.

Claim.—The application of the gauge or shoulders C, acting on the levers A, so as to prevent too great a strain being put upon the springs Y, and thereby preventing the points *d* from being broken off.

97,736.—LAWRENCE B. WATERMAN, Chicago, Ill., assignor to LOUIS B. KELLY, same place.—*Clothes-Drier for Stove-Pipes.*—December 7, 1869.

Claim.—The arrangement of the collar A with its flange *a* and thumb-screw *c*, in combination with the disk or ring B, with its projections *d* and slots *f*, as shown and described.

97,737.—HENRY WIGLEY, New Albany, Ind.—*Boiler-Feed and Water-Heater.*—December 7, 1869.

Claim.—1. A reservoir constructed as described, and connected with the boiler, substantially as herein set forth.

2. The combination of the outer reservoir A, inner reservoir B, provided with flanges *a a*, and V-shaped perforated cap D, tortuous pipe E, inlet F, and outlets G, H, and I, all substantially as herein set forth.

97,738.—A. WILKE, Brunswick, Germany.—*Ice-Creeper.*—December 7, 1869.

Claim.—An ice-creeper, consisting of the metal frame, A, provided with the clips L and the screw F, with the felt sole B attached, substantially as described.

97,739.—F. L. WILKINS, Saint Mary's, Ohio.—*Corn-Planter.*—December 7, 1869; antedated December 4, 1869.

Claim.—1. The seed-boxes K, when provided with the projections N, in combination with the slides P, arm R, and spring S, when used substantially in the manner and for the purpose set forth.

2. The marker G, when provided with a slot upon its inner side, and with curved arm H, when used in the manner and for the purpose specified.

3. The levers M, in combination with the seed-boxes K, slides P, and cam-wheel B, when used substantially in the manner as described.

4. The marker G, and arm H, in combination with the cam I and rod O, when used substantially as set forth.

5. The plows D and F, cam-wheel B, marker G, provided with arm H, rod O, and cam I, in combination with the levers M, seed-boxes K, and slides P, when all are arranged in the manner and for the purpose substantially as set forth and described.

97,740.—ISAIAH M. WILLIAMS, Clinton County, Ohio.—*Tire-Heater.*—December 7, 1869.

Claim.—1. The box F, in combination with the ventilators *f f*, and the ears or buckets *g g*, constructed and operating substantially as and for the purpose described.

2. The revolving platform E, in combination with the crank B, horizontal beam D, and lever C, constructed and operating substantially as and for the purpose described.

3. In combination with the revolving platform E, crank B, lever C, and beam D, the box F, with ventilators *f f*, and ears or buckets *g g*.

97,741.—JOHN H. WILSON, Philadelphia, Pa., and JACOB C. OUTWATER, Newark, N. J.—*Mechanism for Driving Sewing-Machines.*—December 7, 1869.

Claim.—1. The grooved friction-wheel D, and brake-arm E, and shoe E′, when they are secured to the arm B in such manner that the brake-arm shall be adjustable, substantially as described.

2. Elbow-lever B B′, wheel D, brake-arm E, spring F, and treadle-arm G, when the same are so combined and arranged as to operate substantially as described.

97,742.—JOSEPH WILSON, Little Falls, N. J.—*Mole-Killer.*—December 7, 1869.

Claim.—The combination of the outer case or box A, inner box B, spikes C, bail or loop D, arm E, shaft F, elastic rods G *g′*, and sliding bars H *h′* I, with each other, said parts being constructed and operating as herein shown and described, and for the purpose set forth.

97,743.—LEVI WILSON, Springfield, Ohio.—*Cider-Mill.*—December 7, 1869.

Claim.—1. The combination of the wheel D, reciprocating plunger K, and chambered wheel L, arranged to operate substantially as and for the purpose set forth.

2. In combination with the plunger K, a revolving wheel L, constructed with chambers *l*, containing followers M, substantially as set forth.

3. The wheel L, when constructed with chambers *l*, and chambered recesses *l′*, connected by slits, to permit the expressed juice to flow through the wheel.

4. The combination of the wheel L, the followers M, and the cam-plate N, arranged in relation to each other, substantially as and for the purpose set forth.

5. The combination of the plunger K, lever I, and cam-wheel H, constructed and arranged to operate substantially as and for the purpose set forth.

6. The combination of the chambered wheel, the cam-plate N, springs *q*, plate Q, and set-screws, for regulating the relation of the cam-plate to the wheel, substantially as and for the purpose set forth.

7. The combination of the spur-wheel F, pinion E, and shaft F^2, bearing the thread of an endless-screw wheel G, shaft G′, and cam-wheel H, for simultaneously operating the grinding-wheel, press, plunger, and chambered wheel D, substantially as set forth.

97,744.—ALLEN L. WOOD, New York, N. Y.—*Apparatus for Treating Diseases by Mechanical Movement.*—December 7, 1869.

Claim.—1. As an instrument of hygienic treatment, the vibrating bar G, having a rotary motion at the end actuated, and its opposite extremity connected with a vertical vibratory support, for producing the operation of kneading and vibrating through the medium of fixed or removable attachments, for the purpose substantially as shown and described.

2. In combination with the bar G, the pitman J, and elbow-lever K, for converting the circular vibratory into vertical and horizontal vibratory motion, substantially as set forth.

3. In combination with the vibrating bar G, operating as described, the removable leather-covered, ribbed, rubbing-attachment M, substantially as described.

4. The foot and hand rests or bars, having continuous rotary motion given by the disk at the point of attachment, substantially as shown and described.

5. The radially-ribbed rubbing-disk, Fig. 4, operated by any suitable mechanism, either by rotary or oscillating motion, substantially as set forth.

6. The compound cam-wheel E, for producing a kneading effect by rotary motion, substantially as shown and described.

7. Extending the usual opening for the operation of the vibrating-devices through the entire length or breadth of the table on which the patient rests, so that the bar G may operate for the entire length or breadth of said table, substantially as set forth.

97,745.—JAMES A. WOOD and EDWARD V MARBAKER, Crosswicks, N. J.—*Gate.*—December 7, 1869.

Claim.—1. The movable shaft or rod D, provided with pivot *d*, arms E, and pivots *f f*, substantially as and for the purposes herein set forth.

2. In combination with the arm E and pivots *f f*, the plate *g*, constructed as described, and for the purposes set forth.

3. The crank F, secured to the upper end of the shaft D, and provided at its rear end with a box-like projection, in which the pulls G G are pivoted, all substantially as and for the purposes herein set forth.

4. The arrangement of the pawls G G and spring *h*, in combination with the projections *i i* on the circle C, substantially as and for the purposes set forth.

5. The lever H, provided at its center with the clamp I, and having a rod, J, attached at each end, substantially as and for the purposes set forth.

6. The arrangement and combination of the movable shaft or rod D, provided with pivots *d* and *f f*, crank F, pawls G G, lever H, rods J J, and circle C, all constructed as described, and operating substantially in the manner and for the purposes herein set forth.

97,746.—ALEXANDER WRIGHT, Allegheny City, Pa.—*Plow.*—December 7, 1869.

Claim.—Providing the mold-board A with lugs S, and combining it with the cutter D, substantially as herein described.

97,747.—EDWIN M. DAY, Elkhart, Ill.—*Game-Trap.*—December 7, 1869.

Claim.—1. The doors H, secured to and revolving with the shaft I, and operated by means of the trough K, the ball L, and the arm M, substantially as and for the purpose specified.

2. The means employed for resetting the trap, consisting of the door E′, the shaft E, and the arms O and N, in combination with the above-claimed devices, substantially as herein described.

3. The hereinbefore-described animal-trap, consisting of the box A, provided with the open end B, and with the openings G, the swinging doors C′, D′, and E′, and H, the shaft I, the trough K, the ball L, and the arms M N and O, all constructed and arranged substantially as and for the purpose specified.

97,748.—T. G. SPRINGER, Clinton, Iowa.—*Gas-Machine.*—December 7, 1869.

Claim. — 1. Regulating the flow of the carbureting-material into the generating-chamber automatically, by balances, in such a manner that it will be supplied only in proportion as it is needed for evaporation and use, substantially as herein set forth.

2. Maintaining automatically within the generating-chamber of a carbureter or gas-machine the necessary degree of temperature, by means of the expansion and contraction of any suitable material used for that purpose, substantially as herein set forth.

3. Surrounding the generating-chamber of a carbureter or gas-machine with a suitable fluid or other material capable of being expanded and contracted by heat and cold, substantially as herein set forth.

4. Maintaining the same degree of pressure of the atmospheric air, both above and below the carbureting-material, substantially as herein set forth.

5. The combination of a water-tank A, reservoir E, aperture *a*, and air-pipe *b*, all constructed and arranged substantially as and for the purposes herein set forth.

6. The balance G, provided at one end with the adjustable weight K, rod *d*, and valve *e*, and at the other with the tube *i* and cup I, substantially as and for the purposes herein set forth.

7. In combination with the balance, thus constructed, the cup *f*, receptacle *g*, and pipe *h*, all constructed and arranged substantially as and for the purposes herein set forth.

8. The arrangement of the generating-chamber H, tube *i*, and cup I, the latter provided with sponge, or other suitable porous material, substantially as and for the purposes herein set forth.

9. In combination with the generating-chamber H, the outside chamber L and pipe M, constructed and arranged substantially as and for the purposes herein set forth.

10. The piston or plunger *p*, rod *r*, adjustable lever P, and stop-cock *o*, all constructed and arranged to operate substantially as and for the purposes herein set forth.

11. The combination of the longitudinally-slotted lever P, and the longitudinally-slotted bar R, substantially as and for the purposes herein set forth.

12. The heating-chamber N, with pipes *k l*, leading to the chamber L and the burner *m*, constructed and arranged substantially as and for the purposes herein set forth.

13. The heating-chamber T, with pipes *t t* and burner *s*, constructed and arranged substantially as and for the purposes herein set forth.

97,749.—MOSES BURLINGAME, Garrattsville, N. Y., assignor to himself and JAMES E. PILKINGTON, Washington, D. C.—*Machine for Making Candle-Molds.*—December 7, 1869.

Claim.—1. Candle-molds, with their tips formed from the same blank, at one operation, by machinery constructed substantially as described.

2. The combination of a mandrel, B, provided with a longitudinal groove, *b*, the inclosing forming-case A, having a feeding-opening, *a*, and swaging-die C, having a socket, I, all arranged and operating substantially as described.

3. The combination of the pivoted dog G with a mandrel, constructed with a notch or groove *b*, for arresting the motion of the mandrel in the proper position to be locked with the blank, substantially as described.

4. The sliding biting-arms *m*, for holding the mold within the case, for the purpose of allowing the mandrel to be turned independently of the mold, to unlock the latter therefrom, substantially as described.

5. The combination of the pivoted arm F, for locking the mandrel within the case A, with the toothed dog G, and swaging-die C, all arranged and operating substantially as described.

6. The combination, in a machine for forming candle-molds from a single blank, at one and the same operation, of a receiving-case, A, a forming-mandrel, B, a swaging-tip die, C, sliding biting-arms *m*, pivoted locking-arm F, and arresting-dog G, all constructed, arranged, and operating substantially as described.

7. A candle-mold, with its tip made from a single blank, provided with V-shaped projections at one end, as a new article of manufacture, substantially as described.

97,750.—GOTTFRIED BIERING, New York, N. Y.—*Hoop-Skirt.*—December 7, 1869.

Claim.—The combination, with the ordinary hoops E, of a skirt and additional auxiliary and adjustable hoop G, operating as a spring, forming loops, and sliding backward or forward in links H, as herein described and for the purposes set forth.

97,751.—HENRY B. ADAMS, New York, N. Y.—*Fluting-Machine.*—December 14, 1869.

Claim.—The spring M, levers E and L, the set-screw N, and roller B, when combined and arranged to operate substantially as and for the purpose herein shown.

97,752.—GEORGE W. BILLINGS, Chicago, Ill.—*Elastic Washer for Carriages, &c.*—December 14, 1869; antedated December 4, 1869.

Claim.—1. A metallic concavo-convex washer, so constructed that the edge of the concave side shall have a continuous rib or rim, B, substantially as described, and for the purpose set forth.

2. The combination of the concavo-convex washer A, rim B, and filling C, in the manner as and for the purpose described.

97,753. — ABRAHAM BITNER, Jr., Lancaster, Pa.—*Adjustable Wagon-Bottom and Chute.* — December 14, 1869.

Claim.—The arrangement of the adjustable bottom B, in a wagon, in combination with a trap or valve, D, in said bottom, so that it may be connected with a trough or chute, for discharging coal or the like, in the manner and for the purpose specified.

97,754.—THOMAS SCHOENBERGER BLAIR, Pittsburgh, Pa.—*Mode of Treating Conglomerates of Cast Iron.*—December 14, 1869.

Claim.—The before-described improved treatment of pig-bloom, wherein the pig-bloom is first heated to the requisite degree to render it friable, is then crushed, and the crushed material charged at once into a reverberatory furnace, with the least possible loss of heat.

97,755.—JOHN BLUME, Mount Pleasant, Md.—*Animal-Trap.*—December 14, 1869.

Claim.—The toothed ring B, provided with the cross-bars *b′ b″*, and combined with the vertical posts A′ *a a*, spring *c*, trigger *e*, bait-holding apparatus *d d′*, and connecting-rod *h*, in the manner and for the purpose set forth.

97,756.—JOSHUA BROOKS, Boston, Mass., assignor to himself and BENJAMIN E. CORLEW, same place.—*Electro-Magnetic Advertising-Frame.*—December 14, 1869; antedated December 1, 1869.

Claim.—1. Drums H H′, ratchets *h h′*, pawls *g g′*, bell-crank *e′ f′*, *e f*, and bars *d d′*, in combination with an electro-magnetic apparatus, substantially as described.

2. Drum H, strap *q*, stud *p′*, in combination with bell-crank lever *m′ l′*, rod *v*, wire *s*, ball *i*, and pawl *g*, substantially as described.

97,757.—WILLIAM I. BUNKER, Yankton, Dakota Territory.—*Lamp-Extinguisher.*—December 14, 1869.

Claim.—A slot, *a*, in the side of a wick-tube, near the top, with a tap, *b*, extending down from the upper edge of the slot, at an angle from the tube, for the purpose of conveying the rising air to the flame.

97,758.—ROBERT F. BURNS, Albany, N. Y.—*Machine for Polishing the Edges of Boot and Shoe Soles.*—December 14, 1869.

Claim.—1. The polishing-cylinder D, when furnished with the creasing-projections *s s* and the inclined grooves *o o*, substantially as and for the purpose set forth.

2. In combination with a polishing-cylinder, D, constructed with a solid face, and provided with creasing-projections *s s*, the jet of gas or other flame G, applied substantially as and for the purpose set forth.

3. The revolving nut *d*, screw *f*, hand-wheel C, in combination with the frame A, and the adjustable gauge B, substantially as and for the purpose set forth.

4. The stops *k*, made into and in combination with the adjustable gauge B, substantially as and for the purpose set forth.

97,759.—PETER CAMPBELL, Carrolltown, Pa.—*Bee-Hive.*—December 14, 1869.

Claim.—1. The vertical ventilating-tube A, passing centrally through the hive, open at the top and bottom, and perforated and provided with screens, all substantially as herein described.

2. The construction of the hive proper, of a base B, glass sides and back *c c e*, hinged shutters C E, blocks *e e*, comb-frame supports H, removable upper portion K K, and vertical central perforated tube A, open at top and bottom, said hive containing the suspended comb-frames G, the removable sections I, and honey-boxes J, all constructed and arranged substantially as herein described and shown.

97,760.—PETER CAMPBELL, Carrolltown, Pa.—*Railway-Gate.*—December 14, 1869.

Claim.—1. The self-closing gate, provided with springs I, as and for the purpose set forth.

2. The pivoted spring-holders G G′, when connected with the rail B′, for the purpose, and substantially as described.

3. The catch-bars E E′ and levers F F, in combination with the spring-rail B′, when constructed and arranged to operate substantially as described.

4. The combination of the self-closing gate, the spring-rail B′, posts H H, holders G G′, and catch-bars E E′, and levers F F, all constructed and arranged to operate substantially as described.

97,761.—THOMAS J. CHUBB, Williamsburgh, N. Y.—*Reducing Ores.*—December 14, 1869; antedated June 14, 1869.

Claim.—1. Effecting the heating, reducing, melting, or refining of ore, metals, metallic or earthy substances by aid of an agitated intermittent reciprocating or revibrating motion to a current or blast of air or gas entering the combustion-chamber of a furnace, for the purpose of producing a perfect combustion of the air and gases, and for the purpose of facilitating the action of the heated gases or flame to heat the metal, (or other substance to be acted upon by the heated gases,) without a cutting blast.

2. The employment of an agitating, revibrating motion to air, steam, gas, or gases, passing through or among particles of coal or other carbonaceous matter in a gas-producing furnace or apparatus, for the purpose of aiding the production or improving the quality of combustible gas.

3. Effecting the heating, reducing, melting, or refining of ores, metals, metallic or earthy substances by aid of gas, produced substantially as set forth.

4. Producing combustible gas by aid of an agitated intermittent reciprocating or revibrating motion to the air, steam, gas, or gases in immediate contact with the coal or other carbonaceous substances in a gas-producing furnace or apparatus.

97,762.—JAMES B. CLARK and LUCAS C. CLARK, Plantsville, Conn.—*Machine for Bending and Folding Sheet-Metal.*—December 14, 1869.

Claim.—1. The combination of the swinging brakes C and D, and the folding-plate B, substantially as and for the purpose described.

2. The combination of the swinging brakes C and D, folding-plate B, brake-plate J, and cams F F, all constructed and operated substantially as set forth.

97,763.—JOSEPH S. CLARK, New York, N. Y.—*Saw-Swage.*—December 14, 1869.

Claim.—The removable die *e*, in combination with the beveled jaws *b* and *e*, and handle *a*, all constructed, arranged, and operated as set forth.

97,764.—NELSON C. COLE, Beaver Dam, Wis., assignor to himself and LEVERETT H. MARVIN, same place.—*Sash-Holder.*—December 14, 1869.

Claim.—The construction of a combination window-lock, with two bolts upon one plate, and operated by detachable keys, operating upon each sash independently, as herein described.

97,765.—CHRISTOPHER DAY, Mineral Point, Wis.—*Machine for Crimping and Forming the Front of Boots.*—December 14, 1869; antedated November 30, 1869.

Claim.—The new and improved method of forming and crimping the fronts of boots, by means of the ratchet-beam B and ratchet-bars R R, in combination with the gates *g g*, stanchions *o o*, and toothed jaws K K, and the adjustment of the stanchion-sections and jaws K K, by means of screws N and T T, constructed and arranged as herein described.

97,766.—ROYAL E. DEANE, Brooklyn, N. Y.—*Water-Heater for Culinary Purposes.*—December 14, 1869.

Claim.—1. So constructing a water-heater for culinary purposes, that the steam rising from the water boiling in the heater shall force any desired quantity of boiling water out of said heater and into a contiguous vessel, properly connected with the heater, when the same shall be constructed substantially as described.

2. The combination, with a steam-tight cylinder, A, of the pipes F and G, when the same shall be constructed and operate substantially as and for the purposes set forth.

3. In combination with the subject-matter of the second clause of claims, the steam-cock H, pipe I, and perforated plate or disk L, constructed and operating as and for the purposes specified.

4. The combination, with a steam-tight cylinder, A, provided with the pipes F and G, of a measuring-scale, D, as and for the purposes fully described.

97,767.—JOSEPH W. DOUGLAS, Middletown, Conn., assignor to W. & B. DOUGLAS.—*Pump.*—December 14, 1869.

Claim.—An air-chamber, and the passages connected therewith, having a porcelain-enamel surface, as and for the purpose described.

97,768.—S. C. FRINK and L. D. HARLAN, Indianapolis, Ind.—*Depurator.*—December 14, 1869.

Claim.—1. The shield and adjustable head-rest, in combination with the elastic hood, arranged as described, substantially as and for the purposes set forth.

2. Securing the hinged covers of the box G, arranged with the folding lid, as described, by means of the hook-eccentries, arranged as and for the purposes set forth.

97,769.—CHARLES B. GOODRICH, Jr., Boston, Mass.—*Shutter-Fastener.*—December 14, 1869.

Claim.—The combination of a catch-rod, con-

structed with a screw-thread on the inner end, and a catch on the outer end, with a brick perforated to receive the same, and a nut to secure the same, all substantially as and for the purposes described.

97,770.—Suspended.

97,771.—GEORGE GUENTHER, Chicago, Ill., assignor to himself and E. H. HEYMANN, New York City.—*Manufacture of Glue.*—December 14, 1869.

Claim. — As a new article of manufacture the within-described canned glue, prepared substantially in the manner and so as to combine the advantages herein set forth.

97,772.—HIRAM W. HAYDEN, Waterbury, Conn., assignor to HOLMES, BOOTH AND HAYDENS, same place. — *Shade-Rings for Lamp-Burners.*—December 14, 1869.

Claim. — The crimps 2 2 in the springs *o* of the shade-ring *d*, in combination with the bead *i* around the base of the burner, as and for the purposes specified.

97,773.—HIRAM W. HAYDEN, Waterbury, Conn., assignor to HOLMES, BOOTH AND HAYDENS, same place.—*Lamp.*—December 14, 1869.

Claim.—1. The perforated cylinder *d*, and guide-socket, made of one piece of metal, and removable from the wick-tube, as and for the purposes specified.

2. The perforated cylinder *d*, flange *e*, and guide-socket, in combination with the chimney-holder, attached to the flange *e*, as set forth.

3. The perforated cylinder *d*, guide-socket *g*, flange *e*, and chimney-holder *f*, made as specified, in combination with the compound dome *h i*, with flame-slot and notches *o o*, as and for the purposes set forth.

97,774.—FREDERICK HEWITT, Bloomfield, N. J. —*Fluting-Machine.*—December 14, 1869.

Claim.—The combination and arrangement of the heater-boxes A B, A′ B′, lever C, link D, spring H, and lever G, operated as shown and described.

97,775. — ABRAM C. JAQUES, Leavenworth, Kansas.—*Wagon-Brake.*—December 14, 1869.

Claim.—1. The ratchet *i i i*, on the top of the perch A, the pawl *e* and lever *d*, as arranged therewith, and connected with the brake-bar C, in combination with the bell-crank lever *h*, to liberate the pawl and brakes, all being arranged and operating substantially as and for the purposes set forth.

2. The arrangement of the hand-lever I, guide-ratchet *j*, the movable double-tree F, all connected together, and combined with the brake-locking and liberating mechanism, as herein described.

97,776.—E. C. JENKINS, Jr., Worcester, Mass. —*Wick-Trimmers for Lamps.*—December 14, 1869; antedated December 11, 1869.

Claim.—1. The combination, with the wick-tube of a lamp-burner, of a wick-cutting-device composed of two cutting-plates or blades affixed to or forming part of a sleeve fitting the wick-tube, and capable of being moved up or down thereon, so as to bring the blades up in position to cut the wick, or to lower them out of the way.

2. A wick-cutting device, composed of the sleeve *d*, spring-plates *e*, and blades *f*, the whole constructed and operating as described.

97,777.—JESSE B. JOHNSON and THOMAS E. JOHNSON, Indianapolis, Ind.—*Lumber-Drier.*—December 14, 1869.

Claim.—Furnishing the drying-chamber with the vertical deflecting-plates D, and the horizontal deflecting-plates E, arranged substantially as set forth, in combination with the furnace B, curved deflecting-plate C, ventiducts G, and longitudinal ducts formed by the pieces H resting on the top of the truck-frame, all arranged and operating substantially as and for the purpose set forth.

97,778.—JULIUS H. JONES, Charlton, Mass.— *Turbine Water-Wheel.*—December 14, 1869.

Claim.—The wheel, composed of the two series of buckets, D and E, both having a vertical inlet and horizontal discharge, and the rims B and C, confining the water admitted to the upper series to them, when constructed and operating as above set forth and described.

97,779.—HENRY J. KING and BENTON L. BEEBE, Middletown, N. Y.—*Hydraulic Engine.*—December 14, 1869.

Claim.—1. The rectangular box A, provided with valve-chamber B, valves D, inlet and outlet pipes C *b*, in combination with piston-boxes E, having the pistons provided with air-chambers *h′*, substantially as set forth.

2. The rectangular box A, with partitions and plates *a a*, valves D D, rod or stem *c*, packing-box *e*, inlet and outlet pipes C *b*, constructed and arranged substantially as set forth.

3. The pistons F, so constructed with air-chambers as to form a trunk, extending to the bottom end thereof, in combination with valves and valve-chamber, substantially as set forth.

4. The slide I, provided with V-shaped shoulders *i*, and connecting by levers with valve-rod or stem *c*, in combination with elongated cam J, substantially as set forth.

5. The elongated cam J, so arranged with slide, as to impinge against either side of the shoulders *i* thereof, and operate the valves, substantially as and for the purpose set forth.

97,780.—FRANÇOIS ALEXANDRE LE MAT, New Orleans, La., assignor to CHARLES PIETRONI, London, England. — *Breech-Loading Revolving Fire-Arms.*—December 14, 1869.

Claim.—1. The construction and arrangement, with the central barrel, of its hinged breech-block, and the central firing-pin carried in the same, and located, with relation to the hammer, substantially as described and shown.

2. The combination of the hinged breech of the central barrel, carrying the percussion-pin or firing-needle, as described, with the cartridge-retractor, under the arrangement and for the operation as set forth.

3. The herein-described construction of the double hammer, with a permanent beak or pin for exploding the cartridge of the revolver, and a hinged auxiliary hammer, constructed and arranged substantially as specified, to strike against the percussion-pin of the central barrel.

97,781.—FERDINAND LEROY, (FERDINAND LEROY, administrator,) of Commercial Road, London, England, assignor to himself and P. A. VICTOR LE LUDEZ, England.—*Composition for Covering Steam-Boilers, and for other Purposes.*—December 14, 1869.

Claim.—1. Certain additions to and modification in the substances constituting the non-conducting composition.

2. The use of brick-clay, powdered charcoal, saw-dust, fuel-sweepings, cow-hair, cocoanut-fiber, wheaten flour, yeast, or other fermentable substance, the residues of the conversion of starch into sugar and cotton-foot oil, in combination, so as to form a non-conducting composition.

3. The method of preparing the same by fermentation, and the method of applying the same, as set forth in this specification.

97,782.—EDWARD C. LEWIS, Benton Harbor, Mich.—*Wine and Cider Mill.*—December 14, 1869.

Claim.—1. The door or adjustable wall L′, of the intermediate chamber between the two sets of grinding or crushing devices, as and for the purpose set forth.

2. The combination of the chute-supports a^2 a^3, arranged relatively to the two sets of grinding or crushing devices, as shown, and the adjustable wall L′, and removable chute or chutes N O, as and for the purposes described.

97,783.—JOHN R. LEWIS, Piper City, Ill.—*Excavator.*—December 14, 1869.

Claim.—1. The plow, provided with a mold-board turned up at W, to carry earth on to the elevator, in combination with the brace *g*, shoe-plate X, and connecting-plate *t*, as set forth.

2. The combination of the plow D W F E, brace *g*, plates *t* X, stiles O O, roller Y, and beams T and G G′, as described.

3. The combination of the frame A A′, depending standards J K and L K, cross-beam T, provided with lugs U, wheel I, rope *x*, and chain Z, for supporting and adjusting the plow and lower ends of the elevator, as and for the purpose specified.

97,784.—Francis M. Lottridge, Portland, Ind., assignor to himself, James M. Templer, and James C. Jay.—*Band-Tightener.*—December 14, 1869; antedated December 14, 1869.

Claim.—1. The combination of shaft A A^1, hook A^2, ratchet-wheel A^3, pawl *a*, spring *a′*, crank B, and cross-arm C, with pulleys *c c* and *c′ c′*, all arranged to operate substantially as described.

2. In combination with the above, the cut C′ on the upper side of the cross-arm C, with reference to the band or rope, and the pulleys *c′ c′*, substantially as shown and described.

97,785.—Francis M. Lowden and John D. Lowden, Lawrence, Ind.—*Clod-Fender.*—December 14, 1869.

Claim.—The clod-fender herein described, when the same is constructed in its several parts and used substantially as herein set forth.

97,786.—T. J. Magruder, Marion, Ohio.—*Shaft-Tug Lug for Harness.*—December 14, 1869.

Claim.—A harness-tug lug, provided with the plate *a*, and secured to the skirts and pads as described, when the lug is either made hollow, and provided with female-screw thread, and an engaging-bolt, *g*, or solid, with removable nut *d*, all substantially as specified.

97,787.—John W. Marshall, Gilman Joslin, and Nelson Curtis, Boston, and Oliver Edwards, Brookline, Mass.—*Ships or Vessels for Carrying Liquid Cargo.*—December 14, 1869.

Claim.—1. The combination of the cargo-space or tank, either with or without compartments, with the hull of a vessel, when arranged centrally within the hold, and at such distance from the hull as to be accessible on all sides, and made of such relative length, breadth, and height, that when filled with cargo, the center of gravity and weight of the contents will bear such relation to the center of gravity and displacement of the vessel as to load and trim it, substantially as described.

2. The cargo-space, arranged centrally in the hull, as described, and made with its sides longitudinally continuous, in structural combination, with the hull, as described, so that the rigidity due to such construction of the cargo-space shall be imparted to the hull.

3. The combination of the series of tanks, arranged centrally in the hull, and provided with rising-chambers, as described, with the hull of the vessel, when so arranged that the rising-chambers shall extend above the outer deck, so as to serve as hatches, and afford free communication between the interior of the tanks and exterior of the hull, and as combings, to prevent the influx of water that may come on board, as well as means of keeping the tanks entirely filled, substantially as described.

97,788.—Frank W. Marston, Boston, Mass.—*Fastening for Corsets.*—December 14, 1869; antedated November 30, 1869.

Claim.—The spring *a*, covering the clasp, when formed with a concavity, *d*, to engage with the head of the stud *c*, and retain it in position, substantially as described, and for the purpose set forth.

97,789.—W. B. McClure, Alexandria, Va.—*Cart-Saddle.*—December 14, 1869.

Claim.—1. The employment of rollers in the groove of a cart-saddle, when said rollers have their bearing directly upon the saddle, substantially as described.

2. The cart-saddle described, having the groove *a*, depression a^1, rollers *b*, bearing-plate a^2, and bolts *c*, when combined and arranged as described, for the purpose set forth.

97,790.—Philip C. McManus, Troy, N. Y.—*Potato-Digger.*—December 14, 1869; antedated December 7, 1869.

Claim.—1. The arrangement of the digger D L D, the fixed apron E, and the pivoted vibrating sifter F, with reference to each other and the wheels B B, the bevel-gear wheel G, and the pinion H, in manner substantially as herein set forth and shown, for the purpose specified.

2. The combination of the ratchet *p* and pawl R with the lever Q, shaft V, arms M M, links *a a*, and digger D L D, substantially as shown, for the purpose set forth.

3. Making the bars L of the digger in a flanged, ribbed, or angular form at their top sides, substantially as herein described and shown.

4. The combination of the cradle or bolster *f* S S, sifter F, links *b b*, arms O O, shaft W, connecting-arm T, crank U, pinion H, bevel-gear wheel G, and wheel B, with each other, when arranged, with reference to the apron E and digger D L D, in manner substantially as shown, for the purpose set forth.

97,791.—J. S. Merchant, Hopedale, Ohio.—*Washing-Machine.*—December 14, 1869.

Claim.—The washing-machine, consisting of the rectangular tub A, the removable concaves C C, provided with end-pieces or extensions D D, forming the spaces J J, and the semicircular rubber E, forming one end of a lever K, whose fulcrum-rod G works in vertical slots in the sides of the tub, all constructed, combined, and arranged as shown and described.

97,792.—James Montgomery, Croton Landing, N. Y.—*Railway-Rail.*—December 14, 1869.

Claim.—1. A tubular rail, rolled in one piece, and composed of a single bloom or ingot, having an aperture through it of such shape and dimensions, and so located as to leave the largest amount of metal at top and bottom, (the points against which the wheels bear,) the vertical or nearly vertical sides being parallel to each other.

2. Mounting tubular steel rails in string-pieces C, from which they derive both vertical and lateral support, and securing them by bolts E, applied in any manner substantially as set forth.

3. The dovetail-joints, represented in Fig. 9, formed in substantially the manner described.

97,793.—William Morgan, Middlebrook, Va.—*Washing-Machine.*—December 14, 1869.

Claim.—1. The combination of the depressing-lever, the sliding frame, the rubber, the tub, and the oscillator, all constructed to operate as set forth.

2. The combination of the tub with the oscillator, constructed and operating as herein described.

97,794.—H. H. Munroe, Louisville, Ky.—*Compound for Treating Rheumatism.*—December 14, 1869.

Claim.—The above-described remedy for rheumatism, consisting of the compounds A and B, substantially as set forth.

97,795.—John Nester, Portland, Oregon.—*Scribe-Hook.*—December 14, 1869.

Claim.—1. The marker D, when provided with the V-shaped cutting-edge, in combination with the pin *i*, projecting from the pin *h* into the segmental slot of the plate *j*, all arranged to operate substantially as herein shown and described, and for the purpose set forth.

2. The springs *m m*, in combination with the marking-device D *h j*, for the purpose of retaining the marker, arranged as herein shown and described.

97,796.—H. G. Noble, Selma, Ala.—*Roofing.*—December 14, 1869.

Claim.—The arrangement of the sheets A B, in the concave form, between the rafters, and of the caps or troughs C at the joints over the rafters, all substantially as specified.

97,797.—Anthony T. Norgan, Palo Alto, Pa.—*Device for Fastening Piston to Piston-Rods.*—December 14, 1869; antedated December 7, 1869.

Claim.—The construction and arrangement of the piston-rod A with convex nut C and piston B, substantially as described.

97,798.—G. S. NORRIS, Baltimore, Md.—*Attachable and Removable Calks for Horseshoes.*—December 14, 1869.

Claim.—An attachable and detachable calk, secured to the shoe by the catch-piece *e* and the clinch-nails *f f*, with or without the creases in the shoe, substantially as and for the purpose described.

97,799.—JOHN PALEN, Lockport, assignor to NATHAN T. HEALY, Medina, N. Y.—*Harness for Horses.*—December 14, 1869.

Claim.—The construction and arrangement of the neck-strap, as herein described, the same consisting of the length A, passing over the horse's shoulders, and the side-straps *a a*, attached to the breast-plate or collar, passing up through loops, and received at the top by a single buckle, or any other device, whereby side-buckles are dispensed with, substantially as set forth.

97,800.—THOMAS PAYNE, Detroit, Mich.—*Railway-Car Brake.*—December 14, 1869.

Claim.—1. The slotted draught-iron A, which slides in the draw-bar B, in combination with and acting on chain F, so that in starting the engine or power, the pull on said draught-iron A is communicated to and unwinds the chain F, thus acting on tumbling-rod C and chain G, as and for the purpose above described; or, in case the chain V to be used in place of the rod C, then said draught-iron A is claimed in combination with and acting on shaft U, as and for the purpose above described.

2. The manner of putting the brakes on by "shutting off" and drawing the rod O, thereby removing the strain of draught-iron A upon chain F, in consequence of which the spring H is released, and by its own power, unaided either by concussion or momentum, forces the brakes on.

3. The chains J J, tumbling-rod C, slides E, draw-bar B, chain F, spring and spool H, chain G, ratchet L, when arranged and acting in combination, as and for the purpose above specified.

4. The hand-power retaining and releasing device K P Z R, for keeping the brakes partly off, and allowing the strain to apply gradually, and also for releasing brakes by hand, when desired, instead of by engine or other power, when arranged and acting in combination, as and for the purpose above set forth.

97,801.—A. PERIN, Paris, France.—*Saw-Mill.*—December 14, 1869.

Claim.—1. The arrangement of the upper or tension-pulley, the carriage E, screw-shaft *d*, miter-wheels *b*, and crank *a*, when combined, as herein described, with the standard B.

2. The arrangement of the linked serrated plates K, rotating on chain-pulleys, spurs, and bevel-gears *i k l m n o p q r*, axle *t*, and pulleys *z z'*, when combined with the carriage L, as herein described.

3. The carriage L, screw-shaft V, axle *x*, and spur-gears *y y'*, when arranged as described.

4. The arrangement of the carriage M, provided with vertical rollers, elbow-lever *b'*, weight *c'*, and screw *e*, in combination with the table *c*, as set forth.

5. The jointed guide *e*, through which the saw-blade passes, when arranged with the cylindrical stem H, substantially as described.

97,802.—JOSEPH A. PERLEY, Lynn, Mass., assignor to himself and WILLIAM H. PERLEY, same place.—*Spoke-Shave.*—December 14, 1869.

Claim.—The combination of the two handles, the double-edged knife, and the two throat-pieces, substantially in manner as specified.

97,803.—J. R. PERRY, Wilkesbarre, Pa.—*Organ-Bellows.*—December 14, 1869.

Claim.—1. The additional chamber I, in combination with the chamber formed by the suspended valve H, in the manner and for the purpose set forth.

2. The chamber N, attached to the exhaust-boards, as arranged and for the purpose specified.

3. Disclaiming the special arrangement of A. W. Wilcox, patented April 28, 1868, the combination of the valve-chamber H, recess I, and chamber N, in the manner and for the purpose specified.

4. The adjustable frame R, combined with the organ-case, for the support of the spring P, substantially as specified.

97,804.—WILLIAM C. PICKERSGILL, Providence, R. I., assignor to PROVIDENCE TOOL COMPANY, same place.—*Apparatus for Setting Caps in Metallic Cartridges.*—December 14, 1869.

Claim.—The apparatus for setting a cap in a metallic cartridge, substantially as herein shown and described.

97,805.—WILLIAM C. PICKERSGILL, Providence, R. I., assignor to PROVIDENCE TOOL COMPANY, same place.—*Cap-Extractor for Cartridges.*—December 14, 1869.

Claim.—The apparatus for extracting the cap from a metallic cartridge, substantially as herein shown and described.

97,806.—WILLIAM C. PICKERSGILL, Providence, R. I., assignor to PROVIDENCE TOOL COMPANY, same place.—*Apparatus for Setting Bullets in Cartridges.*—December 14, 1869.

Claim.—An apparatus for setting a bullet in a metallic cartridge, which consists of a suitable lever or other power-press, in combination with a mechanism for greasing the bullet, substantially as described.

97,807.—LEMUEL POWELL, Milford, Conn.—*Smoke and Spark Conveyer for Railroad-Trains.*—December 14, 1869.

Claim.—1. The pipes F G H I and smoke-stack D, all constructed and arranged in reference to each other, as described.

2. The arrangement of pipes H I, upon each side of a passage-car, but in a reversed direction, to connect with a single pipe arranged on one side of the tender, as set forth.

3. The combination of a stack-pipe, closed at top, and an angular draught-pipe, F, with a series of conducting-pipes, arranged, as described, in a horizontal line below the top of the highest car, but above the window thereof, for the purpose set forth.

4. In combination with pipes to transfer and discharge the smoke behind the moving train of cars, as set forth, an inclined pipe, J, located on the tender, to receive the cinders, and convey them to the ground, or some receptacle, in the manner described.

97,808.—THOMAS T. POWELL and JOHN F. BURROUGHS, Lawn Ridge, Ill.—*Convertible End-Board and Platform for Wagons.*—December 14, 1869.

Claim.—1. The use and construction of the board B, both as a platform or wagon-bed extension, and as a wagon-seat, with its staples or hooks *k k*, or equivalent fastenings for the gates, and the bars *e' e*, substantially as described, and for the purposes set forth.

2. In combination with the above, the gates C D, with their straps *b b b b* and eyes *d d d d*, secured by the rod *i*, and auxiliary recess *l*, the braces *a a*, and the transverse bar *g*, with its recesses or mortises *f f*, all substantially as described, and for the purposes hereinabove stated.

97,809.—A. PRUTZMANN, Canton, Ohio.—*Machine for Making Fly-Nets.*—December 14, 1869.

Claim.—1. The guide-plate T, provided with the arm U, with pressure-roller *u*, and the tension-device 2 *z* 3, and combined with the bed-plate by the clamping-screw V, substantially as and for the purpose specified.

2. The adjustable arms W S, secured to the plate T by screws *w' t*, and having the pressure-screws *w v* at their ends, substantially as and for the purpose specified.

3. The center-pin *k*, arranged on an arm, *i*, pivoted on the slide *h*, and held by a spring, *j*, attached to the slide *h*, and acting between the end of the arm *i* and the slide-rail Z, substantially as and for the purpose specified.

4. The combination of the plate B with clamping-bolt *y*, and knife *x*, guide-plate T, with clamping-screw V, and pressure-roller *u*, arranged on arm U, with tension-device 2 *z* 3, and slide-rails Z with slide *h*, having arm *i*, with center-pin *k* and spring *j*, attached thereto, the several parts being arranged substantially as and for the purpose specified.

5. The trimming-cutter 7, provided with the jam-nut 9, when used in combination with the standard

M 11, provided with the slot 10, substantially as and for the purpose specified.

6. The trimming-cutter 70, provided with the conical end 73, when used in combination with the retaining-plate 71, with clamping-bolt 72, and the standard M′, substantially as and for the purpose specified.

7. The burnisher 12, provided with one or more holes, 13, and secured by the jam-nut 14, in the standard L, with slot 15, when used in combination with trimming-cutter 7 or 70, substantially as and for the purpose specified.

8. The standard K, with grooved wheel 16, when used in combination with the burnisher 12 or trimming-cutter 7 or 70, substantially as and for the purpose specified.

9. The vise-cylinder I, composed of the jaw I′, fixed to the shaft 20, and provided with the incline 24 and lip 21, and the jaw 17, provided with screw 18 and wedge 22, and incline 23, the several parts being combined and arranged substantially as and for the purpose specified.

10. The cutter-box N, provided with clamp-screw 4, clamping-piece 34, cutter-base 32, and one or more cutters 5, with corresponding cells 33, the several parts being arranged substantially as and for the purpose herein specified.

11. The corrugated slide-rod 6, when used in combination with the cutter-box N, provided with cutters 5 and cells 33, substantially as and for the purpose specified.

12. The tension-rods *r r*, fixed in the head *r′*, and sliding through the compound revolving nut *l m*, in the plate C, and held in position by the jam-nuts *p p*, on the rod *q*, in the head *r′*, in combination with the frame-piece Y, substantially as and for the purpose specified.

13. The straight cutting-knife shaft 60, provided with clamping-bolt 37, journals 67 67, and handle 36, and having the knives 61 61 secured between the headed blocks 62 62 63, substantially as and for the purpose specified.

14. The adjustable stop-piece 38, secured to plate 40 by screw 39, when used in combination with the handle 36, provided with slot 44, on the knife-shaft 60, substantially as and for the purpose specified.

15. The pressure-bar door X, arranged to turn on journals 46 46, working in holes 41 41, in the plates C and 40, and provided with pressure-screws 35 35, and pressure-plate 47, held by clamp 49 and screws 50 50, and held in position either by hooks 35 35, or the retaining-bar 43, substantially as and for the purpose specified.

16. The shaft 56, provided with rollers 58 59 59 and yoke 57, and held down by pressure-screws 35, when used in combination with the knives 61 61 and the front plate 54, substantially as and for the purpose specified.

17. The punch-arm P, provided with the slot *c*, with one or more punches, *b b*, of a conical form, secured therein, and the adjusting-rod *f*, with nut *f′*, when used in combination with the punch-standard *o*, hand-lever Q, and plate B, substantially as and for the purpose specified.

18. The blacking-cup G H, composed of the cup H, with cover-screw 25, and the hinged cover G, with entrance and exit apertures 26 28, dipping-arm 31, and wiping-leather 30, held by clamp 29 and screw 27, the several parts being arranged substantially as and for the purpose specified.

19. The reel E, mounted on standard D, on the frame A, and provided with crank F, when used in combination with the blacking-cup G H, also secured on the plate A, substantially as and for the purpose herein specified.

97,810.—George W. Putnam, Boston, Mass.—*Burglar-Proof Safe.*—December 14, 1869; antedated November 27, 1869.

Claim.—As my invention, the new manufacture of burglar-proof safes, as described, consisting of the hollow cylinder A, or its equivalent, and the dome-shaped cylindrical cap B, made with connection-screws, and provided with a bolt in the one part, and a bolt-receiving cavity in the other, or the mechanical equivalents of such bolt and cavity, the whole being substantially as specified and represented.

97,811.—Ephraim Quinby, Comstock, Mich.—*Horseshoe-Beveler.*—December 14, 1869; antedated December 1, 1869.

Claim.—1. Constructing a horseshoe-"former" with a beveled surface at and near the heel portion, as and for the purposes specified.

2. The improved former herein described.

97,812.—John S. Rankin, Ann Arbor, Mich.—*Padlock.*—December 14, 1869.

Claim.—A spring-actuated pivoted tumbler A, having projection C, recess H, and convexity E, in combination with a pivoted bow, D, having locking recess at one end, and spring-actuated arm F at the other, the said tumbler and bow being arranged within a padlock-case, substantially in the manner described.

97,813.—Elisha R. Rich, South Boston, Mass.—*Ship-Windlass.*—December 14, 1869.

Claim.—The pawl ships' windlasses, constructed to yield or give to the movement of the windlass, for sudden strains thereon, and the above provided with graduations, substantially as described, for the purpose specified.

97,814.—Lemuel Richmond, Derby, Vt.—*Rein-Guide for Harness.*—December 14, 1869.

Claim.—The above-described rein-guide, consisting of the bars H and D, and arm B, arranged substantially as described.

97,815.—Stacy Risler, Locktown, N. J.—*Churn.*—December 14, 1869.

Claim.—The dasher-head E, diamond-shaped blades *d*, arms C, removable bar D, and removable standards B B, in combination with dovetailed ends *b* of box A, provided with removable lids *c*, the arm of dasher being operated either by pin *e* or removable lever F, constructed and arranged substantially as described

97,816.—Thomas C. Robinson, Boston, Mass., assignor to George H. Sandborn, New York City.—*Paper-Cutting Machine.*—December 14, 1869.

Claim.—1. The yokes Y, constructed as described in combination with the screws P P′ and the knife-stock K, having the slits *a a* in its ends, as and for the purpose stated.

2. The automatic reversing-mechanism for operating the clutch, the same consisting of the combination and arrangement of the toe Q, slide U, arm X, bolt *g*, yoke G′, and weight B′, in the manner specified.

97,817.—Henry Schofield, Philadelphia, Pa., assignor to himself and Charles D. Clarke, same place.—*Stone-Polishing Machine.*—December 14, 1869.

Claim.—1. In a machine for rubbing blocks or slabs of marble, &c., the combination of the reciprocating carriage, for supporting the block or slab, a rotating rubbing-disk, composed entirely of metal, and having a smooth or plain rubbing-surface, substantially as described, and mechanism for adjusting and supporting said disk at different elevations, corresponding to the thickness of the block or slab to be rubbed, the combination being and operating substantially as herein set forth.

2. In a machine for rubbing blocks or slabs of marble, &c., the combination of the reciprocating carriage, for supporting the block or slab, a rotating metallic rubbing-disk, with a plain rubbing-surface, and weighted balance-lever, or equivalent device, for graduating the pressure of the disk upon the block or slab, the combination being and operating substantially as herein set forth.

3. In a machine for rubbing blocks or slabs of marble, &c., the combination of the reciprocating carriage, for supporting the blocks or slabs, a rotating metallic rubbing-disk, and hand-lever, for elevating said disk temporarily above the surface of block or slab, the combination being and operating substantially as herein described.

4. In a machine for rubbing blocks or slabs of marble, &c., the combination of the reciprocating carriage, for supporting the block or slab, with a rotating rubbing-disk, connected to a swingin

frame, and made capable thereby of adaptation to surfaces that are curved, inclined, and horizontal, the combination being and operating substantially as herein set forth.

5. In a machine for rubbing blocks or slabs of marble and other stone, a rubbing-disk, the rubbing-surface of which is of metal, entirely plain—that is to say, free from a protruding shaft, and from angular projections or protuberances—perforated, for the passage of sand and water, and connected, on its back or reverse surface, to the extremity of a shaft, through the medium of which power is communicated, for rotating said disk, and for elevating it, to suit blocks or slabs of different thicknesses, all substantially as described.

6. The combination, substantially as described, or its equivalent, of the revolving gear-wheel *g*, gear-wheels *g' g''*, rods *k* and M, shaft F, screw C, carriage B, and stops *m*, for the purpose set forth.

7. The combination, substantially as described, or its equivalent, of the revolving gear-wheels *r'* and *r*, shaft *q'*, and screws *q*, worm-wheels Q, and swinging frame P, for the purpose herein set forth.

97,818.—Socrates Scholfield, Providence, R. I.—*Twist-Drill.*—December 14, 1869.

Claim.—1. A twist, or other similar drill, marked with distinct center-guiding lines or grooves *a a* and *a' a'*, for the purpose of indicating the proper position of the inner corner of each lip in grinding.

2. The combination of the parallel exterior lines *b b* and *b' b'*, with the center-guiding lines *a a* and *a' a'*, substantially as described.

97,819.—George H. Smith, Galesburgh, Ill.—*Smoke-Consuming Fire-Boxes.*—December 14, 1869.

Claim.—1. The pipe E, or its equivalent, with or without perforations *a a*, and the pipe *b*, in combination with the fire-chamber of a furnace, substantially in the manner and for the purpose set forth.

2. The pipe E, perforated as shown, or its equivalent, and the pipe *b*, in combination with the flues F G H of a furnace, and arranged substantially as specified.

97,820.—Samuel Smith, Yohogany, Pa.—*Churn.*—December 14, 1869.

Claim.—The shaft H, provided with revolving dashers G G, in combination with the racks B B, arranged upon each side of the shaft, and extending from the bottom to the top of the churn-box A, and the notched cross-bars C C, all constructed and operating as and for the purpose set forth.

97,821.—William Sidney Smoot, Washington, D. C.—*Repeating Fire-Arm.*—December 14, 1869.

Claim.—1. The combination of an annular key or eccentric sleeve L, vibrating upon the exterior of the breech-block, with the continuous solid breech-block B, and feathers *t t*, the whole forming a breech-system, reciproeating upon the top of the frame, and available throughout its entire length, for the reception of a mainspring and guiding-flange or feather,

2. The combination of the spring Q with the carrier-block H, and a magazine-tube, G, loaded from above and in rear, the whole being arranged in such manner, that after the insertion of each cartridge into the magazine, the carrier shall be caused to partially cover the mouth or entrance thereof, to prevent the expulsion of the cartridge.

3. The wedge-faced bar 2C', operating in connection with a series of inclines on the bottom of the magazine, to hold the cartridges firmly in place.

4. A cartridge-retractor, consisting of a lever-eatch, D, hinged to the sliding breech-block, and operated upon by the side of the frame, to force it against the cartridge-case during the forward movement of the breech, and by a spring, *u*, shoulder, *z*, or other equivalent device, to disengage it from the flange of the cartridge toward the latter portion of its backward movement.

5. The retaining-fingers H, in combination with the pivoted carrier-block E, and inclines *r r*, on the sides of the breech-frame, the whole operating substantially as and for the purpose set forth.

97,822.—Robert Spear, New Haven, Conn.—*Pneumatic Engine.*—December 14, 1869.

Claim.—1. A pneumatic engine into which condensed air is admitted, and from which it escapes through alternating cocks, automatically operated, substantially as described.

2. A plurality of cocks, connected by a crank or cam-arrangement, and operated by the ascent and descent of the float-stem, substantially as described.

3. An engine constructed and arranged as described, so that it will work automatically for ejecting the water when a given quantity thereof shall be received into the engine, and by which means the power is admitted to expel the water, substantially as described.

97,823.—William F. Spear, Wooster, Mass.—*Machine for Polishing Wood.*—December 14, 1869.

Claim.—1. The combination of two or more pulleys or gear-wheels K P T, provided with a crank, V, on the shaft of the last pulley T, connecting-rod Z, and slide-block *i*, with rubbing-block *p* attached, the several parts being constructed, arranged, and operating substantially as and for the purpose specified.

2. The combination of the rubbing-block *p*, provided with the bolt-plate *m*, threaded bolt *k*, with head *n* and the adjusting-nut *l*, the several parts being arranged substantially as and for the purpose specified.

97,824.—Alexander Stevenson, New York N. Y.—*Carpet-Beater and Cleaner.*—December 14, 1869.

Claim.—1. The combination of a yielding bed B, brushing-rollers D; and winding-rollers E, substantially as specified.

2. The arrangement of the yielding beating-bed, with the device for rolling D D and E E, as shown and described, in combination with the beater K F I I H G G, for the purpose specified.

97,825.—Cornelius St. John and Charles E. Marston, Charlestown, Mass.—*Mode of Forming "Burner-Cones" of Lamps.*—December 14, 1869.

Claim.—As a new article of manufacture, a flame-shield or burner, made of a thin shell of metal, formed into shape by electro-deposit of the metal upon a suitable pattern.

97,826.—Lyman Stone, Nelson, N. H.—*Loom.*—December 14, 1869.

Claim.—1. The combination of sliding-bar C^5, cord C^6, weighted lever C^8, having presser C^9 thereon, with the yarn-beam, all being arranged as described, for the purpose of automatically sliding the ratchet-wheel C^4.

2. The worm C^2, wheel C^4, and pawl C^{10}, in combination with a branched lever, the stud 14, arm D, lever *d*, and spring d^3, all arranged as and for the purpose set forth.

3. The arrangement of the sliding ratchet-wheel C^4, shaft C^3, and vibrating pawl C^{10}, substantially as specified.

4. The combination of cams D, arms D^4, rock-shafts D^5, arms D^6, and rods D^7, with the arms D^{11}, rocker-ends D^{12}, and springs D^{13}, as and for the purpose specified.

5. The shipper-lever I, constructed from a single rod, bent as described, and arranged with the spring K, as specified.

97,827.—Clark Strong, Winsted, Conn.—*Coffin-Handle.*—December 14, 1869.

Claim.—1. The use of double sockets C C, in combination with the arm of the coffin-handle, substantially as shown and described.

2. Providing the arms B with pivots *e e*, formed of pieces of wire, and having a right-angled flattened shank placed together, so that when the arm is cast upon them, there will be an equal thickness of metal on both sides thereof, substantially as described.

3. Securing the handle A to pivoted arms B B, by means of the tips F, driven into the slotted ends of the handle, substantially as set forth.

97,828.—Zophar W. Sturtevant, Dunstable, Mass.—*Plow.*—December 14, 1869.

Claim.—1. The shaft B and the beam A, constructed and combined as shown and described, for the purpose specified.

2. The combination, with the shaft B, and with the beam A, as described, of a supporting-frame, F F′, and handles C, in the manner and for the purpose set forth.

3. The combination, with the shaft B, the beam A, frame F F′, and handles C, as described, of the double or reversible plow L L, the parts of which are removable and changeable, and adapted for a double or single plow, or a right or a left-hand plow, in the manner, by the means, and for the purposes substantially as specified.

4. The lever d^3, in combination with the shaft B, and with the back brace K, or other connecting or holding device, for the purpose and substantially as described.

5. The rising-wheel D, and its frame, and guide-rods *f*, cross-head g^3 and screw E, in combination with the handle-supporter F F′, and the shaft B, in the manner and for the purpose described.

6. The rising-wheel G, and rod *k*, having a stand or ears, *m*, and a pin, *c*, with the lever H and cord *o*, in combination with the beam A and shaft B, in the manner and for the purpose substantially as described.

7. Combining a plow or plows, L L or N, with the shaft B and beam A, by box bearings I and *c c*, or caps 7 and 8, and a bail or curved braces, S, as described.

8. Combining the lever d^3 with the shaft B, by means of a hub, d^2, and by screws or pivots, as described.

9. The combination, with the lever H, as shown and described, of the cord *o*, arranged within and through the shaft B, substantially as and for the purpose specified.

10. The handle-supporter F F′, as described, and which serves as a guide and a support for the rods *f*, a stop for the screw E, and to connect the handles with the shaft B, as set forth.

11. The arrangement and combination of the wheels D and G, and their connecting and operating-mechanisms, with the beam A and the shaft B, whereby either or both ends may be raised successively or simultaneously, for the purpose and substantially as described.

97,829.—Timothy J. Sullivan, Albany, N. Y.—*Safe.*—December 14, 1869.

Claim.—1. In safes of vaults, the exterior plates of which consist of alternate layers of iron and steel, constructed and inter-riveted together as described, the bars or strips *b b* placed around the corners or joints of the several sides inter-rivcted to the body of the safe, and having the plate or plates *b′* secured to the said strips *b*, as set forth.

2. The heavy plate *f*, in combination with the plates *a c a′ c′*, forming the vestibule, substantially as and for the purpose set forth.

3. In vaults or safes, strengthening the jointure of the vestibule with the body of the vault by securing the plate *f* to the angle-iron *d″*, substantially as and for the purpose set forth.

4. The lock-bolt holes *e e*, when made into the rabbet-bars *g* and continued through the plate *f*, the line of direction of the said bolt-holes being perpendicular to the plate *f*, substantially as and for the purpose set forth.

5. In safe or vault doors, the exterior plates of which consist of alternate layers of iron and steel constructed and riveted together, the plate *h* riveted to the back of said door, as set forth.

6. The body A of a safe, when provided with the vestibule B and door C, all the parts being constructed and arranged as set forth.

97,830.—James Swan, Seymour, Conn.—*Auger-Handle.*—December 14, 1869.

Claim.—An auger-handle, formed in one piece, surrounded by a sleeve, having an angular hole transversely through the middle to receive the auger-shank, and provided with a set-screw entering at the vertex of an angle, as shown and described.

97,831.—G. L. Swett, Leominster, Mass.—*Stove-Shelf.*—December 14, 1869.

Claim.—The shelf H, shank F F′, and adjustable arm E, in combination with the support A B, as shown and described, and for the purpose set forth.

97,832.—J. F. Tallant, Burlington, Iowa.—*Railway-Rail.*—December 14, 1869.

Claim.—1. In the formation of such a rail, the construction of the cap A with an outer portion, *d*, extending to near the extremity of the base B, where it abuts firmly against a shoulder, *e*, or its equivalent, substantially in the manner and for the purpose above shown.

2. In a compound rail, constructed as above described, the use of the hook-shaped wing *c*, to aid in resisting the outward thrust of the car-wheels, substantially in the manner above described.

97,833.—Richard W. Tanner, Albany, N. Y., assignor to himself and Samuel J. Davenport, same place.—*Tool for Cabinet-Makers.*—December 14, 1869; antedated December 11, 1869.

Claim.—The tool-holder, consisting of the block B, double-handed bar A, tool-bar *a*, eye-bolts *e e*, with their thumb-nuts, and the screw-bolt *c*, all arranged and constructed to operate as described, substantially as and for the purpose specified.

97,834.—Asahel Todd, Jr., Pultneyville, N. Y.—*Ticket-Box for Railroad Passenger-Trains.*—December 14, 1869.

Claim.—1. The self-closing receptacle C E, attached to the case A, for holding in view a coupon or ticket, its insertion being under the control of the conductor, and its removal under the control of the passenger or conductor.

2. The arrangement of the conical recess F, in the case A, the hinged lever I, and gate D, for admitting the coupon, together with the spring-levers G G, for releasing the same.

3. The key A′, having a triangular spring-box, K L, for the insertion of the coupon into the receptacle.

4. In combination with the ticket-box, as constructed, the employment of the coupon-ticket as described, substantially and for the purposes set forth.

97,835.—T. Van Kannel, Cincinnati, Ohio.—*Hydrant.*—December 14, 1869.

Claim.—1. A hydrant having the key D, of cock C, tapering upward, to allow the pressure of the water to force the key into the cock, and provided with the cock C, screwed to the elbow B, as and for the purpose above described.

2. The pipe E, attached to and having a water-communication with key D, by coupling F, as above specified.

3. The part H, having head *h* and radial projections *h′*, screwed on pipe E, in combination with the adjustable collar I, held by the set-screw *g′*, and the rubber J, operating as and for the purpose set forth.

4. The drip-pan K, having the interior central elevation, in combination with stock A attached thereto, and constructed and operated as above specified.

97,836.—Joseph Venet, New York, N. Y.—*Reticule Wicker-Basket.*—December 14, 1869.

Claim.—A reticule wicker-basket provided with metallic ribs G G′ *g*, &c., which form the holders *h i* for the handle, hinges J J for the cover, and loop and staple *k l* for the lock, as a new article of manufacture, substantially as set forth.

97,837.—William Volk, Buffalo, N. Y.—*Velocipede.*—December 14, 1869.

Claim.—1. The lever E, carrying the pinion *c*, and acted upon by the spring *d*, when arranged to connect the pinions *b* on the ends of the axles D, substantially as herein shown and described, for the purpose specified.

2. The combination of the separate driving-axles D D, which carry the pinions *b*, eccentrics *f*, and cranks *g*, with the lever E, pinions *c*, levers F and G, and rods *e*, all arranged and operating substantially as herein shown and described.

97,838.—Henry Balen Walker, New York, N. Y.—*Silvering Glass and Protecting the Same.*—December 14, 1869.

Claim.—A chemical compound, consisting of

nitrate of silver, concentrated liquid ammonia, crystallized tartaric acid, and distilled water, prepared and compounded in quantities and proportions substantially as above described, and in the manner of its application for the uses and purposes aforesaid; and, also, the compound or solution of shellac and alcohol, in the quantities and proportions as above described, and the compound of litharge, red-lead, and oil, forming the outer coating, substantially as above described.

97,839. — P. H. WALKER, Boston, Mass., assignor to himself and JOHN L. TROWBRIDGE, same place.—*Steelyard.*—December 14, 1869.

Claim.—The employment, for the purpose of suspending the weight from a reversible scale-beam, of a tubular sliding cross-head, which encircles and fits the beam, and upon which the weight is hung, substantially in the manner and for operation as herein shown and described, so that when the beam is reversed, the position of the weight may be correspondingly changed without removing the cross-head from the beam, or the weight from the cross-head.

97,840. — DANIEL H. WATERS, Grand Rapids, Mich.—*Barrel.*—December 14, 1869.

Claim.—As a new article of manufacture, a barrel or box, composed of horizontal sections A, united by means of hoops B, as described.

97,841. — DANIEL H. WATERS, Grand Rapids, Mich.—*Barrel.*—December 14, 1869.

Claim.—A barrel or box, composed of horizontal cylindrical sections A, connected together by means of ribbed hoops B and vertical staves D, as described.

97,842. — CYRENUS WHEELER, Jr., Auburn, N. Y.—*Car-Spring.*—December 14, 1869.

Claim.—1. The combination of the metallic cylinder and the hollow rubber cylinder with the piston or follower, substantially as described.

2. The combination of the metallic cylinder and the hollow rubber cylinder with the spiral spring and the piston or follower, substantially as described.

97,843. — ROLLIN WHITE, Lowell, Mass.—*Metallic Cartridge.*—December 14, 1869.

Claim.—1. In combination with the cup *c*, and pellet or cap fitting therein, a metal ring or cup, to re-enforce said cup *c*, substantially as shown in Figs. 1, 2, 3, and 4.

2. In combination with a cup in the base of the cartridge-case, or the vent of a gun, substantially as described, a pellet or cap, with a recess or cavity in its center or near its rim, to receive the fulminate, substantially as and for the purpose described.

3. In combination with a recess, vent, or cup in the base of the cartridge-case, or in a gun, a pellet or cap, so corrugated that by the blow of the hammer, or its equivalent, the rim or edge of said pellet or cap will be pressed against the wall of the cup or vent, or ring within the same, substantially as and for the purpose set forth.

4. A fulminate paste, formed by mixing the fulminate powder with India rubber or other similar elastic substance, substantially as described.

97,844.—SAMUEL M. WICKERSHAM, Allegheny, Pa.—*Apparatus for Purifying Iron.*—December 14, 1869.

Claim.—A gutter or run, having both bottom and sides hollow, lined with fire-clay, and furnished with a series of holes inclined in a direction across that in which the metal flows, as and for the purpose herein described and represented.

97,845.—HENRY WILLOGHS, New York, N. Y.—*Making Piano-Legs.*—December 14, 1869.

Claim.—A piano-leg, when constructed substantially in the manner herein shown and described.

97,846. — DANIEL WILLSON, Ishpeming, Mich.—*Dumping-Wagon.*—December 14, 1869.

Claim.—1. The combination of the connecting-bars M with the wagon-body E, forward bolster J, sliding reach I, and stationary reach G, substantially as herein shown and described, and for the purpose set forth.

2. An improved dump-wagon, formed by the combination of the rear wheels A, rear bolster B, castings C, rollers D, wagon-body E, lock-levers F, stationary reach G, sliding reach I, forward bolster J, forward axle K, king-bolt L, forward wheels O, and connecting-bars M, with each other, substantially as herein shown and described, and for the purpose set forth.

97,847. — EDWIN L. YANCEY, Batavia, N. Y.—*Harvester-Knife Grinder.*—December 14, 1869.

Claim.—A machine for grinding harvester-blades, consisting of a slotted frame, A, adjustable standard B, gearing F G, stone D, hinged frame I, and spring P, constructed, combined, and arranged to operate substantially as described, and for the purpose set forth.

97,848.—H. ZAHN, San Francisco, Cal.—*Candlestick.*—December 14, 1869.

Claim.—In combination with a candlestick, the screw D, arranged and operating substantially as and for the purposes described.

97,849.—SAMUEL ZARLEY, Niantic, Ill.—*Monkey-Wrench.*—December 14, 1869.

Claim.—The wrench, composed of the stem or shank A, shouldered on its opposite sides, the sliding jaw E, its set-screw F, and the fixed jaw B, all constructed, arranged, and operating as herein shown and described.

97,850.—A. F. ABLE, New Orleans, La., assignor to himself and A. D. FINLEY.—*Humming-Wheel Toy.*—December 14, 1869.

Claim.—1. The bent arms A, hinged at B, suitably shaped for handles at one end, and shaped at the other, and provided with two or more sets of cord-holding catches D, substantially as specified.

2. A toy humming-wheel device, consisting of the bent hinged rods A, two or more sets of catches D, and two or more humming-wheels and cords, all substantially as specified.

97,851.—WILLIAM P. ADAMS, Brooklyn, N. Y.—*Ironing-Table and Clothes-Drier.*—December 14, 1869.

Claim.—1. The extension clothes-drier G, constructed and operating as described, for the purpose set forth.

2. The combination of the clothes-drier G and the frame A and ironing-board F, as and for the purposes set forth.

97,852. — DANIEL AGNEW, Vincennes, Ind.—*Saw-Set.*—December 14, 1869.

Claim.—1. A saw-set, composed of the independent levers C and D, said lever C pivoted or hinged to the die *b*, supported at the rear by the chain-links *h h*, and ears or projections *g g*, to receive the lever D, all arranged to operate as and for the purpose described.

2. The lever-bars or handles A B, said lever B provided with ears *g g*, in combination with the independent levers C D, when arranged to operate as and for the purpose described.

3. The springs *i j*, when arranged in combination with levers A B C D, to operate said levers independent of each other, as and for the purpose set forth.

97,853.—HENRY A. ALDEN, Mattewan, N. Y.—*Mode of Protecting the Ends of Vulcanized-Rubber Hose.*—December 14, 1869.

Claim.—1. Protecting the ends of vulcanized India-rubber hose, by means of an annular water-proof cap, in the manner substantially as described.

2. As a new article of manufacture, an annular water-proof cap, for protecting the ends of vulcanized India-rubber hose, the same being applied and used substantially as shown and set forth.

97,854.—JOSEPH BELL ALEXANDER, Washington, D. C.—*Lamp-Burner.*—December 14, 1869.

Claim.—1. The spring D, with its curved teeth N N, and its throat O, substantially as described, and for the purpose set forth.

2. The L-shaped indentures M M, in the cap F, in combination with the projections L L on the inner circumference of the throat H, in the draught-plate E, substantially as described, and for the purpose set forth.

3. The combination of the spring D, with the piece A B C, comprising the deflector, shell, or body, and chimney-seat, and with the draught-plate E, together with the wick-tube P, cap F, base G, and any of the wick-adjusters in use, when arranged together substantially as described, and for the purpose set forth.

97,855.—LAURITZ ANDERSON, Chicago, Ill.—*Gate for Swinging-Bridges.*—December 14, 1869.

Claim.—The gate B, counterpoised by a weight, and provided with a projecting pin or stud, *n*, in combination with the groove *a'* in the end of the turning-bridge, and the locking-lever S, all constructed and arranged to operate substantially as described.

97,856.—SAMUEL J. BAIRD, Staunton, Va.—*Button-Holing Attachment for Sewing-Machines.*—December 14, 1869.

Claim.—1. The screw, having the eccentric thereon, in combination with the cloth-clamp and oscillating plate, as and for the purposes described.

2. The cloth-clamp, the rest, the spring, and presser, in combination, substantially as and for the purpose described.

3. The cloth-clamp and its operating screw, in combination with the double rack, the ratchet and cog-wheels, substantially as and for the purposes described.

4. The connecting-plate, the oscillating plate, and lever, and cam, in combination, substantially as and for the purposes described.

5. The cam V and carrier T, in combination with the sliding ratchet, for changing its position, and changing the movement of the clamp, substantially as described.

97,857.—JAMES L. BAUMER, Columbus, Ohio.—*Oil-Blacking for Leather.*—December 14, 1869.

Claim.—The within-specified composition as an oil-blacking for leather, mixed in the proportions substantially as set forth.

97,858.—CHARLES B. BEALL, Hamilton, Ohio.—*Head-Block for Saw-Mills.*—December 14, 1869.

Claim.—A head-block for saw-mills, combining in its construction a bed-plate for the log to rest upon, two racks E E', with friction-rollers H H in the outer ends, a spring and oscillating lever at their inner ends, a cam-shaped slide, L, for operating the racks, and a knee, C, constructed as described, all arranged and operating as and for the purpose set forth.

97,859.—A. BELT, Newton, Iowa.—*Churn-Dasher.*—December 14, 1869.

Claim.—The within-described churn-dasher, formed of an inverted pan-shaped metal piece, C, perforated and connected to horizontal perforated wood piece A, and connected to the staff B, all as shown and described.

97,860.—FREDERIC S. BIDWELL, Mystic Bridge, Conn.—*Combined Shovel and Sifter.*—December 14, 1869.

Claim.—1. The combination of a fire-shovel with a grate or strainer fitted therein, when the latter is adapted to be lifted, to allow the removal of the ashes, substantially as herein described.

2. A fire-shovel, having a grate or sieve contained within it, and means D *d*, or their equivalent, for disconnecting the same at will, substantially as and for the purposes herein specified.

3. The within-described general combination, construction, and arrangement of a shovel-body, B, with hole b^1 and slot b^2 b^3, the grate or sieve C, with trunnions m^1 m^2, and the fastening-button D, turning on center *d*, all as herein specified, and for the purposes herein set forth.

97,861.—HORATIO N. BILL, Willimantic, Conn.—*Stove-Pipe Thimble.*—December 14, 1869.

Claim.—1. The combination, with a frame, D, provided with grooves or guides E, and adapted for application in the openings in the flue-walls, as described, of the sliding thimble-plate A, provided with an opening, B, for the reception of a pipe or thimble, substantially as specified.

2. The mode of attaching the thimbles G to the plates A, by means of the bent projections H on the former, passing through the notches C in the plates, and turning behind the parts of the plate adjacent to the notches, substantially as specified.

3. The combination of the plate A, frame D, and button F, all constructed and arranged substantially as specified.

97,862.—HENRY C. BILLINGS, Brooklyn, N. Y.—*Diving-Bell.*—December 14, 1869.

Claim.—1. In combination with the compressed-air chamber D, the water-chamber C, with perforated spout G, arranged in the top of the bell, whereby the working-chambers are sprinkled and carbonic-acid gas absorbed, when necessary, as specified.

2. In combination with the bag V and ledge *c*, a revolving hinge *v*, constructed and arranged to operate as specified.

3. In combination with the slab-weight Z, a pocket, *e*, secured to the outside of the bell, and bolt and nut *m*, as specified.

4. In a diving-bell, the combination of the circular rail *u* and the swinging-steps U U, when constructed and arranged to operate as specified.

97,863.—LEWIS BILLINGS, Gallipolis, Ohio.—*Hoe.*—December 14, 1869.

Claim.—The hoe-blade A, constructed as herein described, in combination with the bifurcated handle *b b*, and operating as and for the purposes set forth.

97,864.—EDWARD BOURNE, Pittsburgh, Pa.—*Steam-Generator.*—December 14, 1869.

Claim.—The construction, combination, and arrangement of the boiler A, chambers B, and passages T, substantially as described.

97,865.—EDWARD BOURNE, Pittsburgh, Pa.—*Steam-Generator.*—December 14, 1869.

Claim.—A steam-generator, formed by attaching to and beneath the steam-drum or receiver, by means of short pipes, one or more boilers, provided with a system of flues, each boiler being constructed, arranged, and operating, with respect to the steam-receiver, substantially in the manner herein set forth, and shown in the drawings.

97,866.—EDWARD BOURNE, Pittsburgh, Pa.—*Rivets and Washers.*—December 14, 1869.

Claim.—The combination of the rivet C, washers B and *a*, all constructed as described.

97,867.—WILLIAM H. BRADT, New Scotland, N. Y.—*Wagon-Brake.*—December 14, 1869.

Claim.—1. The combination and arrangement of the T-head pushing-bar *d*, sliding cross-bar *h*, pushing-rods *m m*, levers *k k*, draw-rods *o o*, and shoe-bar P, for the purpose set forth.

2. The combination and arrangement of the levers *k k*, provided with graduating-holes *l l*, or their equivalents, the drawing rods *o o*, and shoe-bar P, when motion is communicated to said levers by the pushing-rods *d m m*, or the equivalents of these parts.

97,868.—J. C. BROADLEY, Franklin, N. J., assignor to himself and JAMES STOUT, same place.—*Drill for Boring Polygonal Holes.*—December 14, 1869.

Claim.—The combination of two or more bits C C, with a pattern-cup D, and spring-levers B B, the said parts being arranged and operated in the manner described.

97,869.—JAMES D. BRYSON and J. H. HARTSUFF, Newcastle, Pa.—*Water-Wheel.*—December 14, 1869.

Claim.—The sliding rings *a a'*, in combination with the fixed chutes *b* and the gates *d*, when the latter have a sliding motion in opening and closing the water-veins, and also an independent motion on their pivots, substantially as described.

97,870.—Isaac W. Burch, Fayette, Miss.—*Cotton-Cultivator.*—December 14, 1869.

Claim.—1. A cotton-cultivator, having adjustable beams E, vibrating on joints C, in the front part of the frame, and adjustable, as to their distances apart, in the manner described.

2. A cotton-cultivator, provided with a vibrating frame I, and rotary cutters N, arranged as described, to cut close to the plant, and cultivate on each side thereof, as set forth.

3. A cotton-cultivator, with a pair of plows, F F, to work on both sides of the row, and arranged in front of the frame, combined with a series of oblique cutters N N, on the hinder part thereof, arranged to rotate on disks, at a less distance apart than the plows, and to clean up close to the plants, all as shown and described.

4. The combination, with the frame A, mounted on wheels B, of the vibrating frame I and rotary oblique cutters N, arranged for adjustment and for operation, substantially as specified.

97,871.—Isaac W. Burch, Fayette, Miss.—*Buckle.*—December 14, 1869.

Claim.—A compound harness-buckle and punch, composed of an ordinary frame and hollow punch-tongue A, as an article of manufacture.

97,872.—Mathias Burkhardt, Cincinnati, Ohio.—*Clamp.*—December 14, 1869.

Claim.—A clamp, composed of jaw-arms C D, screw-rod G, and box A, when constructed and arranged substantially as and for the purpose herein specified, shown, and described.

97,873.—Nelson C. Burnap, Argusville, N. Y.—*Dinner-Pail.*—December 14, 1869.

Claim.—The arrangement of the cover F, pail A, cylinder E, disk *c*, and stop-cock I, when constructed to operate as described.

97,874.—Orren E. Butler and Stephen P Dunham, Marshalltown, Iowa.—*Bolt-Cutter.*—December 14, 1869.

Claim.—The combination, with the slotted lever A and cam-lever E, of the bolt-cutter F, when all constructed and arranged substantially as specified.

97,875.—Samuel G. Cabell, Quincy, Ill., assignor to Flora B. Cabell, same place.—*Padlock.*—December 14, 1869.

Claim.—1. A double-arched padlock-shell, when cast in halves, in an egg or oval shape, having interior spaces only for the insertion of the operating-mechanism, substantially as specified.

2. The combination of the disk *a*, tube *b*, spring *d*, and plate *e*, whether the spring is inclosed within or without the casing, substantially as and for the purposes herein set forth.

3. The combination of the disk *a*, with spring *d*, plate *e*, and disk *g*, with lug *p*, and one or more springs, *m*, substantially as specified.

4. The spring-tumbler *o*, whether arranged above or beneath the bolt D, when operated by the recessed and lugged disk *g*, and used to confine or release the bolt D, substantially as specified.

5. The combination of the disk *a* with spring *d*, plate *e*, disk *g*, bolt D, spring *n*, locking-device and spring *s*, all constructed and operated substantially as specified.

97,876.—S. O. Campbell, Tipton, Mo.—*Railway-Car Coupling.*—December 14, 1869.

Claim.—1. The perforated plate E, pivoted in a partition of a coupling-box, and weighted at one end to hang vertical, and to sustain the coupling-pin as long as the link is not introduced, allowing the link to be applied either above or below the said partition, as specified.

2. The perforated partition D, arranged in a coupling-box, for supporting the weighted pivoted perforated plate E, as set forth.

97,877.—George J. Capewell, West Cheshire, Conn.—*Wrench and Saw-Set Combined.*—December 14, 1869.

Claim.—1. The sides composed of grooved handle-part A, having prolongation B, and the tongued handle-part C, having prolongation D, connected at their inner ends by rivet *h*, and opened or closed by screw E, when constructed and arranged to operate substantially as set forth.

2. Providing in one and the same implement, a wrench and saw-set, when the parts are constructed and arranged substantially as illustrated and described.

97,878.—J. S. Carr, Alliance, Ohio.—*Machine for Dressing Millstones.*—December 14, 1869.

Claim.—1. A machine for dressing millstones, constructed substantially as described, so that the rotation of the driving-shaft, which imparts a reciprocating movement to the pick, shall also cause a curvilinear movement of said pick, substantially as is herein specified.

2. The platform N, provided with the fixed gear-rim M, and turn-table O, substantially as and for the purpose specified.

3. The spring-arm U, when used in combination with the pick-shaft S, for the purpose of regulating the intensity of the blows given by the pick, substantially as is herein specified.

4. The combination of the pick-shaft S, with pick-arm Q and spring-arm U, cord or chain D, and lever C, the several parts being arranged substantially as and for the purpose specified.

5. The arrangement of the shaft F, provided with pinion L and worm-wheel G, in the standards E *l*, so that it may be slid up and down, for the purpose of throwing said pinion and worm-wheel out of gear with the fixed gear-rim M and worm *h*, substantially as is herein specified.

6. The combination of the pick-shaft J, provided with pick-arm Q and tilting-arm T, fly-wheel J with tappets *b b*, shaft H with worm *h*, shaft F with worm-wheel G and pinion L, and fixed gear-rim M, the several parts being arranged substantially as and for the purpose specified.

7. The combination of shaft H provided with the crank I and fly-wheel J, with tappets *b b*, pick-shaft S with pick-arm Q, tilting arm T, and spring-arm U, cord or chain D, and lever C, the several parts being arranged substantially as and for the purpose specified.

8. The combination of the fixed gear-rim M, shaft F with pinion L and worm-wheel G, shaft H, with worm *h*, and fly-wheel J with tappets *b b* thereon, pick-shaft S with tilting-arm T, spring-arm U, and pick-arm Q, cord or chain D, and lever C, the several parts being arranged substantially as and for the purpose specified.

97,879.—L. C. Cattell, Cleveland, Ohio.—*Car-Tank Cover.*—December 14, 1869.

Claim.—The collar B, provided with the groove *a* and packing-ring *c*, in combination with the cover C, having a bead, *b*, fitting the groove *a*, and the lug *c'*, all constructed and arranged to operate as and for the purpose set forth.

97,880.—Edwin Chesterman, Tremont, N. Y.—*Manufacture of Rubber Sponge.*—December 14, 1869; antedated November 17, 1869.

Claim.—1. Treating a rubber compound that has been more or less perfectly vulcanized in a hot-water, steam, or other bath, for the purpose of increasing its volume, as described.

2. Setting or fixing a rubber compound that has been extended in volume by the process last above named, by vulcanizing the same in its extended form, for the purpose set forth.

3. The use of golden sulphuret of antimony incorporated with the compound from which the artificial sponge is made, in the manner and for the purpose specified.

4. An artificial sponge, made by incorporating into a homogeneous mass, on hot rollers, the ingredients hereinbefore mentioned, and afterwards expanding, revulcanizing, and "setting" the same, in the manner described.

97,881.—Abraham Coates, Watertown, N. Y., assignor, for one half, to Jamet Martin Hunt, same place.—*Valve for Water-Engines.*—December 14, 1869

Claim.—The valve A, consisting of the plate *a* and the bars *c c*, as and for the purpose described.

97,882.—JOHN H. COBURN, Lowell, Mass.—*Shuttle for Looms.*—December 14, 1869.

Claim.—The spindle A, provided with the spring *d*, constructed substantially as described, and with the holding-projection *c*, whether on the spring *d*, or on the end of the spindle A, for the purposes set forth.

97,883.—CHARLES COLLINS, Vernon Centre, N. Y.—*Wagon-Seat Fastening.*—December 14, 1869.

Claim.—1. The detent E, arranged on a wagon-seat, and operating in the manner described.

2. The combination of the detent E with a hooked lever, D, and eye F, each constructed as and for the purpose specified.

97,884.—ROBERT CONARROE, Camden, Ohio, assignor to himself, HOWARD YOUNG, and ABRAHAM C. STAUFFER, same place.—*Harvester.*—December 14, 1869.

Claim.—A sheet-metal sheaf-dropper, constructed substantially as shown, and for the purpose specified.

97,885.—PHILIP COOK, Jr., Sioux City, Iowa.—*Mop.*—December 14, 1869; antedated December 10, 1869.

Claim.—1. In combination with a mop, the rollers D D, double springs F, and the compresser G, arranged and operating substantially as and for the purposes set forth.

2. The cross head E, the bands *i* and *k*, and the wires *h h* and *j j*, in combination with the rollers D D and the compresser G, arranged substantially as and for the purposes described.

97,886.—J. B. COX, JAMES O'CONNOR, and MICHAEL CAHALAN, Columbus, Ga.—*Railway-Switch.*—December 14, 1869.

Claim.—The combination of the switch-bars A A, B B, and B′ B′, stop-chairs *b* and *e*, with the coupling-bars D and D′, links H H′, cranks E′ E″, rock-shaft E, and lever F, all constructed and arranged to operate in the manner and for the purpose substantially as described.

97,887.—ISAAC CRAFT, Cincinnati, Ohio, assignor to himself, THOMAS J. WILLIAMS, and CHARLES M. GREVE, same place.—*Slide-Valve.*—December 14, 1869.

Claim.—1. The combination of the wings G G′, plate H, and bolts I, when the same are so constructed, with relation to the steam-chest A J, as to be, when in use, surrounded exteriorly by steam, for the purpose specified.

2. In the described combination, with the elements of the preceding clause, the gaskets *a b*, arranged and operating substantially in the manner and for the purpose described.

97,888.—GEORGE W. CRESSMAN and BERT PFLEGER, Barren Hill, and NICE KEELY, Roxborough, Pa.—*Water-Wheel.*—December 14, 1869.

Claim.—1. The hollow wheel, wheel-case, gates, disk E, and ring G, all combined and arranged substantially as specified.

2. The gates D, ring G, pins H, toothed segment I, and hand-wheel and shaft, all arranged as specified.

97,889.—JOHN C. CROSMAN and OBADIAH MARLAND, Boston, Mass., assignors to themselves and ALFRED E. TILTON, New York City.—*Treating Whisky and other Alcoholic Spirits.*—December 14, 1869.

Claim.—The improvement in treating whisky and other liquors, substantially as described.

97,890.—GARRET B. DAVIDS, Baltimore, Md., assignor to himself and TALBOTT DENMEAD, same place.—*Disintegrating-Mill.*—December 14, 1869.

Claim.—1. Recessing the revolving plates or disks of one cage, so as to receive the rings of the other, and thus make a connection between the cages, that will admit of their free motion without allowing the material to escape at the joints, as described.

2. In combination with two or more cages, placed one within the other, and revolving in contrary directions, the alternating annular rims and recesses on and in the flanges, F G H, on the cages, for preventing the disintegrated material from passing between the cages and the casing, substantially as described.

3. The stands O P, when so made and flanged as to form a part of the casing of the mill, and to admit of the other part of the casing being reversed thereon, so as to change and adapt the run of the mill to any special locality, substantially as described, and for the purpose set forth.

97,891.—ISIDORE DELCAMBRE, Paris, France.—*Machine for Composing and Distributing Type.*—December 14, 1869.

Claim.—1. The combination of the keys *b*, type-reservoirs *a*, and lever *c*, substantially as described, referring to Figs. 2, 8, and 9.

2. The combination of hammers *m* and *n*, eccentric *o*, and channel *j*, substantially as set forth, referring to Figs. 1 and 3.

3. The arrangement, in the justifier B, of the movable plate *q* and pusher *v*, in combination with the friction-slide *t*, substantially as described, referring to Figs. 4 and 5.

4. The conical rotating grooved type-cases A, one or more, constructed with horizontal levers *c′*, in combination with apertures *f′* and conducting-chutes *k*, substantially as set forth, referring to Figs. 10 and 11.

5. The combination, with the galley *a*, of the follower *w*, elevating-screw *b*, disk *x*, and spring-stops *z*, substantially as set forth, referring to Figs. 13 and 15.

6. The combination of channel *c* with the abutment *h* and levers *k k′ r″*, substantially as set forth, referring to Figs. 13 and 17.

7. The combination, with the channel *c*, of the sliding pusher *e*, retaining-spring *f*, and restoring-spring *g*, substantially as set forth, referring to Fig. 13.

8. The combination, with the central groove *o*, of the inclined grooved platform *j*, gates *n*, and type-cases *p*, substantially as set forth, referring to Figs. 14 and 16.

97,892.—MARY DEWEY, New Albany, Ind.—*Soap-Holding Attachment for Sewing-Machines.*—December 14, 1869; antedated December 10, 1869.

Claim.—A soap-holder attachment, constructed as described, and arranged on the presser-foot of a sewing-machine, substantially as herein shown and described.

97,893.—JULIUS EDMUND DOTCH, Washington, D. C.—*Concrete for Paving and for other Purposes.*—December 14, 1869; antedated October 14, 1869.

Claim.—1. The mixture of fibrous animal or vegetable matter, such as tan-bark, sawdust, flock, wool-waste, straw, or similar material, either in a dry state or the same treated with boiled linseed or other oils, with asphaltum, coal-tar, pitch, resin, or any other hydrocarbon, either used alone or in combination with peat, turf, coal-ashes, cinder, gravel, broken stone, sand, hydraulic cement, gypsum, infusorial earths, slate, marble-dust, brick-dust, or any other mineral.

2. The treatment of this mixture with sulphur, in the fluid state or dry.

3. A foundation for streets and sidewalks, of fascines, with slag or cement on the top.

97,894.—JOSEPH W. DOUGLAS, Middletown, Conn., assignor to W. DOUGLAS and B. DOUGLAS, same place.—*Apparatus for Extinguishing Fires by Means of Chemical Agents.*—December 14, 1869.

Claim.—The combination of the chemical-charging or gas-generating vessel or vessels A, A, the independent water-pipes *f f*, and a system of separate connections with the inlet and outlet pipes, to operate substantially as and for the purpose herein described.

97,895.—WARREN WHITNEY DUTCHER, Hopedale, Mass., assignor to DUTCHER TEMPLE COMPANY, same place.—*Loom-Temple.*—December 14, 1869.

Claim.—1. In combination with the temple, a mechanism, substantially as described, for holding back the slide when retracted in the stand.

2. The arrangement of the catch E, and its application to the temple, so as to operate with the

back-stop *a*, in manner and for the purpose as set forth.

3. The catch E, so constructed, that when in use it shall not only perform the function of a catch, or operate with the back-stop *a*, as set forth, but shall act as an intercepter of any oil which may be ejected from either or both the stops, or the slide between them, and prevent such oil from getting upon the cloth carried by the temple.

97,896.—CHARLES P. EAGER, Boston, Mass., assignor to P. B. EAGER, same place.—*Ventilating Horse-Cover.*—December 14, 1869.

Claim.—1. The horse-cover, composed of the sections A A and B, when connected longitudinally by the cover *c*, attached to the rigid braces *e e*, substantially as herein shown and described, for the purpose specified.

2. The horse-cover, provided with elastic straps, substantially as and for the purpose herein shown and described.

97,897.—WILLIAM ENNIS, Philadelphia, Pa.—*Manufacture of Iron and Steel.*—December 14, 1869.

Claim.—In the manufacture of iron and steel, subjecting the mass of molten metal to the action of hydrogen-gas alone, forced up through the mass, in combination with a current or currents of atmospheric air, or oxygen, introduced over the molten metal within a chamber of reflecting character, producing combustion of the carburetted hydrogen, sulphureted hydrogen, phosphoreted hydrogen, &c., above the metal, substantially as and for the purpose specified.

97,898.—JAMES FINLAYSON, Albany, Oregon.—*Seeding-Machine.*—December 14, 1869.

Claim.—1. The adjustable shaft *b*, provided with the spurs b', in combination with the springs a^1, substantially as set forth.

2. The slotted bar *h*, provided with a stop, in combination with the lever *c*, substantially as specified.

97,899.—M. M. FOLLETT, Lake City, Minn.—*Clothes-Wringer.*—December 14, 1869.

Claim. — The combination of the rollers of a wringer, with the pressure-rod E, lever F, spring G, screw-rod H, and nut *b*, all arranged and operating substantially as herein shown and described.

97,900.—C. A. GALE, Demopolis, Ala.—*Blotting-Pad.*—December 14, 1869.

Claim.—1. Forming the cylinder A, to which the blotting-pad is attached, in two segments hinged to each other at one edge, and secured to each other when closed by the spring-latches B C D, or equivalent fastenings, substantially as herein shown and described, and for the purpose set forth.

2. The spring-fastenings B C D, constructed and operating substantially as herein shown and described, in combination with the hinged parts of the cylinder A, as and for the purpose set forth.

97,901. — JOSHUA W. GASKILL and JAMES CHRISTIE, Phillipsburgh, N. J. — *Manufacture of Nuts.*—December 14, 1869.

Claim.—1. The mode or process, herein described, of forming nut-blanks, that is to say, first indenting the metal while it is hot, and afterward, when the metal is cold, or nearly so, subjecting it to the action of a punch, which completes the hole by removing the indented portion of the metal, and shaving the sides of the indentation, all substantially as set forth.

2. As a new article of manufacture, a nut-blank, formed partly by indenting and pressing the metal when hot, and partly by punching and shaving the same when cold, as herein set forth.

97,902.—EDWIN H. GIBBS, New York, N. Y.—*Fire-Place.*—December 14, 1869.

Claim.—1. The fire-back B B', made of iron, and having a hot-air chamber therein, extending on the sides of, over and beneath the grate, as represented and described, for the purposes set forth.

2. The combination of the hollow grate A A' and hollow fire-back B B', as constructed and arranged, substantially as set forth.

3. The combination of the water-coil d^1, and hollow fire-back B B', as and for the purposes specified.

4. The oven E, constructed as represented and described, so as to rest on the basket-grate B, as set forth.

5. The aperture *e*, for conducting fumes and smoke from the interior of the oven to the chimney.

97,903.—JACOB F. GIBSON, Chestnut Level, Pa.—*Grain-Drill.*—December 14, 1869.

Claim.—The clamping-bolt *c*, toothed wheel C, and chain D, arranged with reference to the seed-tube and drag-bar of a grain-drill, substantially as described and for the purpose set forth.

97,904.—JABEZ H. GILL, Philadelphia, Pa.—*Cartridge-Machine.*—December 14, 1869.

Claim.—1. The combination of the rotating disk F, slide *p*, and rod T, for feeding the shells into the carrier-disk D, said parts being arranged to operate substantially as described.

2. The combination of a carrier-disk D, and the reciprocating powder-charger or slide *d*, arranged to operate as set forth.

3. The combination of the carrier-disk D and the testing-plunger *t*, arranged to operate as set forth.

4. The combination of the carrier-disk D, provided with the dies *o*, the rotating disk O, and the bullet-plunger *q*, all arranged to operate as set forth.

5. The combination of the carrier-disk D, provided with taper or crimping-dies *o*, and the sliding rod U, for fastening the bullets in the shells, substantially as described.

6. The combination of the disk D and the tube P, constructed and arranged to operate as described, for withdrawing the cartridges, as set forth.

7. The cam Q, provided with the projections *n*, arranged to operate the powder-slide *d*, and impart thereto the vibratory movements, substantially as described.

8. The combination of the sliding plunger *t* and its weight C', having the spring-pawl o' attached with the pivoted hammer h' and bell J', when arranged to operate as herein described.

9. The combination, in a cartridge-machine, of a carrier-disk, D, a powder-charging and testing apparatus, a bullet-feeding and pressing device, a crimping-device, and a withdrawing-apparatus, when the said several parts are constructed and arranged to operate substantially in the manner herein set forth.

97,905.—ROBERT GLOVER, Tonawanda, N. Y.—*Field-Roller.*—December 14, 1869.

Claim.—1. The triangular frame or derrick E, having windlasses *c* c', with ropes or chains *d* d', when combined with the rollers D D' and A, in the manner and for the purpose specified.

2. The balance-wheel F, in combination with the rollers D D' A, arranged and operating as described.

3. The arrangement of the machine, as a whole, consisting of the hinged frames B C C', rollers A D D', balance-wheel F, derrick E, with windlasses *c* c', and ropes *d* d', the whole operating in the manner and for the purpose specified.

97,906.—HENRY GORTNER, Nashport, Ohio.—*Corn-Planter.*—December 14, 1869.

Claim. — 1. The sides A A, constructed as described, in the shape of sleigh-runners, and provided with shares C C, and pins or teeth *a a*, substantially as shown and described.

2. The dropper E, provided, on its inner side, with a recess, having an adjustable spring, *d*, and pivoted to the inclined bottom of the hopper or box D, substantially as and for the purposes herein set forth.

3. The hinged foot-board G, held in an upright position by the spring H, and connected with the droppers E E, substantially in the manner and for the purposes herein set forth.

4. The combination and arrangement of the sides A A, cross-pieces B B, shares C C, hoppers D D, droppers E E, foot-board G, spring H, and seat I, all constructed as described, and operating substantially in the manner and for the purposes herein set forth.

97,907.—D. R. GOULD, Chestertown, N. Y., assignor to himself and OSCAR H. GREEN, same place.—*Hinge.*—December 14, 1869.

Claim.—The combination of the parts A A′, barrel B, slotted as described, bolt C, pieces *b b*, and the ring or washer D, all substantially as set forth.

97,908.—GEORGE A. GRAY, Jr., Cincinnati, Ohio.—*Radial Drilling-Machine.*—December 14, 1869.

Claim.—1. In connection with a radial drilling-machine constructed to operate substantially as described, the cylindrical column B *b*, interior sleeve S, and arm C, having a spring-socket, *c*, the whole being arranged substantially in the manner and for the purpose stated.

2. In combination with the column B *b*, and bolts and nuts V *u* for securing the same, the groove *h*, and flange *s*, constructed as described, and operating substantially as set forth.

3. In combination with the bed-plate A and bolt W, the drilling-table V, constructed as described.

97,909.—FREDERICK FRANCIS GREENWOOD, Hornsey, England.—*Buckle.*—December 14, 1869; patented in England, September 16, 1868.

Claim.—1. The combination of the lock, the buckle-frame having a loop at one end for engagement with the tongue, and the movable tongue, in such manner that the lock is fixed to the buckle-frame, and the tongue is held in engagement with the loop by the action of the lock, as before represented and described.

2. The combination of the buckle-frame, constructed with a loop at one end, for engagement with the tongue, and a second loop at the other end, for engagement with the strap, a lock fixed to said frame between the said two loops, and a tongue engaging with the first of said loops, and controlled by said lock, as before described.

3. The combination of the buckle-frame, the lock fixed thereto, and the tongue connected with the bolt of said lock by a hinge, so that the said bolt may be turned from and toward the loop of the buckle-frame when not secured by the lock, as before described.

97,910.—LOUIS L. GUNTHER, Chicago, Ill.—*Tool for Carving Wood.*—December 14, 1869.

Claim.—1. The knife E, provided with filling K, when constructed and operating as above described.

2. In combination with the knife E, provided with filling K, the hub G, provided with the studs H and F, and the aperture I, each constructed, and arranged and operating together as and for the purposes aforesaid.

97,911.—JAMES R. HAMMOND, Sedalia, Mo.—*Portable Derrick.*—December 14, 1869.

Claim.—1. The car G, and ropes H and I, in combination with the recessed inclined cross arm F of the vertical pivoted shaft D, substantially as herein shown and described, and for the purposes set forth.

2. The double-inclined plane L, and weighted car K, in combination with the cross-arm F of the vertical shaft D of the derrick, substantially as herein shown and described, and for the purpose set forth.

3. An improved portable derrick, formed by the combination of the truck A B C, stand E, shaft D, cross arm F, car G, ropes H I, rope J, weighted car K, and double-inclined plane L, with each other, substantially as herein shown and described, and for the purpose set forth.

97,912.—B. R. HAWLEY, Normal, Ill.—*Coal-Stove.*—December 14, 1869.

Claim.—The vertical curved flanges B B, extending from the grate to the top of the stove, and surrounded by an outside drum C, with a space between the edges of said flanges and drum, all as herein shown and described.

97,913.—WILLIAM J. HAYS, New York, N. Y.—*Gas-Stove.*—December 14, 1869.

Claim.—The combination of the fire-box A with the vertical pipes B, C, D, E, &c., which form series of annular air and gas passages, and with the transverse pipes *g h* and *j k*, all arranged substantially as herein shown and described.

97,914.—AMBROSE HAZZARD, Saint Louis, Mo.—*Condensing-Column for Stills.*—December 14, 1869.

Claim.—The chambers B, C, and D, tubes *e e*[1], &c., coil H, water-jacket A, and pipe *p*, when arranged in the manner described, for the purpose set forth.

97,915.—WILLIAM HEARLE, Beamsville, Canada, assignor to CHARLES L. SPENCER, trustee, assignor to WILLIAM HEARLE and ALFRED B. JOHNSON.—*Stove-Pipe Drum.*—December 14, 1869.

Claim.—The radiating-drum herein described, consisting essentially of the cylinder A, with smoke-inlet and exit pipes E F, air-pipes B, perforated heads C and D, or equivalents, and deflectors J J, constructed, arranged, and operating as and for the purposes set forth.

97,916.—JAMES HEBRON, Buffalo, N. Y.—*Means for Attaching Mosquito-Bars to Window-Blinds, Doors, &c.*—December 14, 1869.

Claim.—A mosquito-bar, A, sewed spirally to one rod, fastened on one side by staples, and on the other by grooves, and applied to suitable frames, in the manner described.

97,917.—EDWARD HEIM, Pittsburgh, Pa.—*Washing-Machine.*—December 14, 1869.

Claim.—1. The suds-tub A, having steam-tight cover C, vertical corrugations D, and perforated and ribbed false bottom E, all constructed as described, in combination with the disk G, ribbed with rubber, in the manner set forth.

2. The improved mechanism for operating the disk G, consisting of bar F, gears H I, handle L, and spring-collar M N, all constructed, combined, and arranged as set forth.

97,918.—NOAH HILL, Leavenworth City, Kansas.—*Railway-Car Coupling.*—December 14, 1869.

Claim.—The arrangement, with the jaws C D and spring E, of the lever H, connecting-bar K, and lifting-bar L, constructed as described, and arranged to operate in connection with the link G, as set forth.

97,919.—RICHARD HOADLY, Toulon, Ill.—*Fifth-Wheel for Carriages.*—December 14, 1869.

Claim.—1. The forked division G of the forward end of the lower stay F, beneath the axle-tree, in combination with the projections of transverse head I I of carriage-beam, provided with eyes H H by which they are attached, substantially as described.

2. The employment of rubber or spring stops K, so arranged with the fifth-wheel or reach of a vehicle as to dispense with rub-irons, and thus avoid the jerking motion consequent upon the turning of the vehicle, substantially as set forth.

3. The angular projections or clamps *i*, having set-screws, for holding the rubber stops K, in combination with the circle or fifth-wheel L′, substantially as set forth.

4. The guards L, or extension of the axle bearings, beneath the circle L′, in combination with the rubber stops K, constructed substantially as described.

5. The king-bolt A, with clips C, stay or bridge E, with shackles D, forked division G, transverse head I I, with eyes H H, rubber buffers K, clamps *i*, guards L, or extension of axle-bearings, constructed and arranged substantially as described.

97,920.—D. IRVING HOLCOMB, Henry County, Iowa.—*Fruit-Jar.*—December 14, 1869.

Claim.—The metal cap D, provided with the projections or supporting-lugs *d d*, in combination with fastener E, ring C, and jar A, the whole constructed and operating substantially as and for the purpose specified.

97,921.—JOHN C. HOLMES, Wyoming, Pa.—*Corn-Cultivator.*—December 14, 1869.

Claim.—1. The beams A A, constructed as described, each consisting of two bars *a a*, connected together at suitable distance apart, and provided at one end with ears *b b*, by means of which the beams are joined together, substantially as shown and described.

2. The combination of the beams A A with ears *b b*, clevis B with ears *c c*, curved bars C C, and bar G with ears *f f*, all constructed as described and for the purposes set forth.

3. The reversible handles E E, connected by means of the rod F, and provided with the rods D D, substantially as and for the purposes herein set forth.

4. The combination of the beams A A with loops *d d*, clevis B, curved bars C C, bar G, reversible handles E F, and rods D D and F, all constructed and arranged substantially as and for the purposes herein set forth.

5. The reversible plows H H, secured to the beams A A, by means of the shanks I I, and plates *h k*, substantially as shown and described.

6. The plate *h*, provided with projections *i i*, and passed over the plow-shank I, substantially as and for the purposes herein set forth.

7. The combination and arrangement of the beams A A, clevis B, bars C C and G, reversible handles E E, and plows H H, all constructed and connected substantially as and for the purposes herein set forth.

97,922.—THOMAS HOUGHTON and HENRY H. HOUGHTON, Philadelphia, Pa.—*Fruit-Jar.*—December 14, 1869.

Claim.—The band F, with beveled or inclined edge, and the bail G hinged thereto, in combination with the overhanging dome L, having an inclined bearing-surface for said band, substantially as and for the purpose described.

97,923.—JOHN HOUPT, Springtown, Pa.—*Condenser.*—December 14, 1869.

Claim.—1. Chamber A, pipe D, and tubes B C, so arranged that a stream of water is forced through the said chamber, directly into the mouth of the tube D, substantially as described.

2. A rose *h*, constructed and applied to the condenser, substantially as set forth.

3. The valves *k* and *l*, arranged at the lower end of the tube D, substantially as specified.

4. The chamber A, its tube D, and supply-pipe C, in combination with the primer *s*, as described.

5. The combination, with the tubes B, C, and D, arranged as described, of a chamber, A, having a funnel-shaped bottom, for the purpose set forth.

97,924.—ROBERT HUNTER, New York, N. Y.—*Propelling-Apparatus.*—December 14, 1869.

Claim.—The combination and arrangement of the long lever-arm A, short arm A′, propeller-rod C, pivot-float propeller G, and guides S or T, operating substantially as and for the purposes herein set forth.

97,925.—ASAHEL H. HUSSEY, Mount Pleasant, Ohio.—*Hedge-Trimmer.*—December 14, 1869.

Claim.—A hedge-trimmer, so constructed as to be carried by the operator, and provided with harvester-like cutters, operated by a crank, serpentine-grooved pulley, and elbow-lever, substantially as shown and described.

97,926.—DANIEL JOHNSTON, Cranberry, Ohio.—*Fence.*—December 14, 1869.

Claim.—The combination and arrangement of the sills A A, cross-pieces B B, uprights C C, and braces D D, all as shown and described.

97,927.—JAMES M. JONES, Commerce, Mo.—*Saw-Set.*—December 14, 1869.

Claim.—1. The two shafts D, when provided with the movable bearings C and H, and when used to operate the markers G, substantially as and for the purpose described.

2. The slotted standards B and F, in combination with the movable bearings C and H, and shafts D, when used in the manner and for the purpose described.

3. In combination with the markers G, the table L and guides N, substantially in the manner and for the purpose specified.

4. The arrangement of slotted standards B and F, movable bearings C and H, markers G, table L and gauges N, when all are combined to operate in the manner and for the purpose set forth.

97,928.—JAMES A. JOYNER, New York, N. Y.—*Rubber Spring for Use in Ships, Cars, and for other Purposes.*—December 14, 1869.

Claim.—1. The improved spring, herein described, composed of the parts A, B, *b c*, D, E, and F, or their equivalents, combined and arranged substantially as described.

2. The combination of the spring, herein described, with a chain, cable, or the like, in the manner and for the purpose set forth.

97,929.—FREDERICK W. JUDD, New Britain, assignor to himself and EDWARD M. JUDD, New Haven, Conn.—*Carpet-Stretcher and Tack-Holder.*—December 14, 1869; antedated December 9, 1869.

Claim.—The spring *e*, formed with the slot *o*, for suspending the tack, in combination with the carpet-stretcher *b*, as and for the purposes specified.

97,930.—WILLIAM M. KEPLER, Cincinnati, Ohio.—*Public Urinal.*—December 14, 1869.

Claim.—The arrangement of the urinal A and curved shield B, composed of two parts, *b b′*, the said parts being hinged together at or near the center of the shield, and the part *b′* being provided with hinges *c′*, for attachment of the shield to the wall, substantially as and for the purpose specified.

97,931.—JOHN J. KIMBALL, Naperville, Ill.—*Washing-Machine.*—December 14, 1869.

Claim.—1. The combination of the slotted vibrating block E, crank provided with wrist *c*, curved friction-bars I and I′, and sectional frictional disk H, all constructed and arranged as shown and described, whereby either a uniform rotary or an intermittent rotary motion may be imparted to the rubber.

2. The washing-machine consisting of the several parts, all constructed, arranged, and operating as shown and described.

97,932.—JOHN O. KING and HIRAM A. RICE, Louisiana, Mo.—*Grain-Stripper.*—December 14, 1869.

Claim.—The arrangement of the detent-bar M, lever L, links K, arms I, and rock-shaft H, to slide the bar G, in the manner specified.

97,933.—W. T. KIRKPATRICK, Tamaroa, Ill.—*Bee-Hive.*—December 14, 1869.

Claim.—The combination of the bee-hive B, and the lighted moth-box A, when arranged as described, and provided with the moth and bee passages, all substantially as specified.

97,934.—GEORGE W. LARGE, Yellow Springs, Ohio.—*Latch.*—December 14, 1869.

Claim.—The employment, in combination with a rigid latch, D, on the gate, and a gravitating-catch, I, arranged on the face of the latch-post, and dropping in front of the latch, to retain it, of a pivoted or rolling lifter, F, as and for the purposes set forth.

97,935.—L. W. LATHROP, Nyack, N. Y.—*Sewing-Machine.*—December 14, 1869.

Claim.—1. The combination of the grooved vibrating looper D, and its actuating-cam, with the open spool-carrying frame, having its ends beveled, and against which ends the looper operates as described.

2. The combination of the grooved vibrating looper and open spool-carrying frame, having beveled ends, and constructed and operating together as described, with the way N, having the opening O for the passage of the looper, all substantially as described.

3. The arrangement of the needle-guiding plate, the grooved vibrating looper, the slotted way through which the looper vibrates, and the shuttle-carrying frame, when all are constructed as described.

97,936.—GEORGE T. LEWIS, Philadelphia, and EAYRE O. BARTLETT, Birmingham, Pa.—*Manufacture of Dry White-Lead.*—December 14, 1869.

Claim.—1. The manufacture of the basis of a pigment, by mixing finely-divided lead with carbon, and subjecting the mixture to the action of heat in a compound reducing and oxidizing furnace, and collecting the fumes, as above described.

2. The employment of lime in the form of caustic lime or the carbonate of lime, or metallic iron, or its oxides, whether native or artificial, in combination with carbon and finely-divided metallic lead, in a

compound reducing and oxidizing furnace, substantially as described.

3. Subliming the metallic lead, oxidizing the vapors, and collecting them as formed in a separate chamber, for the purpose of forming a basis of pigment and for other purposes, substantially as set forth.

4. As a new manufacture, a white oxide of lead, produced by subliming metallic lead and oxidizing the vapors, and collecting them in a separate chamber.

97,937.—F. A. Lindal, Stockton, N. Y.—*Churn.*—December 14, 1869.

Claim.—1. The body of a churn, constructed of two semi-cylindrical parts, one of which is so hinged to the other as to be swung over and form a receptacle for the butter, and likewise perforated at *a*, to allow the escape of milk and water, as and for the purpose described.

2. The bar D, fitted between cross-pieces of the frame-work, and arranged, in relation to the hinged cover B, so as to support it when open in either a vertical or horizontal position, substantially as and for the purpose described.

97,938.—M. F. Lowth and T. J. Howe, Owatonna, Minn. — *Seeding-Machine.* — December 14, 1869.

Claim.—A gate, placed in such relation to the hopper and cylinder of a seeding-machine as to yield sufficiently to allow caught kernels to pass under it without injury, substantially as described.

97,939.—Orazio Lugo, Baltimore, Md.—*Fertilizer or Guano.*—December 14, 1869.

Claim.—1. The use of hot air, for the purpose and in the manner substantially as herein set forth.

2. The use of the hydrocarbons, or their equivalents, in the connection herein described, and for the purpose set forth.

3. The use of phenol, (carbolic acid,) or its equivalent, for the purpose herein specified, and in the manner substantially as herein described.

4. As a new article of manufacture, the antiseptic fertilizer, the process for the manufacture of which is herein set forth.

97,940.—Henry A. Ludwig, New York, N. Y. — *Furnace for the Manufacture of Ultramarine.* — December 14, 1869.

Claim.—The combination and arrangement, in the one furnace, of the central fire-place A, the ovens B C, the side-flues *b*, and the outlet or outlets *c* to the escape-flue or passage D, substantially as and for the purpose herein set forth.

97,941.—Henry A. Ludwig, New York, N. Y. —*Manufacture of Ultramarine.*—December 14, 1869.

Claim.— The combination of ingredients, herein named, mixed and treated substantially as specified.

97,942.—A. G. Mack, Rochester, N. Y., assignor to himself and George Shelton, same place.—*Wardrobe.*—December 14, 1869.

Claim.—The skeleton-reel B, in combination with the fixed shelf-closets C and drawers D, of corner cabinet-cases, as set forth.

97,943.—George C. Manner, New York, N. Y. —*Upright Piano.*—December 14, 1869.

Claim.—1. The supporting-beams D, when placed so that their ends occupy points between the front and rear sides of the top and bottom pieces, substantially as and for the object explained.

2. The frame E, provided with the concave rabbet *e''*, for the purpose of giving the sounding-board a bellying form, substantially as and for the object specified.

97,944.—Freeman P. Marcy, Keokuk, Iowa.—*Boot-Crimper.*—December 14, 1869; antedated December 4, 1869.

Claim.—1. The hand-lever H and cam G, combined with the jaws E and F, made and adapted to use, substantially as set forth.

2. The combination and arrangement of vise B, hook C, jaws E F, cam G, and lever H, substantially as herein set forth.

97,945.—William L. May, Linwood, Ala., assignor to William J. May.—*Mechanism for Driving Cotton-Gins.*—December 14, 1869.

Claim.—The combination of the band-wheel A', wheel B, idler-pulley *b''*, gin-head *b'*, frame A, and bands *a b*, all arranged substantially as and for the purpose described.

97,946.—Arthur McCarter, Salem, Ohio.—*Meat-Chopper.*—December 14, 1869.

Claim.—1. The vibrating arm *z*, adjustable rod Y, ratchet-wheel I, pawls J K, for operating the worm H, in combination with wheel G, shaft F, and knives *k*, when constructed and arranged to operate as herein described, for the purpose set forth.

2. In combination with the jointed links P P', jointed arms W X, and guide-way R', operated by the crank-shaft T and sliding block S, the arrangement of the gearing U U' X, *v v'*, in connection with the fly-wheel *m*, as herein described, for the purpose specified.

97,947.—Frank H. McGeorge, Corning, N. Y. —*Gate.*—December 14, 1869.

Claim.—1. The combination of the pulleys D D with the slotted wheel *c'*, when arranged as described, and used in connection with a gate and bearing-post, for the purpose set forth.

2. The slotted plate *b*, with its catch b^2, as described, for the purpose set forth.

3. The hollow cap B^1, in combination with the pulleys and wheel, when provided with a cover, as and for the purpose set forth.

97,948.—Alexander McPherson, Santa Cruz, Cal.—*Construction of Buildings.*—December 14, 1869.

Claim.—Binding together the different parts of foundations and walls of brick, stone, concrete, adobe, or other similar material, by interlaying through the work, in one or in several directions, strips of wood or metal, substantially as and for the purpose herein set forth.

97,949.—James R. McPherson, Beloit, Wis.—*Galvanic Battery.*—December 14, 1869.

Claim.—The iron jar A, filled with metal chips saturated with a weak solution of muriatic or sulphuric acid, or strong solution of sal-ammoniac, in combination with the inner porous jar C, filled with black oxide of manganese and nitric acid, and the conductor E, all arranged to operate as herein described and shown.

97,950.—Rufus N. Meriam, Worcester, Mass. —*Gauge for Circular-Saw Table.* — December 14, 1869.

Claim.—The bracket C, pivoted as at *c*, and provided with a slot *d*, and lock-nut c^1, in combination with the sliding block B and face-piece D, all arranged and operating substantially as shown and described.

97,951. — Daniel Mills. New York, assignor to Charles Goodyear, Jr., New Rochelle, N. Y.—*Sewing-Machine for Sewing Boots and Shoes.*—December 14, 1869.

Claim.—1. An organization, substantially as described, consisting of the following elements in combination: First, a barbed needle, mounted on an oscillating arm or lever, operated by a suitable cam, in such manner that the power is applied to the needle-arm, between the needle and its center of oscillation; secondly, a looper, and its actuating-mechanism, so as to effect the chain-stitch, in connection with said needle; thirdly, a top-feed mechanism, propelling the work during the intervals of stitches; fourthly, one or more gauges for guiding and holding the work in the line of the seam to be made.

2. The arrangement, substantially as herein described, of a cam-disk or disks, mounted on one and the same shaft, and to operate as and by the means hereinafter shown and set forth: First, the needle-arm, when the same is a lever of the third order; secondly, the looper having a reciprocating rotary motion; thirdly, the feed, with its up-and-down and back-and-forth movement; fourthly, the edge-gauge,

with its locking-mechanism; and fifthly, the barb-coverer.

3. The combination, with a barbed needle mounted on an arm, being a lever of the third order, and a barb-coverer, mounted in like manner, and upon the same fulcrum with the needle-arm, of independent cams, mounted on the same shaft, to operate the needle and the barb-coverer, in the manner and for the purposes herein set forth.

4. The combination, with the needle and barb-coverer, oscillating upon the same fulcrum, and operated by cams, as described, of a spring and a slot and stud, or their mechanical equivalents, formed on the barb-coverer and needle-levers respectively, whereby, at the proper intervals, the action of the barb-coverer is regulated and controlled by the movement of the needle-arm, as herein set forth.

5. The looper, mounted on the end of a tubular shaft, through which the thread with which the looper is supplied passes, when said shaft is arranged to pass through the cavity in the frame, and there exposed to the action of the flame, substantially as herein shown and described.

97,952.—SIMON B. MOREY, San Francisco, Cal. —*Propeller.*—December 14, 1869.

Claim.—The floats or buckets, formed by the convolutions of the circular spiral E, substantially as and for the purpose set forth.

97,953.—CYRUS B. MORSE, Rhinebeck, N. Y.—*Cast-Steel Tube or Ingot.*—December 14, 1869; antedated December 8, 1869.

Claim.—As a new article of manufacture, a cast-steel tube, which is produced substantially as described.

97,954.—JOHN MCLEOD MURPHY, New York, N. Y., assignor to JAMES LORIMER GRAHAM, same place.—*Packing-Case for Oil-Cans.*—December 14, 1869.

Claim. — The combination, with a tin or other sheet-metal packing-can, provided with a turning cut-off nozzle, C G, of an exterior packing-case, provided with a door F, arranged, relatively to the said nozzle, substantially as specified.

97,955.—CHARLES K. MYERS, Pekin, Ill., assignor, for one-half, to PETER WEYHRICH, same place.—*Tightening and Guiding Belt.*—December 14, 1869.

Claim.—1. The combination of the slotted "shoe" F, and its bed *f f*, with the slotted arm D, pulley E, left-hand nut *b*, adjusting-bolt *d*, and slot *g g*, in frame A.

2. Adjusting-plate G, with its bolt-slot *n*, and pulley-rod slot *l*, in combination with the mortise *k k*, pulley H, and its rod *c*, all substantially as described, and for the purposes set forth.

97,956.—JOHN J. MYERS, Baltimore, Md., assignor to BENTLEY C. BIBB, same place.—*Fire-Place Fuel-Magazine Stove.*—December 14, 1869.

Claim.—1. The gas-escape passage of the feed-chute fire-place magazine-stove, substantially as and for the purpose herein described.

2. The curved door *e*, substantially as and for the purpose described.

3. The arrangement of the door *e* to open by a circular movement in the paths of a vertical plane, substantially as shown and described.

4. Making the chute-door *e* a permanent part of the stove, and yet movable, substantially in the manner and for the purpose described.

5. The combination of the screen or screens and the attached yet movable door *e*, substantially in the manner and for the purpose described.

6. The screen connected to the door *e*, so as to be readily disconnected therefrom, by means substantially as described.

7. The combination of the pipes S, combustion-chamber B B′, hollow flue-base A, return-columns E, and direct-draught damper, J, substantially in the manner and for the purpose described.

8. The combination of the damper J, feed-chute with gas-escape through it, the flue-chamber K, passage *t*, and main draught-flue H, substantially in the manner and for the purpose described.

9. In a fire-place top-feed fuel-magazine stove, the combination of the following elements, to wit, the flue-extension K, the gas-escape *t*, direct damper J, the extension B′, and the pipes S S, substantially as and for the purpose described.

10. In a fire-place top-feed fuel-magazine stove, the combination of the following elements, to wit, an inclined chute, with a gas-passage leading therefrom into the main flue, a single cover or plate permanently attached to the stove, but movable so as to be made to close both the feed and gas passages, or to open the same, and screen-sections G G, substantially as and for the purpose described.

97,957.—JAMES B. PARKER, Knob Noster, Mo. —*Corn-Planter.*—December 14, 1869.

Claim.—1. The arrangement, upon the cross-bar G, of the boxes H H, hoppers I I, plungers *a a*, and connecting-bar N, all substantially as and for the purposes herein set forth.

2. In combination with the bar N and plungers *a a*, the rod *d*, lever S, pins *b b*, cog-wheel P, platform R, cog-wheel O, and spring T, all substantially as and for the purposes herein set forth.

3. The arrangement of the frame J with bar *h*, seat-standard W, and lever Z, all constructed as described, substantially as and for the purposes herein set forth.

4. The combination and arrangement of the main frame A B E G, wheels C C, scrapers D D, frame J, plows K K, boxes H H, hoppers I I, plungers *a a*, bar N, cog-wheels O P, lever S, platform R, rod *d*, spring T, seat-standard W, lever Z, and bar H, all constructed as described, and operating substantially in the manner and for the purposes herein set forth.

97,958.—ARCHIBALD PERRY, Richland, Ind., assignor to himself and JACOB FISHER, same place.—*Sawing-Machine.* — December 14, 1869; antedated December 3, 1869.

Claim.—1. The lever L, slotted or open at each end, in combination with the crank K, arm L, and clamp N, when used in the manner and for the purpose as specified.

2. The forked lever L, crank K, arm M, and clamp N, in combination with the rocking lever F, shaft G, crank K, pitman E, and wheel D, all constructed and operating substantially as set forth.

3. The arm M, so arranged and constructed as to be moved nearer to and further from the center of motion, in combination with the clamp N, springs P and *a*, and cord *c*, when used in the manner and for the purpose as specified.

4. The arrangement of the lever *d*, cords *e* and *f*, brake *g*, and arm M, when all are used in the manner and for the purpose as set forth.

5. The saw H, connected at the top and bottom to the slides I I on the same side, and operated by the rocking lever F, all substantially as set forth.

6. The combination of the lever L, arm M, clamp N, springs *a* and P, cords *c*, *e*, and *f*, lever *d*, and brake *g*, all constructed and arranged to operate substantially in the manner and for the purposes herein set forth.

97,959.—OSGOOD PLUMMER, Worcester, Mass. —*Mechanical Movement.*—December 14, 1869.

Claim.—1. The mechanical movement, substantially as above described.

2. The combination of the slotted rack-piece H, in combination with the bell-crank piece F, substantially as described.

97,960.—W. S. POULSON and W. N. POULSON, Cadiz, Ohio. — *Teachers' Register.*—December 14, 1869.

Claim.—The teachers' register herein described, having slots *a a′*, loops *d d*, and *c*, and sliding scale B, constructed and arranged to operate as specified.

97,961.—JAMES H. PRESTON, Jefferson City, Mo.—*Side-Saddle Tree.*—December 14, 1869.

Claim.—1. The adjustable leg-rest B, when combined with a tree-body, A A′, substantially as set forth.

2. The leg-rest B, the plate C, tablet D, pin *d*, and slot *c*, when arranged and combined with the tree-body, substantially as set forth.

3. The adjustable stirrup-strap F, arranged with an adjustable leg-rest B, and tree-body C, all as and for the purpose set forth.

97,962. — PROSPER VINCENT RAMEL, Paris, France.—*Process of Preparing Plants to be Used in Cigars, Snuff, &c.*—December 14, 1869.

Claim.—The new application of the leaves of the eucalyptus and of the family of myrtles, and their treatment herein described, to all the purposes for which tobacco has been hitherto used, and for tobaccos in rolls or in slabs, and for snuffs. After having submitted the leaves of the eucalyptus to the preparatory processes above described, they are treated in the same way as the leaves of the tobacco-plant are now treated for the various purposes for which they are intended.

97,963.—LEONARD W. REED, East Cambridge, Mass.—*Pipe-Coupling.*—December 14, 1869.

Claim.—The within-described adjustable coupling, consisting of the sections A and B, secured together by means of the clamp-ring D and screw E, substantially as and for the purpose specified.

97,964. — S. B. ROWLEY, Philadelphia, Pa.—*Fruit-Jar.*—December 14, 1869.

Claim.—The combination of the screw-ring D and its flange *j*, the thin metal cap B and its flange *h'*, the rib *d*, shoulder *b*, and screw-thread *a* of the jar, and the gum ring *h*, the whole being constructed, arranged, and adapted to each other, as and for the purpose herein set forth.

97,965.—EDWARD P. RUSSELL, Manlius, N. Y.—*Clothes-Wringer.*—December 14, 1869.

Claim.—The combination of the rollers A B, tube *a*, swing-levers F F', main levers M, auxiliary lever W, cam-lever X, and standards S and S', constructed as described, and operating as and for the purposes set forth.

97,966.—WATSON SANFORD, New York, N. Y.—*Coal-Stove.*—December 14, 1869; antedated September 3, 1869.

Claim.—1. The arrangement of a series of openings in the neck, and between the fire-pot and the body of the stove, substantially as described.

2. The combination and arrangement of the body and fire-pot with the neck, with or without a series of openings, substantially as described.

97,967.—WATSON SANFORD, New York, N. Y.—*Base-Burning Stove.*—December 14, 1869; antedated September 15, 1869.

Claim.—1. The arrangement of open-work at the upper portion of the chute, substantially as described.

2. The arrangement of an additional opening or passage-way to the chute, and in direct contact therewith, and of larger diameter, to admit of a more convenient withdrawal or replacement of such chute, substantially as described.

3. The arrangement of divisional plates or strips longitudinally between the chute and body of the stove, substantially as described.

4. Making such divisional plates or strips adjustable, substantially as described.

5. The arrangement of a slide-damper horizontally between the chute and body of the stove, substantially as described.

6. The construction of the grate and rim containing the trunnions, to admit of the removal of the grate, substantially as described.

7. The arrangement of the foot-ring, when combined with the brackets *q q' q*, substantially as described.

97,968.—AMBROSE H. SASSAMAN, Scranton, Pa.—*Journal-Box.*—December 14, 1869.

Claim.—The combination and arrangement of the grooved journal-box and shaft, herein described, with the rollers *a*, all constructed and operating substantially as and for the purposes specified.

97,969.—JACOB SCHMIDLAPP, New York, N. Y.—*Hook-and-Ladder Truck.*—December 14, 1869.

Claim.—1. The combination of the reach F and G with the trestle-work truck-body or carriage H, all constructed substantially as hereinbefore set forth.

2. In combination with the carriage H, as hereinbefore set forth, the permanently fixed pilot-seat P attached thereto, and elevated above the ladders, for the purposes set forth, and substantially as described.

97,970.—Suspended.

97,971.—THOMAS L. SHAW, Omaha, Nebraska.—*Snow-Plow for Railways.*—December 14, 1869.

Claim. — 1. The pivoted plow-frame B, toggle-levers *r b*, connecting-bars *b'*, and rotating disk C, all constructed and arranged substantially as and for the purpose set forth.

2. The means herein described of operating the leaves B' B' through the agency of the locomotive-wheels, substantially as and to the end specified.

3. The divided pinion *i*, toothed wheel *h'''*, shafts I *h*, and lever *k*, combined and arranged substantially as described.

97,972.—WILLIAM ANTHONY SHAW, New York, N. Y., assignor to PETER NAYLOR, same place.—*Composition Metal for Tubing, Pipes, and Sheeting.*—December 14, 1869.

Claim.—1. An alloy or composite metal, adapted to the manufacture of pipes, tubing, sheet-metal, and other articles, as specified, composed of lead, block-tin, and antimony, in the proportions substantially as set forth.

2. The manufacture of pipes, tubing, sheet-metal, and other articles for conducting or receiving water or other fluids, of an alloy or composite metal such as herein described.

3. Pipes or sheets composed of an alloy such as herein described, when faced on one or both sides with pure lead, substantially as and for the purposes stated.

4. The formation, upon composite-metal tubing, such as described, of one or more longitudinal ribs or ridges, as and for the purposes specified.

97,973.—JOHN H. SHEHAN, Lima, Ind., assignor to himself, GEORGE W. EDGECOMB, and THOMAS J. BULL.—*Pruning-Shears.*—December 14, 1869.

Claim.—The arrangement and combination of the shears D, bar A, and straps F F, as shown and described, and for the purpose set forth.

97,974. — ALBERT SINCLAIR, West Waterville, Me.—*Price-Calculating Device.*—December 14, 1869.

Claim.—1. The combination of an auxiliary indicator, K, with a table of rates, C, and numerals on the revolving cylinder, and the fixed opening G, and table of numerals E of the inclosing-case B, substantially as described.

2. The cylindrical fixed slotted case B, secured to flanged head-plate H, for the purpose of facilitating the removal of the cylinder, substantially as described.

97,975.—C. SHALER SMITH, C. H. LATROBE, and FREDERICK H. SMITH, Baltimore, Md.—*Construction of Bridges.*—December 14, 1869.

Claim.—1. In a system of wrought-iron piers or continuous trestle, such as described, the combination, with the cast-iron joint-boxes, interposed between and forming the bearings for the column-sections, of longitudinal diagonal ties, connecting, substantially in the manner specified, the joints of any one tier with those of another tier, or with the caps or feet of the columns, for the purposes set forth.

2. The combination, with the piers and system of longitudinal diagonal ties, connecting the same, of the wooden chord-sticks and longitudinal system of wooden struts, for supporting the roadway and stiffening the piers.

3. The construction of the cast-iron post-caps, foot-boxes, and joint-boxes, substantially as shown and described.

4. The combination of a series of independent or isolated bridge-piers, formed, as described, with an intermediate span or spans of truss, connecting the same, substantially as set forth.

5. Uniting the longitudinal diagonal ties with the columns, or boxes of said columns, by means of the yoke and screw-nut attachment, substantially as shown and described, so as to admit of the ready adjustment of said ties, for the purposes stated.

6. A system of continuous trestle, for bridges, in which the longitudinal diagonal rods or ties, which connect the caps and feet or joints of the columns, are combined with intermediate spans of truss, extending between said columns, substantially as shown and set forth.

97,976.—SIMON SMITH, Clarksburgh, N. Y.—*Churn.*—December 14, 1869.

Claim.—The combination of the hollow dashers E E, standard C, lever F, and churn-body A, all constructed and arranged as described.

97,977.—WILLIAM M. SMITH, Augusta, Ga.—*Cotton-Bale Ties.*—December 14, 1869.

Claim.—An improvement upon rectangular cotton-bale ties, with V or X-shaped slots, said improvement consisting in striking off the interior point or angle *a*, while the point or angle *a'* is left entire, for the ready and secure adjustment of the loop-band D, as herein shown and described.

97,978.—W. A. WORKMAN, Fairfield, Iowa.—*Grain-Measuring Attachment to Thrashing-Machines.*—December 14, 1869.

Claim.—A sliding cut-off, D, provided with spouts E E, and combined with a reciprocating table A', a grain-spout, G, and a registering-device, substantially as described.

97,979.—ANDREW J. WRIGHT, Cleveland, Ohio.—*Scaffold for Gathering Fruit, and for other Purposes.*—December 14, 1869.

Claim.—The notched standards E and braces H and I, in combination with the platform A, guards B, guides F, and keys G, arranged essentially as and for the purpose set forth.

97,980.—WENDELL WRIGHT, Bloomfield, N. J.—*Revolving Cupboard.*—December 14, 1869.

Claim.—The arrangement of a revolving closet within a stationary chamber that opens into two adjoining rooms, as and for the purpose specified and shown.

97,981.—CHARLES S. SNEAD, Louisville, Ky.—*Barrack or Hospital-Bedstead.*—December 14, 1869.

Claim.—The combination of the bands *a b*, for connecting the side and end rails to the posts, the forked and tempered ends B and E to the side and end rails, the clasps *s* and *r* for holding the lockers and the musket-rack, and holder K and *m*, as specified and described, for the purposes set forth.

97,982.—C. F. TH. STEINWAY, New York, N. Y.—*Piano-Forte.*—December 14, 1869.

Claim.—1. Extending the sounding-board bridge of an overstrung piano-forte, in an unbroken curve, from the treble to the bass end, substantially as and for the purpose described.

2. In combination with the continuous sounding-board bridge, the arrangement of a raised part on the top plate of the metal frame, the strings running under the plate instead of over, substantially as set forth.

3. The treble-bar *h* of the metal frame D, arranged, in relation to the strings *s s' s''*, substantially in the manner shown and described.

4. The semi-cylindrical edge or rim *f* of the metal frame D, as set forth.

5. The braces *o*, forming the connection between the bottom plate *e* of the metal frame and the tuning-block extension of the top plate *d*, and forming shoulders or abutments for the front edge of the sounding-board, substantially as described.

6. The arrangement of blocks or standards *i*, rising from the bottom of the case A, through apertures in the bottom plate of the metal frame, and forming the connection between said bottom and sounding-board, substantially as set forth.

7. Subjecting the bottom of the case A, together with the sounding-board, to a compressing-force produced by screws, wedges, or other suitable devices, substantially as shown and described.

8. The detached blocks *a*, rising from the bottom of the case A, and forming the supports of the metal frame D, substantially as set forth.

9. The metal bands or braces *n*, extending from the rim *f* of the metal frame to that side of the case A which is situated under the open end of the metal frame, said braces serving to counteract the compressing-force to the screws or other devices bearing on the sounding-board and bottom C of the case, as set forth.

97,983.—JOHN STEINHOUSE, 17 Rodney street, Pentonville, London, England, assignor to ARTHUR CHENEY and ALONZO MILLIKEN, Boston, Mass.—*Water-Proofing Fabrics.*—December 14, 1869; patented in England, January 8, 1862.

Claim.—The employment and application of paraffine, in a solid state, to wood, leather, paper, or textile fabrics, composed of cotton, linen, wool, or silk, by means of a metal plate, heated to a temperature from 130° to 250° Fahrenheit, the article to be treated to be stretched thereon, and then manipulated, substantially as and for the purpose set forth.

97,984.—ELIZABETH MARY STIGALE, Philadelphia, Pa.—*Rails for Ornamental Fence.*—December 14, 1869.

Claim.—A recessed rail, adapted to columns, posts, or frames, substantially as described.

97,985.—JOHN W. STILL, San Francisco, Cal.—*Latch for Double Doors.*—December 14, 1869.

Claim.—The combination, with the spring stem D, of the wedge-shaped head G, forming a shoulder on each side of the stem, with its face at right angles to the stem, so as to make a secure fastening for two contiguous doors, substantially as described.

97,986.—JAMES G. STOWE, Providence, R. I.—*Lathe-Fastening.*—December 14, 1869.

Claim.—The combination of the tail-stock A, cam-surfaces I I, cam-block D, lever E, rod H, and shoe F, or their equivalents, constructed and arranged substantially as and for the purpose described.

97,987.—A. D. STRONG, Ashtabula, Ohio.—*Vinegar-Apparatus.*—December 14, 1869.

Claim.—A vinegar-apparatus, constructed with broad, slanting shelves B, provided with marginal grooves or channels C, pins *a*, and case A, in the manner substantially as described, and for the purpose set forth.

97,988.—GEORGE C. TAFT, Worcester, Mass.—*Wrench.*—December 14, 1869.

Claim.—1. The combination and relative arrangement, with the parts A and B, of the screw C and rosette D, substantially as and for the purpose set forth.

2. The combination of the semi-cylindrical parts *a b*, of the divided wrench A B, with the flanges or rings *e*, substantially as and for the purposes set forth.

97,989.—WILLIAM TANSLEY, Salisbury Centre, assignor to "STARBUCK BROTHERS," Troy, N. Y.—*Bark-Mill.*—December 14, 1869.

Claim.—1. Constructing the upper conical ring of the runner with a series of steps, supported on a continuous concentric base, and providing with interior and exterior grinding-teeth, substantially in the manner and for the purpose set forth.

2. In combination with the above, the upper and lower grinding-surfaces C and D', one directly over the other, the upper discharging the coarsely-ground material into the lower, substantially in the manner and for the purpose set forth.

3. The central hollow bearing L of the core M, in combination with the ring or annular journal K, arms G, (having stops H,) and shaft B, with the driver J, all constructed and operating substantially as described, for the purpose set forth.

4. In bark or other mills, the combination and arrangement of the upper and lower continuous grinding-surfaces, the base of the former resting upon and slightly projecting over the top of the latter, grinding coarsely and evenly, and discharging into the lower, where the bark is finely ground and finished, substantially as and for the purpose set forth.

97,990.—JEREMIAH H. TARPLEY, Greensborough, N. C.—*Clevis for Plows.*—December 14, 1869.

Claim.—1. The curved plate D, when provided with a socket B, and with one or more notched ribs E on its face, substantially as and for the purposes set forth.

2. In combination with the plate, socket, and ribs, above claimed, the clevis-strap F, substantially as described.

97,991.—ALBERT L. TAYLOR, Springfield, Vt.—*Handle for Knives.*—December 14, 1869.

Claim.—The filling B, inserted in the handle A, and projecting at the sides thereof, and held tightly in said handle by the tapering tang *k*, which, when driven into the filling, expands the same, and renders it permanently rigid, the blade being secured in the handle by the rivet *a* passing through the part A and the tang, all as herein described.

97,992.—DANIEL THACKARA, Woodbury, N. J.—*Making Bricks, Tiles, &c.*—December 14, 1869.

Claim.—The manufacture of bricks, tiles, and other earthenware, from the sediments or settling which have been deposited on the beds of rivers and other streams of water, or on their shores by the overflowing of the streams, and is commonly called "mud," as above set forth.

97,993.—JAMES P. TIBBITS, New York, N. Y.—*Foot and Kneeling Stool for Churches.*—December 14, 1869.

Claim.—The stool B, constructed with sides *a b*, at right angles, or thereabout, to each other, and hinged, pivoted, or otherwise connected with the floor, in combination with the partition C, substantially as shown and described, for the purposes set forth.

97,994.—CHARLES DARWIN TISDALE, Boston, Mass., assignor to himself and JOSEPH HENRY CLAPP, same place.—*Railway-Carriage Wheel and Axle.*—December 14, 1869.

Claim.—The combination of the tightening-screw *d*, or *d'*, or its equivalent, with the wedge-keys *b b'*, the grooves *a o*, in the wheel-hub and axle, and the stop-piece *c*, substantially as described.

97,995.—CASPER VAN HOESEN, Catskill, assignor to himself, JOHN H. BURTIS, Brooklyn, and M. W. STAPLES, Catskill, N. Y.—*Suspenders.*—December 14, 1869.

Claim.—The combination of the spring A, straps C C, and tension-regulator D, all substantially as and for the purposes herein set forth.

97,996.—FRANCIS H. WALKER, Boston, Mass.—*Button-Hole Cutter.*—December 14, 1869.

Claim.—The combination of adjustable cutter-bed D, with a cutter-carrying-jaw, C, which is connected to a lever-handle, A, by a loose joint, substantially as and for the purpose described.

97,997.—C. E. WALKES, Elyria, Ohio.—*Bed-Bottom.*—December 14, 1869.

Claim.—A bedstead, constructed with cams I, ratchet-wheel and pawl K K, springs D, and slats E C, arranged in the manner as described and for the purpose specified.

97,998.—JOHN WARNER, Flushing, N. Y.—*Still for Oil, &c.*—December 14, 1869.

Claim.—1. Setting a still so that the outer edge and center only of its bottom are supported substantially as and for the purpose specified.

2. The employment of one common convex perforated arch over all the fires, substantially as shown and for the purpose set forth.

3. The hollow central pier D, constructed as shown and for the purpose specified.

4. Withdrawing the heated products of combustion from the circumference of the combustion-chamber, substantially as shown and described.

5. Causing the smoke-flues from the combustion-chamber to center in one common chamber within the foundation of the still, substantially as shown and for the purpose specified.

6. The arrangement of the flues I and *m*, and the chambers K and L, within the foundation of the still, substantially as and for the purpose set forth.

7. The employment of a hinged or removable jacket around the base of the gooseneck, substantially as shown and for the purpose specified.

8. The arrangement of the ventilating-pipes S within and through the casing-wall, substantially as shown and for the purpose described.

9. The arrangement of the doors or traps O upon and within the casing N, substantially as and for the purpose shown.

10. The combination of the ventilating-pipes S with traps O, substantially as and for the purpose shown.

11. The combination of the convex perforated arch F, with the flues I, substantially as shown and described.

12. The general construction and arrangement of the various parts hereinbefore described, substantially as shown and for the purpose specified.

97,999.—CHARLES W. WEST, Shiloh, assignor to himself and OSCAR A. DOUGLAS, Bridgeton, N. J.—*Paper-File.*—December 14, 1869.

Claim.—A paper-file, consisting of the bars A B, having the pins *a a*, and of the strings *b c*, which are interlocked, as set forth, so that they tie the bars together without piercing the paper, substantially as herein shown and described.

98,000.—THOMAS A. WESTON, Ridgewood, N. J., assignor to WILLIAM SELLERS and JOHN SELLERS, Jr., Philadelphia, Pa.—*Hoisting-Apparatus.*—December 14, 1869; patented in England, August 28, 1868.

Claim.—The combination, with a hoist, of helical inclines, frictional surfaces, and a pawl and ratchet, or their equivalent, operating substantially as set forth.

98,001.—CORYDON WHEAT and ALFRED CATCHPOLE, Geneva, N. Y.—*Coke-Wagon.*—December 14, 1869.

Claim.—1. The dumping-box A, swung upon trunnions, substantially as described, and composed of frame *e*, and lining *i*, for the purposes specified.

2. In combination with the dumping-box A, and its suspending-frame, the cranked bail *d*, and carrying-wheel, C, substantially as and for the purposes set forth.

98,002.—DARIUS WILCOX and R. MCCHESNEY, Derby, Conn., assignors to D. M. BASSETT and DARIUS WILCOX, same place.—*Machine for Making Carriage-Clips.*—December 14, 1869.

Claim.—The combination of the holder C, arranged as described, so as to be raised or lowered, and constructed so as to receive and hold the blank, with the segmental roll F, the said roll being hung in the carriage G, so as to pass over the blank on the table C, all substantially as herein set forth.

98,003.—WILLIAM E. WOOD, Baltimore, Md.—*Door for Fire-Place Stove.*—December 14, 1869.

Claim.—The combination of the front opening *a' b'* and the detachable or removable coverings C D E F F', with a "fire-place stove," substantially as and for the purposes hereinbefore set forth.

98,004.—JOHN CHANDOS WOODHEAD, Pittsburgh, Pa.—*Interchangeable Boot and Shoe Heel.*—December 14, 1869.

Claim.—In a changeable boot and shoe heel, the combination of the socketed metallic plates in the upper and lower portions of the heel, when constructed as described, and secured in the manner set forth.

98,005.—SAMUEL WOOLSTON, Vincentown, N. J.—*Camel for Raising Vessels.*—December 14, 1869.

Claim.—1. The arrangement of the camel in two parts, so hinged together as to be opened to receive the vessel, and then rigidly united like a single boat, substantially as set forth.

2. The central elevations E, substantially as set forth.

3. The cross-beam C, arranged substantially in the manner and for the purposes set forth.

98,006.—ISAAC ADAMS, Jr., Boston, Mass., as-

signor to UNITED NICKEL COMPANY.—*Manufacture of the Metallic Parts of Fire-Arms.*—December 21, 1869.

Claim.—The improvement in the manufacture of fire-arms, hereinbefore described, the same consisting in the application to their metallic parts, or any portion of them, of a compact, coherent, tenacious, and flexible coating of nickel, for the purposes specified.

98,007.—H. C. ALEXANDER, New York, N. Y.—*Toy-Velocipede.*—December 21, 1869.

Claim.—The improved velocipede toy, each of its parts being constructed and arranged, with respect to the others, in the manner specified.

98,008.—DANIEL ARMSTRONG, Chicago, Ill.—*Machine for Making Wrought Nails.*—December 21, 1869.

Claim.—The combination of wheel G, frame A, shafts D C, pinion F, and housing I, constructed and arranged as and for the purpose set forth.

98,009.—JAMES ARMSTRONG, Bueyrus, Ohio.—*Wash-Boiler.*—December 21, 1869.

Claim.—1. The bottom B, when constructed substantially as and for the purpose shown and described.

2. The removable adjustable top D, when constructed substantially as shown and described.

3. The combination of the bottom B, top D, and end pieces C C, when constructed and arranged substantially as shown and described.

98,010.—SAMUEL AYRES, Danville, Ky.—*Refrigerator.*—December 21, 1869.

Claim.—1. The combination of the exterior case B, cylindrical case A, fixed rack Q, and revolving rack T, and ice-basket W, when arranged for access through the top and side, and with non-heat-conducting packing in the space between the two cases, as specified.

2. The arrangement of the hollow shaft S, shelves T, fixed rack Q, and ice-basket W, substantially as specified.

3. The arrangement, with the hollow shaft S, and shelves T, of the ice-basket W, oscillating cut-off X, spout Y, and water-passage Z′, substantially as specified.

4. The arrangement, with the shelves T, of the hollow posts *a a′*, in the double capacity of water-conductors and connecting supports, substantially as specified.

5. The arrangement, within the cylinder A, on a revolving central tube, resting upon a center at the bottom, of an ice-basket and a series of shelves, the said shaft being arranged to convey the water from the basket to the shelves, substantially as specified.

6. The arrangement, with the upper wired edge of the cylinder, of the lid E, provided with packing, as described, and hinged in slotted bearings, substantially as specified.

7. The combination, with the case A and door *h*, of the door or lid *l*, connected to the said door *h* by the central loose stud-pin *k*, and one or more pins *k′*, and provided with the spring *p*, all substantially as specified.

8. The combination, with the door L and case B, of the prop-rod M, slotted bar N, and spring hinge-joint O′ P, arranged and operating substantially as specified.

98,011.—GEORGE C. BAILEY, Pittsburgh, Pa.—*Hydrant.*—December 21, 1869.

Claim.—1. The lug *s*, attached to or forming part of the hollow plunger and discharge-pipe, in combination with the removable valve-chamber *f*, having a corresponding lug *s′*, all arranged and combined substantially as set forth.

2. The discharge-pipe *b*, lugs *s s′*, valve-chamber *f*, and joint *d′*, when combined in the manner substantially as shown and described.

3. A hydrant-valve seat inserted in or forming part of a removable valve-chamber, and a vertically-moving plunger or discharge-pipe, in combination with a locking-device constructed and operated substantially as described.

4. The discharge-pipe *b*, valve *a*, movable annular packing-ring *o*, and waste-passage *i*, when combined as shown.

98,012.—JOSEPH BALSLEY, Bedford, Ind.—*Washing-Machine.*—December 21, 1869.

Claim.—The combination of rope H, treadle K, roller or round J, slides F, and springs M, with the roller E, handle N, and rubber standards D, when arranged and operating as shown and described.

98,013.—ASHBELL P. BARLOW, Kalamazoo, Mich.—*Saw-Mill.*—December 21, 1869.

Claim.—The combination of the straight single inclined upper guides *a′ a′* and cross-head *a″* with the saw C and pitman *e*, when the saw is pivoted to the pitman, either above or below the pitman-fulcrum or guide-pins *d*, in the manner and for the purpose substantially as described.

98,014.—E. C. BARTON, Bloomsburgh, Pa.—*Boring-Machine.*—December 21, 1869.

Claim.—The mandrel E and its pinion, the yoke D D′, and collared screw-bolt H, in combination with the worm C and frame A, when constructed, arranged, and operating substantially as herein shown and described.

98,015.—THOMAS BERNHARD, Hartford, Conn.—*Padlock.*—December 21, 1869.

Claim.—The combination of the springs *o o o*, more or less in number, and strengthened by the notched bar *i*, with the sliding bolt *c* and the sliding bar *d*, actuated by the spring *e*, the whole being constructed, arranged, and operating substantially as described, for the purpose set forth.

98,016.—INMON BLACKABY, Civer, Ill.—*Fence.*—December 21, 1869.

Claim.—The panel *a*, sill *f*, short bar *c*, and brace *d*, constructed and arranged as and for the purpose specified.

98,017.—ALBERT BONDELI, Philadelphia, Mo.—*Plowing-Machine.*—December 21, 1869.

Claim.—1. The spade-wheels A *a′*, one or more, constructed substantially as herein shown and described, and set at an angle with the vertical line, and with the line of draught, substantially as and for the purpose set forth.

2. The combination of the circular revolving cutters D with the spade-wheels A *a′* and frame C, substantially as herein shown and described, and for the purpose set forth.

3. The combination of the adjustable caster-wheel E F G and adjustable hinged or jointed tongue H, with the frame C, circular revolving cutters D, and spade-wheels A *a′*, substantially as herein shown and described, and for the purpose set forth.

4. Adjustably connecting the truck-wheels I with the frame C, to which the spade-wheels A *a′* and the circular revolving cutters D are attached by the pivoted arms J and guide-slides K, or equivalent devices, substantially as herein shown and described, and for the purposes set forth.

5. The combination of the levers L, or equivalent device, with the arms J, to which the axles of the truck-wheels I are attached, and with the frame C, to which the spade-wheels A *a′* and circular revolving cutters D are attached, substantially as herein shown and described, and for the purposes set forth.

98,018.—A. S. BOYER, Bernville, Pa.—*Carriage-Brake.*—December 21, 1869.

Claim.—As my invention, in combination with the body of the vehicle, the braking-levers A A, constructed, applied, and operated by a foot-lever, so that they may be entirely withdrawn under the bottom of the said vehicle, or out of sight, when not required or used in braking, substantially as herein-before set forth and described.

98,019.—WILLIAM A. BRADFORD, Cincinnati, Ohio, assignor to C. G. PEASE, trustee for MALONE SAFETY-VALVE COMPANY.—*Low-Water Indicator.*—December 21, 1869.

Claim.—In combination with the expansion-tube L, fitted with a steam-whistle, P, and valve-seat

H, the pendent stationary valve H′, when said valve has a screw-threaded stem, I, and adjusting-nuts N N, arranged and operating in the manner and for the purpose specified.

98,020.—Robert Briggs, Philadelphia, Pa.—*Machine for Making Ferrules.*—December 21, 1869.

Claim.—1. The combination of the annular cutter with the swaging-roll, and of these with the supporting-rolls and mandrel, as herein described, for the manufacture of sockets or ferrules of wrought iron, from tubes previously either but or lap welded, by cutting off the same, simultaneously with the swaging or closing down upon a mandrel, as hereinbefore described.

2. The arrangement of the mandrel J, in combination with the rolls H H H′ and the withdrawing-lever K, substantially as and for the purpose described.

98,021.—M. S. Bringier, Ascension Parish, La.—*Steam-Generator.*—December 21, 1869.

Claim.—1. The application of the waste steam to increase and control the draught of the furnace of a boiler or evaporator, constructed substantially as herein described, when the same is done by the means and in the manner substantially as herein described, for the purpose set forth.

2. The combination of the boiler A, groups of tubes B B′ B″, and connecting vertical pipes C C′ C″ C‴, when used in connection with a furnace, provided with a vertical wall, E, and horizontal divisional plates D D′, with a pipe or drum, *c*, when the latter is provided with the issue-pipes or nipples *d*, and the several parts are constructed, arranged, and operated substantially as and for the purpose specified.

98,022.—Theodor Brinkmann, Greeneville, Tenn.—*Fire and Water Proof Paint.*—December 21, 1869.

Claim.—A compound for painting roofs and houses, when made in the manner substantially as set forth.

98,023.—Adam Brown, Bridgeport, Oregon.—*Animal-Trap.*—December 21, 1869.

Claim.—1. In combination with a box, barrel, or other suitable case, of a detachable chute, B, provided with spring-points D, perforated sheet-metal flooring E, and bait-chamber F, constructed and arranged to operate as herein shown and described, for the purpose specified.

2. The arrangement, in connection with the above, of the metal sheets I and tilting-tables K, all as specified.

98,024.—Augustus Brown, Dryden, N. Y.—*Hair-Spring Adjustment for Watches.*—December 21, 1869.

Claim.—1. The method of securing the outer end of the hair-spring by means of the clamp *c d* pressing upon the edges of said spring, substantially as described.

2. The adjustable link *f* to the regulator, whereby the curb-pins are adjusted to the position of the outer convolution of the hair-spring, substantially as and for the purpose set forth.

98,025.—Charles F. Butterworth, Troy, N. Y.—*Expanding Muff-Block.*—December 21, 1869.

Claim.—The combination of the two cylindrical blocks A B, one recessed and the other shouldered, as set forth, with the threaded, swiveled, and shouldered shaft C F, plate G, and threaded nut E, and the collar or sleeve *i*, all of said parts being arranged and brought together in the manner specified, to form an adjustable muff-block.

98,026.—George L. Cady, Lowell, Mass.—*Sap-Spout.*—December 21, 1869.

Claim.—The combination of the spout *a*, spur *d*, and hanger *f*, constructed and arranged to operate together substantially as and for the purpose herein specified.

98,027.—James Capen, Charlton, Mass.—*Hay-Loader.*—December 21, 1869.

Claim.—The combination of the rake E, case D, and elevator B, with the vertically-sliding frames L and sheets M, all constructed and arranged together, as described, to collect, load, and protect the hay from winds, and in the manner described.

98,028.—George T. Chattaway, Brooklyn, E. D., and John Dickinson, N. Y., assignors to George S. Chattaway.—*Grinding-Machine.*—December 21, 1869.

Claim.—The rest *g*, set upon trunnions in the movable bearings *h*, and adjusted by the screws *t m*, in combination with the grinding-wheel *c* and bed *a*, as and for the purposes specified.

98,029.—John Christy, Clyde, Ohio.—*Coopers' Tool.*—December 21, 1869.

Claim.—The combination of shanks *d* and *e*, when both are constructed and arranged to operate in the manner described.

98,030.—Frank O. Claflin, New York, N. Y.—*Nail and Peg Driver.*—December 21, 1869; antedated December 18, 1869.

Claim.—1. The punch *f*, in combination with the swinging-arm *d*, and mechanism for presenting to the punch one nail or peg to be driven, substantially as set forth.

2. The arrangement of the slide *n*, pawl *r*, die 5, and punch *f*, substantially as and for the purposes set forth.

3. The combination of a wheel with size-marks with lasting-pincers, substantially as set forth.

98,031.—Spencer M. Clark, Washington, D. C.—*Self-Canceling Postal and Revenue Stamp.*—December 21, 1869.

Claim.—A postal or revenue stamp, composed of two layers, one of which is perforated, the two being united and printed on the perforate side, and gummed on the imperforate side, substantially in the manner and for the purpose herein set forth.

98,032.—David N. B. Coffin, Jr., Newton, assignor to himself and Irah D. Spaulding, Boston, Mass.—*Capstan-Windlass.*—December 21, 1869.

Claim.—1. The combination of the capstan-windlass with the double-acting cam and the rocking-shaft, substantially as described.

2. The rocking-shaft *d*, constructed with wrists and rolls or sliding blocks, (see Figs. 16, 17, and 18,) and furnished with arms or head *e e*, in combination with a double-acting cam and shaft, *c b*, substantially as and for the purposes set forth.

3. The combination of the vibrating beam, irrespective of its lever-sockets, with the rocking-shaft and pawl-cases or primary levers of the windlass.

4. The arrangement of the flanged intermediate gear or gears *s*, in combination with the space between the teeth of the center gear and its ratchet-plate or other adjacent part, substantially as described.

5. Constructing the locking or sliding bolts of a capstan, (see Figs. 13, 14, and 19,) with expanded ends, substantially as and for the purpose set forth.

98,033.—François Coignet, Paris, France.—*Metal-Clad Artificial Stone.*—December 21, 1869.

Claim.—1. Protecting the exposed corners, sides, edges, or angles of artificial stones by means and with the use of metallic shields fastened thereto, in the process of manufacturing said stone, substantially in the manner herein set forth.

2. As a new article of manufacture, a metal-clad artificial stone, made substantially as herein described, for building purposes, or other wants of the arts, industry, or commerce.

98,034.—François Coignet, Paris, France.—*Making Artificial Stone and Concrete.*—December 21, 1869.

Claim.—The herein-described mode of obtaining a masonry or block of artificial stone, of the character known as Coignet's agglomerate, without seams, beads, or partings, by means of the system of roughening of the surfaces of the strata, substantially as herein set forth.

98,035. — François Coignet, Paris, France. — *Malaxator for the Preparation of Plastic Materials for Artificial Stone, and for other Purposes.* — December 21, 1869.

Claim.—1. The inclined body or case P Q Q′, in combination with the conjoint helices D S D S, substantially as and for the purpose set forth.

2. The regulating sand-hopper, with its gate *t*, or equivalent device, in combination with the helices D S D S and case P Q Q′.

3. The use of one or more screws S′, with hopper R, and of definite rotated spur-wheels and pinions t^1 t^2, in combination with the helices D S D S, substantially as specified, and to the end of securing automatic feed to the malaxator.

4. The water-pipe Z and variable overflow W, or their equivalent, to obtain the effect specified upon the sand in the malaxator.

5. The conical adjustable sleeves *q q*, in combination with the piece Q′ and conjoint helices D S D S.

6. The combination of the wheels K K, body P Q Q′ and shafts H H, in the manner and to the end set forth.

98,036.— E. R. Colver, New London, Conn. — *Hasp-Lock.*—December 21, 1869.

Claim.—In a hasp-lock, constructed as described, securing the hook and the hasp upon the same pivotal support, substantially as set forth.

98,037.—William S. Colwell, Pittsburgh, Pa. — *Device for Conveying Sawdust from Saws.* — December 21, 1869.

Claim.—1. A conducting, forcing, or ventilating fan or blower, provided with chambers A, B, and C, fan *x*, and clearing-arms *s*, as herein described.

2. The openings *f*, in the ends *f′* of the casing A′, and partitions *l*, arranged, with relation to the fan *x* and discharging aperture *e*, substantially as herein described, and for the purpose set forth.

3. The fan *x*, provided with wings, curved, substantially as herein described, and for the purpose set forth.

4. A fan or blower, provided with a chamber or chambers, separated by means of a perforated partition or partitions from the fan or blower, or apparatus used as the suction and forcing medium, substantially as hereinbefore described and for the purpose set forth.

98,038.—Edward Cotter, Boston, Mass.—*Combination of Piano-Forte and Cabinet.*—December 21, 1869.

Claim.—A "square" piano-forte, in combination with closets G and H, and upright extension-frame N, provided with shelves, when combined and arranged together, forming one piece of furniture, as and for the purpose described.

98,039.— J. P. Crawford, Carmichaels, Pa. — *Curtain-Fixture.*—December 21, 1869.

Claim.—1. The combination of the thumb-nut *e*, shaft *a*, flange *d*, disk *b*, washers *c e*, and socket C, all constructed and operating substantially as and for the purpose described.

2. In combination with the foregoing, the sliding pin *f*, or its equivalent, constructed and operating as described, whereby the disk *b* can be revolved in a given direction only, substantially as described, and for the purpose set forth.

98,040.—Edwin Crawley and Thomas L. Baylies, Richmond, Ind.—*Vise.*—December 21, 1869.

Claim.—1. The combination of boss F, spring *c*, and cam-wheels I I′, with the jaws, screw, and nut of a vise, substantially as set forth.

2. The combination of the cam-wheels I I′, collar *h*, springs *u u′* and *c*, and boss F, with the jaws, screw, and nut of a vise, substantially as described.

3. The combination of the cam-wheels I I′, springs *u u′* and *c*, collar *h*, plate *b*, and boss F, with the screw and movable jaw of a vise, substantially as herein described.

98,041.—William L. Dearth and G. P. Rondebush, Jefferson, Ind.—*Clod-Fender.* — December 21, 1869.

Claim.—1. A fender or plant-shield, constructed, substantially as herein described, of a single bar of rod-iron bent to form an outer frame carrying two interior longitudinal bars, and provided with suitable loops formed by twists in the bar, to receive supporting and adjusting rods or bolts, as herein set forth.

2. The supporting-device A, in combination with a fender constructed as above described, when said device is formed of a single rod, twisted, substantially as herein described.

3. The combination of the fender with its supporting-device by means of the arm *o* and loose bolt *k*, playing in eyes or loops *d f g* in the fender-bars, whereby the fender is made self-adjusting, substantially as herein set forth.

98,042. — John Dennis, Oswego, N. Y. — *Hay and Grain Elevator.*—December 21, 1869.

Claim.—1. The track B C, constructed as described, and car D, in combination with the frame of a barn, when used in connection with my improved hay and grain elevator, patented September 21, 1869, substantially as herein shown and described, and for the purpose set forth.

2. The aprons or slides E, in combination with the frame A, track B C, and car D, substantially as herein shown and described, and for the purpose set forth.

98,043. — James Emerson, Lowell, Mass. — *Dynamometer.*—December 21, 1869.

Claim.—1. The combination of a hydraulic cooling-apparatus, as described, or its equivalent, with the wheel of the dynamometer, to operate with and keep such wheel cool, under circumstances as specified.

2. The combination of a hydraulic cooling-apparatus, as described, or its equivalent, with the friction-band of a dynamometer, to operate therewith, substantially as specified.

3. The combination, as well as the arrangement of the dip trough or channel *t* with the dynamometer-wheel and friction-band, as described.

4. The combination of the auxiliary worm, or its equivalent, with the mechanism for measuring the velocity of the wheel.

5. The combination of the friction-clutch, or its equivalent, with the mechanism for measuring the velocity of the wheel.

6. The combination of the quadrant limb, the index-pendulum, or weighted arm, its pulley and chain, and the main weight, with the lever, combined with, or to be combined with a dynamometer, as set forth.

7. In the dynamometer, the application of the handle-wheel a^2 to its shaft *m*, so that the two shall revolve together, but the wheel be movable endwise on the shaft, as and for the purpose as specified.

98,044.—John Esch, Milwaukee, Wis.—*Dumping-Wagon.*—December 21, 1869.

Claim.—1. A dumping-wagon, consisting of the axle-trees A A, iron I, reach R, iron K, king-bolt Q, bolsters B and S, roller C, body D, E, F, and G, substantially as described.

2. Axle-trees A A, reach R, and irons I and K, and king-bolt Q, substantially as described.

98,045. — George W. Everhart, Louisville, Ky.—*Fire-Place Grate.*—December 21, 1869.

Claim.—1. The arrangement of the grate-basket A, with the wall of the fire-place, to provide the air-space at the ends and the rear, substantially as specified.

2. The arrangement of the recess C and ash-pan, D, in the hearth or bed, substantially as specified.

98,046. — Henry R. Foote, Boston, Mass. — *Vaporizing Petroleum, &c.*—December 21, 1869.

Claim.—1. For the purpose of increasing the heat of a furnace, and improving the combustion of its charge of coal or other fuel when on its grate, the employment of superheated steam in the manner set forth, to vaporize petroleum in a vessel or tank outside of and separate from the furnace, and the introduction of the combined steam and petroleum-vapor from such vessel into the furnace, or into and over the fuel thereof when in combustion therein.

2. The combination as well as the arrangement of

the superheating-steam pipe with the furnace, its boiler and fuel-supporting grate, the petroleum-tank, (separate from and outside of the furnace,) and the system of pipes or means of distributing the combined steam and vapor from the petroleum tank into the furnace, and the fuel when on the grate thereof, the whole being substantially as hereinbefore specified.

3. The arrangement of each of the discharge-pipes *b*, within a groove of the fuel-grate of the furnace, or within the grate and below its fuel-supporting surface, the same being as hereinbefore explained.

98,047.—Charles T. Ford and Edward Trask, Salem, Mass.—*Toy-Gun.*—December 21, 1869; antedated December 7, 1869.

Claim.—The "kerfs" *a* and *b* in the head of the plunger and in the breech of the gun, in combination with the elastic or rubber B, substantially as and for the purpose specified.

98,048.—Harlow French and Robert Meyer, Buffalo, N. Y.—*Shifting Rail for Buggy.*—December 21, 1869.

Claim.—The removable shifting-rail D, provided with the holes E, and having the projections J J and K K, (or slat-irons and props for the top,) all formed or constructed of one piece, substantially as and for the purposes described.

98,049.—Perry G. Gardiner, New York, N. Y.—*Railway-Car Truck.*—December 21, 1869.

Claim.—1. The combination of the springs *b* with the cases and the plungers or spring-heads, constructed and operating as described. Also, particularly, as my invention, the construction of a bolster-buffer or spring, made with a projecting head or plunger, to act upon the plated face of the side-truck frame-piece, in the manner and for the purposes described.

2. The combination of the springs, the bearing-plate or table, and the sockets for supporting and carrying the springs within the checks of the pedestal, constructed, arranged, and operating in the manner and for the purpose described.

98,050.—Perry G. Gardiner, New York, N. Y.—*Car-Springs.*—December 21, 1869.

Claim.—1. The combination of the perforated cellular India-rubber cylinder, surrounded and compressed by the rings, or exterior spiral spring, with the packing of the cells with cotton, or other similar fibrous material, with or without spiral springs in the cells, and with a central spiral in a central cell, through which the bolt passes, constructed, arranged, and operating substantially as described.

2. The combination of rubber cylinder with its equidistant perforation, surrounding a central perforation, packed as aforesaid, without the exterior spiral or rings.

3. The dovetailed lip or rim on the cap, in combination with the rubber cylinder and packing, constructed and operating in the manner and for the purposes described.

98,051.—Melvin J. Gaskill, William Yost, and John Ferris, Pleasant Plain, Ohio.—*Railway-Switch.*—December 21, 1869.

Claim.—The combination of the lugs B, cross-beams C, shaft D, arm E, perpendicular shaft F, screw G, hand-wheel H, and index I, all constructed and operated as and for the purpose described.

98,052.—Thomas L. Gray, Thomasville, Tenn.—*Miller-Trap for Bees.*—December 21, 1869.

Claim.—The combination of inclined entrance-tubes G, apron E, and chamber C, having transparent ceiling and floor, arranged as shown and described.

98,053.—Charles Green, Philadelphia, Pa.—*Stuffing-Box.*—December 21, 1869.

Claim.—1. The use and application of cork and water in a stuffing-box, substantially for the purpose shown and described.

2. A stuffing-box, composed of packing and water-chambers, substantially as shown and described.

3. The packing-chambers *b b'*, with converging tops and bottoms, c^1 c^2, substantially as shown and described.

4. The chambers *b b'*, in combination with the cork packings *d*, button-plates *e*, packing-screws *f*, covers or caps D, jam-nuts *g*, and the gum packings *h*, substantially as and for the purpose shown and described.

5. The packing-chambers *b b'*, water-chamber *c*, packings *d*, supply-pipe E, check-valve F, and the cock G, when combined and arranged as and for the purpose shown and described.

98,054.—Harry S. Griffiths and J. C. Cary, New York, N. Y.—*Suspension-Clip.*—December 21, 1861.

Claim.—The show-card suspension-ring A a^1, constructed and secured to the show-card substantially in the manner herein shown and described, and for the purpose set forth.

98,055.—John Hall, Watertown, Mass.—*Toy-Safe or Bank.*—December 21, 1869; antedated December 7, 1869.

Claim.—1. The combination and arrangement of the platform C with the box A, its cover B, and the means as described, or the equivalent therefor, for raising the cover.

2. The combination of the figure F, or "cashier," with the box and the cover, or the same and the platform, provided with means, as described, for operating such cover in manner as explained.

3. The combination of the pendulum *l*, the spindle *i*, and its arm *k*, with the head and body of the figure or "cashier" F, combined and arranged with the cover and platform applied to the box so as to operate as specified.

98,056.—Amos R. Harper and Charles B. Dake, Hobart, Ind.—*Lounge and Bedstead.*—December 21, 1869.

Claim.—1. The construction of the bedstead, with divided head and foot boards A A, and bottom B B, and movable extension portions *a a* and *b b*, as and for the purposes herein specified.

2. In combination therewith, the construction and arrangement of the mattress with a stiffening-piece, *r*, in one division, D, of the two parts, as and for the purpose herein set forth.

98,057.—Albert S. Hart, San Francisco, Cal.—*Machine for Upsetting Tire.*—December 21, 1869.

Claim.—1. The arrangement, relatively to each other, of the several parts of the above-described machine, substantially as set forth.

2. In combination with the faces D and E, and the projecting heads G, the wedges H, when provided with a flange, *a*, fitting in a groove, whereby the wedges are lifted clear of the faces, when drawn back, so as to leave a clear space to receive the tire, substantially as described.

98,058.—Albert S. Hart, San Francisco, Cal.—*Railway-Car Coupling.*—December 21, 1869.

Claim.—1. The combination and arrangement of the sliding plates G and F, the latter being provided with the spring *d* and lugs *c*, substantially as described.

2. In combination with the plates G and F, the hinged plate I, arm K, and weight J, arranged and operating substantially as set forth.

98,059.—David Hathaway, Troy, N. Y.—*Stove-Grate.*—December 21, 1869.

Claim.—1. The central sliding bars B C, the outer edges of which revolve on the journals D E and F G, the inner edges dropping down into the ash-pit, leaving a wide opening between said bars, constructed, arranged, and operating as set forth.

2. The clasp, Fig. 2, in combination with the rod T and arm S, by which the grate is dumped, and the sliding bars again replaced in working position, substantially as described.

98,060.—John F. Hechtle, Waterbury, Conn.—*Holding-Device for Lamp-Chimneys.*—December 21, 1869.

Claim.—1. The band C, connected to the burner

by means of spring-standards B, and operated upon the chimney, substantially in the manner as described.

2. In combination with the band C, the operating-device, consisting of the racks and pinion D, operated by means of the wheel E, and held in position either by the friction-sleeve *b* or the spring F, when the same is applied to a lamp-burner, in the manner and for the purpose as herein described.

98,061.—Alexander Hendry, Victoria, British Columbia.—*Steam and Caloric Engine.*—December 21, 1869.

Claim.—1. The combination of the furnace, the vertical and horizontal water-jackets, and the cylinders F F^1, when the latter are provided with induction-ports, leading from the combustion-chamber, to which the steam is first conducted and superheated, and exhaust-ports, and when the said jackets provide water and steam spaces around the furnace and cylinders, substantially as specified.

2. The combination, with the water-jacketed cylinders, of the hollow pistons, whether provided with chambers *k* or not, when the said hollow pistons have pipes communicating with the water-space G, and maintaining a circulation in the said pistons, substantially as specified.

3. The combination, with the valves for the induction and exhaust ports, of the hollow stems *a* and water-supply tank, substantially as specified.

4. In combination with the hollow stems *a*, the induction and exhaust valves, and combustion-chambers B, cam-shaft Z, cams Z^1, wipers Z^2, and tappets Z^3, the latter either adjustable or not, when said parts are arranged substantially as herein shown and described, and for the purpose specified.

98,062.—Davis Hurd, Lockport, N. Y.—*Rein-Holder.*—December 21, 1869.

Claim.—The rein-holder, constructed substantially as herein fully described.

98,063. — Abel L. Hurtt, Monticello, Ind.—*Spring-Seat for Wagons.*—December 21, 1869.

Claim.—The double bent vertical rods C, having a free oscillation through the bottom B, in combination with the seat A and springs D, as and for the purpose herein shown and described.

98,064. — Auguste Jacques Hurtu and Victor Joseph Hautin, Paris, France.—*Sewing-Machine.*—December 21, 1869.

Claim.—1. The needle and awl-carriers *f g*, when adapted to be rotated in a horizontal plane, during their vertical movement, by means of the collar *j* and the cam-grooves *x*, working upon the pins *y* in the head *c*, for the purpose of insuring the passage, alternately, of the awl and needle through the leather at the same point, substantially as herein shown and described.

2. The combination of the shuttle 10 with the semi-cylindrical race 8, having the ring 8^1 and opening 8^2, the slotted race 9 upon the spindle 15, the sliding ring 11 carrying the hook 11^1, stem 12, and pinion 14, the oscillating toothed segment 31, the semi-cylindrical spring-jaw 16, and the shuttle-driver 23 and 24, all arranged and operating as described for the purpose specified.

98,065.—Carleton B. Hutchins, Ann Arbor, Mich.—*Roofing-Compound.*—December 21, 1869.

Claim. — The compounding of the before-named ingredients, to make a covering to be used as before named, for roofs and other structures.

98,066.—Robert V. Jenks, Paterson, N. J.—*Dental Impression-Cup.*—December 21, 1869.

Claim.—An improved dental impression-cup, for the lower jaw, made in two parts, substantially in the manner herein shown and described, and for the purpose set forth.

98,067. — A. C. Judson, Grand Rapids, Ohio, assignor to himself and E. O. Judson, same place.—*Pump.*—December 21, 1869.

Claim. — The improved lifting-pump valve, comprising two metal disks, A D, and diaphragms E, &c., all arranged and applied to the pump-rod, as specified.

98,068.—Charles Keniston, Somerville, Mass.—*Leather-Splitting Machine.*—December 21, 1869.

Claim. — A leather-splitting machine, having a stationary knife or cutter, and reciprocating feed-rolls, operating substantially as described.

98,069. — Elhidge S. Kimball, Springfield, Mass.—*Spring-Bed Bottom.*—December 21, 1869.

Claim.—The double-coil lifter-spring *c c′*, formed as at *e e′ f*, in combination with the superincumbent slot-loop *g*, all constructed and arranged in the manner and for the purpose specified.

98,070.—Charles P. Kimball, Portland, Me.—*Whip-Socket.*—December 21, 1869.

Claim. — The improved mode of securing whip-sockets, by means of the ring *c* and its shank *b*, these being made a part of the dasher-frame, as and for the purpose set forth.

98,071. — Abraham L. King, Farmersville, Ohio.—*Flood-Gate.*—December 21, 1869.

Claim.—The combination of gates *a a*, provided with floats *e* and bolts *d*, arranged in the inclined frames *b b′*, and operating in the manner and for the purpose substantially as specified.

98,072.—J. George Knapp, Woodhaven, N. Y., assignor to The Lalance and Grosjean Manufacturing Company, New York City.—*Manufacture of Scoops.*—December 21, 1869.

Claim. — The mode of forming the blank scoop-bowls, by first striking the sheets up into the trough-shaped blanks for two scoops, as herein described, and then separating the blanks, all substantially as specified.

98,073. — D. R. Knight, Akron, Ohio.—*Drive-Well Tubes.*—December 21, 1869.

Claim.—The perforated shield or sheath A, so constructed as to fit closely between the ranges of holes D, as shown in Fig. 4, and to swell outward immediately over said holes, as shown at *e*, for the protection of the holes from dirt, sand, &c., in the manner substantially as described, and for the purpose specified.

98,074. — Abraham Lang, Buffalo, N. Y.—*Device for Preventing Leakage about Chimneys.*—December 21, 1869.

Claim.—The combination of the adjustable box B, with the cement surrounding the chimney, constructed and arranged as described, and for the uses set forth.

98,075. — T. F. Lippencott, Conemaugh, Pa.—*Harvester-Dropper.*—December 21, 1869.

Claim.—1. The combination of the rod E, spring G, adjusting-nut F, eye-plate H, sliding plate I, and spring-catch, J, with the dropper B C, substantially as herein shown and described, and for the purpose set forth.

2. The combination of the jointed rod K and spring L with the dropper B C, substantially as herein shown and described, and for the purpose set forth.

98,076.—Joseph Long, Mechanicsburgh, Pa.—*Car-Coupling.*—December 21, 1869.

Claim.—1. The combination of an open link with a bar, having the surface of its sides corrugated and adapted to spring-jaws, substantially as described.

2. In a car-coupling, the combination of a coupling-bar, having the surface of its sides corrugated, with spring-jaws, having the surface of their faces corrugated in a corresponding manner, substantially as and for the purpose set forth.

98,077. — Charles B. Loveless, Syracuse, N. Y.—*Head-Rest.*—December 21, 1869.

Claim.—The hoop and diaphragm-cushion or rest A with the sustaining-frame B *b b*, provided with a joint, *a*, for folding the parts together, in the manner and for the purpose herein specified.

98,078.—Moses Lunt, Cambridgeport, Mass.—*Burglar-Alarm.*—December 21, 1869.

Claim.—A burglar-alarm, consisting essentially of a frame, B, with its strap *a*, in combination with one

or more springs, *g h*, and tappet-wheels G H, operated by a weight, I, or its equivalent, released by the dropping of a hook, L, from the door-handle, substantially as described.

98,079.—G. MAYER, Sullivan, Ill.—*Folding and Extension Table.*—December 21, 1869.

Claim.—The table formed essentially of the hinged, sectional, detachable top A, the hinged side-rails D D′, arranged for extension by means of the slotted plates N or Q, and pins O or R, and the hinged legs T, all constructed and arranged as herein shown and described, and for the purpose specified.

98,080.—ISRAEL C. MAYO, Gloucester, Mass.—*Lantern.*—December 21, 1869.

Claim.—The combination and arrangement of the lower air-register N and the foraminous chamber S, with the lamp L of the lantern, as set forth, the whole being substantially as explained.

98,081.—HENRY W. MCAULEY, De Soto, Wis.—*Water-Wheel.*—December 21, 1869.

Claim.—The spiral chutes C, fixed in the case of flume F, the short buckets E, and the long buckets A, the latter being curved and widened toward their lower edges, and united with the hub or rim B in a tangential, and the outer rim D in a radial direction, all constructed, arranged, combined, and operating as herein shown and described.

98,082.—EPHRAIM MCDANIEL, Lowell, Mass.—*Let-Off Mechanism for Looms.*—December 21, 1869.

Claim.—The arrangement of the strap or chain *d*, drawing from the fixed end thereof, and in the direction in which the yarn-beam turns, and the arm *o* having an inclined bearing on the yarn-roll, in combination with the lever *g*, weight *h*, and cord *j*, as and for the purpose herein specified.

98,083.—JACOB K. MENTZER, New Holland, Pa.—*Lamp.*—December 21, 1869.

Claim.—A lamp-extinguisher, A B E, affixed by a pivot, *b*, and operated so as to cover the top of the burner *c*, in the manner and for the purpose specified.

98,084.—CARL C. P. MEYER, Yankton, Dakota Territory.—*Surveyors' Mark.*—December 21, 1869.

Claim.—1. As a new article of manufacture, a surveyors' mark, made of burnt clay, porcelain, or similar materials, or coated with the same, and provided with impressed or projecting inscriptions on each end, as herein described.

2. A surveyors' mark, consisting of two heads, A and B, and an intermediate connecting-piece, C, all made of the materials and in the manner herein shown and described.

98,085.—RICHARD R. MILES, Wabash, Ind.—*Tailors' Crayon-Sharpener.*—December 21, 1869.

Claim.—The hollow weight A, with its stopper B, provided with the beveled notch *b*, cutting-faces C C, and opening *c*, all combined and arranged as described, for the purpose set forth.

98,086.—JAMES H. MITCHELL and THOMAS S. MITCHELL, Pittsburgh, Pa.—*Cooking-Stove.*—December 21, 1869.

Claim.—1. In an extension-top stove, the arrangement of horizontal side flues, leading from the chamber *h* to the chamber *h′*, with dampers *i* at either end of such chambers, substantially as and for the purposes set forth.

2. In an extension-top stove, the arrangement of horizontal and diving flues and dampers, such, that whether the dampers be open or closed, the smoke and other products of combustion will enter the chamber *h′* of the extension, at or near its sides, and under the holes *g*, substantially as described.

98,087.—CHARLES MONTAGUE, Boston, Mass., assignor to CYRIL C. CHILD, same place.—*Printing-Press.*—December 21, 1869.

Claim.—1. The extensible vibrating lever C, in combination with a reciprocating type-bed, substantially as described.

2. In combination with the impression-cylinder of a cylinder-press, the gears H and I, connected together by the slot *e* and pin *d*, constructed and operated substantially as described.

3. Raising the cylinder J, to arrest the impression at the will of the operator, by means of the cam-levers *m* and m^1, and the hand-lever m^2, substantially as described.

4. In combination with the cam-levers *m* and m^1 and hand-lever m^2, the cam *q*, for throwing on the impression, substantially as described.

5. In combination with the cylinder J, the pin d^1, set in the end of said cylinder, and the spring-hook c^1, spring *g′*, and arm *b′*, constructed and operated substantially as described, for the purposes specified.

98,088.—CHARLES MONTAGUE, Boston, Mass., assignor to CYRIL C. CHILD, same place.—*Printing-Press.*—December 21, 1869.

Claim.—1. The combination of the cam-levers e^1 and e^2, dog *j′*, bed B, and cylinder L, constructed and operating substantially as described, for the purpose specified.

2. The spring-wedge *k′*, for arresting the action of the dog *j′*, constructed and operating substantially as described, for the purpose specified.

3. In combination, with a reciprocating type-bed, the cam-wedge *n*, pins *m* and *k*, lever *l*, spring *o*, and arm or dog *h*, constructed and operating substantially as described, for the purposes specified.

98,089.—JAMES MONTGOMERY, Sing Sing, N. Y.—*Steam-Generator.*—December 21, 1869; antedated December 17, 1869.

Claim.—1. The combination of the hopper B, chutes or passage C, and generator A, substantially as shown and described.

2. The concavo-convex flue-sheets, substantially as shown and described.

3. The combination of the combustion-chamber D^1, passage D^2, and chamber D^3, substantially as shown and described.

4. The rotating gate D, arranged in the upper portion of the generator, substantially as shown and described.

5. The arrangement of the deflecting or guiding plate A′, with reference to the chamber D^3 and the combustion-chamber D^1, substantially as shown and described.

6. The arrangement of the chamber D^3, with reference to the tubes or flues E and the chamber F, substantially as shown and described.

7. The combination of the reservoir G with the tube-sheet of generator A, substantially as shown and described.

8. A steam-generator, combining in its construction a hopper or reservoir for coals arranged around its upper end, chutes for conducting the coals to the grate, a rotating grate arranged above the tubes, a chamber above and below the tubes, and a reservoir attached to the central portion of the lower tube-sheet for the reception of the sediment, substantially as shown and described.

98,090.—EPHRAIM MYERS, Creagerstown, Md.—*Harvester-Dropper.*—December 21, 1869; antedated December 4, 1869.

Claim.—1. The arrangement, with a harvester, of the grain-board E, hung by journals *b b′*, in the frame *a*, in such a manner that the said grain-board shall have the three distinct and separate motions of falling, raising, and turning, almost at the same time, substantially as and for the purposes herein set forth.

2. In combination with the frame *a* and grain-board E, the collar *c*, placed on the journal *b′*, and having an arm *d*, to the outer end of which the bar *e* is pivoted, all substantially as and for the purposes herein set forth.

3. The bar *e*, constructed as described, and provided at its rear end, where it is pivoted to the arm *d*, with a latch *e′*, and on the under side of its front end, with a hook *g*, to catch on the pins *i i* of the wheel B, substantially as and for the purposes herein set forth.

4. The lever *h*, extending in rear of the harvester, and provided with a hook *m*, substantially as and for the purposes herein set forth.

5. The curved arm *n*, attached to the frame *a*, as described, and provided with one or more hooks *o o*, said arm operating at or near the upper edge of the

dividing-board D, substantially as and for the purposes herein set forth.

6. In combination with the arm *n*, having one or more hooks *o*, the shield *p*, attached to the dividing-board D, substantially as and for the purposes herein set forth.

98,091.—R. L. MYERS, Washington, N. C.—*Cotton-Basket.*—December 21, 1869.

Claim.—A basket, constructed with a large hole, A, in the bottom, as shown and described.

98,092.—ROBERT NEALE, Brooklyn, N. Y.—*Velocipede.*—December 21, 1869; antedated December 4, 1869.

Claim.—The pinions *i i*, guide-flanges *o o*, and disk *s*, in combination with the ratchet-wheels *e*, pawls *r*, and racks *k*, united to the lever *f* by a joint, so that the movement of the lever *f* gives a rotary motion to the shaft or axle *b*, in the manner specified.

98,093.—THOMAS NEWELL, Oskaloosa, Iowa.—*Stove-Pipe Thimble.*—December 21, 1869.

Claim.—The tube A, provided with flange *a* and ring B, in combination with the tube *f*, when the space between the said tubes is filled with some non-conducting substance, and the thimble or flue-supporter is arranged in the manner set forth.

98,094.—JAMES NICKLIN, Cleveland, Ohio.—*Curtain and Shawl Stretcher.*—December 21, 1869.

Claim.—The adjustable sides A, when constructed with slots B, rabbet E, and pins *a*, and screwed to each other in the manner substantially as described, and for the purpose set forth.

98,095.—EDWIN NORTON, Brooklyn, N. Y.—*Railroad-Car Ventilator.*—December 21, 1869.

Claim.—A car-window guard, with projections B thereon, arranged at the side of the window, and held at about a right angle thereto, as shown and described.

98,096.—BENJAMIN NOTT, Albany, N. Y.—*Illuminating-Stove.*—December 21, 1869

Claim.—1. A portable fuel-feeder for stoves, provided with a valve for regulating the supply of fuel, said valve to act as a bottom for the feeder when it is removed for filling.

2. A stove provided with a series of portable feeders, G, whereby various kinds of fuel may be supplied to the combustion-chamber, substantially as shown and described.

3. A stove provided with two or more fire-pots *o*, combustion-chambers, one above another, and separated from each other by means of a crown-sheet provided with a damper, substantially as shown and described.

4. The illuminators or windows K K^2 and L, made of glass, mica, or any transparent translucent substance, and placed at intervals in the back, and sides, and at the front of stove, substantially as shown and described.

5. The fire-pot or chamber B^2, above the crown-sheet E, surrounded by an air-space *c*, to which air is supplied by means of the air-pipe *d*, substantially as and for the purposes described.

6. The door *y*, forming the lower front of the stove, constructed so as to allow of the removal of the fire-pot or furnace B, substantially as set forth.

7. The removable fire-pot or furnace B, substantially as described.

8. The air-chamber C, and pan *x*, for the circulation of the air, substantially as and for the purposes described.

9. The hydrocarbon-feeder *a*, for supplying fuel to the upper combustion-chamber B^2, substantially as shown and described.

10. A reflector, of tin or other suitable material, placed opposite a translucent surface of a stove, as described.

98,097.—JOHN W. ODANIEL, Cloverdale, Ind.—*Hay-Elevator.*—December 21, 1869.

Claim.—1. The sills A, staples K, upright posts B, false post C, cap *s*, revolving beam E, catch-pulley *c*, the braces for upright posts *g*, and beam A, all combined and arranged substantially as specified.

2. The false post C, with metal plate and attachments, constructed as shown.

3. The hay-derrick, consisting of all the parts shown, and constructed, combined, and arranged as specified.

98,098.—THOMAS OLLIS, Netherfield Road South, Liverpool, England.—*Passenger-Register for Vehicles.*—December 21, 1869; patented in England, March 31, 1868.

Claim.—In combination with a series of numbered disks or wheels, arranged side by side on the common axis *b*, the spring *q* on each of said wheels, operated at each revolution thereof by the stationary projection *r*, so as to bring the said spring into engagement with the adjoining left-hand wheel at that point, the whole forming a numbering-register, operating substantially as and for the purpose described.

98,099.—JOSHUA T. OWEN, Philadelphia, Pa.—*Railway-Car Wheel.*—December 21, 1869.

Claim.—As my invention, a car-wheel, which consists of the casting *a*, provided with a central recessed aperture, in combination with the springs *h*, sleeve and shoulders *f c d*, and cap *i*, substantially as set forth.

98,100.—GEORGE PADDINGTON, Springville, Iowa.—*Harrow.*—December 21, 1869.

Claim.—A harrow-tooth, formed of the tube *e*, revolving about a central pin, *h*, as shown and described.

98,101.—FRANCIS L. PALMER, Sr., New York, N. Y.—*Packing and Atomizing Can for Insect-Powder.*—December 21, 1869.

Claim.—1. A packing-can for insect and other powder, provided with the nozzle F, at or near the bottom, and a stopper, C, containing a nozzle, arranged in the same, substantially as specified.

2. The combination with the above of a tube, C, and plug H, arranged as described, for attachment to the nozzle F, as specified.

98,102.—WILLIAM PATTBERGER, Philadelphia, Pa.—*Combined Oyster-Knife and Ice-Pick.*—December 21, 1869.

Claim.—The blade A, hollow handle B containing the bent spring C, held in place by the cork or stopple E, and ice-picker D, arranged substantially as described.

98,103.—Suspended.

98,104.—THOMAS B. PEDDIE, Newark, N. J.—*Trunk.*—December 21, 1869.

Claim.—A trunk, provided with recessed trays C D, and straps F, the said parts being constructed, arranged, and fitted together in the manner described.

98,105.—CHARLES E. PHILLIPS, South Deerfield, Mass.—*Bolt-Clamp.*—December 21, 1869.

Claim.—A tire-bolt clamp, formed of the frame A, branched at the lower, and having a threaded nut in the upper end thereof, combined with a clamping-screw, B, having a hard point at its extremity, the said parts being constructed and operating together in the manner described.

98,106.—JOSIAH POTTS, Milwaukee, Wis.—*Combined Square and Caliper.*—December 21, 1869.

Claim.—1. In combination with a try-square, the surface-gauge E, connected with the square by means of the slide F and thumb-screw G, and arranged and operating substantially as described.

2. The combination of the gauge E and the spirit-level, (as seen at C,) with a try-square, substantially as described.

98,107.—AUG. A. RANDALL, South Braintree, assignor to himself and CHARLES F. WHITCOMB, Boston, Mass.—*Metal Alloy for Harness-Trimmings, &c.*—December 21, 1869.

Claim.—The metal alloy, substantially as set forth.

98,108.—ROYAL B. RICE, Williamsburgh, Mass.—*Carpenters' Plow.*—December 21, 1869.

Claim.—The colter *k*, constructed and arranged, with reference to bit *d*, as herein specified.

98,109.—Levi Richards, Providence, R. I., assignor, by mesne assignments, to himself, Oliver A. Washburn, George S. Perkins, and Frederick S. Roscoe, same place.—*Cut-Nail Machine.*—December 21, 1869.

Claim.—1. The mechanism, substantially as herein described, through the media of which to impart the proper motions to the jaws *b b'* and barrel *c* of a nail-plate feeder, which consists of the following elements or organism in combination: first, a rocking platform, E, upon which the devices to hold the nail-plate are mounted; second, a vibrating rack, F', giving a rotary movement to the barrel *c*; and third, the link G, all performing the functions herein set forth.

2. In combination with the rocking platform E, lever K, and stop-rod N, the griping-jaws *h*, operated by a cam or wedge L, for the purpose of producing a positive intermittent forward movement of the nail-plate to the cutting-machinery, substantially as described.

98,110.—Samuel Rust, Jr., Cincinnati, Ohio.—*Electro-Plating with Brass and other Alloys.*—December 21, 1869.

Claim.—1. The process of electro plating with brass or other alloy, substantially as herein described.

2. In combination with the solution of cyanide of potassium for preparing the depositing-bath, the employment of sulphuret of carbon, substantially as herein described.

3. The process of preparing the depositing-bath by dissolving the brass or other alloy directly by the electro-process in the solution of cyanide of potassium and sulphuret of carbon, substantially as herein described.

4. As new articles of manufacture, metallic or other articles coated with brass or other alloy by the process herein described.

5. The apparatus for heating the depositing-bath, consisting of the vat A and steam-coil B, substantially as herein described.

98,111.—George Selden, Erie, Pa.—*Indicator for Saw-Mill Head-Blocks.*—December 21, 1869.

Claim.—1. The dial A, graduated, so as to indicate the several thicknesses of lumber which may be sawed from a log, with an allowance made for saw-kerf, as described, when used in connection with saw-mill head-blocks.

2. The rim B and index-bar C, in combination with the dial A, when constructed and operated in connection with a saw-mill head block, for the purposes set forth.

3. The shaft Y, pinion E, and frame D, in combination with the plate N, dial A, rim B, and index-bar C, all constructed and operated as and for the purposes set forth.

98,112.—James B. Skinner, Rockford, Ill.—*Cultivator.*—December 21, 1869.

Claim.—1. The combination of caster-wheels with a rigid frame, having vertical movement, substantially as described.

2. The combination of a cultivator-frame having vertical movement, with a lever, where said frame is adjusted vertically by said lever, substantially as and for the purpose described.

3. The combination of a cultivator frame resting upon wheels attached by swinging bars, with levers, when said levers operate to raise or depress the frame, substantially as described.

4. The cultivator-frame described, consisting of the cross-beams B B, shovel-beams C C, and cross-bars *c c*^{1}, when arranged for adjustment, substantially as described, for the purpose set forth.

5. The adjustable standard *f*, in combination with the levers F and wheels A, as and for the purpose described.

6. The levers F, with spring-stop devices described, in combination with the standard *f* and yoke-standard *a'*, substantially as described.

7. The washer G, when constructed as described, and used in connection with the levers F and the frame, as and for the purpose described.

8. The machine described, consisting essentially of the wheels A *a a'*, frame B B C C *c c*^{1}, lifting-devices F *f*, H *h*, standards M, and shovels *m*, the whole being combined and arranged as described, for the purpose set forth.

98,113.—A. L. Smith, Bristol Centre, N. Y.—*Harvester.*—December 21, 1869.

Claim.—The arrangement of the pivoted pawl *w*, wheels *o p*, shaft *n*, and spring *s*, when the said parts are combined with the gavel-discharger E G and aprons D D', in the manner and for the purpose specified.

98,114.—John C. Smith, Brooklyn, N. Y.—*Electro-Magnetic Lock.*—December 21, 1869.

Claim.—1. The combination of the electro-magnet C and the bolt B, substantially as described, for the purposes set forth.

2. The combination of an electro-magnet with a permutation-lock, whereby the bolt of the lock may be thrown in either direction by means of forming or breaking a circuit on certain combinations of figures, letters, numbers, or signs, substantially as described.

3. In combination with a permutation-lock, the circuit-wheels P, and the dial-wheels S, arranged, combined, and operating substantially as and for the purposes described.

4. The weighted lever D, the plate J, and the armature L, in combination with the bolt B, arranged and operating substantially as and for the purposes set forth.

5. The method of communicating the electric current to the circuit-wheels, and thereby completing the circuit, substantially as and for the purposes described.

98,115.—Thomas Smurfit, Davisville, Mich.—*Brick-Machine.*—December 21, 1869.

Claim.—1. The combination of the bar R and rods S with the separator L, cord N, pulley O, lever M, and sweep C, all constructed and arranged to operate as shown and described.

2. The separator L, rope or chain N, pulley O, and lever M, with the press F, rack K, case A, and sweep C, substantially as herein shown and described, for the purpose set forth.

3. The oscillating lever I, connected with the slides G by links H, and having the shaft B as its fulcrum, when extended laterally through a slot in the side of the case A, to allow the supply of clay to the molds to be regulated at the will of the operator, as set forth.

98,116.—Joseph B. Spencer, Norwich, Conn.—*Floor-Clamp.*—December 21, 1869; antedated December 17, 1869.

Claim.—The combination of the lever A, with the pressure-frame *d d'*, gripping-cams *c c*, and connecting-rods *b b*, arranged and operating substantially as described.

98,117.—Aurelius Sperry, Tremont, Ill.—*Churn-Dasher.*—December 21, 1869.

Claim.—The combination, in a horizontal churn-dasher B, of the vertical half-round recesses *c c*, with radiating perforations *e e*, and the cutting-edges *d d*, substantially as and for the purposes hereinbefore described.

98,118.—Amos Stevens, Fitchburgh, Mass., assignor to E. A. Whitney, same place.—*Gas-Generator and Carbureter.*—December 21, 1869.

Claim.—1. The arrangement of four cylinders, of unequal diameters, two connected with the bottom B, and two with the top L, for the purpose above described.

2. The position and form of the oil-tank I, being formed of two cylinders, with the top G, and being placed in the center of the space of water, is completely covered and surrounded by it, substantially as and for the purpose hereinbefore set forth.

3. Passing the gas up through the water, by means of the perforated pipe S, substantially as and for the purpose hereinbefore described and set forth.

98,119.—Alexander W. Stewart, Boston,

Mass.—*Rocking and Easy Chair.*—December 21, 1869.

Claim.—1. A rocking-chair, having rockers jointed to stationary rails by pairs of crossing links, and having stops or projections, *e*, to check the forward and back motions, substantially as shown and described.

2. The combination of the rack *o*, pawl *r*, and cam or crank shaft *p*, constructed and arranged for locking an easy or reclining chair in position, substantially as described.

98,120.—RANSOM E. STRAIT, Galesburgh, Mich.—*Plow.*—December 21, 1869.

Claim.—1. The slotted platform *a*, provided with a curved groove on its upper side, substantially as and for the purposes herein set forth.

2. The box *b* and cap *d*, constructed as described, and made adjustable upon the platform *a*, substantially in the manner and for the purposes herein set forth.

3. The disk E, provided with shaft *c* and rim *e*, substantially as and for the purposes herein set forth.

4. The combination and arrangement of the plow-beam A, landside B, handles C C, braces D D, platform *a*, box *b*, wheel mold-board E, and scraper *f*, all constructed as described, and operating substantially in the manner and for the purposes herein set forth.

98,121.—JOHN TAGGART MELROSE, assignor to himself and WILLIS N. BRINK, Boston, Mass.—*Machine for Scouring, Setting Out, and Finishing Hides or Skins.*—December 21, 1869.

Claim.—1. The combination and arrangement of the rotary series of slickers or tools, mechanism for revolving them, and mechanism moving them endwise, as described, with a platform, and mechanism for imparting to it reciprocating circular movements, as specified.

2. And, in combination therewith, the mechanism, substantially as described, for raising the tools away from and for depressing them toward the platform, as explained.

98,122.—MICHAEL C. TAYLOR, Grass Valley, Cal.—*Variable Cut-Off for Steam-Engines.*—December 21, 1869; antedated December 17, 1869.

Claim.—The arrangement, with reference to the projections B and B′, and the cam C, of the cylinder F, provided with the cam D, and spiral grooves *a*, and the arrangement, within said cylinder, of the follower G, screw H, and sliding stem N, whereby the position of the cam D, relatively to C, may be readily adjusted, substantially as described.

98,123.—ROBERT B. TAYLOR, Pensaukie, Wis.—*Shingle-Packer.*—December 21, 1869.

Claim.—The combination, with a frame A, and elevated central transverse bar D, of the sliding bars E, clamping-bar K, shaft H, pinions, and hand-lever, all substantially as specified.

98,124.—HIRAM THOMPSON, Worcester, Mass., assignor to R. BALL AND COMPANY, same place.—*Cutter-Head.*—December 21, 1869.

Claim.—1. The cutter-frame D, made with the recessed base C, holding-bars I I, and open end or top H, for the reception of the tightening-wedge E, substantially as shown and described.

2. The combination, with the spindle A, provided with the collar or shoulder B, screw-thread *a*, and nut F, of the cutter-frame D, and tightening tubular wedge E, substantially as and for the purposes set forth.

98,125.—WILLIAM J. THOMPSON, Springfield, Mo.—*Water-Wheel.*—December 21, 1869.

Claim.—1. The combination, with a wheel arranged to receive the water as described, of the gates G, pivoted between the rims C and E, and arranged for operation substantially as specified.

2. The combination, with the gates G and rim C, of the movable rim I and pins *a*, when arranged for opening and closing the said gates, substantially as specified.

98,126.—ROBERT WILLIAM THOMSON, Edinburgh, Great Britain.—*Wheel for Steam-Carriage.*—December 21, 1869; patented in England, April 21, 1868.

Claim.—1. The applying of separated segmental metal shoes to rubber tires of road-steamer wheels.

2. The perforating of the shell on which the rubber tire bears, in the manner and for the purpose described.

98,127.—JOHN TRUNICK, Muscatine Iowa.—*Circular-Saw Mill.*—December 21, 1869.

Claim.—The forked guide D, springs H, and screw-guide G, provided with collar and screw-nuts, combined and arranged with the saw C and arbor B, as shown and described, and for the purpose specified.

98,128.—JOHN W. TULL, Zionsville, Ind.—*Clod-Fender.*—December 21, 1869.

Claim.—A clod-fender, consisting of bar D, plate E, hub *j*, provided with arms *g g*, and shield G, all combined and arranged, in combination with the plow, substantially in the manner and for the purpose described.

98,129.—JAMES VARLEY, Hudson, assignor to himself and D. M. SMYTH, Orange, N. J.—*Neck-Tie and Collar Combined.*—December 21, 1869.

Claim.—Uniting one end of the neck-tie to the band of the collar by an eyelet, so that said neck-tie may be turned down for allowing the collar to be buttoned or held up in place by said eyelet, when turned up beneath the collar, as set forth.

98,130.—WILLIAM M. WALTON, Newark, N. J., assignor to JOSEPH J. WALTON, same place.—*Eye for Railway-Car Bell-Rope.*—December 21, 1869.

Claim.—The convoluted frame *a*, supporting the roller *b*, and formed with the tortuous mouth *i*, for the bell-rope to be passed in sidewise, as specified.

98,131.—J. D. WARE, Savannah, Ga.—*Pipe-Coupling.*—December 21, 1869.

Claim.—The pipe-coupling formed by the combination of the projection C on the part B, with the dovetailed and wedged-shape groove of the part A, and with the eccentric-grooved ring E, substantially as herein shown and described, and for the purpose specified.

98,132.—GEORGE L. WATSON, Nesquehoning, Pa.—*Gauge-Cocks.*—December 21, 1869.

Claim.—1. The gauge-cock stem *a*, provided with the stop-cock *b*, and having a projecting seating, *e e*, adapted for use in connection with the cap *c* and stop screw *d*, in the manner and for the purpose specified.

2. The cap *g*, provided with the hollow stop-cock *h*, when said cap is adapted for use upon the gauge-cock stem *a*, fitted with the stop-cock *b*, with or without the seating *e e*, all in the manner and for the purpose specified.

98,133.—JOSEPH W. WATTLES, Canton, Mass.—*Lubricator for the Bolsters of Vertical Shafts.*—December 21, 1869.

Claim.—1. The arrangement of the conduit D, relatively to the bolster, the whirl, and the step of the spindle, the bolster being above and the step being below the whirl, the whole being substantially in manner as specified.

2. The bolster, as made with the oil-intercepting chamber *a*, and the hole *b* leading laterally out of the same, and with the spindle-bearing extended both above and below the intercepting-chamber, the whole being as and for the purpose specified.

98,134.—E. V. WINGARD, Williamsport, Pa.—*Brick-Kiln, &c.*—December 21, 1869.

Claim.—The flues C C, when extending through the interior of the kiln, and provided with the openings *a b j*, for controlling and properly distributing the heat, substantially as shown and described.

98,135.—PHILIP WISDOM, Brooklyn, N. Y., assignor to JOHN SICKLES, trustee, and JOHN SICKLES, trustee, assignor to JOHN WISDOM and JOHN H. WILCOX, New York City.—*Machine for Spinning and Curling Hair.*—December 21, 1869.

Claim.—The combination of the twisted spindle A, rollers *a b*, curling-tube B, and reel C, with the devices described for rotating it, all arranged and severally operating substantially as and for the purposes set forth.

98,136.—DAVID C. WOODS, Waxahatchie, Tex —*Seed-Planter.*—December 21, 1869.

Claim. — 1. The combination of the wheel F, which has the stop *c*, with the toothed disk K and seed-dropper I, all arranged, substantially as described, to automatically drop certain quantities of seed at certain intervals, as specified.

2. The improved seed-planter formed by the combination, with the beam A, of the wheel E, shovel C, hopper G, seed-drooper I, toothed disk K, wheel F, marker M, shovels D, and handles B, when said parts are arranged as shown and described.

98,137.—GEORGE WORKMAN, Rochester, N. Y. —*Harrow.*—December 21, 1869.

Claim. — The arrangement of the hinges B with flanges *f f* and hooks *g g*, the draught-bar D with chains *h h* and attachments *k k l m*, and the teeth-attachments *b b*, the whole operating in the manner and for the purpose specified.

98,138.—EDMUND YARDLEY, Pittsburgh, Pa.—*Railway-Switch.*—December 21, 1869.

Claim.— 1. The arrangement of a switch-bridle, between the movable ends of the shifting-rails of a railroad-switch and the chair or chairs which support such ends, substantially as above described.

2. A switch-chair, having a raised bearing-surface for the stationary rail or rails, and an offset, groove, or depression, in combination with a bridle, interposed between the chair and the ends of the shifting-rails, substantially as above described.

3. The bolts *s*, passing through the webs of the rails *a*, and along notches in the lips *c*, substantially as described.

98,139.—CHARLES ADAMS, Philadelphia, Pa., assignor to himself and CHARLES SHARPE, same place. —*Apparatus for the Manufacture of Iron and Steel.* —December 21, 1869.

Claim. — A converter, consisting of a pipe or chamber, depressed, at or near the middle, substantially as described, and communicating, at one end, with any suitable apparatus for generating carbonic oxide, and having, at its opposite or outlet end a weighted valve, or its equivalent, as set forth.

98,140.—WILLIAM BARRY and GEORGE FRANKLIN, Philadelphia, Pa.— *Railway-Car Spring.* — December 21, 1869.

Claim.—1. A spring, composed of the two bars A and A′, bent and adapted to each other, substantially as set forth.

2. A spring, composed of the said bars A and A′, and intermediate bars B and B′, with or without additional bars *a a′*.

3. The combination of a series of the said springs with a box, D, and sliding plate E.

4. The rounded rib *m′* on the box, and the similar rib *m* on the plate E, the said ribs being adapted to the cavities *y y* of the springs, as described.

5. The intermediate loose rod *n*, adapted to the cavities *y y* of the two sets of springs, as specified.

98,141.—BURROUGHS BEACH, Meriden, assignor to himself and EDWIN I. PYLE, Bridgeport, Conn.— *Folding Chair.*—December 21, 1869.

Claim.—1. In combination with a folding chair, substantially as described, the rocker G, pivoted and swiveled to the leg B, in the manner herein set forth.

2. In combination with the above, the conical key I and pin *f*, to secure the rocker, as set forth.

3. In combination with a folding chair, substantially such as described, the detachable rest, formed by the bars L L, in the manner described.

98,142. — ANN K. BENSON, Allegheny City, Pa. —*Hair-Restorative.*—December 21, 1869.

Claim.—The manufacture or preparation of a compound, which I term Benson's hair-restorative, of the oil and essences herein described, mixed in and about the proportions set forth.

98,143.—ALPHEUS BIGONY, Winchester, Ohio. —*Machine for Laying out Sash.*—December 21, 1869.

Claim.—1. The upper and lower sets of scribing-tools *f*, in combination with a horizontal carriage, H, located and made to slide between said marking-tools, in the manner and for the purpose described.

2. The combination of the fixed and adjustable horizontal supporting bars B C, the adjustable blocks G, the adjusting-screws E, and supporting-springs D, with a horizontal-sliding carriage, H, having adjustable transverse bars J, the whole constructed and arranged to operate as described.

98,144.—JOHN H. BUCKMAN, Cincinnati, Ohio, assignor to himself and PETER W. REINSHAGEN, same place.—*Device for Securing Pulleys to Shafts.*— December 21, 1869.

Claim.—The tapering hub A, provided with slots *a*, in combination with the tightening-rings B B′, operating in the manner and for the purpose specified.

98,145. — ALPHONZO BUTTON, Dunkirk, N. Y., assignor to MATSON O. WILBER, for one-half of said patent.—*Pocket-Book.*—December 21, 1869.

Claim.—The combination of the slotted cylindrical case A, spool E, and note and paper-holding sheet F, substantially as specified.

98,146. — JAMES P. CHAMBERLIN, Abington, Mass.—*Spring-Bed Bottom.*—December 21, 1869.

Claim.—The springs *a*, with their arms *b*, in combination with the slats C, when constructed to operate substantially as and for the purpose described.

98,147.—JOHN CHESNUT, Jr., Hustontown, Pa. —*Safety Harness-Buckle.*—December 21, 1869.

Claim.—1. The combination of a loose, detachable pin with the frame of a trace-buckle, to form an intermediate cross-bar between the ends of the buckle, substantially as and for the purpose herein set forth.

2. The combination of a detachable supporting-plate, G, with the detachable center bar or pin of a trace-buckle, and with the strap or loop supporting the shaft, all substantially as herein described.

3. The detachable keeper-plate H, in combination with the detachable supporting-plate G and detachable center bar B of a harness trace-buckle, substantially as herein set forth.

98,148. — A. P. CINDEL and MARTIN VOGEL, Jacksonville, Ill. — *Washing-Machine.* — December 21, 1869.

Claim.—The washing-machine, herein described, having fixed wash-boards C C, separate from each other, the dasher F, ledge B, bevel-wheels *g* and *k′*, cross-bar H, and cover L, constructed and arranged to operate substantially as specified.

98,149.—BENJAMIN R. COLE, Buffalo, N. Y.— *Operating-Device for Water-Closets.*—December 21, 1869.

Claim.—The combination of the lever C C′, and pan and valve of a water-closet actuated thereby, with foot-board, E, hinged in front, and the adjustable connecting-rod F, when arranged and operating substantially as and for the purpose hereinbefore set forth.

98,150.—E. F. COOPER, Mount Gilead, Ohio.— *Turbine Water-Wheel.*—December 21, 1869.

Claim.—The reversible turbine-wheel, herein described, having reversible casings A A′, with flanches *h h* and gate B, and wheel D, having grooved cylinder-heads D′ D′ and separate reversible buckets *d′ d′*, cast on separate iron staves *d d*, all constructed and arranged to operate substantially as specified.

98,151.—C. O. CROSBY, New Haven, Conn.— *Sewing-Machine for Sewing Boots and Shoes.*—December 21, 1869.

Claim.—1. The combination of the needle-bar C and the sliding bar H′, upon which is formed an incline, and the adjusting-screw C^4, to move the needle, so as to feed the work, substantially as set forth.

2. In combination with the subject-matter of the

first clause of claim, the sewing-needle and awl D, substantially as set forth.

3. The combination, substantially as described, of the vibrating arms K and I^2, with the spring-spindle for supporting and moving the last.

4. In combination with the last-supporting spindle I^1, the wheel N, the ring *n*, and the wedge-shape bar N^1, so as to lock the spindle and prevent its turning, substantially as described.

5. In combination with the arm I^2, the segment L, with the wedge I^1, arranged for clamping and holding the said arm, substantially as set forth.

6. In combination with the arm I^2 and the segment L, the plate L^4, constructed and adjustable so as to permit or prevent, as the case may be, the lateral movement of the arm I^2, substantially as set forth.

7. In combination with the arm I^2, substantially as described, the swinging arm P, so as to hold the spindle I^1, to adjust the shoe for stitching, as set forth.

98,152. — THEOPHILUS CRUTCHER, Edgefield, Tenn.—*Churn-Dasher.*—December 21, 1869.

Claim.—The combination of the conical dasher *h*, when provided with perforations, as shown, cross-bars *k k k k*, the tube *i*, hollow shaft *b*, valve-seat *c*, and valve *g*, as herein set forth.

98,153.—JACOB N. DECK, Buffalo, N. Y., assignor to himself, B. R. COLE, and G. FRANCIS DECK, same place. — *Water-Closet Valve.*—December 21, 1869.

Claim.—The rubber or other elastic ball A, arranged with the seat *h* and bearing *i*, so as to be pressed from the valve-seat by a thrust, substantially as set forth.

98,154.—CHARLES R. DOANE, Brooklyn, E. D., N. Y.—*Card-Holder.*—December 21, 1869.

Claim.—A card-holder, in which the front and rear sides meet at their lower edges, and from thence extend upward and apart at any suitable angle, substantially as and for the purpose specified.

98,155.—JOHN OTTO DONNER, Jersey City, N. J.—*Process of Treating Wines, Beer, and Liquors.*—December 21, 1869.

Claim. —The treatment of wines, beers, or liquors with salts of magnesia, substantially as and for the purpose herein set forth.

98,156. — THOMAS E. EVANS, WILLIAM R. THOMAS, and JOSHUA HUNT, Catasauqua, Pa. — *Valve-Gear.*—December 21, 1869.

Claim.—In combination with a valve-gear, the inclined planes J J, arranged and operating substantially as and for the purposes herein shown and described.

98,157.— D. FITZPATRICK and JOHN KNULL, Saint Paris, Ohio.—*Corn-Planter.* — December 21, 1869.

Claim.—1. The combination of the drag-bars *d* and *e*, having their standards with shovels *m* and *n* attached, and arranged as described.

2. The arrangement of the rock-shaft *r*, provided with treadle *s* and lever *t'*, the slides D, cross-bar P, spring *q*, and link *t*, substantially as and for the purpose set forth.

3. The arrangement of the rock-shaft *v*, with its arms *w e'*, rods *f*, levers *g'*, and hand-lever *x*, for operating the drag-bars *d e*, substantially as described.

98,158.—F. P. FURNALD, Jr., R. W. CHAMPION, and ISAAC N. DAVIES, New York, N. Y.—*Paint-Brush.*—December 21, 1869.

Claim.—The paper cylinder F, in combination with a ferrule, composed of wire covered or wound with thread or twine, as specified.

98,159.—JOHN W. GOODALL, Eldred, Pa.—*Grub-Hook.*—December 21, 1869.

Claim.—1. The herein-described implement, consisting of a short, strong, iron beam A, provided with the curved prong B, and the handles I rigidly attached, substantially as described.

2. In combination with the above, the adjustable side-prongs C and detachable shares D, all constructed and arranged to operate substantially as described.

98,160.—BENJAMIN F. GOTT, Brooklyn, E. D., N. Y.—*Wash-Board.*—December 21, 1869.

Claim.—A wash-board, formed with rubbing-surfaces, of unequal corrugations, when made of tinned plates, without a supporting-panel, substantially as set forth.

98,161.—GEORGE H. GREGORY, North Wilton, Conn.—*Churn.*—December 21, 1869.

Claim. — The arrangement of the horizontally-working churn A, containing three vertical dashers B C D, to be actuated by and in combination with the spring-power machinery, or its equivalent, in the manner and for the purpose substantially as herein described.

98,162.—ANDREW HARRIS, Philadelphia, Pa.—*Hydro-Pneumatic Governor.*—December 21, 1869.

Claim.—A vessel, containing two compartments, communicating with each other, substantially as described, and partly filled with water or other suitable fluid, in combination with an exhausting or blowing apparatus, which is driven by the engine, and by which, in conjunction with an inlet or outlet cock or tube, the air is caused to so act on the water that the latter becomes a medium for operating the throttle-valve of the engine.

98,163.—CHARLES FREDERICK HILL, New York, N. Y.—*Musical Instrument.*—December 21, 1869.

Claim.—1. The arrangement of two or more slides in one and the same guide-way, in combination with the channels *b* b^1 b^2, forming the communication between the wind-chests and the reeds or pipes, substantially as shown and described.

2. The arrangement of two or more sets of ports, consisting of two or more openings in each slide, to control the admission of the wind to two or more reeds to each note, each separately or in combination, as set forth.

3. The arrangement of levers E in the wind-chest, to open communication with reeds, arranged in two or more lines or rows to a register, in combination with stops G, substantially as set forth.

4. The arrangement of the valves F, so constructed that they open by suction and gravity, as set forth.

98,164.—J. S. HUSTON, Mechanicsburgh, Pa.—*Securing the Lash in Fly-Nets.*—December 21, 1869.

Claim.—The manner of securing the ribs of fly-nets together, by passing the lash singly through the hole in the rib, thence entirely around the rib, from right to left, or *vice versa*, and interlocking the lash, at the point of juncture, immediately opposite the hole in the rib, as shown and described, and for the purpose specified.

98,165. — PIERRE JACQUES, Paris, France.—*Process of Purifying and Decoloring Albumen from Blood.*—December 14, 1869.

Claim.—The process for purifying and decoloring blood-albumen, by the combined action of the four physical agents, heat, light, water, and air, as herein described.

98,166. — WILLIAM C. JONES, Quincy, Ill.—*Wire-Handle Former.*—December 21, 1869.

Claim. — The machine, herein shown and described, for forming wire handles, having plate A, chisel C, lever E, sliding blocks G and K, hinged gauge H, and disks Y, constructed and arranged to operate substantially as specified.

98,167.—CHENEY KILBURN and ARTEMAS KILBURN, Philadelphia, Pa., assignors to HALE, GOODMAN AND COMPANY, same place.—*Mechanism for Raising and Lowering Boards.*—December 21, 1869.

Claim. — 1. The vertically-traversing endless chains H and H', with their projections *e e*, in combination with the strips L L', and boards K, or their equivalents.

2. In combination with the above, the shaft E, with its worm-wheel *a*, and the driving-shaft *b*, with its worm.

3. The inclined planes *n*, extending from the tops of the strips L and L′ to the floor, as described.

4. The curved projections *h h* above the tops of the said strips.

5. The arms *p p*, arranged, in respect to the strips L and L′ and endless chains, as set forth.

6. The arms *q q*, arranged, in respect to the said strips and chains, as specified.

98,168.—Linn Laurie, Washington, D. C.—*Egg-Beater.*—December 21, 1869.

Claim.—1. The frame, composed of the handle H, the rods *f f*, and braces *b b*, in combination with the lever L, with its rods *c r*, pin *i*, and cord C, to produce the double or compound motion described, when constructed and arranged substantially as described.

2. The described lever, with its parts, including the cord C, and the described frame, when in combination with the described shaft S, and its parts, when constructed and arranged substantially as described.

98,169.—Edwin S. Lenox, New Brighton, N. Y.—*Wire Bale-Fastening.*—December 21, 1869.

Claim.—A wire bale-band, formed at one end into the loop B, with its recess *b*, and at the other with the cross-head C, when said parts are constructed, combined, and operated as and for the purpose herein set forth.

98,170.—Calvin A. Leonard, Rochester, N. Y.—*Insole for Boots and Shoes.*—December 21, 1869.

Claim.—The metallic stiffener *a*, of removable insoles, when its attachment thereto is effected by means of projecting points at the ends, as shown and described.

98,171.—Hippolite Levasseur, Brooklyn, N. Y.—*Globe-Valve.*—December 21, 1869.

Claim.—1. The construction of the valve-stem G, with a collar, *n*, fitting into a corresponding seat, in combination with the gland J, acting upon the top of said collar *n*, operating together in the manner and for the purpose described.

2. The arrangement and use of the pin N, operated through its collar *w*, or its equivalent, by a screw-thread, cut upon a projecting tube fast to the stationary gland J, and passing through the handle or wheel H, which operates the valve, the whole being combined and operating in the manner and for the purpose specified.

3. The friction-clutch *v*, in the nut or collar *w*, acted upon by a spring or set-screw, and operating in the manner and for the purpose set forth.

98,172.—George A. Lloyd, San Francisco, Cal., assignor to himself and Anthony Rosenfield.—*Lubricating-Sleeve.*—December 21, 1869.

Claim.—1. Dividing the sleeve longitudinally, and holding it in position, when in operation, by means of lugs and recesses *f f*, substantially as described.

2. The end recesses *d d*, and spaces *f′ f′*, in a lubricating-sleeve, as set forth.

98,173.—George Washington Lord, Philadelphia, Pa.—*Composition for Preventing Incrustation in Steam-Boilers.*—December 21, 1869.

Claim.— A scale-detaching or anti-incrustation powder, when composed and used in the manner and for the purpose above set forth and described.

98,174.—Charles B. Loveless, Syracuse, N. Y.—*Gas-Generator and Burner.* — December 21, 1869.

Claim.—The combination of the pipes D and E with generator F, supply-pipe A, and burner *b b*, and chimney G, substantially as described, and operating as and for the purposes set forth.

98,175.—Orozi Lugo, Baltimore, Md.—*Extinguishing Fire in Buildings.*—December 21, 1869.

Claim.—The arrangement of pipes and outlets to the same, substantially as herein set forth, in connection with the application of steam from a steam fire-engine or portable steam-boiler.

98,176.—John Matthews, Jr., New York, N. Y.—*Apparatus for Dispensing Soda-Water Sirups.*—December 21, 1869.

Claim.—1. The arrangement, in a soda-water apparatus, of the cooler B, the cooling-worm C, and the sirup-cans or vessels, entirely below the cooler, and within the box or case containing the latter, substantially as specified.

2. The arrangement of the door F, in the case A, of a soda-water apparatus, with relation to the sirup-cans or vessels E, and hung to open inward over the filling-ends of said cans, as shown and described.

3. The sirup-cans or vessels, constructed of a boat or trough-like form, having openings at their tops in the rear, but of spout-shape in front, and hung so as to rock or tilt on suitable pressure being applied, with freedom to adjust themselves on such pressure being removed, essentially as herein set forth.

4. The combination, with the tilting sirup-cans or vessels, of tumbler-guards J, connected with or carried by said cans in front, substantially as and for the purpose or purposes herein set forth.

5. The combination of the stationary tumbler-gnide I with the tumbler-guards J, for adjusting and holding the tumblers in place beneath the delivery-ends of the sirup-cans or vessels, essentially as specified.

98,177.—John Matthews, Jr., New York, N. Y.—*Sirup-Dispensing Apparatus.*—December 21, 1869.

Claim.—The combination of the trap C, tube or vessel A, and flexible bulb or piston-like device B, all arranged for operation as shown and described.

98,178.—John Matthews, Jr., New York, N. Y.—*Sirup-Reservoir for Soda-Fountains.*—December 21, 1869.

Claim.—1. The combination, with the dispensing-vessel or reservoir, provided with a measuring-nozzle, for action, as described, of a movable or adjustable trap, operating, when closed, to seal said nozzle, and serving, when open, to effect discharge of liquid lying between the trap and orifice in the bottom of the vessel, and to admit air to the latter, substantially as specified.

2. The trap D, hinged or pivoted, as described, and provided with a weighted extension or lever, *f*, in rear of its fulcrum, in combination with the vessel A and nozzle B thereto, essentially as and for the purposes herein set forth.

3. The combination, with the dispensing-vessel or reservoir, and its measuring-nozzle, and trap thereto, of a device operating to constrict the area of the discharging-orifice in the vessel, when the latter stands in working position, but allowing of said orifice being fully or freely opened, when the vessel is inverted for filling, substantially as specified.

4. The combination of the tumbler guide-rods *g g* with the trap D, constructed to operate essentially as herein set forth.

98,179. — Charles P. McGimsey, Memphis, Tenn.—*Soap.*—December 21, 1869.

Claim.—The herein-described compound of Colgate's soap and extracts, as described.

98,180. — Daniel T. Munger, Waterbury, Conn., assignor to himself and Rufus E. Hitchcock, same place. — *Method of Heading Screws.*—December 21, 1869.

Claim.—The method herein described of making blanks for screws, rivets, and like articles of manufacture.

98,181. — Matthew Newlove, Burlington, Iowa, assignor to himself and Samuel Gilbert, same place.—*Brick-Mold.*—December 21, 1869.

Claim.—1. The arrangement of the levers H H, having round knobs, L L, on their handles, independently, and so as to operate from both ends of the mold, in the manner set forth.

2. The combination of levers H, followers C, subdivided mold-box A, frame E D, and slotted plates F F, all constructed and arranged as described.

98,182.—Theodore Neys, Menomonee, Wis., assignor to himself and Alexis I. Brunell.—*Harvester-Cutter.*—December 21, 1869.

Claim.—The guards A, made in an oblique form,

having their lateral surfaces continuous, and provided with tongues F on top and bottom, by which they are connected to the bar G, and with a recess, E, between their forward parts, and the tongues, through which passes a shaft, C, having a series of circular vertically-placed knives, B, which operate under the ribs I, and through slots in guards, all substantially as specified.

98,183.—A. R. NIXON, Memphis, Tenn.—*Cotton-Seed-Planter.*—December 21, 1869.

Claim.—1. The slotted hopper G, constructed as described, and provided with tube H, and slotted side-plates *d d*, substantially as and for the purposes herein set forth.

2. In combination with the hopper G and tube H, the toothed wheel I, mounted upon the axle B, substantially as and for the purposes herein set forth.

3. The arrangement of the shaft *J*, teeth or arms *f f*, lever K, pin *h*, and spring *i*, all constructed and operating substantially as and for the purposes herein set forth.

4. The combination and arrangement of the frame A, axle B, wheels D D, collar *b*, lever E, seat F, hopper G, tube H, wheel I, agitator *J f*, and the device for operating the same, shaft L, lever M, furrow-plow N, and covering-plow P, all substantially as herein set forth.

98,184.—WILLIAM J. OSBOURNE, New York, N. Y., assignor to himself, GIDEON B. MASSEY, and WILLIAM F. SHAFFER, same place.—*Hose-Coupling.*—December 21, 1869.

Claim.—1. The arrangement of the ring H with inclined planes, upon the tube A, as set forth, so that the said ring moves independent of the hose, and *vice versa*, all as shown and described.

2. The combination of tubes A B, with ring H, hooks E E, packing G, and collar D, all constructed and arranged as specified.

98,185.—CHRISTOPHER OSTRANDER, Lodi, Wis.—*Farm-Gate.*—December 21, 1869.

Claim.—The gate C, hung on the two rollers *c c*, mounted in a swiveled case, B, and provided with roller E and pivoted latch F, to engage in post A′, all constructed and arranged as herein described.

98,186.—S. N. PARK, Bloomsbury, N. J.—*Railway-Rail Chair.*—December 21, 1869.

Claim.—The combination of the chair A, projections *a a*, rails B B, with notches *b b*, false bottom C, and key D, all constructed and arranged substantially as and for the purposes herein set forth.

98,187.—MORGAN PAYNE, Cardington, Ohio.—*Nut Lock.*—December 21, 1869.

Claim.—The combination of the nut D, washer G, with its projections, and spring-key H, all constructed as shown and described, and for the purposes set forth.

98,188.—DAVID PICKMAN, Lowell, Mass., assignor to himself and STUART BISHOP, same place.—*Shuttle-Check for Looms.*—December 21, 1869.

Claim.—The arrangement, within the shuttle-box, and on opposite sides thereof, of the spring *f* and adjustable block *e*, when the said parts are constructed and operate to check the movement of the shuttle, as described.

98,189.—C. PURDY, Bedford, Ohio.—*Saw-Guide.*—December 21, 1869.

Claim.—1. The adjustable guide-wheels C C, for the sides of saw, with the conical bearings D D, made substantially in the manner and for the purposes specified.

2. The eccentric bearing-boxes E E, provided with screws or other equivalents, for adjusting the conical bearings D D, and provided with self-oiling devices, all constructed and arranged substantially as and for the purpose specified.

3. The back-guide wheel H, arranged with adjustable slide I, held in position with screw *h*, and provided with groove *i*, substantially in the manner and for the purposes specified.

98,190.—FITCH RAYMOND and AUGUST MILLER, Cleveland, Ohio.—*Grain-Bin.*—December 21, 1869.

Claim.—1. A grain-bin, or a series of bins, constructed with a revolving perforated hollow shaft, E, radial arms I′, and air-vents *a*, all arranged and combined to operate in combination with an air-pump or blower, in the manner substantially as described, and for the purpose specified.

2. A grain-bin or bins, constructed with branching perforated distributing-tubes J L L, when provided with rose-heads M M K, and arranged, in relation to and in combination with an air-pump or blower, in the manner substantially as described, and for the purpose set forth.

98,191.—IRA REYNOLDS, Dayton, Ohio, assignor to REYNOLDS AND REYNOLDS, same place.—*Book-binding.*—December 21, 1869.

Claim.—1. A book-cover, the back of which is formed of metal, or equivalent material, forming an integral part thereof, and supporting the two leaves of the cover, when such back is so shaped as to span and grasp the back of a book, combined with a removable book, correspondingly so shaped, with lips or ribs upon its back, as to be sprung or slidden into and held firmly by such cover, substantially as shown and described.

2. A cover and book, substantially such as specified in the above claim, when each has a longitudinal groove or indentation, as described, and shown in Fig. 3, so that the two, when united, form a tube or chamber to receive a pencil or similar article.

3. In combination with a book removable from its cover, and constructed as described, the indorsement upon its back, arranged with blank spaces, substantially as and for the purpose set forth.

98,192.—WILLIAM H. RUDOLPH, Saint Louis, Mo.—*Vapor-Burner.*—December 21, 1869.

Claim.—1. The head-piece B, combined with the cap-plate C and the receiving-plate B′, when the latter has cups D situate both sides of the discharge-orifice *b′* of the head-piece, substantially as set forth.

2. The head piece B, screw *c*, and orifice *b′*, when the screw *c* is placed in line with the orifice *b′*, substantially as set forth.

98,193.—C. B. RUTH, Doylestown, Pa.—*Corn-Planter.*—December 21, 1869; antedated December 11, 1869.

Claim.—1. The seed-box F, divided into compartments for both compost and seed, in combination with the shaft I, wheels K, H, and D, axle C, and drums G, when used substantially as set forth.

2. The funnels L, boots M, levers P and N, hook S, and chain or cord R, when combined in the manner and for the purpose set forth.

3. Box X, wheels C and D, lever V, funnels L, roller W, shaft I, drums G, levers P and N, wheels K and H, and hook S, when all are arranged and combined to form a corn-dropper, substantially as described.

98,194.—CHARLES SAXTON, Fredonia, Ohio.—*Gate.*—December 21, 1869.

Claim.—The arrangement, upon a gate, of the beveled parallel bars D D, cross-bar B, brace G, and beveled and flanged rollers C^1 C^2, substantially as shown and described.

98,195.—SAMUEL SCOTT, Yane, Ohio.—*Farm-Gate.*—December 21, 1869.

Claim.—1. The combination of the lever D, provided with its handle *a* and arm *c*, with the link *i* and staple *e*, as set forth.

2. The gate A, provided with the projections on its front end, resting on catches *j*, when the upper hinge is made adjustable, substantially as described.

98,196.—GEORGE SEEGER and CHARLES H. SHAFFER, Clark's Hill, Ind.—*Post-Auger.*—December 21, 1869; antedated December 11, 1869.

Claim.—1. In combination with the barrow B, the pivoted legs *l′* and curved rack *m*, as and for the purpose described.

2. The conical cleaner *i*, provided with the wings *i′ i′*, as and for the purpose described.

3. The pivoted arm *e*, provided with the pin *e′*, in combination with the groove *d‴* of the shaft *d*, as and for the purpose specified.

98,197.—Reuben Shaler, Madison, Conn.—*Paving-Block.*—December 21, 1869.

Claim.—The paving-blocks herein described, consisting of two thicknesses of wood, combined as described, the upper surface indented or perforated, and coated, substantially in the manner herein set forth.

98,198.—Thomas Shaw, Philadelphia, Pa.—*Cartridge-Feeder for Gun-Hammer.*—December 21, 1869.

Claim.—The combination of the cartridge-tube *f* with the cylinder *d*, plunger *o*, lever *i*, and cam *g*, operated in the manner substantially as and for the purpose set forth.

98,199.—John P. Sherwood, Fort Edward, N. Y., assignor to himself and Benjamin S. Burnham, same place.—*Wash-Boiler.*—December 21, 1869.

Claim.—The two end spouts, D, having their inwardly-projecting upper parts, *d'*, constructed in the manner herein shown and described, in combination with the corrugated and perforated false bottom B, substantially as and for the purpose set forth.

98,200.—David Shive, Philadelphia, Pa.—*Book-binding.*—December 21, 1869.

Claim.—The flaps D, fitting into the recesses *a*, in the backs of the book, and retained therein by the removable fastenings E, substantially as and for the purpose described.

98,201.—Oliver Slagle, London, assignor to himself and Thomas H. Foulds, Cincinnati, Ohio.—*Railroad-Car Ventilator.*—December 21, 1869

Claim.—1. The wind-wheel E, located upon the outside of the car-roof, driven by an outside current of air, produced by the locomotion of the car, coming in contact with the same, in combination with the horizontal fan B, located upon a suitable shaft, geared to the vertical shaft of the wind-wheel E, when said blower is located within the dome of the car, substantially as and for the purpose herein specified and shown.

2. In combination with the wind-wheel E and blower B, the adjustable shield F and plate G, constructed and arranged substantially as described, and for the purpose stated.

98,202.—S. T. Spaulding, North Cohocton, N. Y.—*Cultivator.*—December 21, 1869.

Claim.—The combination, arrangement, and construction of the central beam *a*, cross-bars *b b*, and side beams *c c*, the doubly-adjustable clevis, and the adjustable single and double teeth *d d g*, the whole operating together as described.

98,203.—Francis Stein and Henry Haering, New York, N. Y.—*Elevator.*—December 21, 1869.

Claim.—1. The combination of the posts A, toothed racks B, platform C, shaft D, pinions E, cases or frames F, and operating-gears H I K, and hand-cranks, all substantially as specified.

2. The arrangement, with the wheel K and disks N M, of the lever Q, friction-strap R, pawl O, stud-pin P, pawl T, and ratchet U, substantially as specified.

3. The arrangement, with the posts A and brackets X, of the cases or frames F, for sliding past the said brackets, substantially as specified.

98,204.—Edward Stodtmeister, Cape Girardeau, Mo.—*Tire-Cooler.*—December 21, 1869.

Claim.—1. The frame A, supported by standards D upon rollers *d*, and secured by braces K, when combined with the spindle B, step-tube C, the inclined rails E, and their rest-concavities H, and arranged within the tub partially filled with water, substantially as set forth.

2. The step tube C, arranged with its upper edge to project above the tub-bottom, and its lower end extending below said bottom, substantially as set forth.

98,205.—John W. Sutton, Portland, Oregon.—*Dynanometers.*—December 21, 1869.

Claim.—1. The long end of the hub of B, with feather *a'*, the sliding grooved collar E, the curved springs O O, the cords P P P, sheaves Y Y Y *b b b*, and screws X X X, on the ends of P P P, with their adjusting-nuts, substantially as set forth.

2. The half yoke F, index-rod G, hanging yoke N, scale *e*, in combination with the sliding collar F, and long end of hub of B, substantially as set forth.

3. The frame *a*, rollers L K, friction-wheel M, and pencil-point J, in combination with index-rod G, half yoke F, and sliding grooved collar E, substantially as set forth.

98,206.—John A. Taplin, Carthage Landing, Fishkill, N. Y.—*Machine for Sawing and Splitting Wood.*—December 21, 1869.

Claim.—In a rotary sawing and splitting machine, the combination of an iron disk and splitting-knife with a circular saw, each constructed, and the whole arranged substantially as and for the purposes herein described.

98,207.—George W. Tew, Kansas City, Mo.—*Carriage-Springs.*—December 21, 1869.

Claim.—The straps B, arranged with grooved bearings *b*, combined with the cords C, wrapped and otherwise formed, substantially as set forth.

98,208.—Lovias D. Towsley, Newark, N. J.—*Self-Ventilating Safety-Cans for Filling and Discharging Hydrocarbon-Apparatus.*—December 21, 1869.

Claim.—1. The ventilating-tube B, arranged within the vessel A, having its ends in direct communication with the ingress and egress openings thereof, so as to facilitate the circulation of the air and fluid therein, whether in filling or discharging from or into air-tight vessels, as described.

2. The vessel A, constructed as described, to be used as an intermediate circulating-vessel, in drawing from one air-tight vessel to fill another, substantially as described.

3. The combination of the vessel A, the circulating-tube B, and the stop cocks or faucets C^1 C^2, constructed, arranged, and operating as described.

98,209.—Elisha Turner, Wolcottville, Conn.—*Cord-Tightener for Curtain-Fixtures.*—December 21, 1869.

Claim.—The slide *b*, formed with the ribs 2 2, at the edges of the back, and the holes 3 3 in the raised portion of the back, in combination with the block *c*, pulley *d*, and projection 4, as and for the purposes set forth.

98,210.—George Vining, Pittsfield, Mass.—*Manufacture of Paper-Pulp from Wood.*—December 21, 1869.

Claim—1. In combination with a machine for the manufacture of paper, or paper-pulp, from wood fiber, and other materials, the emery-wheel or cylinder A, as specified.

2. The emery-wheel or cylinder herein described, when used in the manufacture of paper or paper-pulp, from wood fiber and other materials, constructed and arranged to operate as specified.

98,211.—Peter M. Wallower, Smith's Ferry, Pa.—*Compound for Mixing Paints.*—December 21, 1869.

Claim.—The combination of petroleum, linseed-oil, resin, and lacquer, in the proportions and by the process substantially as herein specified, for the uses and purposes set forth.

98,212.—Cornelius Walsh, James F. Connelly, and Alfred Bratt, Newark, N. J., assignors to Cornelius Walsh.—*Hasp-Lock.*—December 21, 1869.

Claim.—The hasp, containing the lock-works, and the case or socket for the reception and retention of the hasp, adapted to slide edgewise, one within the other, for engagement, as herein represented and described.

98,213.—Orrin A. Wheeler, Doniphan, Kans.—*Seed-Drill.*—December 21, 1869.

Claim.—1. The means employed for elevating or

lowering the drills, and for throwing in or out of gear the seeding-devices, consisting of the crank-axle B and lever N, and, in combination therewith, the quadrant O, or its equivalent, substantially as and for the purpose specified.

2. The arrangement of the slide L, provided with the cam-shaped opening *l*, the bottom I, and the lever M, substantially as and for the purpose shown.

98,214.—EDWARD WIARD, Louisville, Ky., assignor to B. F. AVERY, same place.—*Expanding Triple-Shovel Plow.*—December 21, 1869.

Claim.—1. The bars or frame C, constructed and secured to the plow-beam, substantially as herein shown and described, and for the purpose set forth.

2. Adjustably connecting the rear plow-standards G to the rear ends of the bars or frame C, by the tube E and long bolt D, whether made in one piece or separate, and the washers F and set-screws *g'*, substantially as herein shown and described, and for the purpose set forth.

3. Adjustably securing the forward standard L to the forward ends of the bars or frame C, by means of the washers N and bolt M, substantially as herein shown and described, and for the purpose set forth.

4. The notched washers F N, constructed substantially as herein shown and described, when used for securing the plow-standards in place, as and for the purpose set forth.

5. The combination of the slotted and grooved washers K, eye-bolts J, and slotted arms I, with the brace-rods H and bars or frame C, substantially as herein shown and described, and for the purpose set forth.

98,215.—FRANKLIN J. STALEY, Indianapolis, Ind., assignor to himself, GEORGE W. JOSEPH, ISAAC S. LONG, and GEORGE H. CARTER, same place.—*Head-Block of Saw-Mills.*—December 21, 1869.

Claim.—1. The sleeve E, furnished with the flanges F and pawls *s s'* and keys *e e*, concentric piece E, furnished with cogs *i* and ratchets *o*, in combination with the setting-shaft D, furnished with the hand crank wheel P and knees C, all constructed and arranged substantially as and for the purpose set forth.

2. The ratchet-wheel K lever J, pawls H and I, arranged in pairs, as described, in combination with bevel-wheels D and M, setting-shaft D, and the device described, for operating the knees C, constructed and arranged substantially as and for the purpose set forth.

3. The segmental arch Q, lever J, pawls H I, ratchet K, and gears L and M, when all the parts are constructed and arranged as herein specified, and for the purpose set forth.

***97,970.**—SAMUEL B. SEXTON, Baltimore, Md.—*Base-Burning Fire-Place Heater.*—December 14, 1869; antedated November 23, 1869.

Claim.—1. An exposed magazine, in combination with a valve for discharging gas therefrom, and a separate door or conductor for introducing fuel.

2. An exposed magazine, in combination with pipes or columns for conducting the gases from the combustion-chamber beneath or around the lower part of said magazine to the flue-chamber at the base of the stove.

3. The combination and arrangement of the pipes E E, G G, I, and chambers F H, substantially as set forth.

4. The shield or screen O, constructed either with or without perforations, or a door or doors, or both, substantially as set forth.

5. In a fire-place stove, the shoulder between the illuminated walls and the cylindrical fire-pot, arranged, relatively to the flues E, substantially as set forth.

98,216.—CHARLES DOUGHTY ALLEN, New York, N. Y.—*Steam-Engine Governor.*—December 28, 1869; antedated December 24, 1869.

Claim.—The arrangement of the stand A, spindle B, and sleeve F, as herein shown and described.

98,217.—E. AVERILL, Sacramento, Cal.—*Propelling-Apparatus.*—December 28, 1869.

Claim.—1. The vibrating arms B, hinged paddles and reversible slides *k*, combined and arranged substantially as specified.

2. The combination of the vibrating arms B, pinions *d*, wheels *e*, and levers *f*, substantially as specified.

98,218.—JABEZ K. BABCOCK, Shortsville, N. Y.—*Water-Elevator.*—December 28, 1869.

Claim.—1. The crank C, pivoted eccentrically to the loose ratchet *c*, and provided with a projecting stop, *o*, in combination with disk *b* and projection *n*, for the purposes set forth.

2. The flange *d*, in combination with stop *o* and crank C, for the purpose specified.

3. The perforated flange *a'* and hook *l*, when used in combination with the ratchet *c* and winch C, for the purposes set forth.

98,219.—SYLVESTER P. BABCOCK, Adrian, Mich.—*Boot-Jack.*—December 28, 1869.

Claim.—The boot-jack, having extended jaw D and loop-hole E, in combination with movable handle H G, provided with toe-piece H and staple F, constructed and arranged as herein described, for the purpose specified.

98,220.—L. M. BATTY, Canton, Ohio.—*Harvester.*—December 28, 1869.

Claim.—1. The combination with a harvester finger-bar, constructed with a concave rear face, of a toe-plate, fitting into the concave rear face of the finger-bar, and secured to the edge thereof, and a frame piece for the delivery-mechanism, fitting in the concavity in the toe-plate, and secured to said plate, substantially as is herein specified.

2. The combination, with a harvester finger-bar, constructed with a concave rear face, of a heel-shoe, notched and faced to receive the finger-bar, and a retaining-plate, fitting into the concave rear face of the finger-bar, and secured to the heel-shoe, substantially as is herein specified.

3. The combination, with a harvester finger-bar, constructed with a concave rear face, of a shaft or roller, arranged parallel to the finger-bar, and in the concave rear face of the same, substantially as is herein specified.

4. The combination, in a harvester, of a finger-bar constructed with a concave rear face, a roller, arranged in said concave face, a driving-roller, arranged between standards extending from said finger-bar, and a dropping-apron, arranged around said rollers, substantially as is herein specified.

5. The reciprocating rock-bar, acting on the ratchet-wheel on the shaft of the driving-apron roller, and actuated by the driver on his seat on the machine, for the purpose of operating an endless dropping-apron for harvesters, substantially as is herein specified.

98,221.—FRANCIS BOSOM, Saint Louis, Mich., assignor to himself and JOHN W. TACKABURY, same place.—*Churn-Dasher.*—December 28, 1869.

Claim.—1. The spirally-coiled metallic dash B, constructed substantially as described.

2. In combination with a dash, B, secured to a hollow dash-rod, A, the employment of a cylinder, C, on which said rod is sleeved, for containing a liquid for regulating the temperature of the cream in the churn, substantially as described.

98,222.—JOHN BOURNE, No. 1 Northumberland Terrace, Regent's Park Road, England.—*Propelling-Apparatus.*—December 28, 1869.

Claim.—1. The oar I, provided with the pivoted sleeve F, in combination with the bracket G, crank E, rods B and B', and crank-shaft *b c*, when said parts are arranged, with relation to the deck and stern of the vessel, and to operate as shown and described.

2. The pivoted sleeve F and slide M, in combination with the removable bracket G and oar I, provided with collars, and all constructed and arranged as shown and described.

3. The bracket G, arranged on the side of a ship, so as to be easily removed or swung out of the way, and for the purpose of sustaining an oar or oars to be operated by machinery for propelling vessels in calms, as set forth.

*This number should have appeared in its numerical order on page 745.

98,223.—McKendree A. Brooks, La Porte, Ind.—*Water-Wheel.*—December 28, 1869.

Claim.—1. A water-wheel having a series of upward-discharging buckets, B, and a series of downward-discharging buckets, B′, separated by a disk, C, rotating within a case, D, and so arranged that the water may act upon either or both series of buckets, substantially as and for the purpose set forth.

2. In combination with a water-wheel, constructed as herein described, the case D and scroll E, divided into separate chambers by the diaphragm F, and provided with independent gates, G G′, the whole arranged and operating in the manner and for the purpose specified.

98,224.—John Burt, Detroit, Mich.—*Finishing-Case for Railway-Bars.*—December 28, 1869.

Claim.—The case or finishing-carriage A, constructed as described, whereby railway-bars may be straightened, punched, sawn off, upset, hammered, cooled, and hardened while in said case, substantially as herein set forth.

98,225.—George W. Burton, Bordentown, N. J.—*Machine for Laying out Sash and Blinds.*—December 28, 1869.

Claim.—The frame A *d*, the holders B and C, respectively adjustable, and movable horizontally, and provided with dovetailed tenons *g g*, for retaining markers F *h*, the springs D, rods C, and lever E *e*, all constructed and arranged to operate as shown and described.

98,226.—Samuel C. Bruce, New York, N. Y.—*Apparatus for Mixing and Ageing Liquors.*—December 28, 1869; antedated December 21, 1869.

Claim.—1. The aperture E, formed by the cutting of the two circles, forming a connection between the chambers A and B, in the manner and for the purpose substantially as described.

2. Feeding the liquor in at the sides of the chamber A, behind the tappets D, substantially as described.

98,227.—Joseph Busser, Troy, Ohio.—*Railway-Car.*—December 28, 1869.

Claim.—A railroad-car body, having its walls composed of planks, laid flatwise, one upon another, and secured down to the sill-beams of the bed by means of bolts, in combination with the vertical corner-facings *a* and tie-bolts, which are inclosed within the plank walls, substantially as described.

98,228.—L. Chandor, Saint Petersburg, Russia, assignor to Cassius M. Clay.—*Vapor-Burner.*—December 28, 1869.

Claim.—1. The tube B, provided with the springs F, the metallic gauze cap D, arranged within said tube, and the casing E, perforated at its upper end, all constructed as shown and described, and for the purpose specified.

2. The springs F and the perforated casing E, in combination with the tube B, arranged substantially as and for the purposes described.

98,229.—Matthew Clinton, New York, N. Y.—*Self-Adjusting Cart-Saddle.*—December 28, 1869.

Claim.—The padded blocks A A, connected by the curved bars D F, in connection with the curved rod K, fitted on bar D, all constructed and arranged substantially as and for the purpose set forth.

98,230.—Andrew Cole, Mishawaka, Ind.—*Spring-Bed Bottom.*—December 28, 1869.

Claim.—The bed-bottom, consisting of the longitudinal rails C, provided at each end with fixed conical pillars D, to which are secured the cross-pieces E, forming the support of the middle and outer wires F, with which the slats A are interwoven, the latter resting at their ends on spiral springs B, as shown and described.

98,231.—Gideon W. Cole, Canton, Ill.—*Planing-Machine.*—December 28, 1869.

Claim.—The oscillating top-bed A, having the adjustable section B and slotted side frame D, when all the parts are constructed, arranged, and operated substantially as described, and for the purpose set forth.

98,232.—O. Collier, Sacramento, Cal.—*Piston and Piston-Packing.*—December 28, 1869.

Claim.—A piston, provided with end disks A B, ring C, (with three annular recesses *f*,) end rings H H, and adjustable centering-ring I, all arranged and fitted together in the manner described.

98,233.—James P. Coulter, Bloomington, Ill.—*Signal for Railways.*—December 28, 1869.

Claim.—1. The roller D and flag E, arranged to operate automatically as set forth.

2. The roller D, arranged to operate automatically in combination with the lid A H B, shaft M, pinion L, segment G, arm O, boxes A A F, and rope Q, as and for the purpose set forth.

3. The combination of the case S, segment Y, lugs *c*, drum *a*, lantern T, rope V′, and box A′, constructed and arranged as and for the purpose specified.

98,234.—Randolph Raby Craig and Joseph Craig, Nevada, Cal.—*Ball-and-Socket Joint.*—December 28, 1869.

Claim.—The combination of the ball-and-socket joint, consisting substantially of the parts A and B, with the rods D, set-screws D^1 D^2, swivel E, and stay-plate F, substantially as and for the purpose described.

98,235.—Seth Craig, Philadelphia, Pa.—*Spur.*—December 28, 1869.

Claim.—The improved spur above described, formed by the combination of a shank, B, spring-catch *a*, and heel-pin *b*, with heel-arms A A, having the bent ends *c c*, each of said parts being constructed and arranged with respect to the others, as shown and described.

98,236.—James Dampman, Lebanon, Pa., assignor to William A. Moyer, same place.—*Hay-Fork.*—December 28, 1869.

Claim.—The combination, with the tines of a hay-elevating fork, and the hoisting-rope thereof, of a sliding block, A, provided with a fixed and a pivoted jaw, arranged for engaging the tine not connected with the rope, also provided with a spring-catch and trip-rope, all arranged for operation substantially as specified.

98,237.—Charles T. Day, Newark, N. J.—*Skate.*—December 28, 1869.

Claim.—1. The clamping-levers, pivoted together in pairs, substantially as herein shown and described.

2. The combination of the clamping-levers with the swivel-nuts *g h* and diagonal screw G, all arranged as set forth.

98,238.—Richard S. Dillon, Detroit, Mich., assignor to himself and George H. Russell, same place.—*Steam-Boiler Furnace.*—December 28, 1869.

Claim.—In the construction of boiler-furnaces, the flue F and reverberatory chamber G, provided with air-ducts *a*, *b*, *c*, furnished with appropriate valves *a′*, *b′*, and *c′*, or their equivalents, the whole so arranged as to operate in the manner and for the purpose herein set forth.

98,239.—William T. Downs, Saint Louis, Mo.—*Charcoal-Furnace.*—December 28, 1869; antedated December 11, 1869.

Claim.—1. The arrangement of the furnace A and boiler G, substantially as and for the purposes set forth.

2. The body A, grate C, partitions H, smoke-passages H′, cover E, and chimney F, substantially as set forth.

98,240.—Foster Ellis, Sylvania, Ohio, assignor to himself and John S. Ellis, same place.—*Hoop-Cutting and Dressing Machine.*—December 28, 1869.

Claim.—1. The cutter-head E, provided with cutters *g h*, constructed as above described and shown, for the purpose of dressing the face and both edges of a hoop at one operation, as above described and shown.

2. The combination of the saw *d*, the shaft C, the pulley *b*, the belt *c*, and the yoke B, with the cutter-head E, provided with cutters *g h*, the shaft *e*, the pulley F, the belt *f*, the feed-rollers G, and the table

H, in connection with the frame A, when constructed, arranged, and operating as and for the purpose above mentioned.

98,241. — EDWARD FOX, New York, N. Y., assignor to himself and JOSEPH J. WALTON, same place.—*Steering-Apparatus.*—December 28, 1869.

Claim.—The barrels *d*, *e*, *f*, and *g*, of two different sizes, to which the chains *h* and *i* are connected, in combination with the blocks *l*, *m*, *s*, and *t*, that are connected to the rudder, the parts being arranged and operating substantially as set forth.

98,242. — CHARLES FURBISH, Bucksport, Me.—*Truss for Vessels.*—December 28, 1869.

Claim.—The struts or arms G G, with rollers *e e*, the band or collar F, and rollers *h h*, the support or platform H and E, combined and arranged substantially as herein set forth.

98,243. — JOHN GIBSON, Jr., Albany, N. Y. — *Stove-Leg.* — December 28, 1869; antedated December 11, 1869.

Claim.—1. Furnishing one or more edges of either the shank *b* or dovetails *a a* with corrugations, or any other irregular surface-edges, having a uniform line of prominences, substantially as and for the purpose set forth and described.

2. Securing or locking the leg B to the base A of a stove or heater, by pushing or drawing the shank *b*, within the dovetails *a a*, by means of sliding bars, screw-bolts, buttons, pins or keys, dogs or spring-catches, or their equivalents, substantially as set forth and described.

98,244.—JOHN GIBSON, Jr., Albany, N. Y.—*Coffee-Pot, Pitcher, &c.*—December 28, 1869; antedated December 11, 1869.

Claim.—1. The recessed bearings *a a*, with their guiding-slots *s*, inclined in the manner described, and in combination with the vessel A, substantially as and for the purpose set forth.

2. The stop *b*, or its equivalent, in combination with the supporting-base B, or in combination with the vessel A, substantially as and for the purpose set forth.

3. The wheels D, rollers *m*, or their equivalents, in combination with the supporting-base, B, of a tilting-stand, substantially as and for the purpose described.

4. The lamp E, in combination with the supporting-base, B, of a tilting-stand, and a swung vessel, A, substantially as and for the purpose set forth.

98,245. — JOHN GIBSON, Jr., Albany, N. Y. — *Device for Tilting Pitchers, Coffee-Pots, &c.*—December 28, 1869; antedated December 1, 1869.

Claim.—1. The swinging basket B or swinging rest B′, for holding or supporting the vessel C, substantially as described, and working in combination with the pivots *c*, substantially as described, for the purposes set forth.

2. In combination with a stand A, for supporting and tilting a pitcher or other vessel, a water-tight base or receptacle, *g*, made with the said stand A, or fitted to and made detachable therefrom, for the purpose substantially as set forth and described.

3. The stand A, (either with or without the water-tight base or receptacle *g*,) provided with the gallows or supports *a a*, in combination with the swinging basket B, or swinging rest B′, substantially as and for the purposes set forth and described.

4. In combination with the swinging basket B, the screw S or S′, or spring *e* and screw S″, or their equivalents, substantially as and for the purpose set forth and described.

5. The stop *r*, or its equivalent, in combination with the stand A or supporting-standards *a*, or suspending-arms *b*, or basket B, or base B′, as and for the purpose specified.

98,246. — JOHN GIBSON, Jr., Albany, N. Y. — *Rein-Holder.*—December 28, 1869; antedated December 17, 1869.

Claim.—1. In combination with a whip-holder or whip-socket A, the stem S, as described, or its equivalent, made with or attached to a fastening, C or C′, of the said whip-holder or whip-socket A, as and for the purpose specified.

2. The stem S, as described, or its equivalent, in combination with a fastening, C or C′, for a whip-socket, as and for the purpose specified.

3. The driving-reins R and stem S, or its equivalent, in combination with a fastening, C or C′, of a whip-holder or whip-socket, by means of which the reins can be held, substantially in the manner set forth and described.

98,247. — JOHN GIBSON, Jr., Albany, N. Y. — *Hitching-Post.*—December 28, 1869; antedated December 18, 1869.

Claim.—As a new article of manufacture, a hitching-post, formed of wooden posts A, protected by the caps C and plates P, and furnished with the hitching-rod H, with chain *h* attached, connected with the post by means of the eye-staple S, when constructed and arranged as shown and described.

98,248. — JOHN GIBSON, Jr., Albany, N. Y. — *Railroad-Car Heater.*—December 28, 1869.

Claim.—1. The metallic floor *b*, corrugated, or otherwise, not perforated, in combination with the hot-air chambers *a a*, substantially as described, and for the purposes set forth.

2. The adjustable deflector or warm-air spreader *h*, also its standard or support, in combination with any register, placed in the floor of any traveling-conveyance or room, substantially as set forth, and for the purposes described.

3. In combination with any warm-air register, a fixed hood *i*, or reversible hood *i′* for spreading the heat, substantially as described.

4. The pinch-screws *r*, or their equivalent, in combination with the registers *v*, substantially for the purpose set forth and described.

98,249. — JOHN GIBSON, Jr., Albany, N. Y. — *Securing Legs to Stoves.*—December 28, 1869.

Claim.—1. Locating a leg, and preventing it from being moved in any direction on the surface of the base of a stove or heater, by means of the interior, or exterior, or hidden guides, arranged in the manner substantially as described.

2. Binding the angle-piece of a leg to the base of a stove or heater, around the interior guides, or within the exterior guides, or over the hidden guides, or any of their equivalents, by any binding-device, working from the base of such stove or heater, on or over the angle-piece of the leg, or by reversing the order, and attaching the said binder or binders to the angle-piece of the leg, and working them under impinging lips, made on the base of the stove or heater, in the manner substantially as described.

3. The elements herein set forth, to secure the results herein specified.

98,250.—D. R. V. GOETCHINS, Little Falls, N. Y.—*Head-Rest.*—December 28, 1869.

Claim.—1. The combination of plate A and posts C C, connected together by sockets and studs, as shown and described.

2. A removable rest, F, hung adjustably between two detachable posts C C, which are supported upon a separate plate, A, by means of studs and corresponding sockets, in the manner specified.

98,251. — FRANK GOSS, Wexford, Pa.— *Shovel-Plow.*—December 28, 1869.

Claim.—1. The combination, in a cultivating-plow, of a beam, A, standard B, sole-bar F, upright arm H, and tie-bolt G, constructed and arranged as herein described, and for the purposes set forth.

2. The sole-bar F, as constructed, of the form represented and described.

3. The shovel or share E, constructed with the flaring dovetail-attaching socket *e*, substantially as represented and described.

4. The combination, in a cultivating-plow, of a frame, A, B, F, G, H, handles C, clevis D, shovel or share E, wings or scrapers I I, device J J K for adjusting the wings or scrapers, an adjustable gauge-wheel L *l*, and means *a m*, for holding the gauge-wheel, constructed and arranged as herein represented and described, for the purposes shown.

98,252. — A. D. GRAY, Chariton, Iowa. — *Combined Seed Sower and Harrower.* — December 28, 1869.

Claim.—The machine described, consisting of the axle A with wheels *a a*, pole B, frame C C, *c c c*, hinged beams D, toothed roller E, rod F, lifting-lever G, hopper I, spring-slide J, indented wheel K, adjusting-lever L, belt M, and guides *m m*, when combined as described, for the purpose set forth.

98,253.—JOHN H. GRAY and WILLIAM B. TURNER, Saint Anthony, Minn.—*Paper-Feeder.*—December 28, 1869.

Claim.—The feed-board A, obliquely perforated and connected with chamber B, out of which, by means of a pump or other pneumatic apparatus, air-currents may be driven through such oblique perforations, in direction of the guides E^1 E^2, substantially as and for the purpose described.

98,254. — HENRY GREENWOOD, Gilbertsville, Mass.—*Register for Spinning-Jack.*—December 28, 1869.

Claim.—The combination and arrangement of the pawl-clutch E and the gravitating and sliding weight G, with the driving-shaft *c*, the pawl F, and the draw-registering mechanism operated thereby, substantially as described.

98,255.—HENRY S. HALL, Boston, Mass.—*Apparatus for Raising and Lowering Chandeliers and Lamps.*—December 28, 1869.

Claim. — The frame A, in combination with rod C, levers *b*, corrugated rollers *c c*, and nut D, constructed in the manner and for the purpose substantially as described.

98,256. — GEORGE A. HARLEY, New York, N. Y.—*Hair-Cutter.*—December 28, 1869.

Claim.—The clamps C D, in combination with the slotted comb B, for the purpose of adjustably securing a blade, A, in the slot of the comb B, substantially as herein shown and described.

98,257. — AARON HARRIS, Laporte, Cal.—*Hydraulic Nozzle.*—December 28, 1869.

Claim. — 1. The transverse slot B, in the nozzle, through which the gate is raised or lowered, for adjusting the rings, without stopping the flow of water through the nozzle, substantially as and for the purpose described.

2. The adjustable gate C, provided with a ring-seat, C′, rings E E, and spray-ring E′, which are held, when in position, against the shoulder of the nozzle, by the screw-coupling F, as described.

98,258. — ELAM HARTER, Dowagiac, Mich.—*Horse Hay-Fork.*—December 28, 1869.

Claim.—1. The coupling-lever C, bars D and E, friction-roller F, and tripping-lever G, when constructed, arranged, and combined as set forth.

2. In combination with the above-claimed parts, the tines A A, hoisting stem B, loop *i*, pins *j* and L, and hook *d*, substantially as set forth.

98,259. — ELAM HARTER, Dowagiac, Mich.—*Grappling-Hook.*—December 28, 1869.

Claim.—The swivel G, pulley H, and yoke D, carrying the ring I, with the hooks A A, having the slots E E, all constructed, combined, and arranged, as herein shown and specified.

98,260. — ROBERT G. HATFIELD, New York, N. Y. — *Anti-Friction Journal-Bearing for Hoisting-Machines, &c.*—December 28, 1869.

Claim.—In combination with a journal, the track D, roller E, and bearing-rail G, arranged and operating substantially as and for the purposes herein shown and described.

98,261. — RUFUS E. HITCHCOCK, Waterbury, Conn.—*Curtain-Fixture.*—December 28, 1869.

Claim.—The cylindrical roller-end *b*, in combination with the adjustable friction-strap *e* and bracket *d*, as specified, so as to apply a variable friction to the curtain-roller, independent of the device for rotating the roller, as set forth.

98,262.—ARTEMAS HOLBRIDGE, West Burlington, N. Y.—*Curing Cheese.*—December 28, 1869.

Claim. — The above-described process of curing cheese, by cutting the flat cakes into blocks, of rectangular form, covering the said blocks with some fabric, and placing them, two deep, in a mold, with flat plates between them, then subjecting them to pressure, as set forth, the said blocks being afterward turned on shelves in the manner described.

98,263. — CHESTER J. HOLMES and DAVID C. HOLMES, Stafford Springs, Conn.—*Dried-Beef Cutter.*—December 28, 1869.

Claim.—The combination of a table, made as described, having the hook *d*, with the swinging-arm *g*, bearing the knife *o*, fastened and regulated as described, all for the purpose herein set forth.

98,264.—JOHN HORTON, New York, N. Y., assignor to BENNETT B. SCHNEIDER, same place.—*Lamp.*—December 28, 1869.

Claim.—1. Providing the drip-cup F of an Argand-burner with the vertical central tube *m*, in the manner substantially as and for the purpose set forth.

2. The torch or taper G, inserted in the rod B of the lamp, when the former is used with or applied to an Argand-burner lamp, having the drip-cup F of its burner provided with a central tube *m*, substantially as shown and described.

3. The match-box H, taper or torch G, fountain or reservoir D, and the Argand-burner E, when all are constructed, combined, and arranged to form a lamp and convenient lighting-apparatus, substantially as herein shown and described.

98,265. — JOHN HUMPHREY, Ravenna, Ohio.—*Boring and Mortising Machine.*—December 28, 1869.

Claim.—1. The combination of the endless screw G with a series of two or more augers, *a a*, having inclined grooves *c* in the shanks thereof, and arranged in the manner and for the purpose described.

2. The automatic reciprocating table I, in combination with the upper and lower series of boring-augers *a a* and chisels B C, when all the parts are constructed and arranged to operate in the manner and for the purpose described.

3. The combination of the screw G, auger or series of augers *a*, with the chisels B C, when constructed and arranged, with relation to each other, and operating in the manner and for the purpose substantially as described.

4. The combination of the chisels B C, having boring-augers *a*, clamps E, transverse slides D, with the table I, jam S, and cam T, all constructed and arranged to operate substantially as described.

5. The combination of the lever Q, clutch P, and table I, when arranged to operate substantially in the manner and for the purpose described.

98,266. — JOHN C. HUNT, Terre Haute, Ind., and WILLIAM W. INGRAHAM, Chicago, Ill.—*Grain-Smutter, Scourer, and Separator.* — December 28, 1869.

Claim.—1. The scouring knives or beaters I, when constructed and arranged substantially as and for the purposes herein specified and shown.

2. The rings J, when constructed and operating substantially as and for the purposes described.

3. The scouring-drum, provided with an inlet and outlet, and scourers or beaters for scouring the grain, when they are so constructed and arranged that the scourers or beaters revolve in a mass of grain in the drum, substantially as and for the purposes specified and shown.

98,267. — WILLIAM H. JOECKEL, New York, N. Y.—*Reversible Chair.*—December 28, 1869.

Claim.—A reversible chair, on which, by means of cams *f*, the seat will be adjusted when the back is reversed, substantially as herein shown and described.

98,268. — JAMES ALBERT JOYNER, New York, N. Y.—*Propeller-Wheel.*—December 28, 1869; antedated December 18, 1869.

Claim. — The propeller-wheel, consisting of the hub A and blades B, when provided with the tapering cylinder C, substantially as herein shown and described, for purpose set forth.

98,269.—A. N. KELLOGG, Chicago, Ill.—*Rotary Table-Waiter.*—December 28, 1869.

Claim. — 1. The rotary frame D, adapted for adjustment vertically upon the shaft A, as herein shown and described, for the purpose specified.

2. The combination of a rotary dish-holder, C, and a rotary adjustable dish and bottle holding frame, D, upon the same stand, as herein shown and described, for the purpose specified.

98,270.—ALEXANDER W. KELLY and JOHN B. SAMUEL, Philadelphia, Pa.—*Machine for Grinding Glass Jars.*—December 28, 1869.

Claim.—1. The sliding holding-weight F, and the adjustable arm e'', the adjustable ring 3, and arm e', in combination with the rotary shaft E, and as arranged to operate together in supporting and holding the jar x in a vertical position, substantially as and for the purpose hereinbefore described and set forth.

2. The combination of a series of vertical rotating shafts, E, each provided with a series of adjustable arms, e' e'', having, respectively, the rings 3 and weights F attached, for receiving and supporting glass jars thereon in vertical positions, as described, with the central-rotating shaft C, and its horizontal disk D, the said parts being arranged to operate together, substantially as and for the purpose hereinbefore described and set forth.

98,271.—JOHN KENMUIR, Leavenworth, Kansas.—*Button.*—December 28, 1869.

Claim.—A sleeve-button, having an annular spring D, catch E E, hook F, and case B, each constructed and arranged with respect to the other in the manner described.

98,272.—JOHN KENT, New York, N. Y.—*Knitting-Machine.*—December 28, 1869.

Claim.—1. The combination, with a series of plain knitting-needles, of a single revolving-needle arranged and operating as described, for the purpose of producing an imitation seam.

2. The combination of the worm F, the bell-crank G, and the button N, with the mechanism connected therewith, for giving the needle *a* a revolving motion, when the same are combined with a knitting-machine, substantially as and for the purpose herein shown and described.

98,273.—HORATIO KEYS, Terre Haute, Ind.—*Carriage-Wheel.*—December 28, 1869.

Claim. — 1. The spokes C, dovetailed into the groove of a metallic hub, by means of wedges, which expand their ends, as set forth.

2. The spokes B C of a wagon-wheel, fitted alternately secure and loose into an endless groove of a metallic hub, substantially as herein shown and described.

3. The tube D, for holding the inner end of the box E, when countersunk or dovetailed, by means of wedges, into the enlarged part of a chamber in the hub, as set forth.

4. Retaining spokes in the hubs of wheels, by means of wedges forced into them as set forth.

98,274.—JOHN KILLEFER, West Richfield, Ohio.—*Bob-Sled.*—December 28, 1869.

Claim. — 1. The runner-standard B, constructed with legs of a hollow or corrugated section, and with a concave seat for the axle-pipe, as is hereinbefore specified.

2. The axle-pipe A, constructed with two cylindrical axle-bearings, when used in combination with the runner-standard B, constructed with legs of a hollow or corrugated section, as is herein specified.

3. The coupling-piece D and pin E, when constructed as shown, and used in combination with the tongue-roll and independent runners, substantially as is herein specified.

4. The draught-chains C C, when used in combination with the sliding reach-collar, rear runner-axle, and independent rear runners, having their standards constructed of a hollow or corrugated section, as is hereinbefore specified.

98,275. — C. H. KNAPP, Lawrenceville, Pa.—*Pulley-Block.*—December 28, 1869.

Claim.—1. The combination of the divided block A, divided pulley B, stock D, and tripping-clamp F H, all substantially as specified.

2. The arrangement, with the divided block A, of the tripping-clamp F H and spring L, substantially as specified.

98,276. — HEBER F. LEARNARD, Mazo Manie, Wis.—*Table.*—December 28, 1869.

Claim.—1. The table-frame formed of the posts, having the vertical grooves A and the rails D fitting therein, and the angle-plates C provided with dovetailed tongues fitting in corresponding grooves B in said rails, all arranged as shown and described, for the purpose specified.

2. In combination with the table-frame, constructed as described, the curved springs H, attached and arranged to operate the arm I, as shown and described.

98,277.—BENJAMIN F. LEET, Dayton, Nevada.—*Brake for Carriages.*—December 28, 1869.

Claim.—1. The combination, with the brake-shoe, suspended as described, of the knuckle-jointed links, and actuating-bars, connected thereto, and provided with means for operating them, substantially as specified.

2. The combination, with the brake-shoes and knuckle-jointed links, of the operating-bars G, when arranged for operation either by the pinion and hand-shaft, or the oscillating shaft, eccentrics, and hand-lever, all substantially as specified.

3. The combination of the jointed suspending-arms C, brake-shoes, and knuckle-jointed links, when the said links and arms are arranged for adjustment, substantially as specified.

98,278.—CHARLES D. LEET, Vienna, Austria, and B. B. HOTCHKISS, New York, N. Y. — *Metallic Cartridge.*—December 28, 1869; antedated December 15, 1869.

Claim.—The closed or tight-backed cartridge-case A, inner casing D, packing E, the central fulminate B, and anvil O, combined and arranged in the shell of the cartridge, as and for the purposes herein set forth.

98,279.—JOHN A. LIDBACK, Portland, Me., assignor to himself and HENRY BAKER, same place.—*Steam-Pump.*—December 28, 1869.

Claim.—1. A pump with three cylinders inclosed in each other, constituting three chambers connected by ports, one for plunger, one for suction, and one for force, substantially as described.

2. The oscillating conical valve B, in combination with cylinders *a*, *b*, *c*, as described.

3. The combination of the oscillating feed-pump G, and oscillating conical valve B, substantially as set forth.

4. The spiral guide or slot *p*, on feed-pump G, in combination with perpendicular moving cross-head N, sliding on the same, causing the oscillation of the valves B B, substantially as described.

5. The construction and arrangement of sash K and rockers *l l*, substantially as described.

98,280.—GOTTLIEB LUEDKE, Princeton, Wis.—*Axle-Gauge.*—December 28, 1869.

Claim.—1. The combination, with the stock A, made in two parts, adjustable lengthwise, and provided with scales as described, of the gauge-block-supporting arms D E or D′ E′, substantially as specified.

2. The combination, with the gauge-blocks F, when arranged with reference to their supports, and the stock A, as specified, of the pins K L M, when arranged as specified.

98,281.—C. R. MACY, Bedminster, N. J.—*Harrow.*—December 28, 1869.

Claim.—The improved harrow, composed of the parts A and B of the form shown, hinged together and provided with teeth in front and rear of the toothed cylinders C C, which are in alignment when the harrow is open, all constructed and operating as shown and described, for the purpose specified.

98,282.—ANGELINA MADISON, Cincinnati, Ohio.—*Charcoal Cooking-Furnace.*—December 28, 1869; antedated December 15, 1869.

Claim.—The use of a draught-pipe, answering the double purpose of drawing the heat-current through it, and serving also as an opening for cooking-purposes at the same time, in connection with the other parts of the furnace, constructed and arranged to operate substantially as described, and for the purpose specified.

98,283.—WILLIAM W. MALLERY and CHARLES H. SAGE, Copenhagen, N. Y.—*Trace-Fastening.*—December 28, 1869.

Claim.—A trace-fastener, covered on the outside with a smooth-surfaced frame, made in detachable sections, and having a recess to receive the trace, and provided with a forked spring-catch on the inside, all as shown and described.

98,284.—F. H. MANNY, Rockford, Ill.—*Harvester-Rake.*—December 28, 1869.

Claim.—1. The cutter E and springs F F′, arranged to operate substantially as described.

2. In combination with the cutter E and springs F F′, the stem *d* and friction-roller *d′*, as and for the purpose set forth.

98,285.—JOHN C. MARSH, Alexandria, La., assignor to GEORGE R. MARSH, same place.—*Apparatus for Bleaching and Defecating Cane-Juice.*—December 28, 1869.

Claim.—The mode herein described of disseminating sulphurous gases in and through saccharine liquids, when the same is carried into effect by the apparatus herein described, the same being constructed in all its parts and operating as specified, for the purpose set forth.

98,286.—ELEZER MAY, Natick, Mass.—*Welt-Knife.*—December 28, 1869.

Claim.—An improved welt-knife, composed of a stock C, guard *a*, clamp B, screw D, and knife A, constructed and combined as described.

98,287.—EMERSON MCMILLIN, Ironton, Ohio.—*Street-Box for Gas-Pipes.*—December 28, 1869.

Claim.—A street-box for gas-pipes, of the construction herein described, with a cover and slides formed and operated substantially as specified.

98,288.—A. H. MCWAINE, Shickshinny, Pa.—*Churn.*—December 28, 1869.

Claim.—The revolving dashers A and B, when constructed of the flared paddles *o* and *m*, and fastened to the churn-body *a* by the staves *b* and beam *c*, and operated by the driving-wheel C, and cogs *f* and *g*, in the manner and for the purpose specified.

98,289.—AUTON MEYER, Stuttgart, Germany, assignor to THEODORE HAHN.—*Watchman's Time-Detector.*—December 28, 1869.

Claim.—1. The application of a false revolving dial, of card, or other suitable material, Fig. V, in combination with a stationary hand, *r*, and the opening *m*, and a movable stamp, making marks or perforations from the outside.

2. Of the marking-system, detached from the watch, and not attached or combined in it, the whole constructed and operating substantially as and for the purposes set forth.

98,290.—JAMES MONTGOMERY, Sing Sing, N. Y.—*Bar of Horseshoe-Blanks.*—December 28, 1869.

Claim.—As a method, welding together a bar of tough, fibrous wrought iron and a bar of hard-carbonated iron, (not steel,) and converting the same into connected horseshoe-blanks, molded, creased, and notched at points where such blanks are to be separated from one another, by passing said composed bar between rollers, substantially as described.

98,291.—ELIAS NASHOLD, Rockford, Ill.—*Spider.*—December 28, 1869.

Claim.—The combination of a bail and brace-rod with a spider, as described, for the purpose set forth.

98,292.—EBEN W. NICHOLS, Worcester, Mass.—*Hay-Spreader.*—December 28, 1869.

Claim.—1. The adjustable tripping-lever N, in combination with the dogs S and rods *i*, carrying tedder-forks.

2. The adjustable tripping-lever N, in combination with the dogs S, rods *i*, and return-spring L.

3. The arrangement of the hand-lever O and connecting-rod *m*, or their equivalents, in combination with the adjustable tripping-lever N, dogs S, and rods *i*.

98,293.—JOHN S. PATRIC and LEWIS PATRIC, Rochester, N. Y.—*Draught and Spark-Extinguishing Device for Steam-Generators.*—December 28, 1869; antedated December 24, 1869.

Claim.—1. The arrangement of the chamber A with its internal and external co-operative devices, whereby a stratum or spray of water is rendered available in advance of the exhaust-fan or apparatus, by means of which the smoke and other products of combustion are forced through the flue or chamber, substantially as herein set forth.

2. The arrangement of the outer shell or drum A, provided with induction and eduction ports *b* b^1, exhaust-chamber B, and fan D, all constructed substantially as described.

3. The arrangement of heating-flues, provided with valves or dampers, between the furnace and the exhaust, for the purpose of controlling the direction of the current of heat.

4. A floating gauge, E, operating in combination with the exhaust, substantially as described.

98,294.—JOHN PEACE, Camden, N. J.—*Tube-Cutter.*—December 28, 1869.

Claim.—The construction, combination, and arrangement of the box A, follower F, screw B, and sliding bar D, substantially as and for the purposes herein shown and described.

98,295.—WILLIAM H. PHILLIPS, Bridgeton, N. J.—*Shipwrights' Clamp.*—December 28, 1869.

Claim.—The implement herein described, consisting of the screw I, nut-block G, recessed extension E stud *b*, and curved serrated brace-claw H, each constructed and arranged in the manner and for the purpose set forth.

98,296.—HENRY B. PORTER, Chicago, Ill.—*Electrical Annunciator for Hotels.*—December 28, 1869.

Claim.—1. The pivoted and gravitating hooked armature *c*, applied to the helix′ b^3, in combination with a sliding cover, I, substantially as and for the purpose described.

2. The arrangement of lifting-arms *k*, on vertically-sliding bars J, in combination with the gravitating slides I, working over numbered or lettered plates H, said sliding bars J being connected to a key-shaft, L, substantially as and for the purpose described.

3. Covering-slides I, constructed with toes *i* upon them, and arranged so as to move over stationary numbered or lettered plates H, substantially as described.

98,297.—THEOPHILUS PUGH, Chicago, Ill.—*Pulverizing-Chaser.*—December 28, 1869; antedated August 7, 1869.

Claim.—The combination and arrangement of the wheel A, the tire B, the wooden backing *c*, and the wedges *a*, when constructed and operating as and for the purposes above set forth and shown.

98,298.—WILLIAM REICHENBACH and FRIETRICH ROSCHDIANTZKY, Chicago, Ill.—*Sofa and Table.*—December 28, 1869.

Claim.—1. The arrangement, in connection with a sofa or settee, of the sliding hinged drawer D and the drawer *b*, having the pivoted support *c* attached, substantially as shown and described.

2. The detachable table B, in combination with a sofa, when said parts are arranged to be used substantially as herein set forth.

98,299.—WILLIAM ROEMER, Newark, N. J.—*Lock for Satchels and Carpet-Bags.*—December 28, 1869.

Claim.—1. Attaching the lock B, on the outside, against the side of the frame for satchels and carpet-bags, in combination with a staple, D, attached to the top of the frame, operating together in the manner and for the purpose described.

2. The projecting piece or plate C, in combination with the lock B and inner frame A′, substantially as and for the purpose set forth.

98,300.—WILLIAM ROEMER, Newark, N. J.—*Button and Pin for Carpet-Bags, &c.*—December 28, 1869.

Claim.—The button or boss A, when constructed with the inside extended hub *n*, and the outside recess *a*, around the pin-aperture, in combination with the pin *m*, the head *v* of which fits closely in said recess, as specified.

98,301.—JOHN J. ROEPER, Philadelphia, Pa.—*Base-Burning Stove.*—December 28, 1869.

Claim.—In combination with a magazine-stove, the direct flue C, the chimney-flue D, and the space *b″*, outside of the magazine A, substantially as and for the purposes hereinbefore set forth.

98,302.—DANIEL J. ROSS, Havre de Grace, Md.—*Propelling Boats.*—December 28, 1869.

Claim.—In combination with the boat A, propeller-wheel B, and shaft C, the pulleys D and G, and band I, when arranged and operated substantially as and for the purposes set forth.

98,303.—JACOB SCHNEIDER, Canton, Ohio.—*Harvester-Cutter.*—December 28, 1869.

Claim.—1. The combination, on the finger-bar of a harvester, of a set of fingers, provided with dovetail grooves in their necks, an under-plate bar, with a dovetail section, and a set of under-cutter plates, one to each finger, secured on said bar, the several parts being arranged substantially as and for the purposes herein specified.

2. The harvester-finger C, constructed with head D, lip G, slot J, concavity H, and neck E, with dovetail groove F, the several parts being arranged as shown, and the whole being used in combination with the bar B, with plate A secured thereto, substantially as and for the purpose herein specified.

98,304.—WILLIAM F. SEMPLE, Mount Vernon, Ohio.—*Chewing-Gum.*—December 28, 1869.

Claim.—The combination of rubber with other articles, in any proportions adapted to the formation of an acceptable chewing-gum.

98,305.—JAMES A. SEVEY, Boston, Mass.—*Plane for Shaving Whalebone.*—December 28, 1869.

Claim.—1. The combination and arrangement of the spring or elastic throat-piece M, (provided with adjusting-devices, as described,) with the plane-stock E, and the cutter or plane-iron C.

2. The combination and arrangement of the plane-iron supporters A A, and the clamp-screws *g*, and adjusting-screws S S P, with the plane-stock E, the cutter C, and the mouth-piece M, provided with devices for adjusting it, as set forth.

98,306.—ZACHARIAH SHAW, Ypsilanti, Mich.—*Perpetual Brick-Burner.*—December 28, 1869.

Claim.—The combination and arrangement of the curved chamber A, the carrier E, and the fire-chamber C and C′, burning brick upon both sides at once, when constructed and operating as and for the purpose set forth.

98,307.—JOHN SHOREY and FREEMAN H. BUTLER, Lowell, Mass., assignors to said SHOREY and JOHN GRIFFITH, same place.—*Curtain-Fixture.*—December 28, 1869; antedated December 18, 1869.

Claim.—The friction-plates *e* and F, connected with the brackets, strap D, eye or staple H, and pulley B, arranged as shown and described.

98,308.—AUGUSTUS SIMPSON, Woonsocket, R. I., assignor to WOONSOCKET IRON FOUNDERY, same place.—*Machine for Folding Cloth.*—December 28, 1869.

Claim.—1. The knife K, jaws I and I′, in combination with the rolls G and H, brushes F and F¹, friction-rollers D D, stretcher C, and carriage B, all arranged and operating substantially as and for the purposes set forth.

2. The wheel or disk L, in combination with the roll G, knife K, and jaws I and I′, all constructed and operating substantially as described.

3. The combination of the pulleys M², slat M, cords M¹, cords *m*, and springs M⁴, substantially as and for the purpose set forth..

98,309.—GEORGE SINGLETON, Rockville, Conn., assignor to himself, JAMES F. PRESTON, and JOHN N. LEONARD, same place, ROBERT SINGLETON and E. KELLOGG ROSE, Paterson, N. J., and LEONARD & LOCKHART, Chicago, Ill.—*Spindle for Spinning Silk.*—December 28, 1869.

Claim.—The compensating top A, in combination with traveler B, hollow revolving thimble D, and revolving spindle I, all arranged and operating as described, and for the purpose set forth.

98,310.—DAVID L. SMITH, Montana, Iowa.—*Apparatus for Packing Stuffing-Box.*—December 28, 1869.

Claim.—The construction of an apparatus for the purpose described, wherein the sleeve A, arm B, head or traversing follower C, wheels D and E, guide F, and spring I, are arranged substantially as described, and operated by the pawl lever H and hand-clamp G, substantially as set forth.

98,311.—JOHN G. SMITH, Oregon, Wis., assignor to himself and FRANK A. VICKERY, Mason City, Ill.—*Hames and Collars.*—December 28, 1869.

Claim.—1. The swivel and hinge-joint fastening N, constructed substantially as described.

2. The swivel and hinge-joint fastening N, in combination with the adjustable straps E, when constructed and arranged substantially as described.

3. The adjustable wooden collar A, having the leather extension B, in combination with the hames C, when constructed with the swivel and hinge-joint fastening N and adjustable strap E, substantially as and for the purpose described.

4. The adjusting toothed staple F, so constructed and arranged that the trace only can be adjusted when the hames are removed from the collar, substantially as described.

98,312.—LOYST J. SMITH, Whitehall, N. Y., assignor to himself and E. H. GARDINER, same place.—*Railway-Rail Chair.*—December 28, 1869.

Claim.—The arrangement, upon the bases of the jaws A B, and between the cheeks thereof, of a plate, D, with transverse ribs *c c*, and projecting-lugs *d d*, all as shown and described, to prevent the longitudinal displacement of the rails and the constant strain upon the bolts.

98,313.—J. L. STRAIT, Cooksville, Miss.—*Seed-Planter.*—December 28, 1869.

Claim.—1. An improved seed-planter, formed by the combination of the tongue B, side beams A, drive-roller C, pulleys D, bands E, idler K, pulleys G, dropping-cylinder F H, opening-plow I J, coverers L M, concave roller P, and handles N, with each other, said parts being constructed and arranged substantially as herein shown and described and for the purposes set forth.

2. The forked standard J, for the opening-plow, arranged between the drive-roller C and the dropping cylinder F H, and adapted to serve as a guard or fender for the said dropping-cylinder, substantially as herein shown and described, and for the purpose set forth.

98,314.—CHARLES A. SULLIVAN, Starkville, Miss.—*Pneumatic Centrifugal Power-Regulator.*—December 28, 1869.

Claim.—1. A centrifugal power-regulator, consisting of a fan-wheel with wings pressed by springs to its periphery, and rising therefrom automatically when a certain initial velocity is attained, but constantly presenting a more expanded surface and a greater resistance as the said velocity increases, all as shown and described.

2. The combination of a fan-wheel, G, constructed and operating as described, with a spring-propelling wheel, and suitable connecting-mechanism to automatically prevent a too rapid evolution of the spring, as set forth.

3. The combination of the automatic fan-wheel regulator, spring-driving wheel, and a rotating shaft, said instrumentalities being connected by suitable mechanism, and operating together substantially in the manner specified.

98,315.—William H. Tillou, Le Roy, N. Y.—*Hames-Fastener.*—December 28, 1869.

Claim.—A hames-fastener, provided with slotted piece A, having hook *a'* at one end, and perforations through its sides at the other end, so that the fastener may be lengthened or shortened, without changing the leverage, substantially as shown and described.

98,316.—Elisha H. Tobey, Chicago, Ill.—*Breech-Loading Ordnance.*—December 28, 1869.

Claim.—1. The combination of the arms D, piston or recoil-block F, and operating-screw G, with the main portion of the gun A, and the breech-piece C, when the radius of the latter is below the major axis of the gun A, substantially as herein described, for the purpose specified.

2. The weights E, in combination with the breech-piece C and arms D, substantially as described, for the purpose specified.

98,317.—Frederick Townsend, Albany, N. Y.—*Machine for Quarrying and Dressing Stone.*—December 28, 1869.

Claim.—A vibrating loaded arm, carrying one or more stone cutting or dressing chisels, and receiving its movements from a revolving crank-pin, working in a slotted or forked arm, C, substantially as described.

98,318.—George P. Treulieb, Baltimore, Md.—*Meat-Cutter.*—December 28, 1869.

Claim.—1. In combination with the worm K, the frame N O R R, bearings S S, guides L L M, and slides P P P', all constructed and arranged substantially as and for the purposes specified.

2. The combination and arrangement of the block A, rollers *a a a*, worm-wheel B, worm K, its frame N O R R S S, guides L L M, slides P P P', screw I, and female screw U, substantially as and for the purposes herein set forth.

98,319.—R. W. Trude, Clearfield Bridge, Pa.—*Water-Wheel.*—December 28, 1869.

Claim.—1. The double wheel C, provided with vents or openings, for the escape of the water around the shaft B, and constructed substantially as herein shown and described, in combination with the casing D, as and for the purpose set forth.

2. The combination of the wheel C, casing D, and gate E, with each other, said parts being constructed and operating substantially as herein shown and described, and for the purpose set forth.

98,320.—Ludwig Ignatius Trueg, Saint Vincents, Pa.—*Sun-Dial.*—December 28, 1869.

Claim.—The graduated arc D, provided with slotted ends, in combination with the quadrant or gnomon E, and pivoted plate B, as shown and described.

98,321.—George E. Turner, Chicago, Ill.—*Hollow Grate-Bar Frame.*—December 28, 1869.

Claim.—1. The hollow grate-bar frame, made of two or more horizontal sections, substantially as set forth, to enable each section to expand independently of the others, as specified.

2. The stays or braces *d*, arranged in the sections of the hollow grate-bar frame, substantially as and for the purpose herein shown and described.

98,322.—Thomas Warren, Flint, Mich.—*Governor-Valve.*—December 28, 1869.

Claim.—In combination with the case A, provided with seats B B', openings C C', inlet-pipe N, and outlet-pipe E, the slide-valves F F', provided with ports G G', adjusting right and left screws I, guides H, nut K, and valve-stem L, in connection with any proper governor, when each of said parts is constructed as described, and all are arranged to operate as and for the purpose set forth.

98,323.—Thomas Waterhouse, West Gorham, and Charles F. McKenney, Saco, Me.—*Horseshoe.*—December 28, 1869.

Claim.—The arrangement, on a horseshoe, of the groove *a*, metallic strip *e*, screws *d*, and elastic sheet *b*, secured as described, and for the purposes set forth.

98,324.—James G. Weir, Pittsburgh, Pa.—*Wheelbarrow.*—December 28, 1869.

Claim.—Pivoting the wheel B to springs C, with the center of the wheel directly under the head-piece D, said springs being so arranged, with relation to the wheel B and frame A, that their back ends will slide in guides *f*, as herein described, and for the purpose set forth.

98,325.—Benjamin C. Wilkins, Elgin, Ill.—*Bed-Lounge.*—December 28, 1869.

Claim.—The construction of a bed-lounge, wherein the couch A, back B, leaf *a*, hinges *c* and *d*, hinged support *e*, and hooks *f* and *g*, are arranged and operated in the manner and for the purpose specified.

98,326.—Jesse A. Wilson, Hamburgh, Iowa.—*Cultivator.*—December 28, 1869.

Claim.—1. The castings E and I, constructed and secured to the ends of the beam C, substantially as herein shown and described and for the purposes set forth.

2. The bows F G and K L, constructed and arranged substantially as herein shown and described, in combination with the castings E I and tongue H, as and for the purpose set forth.

3. The slide-bar P O and adjustable bows M, in combination with the tongue H and beams C, substantially as herein shown and described and for the purpose set forth.

98,327.—S. E. Adamson, Philadelphia, Pa.—*Card-Holder.*—December 28, 1869.

Claim.—The adjustable end spring E, in groove or slot D, in combination with the pull B and sign or label C, constructed substantially as described, and operating as and for the purposes set forth.

98,328.—William Adel, Rockton, Ill.—*Eaves-Trough.*—December 28, 1869.

Claim.—1. The trough A, grooved bars B B, and partitions C C, all constructed substantially as described, and for the purposes set forth.

2. In combination with trough A, bars B B, and partitions C C, the pipes D and E, constructed substantially as described, and for the purpose set forth.

98,329.—Henry Aiken, Philadelphia, Pa.—*Stone-Separator.*—December 28, 1869.

Claim.—1. Separating stones from clay, by forcing the latter through elongated slots in a tapering cylinder, and discharging the former into a suitable receptacle at the small end of such cylinder, substantially in the manner and for the purpose specified.

2. The combination of the tapering slotted cylinder A, shaft B, with screw-formed beaters B^2, and stand C with hopper C^1, all arranged to operate substantially as and for the purpose set forth.

3. In combination with the elements of the preceding clause, the tapering cylinder D, substantially as and for the purpose set forth.

4. The combination of the tapering slotted cylinder D with the slotted pivoted gate D^1, friction-roller d^2, and guide D^2, when said parts are constructed and arranged as herein set forth.

98,330.—Otis N. Angell and Andrew J. Angell, Providence, R. I.—*Turbine Water-Wheel.*—December 28, 1869.

Claim.—1. The buckets B B, formed substantially as described, with an inward horizontal and a downward discharge, arranged in relation to and in combination with the eduction-ports F, as shown and specified.

2. The improved turbine-wheel herein described, provided with the buckets B B and the ports F, in combination with the valve-gates G and the stationary guides H, the parts being arranged and operating substantially as described, for the purposes specified.

98,331.—E. A. Archibald, Methuen, Mass.—*Machine for the Manufacture of Spoked Wheels.*—December 28, 1869.

Claim.—1. The pins *e*, in combination with the disk *a*, when arranged to be operated substantially as shown and described, and for the purpose specified.

2. The cutters *j* and *k*, or either of them, in combination with the disk *a* and clamping-mechanism, when constructed and arranged to operate upon either of the exposed surfaces of the nave-ends of the spokes, substantially as described, and for the purpose specified.

3. The arm *p*, pivoted as described, and arranged so as to swing to position over the wheel-center, and to be locked there while one or both faces of the nave-ends are being faced by the cutter or cutters borne by the arm, and so that said arm may be unlocked and swung outward, clear of the spokes, substantially as described.

98,332.—Aime Nicholas Napoleon Aubin, Montreal, Canada.—*Oil-Can.*—December 28, 1869.

Claim.—1. A self-sealing attachment to the neck of cans, consisting in a lever, D, bearing the cap, a spring *f*, and hinged prop F, constructed and operating substantially as described.

2. The wire gauze, covering the apertures inside of the can, not as a separate device, but in combination with the self-sealing attachment.

3. The projection K, in combination with the spout G, for the purpose hereinbefore set forth.

98,333.—Aime Nicholas Napoleon Aubin, Montreal, Canada.—*Peat-Machine.*—December 28, 1869.

Claim.—The side-pocket E, at a tangent of the curve described by the end of the fixed knives G, and the fixed knives G, in combination with the revolving knives F, the whole constructed and operating substantially and for the purpose hereinbefore set forth.

98,334.—Joseph Baker, Sheridan, assignor to himself and R. C. Hathaway, Ionia, Mich.—*Shingle-Machine.*—December 28, 1869; antedated December 9, 1869.

Claim.—In shingle-machines, the vibrating tilting-frame F, provided with racks *f f*^{1}, the pinions G and H, rock-shaft I provided with cams *i i*$'$, rocker-arm *h*, and feather M, the notched slide K, provided with stop-pin *k*, the rod *g*, stop O, and graduated stop-lever N, or their equivalents, when constructed, arranged, and operating substantially as and for the purposes set forth.

98,335.—E. A. Barton, Boonville, Ind.—*Combined Harrow and Seed-Sower.*—December 28, 1869.

Claim.—In combination with the seed-sower, harrow, and roller, constructed and operating as described, the tumbler-rod E and cleaning-teeth *e*, as and for the purpose set forth.

98,336.—Benjamin Baugh, Chadwick, near Bronsgrove, England.—*Enameling Iron and Steel.*—December 28, 1869.

Claim.—1. The method of producing ornamental designs and inscriptions in enamel upon metal tablets, by the use of stencils, substantially as set forth.

2. The method of producing pictorial designs of several colors in enamel upon metal plates, by the use of separate printings of the several colors upon suitably-prepared paper, and the transfer of the same to the surface to be enameled, and fusing thereon, substantially as set forth.

3. As a new article of manufacture, enameled metallic tablets, formed of designs produced in part by stenciling, and in part by printing and transferring, substantially as set forth.

98,337.—Luman L. Beach, Mount Upton, N. Y.—*Hand-Cultivator.*—December 8, 1869.

Claim.—1. The implement, consisting of the frame A, with the cross-bars I and I$'$, with the uprights B, and the adjustable handle C H, and the wheel D, all constructed and arranged substantially as described.

2. The combination of the cross-bars I I$'$, adjustable bars J J, provided with the notches *e* and standards E, when secured by the bolts *n*, as set forth.

98,338.—C. Becker and Morris Wise, New York, N. Y.—*Buttons.*—December 28, 1869.

Claim.—1. The fastening-screw *b*, provided with a shoulder, *e*, in combination with the tubular shank-head A and sleeve *c*, constructed and operating substantially as shown and described.

2. The eyelet *d*, in combination with the fastening-screw *b*, tubular shank-head A, and sleeve *c*, substantially as set forth.

3. The swivel-head *f*, in combination with the tubular shank A, sleeve *c*, and fastening-screw *b*, substantially as described.

98,339.—Charles H. Berry, East Somerville, Mass.—*Spring-Bed Bottom.*—December 28, 1869.

Claim.—In combination with the reversible slats *c*, the elliptical springs E, and plugs K, when constructed and operating as herein described and shown.

98,340.—Seymour A. Bostwick, Laconia, N. H.—*Tobacco-Cutter.*—December 28, 1869.

Claim.—1. The rotary cutter G, in combination with the slides K, ratchet L, and lever D, or the equivalents of said devices, substantially as set forth.

2. The pinion E, upon the shaft of the cutter G, in combination with the toothed bar F, substantially as set forth.

98,341.—B. F. Bowling, Holly Springs, Miss.—*Combined Cotton Scraper and Cultivator.*—December 28, 1869.

Claim.—1. The combination of the adjustable harrow E with the scraper, substantially as and for the purpose herein set forth.

2. The construction and arrangement of the oblique connecting-bar G, pivoted to the front upright B of the stock, and guided and braced by the rear upright C thereof, as described.

98,342.—Charles M. Bowman, Washington, D. C.—*Crossing Signals for Railways.*—December 28, 1869.

Claim.—1. The truck or slide C D, adapted to be drawn by the rotation of the locomotive-wheels, and to actuate a signal, H, of any suitable construction.

2. The inclined track or bar B, in combination with the truck or slide C D, for the purpose set forth.

98,343.—Washington Boyce, Tuscola, Ill.—*Apparatus for Filtering Volatile Liquids.*—December 28, 1869; antedated December 17, 1869.

Claim.—1. The cup A, provided with the movable cover E and rubber band D, so as to form an air-tight connection with the bottle or receiver C.

2. The perforated plunger B, the lower end of which is shaped like a cone, and which is provided with the grooves and openings, in the manner and for the purpose specified.

3. In combination with the above plunger, the floss, silk, or cotton wrappings, when used in the manner and for the purpose specified.

4. The combination of the cup A and the plunger B, when used in the manner and for the purpose specified.

98,344.—James M. Bucklin, Saint Louis, Mo.—*King-Bolt for Railway-Car Trucks.*—December 28, 1869.

Claim.—1. The king-bolt *z*, arranged to rest immediately on the transom of railroad-cars, and constructed to drop through the transom in disconecting the truck.

2. In combination with a railroad-car, the transom A, having central oblong slot *e*, with upright bearing-grooves, constructed and arranged to operate as specified.

3. In combination with the transom of a railroad-car, the oblong-headed bolt *z*, oblong slot *e*, and transverse seat *i*, with cover *n*, constructed and arranged to operate as specified.

98,345.—Riley Burdett, Chicago, Ill.—*Reed-Organ.*—December 28, 1869.

Claim.—1. The arrangement of the upper and lower wind-chests B$'$ and B, connected by the throat I, substantially as described.

2. The set L, placed vertically, or nearly so in

the socket-board, as described, and for the effect set forth.

3. The combination and arrangement of the key D, lever W, and block X, or its equivalent, with the tracker-pin E, for the purpose set forth.

4. The combination and arrangement of the foot-pedal keys S, long connecting-rod T, and extension-arm U, so that the keys of the lower bank may be operated by the pedal-keys when desired.

5. The manual sub-base, set into the throat of the bellows, and operated as described.

6. The combination and arrangement of the several parts described, and for the purpose set forth.

98,346.—HENRY K. BURKHOLDER, Clear Spring Pa.—*Grain-Separator.*—December 28, 1869.

Claim.—1. Providing the heads of a fan in a grain-separator with screens, substantially as and for the purposes herein set forth.

2. In combination with a fan-case, having an opening across its back, as above described, the outside shutters C C, connecting-bar *d*, rods *e e*, and adjustable weights *f f*, all substantially as and for the purposes herein set forth.

98,347.—CHARLES F. BURLEIGH, Tuftonborough, N. H.—*Automatic Fan.*—December 28, 1869.

Claim.—1. The spring-head pendulum as described, the same consisting of the ring E, bars *c c*, spring D, shaft *i*, pendulum-rod and fan-blade G, all combined, arranged, and operating as and for the purpose specified.

2. The combination, as described, of the eccentric *g* with the spring-head pendulum and fan-blade G, by means of the arm *h* and lever *n*, in the manner and for the purpose specified.

98,348.—LUKE CHAPMAN, Collinsville, Conn., assignor to himself and THE COLLINS COMPANY, same place.—*Lawn-Mower.*—December 28, 1869.

Claim.—The combination of the handles *p p*, attached to the shafts by adjustable sockets *r* and r^1, the shaft *b*, with its adjustable bearing *x x*, the toothed wheels *d* and *g*, and endless chain *e*, all constructed and arranged substantially as described.

98,349.—DANIEL G. CHASE, Boston, Mass.—*Button-Hole Cutter.*—December 28, 1869.

Claim.—The button-hole cutter, consisting of the jaw A, with the barrel B and spring *s* for holding the barrel in position, and the jaw A^1, with the cutter C and gauge G, constructed as described, and all combined and arranged, relatively to each other, as set forth.

98,350.—JAMES T. CORBITT, Des Moines, Iowa.—*Corn-Marker.*—December 28, 1869.

Claim.—The frames 2 2 and 4 4, when hinged as described, and provided with marking-wheels 1 1 1, in combination with the seat 8 and supporting-roller 10, all arranged and operating as specified.

98,351.—BENJAMIN P. CRANDALL, New York, N. Y.—*Children's Carriage.*—December 28, 1869.

Claim.—1. In a child's carriage, the combination, with the bearing to which the reach is immovably secured, of the front axle, pivoted to said bearing, substantially as and for the purpose described.

2. The casting J, constructed to support the reaches, form the bearings for the front axle, and guides for its oscillations, and receiving the spring which bears against said axle, substantially as described.

98,352.—MOSES G. CRANE, Newton, Mass., assignor to JAMES M. GARDINER, Saint Louis, Mo.—*Signal-Box Mechanism for Fire-Alarm Telegraph.*—December 28, 1869.

Claim.—In combination with a signal-box mechanism of a fire-alarm telegraph, an insulated circuit-wheel, (for breaking and closing the circuit,) automatically and continuously rotated by the stress of a spring or weight, exerted through a suitable train of gearing, substantially as described.

98,353.—ROBERT CREUZBAUR, Brooklyn, N. Y.—*Piston Liquid-Meter.*—December 28, 1869.

Claim.—1. The arrangement, within one barrel A, of two pistons, C and D, acting as valves for each other, substantially as and for the purpose hereinbefore set forth.

2. The arrangement of the two pistons C and D, acting as valves for each other, when the piston D, acting as valve for piston C, changes the ports for the latter at or near half stroke of D, and *vice versa*, and when the two pistons are disconnected and move independent of each other, substantially as and for the purpose hereinbefore set forth.

3. The combination, with a meter-shell, A, and one or more pistons, C and D, of the cork bulkheads named, substantially as and for the purposes hereinbefore set forth.

4. The combination, with a meter-shell, A, and pistons C and D, of the outside water-channels, arranged as shown, substantially as and for the purpose hereinbefore set forth.

5. The combination, with a meter-shell, A, and two pistons C and D, with their recesses 7 and 8, of the duplicate ports E and the duplicate ports S, substantially as and for the purpose hereinbefore set forth.

6. The combination, with a meter-shell, A, and two pistons C and D, of a bulkhead, H, with its rim h^2, and recesses h^3, substantially as and for the purpose hereinbefore set forth.

7. The small relief-ports *x* x', in combination with the piston-valves C and D, arranged as described and for the purpose named.

98,354.—JOHN J. CROOKE, Southfield, and LEWIS CROOKE, New York, N. Y.—*Plating Iron for the Manufacture of Hinges, &c.*—December 28, 1869.

Claim.—Plating metals, by the process described, that is to say, by first subjecting the rough metal to the pickling-process, then coating it with tin, or other soft metal, suitable to form a foundation for plating, then rolling the metal, to produce an even surface of the tin, or its equivalent, and then applying the plating-metal, substantially as hereinbefore set forth.

98,355.—C. W. DAWSON, Paynesville, Mo.—*Stump-Extractor.*—December 28, 1869.

Claim.—1. The cap H, constructed as described, and provided with ears *a a* and bar *b*, substantially as and for the purposes herein set forth.

2. The combination and arrangement of the frame A B C, standards G G, cap H, lever I, hooks *e* and *f f*, and block and tackle J, all constructed and arranged to operate substantially as and for the purposes herein set forth.

98,356.—EDWARD MORTIMER DEEY, New York, N. Y.—*Apparatus for Floating Ships over Sand-Bars.*—December 28, 1869.

Claim.—The apparatus herein described, consisting of the locks A A', provided with floats E E', canal B, and reservoir C, combined, arranged, and operating substantially as and for the purposes described and set forth.

98,357.—SAMPSON P. DICK and DAVID R. MUSSELMAN, Louisville, Ky.—*Tobacco-Press.*—December 28, 1869.

Claim.—1. In machines for making plug-tobacco, the combination of the shafts P with a roller, F, at each end, the rollers being connected with the shafts by means of a loose coupling, R, and the shafts Y with rollers E E at each end, all arranged and operating substantially in the manner and for the purpose herein set forth.

2. The arrangement of the series of double rollers D D, pulleys O, pinions S S, and connecting-bands C, all operating substantially as and for the purpose specified.

3. The rollers V V, arranged as described with relation to the rollers D D, and driven therefrom in the manner and for the purpose substantially as described.

4. The arrangement of the several series of double rollers F F, E E, D D, and V V, the pulleys O, toothed wheels S T, and bands C C, all operated by means of gearing G G G H H *i i*, and drive-wheel J, all constructed and arranged to operate substantially as herein described.

98,358.—JOHN DONALDSON, GEORGE REAVELY, and JAMES FRANCIS, Galashiels, Scotland.—*Choke-Block for Railways.*—December 28, 1869.

Claim.—1. In combination with the rails of a railroads witeh or "siding," the ehoke-bloeks C C′, so arranged and eonneeted that they are automatically removed from the traek by the pressure of the ear or locomotive wheel, substantially as deseribed.

2. The arrangement of the rail D, sway-bar G, with its connections, the bar J, lever L, and the key-bar N, substantially as described, for the purpose set forth.

98,359.—JACOB DOURSON, Columbus, Ohio.—*Bedstead and Lounge.*—Deeember 28, 1869.

Claim.—The eombination of the bedstead-frame A, mattress-frame B, double joints C, and plates D, all eonstrueted and arranged substantially as and for the purposes herein set forth.

98,360.—JACOB DOURSON, Columbus, Ohio.—*Extension Table Roller-Slide.*—December 28, 1869.

Claim.—1. The combination of the key or bed-piece B, rollers *e e*, and top-piece C, all constructed and arranged substantially as and for the purposes herein set forth.

2. In combination with the roller-slide B C *e*, the stop D, substantially as and for the purposes herein set forth.

98,361.—ALVA E. ELLIS, Friendsville, Ill.—*Quilting-Frame.*—Deeember 28, 1869.

Claim.—The combined quilting-frame and clothes-horse, herein described, construeted with frame A, cross-heads C, rollers E, eranks *a*, segments G, and rod H, as specified.

98,362.—OBED FARNESTOCK, Lebanon, Ind.—*Waiter.*—December 28, 1869.

Claim.—An improved waiter, having a reeess, as at C, to fit the arm, and a handle, D, underneath it, arranged and constructed in the manner shown, and for the purpose set forth.

98,363.—HENRY FAIRBANKS, Saint Johnsbury, Vt.—*Machine for Milling Knife-Edges of Scale-Beams.*—December 28, 1869.

Claim.—1. In a knife-edge milling-maehine, substantially as herein specified, the rocking-table B, tilting upon two axes, substantially as and for the purposes herein set forth.

2. In eombination with the milling-tools A A, and a tilting table, B, carried on a transverse slide, C, the employment of one or more adjusting-screws, *e e′*, arranged and adapted to serve, relatively to the other parts, substantially in the manner and for the purposes herein set forth.

3. The within-deseribed combination and arrangement of the tilting-table B, eross-shaft H, and inclines G G′, with their connections, adapted to operate together, as and for the purposes herein set forth.

4. In combination, the vertical slides F F′, the reversed inclines G G′, and cross-shaft H, arranged to transmit the proper tilting motion to the tilting-table B, without interfering with its transverse motion, substantially as and for the purposes herein set forth.

5. In a knife-edge milling-machine, the combination of a carrying-table, B, adapted to feed the work to the milling-tools, the supporting-pieces I, and adjusting-means N, adapted to apply directly under the knife-edges, all substantially as and for the purposes herein set forth.

98,364.—WILLIAM FIELDS, Wilmington, Del.—*Manufacture of Sheet-Iron.*—December 28, 1869.

Claim.—1. The mixing the irons, as hereinbefore set forth, and the use of the flour of zinc in the finishing of the same.

2. The use of the flour of zinc, in combination with the black lead and tallow, in the finishing of the iron, as hereinbefore described.

3. The application of the wooden faces to the steam-hammer and its anvil when used for the purpose of finishing iron.

4. Making and finishing sheet-iron, using all the articles as a combination, as hereinbefore specified.

98,365.—JAMES M. FORD, Brooklyn, N. Y.—*Sash-Cord Guide-Block.*—December 28, 1869.

Claim.—The cylindrical tube herein deseribed, having worms *b*, and isometrically-curved bore *c*, construeted and arranged to operate substantially as speeified.

98,366.—ISAAC N. FORRESTER, Bridgeport, Conn.—*Pump.*—Deeember 28, 1869.

Claim.—1. The annular-flanged piston-valve C, formed in two sections, as and for the purposes set forth.

2. The eombination of the cylinder, the piston, and the sectional valve, all construeted to operate as set forth.

98,367.—ISAAC N. FORRESTER, Bridgeport, Conn.—*Pump.*—December 28, 1869.

Claim.—The combination of the stationary tubular sectional piston-rod and its flanges with the flanged piston-valve and the reciprocating cylinder, all these parts being constructed to operate as set forth.

98,368.—ISAAC N. FORRESTER, Bridgeport, Conn.—*Pump.*—December 28, 1869.

Claim.—The eombination of the moving barrel A, stationary perforated tubular rod B, collars B^1, pistou-valve C, and receiving-valves *a a*, A^1, the whole arranged and operating substantially as and for the purpose set forth.

98,369.—JAMES D. FRARY, New Britain, Conn.—*Handle for Cutlery.*—December 28, 1869.

Claim.—The hollow handle, and the tang passing entirely through it, with the interposed filling, leaving spaces at one or both ends, to receive portions of the cap, or of the cap and bolster, east on the tang, substantially as and for the purpose described.

98,370.—EMERSON E. GORE, Phœnix, Oreg.—*Gang-Plow.*—December 28, 1869.

Claim.—1. The combination of the stops R′ R′ with the frames A and A′, and arms D′ and F′, whereby the latter are retained in an inclined position, and the plows thereby prevented from rising or falling, substantially as and for the purpose specified.

2. The links D′ F′, connecting the frame A A′, the hind links being slotted, for the purpose of allowing the plows to be raised in an inclined direction, as specified.

3. The hoisting-lever M′, link K′, and crank I′, in combination with the links D′ F′, and frames A A′, of a gang-plow, as specified.

4. The spring-catch O′, pivoted to the frame A, for the purpose of locking the frame A′ in its elevated position, as specified.

5. The frame A, supported on the front axle by the rods C, and on the swiveled caster-wheel O, substantially as described, so that it can be raised and lowered at will, to adjust the position of either plow, or of both, substantially as speeified.

6. The levers D, connected separately with the axle and with the frame A, for raising or lowering the latter, as speeified.

7. The lever P, connected with the swiveled shank N of the caster-wheel O, and pivoted to a jointed arm, Q, that projects from the frame A, to adjust the latter, substantially as herein shown and described.

8. The combination, with the frame A and axle B, of the jointed rod H, adjustable rod I, and jointed rod J, substantially as speeified.

98,371.—JOHN MCFARLANE GRAY, Liverpool, England.—*Steam Steering-Apparatus.*—December 28, 1869.

Claim.—1. In combination with a steering-engine, a screw and nut, one of which receives a rotary motion from the engine, and the other from the attendant, arranged to produce a differential traverse motion, and thereby control the action of the steering-means, substantially as herein set forth.

2. A rotating shaft connecting the steering-mechanism with the engine, in combination with apparatus arranged to produce a differential traverse motion to control the action, substantially as herein described, while the same is operated from the bridge or place of governance at will, as set forth.

3. The magnifying telegraph-director F^2, construeted with two joints, substantially as herein set forth.

4. The quadrants F^1 H^1, operated by worms, in the manner and for the purpose herein set forth.

5. Controlling the steering-engine and the steering-telegraph by one and the same motion-transmitter led from the place of governance, substantially as and for the purpose herein set forth.

98,372.—B. R. HAWLEY, Normal, Ill.—*Ventilator.*—December 28, 1869.

Claim.—The combination of the devices herein described, for ventilating and heating buildings, consisting of the hot-air shaft B, provided with dampers *a a*, the foul-air shaft F, and the space or chamber formed between the inner and outer walls, and in the floor and ceiling, said space or chamber being rendered air-tight from the outside by a continuous line of plastering or other equivalent, on the inside of the outside walls, substantially as set forth.

98,373.—THOMAS HEAP, Saint Joseph, Mo.—*Concrete Blocks for Building and other Purposes.*—December 28, 1869.

Claim.—1. A concrete building-block, formed of the materials, and compounded in about the proportions herein specified.

2. A concrete building-block, faced with the composition herein described, substantially in the manner specified.

98,374.—HENRY B. HEBERT, New York, N. Y.—*Grain-Drier.*—December 28, 1869.

Claim.—The arrangement, in transverse series, of the scattering-bars B with those of one series alternating with each other, in connection with the air-holes *a a*, arranged zigzag, and relatively to the said transverse and alternate bars, the whole together as described.

98,375.—H. M. HEDDEN, Worcester, Mass.—*Photographic Paper.*—December 28, 1869.

Claim.—1. A photographic paper, constructed substantially as and for the purposes set forth.

2. The loose central fibrous layer *a*, in combination with the sides B B, substantially as and for the purposes set forth.

98,376.—B. T. HENRY, New Haven, Conn.—*Method of Forming the Heads of Carriage-Springs.*—December 28, 1869.

Claim.—The method herein described of forming the heads of carriage-springs.

98,377.—THOMAS R. HERD, Allegheny, Pa.—*Car-Coupling.*—December 28, 1869.

Claim.—1. The carriage A^1, rollers A^2 B, rack A^3, shaft A^5, pinion A^4, ratchet A^6, and pawl A^7, in combination with the curved cone B^1, link B^3, spring C^1, and bumper A, having recesses B^1 and C, when constructed, arranged, and operating substantially as and for the purpose described and set forth.

2. The arrangement of the above devices, in combination with the bumper E, springs E^1 E^2, seat F, rollers G^1, and pin G, when constructed and arranged and operating substantially as described, and for the purpose set forth.

98,378.—GEORGE HERRICK, Waverly, N. Y.—*Railway-Car Truck.*—December 28, 1869.

Claim.—1. In combination with the bearing-plate B of a car-truck, provided with the guard-pins *z z*, the swivel-pedestal C, pivoted to the plate B, said pedestals having curved slots, *n n*, and forming bearings for the journals of the car-wheel.

2. The car-wheel D, having grooved axle *a'*, in combination with the swivel-pedestal C and pivoted brace H.

3. The car-truck herein described, having frame A, rubber cushions *v v*, bearing-plates B B, provided with pins *z z*, and pivoted to the slotted pedestals C C, braced by the pivoted bars H H, and forming bearings for the grooved axles *a' a'*, of the car-wheels.

98,379.—FRANCIS HOVEY, New York, N. Y.—*Carriage-Jack.*—December 28, 1869.

Claim.—The combination of the lever C, with its locking surfaces or stops *e*, the toggle-joint motion or motions D, and the lifting-bar B, in roller-sliding connection with the stand A, substantially as shown and described.

98,380.—R. B. HUGUNIN, Cleveland, Ohio.—*Sash-Holder.*—December 28, 1869.

Claim.—1. The longitudinally-grooved surface D, substantially as and for the purposes herein described.

2. The longitudinally-grooved surface D, roller E, projection C, in plate A B, substantially as and for the purposes herein described.

3. In combination with the elements of the second claim, the slotted springs F and F', for the purposes herein specified.

98,381.—THEODORE HYATT, New York, N. Y.—*Rendering Safes, Vaults, and Chests Fire-Proof.*—December 28, 1869.

Claim.—1. The use of cans or vessels, constructed of any non-corrosive material or materials, of any suitable form and size, containing gas or steam-producing materials, when said cans or vessels are placed in any position between the inner and outer walls or shells of fire-proof safes, and other structures, and enveloped and insulated from such walls and from each other, by means of a filling or packing of dry non-heat-conducting absorbent earth or earths, when such earths are combined in any proportions, with any chemical salt or salts, containing water of crystallization.

2. Insulating the vessels holding gas or steam-producing materials from the external walls of safes and other structures, by means of above-described dry compound.

3. Insulating the vessel containing steam-generating materials from the interior walls or shells of book-case, by the means and for the purposes set forth.

4. Insulating the cans containing gas or steam-producing materials from each other, by the means and for the purposes mentioned.

98,382.—JOHN HORSLEY, Cheltenham, England.—*Nitro-Glycerine Compound for Blasting.*—December 28, 1869.

Claim.—The manufacture of blasting powder, or explosive compound, by incorporating nitro-glycerine with any of the explosive mixtures or powders herein described, and in about the proportions herein set forth.

98,383.—JOHN HUGHES, Buchanan, Pa.—*Lantern.*—December 28, 1869.

Claim.—1. The combination of a pivoted locking-tongue, *h*, with a latch, E, applied to a lantern, substantially as described.

2. The application of perforated strengthening-strips *a* to the lantern-top A, substantially as and for the purposes described.

98,384.—M. G. IMBACK, Bethlehem, Pa.—*Curtain-Fixture.*—December 28, 1869; antedated December 18, 1869.

Claim.—1. The roller A, having two pulleys of unequal diameter formed upon one end, substantially as and for the purposes herein set forth.

2. The roller A, provided with pulleys D and G, of unequal diameter, in combination with one or more cords H, curtain C, weight K, or its equivalent, when used as shown, and for the purpose specified.

98,385.—PLATT C. INGERSOLL, Green Point, N. Y., assignor to himself and HORACE F. DOUGHERTY, same place.—*Mechanical Movement for Actuating Presses.*—December 28, 1869.

Claim.—The arrangement of the double or divided ratchet-wheel or wheels F F, the interposed connecting-chain pulley or body G, the lever or levers H, with their pawls I, the pulleys M, sheave or sheaves K and the chain or chains J, substantially as specified.

98,386.—JOHN G. ISHLER, Martinsville, Ill.—*Quilting-Frame and Clothes-Drier.*—December 28, 1869.

Claim.—1. In combination with the mortised posts A A, the cross-bars D D^1 D^2, having holes at

one end, the keys *b b*, and spool-pins *d d*, all as and for the purposes herein set forth.

2. The combination and arrangement of the posts A A, feet B B, notched pieces C C, end-rails E G, side-rails H H, cross-bars D D^1 D^2, hooks *a a*, *e e*, *i i*, and *h h*, keys *b b* and *m m*, and spool-pins *d d*, all constructed as described, and for the purposes herein set forth.

98,387. — JOHN JEANING, Plainville, Conn., assignor to himself and R. B. PRINDLE, Washington, D. C.—*Bleaching Cotton and Woolen Fabrics.*—December 28, 1869.

Claim.—1. The hereinbefore described process for bleaching woolen or cotton fabrics, substantially as set forth.

2. The hereinbefore-described soap, compounded of the ingredients and in the manner substantially as and for the purpose specified.

3. The hereinbefore-described bleaching-fluid, composed of the ingredients, and compounded in the manner substantially as and for the purpose shown.

98,388.—GEORGE JOHNSON, Cincinnati, Ohio.—*Hoisting-Machine.*—December 28, 1868; antedated December 17, 1869.

Claim.—1. The cross-head L, attached to the shifting-rod D, or other equivalent parts, having projections *l* and *l'*, substantially as and for the purpose described.

2. The lever J, so attached as to allow the poles of its fulcrum to pass through the shifting-rod D, and having an adjustable weight, K, as and for the purpose specified.

3. The combination, with the shifting-rod D, or other equivalent parts, of the cross-head L, projections *l l'*, lever J, and adjustable weight K, all operating together, as and for the purpose herein set forth.

98,389.—AMASA C. KASSON, Milwaukee, Wis.—*Ruffling-Attachment for Sewing-Machines.*—December 28, 1869.

Claim.—1. A ruffler for sewing-machines, consisting of the plate A, with the projection on its rear edge, and the plate B, having a corresponding projection, and with the slots in plate A, said plates being arranged as described.

2. A ruffler, constructed with two projections or plates, of uniform shape and size, and nearly so, for the upper fabric to pass between, said projection or plates bearing on the fabric equally on each side of the needle, substantially as herein described.

98,390. — THOMAS LAMB, Philadelphia, Pa.—*Sewing-Machine.*—December 28, 1869.

Claim.—1. A shuttle, F, having a hook, *d*, at the edge, and a hook, *e*, at the back, and revolving in an inclined shuttle-race, in combination with a bobbin, G, which lies within a perforated case, retained in a stationary position loosely within the shuttle, as described.

2. The hook *e*, beveled at the edge, arranged at the back of the shuttle, so as to be adjustable on the same, and operating substantially as specified.

3. A projection, *f*, arranged, in respect to the shuttle, substantially as and for the purpose set forth.

4. The presser-foot, attached to an arm vibrating on a fulcrum at the rear end of the machine, and operated by the needle-arm, as described.

5. A feeding-foot, K, attached to an overhanging arm, pivoted at the rear end of the machine, and operated vertically and laterally from the needle-arm by devices, substantially as described, and for the purpose specified.

6. The arm I, hung to the base-plate A, and carrying the arm L and slide *r*, in combination with a wedge, *q'*, which is forced between the slide and the arm L on the movement of the needle-arm, substantially as and for the purpose specified.

98,391.—WILLIAM LOVE, McConnellsville, Ohio.—*Ladies' Boot.*—December 28, 1869.

Claim.—A laced boot, having its vamp and flap forming one continued piece, the said flap covering the lacing, and secured to the sides of the quarters by buttons, or their equivalents, substantially as described.

98,392.—THOMAS LOWDEN, Boston, Mass., assignor to himself, GEORGE STOUT, and RICHARD J. LOWDEN, same place.—*Water-Wheel.*—December 28, 1869.

Claim.—A series of independent buckets, so pivoted that each one may, at a point above the center of the wheel, open or swing out away from the center, substantially as and for the purpose described.

98,393.—JAMES MAGEE, Usquepaugh, R. I., assignor to himself and S. A. ALPIN, same place.—*Adjustable Wrench.*—December 28, 1869.

Claim.—The improved adjustable wrench, composed of handle and jaw A, guide-bar B, spring D, and adjustable jaw C, constructed as described.

98,394.—LEANDER J. MCCORMICK, LAMBERT ERPELDING, and WILLIAM R. BAKER, Chicago, Ill., assignors to C. H. MCCORMICK AND BROTHER, same place.—*Harvester.*—December 28, 1869.

Claim.—1. The combination of the turning rake-arm *p*, swiveled connecting-rod p^2, socket p^1, crank *r*, link r^1, roller r^3, and guide-cam M, operating substantially as set forth.

2. The combination of the main frame, supplementary frame, driving-wheels, hinged finger-beam, the overhung reel, and the rotating turning-rake mounted on the finger-beam, all these parts being constructed for joint operation, as set forth.

98,395.—WILLIAM T. MCKEAN, East Palestine, Ohio.—*Washing-Machine.*—December 28, 1869.

Claim.—1. In a washing-machine, a roller-frame, jointed at its center, longitudinally, and resting upon fulcrum-pivots, so that the weight, attached to one end of said frame, shall press the jointed central portion against a rotating cylinder, as shown, and for the purpose herein specified.

2. The herein-described washing-machine, consisting of the box or trough A, the legs B, the fluted cylinder C, the shaft D, the boxes E, the crank F, the center-jointed frame G, G', G'', and G''', the weight L, the fulcrum-pivots M, and the rollers N, all constructed and arranged as and for the purpose specified.

98,396.—RUFUS N. MERIAM, Worcester, Mass.—*Cutter-Head.*—December 28, 1869.

Claim.—The rebating cutter-head, (constructed as herein shown and described,) consisting of the rectangular head A, provided with radial grooves *b*, for the reception of spurs C, and dovetailed grooves parallel with its axis, to receive the bolt for securing the cutter.

98,397.—JOHN A. MILLER, Shippensburgh, Pa.—*Horse Hay-Fork.*—December 28, 1869; antedated December 18, 1869.

Claim.—1. In combination with a hay-fork of any description, the gauge E, constructed substantially as described, and operating in the manner and for the purposes herein set forth.

2. The arrangement of the semi-elliptical prongs A A', gauge E, handles B B', loop D, and cord *b*, all the parts constructed and operating substantially as set forth.

98,398. — R. M. MILLER, Port Andrew, Wis.—*Clothes-Drier*—December 28, 1869.

Claim. — A clothes-drier, having its body, A, mounted on a post so as to revolve thereon, and provided with the arms B, made stationary, and the arms C and D, made adjustable, by means of a windlass, pulley, and cords, the whole arranged to operate as herein described.

98,399.—CHARLES J. NEGER, Philadelphia, Pa.—*Ventilator.*—December 28, 1869.

Claim.—The combination, with a stove or heater, of a curved flue, adapted for being connected to flues or pipes H H', as herein set forth, for the purpose specified.

98,400. — WILLIAM W. OGLESBEY, Benton County, Oreg.—*Salve.*—December 28, 1869.

Claim.—The manufacture or preparation of a compound which I denominate "Oregon Balm-of-Gilead Salve," of the ingredients, in the proportions, and for the purposes set forth.

98,401.—O. S. Osgood, Burlington, Iowa.—*Bed-Bottom.*—December 28, 1869.

Claim.—In combination with a bedstead, the cross-bars B and D D, spring-slats C C, cross-slats E E, and bed-slats G G, all constructed and arranged as herein set forth.

98,402.—Addison Overbagh, Scranton, Pa.—*Device for Lubricating Journals.*—December 28, 1869.

Claim.—The combination, within the box, as shown, of the flanged journal A, bearing B, with groove *a*, chain C, and oil-receptacle D, all constructed to operate substantially as specified.

98,403.—Lindon Park, Brady, Pa.—*Window-Blind.*—December 28, 1869.

Claim.—1. The independent links E E, made of metal or other material, fitting in notches G G, in the edges of the slats D, and connecting the double tape lines or strings C C, as herein shown and described.

2. In combination with the above, the zigzag method of folding up the bliud with a drawing-string, J, passing through holes K, in the slats D, and fastening on a button, N, on the lower slat, as herein shown and described.

98,404.—Isaiah Paxson and Charles Paxson, New York, N. Y.—*Solar Camera.*—December 28, 1869.

Claim.—1. The combination of the springs P P and rebated strips R R with the negative-holder O, with or without the intermediate strips *h h*, substantially in the manner and for the purpose hereinbefore described.

2. The combinatiou and arrangement of the vertical screw-rods D with the printing-board C, the said rods having wheels E on their upper ends, which have the endless chain F in connection, all operating conjointly, as and for the purpose specified.

98,405.—Seth W. Perkins, Geneseo, Ill.—*Extinguisher.*—December 28, 1869.

Claim.—The case B, combined with the pivoted jaws *b*, arms *b'*, and weights *b''*, in the manner and for the purpose set forth.

98,406.—N. Petrè, New York, N. Y.—*Lock.*—December 28, 1869.

Claim.—In combination with a single cut-away disk, the stop and spring, when the spring acts to both push and pull the disk against the frame, substantially as described and represented.

98,407.—Joseph F. Pool, Monroe, Wis.—*Seed and Grain Separator.*—December 28, 1869.

Claim.—1. The frame E, constructed as described, with a partition, *c*, to form the V-shaped chamber G, said chamber being provided with sliding-door *d* and hopper-screen H, substantially as and for the purposes herein set forth.

2. The arrangement of the arms O O, slotted plates P P, and set-screws R R, for the purpose of raising and lowering the rocking-shaft N, substantially as herein set forth.

3. The within-described arrangement of feed-board C, spring D, shaft Y, frame E, stationary rollers *a a*, adjustable rollers *b b*, arms O O, slotted plates P P, and rocking-shaft N, all constructed and operating in the manner and for the purpose set forth.

98,408.—Charles Pratt, New York, N. Y.—*Nozzle for Oil-Cans.*—December 28, 1869.

Claim.—A removable or detachable nozzle for cans, &c., composed of a spout, for the discharge of the liquid, and a vent-tube or conduit, for the admission of air, substantially as set forth.

98,409.—George M. Pratt and L. E. Maynard, Middletown, Conn., assignors to The Finkle and Lyon Manufacturing Company, same place.—*Thread-Controller for Sewing-Machine.*—December 28, 1869.

Claim.—The slotted lever D, constructed as shown, and arranged transversely across the path of the needle, in combination with the pin *a*, on the needle-bar, and the fixed eyes E and F, all operating substantially in the manner and for the purpose herein set forth.

98,410.—A. B. Prouty, Worcester, Mass., assignor to Samuel V. Essick, Mansfield, Ohio.—*Knitting-Machine.*—December 28, 1869.

Claim.—1. The combination of the toothed work-holding disk with the wheel S, having teeth on its periphery, serving to propel the disk, and also notches or teeth on its upper surface, by which it is itself propelled, substantially as shown and described.

2. The combination, with the wheel S, of the propelling-pawl R, mounted on a reciprocating shaft, arranged to rock in its bearings, so as to bring either arm of the pawl into or out of action, substantially as shown and described.

3. The combination of the cam O on the driving-shaft, the reciprocating rocking-shaft Q, and its pawl R, wheel S, spring switch-lever V, and adjustable pin or pins on the disk.

4. The combination of the pin or projection Y on the needle-stock, the slide U and its spring 5, and the wheel S, substantially as shown and described.

5. The combination, with the toothed disk, of the hanger 6 and the spring-piece or deflector 4, substantially as shown and described.

98,411.—D. J. Pruner, Bellefonte, Pa.—*Hydrant.*—December 28, 1869.

Claim.—1. The combination and arrangement of a pit-lining, A, and a removable hydrant, constructed with metal shoulder M, and attached to the supply-pipe by the slanting joint-plates B and *e*, as specified.

2. In combination with a pit-lining, A, the removable hydrant, herein described, having slanting joint B, pipes *p* and *c'*, cut-off disks *l* and *t*, shoulder *r*, jaws *n*, springs S and *m*, struts K, and plates M and *z*, constructed and arranged to operate as specified.

3. In combination with a pit-lining, A, the removable hydrant, herein described, having slanting joint B, pipes *p* and *c'*, cut-off disks *l* and *t*, shoulder *r*, jaws *n*, wedges *v v*, adjustable spring *m*, struts K, and plate M and *z*, as specified.

4. In combination with the cut-off plate *t*, with elbow *r*, the plate *l* having three apertures, viz, an inlet, *e*, and outlets *e'* and *e''*, constructed and arranged to operate as specified.

98,412.—Aaron C. Pry, Keedysville, Md.—*Hopper-Boy Rake.*—December 28, 1869.

Claim.—The shaft A, provided with a spiral longitudinal groove, in combination with the rake B, provided with a suitable spline or splines, substantially as shown and described.

98,413.—Amos Raffensparger and D. G. S. Gochnauer, Mulberry, Pa.—*Seed-Sower.*—December 28, 1869.

Claim.—1. The combination of the frame A, springs B B, cylinder C, pivots *a a*, spring *d*, and cord or strap *b*, all substantially as and for the purposes herein set forth.

2. The arrangement of the arm G, ratchet-wheel H, screw-rod I, pinion *i*, and indicator *m n*, all substantially as and for the purposes herein set forth.

3. The combination and arrangement of the frame A, springs B B, cylinder C, pivots *a a*, spring *d*, arm G, ratchet-wheel H, screw-rod I, pinion *i*, and indicator *m n*, all constructed as described, and operating substantially in the manner and for the purposes herein set forth.

98,414.—J. P. Randolph, Marietta, Ohio.—*Feed-Cutter.*—December 28, 1869.

Claim.—1. The combination of the lever C, having a hook, C^2, formed upon one side, with the guide B^1 of the frame B, substantially as and for the purpose set forth.

2. In combination with the above elements, the knife-frame D, knife D^1, and link C^3, substantially as and for the purpose set forth.

3. The plate E, constructed with oblique flanges, and arranged substantially as and for the purpose set forth.

4. The plate G, constructed with oblique flanges, and arranged to operate substantially as and for the purpose set forth.

98,415.—E. C. Ranks, Boston, Mass.—*Folding-Chair.*—December 28, 1869.

Claim.—As an improvement in folding-chairs, the elongated eyes I, encircling the grooves *a*, in the round J, in combination with the cross-legs A B E, the round N, and staples L, arranged longitudinally and horizontally beneath the seat H, as and for the purpose set forth.

98,416.—S. H. Ransom, Albany, N. Y.—*Base-Burning Stove.*—December 28, 1869.

Claim.—1. The independent vertical ascending flue S, inclosed by the vertical descending flue H, and arranged to operate substantially as described.

2. The flues S H, combined with a hollow flue-base, A, substantially as described.

3. The arrangement of direct-draught damper K, in the relation shown to the exit-passage S, substantially as described.

4. The wings or side plates *p p*, applied to outlet-passage N and magazine G, substantially as described.

5. The combination, with the grate-hook *d*, of the slide *b* and button *c*, substantially as described.

6. The fire-pot C, constructed with a beveled bottom edge, and fitted upon the corresponding beveled surface *v*, of the ring B^2, substantially as described.

98,417.—George N. Rex, Butler, Ind.—*Road-Scraper.*—December 28, 1869.

Claim.—In combination with the box A and revolving bottom D, the vertically-placed bail *b*, made L-shaped at the bottom, and pivoted to the horizontal pins *d d*, upon which rest the springs *e e*, to control the bail *b*, all substantially as and for the purposes specified.

98,418.—L. Rodenhausen, Philadelphia, Pa.—*Spring-Coupling.*—December 28, 1869.

Claim.—The two-part coupling A B, the part A being provided with groove A, substantially as and for the purpose described.

98,419.—Benjamin K. Rogers, Jonesport, Me.—*Ship-Pump.*—December 28, 1869.

Claim.—A ship's pump, having cylinders B, plungers C, rods D, standard G, levers H and *c*, plate K, ratchets L and P, and walking-beam N, constructed and arranged substantially as specified.

98,420.—H. W. Safford, New York, N. Y.—*Head-Rest for Car-Seats.*—December 28, 1869.

Claim.—The combination of the sliding standards A A A, cases *a' a' a'*, and pads C C, with the reversible back of a railway-car seat, substantially as and for the purpose hereinbefore set forth.

98,421.—Jacob F. Saiger, Shelby, Ohio.—*Curing and Preserving Butter.*—December 28, 1869.

Claim.—The arrangement or process herein described for curing and preserving butter, substantially as specified.

98,422.—Jacob Scott, Earlville, Iowa.—*Pump.*—December 28, 1869.

Claim.—A pump, consisting of the perforated chamber A, and pump-stock B, eduction-pipe B', hinged valves C and C', eduction-passage D, solid piston E, piston-rod E^1, lever E^2, and fulcrum G, all as shown and described.

98,423.—William Sellers, Philadelphia, Pa.—*Lathe.*—December 28, 1869.

Claim.—1. The beveled projection *d*, or its equivalent, when used in combination with the clamp C, substantially as and for the purpose specified.

2. The screw D and nut E, in combination with the set-screw *g*, or its equivalent, for the purpose specified.

98,424.—Merville Shaffer, La Fayette, Ind., assignor to Ford Tanner, same place.—*Basket-Machine.*—December 28, 1869.

Claim.—The pins or guides *f*, in combination with the screw-rod *g* and socket *a*, as herein set forth.

98,425.—Taliaferro P. Shaffner, Louisville, Ky.—*Manufacture of Nitro-Glycerine.*—December 28, 1869.

Claim.—The combination of mechanical parts, and the process of washing and agitating nitro-glycerine, submerged in or mixed with water, pure, or impregnated with an alkali, substantially in the manner and for the purposes hereinbefore described.

98,426.—Taliaferro P. Shaffner, Louisville, Ky.—*Process of Preserving Nitroleum and other Explosive Liquids.*—December 28, 1869.

Claim.—The use of sponge, or other equivalent elastic porous substance, to hold in suspension, by capillary attraction, nitro-glycerine, or other equivalent explosive liquid, for the purpose of storing or transportation, in the manner and substantially as hereinbefore described.

98,427.—Taliaferro P. Shaffner, Louisville, Ky.—*Explosive Compound.*—December 28, 1869.

Claim.—1. The combination of gun-cotton or other high explosive substance with nitro-glycerine, in the manner substantially as hereinbefore described.

2. The combination of gun-cotton or other elastic explosive substance, with nitro-glycerine, in the manner substantially as hereinbefore described.

3. The combination of nitrated fiber, of whatsoever form or texture, with nitro-glycerine, in the manner substantially as hereinbefore described.

4. The combination of twisted, compressed, loose, or other-conditioned nitrated or explosive fiber, with nitro-glycerine, in the manner substantially as hereinbefore described.

98,428.—Taliaferro P. Shaffner, Louisville, Ky.—*Blasting-Fuse.*—December 28, 1869.

Claim.—1. The combination of a train or blasting-fuse with a metallic or other suitable cup or vessel, charged with fulminate or detonating-powder, substantially in the manner and for the purposes hereinbefore described.

2. The combination of materials of different explosive powers and densities in the same fuse, or in parts of fuses, when incased and so connected that the ignition of the one will reach the other, substantially in the manner and for the purposes hereinbefore described.

98,429.—James T. Shattuck, Natick, Mass.—*Well-Tube.*—December 28, 1869; antedated November 27, 1869.

Claim.—1. The elliptical perforated tubes *s s*, in combination with the main driving-tube T, substantially as described.

2. The arrangement and combination of the main tube T, small tubes *s s*, and clearing-tube *t t*, substantially as and for the purposes hereinbefore set forth.

98,430.—Thomas Shaw, Philadelphia, Pa.—*Machine for Pressing Clay Pipes.*—December 28, 1869.

Claim.—1. The pipe-press herein described, consisting of the tub *b*, cover *k*, disk *l*, with rods *f f*, and hollow rod *c*, with its inlet *e* and outlet *i*, when constructed and operated in the manner and for the purpose herein set forth.

2. In connection with the above-named parts, the piston *m*, when constructed and combined with said parts, as and for the purpose herein set forth.

98,431.—Daniel Sherwood, Lowell, Mass., assignor to Woods, Sherwood and Company.—*Knife-Rest.*—December 28, 1869.

Claim.—As a new and improved article of manufacture, a knife-rest, made of twisted wire, substantially as described and specified.

98,432.—Daniel Sherwood, Lowell, Mass. assignor to Woods, Sherwood and Company.—*Table-Caster.*—December 28, 1869.

Claim.—As a new and improved article of manufacture, a table-caster, constructed of wound wire, substantially as described and specified.

98,433.—Daniel Shockey, Waynesborough, Pa.—*Carriage-Springs.*—December 28, 1869.

Claim.—The combination of the guide bars ,*a* struts *a'*, cushions *a'' b*, axle A, cross-bar A', in the manner and for the purpose specified.

98,434.—Valentine J. Shryock, Folsomville, Ind.—*Tobacco, Hay, and Cotton Press.*—December 28, 1869.

Claim.—1. The arrangement, upon the bed A, between the standards B B and braces C C, of the track G, carriage H, and board I, the latter connected, by the ropes *a a*, to the windlass K, substantially as and for the purposes herein set forth.

2. The arrangement of the rods *d d*, slotted bar *b*, and wedges *e e*, for the purpose of holding the hogshead on the board I, when pressing the tobacco, substantially as herein set forth.

3. In combination with the devices herein described, for moving and holding the hogsheads J J, the windlasses M M, ropes *f f* and *h h*, levers L L, and cam-shaped bars N N, all substantially as and for the purposes herein set forth.

98,435.—William Slade, Sr., Gum Creek, Ga.—*Water-Wheel.*—December 28, 1869.

Claim.—1. The combination of the bolts D D, crank E, with handle *f*, and springs *e e*, all constructed as described, and operating substantially as and for the purposes herein set forth.

2. In combination with the bolts D D, crank E, handle *f*, and springs *e e*, the projections *i i*, arranged as described, to operate substantially in the manner and for the purposes herein set forth.

3. The combination and arrangement of the shaft A, arms B B, swinging paddles C C, rods *d d*, bolts D D, cranks E E, springs *e e*, handle *f*, and projections *i i*, all constructed and arranged as described, substantially as and for the purposes herein set forth.

98,436.—Alfred E. Smith, Bronxville, N. Y.—*Carriage-Axle.*—December 28, 1869.

Claim.—The arrangement, herein described, of the axle A, skein H, thread *c*, nut G, conical washer *s*, grooved channel *d*, and recess *a*, when the same are constructed substantially as specified.

98,437.—Augustus B. Smith, Philadelphia' Pa.—*Skates.*—December 28, 1869.

Claim.—1. The lever E, hinged to the runner A, and having, at its outer end a lip, *h*, adapted to a recess in a block, F, attached to the heel of the boot or shoe, all substantially as set forth.

2. The combination of the said lever E and its lip *e*, with the curved wedge H, on the under side of the heel-plate.

3. The combination of a single strap, G, secured to the sole-plate with the lever E.

98,438.—Friend W. Smith, Jr., Bridgeport, Conn.—*Picture-Nail.*—December 28, 1869.

Claim.—The flexible and elastic diaphragm or lining attached to the back of the head, to operate substantially as and for the purpose herein set forth.

98,439.—William H. Smith, Charlestown, Mass.—*Metallic Cartridge.*—December 28, 1869.

Claim.—1. The chamber or recess C', surrounding the base of the nipple D, and communicating with the interior of the cartridge, by means of a number of openings, *c*, substantially as and for the purpose specified.

2. The nipple D, constructed as described, in combination with the head B, provided with the recess C', and openings C and *c*, substantially as shown, and for the purpose set forth.

98,440.—William M. Smith, Columbus, Ohio.—*Chair-Frame.*—December 28, 1869.

Claim.—1. The part, Fig. 2, as shown and described, when constructed and used in the manner and for the purpose specified.

2. The combination of the parts as shown in Figs. 2, 3, and 4, constructed and used in the manner specified.

98,441.—C. A. Snyder, Richmond, Va.—*Tag for Mail-Bags.*—December 28, 1869.

Claim.—1. The plate A, constructed as described, with slot *a*, block B containing the spring-catch *e*, and a recess having transverse grooves at its ends for the insertion of the ticket, substantially as herein set forth.

2. The lid or cover C, pivoted at one end to the plate A, and having at its outer end a notch, *b*, and on its under side longitudinal grooves for the insertion of glass, mica, or other suitable transparent material, substantially as herein set forth.

3. The combination of the plate A, block B, spring-catch *e*, and cover C, all constructed as described and for the purposes set forth.

98,442.—John H. Steiner, Philadelphia, Pa., assignor to himself and Christian Sharps, same place.—*Apparatus for Producing and Carbureting Hydrogen-Gas.*—December 28, 1869.

Claim.—1. Generating hydrogen-gas by treating a mass of iron or zinc scraps or filings with acidulated water, which is caused to pass through the mass of metal, without being retained in contact with the same.

2. The combination, with a receptacle, containing a mass of zinc or iron scraps, of a reservoir, containing acidulated water, which is passed among the particles of metal and from the same, either continuously or intermittently, for the purpose described.

3. The combination of a gasometer, a chamber, containing a supply of acidulated water, and devices, whereby the passage of the liquid from the chamber is regulated on the movement of the gasometer, for the purpose set forth.

4. A deflector, F, arranged, in respect to a pipe, E, for distributing a fluid over a mass of metal, below the deflector, substantially as set forth.

5. The combination of the metal-receptacle, a chamber below the same, and a waste-pipe, so arranged as to prevent the liquid from reaching the metal after passing from contact with the same.

98,443.—Lewis Theobald, Bremen, Ind.—*Carriage.*—December 28, 1869.

Claim.—A coupling or reach, A, constructed of two parts, B and C, connected together by a double socket and bolt, *b*, with intervening leathers F and G, all arranged substantially as herein described.

98,444.—Leopold Thomas, Pittsburgh, Pa.—*Machine for Making Railroad-Spikes.*—December 28, 1869.

Claim.—1. Two circular pointing-rollers, presenting three rotating sides, in combination with an abutment, which presents one stationary side, said parts being arranged so as to gripe the spike-rod point, and cut off the spike-blanks, and deliver them, in position to be carried to the heading-dies, substantially as specified.

2. The laterally-reciprocating carrier-device S, adapted for delivering a spike-blank into a heading-die, and also holding it firmly therein while the heading is being done, substantially as described.

3. Two heading-dies, in combination with a laterally-reciprocating carrier, which will alternately deliver the blanks into said dies, substantially as specified.

4. The combination of two heading-dies, two headers, and a laterally-movable blank-carrier, substantially as specified.

98,445.—James W. Tufts, Medford, Mass.—*Soda-Water Apparatus.*—December 28, 1869.

Claim.—The sirup-cocks E, connected with the bottoms of the cans C by means of flexible tubes G and pipes *c*, whereby the cans may be turned back to afford access to the couplings or connections, substantially as set forth.

98,446.—M. P. Turner, Des Moines, Iowa.—*Wall for Buildings.*—December 28, 1869.

Claim.—1. A wall for buildings, constructed as described, by placing the brick on their edges, their ends separated by vertical wooden studs, and bound with wire placed horizontally between each layer of brick, substantially as herein set forth.

2. The combination of the corner-post *a*, brick *b*, studs *d*, and wires *c i*, all arranged substantially as and for the purposes herein set forth.

98,447.—Oliver Tyson, Otho, Iowa.—*Gauge for Filing Saws.*—December 28, 1869.

Claim.—1. The rollers B, slotted bearings *b*, and frame A, when combined in and for the purpose described.

2. The latch D, having the projection *d*, when combined with the frame A, as and for the purpose described.

3. The device described, consisting essentially of the frame A, rollers B, bearing-bar C, and latch D, when combined as and for the purpose described.

98,448.—GEORGE M. VAN BUREN, New York, N. Y.—*Ticket-Holder.*—December 28, 1869.

Claim.—A ticket-holder, constructed with a portion of one side at the end left off, whereby the contents may be seen in connection with the covering-lid B, and diagonal division-plate *b*, substantially as and for the purpose described.

98,449.—CHARLES C. WAGGONER, Saint John's, Ohio.—*Steam-Engine.*—December 28, 1869.

Claim.—1. The arrow-headed arm E, slide D, lever B, and valve-levers *a'*, combined and arranged substantially as set forth.

2. The rod G, having a right-and-left screw connection, combined with the valve-levers *a'*, as and for the purpose described.

3. The rotatable stress-head *d*, provided with pins *d'*, in combination with follower-screw *e*, elbow-springs *c'*, and packing-ring *c*, substantially as specified.

98,450.—WASHINGTON WALLICK, Philadelphia, Pa., assignor by mesne assignments to WALLICK AND ASAY, same place.—*Manufacture of partly Gilt Frames.*—December 28, 1869; antedated December 22, 1869.

Claim.—The finishing and priming of such portions of wood moldings or oval or arched top frames as have to be gilded prior to the finishing of the main body, as and for the purpose herein set forth.

98,451.—JOHN P. WHIPPLE, Woonsocket, R. I.—*Apparatus for Filling Vials.*—December 28, 1869.

Claim.—The combination and arrangement of the chamber A, gooseneck D *b*, elastic bulb F, gauge E, and spring-compression rod G, in such manner as to draw back to said chamber A any surplus fluid that may have been discharged therefrom, as shown and described.

98,452.—JAMES H. WHITNEY, Brooklyn, N. Y.—*Feeding-Mechanism for Sewing-Machine.*—December 28, 1869.

Claim.—1. The arrangement and combination of the lever D, with its cam-grooves *e* and *f*, the studs *b* and *c*, and feed-bar C, with its surface I, the whole constructed and operating substantially as described and specified.

2. The combination, with the lever D, constructed as described, of the dog E, for regulating the feed of the machine, substantially as described and specified.

98,453.—CHARLES H. WIGHT, Baltimore, Md.—*Stationery-Furniture.*—December 28, 1869.

Claim.—The arrangement upon stand A, of stamp-safe G, calendar B, pen-rack K, letter-scale E, thermometer F, ink-receptacles H I, swinging mucilage-bottle W, and sponge-cup C, in the manner and for the purpose described.

98,454.—C. S. WILLIAMSON, Covert, N. Y.—*Machinery for Operating Churns.*—December 28, 1869.

Claim.—The within-described machine for operating churns, constructed and arranged substantially in the manner herein set forth.

98,455.—ALBERT M. WINN, JEFFERSON KINDLEBERGER, and WILLIAM AUGUSTUS ARNOLD, San Francisco, Cal., assignors to "THE INVENTORS' ASSOCIATION," same place.—*Machine for Boring Blind-Stiles.*—December 28, 1869.

Claim.—1. The combination of the upper and lower series of adjustable bit-holders D' and D, herein described, with the table J, substantially as and for the purpose specified.

2. The combination of the cams M and N, lever P, and block K, or equivalent devices, with the table J, when constructed and arranged substantially as herein described.

3. The sliding-bar V and pulley T, in combination with the operative mechanism described in the second claim.

4. The spacer *b*, composed of the fixed forks *d d* and the adjustable forks *e e*, substantially in the manner and for the purpose described.

98,456.—FREDERICK WITRAM, San Francisco, Cal.—*Harvester-Cutter.*—December 28, 1869.

Claim.—The combination of the slotted cutters, the T-pieces, and cutter-bar, arranged to operate substantially as described.

98,457.—MOSES B. WRIGHT, West Meriden, Conn.—*Apple Coring and Slicing Machine.*—December 28, 1869.

Claim.—1. The slotted plate G, in combination with the head-piece L, so arranged that the knives *e e* will pass through the slots, for the purpose set forth.

2. The combination of bar H, provided with nipple I, with slotted plate G, and head-piece L, and tube J, all constructed and arranged to operate as described.

3. The combination and arrangement of the hollow shaft or tube J, provided with flange *a*, and moving in the standards E E, circular knife *f*, conical head piece L, with cutters *e e*, ferrule K, bar *h*, slotted plate G, and knob *m*, all constructed as described, and arranged to operate substantially in the manner and for the purposes herein set forth.

98,458.—GEORGE F. BOWMAN, Cleveland, Ohio.—*Mounting Writing-Slate.*—December 28, 1869.

Claim.—A common framed slate, secured within a portfolio by means of metallic end-cars C, and supported along its entire length by a metallic back, B, fitted thereto, made in one piece with the ears, and constituting the seat or receptacle for the slate-frame E, and the back of the portfolio A, so that the slate may be removed when necessary, as described.

98,459.—ADAM GOOD, Jr., Titusville, Pa.—*Clamps for Elevating Well Tubes and Rods.*—December 28, 1869.

Claim.—1. The tube-clamp C, constructed as described, with a hinged part, C', in such manner that the whole clamp can be opened for the purpose of admitting the tube or pipe within the clamp sideways, and locked together, so as to complete the circle of the clamp, substantially as hereinbefore described.

2. In combination with a clamp having a hinged section, C', as described, the spring-bolt D, inserted in the journal *c'*, in an axial direction, for the purpose of locking the hinged section C' to the fixed part C, when the tube is embraced between them, substantially as before described.

3. The hinged section C' of the clamp, provided with a bearing-block, c^8, in connection with a receiving-notch c^9, in the fixed part C, for the purpose of supporting the hinged section, and relieving it from strain when the two parts are locked together, as before described.

4. The combination of a hinged sucker-rod wrench, E, with a clamp, constructed with a hinged and fixed section, C and C', substantially as before described.

5. The sucker-rod wrench E, hinged to the clamp, so that it may be turned over or swung back off the opening in the clamp, when not desired for use, substantially as before described.

6. The socket c^5, for the reception of a sucker-rod wrench, which may thus be connected to the clamp, so that it may be removed therefrom and replaced by another having a larger or smaller opening to suit different sizes of sucker-rods, as hereinbefore described.

7. The clamp constructed with one or more lugs c^4 c^5, for the purpose of receiving the arresting-catch H, and the cam-head wrench F, and the wrench-clamps E E', in the manner and for the purpose hereinbefore described.

8. The combination of an elevating swiveled tube-clamp, C C', with a hinged tube-catch, H, operating in the manner substantially as hereinbefore described.

9. The combination of an elevating swiveled tube-clamp with a double eccentric tube-wrench, F, in the manner substantially as hereinbefore described.

10. The combination of the hinged and fixed parts of the clamp C C', hinged wrench, the spring-catch D, with the bail or stirrup A and the swiveled ring B, the whole constructed and arranged substantially as before described.

EXTENSIONS.

JAMES E. SIMPSON, Brooklyn, N. Y.— *Dry-Docks.*—Patented December 5, 1854, No. 12,034; extended January 12, 1869.

Claim.—The method herein described of constructing dry-docks by making use of the natural stratum of clay for the floor of the dock, and continuing the same up through the walls by means of puddling, in the manner set forth, the front of the dock being furnished with gates for the admission of the vessel, as described.

JOHN PEPPER, Gilford, N. H.—*Circular-Knitting Machines.*—Patented December 5, 1854, No. 12,046; reissued October 27, 1863, No. 1,555; extended January 12, 1869.

Claim.—1. The sliding detached needles, in combination with a cam, or its equivalent, for operating two, three, four, or more of them at one and the same time, substantially as described.

2. The series of ribbing-needles, in combination with the plain needles of a circular-knitting machine, operating in the manner substantially as set forth, for the purpose specified.

3. Making a part of the cam or lip which actuates the ribbed needles removable, for the purpose of introducing and withdrawing the needles, as set forth.

4. Making a part of the lip of the cam-plate adjustable, for the purpose of varying the length of stitches as required.

5. Inclining the plane of one series of needles to the plane of rotation of the other series, for the purpose set forth.

ELIAS INGRAHAM, Hartford, Conn.—*Design for Clock-Case.*—Patented December 3, 1861, No. 139; extended January 12, 1869.

Claim.—The design for a clock case as hereinbefore illustrated and described.

AARON H. ALLEN, Boston, Mass.—*Seats for Public Buildings.*—Patented December 5, 1854, No. 12,017; reissued January 15, 1861, No. 21; extended January 12, 1869.

Claim.—A swinging or lever-seat, set and moving upon a cross-shaft or hinges, and sustained when in use by a stop or stops, so disposed as that the rear portion of the seat comes in contact with said stop or stops when the seat is turned down, substantially as herein set forth, and whether combined or not with weights or springs whereby the said seat may assume and retain a vertical or raised position automatically, as herein specified.

CYRENUS WHEELER, Jr., Auburn, N. Y.—*Grain and Grass Harvesters.*—Patented December 5, 1854, No. 12,044; reissued January 3, 1860, No. 875; extended January 12, 1869.

Claim.—1. In combination with the hinged bar H, and the finger-bar, the intermediate shoe M, hinged to said bar H, substantially in the manner and for the purpose set forth.

2. In combination with the hinged bar H, a lever that when released allows said bar to freely swing around its pivoted points, and when fastened holds said bar firmly in its adjusted position, as described.

3. The shoe M as a hinge and a support both to the cutter bar, substantially as described.

4. The socket or recess *n* in the shoe M, for the reception of the finger-bar, substantially as described.

5. In combination with a finger bar, hinged at one of its ends to an intermediate piece also hinged to the main frame, an elevating and supporting caster-wheel for carrying that end of the machine when adjusted for reaping or mowing, substantially as described.

6. The combination of a brace or support, *t*, on the shoe, and a similar brace or support, *u*, on the bar H, for resisting the strain on the finger-bar when reaping, substantially as described, or for transporting it from place to place.

7. The flexible connection for elevating the outer end of the finger-bar, substantially as described.

CYRENUS WHEELER, Jr., Auburn N. Y.—*Harvesters.*—Patented December 5, 1854, No. 12,044; reissued January 3, 1860, No. 876; again reissued May 14, 1867, No. 2,610; extended January 12, 1869.

Claim.—In combination with a harvester-frame that is free to vibrate about a gear-center, a laterally-projecting finger-bar, so hinged to one end or corner of said frame as to permit the finger-bar at each end to follow the undulations of the ground over which it is drawn.

CYRENUS WHEELER, Jr., Auburn, N. Y.—*Grain and Grass Harvesters.*—Patented December 5, 1854, No. 12,044; reissued January 3, 1860, No. 877; extended January 12, 1869.

Claim.—1. So hinging a finger-bar by one of its ends only to the main frame as that it may oscillate or turn round its longitudinal axis, for the purpose of raising or lowering the points of the fingers to adapt the machine to the condition of the ground or of the crop to be cut, substantially as described.

2. In combination with a finger-bar hinged by one of its ends only to the main frame, so that the points of its fingers can be raised or depressed, a connecting-rod or pitman, in two pieces, and so connected that one piece can turn independently of the other, for the purpose of preventing the cramping or torsion of said rod, when the finger-bar is turned substantially as described.

CYRENUS WHEELER, Jr., Auburn, N. Y.—*Grain and Grass Harvesters.*—Patented December 5, 1854, No. 12,044; reissued January 3, 1860, No. 878; extended January 12, 1869.

Claim.—A short finger-bar, so hinged by one of its ends only to an arm, brace, or support that is in turn hinged to the main frame in or near the line of the finger-bar, as that said finger-bar may rock or roll in the line of its length, as well as rise and fall in a line transverse thereto, by being simply drawn over the ground, substantially as described.

CYRENUS WHEELER, Jr., Auburn, N. Y.—*Grain and Grass Harvesters.*—Patented December 5, 1854, No. 12,044; reissued January 3, 1860, No. 879; extended January 12, 1869.

Claim.—In combination with a cutter-bar, the shoe M and its hinge, and a supporting-piece and its hinged connection to the main frame, the arranging of the pivots of said hinges at right angles to each other, and in or near the line of the finger-bar as described.

CYRENUS WHEELER, Jr., Auburn, N. Y.—*Grain and Grass Harvesters.*—Patented December 5, 1854, No. 12,044; reissued January 3, 1860, No. 881; extended January 12, 1860.

Claim.—The combination of the drooping main frame, the loose tongue, and a hinged finger-bar, substantially as and for the purpose described.

CHARLES DANFORTH, Paterson, N. J.—*Throstles for Spinning Cotton.*—Patented December 12, 1854, No. 12,055; extended January 12, 1869.

Claim.—The connecting together the spindle-rails from side to side of the frame in two or more sections, connecting the guards and guard-wire boards with the spindle-rails, so that they will traverse with them, and constructing and arranging the traverse movements so that the different sections will counterbalance each other, essentially as described in this specification.

B. F. BROWN, Dorchester, Mass.—*Hanging Carriage Bodies.*—Patented December 12, 1854, No. 12,051; extended January 12, 1869.

Claim.—1. The combination of the C-springs and perches, arranged substantially as above described, for sustaining the weight of the carriage-body and for relieving the said carriage-body from sudden jolts, the combined action of the C-springs and perches being such as to give an easy and elastic motion to the carriage-body; and, further,

2. The combination of the C-springs, perches, and thorough-braces, the said thorough-braces operating to give an easy motion to the carriage-body, and preventing the swaying of the said carriage-body from twisting or bending the C-springs, as above set forth.

JEREMIAH STEVER, Bristol, Conn.—*Machines for Scraping Metals.*—Patented December 12, 1854, No. 12,076; extended January 12, 1869.

Claim.—The arrangement of the driving-shaft, the connecting-rod F, the slotted lever G, and its fulcrum-lever I, in connection with the rod O and its rocker-shaft C, the whole being for giving the scraper the double motion, and regulating the same, essentially as specified.

PHILIPPINE S. BRACKENRIDGE, Natrona, Pa., administrator of EDWARD STIEREN, deceased.—*Processes for Treating the Mother-Water of Salines.*—Patented December 12, 1854, No. 12,077; extended January 12, 1869.

Claim.—The process for treating the bitter water of such of the salines of the United States, for the purpose of obtaining Epsom salts, (or sulphate of magnesia,) iodine, bromine, and a portion of refined table-salt, using for the purpose the apparatus referred to, or any other which may be found to answer the purpose.

SYLVANUS SAWYER, Fitchburg, Mass.—*Rattan-Machine.*—Patented December 12, 1854, No. 12,073; extended January 12, 1869.

Claim.—1. The combination of a mechanism for dressing the enameled side of the strand of rattan, and a mechanism for reducing a strand to its proper thickness, as specified.

2. The combination of a mechanism for reducing the strand to a proper thickness, and a mechanism for reducing it to its proper width, as specified.

3. The combination of a movable grooved bed or roller, pressure-roller or rollers, and knives for reducing a strip to the width required.

4. The combination and arrangement of a mechanism for reducing the enameled surface or side of the strand, or removing the joints or other protuberances therefrom, a mechanism for reducing a strand to its proper thickness, and a mechanism for reducing it to its proper width, the same being made to act together automatically, essentially as hereinbefore specified.

MARTIN P. M. CASSITY, Nehama county, Kansas, administrator of ISAAC H. STEER, deceased.—*Making Nuts.*—Patented June 19, 1855, No. 13,118; antedated December 19, 1854; extended January 19, 1869.

Claim.—1. Making a nut at a single operation, from a heated bar or plate of metal, by cutting off the blank from the bar, punching a hole or eye through it, and swaging it into shape, substantially as herein set forth.

2. Punching the eye of the nut in a die or press-box, by which it is surrounded and firmly supported, and thus prevented from straining or bursting during the operation, substantially as set forth.

3. Shaping nuts by subjecting them, while hot, to powerful and sudden compression on the punch and in the punching-die, substantially as herein set forth, whereby they are finished with such a degree of smoothness, regularity, and precision, that in the condition in which they come from the machine they are fit to use in the construction of most kinds of machinery, and are at the same time sounder and stronger than unpressed nuts made by machinery.

SYLVANUS SAWYER, Fitchburgh, Mass.—*Machine for Splitting Rattan into Strips.*—Patented January 2, 1855, No 12,141; extended January 12, 1869.

Claim.—1. A combination of mechanism for splitting the rattan into sectoral strips, and a mechanism for removing annular or segmental strands therefrom, substantially as above specified.

2. A combination of mechanism for splitting a stick of rattan into sectoral or triangular parts or strips, and a mechanism for rounding and dressing or finishing either one or more such strips, substantially as specified.

3. A combination of mechanism for splitting a rattan into sectoral parts or strips, a mechanism for removing or separating from such parts annular or segmental strands, as specified, and mechanism for rounding, reducing, or finishing either one or more or all of the triangular strips or parts of the pith or inside portions of the rattan, as specified.

SYLVANUS SAWYER, Fitchburgh, Mass.—*Machinery for Cutting Rattan, &c.*—Patented June 24, 1851, No. 8,178; extended January 12, 1869, by act of Congress.

Claim.—1. The combination of the cutters *a*, as described, with the levers C, and springs *e*, and cams D, or their equivalents, and also handles D′ and links *d*′, for the purpose of applying said cutters or scrapers so as to act upon the stick of rattan in the manner herein described, and by which they may all be operated simultaneously, substantially in the manner herein described.

2. Bending the stick at the point at which the cutter is removing the strand from the surface.

3. The combination of the elements which compose each simple section of the cutting-apparatus, that is to say, of the cutter H and gauge I with the stock G and guide *g*, and bed-roller F, or their equivalents, substantially as described, for the purpose of bending the stick and removing the strand therefrom, whether said section is used alone or is combined with others, as described.

4. The combination of that part of the machine called the "scraper," with the feeding-rollers, or their equivalents, and the several sections of the cutting-apparatus, said sections being so arranged in relation to each other as that the stick, in passing from the one to the other shall be properly bent, and also that the several cutters shall act upon different points of its circumference, the whole being arranged and operating substantially in the manner herein described and set forth.

LYSANDER WRIGHT, Newark, N. J.—*Sawing-Machine.*—Patented January 2, 1855, No. 12,176; extended January 12, 1869.

Claim.—1. The two pulleys, varying in size, for the purpose set forth.

2. The revolving guide-block, for the purposes set forth.

3. The arrangement and combination of the guides, cross-head, hold-fast and guide-block, shoe and screw, for the purpose of raising and lowering, and to give the rake all of which, substantially as set forth.

JOSEPH S. WINDSOR, Providence, R. I.—*Machines for Making Weavers' Harness.*—Patented January 2, 1855, No. 12,175; extended February 9, 1869.

Claim.—1. The mode of operation, substantially as specified, by means of which each twine is formed in a loop, and the spool, or its equivalent, carrying such twine, carried through such loop to form a knot, and then the spool, or its equivalent, which carries the other twine, passed through such loop, that the twine thus carried through may be griped therein when the knot is drawn tight, thus forming the eye of two twines, with a knot in each griping the other twine, as herein set forth.

2. The mode of operation, substantially as herein described, for determining the size of the eyes by closing the knots on the two fingers, or their equivalents, whereby the knots are closed at the proper place on each twine, the two sides of each eye made of equal length, and any desired number of eyes of the same size, as set forth.

3. In combination with the fingers, or their equivalents, on which the knots are closed, the discharger, or any equivalent therefor, by means of which the knots are discharged from the said fingers as they are drawn tight, as set forth.

4. In combination with the mechanism for forming the knots, substantially as herein described, the employment of pincers, substantially as described, or any equivalent therefor, for holding the twines tight after the knots at each end of the eye have been closed, and during the operation of drawing the twines tight around the bands, as set forth.

5. The mode of operation, substantially as described, by means of which the twines are wrapped

around the bands in succession, and formed each into a loop, through which the spool, or its equivalent for carrying the twine, is passed, to effect the tie, substantially as described.

6. The mode of operation, substantially as described, for forming what is termed the leese of the harness, by reversing the motions of the spools, or their equivalents, for carrying the twines, thus carrying the twines alternately on opposite sides of one band, as set forth.

7. The method, substantially as herein described, of mounting the heddles, as they are formed on the slats or rods, by suspending the said slats or rods above the machine, and attaching the bands to which the heddles are tied in the process of formation, to a sliding-bar, or its equivalent, which is elevated as the heddles are formed, as set forth.

8. The method of marking every nineteenth (or any other number) of heddles, by means of the marker receiving motion, in the manner substantially as specified, or by equivalent means.

JESSE W. HATCH and HENRY CHURCHILL, Rochester, N. Y.—*Machine for Cutting Boot and Shoe Soles.*—Patented January 2, 1855, No. 12,128; reissued July 24, 1866, No. 2,321; extended February 9, 1869.

Claim.—1. The reciprocating cutter-shaft A, having the endless-edged knife or die C attached thereto, when the same is made to perform half a revolution between successive cutting-strokes, by means of the segment-gear F, or other equivalent means for that purpose, operating substantially as described.

2. The said reciprocating cutter-shaft, when the same is used in connection with the cutting-block M and guide-bar J, or their equivalents.

3. The said cutter-shaft A, guide-bar J, cutting-block M, and discharging-plate T, or their equivalents, combined and operating together, substantially as described.

P. W. MACKENZIE, Orangeville, N. Y.—*Machine for Blowing Blasts, &c.*—Patented January 2, 1855, No. 12,165; extended February 9, 1869.

Claim.—1. The use of the drum and blower having centers eccentric to each other, the said blower being internal of the drum, and propelled by it, substantially in mode of construction and for the purposes hereinbefore set forth.

2. As a part of my invention, the cylindrical adjustable packing for the arms of the blower, in combination with the drum and blower-arms, substantially in mode of construction and operation and for the purposes hereinbefore set forth.

FANNY HOLMES, Whitehall, N. Y., executrix of JOHN E. NEWCOMB, deceased.—*Grain-Harvesters.*—Patented January 9, 1855, No. 12,215; extended February 9, 1869.

Claim.—1. Making the hinged apron extensible, substantially in the manner set forth.

2. The mode of keeping the scythe-plate to the shear-edges of the guides, said mode consisting in the employment of a grooved pressure-plate, or bar, and set-screws, for the purposes herein set forth.

GEORGE W. HUBBARD and WILLIAM E. CONART, New York, N. Y.—*Operating Slide-Valves in Direct-Action Engines.*—Patented January 9, 1855, No. 12,203; reissued September 18, 1866, No. 2,359; extended February 9, 1869.

Claim.—1. So combining a main engine, or motor, a supplementary valve-working engine, and their induction and eduction valve or valves, that the movement of the valve or valves of the main engine or motor is commenced and partly effected by the piston of said engine, and completed by the piston of the supplementary or valve-working engine, substantially as herein described.

2. When two direct-action engines are so combined that the movement of the induction and eduction valve or valves of one is produced by the movement of the piston of the other, we claim the arrangement of the cylinder and piston of one engine within the valve-chest of the other, substantially as herein described.

3. In operating the slide-valve of one direct-action engine by the piston of another, we claim so connecting the said slide-valve with a tappet-rod, operated by an arm on the piston-rod of its own engine, that the said rod and valve may have each a certain amount of motion, independently of the other, substantially as and for the purpose herein specified.

4. The arrangement of the valves E and *k*, tappet-rod F, and its connections, with the said valves and the cut-off plate *j* and stops *e e*, substantially as described, for the purpose set forth.

AMBROSE FOSTER, Lauraville, Md.—*Building-Block.*—Patented January 16, 1855, No. 12,264; extended February 9, 1869.

Claim.—The building-block, herein described, is claimed as a new manufacture.

JARVIS CASE, La Fayette, Ind.—*Corn-Planters.*—Patented January 16, 1855, No. 12,231; reissued November 16, 1858, No. 623; again reissued April 17, 1866, No. 2,227; extended February 9, 1869.

Claim.—1. The seed-slide *c*, lever *m*, rod *o*, and slide *r*, whereby a valve at the seed-hopper of a corn-planter is so connected with another valve below the seed hopper that, by a single impulse or movement, a charge of seed shall be dropped from each valve, substantially as described.

2. The combination of lever I, rock-shaft *u*, weight *v*, and wire 2, with lever J, whereby the valves of one corn-planter may not only be operated to produce the double drop of seed described, but will become convertible, at will, from a hand-planter to an automatic planter, substantially as described.

3. So arranging and connecting a valve at the seed-hopper of a corn-planter with another valve below the hopper, in combination with a lever, that the attendant of the machine, as it is moved over the ground, by a single throw of the lever, not only discharges the seed from the valve below the hopper, at the proper time, but drops a charge from the valve at the seed-hopper to the valve below, in readiness for the next hill, substantially as set forth.

4. So combining and arranging the mechanism of a corn-planter's valve that the valve in the seed-hopper and the valve in the seed-tube below the hopper may each be made to drop a charge of seed by a single impulse or movement, substantially as described.

JOTHAM S. CONANT, Hackensack, N. J.—*Sewing-Machines.*—Patented January 16, 1855, No. 12,233; reissued November 24, 1868, No. 3,214; extended February 9, 1869.

Claim.—An endless rotary cloth-feeder, substantially as herein described, in combination with a reciprocating eye-pointed piercing-needle.

GEORGE A. BROWN, Middletown, R. I.—*Hay-Making Machine.*—Patented January 23, 1855, No. 12,269; extended February 9, 1869.

Claim.—The construction of a machine, in manner and form as herein described, or in any other manner or form substantially the same, applying the power directly from the driving-wheels to the spreading-apparatus, thus saving the loss of power caused by friction in a series of wheels; using coiled or spring teeth; and the application of such machine to the purpose of spreading and turning hay.

CHARLES METTAM, New York N. Y.—*Rolling Iron Shutters.*—Patented January 23, 1855, No. 12,281; extended February 9, 1869.

Claim.—Making the slats of the form substantially as herein specified, that is to say, with an exterior-protruding arch, *a*, at their center, combined with flat taps or bearings *b* at their edges, the slats being arranged in relation to each other and united together essentially as set forth, by which configuration the shutter may be rolled up in a less compass, the labor of rolling up reduced, and the many other advantages herein set forth obtained.

THADDEUS SELLECK, Greenwich, Conn.—*Method of Working Franklinite Ore.*—Patented January 30, 1855, No. 12,329; extended March 9, 1869.

Claim.—The process of reducing Franklinite ore, to obtain iron and the white oxide of zinc therefrom, by working it under a lighter head in a vertical-walled low-cupola furnace, substantially as described.

CYRENUS WHEELER, Jr., Auburn, N. Y.—*Harvesters.*—Patented February 6, 1855, No. 12,367; reissued June 5, 1860, No. 971; again reissued May 28, 1867, No. 2,632; extended March 9, 1869.

Claim.—1. The combination of a vibrating frame, a finger-bar attached to one corner or end thereof by a hinge, and a platform in rear of said finger-bar, so as to leave an unobstructed space for the delivery of the grain on the ground.

2. The combination of a vibrating frame with the cutting-apparatus hinged thereto, a driver's seat, and an arrangement of one or more levers, whereby the driver in his seat can raise and sustain the cutting-apparatus when desired.

3. The combination of a finger-bar, hinged to a vibrating frame, and a removable platform connected with the said frame by means of the finger-bar only.

4. The combination of a hinged finger-beam and a side-delivery platform, so arranged that the grain may be delivered from the platform on to the ground out of the way of the horses on their next round.

5. The combination of a hinged finger-beam, a lever, and a yielding or linked connection extending from the lever to the vibrating part of the machine to which the finger-beam is attached, whereby the inner end of the finger-beam is raised to pass obstacles in mowing, and raised and sustained in reaping.

6. The combination of a hinged finger-beam, a lever, a yielding or linked connection extending from the lever to the vibrating part of the machine to which the finger-beam is attached, and the seat for the driver, whereby the driver can raise the inner end of the finger-beam to pass obstacles in mowing, and raise and sustain the same in reaping.

7. The combination of a hinged finger-beam with an auxiliary draught rod or bar attached to the inner end of the hinged finger-bar.

8. The platform-bar Q, as a means of securing the platform to the finger-beam, and for strengthening said finger-beam when it has the platform to carry, substantially as described.

9. The inclined caster-wheel S, arranged as represented, and in combination with the platform, whereby the latter is elevated when the machine is being turned short around to the right, substantially as described.

10. In combination with a finger-beam and platform, placed in rear of the main supporting-wheel, the two casters N S, arranged as described, for allowing the machine to turn short around to the right, for the purposes specified.

11. A revolving track-clearer, when operated from a ground-wheel through gearing, substantially as described.

BIRDSILL HOLLY, Lockport, N. Y.—*Elliptical Rotary Pumps.*—Patented February 6, 1855, No. 12,350; extended March 9, 1869.

Claim.—The corrugated or grooved pistons or cogs, in the manner and for the purposes specified.

JAMES EASTERLY, Albany, N. Y.—*Base-Burning Stoves.*—Patented February 13, 1855, No. 12,382; reissued June 30, 1868, No. 3,009; extended March 9, 1869.

Claim.—Constructing a stove, as herein described, with openings for the admission of air to the burning fuel at some point or points above the grate, including between said points and the grate sufficient fuel for ignition, at any one time, substantially as described.

JAMES EASTERLY, Albany, N. Y.—*Base-Burning Stoves.*—Patented February 13, 1855, No. 12,382; reissued June 30, 1868, No. 3,010; extended March 9, 1869.

Claim.—1. A cooking-stove, which is provided with a coal-supply magazine and a combustion-chamber, arranged without the space inclosed by the outer walls of the stove, substantially as described.

2. The combination of a coal-supply magazine with a cooking-stove, when such magazine is wholly outside of the outer walls of the stove, substantially as described.

3. In a cooking-stove, having a magazine for supplying the combustion-chamber with fuel, inlets for the admission of air to the burning fuel, arranged at some point or points above the grate, substantially as described.

4. The relative arrangement of the several parts of the stove, whereby the heated products are caused to circulate around the oven, substantially as described.

RUSSELL JENNINGS, Deep River, Conn.—*Augers.*—Patented January 30, 1865, No. 12,318; reissued October 3, 1865, No. 2,081; again reissued January 16, 1866, No. 2,146; extended March 9, 1869.

Claim.—The projecting of the floor-lips in advance of the cutting-spur, substantially as herein described, and for the purpose herein set forth.

THOMAS C. BALL, Bellows Falls, Vt.—*Screw-Jacks.*—Patented February 27, 1855, No. 12,464; extended March 9, 1869.

Claim.—The combination of the tubular screw B with the standard A and the inner screw C, the whole being arranged substantially as and for the purpose above set forth and described.

NORMAN W. WHEELER, Brooklyn, N. Y.—*Method for Operating Steam-Valves.*—Patented July 31, 1855, No. 13,369; antedated March 1, 1855; extended March 9, 1869.

Claim.—1. Actuating the induction and eduction valves of any double-acting reciprocating steam-engine, by means of steam-pressure derived from the working-cylinder, and released therefrom by the passage of the working-piston over and beyond appropriate ports, when the pistons, or their equivalents, upon which such pressure acts, are so arranged that no movements of the valves shall result from the passage of the working-piston over the first of two or more such ports in any full stroke.

2. Releasing the steam contained between pistons of unequal areas, by the passage of the larger one over its exhaust-port, and stopping the supply between the same pistons, by the passage of the smaller one over its induction-port, substantially as described.

JOHN STEINTHORP, Brooklyn, N. Y.—*Machines for Making Candles.*—Patented March 6, 1855, No. 12,492; extended April 13, 1869.

Claim.—1. The employment of the pistons D D, formed at their upper ends into molds for the tips of the candles, in combination with stationary candle-molds, to throw out the candles in a vertical direction, substantially as herein set forth.

2. The combination of the rack, tip-bar, and clasps, constructed and arranged substantially as described, and for the purposes specified.

NOBLE T. GREENE, Providence, R. I.—*Cut-Off Valves for Steam-Engines.*—Patented March 13, 1855, No. 12,507; extended April 13, 1869.

Claim.—1. Combining with the rocking levers, or their equivalents, for operating the valves, the spring-tappets on the sliding bars, substantially as described, and for the purpose specified.

2. In combination with the sliding spring-tappets that operate the rock-levers, substantially as described, the employment of the gauge-bar, or any equivalent therefor, to regulate the period of closing the valves, whether the said gauge-bar be regulated by a governor or by other means, as set forth.

JOHN C. SCHOOLEY, Cincinnati, Ohio.—*Processes of Curing Meats.*—Patented March 13, 1855, No. 12,530; extended April 13, 1869.

Claim.—The process of curing meat, and preserving fruit and provisions, by means of circulating currents of air, artificially dried by ice or its equivalent, through the room wherein the curing takes place, substantially as and for the purposes set forth

CHARLES CUNNINGHAM, Nashua, N. H.—*Benzole-Vapor Apparatus.*—Patented March 13, 1855, No. 12,535; extended April 13, 1869.

Claim.—1. The combination of the heater *w* and the swinging gas-burner *v*, or of the induction air-pipe A, and any one of the burners of the apparatus, with the water-vessel *u*, the reservoir *k*, or the meter

a, substantially as herein described, for the purpose of keeping the contents of the vessel containing the benzole or light-producing liquid at a given temperature.

2. The combination of the reservoir *k* and the rotary disseminator *n o*, with an ordinary rotary meter-wheel, substantially as herein described, for forcing air through the hollow shaft, or its equivalent, into the reservoir *k*, for the purpose of vaporizing the benzole of the latter vessel.

3. The particular mode of making the rotary disseminator *n o*, substantially as herein described, and for the purposes herein specified, not meaning to claim the use of the hollow shaft for evaporating saccharine fluids.

4. The application and use of the meter-wheel, with its case and contents, as an air-blast apparatus, operated by weights or otherwise, not meaning to claim the method of using the meter for measuring gas.

G. W. N. YOST, Corry, Pa.—*Cultivators.* — Patented March 20, 1855, No. 12,571; extended April 13, 1869.

Claim.—The combination of the adjustable scraper E with the bar-point, &c., D, as already described, for the purpose of barring off the row, and rapping up the middle; also, for scraping off the row, and rolling the scrapings over into the furrow opened by the plow, substantially as set forth in this specification.

LEMUEL T. WELLS, Saint Louis, Mo.—*Printing-Press.* — Patented March 20, 1855, No. 12,568; extended April 13, 1869.

Claim.—The platen U, hinged or pivoted to vibrating arms V, in combination with the stationary pin or pins *n*, and retracting-springs X, or equivalent devices for the purposes explained.

THADDEUS HYATT, New York, N. Y.—*Illuminating Vault-Covers.*—Patented March 27, 1855, No. 12,595; extended April 13, 1869.

Claim.—The method of securing glasses in the apertures of metal plates, or other surfaces, by surrounding the glass with a hoop or belt of lead, gutta-percha, or other equivalent yielding substance, and forcing the glass so surrounded into the aperture, or recess, substantially as and for the purpose specified.

WILLIAM H. GUILD and WILLIAM F. GARRISON, Brooklyn, N. Y.—*Operating Valves in Direct-Acting Steam-Engines.* — Patented March 27, 1855, No. 12,592; reissued July 29, 1856, No. 382; extended April 13, 1869.

Claim.—Giving to the valve the whole or part of the movement necessary to effect the change in the direction of the movement of the engine-piston, by means of the steam acting upon a piston, E, which is fitted to work perpendicularly to the valve, in a cylinder, D, forming a part of the valve-driver, or device employed to drive the valve, and is supported against the pressure of steam by a rocker *e*, or its equivalent, by which it is caused to operate on the valve-driver, substantially as herein set forth.

THOMAS J. HALL, Bryan, Texas.—*Plows.*—Patented April 3, 1855, No. 12,627; extended April 13, 1869.

Claim.—The so hanging of the cutter to the beam as that it may swivel therein, in combination with the supports at the edge of the wheel, substantially as set forth and described.

FINLEY LATTA, Cincinnati, Ohio, administrator of A. B. LATTA, deceased.—*Steam Generators.*—Patented April 10, 1855, No. 12,682; extended May 11, 1869.

Claim.—1. Combining a steam-generator, or boiler, consisting of a coil of tube with a furnace, in such a manner that the flame or products of combustion shall come in immediate contact with said coil, when this coil is combined with a feed-apparatus and gauges, which will enable the engineer to inspect constantly the supply of water, see that it is not interrupted, test its sufficiency, and regulate it at pleasure, according to the varying demands of the boiler, or close the dampers if the feed should be interrupted, substantially as described.

2. While confining the admission of water to the receiving-end of a coiled-tube boiler, limiting the quantity therein, and the supply thereof to the quantity demanded for immediate conversion into steam, for the purposes of avoiding the weight of a large quantity of water, producing steam promptly, saving fuel, and preventing the water from being thrown out of the tube by the steam formed in the lower part thereof, substantially as described.

3. Causing the dischargiug-end of a coiled-tube generator to communicate with and discharge itself into the water-jacket, while all other communication of said coil with said water-jacket is avoided, as described.

ALBERT S. SOUTHWORTH, Boston, Mass.—*Plate-Holders for Cameras.*—Patented April 10, 1855, No. 12,700; reissued September 25, 1860, No. 1,049; extended May 11, 1869.

Claim.—Bringing the different portions of a single plate, or several smaller plates, successively into the field of the lens of the camera, substantially in the manner and for the purpose specified.

AARON WOODMAN, New York, N. Y., administrator of MOSES THOMPSON, deceased.—*Furnaces for Burning Wet Fuel.*—Patented April 10, 1855, No. 12,678; reissued October 7, 1856, No. 398; again reissued March 31, 1857, No. 446; extended May 11, 1869.

Claim.—1. Using green bagasse, wet tan, wet sawdust, and other wet carbonaceous or vegetable substances, as fuel, for the production of intense heat, by mingling the gases issuing from a highly-heated mass thereof with those arising from carbonaceous combustion, by the intervention of a flue, or chamber, with which the chamber or chambers containing the fire and charge of wet substances communicate, and in which said gases meet, mingle, and consume each other on their way to the apparatus to be heated and to the stack.

2. The combustion, for the purpose of a high degree of heat, of bagasse, refuse tan, sawdust, and other wet refuse substance, or very wet and green wood, by the employment of a series of fire-chambers, arranged in any manner substantially as described, to communicate with one common flue, or mixing-chamber, when any number of said chambers is nearly closed to the admission of air when first charged, as described, while the remaining chamber or chambers are in full communication with the mixing-chamber, and have a proper supply of air admitted, and the ash-pit of each chamber in its turn is nearly closed, and then opened, and has air admitted, whereby the heat required is rendered continuous and comparatively uniform, while the fuel in some of the chambers is being heated and decomposed, and its gases sent forward to the mixing-chamber, to any desirable degree, as herein set forth.

CHESTER VAN HORN, Springfield, Mass.—*Slide-Rest for Lathes.* — Patented April 17, 1855, No. 12,747; extended May 11, 1869.

Claim.—Forming the tool block C of two parts, *c d*, and connecting said parts together by a dovetail, or its equivalent, so that the upper part *c* may slide or work on the lower part, *d;* the faces of the two parts *c d*, that are connected, being oblique or inclined, as herein shown, and the part *c* being moved or operated by a screw, E, or its equivalent, for the purpose of elevating or depressing the tool G, as herein described.

CHARLES H. FONDI, Mobile, Ala.—*Dredging-Machines.*—Patented April 17, 1855, No. 12,720; extended May 11, 1869.

Claim.—1. The device for keeping the wheel in gear while raising and lowering, and the combination of the radius bar and the sliding carriage, which carries the shafts of the pinions, and also moves the miter-wheels which slide on the feathered shafts, as this device, and this combination of well-known mechanical devices, is my own invention, and has enabled me to keep the excavating wheel always in gear with the engine, and has never been so applied before.

2. The self-acting latch F, in its particular form and mode of adjustment, it being so shaped and adjusted as to hold on to the lid of the bucket until it is struck by the tipper, and so balanced that by its own gravity it will fall over and latch again before the bucket enters the water. This particular form and adjustment with the pin marked H does away with the necessity of springs, and is the result of careful and expensive experiments.

3. That particular combination of chutes, or sluiceways, G G, which forms an apex under the discharging-tipper, and passes athwartships on an incline toward the scows, which particular combination has enabled me to discharge an excavating-wheel laterally on either or both sides.

JAMES EMERSON, Lowell, Mass.—*Ships' Windlass.*—Patented April 17, 1855, No. 12,718; reissued July 31, 1860, No. 1,020; extended May 11, 1869.

Claim.—1. The combination applied to each chain-wheel, H, and the shaft B, the same consisting of the part pinions G G′, the guard-sectors I I, the pawls J J, the levers K K, and the studs *h′ h′*, the whole being made to operate together and be operated by the shaft B, substantially in manner and for the purpose as specified,

2. The combination and arrangement of the gears C D, N O, and their ratchet-and-pawl mechanisms, or equivalents thereof, applied to the two shafts B E, substantially in manner and for the purposes as specified.

3. The arrangement of the auxiliary capstan F, with the main capstan *a*, and its shaft E, when the latter is connected with and made to operate another shaft B, by gears C D, as described.

NORMAN C. HARRIS, Poultney, Vt.—*Manufacture of Slate-Pencils.*—Patented April 24, 1855, No. 12,759; extended May 11, 1869.

Claim.—Cutting the pencils completely formed, from slabs of slate, by means of a cutter or series of cutters, grooved so as to half form the pencils on one side of each slab, and then reversing the slab and forming the other halves of the pencils, substantially as herein set forth.

CLEMENT RUSSELL, Massillon, Ohio. — *Double-Geared Horse-Power.* — Patented May 1, 1855, No. 12,782; reissued April 15, 1862, No. 1,302; extended May 18, 1869.

Claim.—In connection with double-geared horse-power, the combined use of a center-pin and moving block, for allowing the drive-wheel to adjust itself to the pinions with which it works, substantially as herein described.

GEORGE W. BROWN, Galesburgh, Ill.—*Seed-Planters.* — Patented May 8, 1855, No. 12,811; reissued November 10, 1857, No. 508; again reissued December 11, 1860, No. 1,091; extended May 18, 1869.

Claim.—1. In combination with a seed-planting machine that is operated by hand, the placing of both the driver and the person who operates the seed slides or valves upon the machine in such position as that each may attend to his particular duty, without interfering with that of the other, substantially as described.

2. In combination with a seed-planting machine that is operated by hand, and upon which the driver and the person who works the seed slides or valves sit or stand, the so locating of said seats or stands as that the weight of one of the persons may be used to counterbalance or overbalance the weight of the other, for the purpose of more readily raising or lowering the seeding-apparatus, substantially as and for the purpose described.

GEORGE W. BROWN, Galesburgh, Ill. — *Seed-Planters.* — Patented May 8, 1855, No. 12,811; reissued November 10, 1857, No. 508; again reissued December 11, 1860, No. 1,092; extended May 18, 1869.

Claim. — In combination with a seed-planting machine operated by hand, and having its seeding-devices forward of the center of the wheels and forward of the driver's seat, and a hinged connection, the locating of the seat in such relation to a line drawn through the centers of the wheels or ground-supports, as that the occupant of said seat may, by moving himself or throwing his weight forward or backward, on his seat, without the necessity of rising, walking, or standing over or near the seeding-devices, force the seeding-apparatus into, or raise it from, the ground, substantially as described.

GEORGE W. BROWN, Galesburgh, Ill. — *Seed-Planters.* — Patented May 8, 1855, No. 12,811; reissued November 10, 1857, No. 508; again reissued December 11, 1860, No. 1,093; extended May 18, 1869.

Claim. — In combination with a seed-planting machine that has a hinged or yielding joint between its fixed points of support, and with its seeding-devices between said points, the so connecting of the parts between said fixed points of support as that that portion of the machine carrying the seeding-devices may be raised up out of the ground by the attendant riding on the machine, and be carried by the tongue or horse-necks and the supporting-wheels, substantially as and for the purpose described.

GEORGE W. BROWN, Galesburgh, Ill. — *Seed-Planters.* — Patented May 8, 1855, No. 12,811; reissued November 10, 1857, No. 508; again reissued December 11, 1860, No. 1,094; extended May 18, 1869.

Claim. — In combination with a seed-planting machine so made that the forward part of the machine can be raised up into the supporting-wheels, and there carried, a lock, block, or stop, *h*, which prevents the rear part of the frame from descending so low as to strike the ground or inconvenience the occupant of the seat upon said rear portion of the frame, substantially as and for the purpose described.

GEORGE W. BROWN, Galesburgh, Ill. — *Seed-Planters.* — Patented May 8, 1855, No. 12,811; reissued November 10, 1857, No. 508; again reissued December 11, 1860, No. 1,095; extended May 18, 1869.

Claim.—So combining with a lever by which both may be operated, a valve or slide in the seed-hopper and a valve in the seed-tube, as that a half motion of the lever by the operator riding on the machine by which they are operated, shall both open and close the seed-passages at regular periods, and pass measured quantities only, substantially as described.

LYDIA W. LITCHFIELD, Southbridge, Mass., administratrix of LAROY LITCHFIELD, deceased. — *Shuttles for Looms.* — Patented May 1, 1855, No. 12,780; reissued March 30, 1869, No. 3,355; extended May 18, 1869.

Claim.—1. The combination and arrangement of the spring *d* with the shuttle A, the spindle *a*, the joint-pin *b*, the arm *c*, and the abutment or stop *h*.

2. The combination and arrangement of the pin *e*, and its head *f*, with the shuttle A, the spring *d*, the spindle *a*, the joint-pin *b*, the arm *c*, and the abutment or stop *h*.

3. The combination of means of adjusting the stop *h*, in manner as described, with such stop, the arm *c*, the spindle *a*, the pin *b*, and the spring *d*, arranged with the heel and the joint-pin of the spindle, and in the shuttle, as set forth.

WARREN HOLDEN, Philadelphia, Pa. — *Boot and Shoe Stretchers.*—Patented May 1, 1855, No. 12,793; extended May 18, 1869.

Claim. — Dividing the last A into a number of parts, *a, b, c c*, connected by rods *e e, f f*, and a link, *d*, and forcing said parts outward, so as to stretch the boot or shoe at any desired part, or at all parts, by means of the device composed of the jointed levers *j j*, nuts *k k*, and rod *l*, as herein shown and described.

JEREMIAH STEVER, Bristol, Conn.— *Machine for Burnishing Metals.* — Patented May 1, 1855, No. 12,799; reissued October 11, 1859, No. 834, (whole No. 1,205;) again reissued July 2, 1861, No. 100; extended May 18, 1869.

Claim. — The combination of these three things,

viz: A tool proper for burnishing metals and caused to traverse mechanically, a rest or support for the article to be burnished, and a contrivance for holding the tool and article to be burnished in working-contact by a yielding or spring pressure, the combination being substantially such as specified.

M. M. RHODES AND J. C. RHODES, Taunton, Mass. — *Machine for Leathering Tacks.* — Patented May 8, 1855, No. 12,832; extended May 18, 1869.

Claim. — 1. The employment, substantially as herein described, of a hollow cylinder with an opening in the side to receive the tacks, and a driver working within it in a suitable manner to expel the tacks at the end of the cylinder, and drive them into the leather, or any material serving the same purpose, which is presented in a suitable manner to receive them.

2. Operating the cylinder and driver substantially as described, so that the former may receive a short and the latter a long movement, and that the final operation of the former to cut the leather or other material on the punch may not take place till after the termination of the operation of the latter in driving the tack through the said leather or material, as herein fully set forth, but may be produced by a continual movement of the latter after it has driven the tack through.

3. The divider, consisting of one or more tongues similar to I I′, having a straight edge working nearly close to and across the entrance of the receptacle into which the tacks are fed to be submitted to the operation of the driver, and having a beveled end, terminating in a point, to separate the tacks, one by one, as they are brought by the feeder contiguous to the aforesaid receptacle, and to conduct and push them as required into the said receptacle, substantially as herein described.

4. Forming the mouth *o* of the barrel with a projecting lip *k*, substantially as described, for the purpose of passing outside the point of the tack as the barrel rises and the tack is entering the mouth, and thereby preventing the point from going down the outside of the barrel, and letting the tack fall head foremost into the barrel.

JACOB A. CONOVER, New York, N. Y.,—*Machine for Splitting Wood.*—Patented May 15, 1855, No. 12,857; extended May 25, 1869.

Claim.—1. The movable bed or carriage for carrying and advancing the blocks of wood, in combination with the reciprocating cutters, operating at right angles with the surface of the bed or carriage, substantially as and for the purpose specified.

2. In combination with the bed or carriage and reciprocating cutter, substantially as specified, the employment of the clearing-plate through which the cutters pass, substantially as and for the purpose specified.

3. Providing the said clearing-plate with an elastic pad, and imparting to it an up-and-down motion, substantially as specified, in its combination with the bed or carriage and reciprocating cutter, as specified, by means of which the said plate, under the combination specified, performs the double office of holding the blocks and clearing the cutters, as specified.

E. M. STEVENS, J. B. CROSBY, and J. W. PEARSON, Boston, Mass.—*Seed-Planters.*—Patented May 22, 1855, No. 12,924; reissued January 26, 1869, No. 3,278; extended May 25, 1869.

Claim. — 1. The application of elastic-surfaced feed-rollers in seed-sowing machines, when constructed and arranged to receive and deliver the grain, substantially as described.

2. The combination of the rollers, either or both elastic-surfaced, with the hopper or seed-box of a seed-sowing machine, substantially as and for the purposes described.

3. The combination of the rollers, either or both elastic-surfaced, with a spreader, provided with grooves or tubes, and furrow-openers, substantially as described.

4. The combination of seed-box, rollers, and spreader, provided with grooves or tubes, and furrow-openers, all constructed to operate substantially as described.

THOMAS J. SILSBY, Boston, Mass., administrator of ARAD WOODWORTH, 3d.—*Machinery for Spinning.*—Patented May 15, 1855, No. 12,889; extended May 25, 1869.

Claim.—The use of one or more inner fliers, arranged in a sequence, one within the other, to revolve in the same or different directions, or at the same or different speeds, with the outer flier, all the fliers acting continuously upon the roving-yarns, or material first received by the outer flier, until the spinning or twist is completed, and the yarn or yarns are wound upon the spool or bobbin, thereby twisting and spinning more rapidly, and attaining any desired degree of twist in yarns, as hereinbefore more fully described.

THOMAS J. KNAPP, Philadelphia, Pa.—*Adjustable Tenoning-Tool.*—Patented May 15, 1855, No. 12,864; extended May 25, 1869.

Claim.—The construction of the tool, as herein shown and described, viz, having two segments, D D, of a cylinder secured to the flanch B, of the shank A, by screws *b b*, and having screws *c c*, *d d*, pass through the flanches E E and projections *e e*, of both segments, for the purpose of allowing the segments to be placed nearer together or further apart, as desired, and having a hub or boss, C, at the center of the face of the flanch B, to receive the rings I, of different sizes, corresponding to the diameter of the tenons to be cut, and by which rings the segments are properly adjusted the required distance apart, for the purpose of cutting tenons of various sizes, as herein shown and described.

CHARLES A. DURGIN, New York, N. Y.—*Sewing-Machines.*—Patented May 22, 1855, No. 12,902; reissued June 15, 1858, No. 567; extended June 1, 1869.

Claim.—1. The vibrating hook, or its mechanical equivalent, for holding down the thread, during the partial passage of the shuttle through the loop, when arranged and operating substantially as set forth.

2. In combination with the vibrating hook, or its equivalent, the employment of two continuous rotary motions, one working the needle, the other the shuttle, and this for the purpose of producing sewing without any rest, on either the shuttle or needle in their movements, thereby rendering a sewing-machine capable of rapid action, simple in construction, and noiseless in its operation, substantially as set forth.

JOHN TYLER, West Lebanon, N. H.—*Curbs for Water-Wheels.*—Patented May 22, 1855, No. 12,927; extended June 8, 1869.

Claim.—Combining the within-described hinged lip *v* with the curb of a water-wheel, in such a manner that its inner curved surface forms the termination of the scroll water-way surrounding the wheel, while its straight surface forms one side of the mouth of the said scroll water-way, for the purposes herein set forth.

REBECCA A. MARCHER, New York, N. Y., executrix of ROBERT I. MARCHER, deceased. — *Tool for Grooving Moldings.*—Patented May 22, 1855, No. 12,916; extended June 8, 1869.

Claim.—Forming or cutting transverse and parallel grooves *g* in concave portions *f* of moldings B, by means of a tool-stock, D, attached to a plate, C, by a pivot, E, which is at the center of a circle of which the concave forms a part, the cutter *b* being attached to the lower end of a slide, E′, which is operated or pressed down, when the cutter acts upon the molding, by a spring, H, and elevated upon the return motion of the cutter by raising the lever G, the cutter *a* having a stop or guard, *c*, adjoining it, for the purpose of regulating the depth of the cut, as herein shown and described.

E. W. GOODALE, Clinton, Iowa. — *Machine for Making Paper Bags.*—Patented May 29, 1855, No. 12,945; reissued September 4, 1860, No. 1,033; extended June 8, 1869.

Claim.—1. Cutting off the paper from a continuous roll in a machine for making bags by a cut of such form, that when a bag is completed, one side of the mouth is caused. by the form of the said cut, to pro-

ject beyond the other side, substantially as represented in Figure 12, to afford facility for opening the bag and to form a flap for closing the mouth.

2. Giving the blades of the side-shears J J′, J J′ a curved, angular, or irregular form near the point, for the purpose of cutting out, each by a single cut, the whole piece necessary to leave the lap on one side of the bag, substantially as represented in Figures 4 and 10.

3. Hanging the movable blades J′ J′, of the said shears, on shafts, or pivots, *j j*, perpendicular to their faces, for the purpose of allowing them to cut slightly across the fixed blades by a slight lateral movement, which they receive simultaneously with the movement usually given to the shears, substantially as described.

4. The intermittently-rotating folder, arranged and operating substantially as described, to receive the bag-pieces from the feed-apron L, after the cutting and pasting operations, and to support or partly support them until the creases come into their operating-positions, and afterward to fold them over the creasers.

5. The combination of the side-lappers N N, and the folding stands *d d*, substantially as described, that is to say, the stands being so placed as to support the bag-piece and the creasers during the folding and lapping operations, and to allow the folder to pass between them and the lapping-pieces, being attached to the said folding-stands in such a manner as to be capable of falling over those creasers which are supported by the folding-stands. This I claim irrespective of any manner of operating the lappers, and whether the folding-stands have the lateral movement described, or are stationary.

6. The tooth-roller T, hung in a frame, T′, from the axle of one of the pressing and delivery rollers, and operating substantially as described, to commence the removal of the bags from the creasers.

7. The general arrangement and combination of the several working-parts of the machine, substantially as herein described.

ALPHEUS C. GALLAHUE, New York, N. Y.—*Machines for Pegging Boots and Shoes.*—Patented August 16, 1853, No. 9,947; antedated February 18, 1853; extended June 8, 1869.

Claim.—1. The sliding lever *n′ n′*, having a hook *p p* thereon, for entering the staple of the last, which, passing through slots in the uprights 4*s* 4*s*, of the turn-table, secures the last to said table, *s′ s′*, by the introduction of the wedge *q′*, as set forth.

2. The turn-table *s′ s′*, mounted on the sliding table *v′ v′*, which works on ways upon the moving table *w′ w′*, and is actuated by springs G G, for the purpose of keeping the edge of the sole at all times in contact with the gauge *a*, when this is combined with mechanism for giving the turn-table a semi revolution at the point where its center is brought opposite the awl, by the motion of the table *w′ w′*, that regularity in inserting the pegs may be secured.

3. The combination of the spring *k′*, lever 16, catch 3*s*, or their equivalent, sliding wheels D and 9, racks 6 and 5, miter-wheels F and B, by which a semi-revolution is given the turn-table, while the pegs are being inserted around the heel, by the shifting of cog-wheel 9 from rack 7 into 6, on release of lever 16 from catch 3*s*, and the return of said cog-wheel 9 into rack 7, on the release of spring H from catch I, by which means it acts on the upper side of lever 16, as set forth.

4. The cam 53, rod 52, secured to hammer *z*, and helical spring *f′*, by which a graduated driving-stroke is given the awl *d*, and its rod, in combination with cam 2, rod *h*, upon which slides the hammer Y, and helical spring *g′*, by which a driving-stroke is given the peg-driver alternatively with that of the awl and its rod; it being understood that I do not claim the general feature of a hammer and rod carrying an awl and spring for driving the awl operated by a cam, as this has been done heretofore, but the particular mode or combination in which they are used, as here claimed.

5. Giving the peg-tube and driver a side motion independent of the awl and rod, by means of cam *o* and lever A, or their equivalent, for the purpose of bringing the peg directly over the hole punched in the sole of the shoe by the withdrawn awl, the whole constructed and operating substantially as set forth and shown.

6. The combination of cam *o* and stirrup *m* with the swung peg-cutter R, by which the peg-wood is split with the grain of the wood from below, by the knife at 55, and at the same time forces in the tube in R; it being understood that I do not claim the general feature of a peg-cutter forming one side of the tube through which the peg is driven, but only the particular mode of applying it, as here claimed.

GEORGE W. LA BAW, Jersey City, N. J.—*Miter-Machines.*—Patented May 29, 1855, No. 12,956; reissued May 18, 1869, No. 3,445; extended June 15, 1869.

Claim.—1. The knives or cutters G, H H, and X, attached to the stock F, in combination with the mechanism for operating the same, substantially as described, and for the purposes specified.

2. The knives, or cutter X, arranged as described, in combination with the mechanism for operating the same, for cutting miters, substantially as described and specified.

3. The mechanism for holding the material for cutting miter and square joints, consisting of the bar C, slotted both vertically and horizontally, and the eccentric lever D, constructed substantially as described, and for the purpose specified.

GEORGE FOWLER, Seymour, and SOPHRONIA and MALTBY FOWLER, Wallingford, Conn., administrators of DE GRASSE FOWLER, deceased. — *Machines for Punching Metal.* — Patented April 17, 1855, No. 12,723; extended June 15, 1869.

Claim.—The peculiar manner of connecting the operation of the two levers *n n* and K, to throw the machine out of gear at the time when the punch is at its greatest elevation, when constructed, arranged, and made to operate substantially in the manner herein described.

EDWARD A. STERRY, Norwich, Conn.—*Faucet.*—Patented June 12, 1855, No. 13,047; extended June 15, 1869.

Claim.—The arrangement of the valve *e*, the set-screw *i*, the grooved shank *d*, and the screw-enlargement *c*, of the spindle of the key, with each other, and with the female screw in the sides of the chamber *a*, and the groove K, which cuts through the threads of said screw, by which, in a cock of the usual proportions, the valve can be moved up and down without being turned on its axis, substantially as herein set forth.

CALEB H. GRIFFIN, Lynn, Mass.—*Machines for Cutting Out Boot and Shoe Soles.*—Patented June 12, 1855, No. 13,072; reissued January 26, 1864, No. 1,610; extended June 22, 1869.

Claim.—1. The combination of the depresser-bar with the reciprocating knife-frame, its two movable knives, and their elevating-springs, or equivalent machinery, such being arranged and made to operate together, substantially as specified.

2. So constructing a machine with two knives, each connected to a separate cutter-head, and with their edges toward the surface to be cut thus by the mechanism employed, said knives shall be brought alternately to the cutting-point, the one ascending as the other descends, the one cutting the right and the other the left side of the sole, and so on alternately, in the manner described, and for the purposes set forth.

HENRY BOYNTON, New York, N. Y.—*Reciprocating Railway-Propeller.* — Patented June 19, 1855, No. 13,078; extended June 22, 1869.

Claim.—1. The double-wheeled car-truck, provided with wheels rotating in opposite directions, on the same axis, and running between upper and under simultaneous-acting railways, constructed and applied substantially in the manner and for the purpose described, by which a longitudinal propeller for water-craft is held or confined to its designed railways.

2. In combination with two sets of railways, one for the forward and the other for the back-stroke, the ascending and descending railways, so arranged that the fore-wheels of the truck run upon one track, and the after-wheels upon another track, whereby

the truck is free to ascend and descend, at either end of the main railway, in such manner that a line drawn through its axles will be always parallel, or nearly so, to the main horizontal rails, substantially in the manner and for the purpose described.

3. The lower rising vibrating rails and the upper pivot-moving rails, constructed and applied substantially as herein set forth.

4. The combination of levers in their adaptation to railway-propellers, by which the upper pivot-rails, at either end of the railway, being moved by the truck-wheels, those at the opposite end are similarly moved at the same time, and the addition of safety-levers, by which, if the pivot-rails upon either side end are moved, all the others are similarly moved at the same time.

5. The combination of levers, by which the catch-bars or fastenings to the upper pivot-rails are governed, and disengaged by the truck-wheels, and by which, if either one is disengaged, the others are also at the same time.

6. The combination of the curved toe-rocking shaft, with the oscillating riding-bar sustaining a weight or spring with any reciprocating-arm attached to the engine, for the purpose of gradually and rapidly retarding the piston, and bringing it and the car-truck to a state of rest, as herein described.

WILLIAM BOYD and WILLIAM F. BOYD, Mansfield, Mass.—*Bridle-Winkers.*—Patented June 26, 1855, No. 13,119; extended June 29, 1869.

Claim.—Forming the flaring or projecting portions *a*, of the winkers A of horse-bridles on metallic plates *b*, as herein shown, and for the purpose as set forth.

JONAH NEWTON, New York, N. Y.—*Method of Securing Cutters to Rotary Disks.*—Patented June 19, 1855, No. 13,096; reissued August 13, 1867, No. 2,728; extended June 29, 1869.

Claim.—1. A rotary cutter, consisting of a disk having recesses, which represent the segment of a circle, and teeth adapted to and admitting of being adjusted in these recesses, substantially as set forth, for the purpose specified.

2. The tooth or cutter, consisting of the segment of a ring, having on its convex side a rib adapted to a groove in the above-mentioned recess.

3. The recess *h*, and segmental nut *f*, arranged for securing the tooth or cutter to the disk or plate, as set forth.

WILLIAM MCDONALD, Morrisania, N. Y.—*Machine for Mitering Printers' Rules.*—Patented July 3, 1855, No. 13,197; reissued March 17, 1868, No. 2,899; extended July 6, 1869.

Claim.—The combination, with a movable cutter, of a sector-guide plate, a rule-holding bed, and adjusting-mechanism, constructed and operating substantially as described, and for the purpose specified.

WILLIAM MCDONALD, Morrisania, N. Y.—*Machine for Mitering Printers' Rules.*—Patented July 3, 1855, No. 13,197; extended July 13, 1869.

Claim.—Attaching to the bed A and framing B a sector-guide plate E, to which plate E the bed F is secured by a set-screw G, the bed F having a curved projection *e* attached to it, which projection works in a recess or groove *a* in the plate E, by which the bed F may be adjusted at the desired angle with the plate A, and the ends of the rules beveled or cut as herein shown, and for the purpose set forth.

ADDISON P. BROWN, Syracuse, N. Y.—*Self-Regulating Windmill.*—Patented July 3, 1855, No. 13,156; extended July 13, 1869.

Claim.—1. The helical slot and pin as a means of governing the degree of obliquity of the fans to the wind.

2. The combination of weights with the helical slots and pins, combined and operating in the manner and for the purpose herein specified.

THOMAS CROSSLEY, Bridgeport, Conn.—*Machine for Printing Woolen and other Goods.*—Patented June 20, 1854, No. 11,118; antedated April 5, 1854; extended July 20, 1869.

Claim.—1. The combination of the series of blocks with the stationary cases, or their equivalents, and the endless-chain register, operating in the manner substantially as described, by which any number of colors may be simultaneously applied, and a section of the figure be completed each time the blocks are compressed.

2. The within-described method of holding and feeding the material to be printed, by means of the endless chain and hooks, by which the material is held rigidly until the operation is completed, and thus perfect and unerring register is obtained.

3. The method, substantially as herein described, of giving motion to the blocks, by means of the sector X, or its equivalent, whereby they are moved in by a slow motion, and out with a rapid motion, and are caused to remain stationary at the two extremes of their traverse, while they receive their color and the impression is made.

WILLIAM ADAMSON, Philadelphia, Pa.—*Sand-Paper Cutting-Machine.*—Patented July 3, 1855, No. 13,153; extended July 20, 1869.

Claim.—The employment of thin elastic metallic blades L L′ and K K′, of uniform thickness, so arranged that the revolving blade shall overlap slightly the stationary blade, in the manner and for the purpose substantially as herein set forth.

S. T. THOMAS, Gilford, N. H.—*Looms.*—Patented July 3, 1855, No. 13,187; extended July 20, 1869.

Claim.—1. Combining with each rocker-lever L, and the lifter R thereof, an arm, N, cam *a*, and sector O, or the equivalent or equivalents thereof, the whole being applied together and made to operate in the manner essentially as specified.

2. Combining with the series of lifters R R and the pattern-prism *k*, a series of bent levers, *f f*, or their equivalents, and imparting to the pattern-prism vertical or up-and-down movements, as described, the same being to produce advantages, as stated.

3. When the upper and lower sets of cords of a harness are supported by pulleys, as described, applying both said upper and lower sets of cords to one and the same end of a lever, operated by a cam having a continuous rotation, as described.

4. Combining with the star-cam and lever for moving a set of shuttle-boxes, a mechanism, substantially as described, for imparting an accelerated movement to the shuttle-boxes, as explained, the said mechanism consisting of the additional lever *d*, the movable wedge *h′*, and its operative mechanism, as described.

5. The above-described arrangement of a jacquard, the wires thereof, the impelling-pawls, and the star-cams and their shaft, whereby one jacquard-apparatus, applied at one end of the loom, is made to operate two independent shuttle motions of the loom, as explained.

6. So applying to the main shaft a friction-clutch wheel, and a fly or balance wheel, that the fly may run loosely upon the shaft, and be capable of being moved either toward or away from the friction-clutch, in combination with so connecting the fly with the shipper, that the said fly shall be moved laterally during and by the movements of the shipper, as described.

7. Combining with the friction-wheel and the shipper, as described, a brake-mechanism, for throwing said brake, g^3, into and out of operation, as specified, such mechanism consisting of the lever-latch h^3, the projection l^3, and spring f^3, as specified.

JOHN PEPPER, Gilford, N. H.—*Knitting-Machines.*—Patented July 17, 1855, No. 13,289; reissued September 15, 1863, No. 1,538; extended July 20, 1869.

Claim.—1. The bar *e*, with its grooves *c′*, having its rear elevated above its forward portion, for the purpose of preventing the needle from rolling, as described.

2. In combination with the hooked sinkers and ribbed needles, made to operate substantially as described, the series of "cast-off" sinkers, or those formed without hooks, the same being arranged in the sinker-bar, and not only so as to admit the rib-needles to work between the hooked sinkers, but so as to render the machine capable of performing either plain or ribbed work, as specified.

3. Making the rib-needles take the place of the front or hook of the sinker in forming the loops of the rib-stitch.

HENRY R. WORTHINGTON, Greenburgh, N. Y.—*Water-Meter.*—Patented July 24, 1855, No. 13,320; extended July 20, 1869.

Claim.—The employment of two cylinders, which may be distinguished as cylinders No. 1 and 2, with pistons working in the same, so arranged and combined with regard to each other as that the motion of the piston in cylinder No. 1 shall actuate the supply and delivery valve of cylinder No. 2, while, in like manner, the motion of the piston in cylinder No. 2 actuates the supply and delivery valve of cylinder No. 1, thus producing a positive and direct motion, as herein fully set forth.

STEPHEN E. BOOTH, Orange, Conn., administrator of SHELDON S. HARTSHORN, deceased.—*Buckles.*—Patented July 10, 1855, No. 13,218; extended July 20, 1869.

Claim.—The improvement in the manufacture of buckles, composed of but two pieces, when constructed substantially as herein described.

JOSEPH A. PEABODY, Philadelphia, Pa.—*Machine for Mortising Window-Blinds.*—Patented July 17, 1855, No. 13,271; extended July 27, 1869.

Claim.—1. The bar or carriage N, which carries the blind-stile, and which is moved by lever or otherwise; and the changeable and adjustable arms O, O, or their mechanical equivalents, one end of each of them being connected to the bar N, while their opposite ends are so connected (by pins or otherwise) to the machine, that these arms are changeable and adjustable, so as to impart any desired angle to the mortises, essentially in the manner and for the purposes set forth.

2. The carriage B, or its equivalent, which may be vibrated or moved by lever or otherwise, for carrying a series of revolving mortising-chisels; this carriage, and the chisels attached to it, being so moved that the chisel will form or cut all the angular mortises in one window-blind stile at one operation, essentially in the manner and for the purposes set forth.

KINGSTON GODDARD, Richmond County, N. Y.—*Bridle-Reins.*—Patented July 24, 1855, No. 13,306; extended August 3, 1869.

Claim.—The arrangement of the reins, substantially as herein described, by making the snaffle-rein tubular in part to receive the curb-rein, substantially as and for the purpose set forth.

WELLIS HUMISTON, Troy, N. Y.—*Candle-Mold Apparatus.*—Patented July 24, 1855, No. 13,334; reissued January 22, 1861, No. 1,131; again reissued November 14, 1865, No. 2,108; extended August 3, 1869.

Claim.—1. The combination of the candle-tip mold *a* with the piston or ejecting rod D, in the manner and for the purposes substantially as herein described and set forth.

2. The combination of the said candle-tip mold *a*, arranged and combined with the said piston or ejecting rod D, with the vertical stationary candle-mold B, in the manner and for the purposes substantially as herein described and set forth.

3. The receiving of the candles in and by the vertical candle-supporting bars F, in the position in which they are ejected or pushed from the vertical stationary candle-molds B, and the closing of the said bars F, with the candles therein, and thus and thereby holding them during the operation of the pouring into or filling the said molds immediately below said receiving and supporting bars F, and thereby avoid the danger or liability of breaking the said candles or their tips, substantially as herein described and set forth.

4. The adjusting and holding the wick for the candles in the center of the said vertical stationary candle-molds B, by means of the said candle receiving and supporting bars F, and the candles therein held or supported by means thereof, in connection with the candle-tip molds *a*, each arranged and operated in the manner substantially as herein described and set forth.

5. The employment of the candle receiving and supporting bars F, so constructed and arranged as to open laterally on a vertical line lengthwise of the same, to receive the ejecting candles, and to close with such candles therein, by the means substantially as herein described, and so arranged over and above the said vertical stationary candle-molds B, as to hold said candles therein until the wick is severed between the candles so suspended and those molded in said stationary molds below, and thereby allow of the removal (when necessary) of such candle receiving and supporting bars F, with said candles therein, in the manner substantially as herein described and set forth.

6. The employment of portable candle receiving or supporting bars F, which may be opened and closed laterally, on a vertical line lengthwise of the same, immediately above and near the center of the vertical stationary candle-molds B, and so arranged and combined with the candle-machine frame or trough C that the same may, whenever desirable, be removed therefrom with the candles which have been ejected therein from the stationary molds below, in the manner substantially as herein described and set forth.

7. The holding of the candles F suspended over and above the vertical stationary candle-molds in and by the said candle receiving and supporting bars F, while the said candle-tip molds *a* are being separated or drawn from the tips of the said candles by means of the lowering or downward movement of the platform E, to which the piston or ejecting rods D are attached and combined, in the manner substantially as herein described and set forth.

8. The employment of one or more springs R, constructed of spiral or other shape, in combination with the said vertical candle receiving and supporting bars F, and operating between such bars, for the purpose of opening the said bars laterally on a vertical line lengthwise of the same, so as to allow the candles being ejected from the vertical stationary candle-molds to enter or pass between the same, in the manner substantially as herein described and set forth.

9. A candle-machine, so constructed, arranged, and combined, that by one continued upward movement or operation of the platen or platform E, having thereto attached the said piston or ejecting rods D, three or more rows of candles will be ejected vertically from the vertical stationary candle-molds and into the candle receiving and supporting bars F, opening laterally on a vertical line lengthwise of the same, at or near the center thereof, and immediately over and above the said stationary candle-molds B, in the manner substantially as herein described and set forth.

10. The starting of the candles from the said candle-molds B, by giving a sudden blow to the candle-tip molds *a* and to the candles therein, by means of the upward movement of the platen or platform E, with the said piston or ejecting rods D thereto attached, in the manner substantially as herein described and set forth.

D. C. CUMMINGS, Smithville, N. J.—*Straw-Cutters.*—Patented August 7, 1855, No. 13,385; extended August 10, 1869.

Claim.—1. The upward cut, when the material is fed in by a distinct device for that purpose, by which the dirt is separated from the straw or other material to be cut, passing out beneath the feed-rollers instead of collecting on the stationary guard or cutting-plate, substantially as and for the purposes specified.

2. Operating the movable feed-roller by means of a spur-wheel hung in a vibrating frame or yoke, with a universal coupling for connecting its axis with that of the roller, when said roller is supported on spring-bearings independent of each other, substantially as and for the purposes specified.

JOHN E. BURROWS, Newark, N. J.—*Making Zinc-White.*—Patented August 14, 1855, No. 13,416; extended August 24, 1869.

Claim.—The making of white oxide of zinc from ores of zinc or Franklinite, prepared substantially as above set forth, by means of a furnace having perforated grate-bars and an air-chamber underneath them, in which hot or cold blasts of air are forced to unite with the ignited mass of fuel in a diffused state, by passing through the perforations of the

grate-bars to liberate the zinc, in the form of vapor, in manner of construction and mode of operation, substantially as set forth.

BARNET L. SOLOMON, New York, N. Y., executor of MYER PHINEAS, deceased. — *Design for an Inkstand.* — Patented August 19, 1862, No. 1,652; extended September 7, 1869.

Claim.—The design for an inkstand, represented in the accompanying drawings.

JOHN and THOMAS HOPE, Providence, R. I.—*Machine for Engraving Calico-Printers' Rollers.*—Patented August 21, 1855, No. 13,462; extended September 7, 1869.

Claim.—1. The combination and arrangement of the two sets of measuring markers *i i i i*, the hold-back rods E F, and roller with the plane-surface table B, the same being not only to enable the design to be transferred, it being brought forward in regular sections, but to be maintained flatly upon the table, as described.

2. The two measuring-indices Q B′, in combination with the large pulley M, and the shaft of the driving-roller of the cylinder to be engraved.

3. The means of holding and moving the cylinder so that it shall not only be rotated by pressure against its external surface, but may be readily either removed from or applied to its supports, the same consisting in employing a driving-roller and a bearing-roller at one end of the cylinder, in combination with two sets of bearing-rollers made to extend into a groove around the cylinder, and to support such cylinder, both laterally and longitudinally, as described.

4. The arrangement of the pattern-table, the tracer, and its carriage, the several other carriages, the mechanism for operating each, the wheel M, its shaft, and the supports of the roller to be engraved, the whole constituting an important improvement in engraving-machinery, and securing to it important advantages in operation as well as in construction.

F. A. ROSS, New York, N. Y.—*Sewing-Machine Cases.* — Patented August 28, 1855, No. 13,499; extended September 7, 1869.

Claim.—1. The making the case in the form of a cabinet, which, when opened, will afford space for operating the machine by the treadle, and will form a table for the work by raising the leaves and supporting them by the doors of the cabinet when thrown open, in the manner above described.

2. The construction of the folding top, which, when open, furnishes drawers and shelf for the convenience of the operator, as above described.

HENRY WATERMAN, Brooklyn, N. Y. — *Reaping and Mowing Machines.*—Patented August 28, 1855, No. 13,512; extended September 7, 1869.

Claim. — 1. The combination of the two sets of knives described, with the curvilinear motion of the cutter-bar, as set forth.

2. The elastic fingers, in combination with the curvilinear motion of the cutter-bar.

3. Collecting and depositing the grain by the revolving cradles actuated by the weight of the grain laid upon them by the reel, in the manner set forth.

4. The flexible deflector, constructed and operating as set forth.

JOSEPH ALEXANDER ADAMS, Brooklyn, N. Y.—*Machine for Electrotyping.*—Patented September 4, 1855, No. 13,516; extended September 7, 1869.

Claim.—The reciprocating or vibrating brush M, operated as shown, or in an equivalent way, for the purpose of covering or coating the molds for electrotyping purposes, with any proper powdered substance, the said vibrating brush being combined, when necessary, with a carriage, P, arranged as shown, or in an equivalent way, so that the whole surface of the molds may be presented gradually or successively to the action of the brush as the molds pass underneath it.

CLARK TOMPKINS, Troy, N. Y., and JOHN JOHNSON, Boston Mass.—*Knitting-Machines.*—Patented September 18, 1855, No. 13,586; reissued May 15, 1860 No. 963; extended September 21, 1869.

Claim.—1. The apparatus for revolving the take up machinery in unison with the needle-cylinder, as herein specified, substantially in the manner and for the purpose set forth.

2. Revolving the shaping-plates S and C by a positive motion with and at the same velocity as the take-up motion, substantially as described and for the purposes specified.

JOSEPH D. ELLIOT, Leicester, Mass.—*Machinery for Folding and Measuring Cloth.* — Patented September 11, 1855, No. 13,543; extended September 21, 1869.

Claim.—1. In connection with the pivoted vibrating blades E E′, the rod and swivel for causing said blades to make a half revolution during each vibration, substantially as described.

2. The friction-bar or brake C, in combination with the rolls B D, for preventing the cloth, by the momentum of the blades, from paying off faster than it is folded, substantially as described.

ALBERT BISBEE, Chelsea, Mass. — *Steam-Gauge Cocks.*—Patented September 18, 1855, No. 13,563; extended September 21, 1869.

Claim.—The arrangement, substantially as specified, of the India-rubber disk or facing to the screw-plug or stopper, imbedded and bound at its edges by an extension of the body of the plug as described, with the stationary annular stopper-seat of the cock, essentially as set forth.

JOSHUA H. BUTTERWORTH, Dover, N. J.—*Door-Locks.*—Patented April 11, 1846, No. 4,452; reissued June 4, 1861, No. 88; extended September 21, 1869.

Claim.—1. The pawl described, or its equivalent, when combined with a movable talon that can yield to the pressure of the key-bit or key, to a point beyond its range, in the manner and for the purpose set forth.

2. The use or employment of one or more sets of rotating cam or disk plates, such as are described, having two or more in a set, on the same stem, when so combined with a tumbler or tumblers that lock the main bolt, so that it cannot be withdrawn until all the plates are rotated into such a position, relative to the tumbler, that the resisting parts can enter the notches in the circular cam-plates, pass within the line of their periphery, and so allow the tumblers to withdraw from contact with and resistance to the withdrawal of the bolt.

3. The use or employment of cam or disk-plates, two or more in a set, having the same center or key-bolt, when so constructed that one plate only is attached to the key-bolt, the next plate being moved by the pin projecting from its surface, coming in contact with the ends of the slits described, or in any analogous manner that allows the plate acted upon by the key to move, during a part of its revolution, without engaging and carrying round the next plate.

4. The use or employment of plates such as are described, two or more in a set, when so constructed and arranged as to require the motion of the key to be reversed in order to set each succeeding plate into such a position that the tumblers can descend into their notches and relieve the bolt.

5. The use of a plurality of cam or disk plates, in one set, operated by one key, key-bolt, or stem, when so constructed that the plates are to be set consecutively by means of the same key, key-bolt, stem, or their equivalent, each plate to its own proper position, according to the existing combination, by the aid of the same index, so as to relieve the bolt from the tumbler, or other mechanism combined with the plates, that has kept the bolts from being drawn back.

6. The use or employment of disk or cam plates, such as are described, combined by levers, or their equivalent, with the talon that draws back the bolt, when so arranged that the talon is thereby withdrawn beyond the range of the key-bit, and only allowed to come within its range, so as to be acted upon by it, when the plates have been brought into such a position as to allow that part of the levers that rest upon the edges of the plates to pass into the notches with the line of their periphery.

7. Separate pieces of metal 2 2 2 2, moving upon

pins, when used in connection with cam-plates, so as to change the point of contact between the plates themselves, and thus diversify, regularly or irregularly, the combination of permutation-locks.

RICHARD MONTGOMERY, New York, N. Y.—*Corrugated Beams.*—Patented September 25, 1855, No. 13,599; extended September 28, 1869.

Claim.—A supporting-beam formed of sheet-metal of unequal thickness, bent into a series of folds, substantially as represented in the accompanying drawing, and herein set forth.

THOMAS J. BALL, Bryan, Texas.—*Gang-Plows.*—Patented May 1, 1855, No. 12,791; extended September 28, 1869.

Claim.—The arrangement of the plows and pivoted beams, with the adjustable cross-beams, so that the plows may have a convenient permanent adjustment, in connection with their self-adjusting property in the plow-beam, as set forth and described.

ARCALOUS WYCKOFF and E. R. MORRISON, Elmira, N. Y.—*Boring-Machine.*—Patented September 25, 1855, No. 13,606; reissued October 14, 1856, No. 404; extended October 5, 1869.

Claim.—1. The tubular or hollow auger or bits G, as constructed, having the cutting-lips of the bits approach the center, and yet separated from each other, doing without the use of a screw on the end of the bit, for the purpose of preventing the bit from following the grain of the wood.

2. The worm J, operating on its own axle, and independent of the revolutions of the auger or bits D, for the purpose of clearing away the chips, as set forth.

SAMUEL VAN SYCKEL, Titusville, Pa.—*Interlocking Grate-Bars.*—Patented October 9, 1855, No. 13,669; extended October 5, 1869.

Claim.—The so casting of grate-bars, with projections and recesses on their sides and ends, as that when laid together they shall interlock one over, under, or behind the other, in such manner as to prevent them moving vertically and horizontally, or from warping or twisting, whilst they may be readily removed or replaced, as herein set forth.

ISAAC M. SINGER, New York, N. Y.—*Sewing-Machines.*—Patented October 9, 1855, No. 13,661; extended October 26, 1869.

Claim.—1. In combination with the shuttle, and attached thereto, the employment of a spring pressure-guide, substantially as specified, to control the shuttle-thread as the needle enters the cloth or other substance to be sewed, as set forth, and for the purpose specified.

2. The continuous feed-motion for spacing the stitches, substantially as specified, in combination with the vibratory motion of the needle, imparted in one direction by the feed-motion, and in the opposite by a spring or any equivalent therefor, substantially as and for the purpose specified.

PETER GEISER, Waynesborough, Pa.—*Grain-Separators.*—Patented October 9, 1855, No. 13,644; extended October 26, 1869.

Claim.—1. The vanes within the fan-case, against which the blast acts, for the purpose of closing or opening the register automatically, to regulate the blast, as set forth.

2. The manner of separating the grain from the straw and other impurities, by means of the aprons, combs, and grooved rolls, without the use of a riddle, whether one, two, or more sets of such separating-apparatus be used, substantially as described.

3. In combination with the separating-apparatus, the self-regulating dividing-shelf, upon which the grain drops for the purpose of carrying the heavy grain back and the lighter forward, for a second or more complete separation, as set forth.

4. The hinging of the upper to the lower portion of the straw-carrier frame, and providing it with adjustable slides or conveyers, for dividing and conveying the straw into any desired localities, as set orth.

B. F. MILLER, New York, N. Y.—*Chimney-Stack.*—Patented October 2, 1855, No. 13,620; extended October 26, 1869.

Claim.—Constructing and placing a solid or hollow cone or a pyramid in the mouth of the funnel or smoke-stack, with its apex upward or pointing outward from the mouth of said chimney or pipe, in combination with the surrounding shield, furnished with flanches, as described, constructed and located substantially as set forth.

JAMES M. COOK, Boston, Mass.—*Dust-Deflector for Windows of Railroad-Cars.*—Patented October 16, 1855, No. 13,676; extended October 26, 1869.

Claim.—The rotary deflector or ventilator, constructed and made to operate substantially in manner and for the purpose as specified.

JOSEPH KEECH, Waterloo, N. Y.—*Wash-Boards.*—Patented October 16, 1855, No. 13,682; extended October 26, 1869.

Claim.—Constructing the operating face of wash-boards of a laterally depressed and centrally elevated corrugated surface, substantially as specified, for increasing the effective operation of the board, in the manner set forth.

ALBERT FULLER, New York, N. Y.—*Faucet.*—Patented October 16, 1855, No. 13,677; reissued July 5, 1859, No. 752; extended October 26, 1869.

Claim.—1. The elastic plug-valve, attached to a stem, when operated by an eccentric or its equivalent, substantially as set forth, for the purposes described.

2. The elastic plug-valve, constructed as described, in combination with the cup-shaped cap, to prevent the plug from spreading, substantially as described.

D. W. C. SANFORD, New Orleans, La.—*Refrigerators.*—Patented November 13, 1855, No. 13,802; reissued April 21, 1857, No. 455; extended November 2, 1869.

Claim.—In combination with said shelves or fixtures so placed, constructing the open bottom of the ice-box in such manner that the air may pass freely down through the same and fall directly from the ice upon the articles to be refrigerated, while at the same time the drip of the water is prevented, as set forth.

L. W. LANGDON, Northampton, Mass.—*Sewing-Machines.*—Patented October 30, 1855, No. 13,727; extended November 2, 1869.

Claim.—1. Making a stitch by tying a half knot or a whole knot, at the will of the operator, in the manner herein set forth and described.

2. The snail-worm on the revolving vertical face-plate, for the purpose of holding the tread until the knot is tied, and then casting it off in time for the stitch to be drawn up.

3. The vertical face-plate, into which the shuttle is set for the purpose of carrying it around, and the reaction of the looper K, for quickening the motion of the shuttle as it passes the needle for the purpose of letting the looper pass out freely.

4. Feeding the material by the needle, when combined and arranged with the lateral motion of the needle, in the manner described, that is to say, in connection with the rock-shaft H, with the sliding-step in the end, the connecting-rod *q*, the spring S, the set-screw and rollers R R, the cams T T, the sliding-bar P, and the adjustable lever *o*, as set forth.

JAMES WEST, Syracuse, N. Y.—*Roofing Compositions.*—Patented October 30, 1855, No. 13,733; reissued September 8, 1857, No. 491; extended November 2, 1869.

Claim.—The use of lime in combination with the rubber or gutta-percha and shellac solutions, in the composition as set forth, and for the purpose specified.

JAMES O. LEACH, Ballston Spa, N. Y.—*Looms.*—Patented October 30, 1855, No. 13,724; extended November 9, 1869.

Claim.—1. The combination and arrangement of the shifting-lever N, connecting-rod P, and eccentric R, operated by the gearing T and S, or their mechanical equivalents, substantially in the manner described, for the purpose of varying the movement of

the loom-harness or heddles, so as to produce solid or tubular fabric with the same warp, and vary the solid or tubular weaving, so as to produce bags of any desirable capacity.

2. The mechanism, substantially as herein described, for determining and regulating the intervals between the shift of the cams, viz, stops on the shaft of the eccentric, governed by a stop-lever, said stop-lever being operated by a horizontal cam, which is itself turned by a ratchet-wheel whose pawl is driven by the oscillating motion of the lathe, in combination with the partially-toothed bevel-wheel.

Additional Improvement No. 147, *dated July* 8, 1856.—In operating a loom, the employment of two sets of cams, four in each set, constructed, shaped, and arranged, in reference to each other, as shown in the drawings, the same being movable to the right and left without changing their intervals, and in either position producing a tubular cloth; one set being arranged in reference to the other so that the shift of the cams shall make the harness shift the warp, instantly carrying that part forming the upper web downward, and that forming the lower web upward, making at their crossing a firm single joint.

Additional Improvement No. 159, *dated March* 3, 1857.—The change in the relative position of cams 2 and 4, 6 and 8, in the manner and for the purposes substantially as set forth.

SARAH A. HOLMES, administratrix of RICHARD G. HOLMES, deceased, and WILLIAM H. BUTLER, New York, N. Y.—*Locks.*—Patented October 30, 1855, No. 13,722; extended November 9, 1869.

Claim 1.—Arranging the spindle or arbor E, of the lock, in such a relation with the bolt, that the bolt may be operated by drawing and pressing the spindle or arbor in a direction transversely with the casing of the lock, substantially as described.

2. The cylindrical bolt B, constructed and arranged substantially as shown, and also connecting said bolt to the spindle or arbor E by means of the lever C, as described.

3. The employment or use of the sector-tumblers K, when attached to a sliding-plate, J, and used in connection with a spring, L, which is acted upon by the beveled or inclined projection *n*, at the side of the box or casing I, for the purpose of preventing the lock being picked by obtaining a knowledge of the position of the slots *l*, in the tumblers, by pressing the tumblers singly against the plate K, as herein described.

JOSEPH MCCORD, Philadelphia, Pa.—*Policemen's Rattles.*—Patented November 20, 1855, No. 13,823; extended November 9, 1869.

Claim.—The securing of the handle to the edge of the ratchet-wheel, and at right angles to the axis of the latter, for the purpose of turning down the handle out of the way, thereby rendering the instrument more convenient to carry in the pocket, and for the further purpose of combining a mace and rattle in one instrument, substantially in the manner herein set forth.

MARY F. CROCKER, West Winsted, Conn., administratrix *de bonis non* of WILLIAM R. CROCKER, deceased.—*Machine for Manufacturing Corks.*—Patented October 30, 1855, No. 13,714; extended November 16, 1869.

Claim.—1. The application of the revolving cylindrical cutters, to cut corks from a block or slab, as herein described, whether the cutters are slit to cut tapering or conical, or unslit to cut cylindrical corks.

2. I do not claim a cylindrical cutter, but this mode of construction, use, and application, allowing myself the privilege of varying the same in detail while the principle and distinguishing characteristics are retained.

SAMUEL WETHERILL, Baltimore, Md.—*Process for Making Zinc-White.*—Patented November 13, 1855, No. 13,806; extended November 16, 1869.

Claim.—The process of producing the white oxide of zinc from the ores of that metal by the direct application of the fuel to the ore in the crushed state and in admixture therewith, in combination with a blast of atmospheric air introduced in numerous small jets to the charge of mixed ore and coal, in a thin layer, substantially as specified.

JAMES A. WOODBURY, Boston, Mass.—*Planing-Machine.*—Patented November 13, 1855, No. 13,808; extended November 16, 1869.

Claim.—Making both of the edge-cutters adjustable in such a manner that the board can be fed in from either side of the machine, double guides being provided for the purpose, as specified.

ELI HORTON, Windsor Locks, Conn.—*Lathe-Chuck.*—Patented November 13, 1855, No. 13,787; extended November 16, 1869.

Claim.—1. In combination with the opening H, on the front plate for the introduction of the solid jaws, the hub L, on the back plate for closing said opening and retaining the jaws in their respective slots, substantially as described.

2. The locating of the circular rack in the deep recess or groove formed between the flanges F Z, which not only form a tight casing to protect it from chips, filings, &c., but also support it, as well as the shanks of the screw-bolts, substantially as set forth.

RHUDOLPHUS KINSLEY, Springfield, Mass.—*Tobacco-Presses.*—Patented November 13, 1855, No. 13,790; extended November 16, 1865.

Claim.—The construction and employment of a press-box or compresser, substantially as herein described, in which the article to be compressed can be put, and placed under a press, and when compressed can be retained in that position and removed from the press till set, while the press is liberated for other operations, all as above set forth.

E. HARMON, Gettysburgh, Pa.—*Envelope.*—Patented November 20, 1855, No. 13,838; extended November 30, 1869.

Claim.—The manufacture or preparation of envelopes with parallel lines on the interior of the back as herein set forth.

TIMOTHY BAILEY, Ballston Spa, N. Y.—*Knitting-Machine.*—Patented November 20, 1855, No. 13,811; extended November 30, 1869.

Claim.—1. Actuating the sinking or other burrs by means of a gear-wheel, whose teeth are actuated, or rather acted upon by the needle as a rack, whereby the wings in said burrs are freed from contact with the needles and do not nip the yarn tightly between said wings and the needles, substantially in the manner and for the purposes described.

2. Carrying back the old stitch and holding it back by means of a disk-wheel and segment having a planetary motion, as herein set forth, and also the leading of the finished cloth through a ring, or its equivalent, surrounding a shaft having a planetary motion, whereby the action of the drag-weight is properly adjusted upon different portions of that circuit of the cloth which is being acted upon by the needles and burrs, substantially as herein specified, and in combination with a cloth or knitted tube, to which is imparted substantially such a revolving motion as is herein described.

3. A self-adjusting climbing drag-weight, constructed substantially in the manner herein set forth.

4. A stationary series of needles in circuit, when constructed and arranged substantially in the manner described, in combination with the revolving burrs driven by independent gearing, and traveling from needle to needle, whereby the turning of the finished cloth on its own axis is avoided, and all difficulties incident thereto obviated.

Disclaimer as to 1st and 4th claims filed November 6, 1869.

SETH SIMMONS, Providence, R. I., administrator of NATHAN SIMMONS, deceased.—*Cloth-Stretching Rollers.*—Patented December 4, 1855, No. 13,888; extended December 14, 1869.

Claim.—My improvement in the cloth-stretching roller or cylinder, the same consisting in imparting to its sectional stretchers, while the roller is in revolution, consecutive movements in one direction or away from the middle of the roller in the order as described, and by mechanism substantially as specified, or any mechanical equivalent therefor.

STEPHEN E. BOOTH, Orange, Conn., administrator of SHELDON S. HARTSHORN, deceased.—*Buckles.*—

Patented December 11, 1855, No. 13,907; extended December 14, 1869.

Claim.—Constructing the tongues and loop of the buckle in one part, and at one operation, in such a manner that socket (*a*, Fig. 3) will firmly secure the joint *b* in the other part (Fig. 2) so as to need no other fastening, as herein described.

PHILO MARSH, South Adams, Mass.—*Treating Oils.*—Patented January 1, 1856, No. 14,042; extended December 28, 1869.

Claim.—For the purpose of defecating oil, the employment, in manner substantially as above described, of the pyrogenic constituents of crude pyroligneous acid, except the acetic acid.

JAMES COCHRANE, New York, N. Y.—*Method of Operating and Lubricating Slide-Valves.*—Patented January 1, 1856, No. 14,010; extended December 28, 1869.

Claim.—1. Moving a vibratory, flat, or curved slide-valve within its chest, without the necessity of a stuffing-box, by the means, or similar ones, to those described.

2. Substantially the method of lubricating slide-valves as described, by and through an aperture of the valve or its seat.

DESIGNS.

3,304.—HARRISON EATON, Amherst, N. H.—*Stove.*—January 5, 1869.

3,305.—ISRAEL FOSTER, Philadelphia, Pa.—*Carpet-Pattern.*—January 5, 1869.

3,306.—JACOB GETZ, Buffalo, N. Y.—*Trade-Mark.*—January 5, 1869.

3,307.—WILLIAM GORMAN, New Haven, Conn., assignor to SARGENT AND COMPANY, same place.—*Shelf-Bracket.*—January 5, 1869.

3,677.—Isaac Starr, Jr., Philadelphia, Pa.—*Carpet-Pattern.*—September 28, 1869.

3,678.—George W. Tucker, Manchester, N. H.—*Trade-Mark.*—September 28, 1869.

3,679.—Samuel L. Utter, Brooklyn, N. Y.—*Fire-Place Heater.*—September 28, 1869.

3,680.—Samuel L. Utter, Brooklyn, N. Y.—*Stove.*—September 28, 1869.

3,681.—Nicholas S. Vedder, Troy, and Thomas S. Heister, Lansingburgh, N. Y., assignors to John H. Herron and Company, Pittsburgh, Pa.—*Stove.*—September 28, 1869.

3,682.—John T. Webster, New York, N. Y., assignor to Page, Wilder and Company, Hallowell, Me.—*Floor Oil-Cloth.*—September 28, 1869.

3,683.—John T. Webster, New York, N. Y., assignor to Page, Wilder and Company, Hallowell, Me.—*Floor Oil-Cloth.*—September 28, 1869.

3,684.—John T. Webster, New York, N. Y., assignor to Page, Wilder and Company, Hallowell, Me.—*Floor Oil-Cloth.*—September 28, 1869.

3,685.—John T. Webster, New York, N. Y., assignor to "Crossley Company," Bridgeport, Conn.—*Felt Border.*—September 28, 1869.

3,686.—August Wilhelm, Philadelphia, Pa.—*Reflector.*—September 28, 1869.

3,687.—Alma Bedford, Cold Water, Mich.—*Buckle.*—October 5, 1869.

3,688. — Henry Berger, New York, N. Y.—*Center-Piece.*—October 5, 1869.

3,689. — F. W. Brocksieper, New Haven, Conn., assignor to Sargent and Company, same place.—*Drawer-Pull.*—October 5, 1869.

3,690. — F. W. Brocksieper, New Haven, Conn., assignor to Sargent and Company, same place.—*Latch-Handle.*—October 5, 1869.

3,691. — F. W. Brocksieper, New Haven, Conn., assignor to Sargent and Company, same place.—*Latch-Handle.*—October 5, 1869.

3,692. — F. W. Brocksieper, New Haven, Conn., assignor to Sargent and Company, same place.—*Match-Safe.*—October 5, 1869.

3,693. — F. W. Brocksieper, New Haven, Conn., assignor to Sargent and Company, same place.—*Shuttle-Hook.*—October 5, 1869.

3,694. — F. W. Brocksieper, New Haven, Conn., assignor to Sargent and Company, same place.—*Sash-Lift.*—October 5, 1869.

3,695. — F. W. Brocksieper, New Haven, Conn., assignor to Sargent and Company, same place.—*Sash-Lift.*—October 5, 1869.

3,696. — Stephen Eich, East Toledo, Ohio. — *Door-Knob.*—October 5, 1869.

3,697. — John K. Cappelhoff, New York, N. Y.—*Muff.*—October 5, 1869.

3,698. — Elemir J. Ney, Dracut, Mass., assignor to Lowell Manufacturing Company. — *Carpet-Pattern.*—October 5, 1869.

3,699.—Elemir J. Ney, Dracut, Mass., assignor to Lowell Manufacturing Company. — *Carpet-Pattern.*—October 5, 1869.

3,700. — Elemir J. Ney, Dracut, Mass., assignor to Lowell Manufacturing Company. — *Carpet-Pattern.*—October 5, 1869.

3,701. — Elemir J. Ney, Dracut, Mass., assignor to Lowell Manufacturing Company. — *Carpet-Pattern.*—October 5, 1869.

3,702. — Elemir J. Ney, Dracut, Mass., assignor to Lowell Manufacturing Company. — *Carpet-Pattern.*—October 5, 1869.

3,703. — Elemir J. Ney, Dracut, Mass., assignor to Lowell Manufacturing Company. — *Carpet-Pattern.*—October 5, 1869.

3,704. — Frederick G. Niedringhaus, Saint Louis, Mo.—*Bell.*—October 5, 1869.

3,705.—William Parkin, Taunton, Mass., assignor to Reed and Barton, same place.—*Tea-Service.*—October 5, 1869.

3,706.—William Schwab, New York, N. Y.—*Knitted Cap.*—October 5, 1869.

3,707.—George C. Thilenius, Cape Girardeau, Mo.—*Trade-Mark.*—October 5, 1869.

3,708.—John W. Baldwin, Laconia, N. H.—*Foot-Lathe.*—October 12, 1869.

3,709. — A. F. Barry, New York, N. Y., assignor to himself and Ira G. Lane, same place.—*Elevated Oven-Range.*—October 12, 1869.

3,710. — Wales A. Candee and William C. Richards, Bristol, Conn.—*Bottle.*—October 12, 1869.

3,711.—Byron Clark Smith, Auburn, N. Y., assignor to Hayden and Leitchworth. — *Trade-Mark.*—October 12, 1869.

3,712. — George F. Stone, Baltimore, Md. — *Return-Bend.*—October 12, 1869.

3,713.—Orin L. Bassett, Taunton, Mass., assignor to The Taunton Tack Company, same place.—*Tack-Head.*—October 19, 1869.

3,714. — Orin L. Bassett, Taunton, Mass., assignor to The Taunton Tack Company, same place.—*Tack-Head.*—October 19, 1869.

3,715. — Thomas R. Bearse, Taunton, Mass., assignor to The Taunton Tack Company, same place.—*Tack-Head.*—October 19, 1869.

3,716.—John Bryce, East Birmingham, Pa.—*Ornamenting Glass-Ware.*—October 19, 1869.

3,717. — Jonathan Crabtree, Philadelphia, Pa., assignor to James Bromley and Brothers, same place.—*Carpet-Pattern.*—October 19, 1869.

3,718. — Jonathan Crabtree, Philadelphia, Pa., assignor to James Bromley and Brothers, same place.—*Carpet-Pattern.*—October 19, 1869.

3,719. — David K. Innes and Wesley W. Magill, Cincinnati, Ohio. — *Stove.* — October 19, 1869.

3,720.—Jordon L. Mott, Mott Haven, N. Y.—*Range-Front.*—October 19, 1869.

3,721.—Jordon L. Mott, Mott Haven, N. Y.—*Iron Wash-Stand Slab.*—October 19, 1869.

3,722.—Emery Parker, New Britain, Conn., assignor to The Russell and Erwin Manufacturing Company, same place.—*Shutter-Hook or Bar.*—October 19, 1869.

3,723. — Henry Whitney, East Cambridge-Mass.— *Combined Inkstand and Pen-Rack.*— October 19, 1869.

3,724.— Orin L. Bassett, Taunton, Mass., assignor to The Taunton Tack Company, same place. —*Tack-Head.*—October 26, 1869.

3,725.—Orin L. Bassett, Taunton, Mass., assignor to The Taunton Tack Company, same place. —*Tack-Head.*—October 26, 1869.

3,726.—Frederick Delliker, Trenton, N. J., assignor to The East Trenton Porcelain Company.—*Anchor.*—October 26, 1869.

3,727.—Jonathan Smith Eaton, Boston, Mass. —*Covering Trunks.*—October 26, 1869.

3,728. — George Sharp, Philadelphia, Pa. — *Fork or Spoon Handle.*—October 26, 1869.

3,729. — Elizabeth Mary Stigale, Philadelphia, Pa.—*Flower-Shade and Pedestal.*—October 26, 1869.

3,730.—George William Whitham, Philadelphia, Pa., assignor to MacKellar, Smith and Jordan, same place.—*Printers' Type.*—October 26, 1869.

3,731.—Samuel W. Gibbs, Albany, N. Y.—*Plate of a Stove.*—November 2, 1869.

3,732.—William Gorman, New Britain, Conn., assignor to The Russell and Erwin Manufacturing Company, same place. — *Door-Knob and its Rose.*—November 2, 1869.

3,733.—William Gorman, New Britain. Conn., assignor to The Russell and Erwin Manufacturing Company, same place.—*But-Hinge.*—November 2, 1869.

3,734.—Charles F. Hager, Buffalo, N. Y. — *Rack Pulley.*—November 2, 1869.

3,735.—CONRAD HARRIS and PAUL W. ZOINER, Cincinnati, Ohio.—*Stove.*—November 2, 1869.

3,736.—CONRAD HARRIS and PAUL W. ZOINER, Cincinnati, Ohio.—*Stove.*—November 2, 1869.

3,737.—CONRAD HARRIS and PAUL W. ZOINER, Cincinnati, Ohio.—*Cylinder-Stove.* — November 2, 1869.

3,738.—Suspended.

3,739.—LOUIS ROMMEIKS, Newark, N. J.—*Ornamenting Bridle-Bits.*—November 2, 1869.

3,740.—NICHOLAS S. VEDDER and FRANCIS RITCHIE, Troy, N. Y., assignors to G. H. PHILLIPS AND COMPANY, same place.—*Cook-Stove.*—November 2, 1869.

3,741.—N. BANGS WILLIAMS, New York, N. Y. —*Trunk-Cover.*—November 2, 1869.

3,742.—CHARLES GREIFF, New York, N. Y., assignor to WILCOX AND GIBBS SEWING-MACHINE COMPANY.—*Leg and Treadle of a Sewing-Machine.* —November 9, 1869.

3,743.—N. C. HAWKS, Milwaukee, Wis.—*Printers' Type-Case Stand.*—November 9, 1869.

3,744.—ELBRIDGE J. STEELE, New Britain, Conn., assignor to P. and F. CORBIN, same place.—*Drawer-Pull.*—November 9, 1869.

3,745.—JAMES STORMS and HENRY DORER, Buffalo, N. Y.—*Elevator-Bucket.*—November 9, 1869.

3,746.—JOSEPH B. HOOVER, New York, N. Y.—*Bridle-Bit.*—November 9, 1869.

3,747.—DAVID NEUMANN, New York, N. Y.—*Trade-Mark.*—November 9, 1869.

3,748.—THOMAS YOUNG, Philadelphia, Pa.—*Convex Lid of a Dish or Tureen, &c.*—November 9, 1869.

3,749.—CHARLES WILLIAM ZAREMBA, Chicago, Ill.—*Letter-Box Cover.*—November 9, 1869.

3,750.—EMIL NEY, New York, N. Y. — *Sign.*— November 16, 1869.

3,751.—WILLIAM F. SAYLES and FREDERICK C. SAYLES, North Providence, R. I.—*Trade-Mark.*— November 16, 1869.

3,752.—GEORGE A. SEAVER, New York, N. Y.— *Cotton-Knife.*—November 16, 1869.

3,753.—CYRUS W. STROUT, Hallowell, Me. — *Floor Oil-Cloth.*—November 16, 1869.

3,754.—HERMANN VASSUER, Wallingford, Conn., assignor to SIMPSON, HALL, MILLER AND COMPANY, same place.—*Tea-Service.*—November 16, 1869.

3,755.—WILLIAM S. WORTHINGTON, Newtown, N. Y.—*Perforated Banner.*—November 16, 1869.

3,756.—HENRY BERGER, New York, N. Y.—*Center-Piece.*—November 23, 1869.

3,757.—HENRY BERGER, New York, N. Y.—*Center-Piece.*—November 23, 1869.

3,758.—P. BORN, Selin's Grove, Pa.— *School-Desk.*—November 23, 1869.

3,759.—JOHN BRYCE, East Birmingham, Pa.— *Glass-Ware.*—November 23, 1869.

3,760.—JOHN FLEMING and JOHN HAMILTON, Pittsburgh, Pa.—*Pitcher.*—November 23, 1869.

3,761.—LUTHER W. HARWOOD, Troy, N. Y., assignor to FULLER, WARREN AND COMPANY, same place.—*Plate of a Cooking-Stove.*—November 23, 1869.

3,762.—SAMUEL HILLIER, Allegheny, Pa.—*Coffin.*—November 23, 1869.

3,763.—R. P. MYERS, B. F. ROUSE, and JAMES M. OSBORN, Cleveland, Ohio.—*Stove.*—November 23, 1869.

3,764.—J. R. ROSE and EDWARD L. CALELY, Jr., Philadelphia, Pa., assignors to WILLIAM E. WOOD AND COMPANY, Baltimore, Md. — *Border-Frame of a Fire-Place.*—November 23, 1869.

3,765.—J. R. ROSE and EDWARD L. CALELY, Jr., Philadelphia, Pa., assignors to WILLIAM E. WOOD AND COMPANY, Baltimore, Md.— *Fire-Place Stove.*—November 23, 1869.

3,766.—GEORGE SHARP, Philadelphia, Pa.— *Fork or Spoon Handle.*—November 23, 1869.

3,767.—CHARLES L. W. BAKER, Hartford, Conn. —*Brush.*—November 30, 1869.

3,768.—EDWIN C. CLEVELAND, Worcester, Mass. —*Frame of a Carding-Machine.*—November 30, 1869.

3,769.—HORACE FENN, Plymouth, Conn. — *Trade-Mark.*—November 30, 1869.

3,770.—JULIUS HERRIET, New York, N. Y., assignor to DAVID WOLFE BRUCE, same place.—*Printers' Type.*—November 30, 1869.

3,771.—THOMAS F. LESLIE, Brooklyn, N. Y.— *Label.*—November 30, 1869.

3,772.—WALTER K. MARVIN, New York, N. Y. —*Safe.*—November 30, 1869.

3,773.—WILLIAM SAGE, Indianapolis, Ind.—*Miter-Mold.*—November 30, 1869.

3,774.—GEORGE WILKINSON, Providence, R. I., assignor to GORHAM MANUFACTURING COMPANY, same place.—*Caster.*—November 30, 1869.

3,775.—GEORGE WILKINSON, Providence, R. I., assignor to GORHAM MANUFACTURING COMPANY, same place.—*Caster.*—November 30, 1869.

3,776.—GEORGE WILKINSON, Providence, R. I., assignor to GORHAM MANUFACTURING COMPANY, same place.—*Caster.*—November 30, 1869.

3,777.—GEORGE WILKINSON, Providence, R. I., assignor to GORHAM MANUFACTURING COMPANY, same place.—*Caster.*—November 30, 1869.

3,778.—GEORGE WILKINSON, Providence, R. I., assignor to GORHAM MANUFACTURING COMPANY, same place.—*Caster.*—November 30, 1869.

3,779.—F. KROEBER, New York, N. Y.—*Clock-Case Front.*—December 7, 1869.

3,780.—F. KROEBER, New York, N. Y.—*Pendulum-Clock-Case Front.*—December 7, 1869.

3,781.—ED. ELISHA MACK, Albany, N.Y.—*Collar.*—December 7, 1869.

3,782.—JAMES PATERSON, Elizabeth, assignor to RICHARD H. REEVE and BENJAMIN C. REEVE, Camden N. J.—*Floor Oil-Cloth Pattern.*—December 7, 1869.

3,783.—D. SCHOONMAKER, Springfield, Mass.— *Harness-Buckle.*—December 7, 1869.

3,784.—D. P. BECKWITH, Dowagiac, Mich.— *Stove.*—December 14, 1869.

3,785.—GEORGE JOHNSON, Cincinnati, Ohio, administrator of the estate of GEORGE P. DARROW, deceased, assignor to JAMES L. HAVEN AND COMPANY, same place.—*Plow-Clevis.*—December 14, 1869.

3,786.—Sherman S. Jewett and Francis H. Root, Buffalo, N. Y.—*Stove.*—December 14, 1869.

3,787.—Daniel Keefer, Attica, Ind.—*Masonic Ornament.*—December 14, 1869.

3,788.—William F. Mosely, Brooklyn, N. Y.—*Paper Collar.*—December 14, 1869.

3,789.—Charles H. Waters, Groton, Mass.—*Flower Stand.*—December 14, 1869.

3,790.—Orin L. Bassett, Taunton, Mass., assignor to The Taunton Tack Company, same place.—*Tack-Head.*—December 21, 1869.

3,791.—Orin L. Bassett, Taunton, Mass., assignor to The Taunton Tack Company, same place.—*Tack-Head.*—December 21, 1869.

3,792.—George M. Bull, New Baltimore, N. Y.—*Coffee or Tea Filter.*—December 21, 1869.

3,793.—Robert R. Campbell, Lowell, Mass., assignor to Lowell Manufacturing Company, same place.—*Carpet-Pattern.*—December 21, 1869.

3,794.—Robert Hitchcock, Springfield, Mass.—*Car-Ventilator.*—December 21, 1869.

3,795.—Morton Judd, New Haven, Conn.—*Wardrobe-Hook.*—December 21, 1869.

3,796.—Morton Judd, New Haven, Conn.—*Wardrobe-Hook.*—December 21, 1869.

3,797.—Morton Judd, New Haven, Conn.—*Wardrobe-Hook.*—December 21, 1869.

3,798.—Elemir J. Ney, Dracut, assignor to Lowell Manufacturing Company, Lowell, Mass.—*Carpet-Pattern.*—December 21, 1869.

3,799.—Elemir J. Ney, Dracut, assignor to Lowell Manufacturing Company, Lowell, Mass.—*Carpet-Pattern.*—December 21, 1869.

3,800.—Elemir J. Ney, Dracut, assignor to Lowell Manufacturing Company, Lowell, Mass.—*Carpet-Pattern.*—December 21, 1869.

3,801.—Elemir J. Ney, Dracut, assignor to Lowell Manufacturing Company, Lowell, Mass.—*Carpet-Pattern.*—December 21, 1869.

3,802.—Elemir J. Ney, Dracut, assignor to Lowell Manufacturing Company, Lowell, Mass.—*Carpet-Pattern.*—December 21, 1869.

3,803.—Charles Perkes, Philadelphia, Pa.—*Trade-Mark.*—December 21, 1869.

3,804.—George P. Reed, Boston, Mass.—*Watch-Plate.*—December 21, 1869.

3,805.—George P. Reed, Boston, Mass.—*Watch-Plate.*—December 21, 1869.

3,806.—Henry E. Shaffer, Rochester, N. Y.—*Fruit-Jar Cover.*—December 21, 1869.

3,807.—Abraham Demarest, New York, N. Y.—*Badge.*—December 28, 1869.

3,808.—Emery Parker, New Britain, Conn.—*Key.*—December 28, 1869.

3,809.—Emery Parker, New Britain, Conn., assignor to Russell and Erwin Manufacturing Company, same place.—*Striker-Plate for a Lock.*—December 28, 1869.

REISSUES.

3,250.—Thomas C. Craven, Albany, N. Y.—*Hay Spreader.*—Patented December 8, 1868, No. 84,800; reissued January 5, 1869.

Claim.—1. The combination, with the ends of the central support M and caps *m*, of the bars N, substantially as and for the purpose set forth.

2. The combination of the bars N, having irregular-shaped ends, with the heads or disks L and central support M, substantially as and for the purpose set forth.

3. The combination of the caps *m* with the central support M, substantially as and for the purpose set forth.

4. The combination, with the frame or bearings which support the reel-shaft, of the eccentries E′, substantially as and for the purpose set forth.

5. The combination, with the eccentries E′ and side-rails A, or their equivalents, of the arms *p*, springs *s*, and pins *r*, substantially as and for the purpose set forth.

6. The combination of the driving-gears K with the wheels F, substantially as and for the purpose set forth.

7. The combination, with the frame which supports the reels and the frame which connects the journals of the wheels F, of adjusting-screw R and nuts *v v′*, substantially as and for the purpose set forth.

8. The combination, with the frame of the machine and the driver's seat, of a metallic or other suitable guard or shield, W, arranged substantially as and for the purpose set forth.

9. The employment, in a hay-tedder, of a triangular or three-barred reel, substantially as and for the purpose set forth.

10. A double wire-spring tooth, provided with the two conical coiled springs, arranged and operating substantially as described.

11. The boards T and V, in combination with the hoop Q and guard J′, arranged substantially as and for the purpose set forth.

12. The boards T and V, bands or hoop Q, and guards J′, in combination with the vibrating frame A, all suspended upon the inner ends or journals *e* of short axles E, substantially as and for the purpose set forth.

13. The grooved clasps or fastenings *o o*, in combination with the double-coiled spring-teeth, for securing said teeth to the bars N, as described.

3,251.—William J. Lewis, Pittsburgh, Pa.—*Bolt-Making Machine.*—Patented March 15, 1864, No. 41,929; reissued January 5, 1869.

Claim.—The combination of the dies P P and header A, constructed and arranged, in relation to each other, substantially as described.

3,252.—Benjamin Markley Nyce, Cleveland, Ohio.—*Building for Preserving Fruits and other Substances.*—Patented March 19, 1861, No. 31,734; reissued January 5, 1869.

Claim.—1. An insulated house, constructed substantially as and for the purposes described, having an ice-reservoir above, and separated from it by an air-tight metallic floor.

2. The combination of vestibule W, furnished, as described, with a house so insulated and cooled.

3. The use, in such a house, of a hydrometer, constructed substantially as explained.

3,253.—William T. Mersereau, Newark, N. J.—*Stair-Rod.*—Patented November 20, 1866, No. 59,921; reissued January 5, 1869.

Claim.—1. A stair or vestibule rod, in combination with rings having tips operating in connection with such rings, substantially as described.

2. A ring in combination with a tip hinged to said ring, so that the tip will operate, substantially as described and shown, to permit of the removal of the rod.

3,254. — GEORGE M. PULLMAN, Chicago, Ill., assignee, by mesne assignments, of himself and BEN FIELD. — *Sleeping-Car.* — Patented September 19, 1865, No. 49,922; reissued February 11, 1868, No. 2,862; reissued January 5, 1869.

Claim.—1. The construction and arrangement of the berth A, hinged to the car at B, and supported by the jointed suspenders C, or other analogous devices, the whole so adapted to the car, that when turned up it forms one side of the closed triangular recess, as shown.

2. In combination with the berth A, the sliding partition I, substantially as shown.

3. In combination with the berth A, the movable head-board J, substantially as described.

4. The construction and arrangement of a car-seat, with the back and seat cushions hinged together, and disconnected from the seat-frame, so that the back cushion may be placed on the seat-frame, and the seat-cushion extended to meet the seat-cushion of the opposite seat, substantially as described.

3,255. — ADAM R. REESE, Phillipsburgh, N. J., assignee, by mesne assignments, of MATHIAS RAEZER.—*Horse-Rake.*—Patented October 5, 1858, No. 21,698; reissued January 5, 1869.

Claim.—1. The vibrating cleaner-rods to a two-wheel wire-tooth hay-rake, in combination with a hand-lever for operating the same, operated by the attendant while riding on the seat.

2. In combination with a two-wheel wire-tooth hay-rake, a hand-lever, operated by the attendant while riding on the seat, for simultaneously raising the teeth and operating the vibrating cleaner-rods.

3. In combination with a two-wheel wire-tooth hay-rake, the teeth of which are supported against backward strain, at a point betwixt and within the periphery of the wheels, a hand lever operated by the attendant while riding on the seat, for raising the teeth and operating the vibrating cleaner-rods.

4. A foot-support on the lever, for the purpose of supporting the foot of the attendant while he presses the lever from him while riding on the seat, for the purpose of holding the teeth to the ground while in operation.

5. In combination with a two-wheel wire-tooth hay-rake, with the teeth supported against backward strain at a point betwixt and within the periphery of the wheels, a hand-lever and a connecting-rod or link uniting said lever with the rake-head, in such manner that the operator, while riding on the seat, can raise the teeth, by drawing the upper end of said lever backward, and can depress the same by pressing the lever forward.

6. In combination with a two-wheel wire tooth hay-rake, with the teeth supported against backward strain at a point betwixt and within the periphery of the wheels, a lever and a connecting-rod or link uniting said lever with the rake-head, and operated by the attendant while riding on the seat, for lowering the teeth, by pressing the top of the lever forward, and drawing it backward for raising the teeth, with a device for cleaning the teeth of the gathered hay in their upward motion.

3,256. — EZRA RIPLEY, Troy, N. Y. (Division No. 1.) *Tea-Kettle.*—Patented January 1, 1861, No. 31,035; reissued December 5, 1865, No. 2,122; reissued January 5, 1869.

Claim.—In the manufacture of tea-kettles, such a construction and application of the lid or cover and its appurtenances, that the kettle, by means of an edgewise movement of the cover, shall be opened and closed at its top, substantially as described.

3,257.—EZRA RIPLEY, Troy, N. Y. (Division No. 2.) *Tea-Kettle.*—Patented January 1, 1861, No. 31,035; reissued December 5, 1865, No. 2,122; reissued January 5, 1869.

Claim.—1. An edgewise-movable cover of a tea-kettle or other like vessel, pivoted to a permanently fixed or a removable pintle, substantially as described.

2. A combined bail-lug and pivotal attachment for an edgewise-movable cover, constructed and applied to a tea-kettle or other bailed and spouted vessel, substantially as described.

3. The flat-surfaced base or offset F, formed on a tea-kettle or other bailed vessel, and having a bail-lug rising perpendicularly from it, in combination with an edgewise-movable cover to such vessel, substantially as described.

4. The combination of lug *b*, edgewise-movable cover D, and washer *e*, with the bail or handle C, substantially as described.

5. The construction of the cover D with a perforated offset or ear, *d*, upon its circumference, by which said cover can be pivoted to a tea-kettle or other like vessel, so as to have an edgewise swinging or vibrating movement, substantially as described.

3,258. — D. B. STURDEVANT and B. H. HARMON, Clifton Springs, N. Y.—*Process of Removing Tin from Sheet-Metal.* — Patented March 24, 1868, No. 75,809; reissued January 5, 1869.

Claim. — 1. The process herein described of removing coatings from sheet-metal, by the combined use of hot air and steam, acting upon the mass in a closed retort, substantially as herein set forth.

2. The process herein described of removing tin coatings from sheet-metal, by agitating the metal while subjected to heat.

3. The process herein described of removing tin coatings from sheet-metal, by jarring or agitating the metal while subjected to the combined action of hot air and steam or gases in a closed vessel or retort, substantially as herein set forth.

4. The combination, with a retort provided with a vibratory grate, or equivalent, of an induction-pipe below the grate, and an eduction-pipe above the grate, for the admission of hot air, steam, or gases through the mass, supported by the grate, whether combined or not with water-receptacle, as and for the purposes shown and described.

3,259.—GILBERT W. BARNES, Mount Vernon, N. Y.—*Safety-Bridle.*—Patented August 11, 1868, No. 80,897; reissued January 12, 1869.

Claim. — The cheek-pieces A of the headstall, passing to the driving-rein through the rings of the bit, and supplemental straps B, secured to said cheek-pieces, combined and applied substantially as described.

3,260.—ELIJAH M. CARRINGTON, New York, N. Y.—*Self-Cementing Band for Holding Bank-Notes, Papers, &c.*—Patented August 25, 1868, No. 81,339; reissued January 12, 1869.

Claim.—The self-cementing band, or its equivalent fabric, made substantially in the manner and for the purpose herein set forth.

3,261.—B. B. HILL, Chicopee, Mass.— *Hand-Stamp.*—Patented November 6, 1866, No. 59,395; reissued January 14, 1868, No. 2,836; reissued January 12, 1869.

Claim.—1. The series of type-wheels, having a series of indicating-characters, for the purpose described, and the arrangement therewith of the die and the ink-ribbon, when all parts are attached to and move with the plunger, substantially as set forth.

2. The bracket H, made on or secured to the case G, having a step, *c*, or its equivalent, to enter the lower end of the spindle, and orifice for the screw *e*, for attaching and detaching said ease to the spindle E, substantially as and for the purpose described.

3. The flanch K, in combination with the chase L, for the purpose of easily and quickly attaching the type-plate to or detaching it from a hand-stamp, when constructed and operating substantially as herein described.

3,262.— PETER H. MELLON, Saint Louis, Mo.— *Quilting-Frame.*—Patented June 16, 1868, No. 78,989; reissued January 12, 1869.

Claim.—1. The metallic plates D and keys F, constructed and arranged, in combination with the rollers E, substantially as and for the purposes set forth.

2. In combination with the rollers E, metallic plates D, and keys F, the thimbles on the collars *g*

and the ratchets I, substantially as shown and described.

3,263.—Joseph Reichmann, Dubuque, Iowa.—*Valve for Steam-Engines.*—Patented February 18, 1868, No. 74,593; reissued January 12, 1869.

Claim.—1. The steam and exhaust ports as arranged, whereby to cause motion of the valve-piston, and to check and stop the motion of said piston, substantially as herein set forth.

2. The stationary valve-plate *h*, constructed as described.

3. The combination of the valve *d*, piston *f*, cylinder *c*, plate *h*, and valve *i*, constructed and arranged as described, whereby to induce acting and checking motion, substantially as and in the manner herein set forth.

4. The valve *i* as arranged, whereby to supply steam to the cylinders C and C′, when partially filled with steam, and at the same time to produce exhaust upon the side opposite to that being supplied, as set forth.

5. The valve-plate *h*, constructed and arranged with reference to the ports 2 and 2′, whereby to close the exhaust in their outward movement, and to uncover them to the live steam at their outermost position, substantially as set forth.

3,264.—Robert Murphy, Jasper, N. Y.—*Churn.*—Patented July 5, 1864, No. 43,423; reissued January 12, 1869.

Claim.—1. A barrel-churn, A, rotated upon transverse trunnions *a a*, and provided with counterpoises *dx dx*, the whole being arranged to operate in the manner and for the purpose set forth.

2. Constructing, attaching, and securing the cover to the barrel-churn herein described, as specified.

3,265.—Charles William Siemens and Frederick Siemens, Westminster, England.—*Regenerator-Furnace for Metallurgists and Others.*—Patented March 1, 1864, No. 41,788; reissued January 12, 1869.

Claim.—1. In combination with a furnace, A, and its chimney or smoke-discharge flue P, a system or series of air and gas regenerators, B^1 B^2 B^3 B^4, constructed substantially as specified, and having conduits and dampers, arranged so that air and gas may be led into and through such regenerators and furnace, and out of the chimney, in manner and so as to be operated as and for the purpose or purposes hereinbefore described.

2. The arrangement and combination of the air-space or open chamber C, with the furnace and its system of regenerators, arranged and applied together substantially in manner and so as to operate as described.

3. The arrangement and combination of the air-chamber or space D, or the same and the space E, with the furnace, regenerators, conduits, and damper-chests applied thereto, the whole being substantially as specified.

4. The combination of a furnace with one or more regenerators or means of receiving its waste smoke and gaseous products, and intercepting or receiving heat therefrom, and also with means or devices by which all or a portion of the heat so intercepted or received may be absorbed by the influent air or gas during its passage into or to such furnace, for the purpose of improving or promoting combustion therein.

3,266.—The First National Ore-Smelting and Desulphurizing Company, New York, N. Y., assignees of John Absterdam.—*Roasting and Smelting Metallic Ores in vacuo.*—Patented January 23, 1866, No. 52,120; reissued January 12, 1869.

Claim.—1. Extracting or dilating the impurities contained in ores, when the same are heated in a retort or furnace, by creating and maintaining, within said retort or furnace, a vacuum or partial vacuum, substantially as set forth.

2. Supplying the air, for the combustion of the fuel mixed with the ore in the retort or furnace, by creating and maintaining, within the retort or furnace, a vacuum or partial vacuum, substantially as described.

3. Introducing into the retort or furnace containing the ore, a hydrocarbon-liquid, vapor, or gas, by creating and maintaining, within said retort or furnace, a vacuum, or partial vacuum, substantially as described.

3,267.—Samuel Johnston, Syracuse, N. Y.—*Harvester.*—Patented November 4, 1862, No. 36,843; reissued January 19, 1869.

Claim.—1. A sweep-rake, wholly mounted upon the heel of the finger-beam, or on the inner shoe thereof, in a harvester, which has its cutting-apparatus and platform hinged to the draught-frame in such a manner that the rake-arm sweeps the platform from front to inner side, and maintains a correct position in relation to the finger-beam and platform during the rising or falling movements thereof on the joint or joints.

2. An inclined standard or support, R, or its equivalent, wholly mounted upon the finger-beam or inner shoe of a hinged cutter-bar, and adapted for supporting a sweep-rake in an unchanging position in relation to the platform, without obstructing the free motion of the platform or finger-beam.

3. The combination of a suspended hinge-joint finger-beam and a sweep-rake, mounted directly and wholly upon said suspended hinge finger-beam in a harvesting-machine.

4. So constructing and arranging the several parts of a two-wheel hinge-bar harvester, that the rake-head, mounted on a support attached to the inner end of the finger-bar or shoe, will occupy a position wholly on the grain-side of the inner wheel.

5. The angular or knee-attachment, at the inner end of the rake-arm, for guiding it.

6. The combination of cam, rake-standard, finger-beam, and platform, of a hinged machine, all connected together, as described, so that the operation of the rake will not be interfered with in passing over uneven ground.

7. The double-track or cam-way, on the platform-side of the vertical rake-shaft or pivot, in a two-wheel hinged-bar machine.

8. The combination of the cam-way, arranged in a plane parallel to the rake-shaft, and the knee-attachment to the rake-arm.

9. The combination of a sweep-rake, supported upon a vertical axis, with a radial pivoted arm and a cam, against which the heel or the rake-arm presses, for holding down the rake to the platform while sweeping it off.

10. In combination with a two wheel machine and hinged cutting-apparatus, the support for an automatic rake located on the finger-beam.

11. The combination of an automatic or hand-rake, located wholly upon the finger-beam or shoe of a hinged harvester, and a driver's seat on the main frame.

12. The combination of the automatic or hand-rake standard, attached to the finger-beam, with the cam or guide attached to said standard, the whole vibrating together, in conformity with the platform of said machine, in passing over uneven ground.

13. The combination of the automatic or hand-rake standard, rigidly attached to the finger-beam or shoe of a hinged machine, the cam or guide, and the driver's seat, on the main frame.

14. The metallic support or standard of a sweep-rake, bolted directly on top of the inner end of the finger-bar or the inner shoe.

15. The arrangement and combination, in a reaper and mower, of the hanger I, curved guide O, hinge-joints M and *g*, and shield P′, of shoe P, or their equivalents, constructed and operating substantially and for the purpose described.

16. Constructing and arranging the bearing *n m*, substantially in the manner described, in combination with the pitman-shaft J, shield P′, and hinge-joints M and G, for the purpose set forth.

17. The hanger I I^1 I^2 I^3, *h h′*, constructed as described.

18. The combination of the cam-track, partly inclosed by rails *t* t^1, and a yielding gate t^2, and the guiding-eye R^2, lever Z, crane-like arm U V, pivoted rake-head X, and stale Y, substantially as and for the purposes described.

19. The construction of the jointed crane-like arm U V, substantially as and for the purpose set forth.

20. The construction of the part V of the arm,

with journals, and with points of attachment for the lever Z and part U of the arm, substantially in the manner described.

21. The combination of the yielding gate t^2 and the rails $t\ t^1$, of the grooves or cam-track W, substantially as and for the purpose described.

22. The bearing W, with a groove, and rails $t\ t^1\ t^2$, constructed and operating as described, in combination with the extension $s\ s'$ of the part U of the crane-like arm, for the purpose set forth.

23. The construction and arrangement of the pivoted spring-gate at the end of the horizontal groove or cam-track, substantially as and for the purpose set forth.

24. The combination, in an automatic or hand-rake attachment, of the eye R^2, and the stale Y, for the purpose set forth.

25. The combination and arrangement of the open-slotted adjustable pole-plate $n\ p$, as described, and for the purpose set forth.

3,268. — WILLIAM BAKER, Utica, N. Y.—*Clapboard-Joint.* — Patented May 15, 1854, No. 10,903; reissued September 22, 1863, No. 1,541; extended seven years; again reissued January 19, 1869.

Claim.—1. The construction of the joint of clapboards, or jointed siding, for houses and other buildings, in such manner that the boards, when laid on the frame, shall lie flat and solid, for their whole width, against the frame of the building, and at the same time shall preserve the appearance and advantage of clapboarding, in front, by the outer lip of the upper board, at each joint, overlapping outside the board next below it, for shedding the water, as described.

2. The combination of the lock *a*, in the rear of the joint, for holding the board to the frame at the lower edge, as described, with the extended lip C, Fig. 1, in front, for covering the head of the nail, as described, the whole being constructed, combined, and arranged substantially in the manner and for the purposes herein set forth.

3,269. — P. HOOP, Jr., and R. HOOP, Berlin Cross-Roads, Ohio.—*Hot-Blast Furnace.*—Patented October 27, 1868, No. 83,383; reissued January 19, 1869.

Claim.—1. The rings C, provided with the lugs *e*, in combination with the foundation-plates *c*, as and for the purpose described.

2. The rings C, in combination with the pipes D, made in three or more sections, and having their middle portions outside the chimney, as and for the purpose specified.

3. In connection with an apparatus for heating air for the purposes specified, in which several heating-vessels or chambers are employed, connecting said heaters by a pipe or pipes, D D′, running either partly or wholly outside of the chimney or oven, substantially as and for the purposes described.

4. In a hot-blast apparatus, in which the heaters are connected by pipes, D D′ D″, the arrangement of the joints of said pipes outside of the chimney or oven, so as not to be exposed to the heat thereof, substantially as described.

3,270.—J. G. PUTNAM and J. SCHIEFFELIN, Jr., Tioga, Pa., assignees of J. G. PUTNAM. — *Corn-Sheller.* — Patented May 22, 1860, No. 28,440; reissued January 19, 1869.

Claim. — 1. A divided, yielding perforated concave bed, each section of which is disconnected from the next, and so arranged in the machine as to be free at all points to yield and recede from the cylinder, and also to turn upon both its longitudinal and transverse imaginary axes, substantially as and for the purpose set forth.

2. The combination of the shelling-cylinder, divided yielding perforated concave and elongated journal-slots *c*, to allow the shifting of the journals of the concave section, substantially as shown and described.

3. The arrangement of the divided yielding perforated concave E, feeder B, prongs *b*, guard-plate J, guard L, and shelling-cylinder D, as and for the purpose herein shown and described.

3,271. — CHARLES H. RAYMOND, Southington, Conn. — *Tinman's Machine.* — Patented August 30, 1859, No. 25,278; reissued January 19, 1869.

Claim. — An endwise adjustment applied to the shaft that is fitted to swing in the bearings, substantially as set forth.

3,272. — PAUL SCHMITT, New York, N. Y., assignee of JANE QUANTIN and H. A. PINTARD, administrators of ALPHONSE QUANTIN, deceased.—*Method of Bottling Fluids under Gaseous Pressure.* —Patented March 4, 1856, No. 14,368; reissued October 27, 1868, No. 3,175; again reissued January 19, 1869.

Claim.—1. The above-described device, for filling bottles or other vessels with aerated water and sirup, consisting of conduits or passages A and B, a sirup-measuring chamber, and a discharging-nozzle or their known mechanical equivalents, so arranged that the water and sirup may be discharged from said nozzle common to both, substantially as shown and described.

2. The combination and arrangement in one draught-apparatus of the sirup-measuring chamber and a cock or valve for drawing aerated water, substantially as shown and described.

3. The arrangement of the sirup-conduit and the water-conduit, as a consequence of which the sirup is expelled from its conduit, and such sirup is mingled with the water at some distance from their common outlet, substantially as shown and described.

4. The combination, substantially as described, of a valve or cock for drawing the water, and a device for receiving and dispensing the sirup, as a consequence of which the reception and dispensing of the sirup are accomplished by the manipulation of the valve or cock for drawing the water.

5. The construction and arrangement of the vent-opening and closing device and the water-drawing valve or cock, as a consequence of which they are both operated simultaneously by the movement of water-drawing valve, substantially as shown and described.

3,273. — ALBERT SONNEKALB and JOHN W. LIEB, Newark, N. J. — *Carpet-Bag Frame.* — Patented August 21, 1866, No. 57,399; reissued January 19, 1869.

Claim.—1. A box or L-shaped jaw for a traveling-bag, constructed of sheet-metal, partially cut through transversely and bent lengthwise and transversely, substantially as before set forth.

2. The combination of a box-jaw, constructed of sheet-metal, as before set forth, with a second jaw, of box-form, by means of hinges, the whole forming a complete box-formed frame for a traveling-bag, substantially as before set forth.

3. The hinge, constructed by combining the joint-rod with both an ear and a tubular part of the jaw, substantially as before set forth.

3,274.—HENRY M. STOW, San Francisco, Cal.—*Pavement.*—Patented December 10, 1867, No. 72,110; reissued January 19, 1869.

Claim. — 1. A pavement, composed of alternate tiers of square-ended and wedge-shaped blocks, the wedge-shaped ends of the latter being driven into a foundation-bed of sand or earth, substantially as and for the purpose described.

2. A pavement, composed of blocks, with lower ends wedge-formed, and all driven down into a foundation-bed of sand or earth, substantially as shown and described.

3. A pavement, composed of wood, or in whole or in part of other suitable material, laid on a foundation-bed of sand or loose earth, as described, and a portion of the blocks driven down into said foundation-bed, to pack the same, substantially as and for the purpose specified.

3,275. — ISAAC STRAUB, Kenton County, Ky., administrator of the estate of ABRAHAM STRAUB, deceased.—*Asphaltic Cement.*—Patented November 17, 1863, No. 40,649; reissued January 19, 1869.

Claim.—The within-described cement, when composed of the ingredients, united substantially in the proportions herein specified, for the purpose set forth.

3,276. — EDWIN A. JEFFERY, Trappe, Md., assignee, by mesne assignments, of himself.—*Griddle.*

—Patented August 27, 1867, No. 68,202; reissued January 26, 1869.

Claim.—A griddle, consisting essentially of two plates, A and B, of which one plate can be swung to dump the cakes upon the other, as set forth.

3,277.—DAVID R. PAIST, Willistown, Pa., assignee, by mesne assignments, of himself.—*Harvester.*—Patented June 5, 1866, No. 55,427; reissued January 26, 1869.

Claim.—1. The combination, in a two-wheel harvesting-machine, with rear cut, of a hinged finger-beam and platform, a support for a revolving-rake connected therewith, and a lever, attached to the front end of the drag-bar, for raising, lowering, and inclining the fingers and finger-beam.

2. A lever, attached to the front end of the drag-bar, and arranged in front of the carrying axle, and at right angles, or nearly so, to the path of the driving-wheels, so as to be convenient to the driver, while riding in his seat.

3. The combination, in a two-wheel harvesting-machine, of a flexible finger-beam, a revolving rake-standard connected therewith, and a device for raising, lowering, and inclining the finger-beam and rake-standard, operated by the driver, while riding on a seat supported by the main frame.

3,278.—EDGAR M. STEVENS, JOSEPH B. CROSBY, and JOSEPH W. PEARSON, Boston, Mass. — *Seed-Planter.*—Patented May 22, 1855, No. 12,924; reissued January 26, 1869.

Claim. — 1. The application of elastic-surfaced feed-rollers in seed-sowing machines, when constructed and arranged to receive and deliver the grain, substantially as described.

2. The combination of the rollers, either or both elastic-surfaced, with the hopper or seed-box of a seed-sowing machine, substantially as and for the purposes described.

3. The combination of the rollers, either or both elastic-surfaced, with a spreader, provided with grooves or tubes, and furrow-openers, substantially as described.

4. The combination of seed-box, rollers, and spreader, provided with grooves or tubes, and furrow-openers, all constructed to operate substantially as described.

3,279.—LEONARD ANDERSON, Painesville, Ohio, assignee of JAMES T. GILMORE, same place.—*Machine for Tramming, Staffing, and Fine-Dressing of Millstones.*—Patented October 28, 1862, No. 36,776; reissued February 2, 1869.

Claim.—1. The arm S, provided with a guide, T, of dovetail or other form, for a socket or tool-holding slide to work upon, for the purposes set forth.

2. In combination with the said arm, the shaft *w*, with its crank-plate *y*, beveled gear-wheel *x*, U, the same being attached to and used in combination with the other parts of the machine, to wit, the slide K, cross-plate G, dovetailed guide H, screw-shaft I, nut O, beveled geared wheel N, and crank-plate R, said several parts connecting with the circular pivot-plate F, clips *c* and *c'*, sleeve D, double flange E, hollow journal A, branch feet B, set-screws *c''*, cap-plate *a*, screw-bolts *b*, and lever-nut *y*, the whole constructed and operating as described, and for the purpose specified.

3. The mode described for attaching the machine to the bed and runner-stones, by means of the branched straps and grappling-arms, secured as described, for the purpose set forth.

4. The tramming and staffing block I, with its shaft fitting into the socket-slide *e*, on the guide T of arm S, substantially as and for the purpose set forth.

5. The means employed for raising and controlling the diamond when used in connection with a revolving arm, S, the means consisting of the stock *j*, diamond-handle *l*, spring *n*, finger *o*, lever *p*, and handle *r*, constructed and arranged substantially as shown and described.

6. Attaching the arm S, with its guide T, to the circular plate F, provided with a shoulder, T, when said parts are used in combination with the sleeve D and journal A, and all arranged substantially as and for the purpose set forth.

3,280. — JOHN BROKENSHIRE, Oswego, N. Y.—*Pump.*—Patented August 11, 1868, No. 80,905; reissued February 2, 1869.

Claim.—1. The internal chamber E E, in conjunction with the suction-pipes D, in combination with the barrels A A plungers B B, and valve C C, substantially as set forth.

2. In combination with the above, the opening and plug in line with the suction-pipes D, as and for the purpose set forth.

3,281. — WILLIAM STUART GUINNESS, London, England, for himself and A. G. SEAMAN, New York, N. Y., assignee of WILLIAM S. GUINNESS.—*Sewing-Machine.*—Patented March 15, 1864, No. 41,916; antedated March 9, 1864; reissued February 2, 1869.

Claim.—1. The combination of the driving-shaft arranged lengthwise beneath the frame, the reciprocating needle-arm arranged longitudinally above the table, and always remaining parallel with the driving-shaft and the presser-foot, with the shuttle and feed-bar arranged below the table, and moving transversely to the needle-arm and driving-shaft, as and for the purposes specified.

2. The combination, substantially as set forth, of the longitudinally-slotted feed-bar, the fulcrum-pin *l*, and its support L, with the ledge L^1, guide l^1, and adjusting-screw l^2, whereby the feed can be varied at pleasure.

3. The thread-regulator or take-up P, constructed, arranged, and operating as set forth.

4. The combination, with the shuttle, of the adjustable holder and reciprocating carrier, as set forth.

5. The combination of a needle and a shuttle, operating substantially as described, with a needle-way cut away at one side, to or below the bottom of the shuttle, for the purposes specified.

6. The combination, substantially as set forth, with the reciprocating slide I, of the adjustable holder h^1, whereby shuttles of various sizes may be employed.

7. The combination, substantially as set forth, of the oscillating slotted treadle X, the adjustable arms *x*, the ball-and-socket joint, the pitman, and the balance-wheel, for the purposes specified.

3,282.—HENRY HAUER, Philadelphia, Pa., administrator of the estate of LOUIS BAUHOEFER.—*Method of Treating Cork for the Manufacture of Mattresses, &c.*—Patented November 6, 1866, No. 59,342; reissued February 2, 1869.

Claim.—1. Subjecting particles of cork, to be used as a stuffing-medium for mattresses, cushions, &c., and for other packing-purposes, to the action of the products of combustion, for the purpose specified.

2. Charring, roasting, or partially burning particles of cork, (to be used as a filling-material,) for the purpose described.

3. Subjecting particles of cork to the action of the fumes or vapors of burning or heated aromatic substances, as and for the purpose specified.

3,283. — HENRY HAUER, Philadelphia, Pa., administrator of the estate of LOUIS BAUHOEFER.—*Prepared Cork for the Manufacture of Mattresses, &c.*—Patented November 6, 1866, No. 59,342; reissued February 2, 1869.

Claim.— Particles of cork, roasted, charred, or partly burnt, as set forth, for the purpose specified.

3,284. — ANDREW J. HOLMAN, Philadelphia, Pa., assignee, by mesne assignments, of ISAAC C, TWINING. — *Harvester-Rake.* — Patented August 14, 1860, No. 29,640; reissued February 2, 1869.

Claim.—1. A crown or bevel wheel, to which the rake-arm is pivoted, located on the inner side of the drive-wheel, and below the highest point thereof.

2. The arrangement of the crown or rake-driving wheel, to which the rake-arm is pivoted, on the inner side of the drive-wheel, and within the periphery of said wheel.

3. Hinging or pivoting the rake-arm to the upper face of a crown or rake-driving wheel, so as to permit the necessary rising and falling movements of the rake.

4. A sweep rake hinged to a horizontal, or nearl horizontal, bevel or rake-driving wheel at a poin

inside of the ground or drive-wheel, and below the highest point of said wheel.

5. The use of the inner bearing of the drive-wheel as the support for the shaft, or pivot, of the crown or bevel wheel, to which the rake-arm is pivoted.

6. An automatic rake, hinged or pivoted at a point within the periphery of the driving-wheel, to a crown or bevel wheel which conforms to the movement of the platform, in combination with a lifting-mechanism, controlled by the attendant in his seat on the machine, for adjusting the position of the cutting-apparatus, platform, and rake.

7. An automatic rake, hinged to and operated by a horizontal crown or bevel wheel, in combination with means whereby the rake may be made to discharge the grain more or less frequently, as the condition of the crop may require.

8. The arrangement of the wheels I K G, toothed at their peripheries in sections, in connection with the bent bar *o*, cam H, and rake-bar L, attached to the upper surface of the cam-wheel K, substantially as and for the purpose set forth.

9. The arrangement, with the wheel I, of the pinions *d e*, cam *g*, and lever G′, and spring *c*, substantially as shown, for the purpose of giving the necessary dwells or cessations of movement to the rake, as and for the purpose set forth.

3,285.—Jason B. Loomis, Chelsea, Mass.—*Bustle.*—Patented August 18, 1868, No. 81,281; reissued February 2, 1869.

Claim.—1. Arrangement of ribs or bow-springs *b*, the bow or back-spring *e*, the hook *f*, or its equivalent, and the adjusting strap *g*, the whole being applied to a waistband, as set forth.

2. The combination as well as the arrangement of the shield or abutment *k*, with the bustle, made and provided with the spring *e*, as set forth.

3. The arrangement as well as the combination of the bow-springs or ribs *b e*, the flexile pocket-frames A A, the waistband *a*, and the joining flexile bands *d*.

3,286.—Alois Peteler, New Brighton, N. Y., assignee of Johann N. Peteler.—*Portable Railway.*—Patented September 4, 1866, No. 57,826; reissued February 2, 1869.

Claim.—1. In a portable railway, a section, A, composed of two rails, which are connected by cross-ties, *m*, and provided at their ends with hooks and staples, or any other suitable fastening, as shown and described.

2. A turn-out, B, made in two halves, which are provided at their ends with hooks and staples, or other suitable fastenings, as set forth.

3. A supporting-frame, C, composed of two rails, supported by cross-ties, *m*, which are connected by longitudinal boards *o*, said rails being provided at their ends with hooks and staples, or other suitable fastenings, as shown and described.

4. A crossing, E, constructed as shown in Fig. 5, and provided at its ends with hooks and staples, or other suitable fastening, as set forth.

5. The combination of the perforated ears *a* and turn-table F, constructed and operating substantially as described.

3,287.—William Green, Cleveland, Ohio.—*Cement-Roofing Fabric.*—Patented May 29, 1866, No. 55,087; reissued February 9, 1869.

Claim.—The herein-described sheet-roofing, as a new article of manufacture, made substantially as set forth.

3,288.—William Green, Cleveland, Ohio.—*Roofing-Cement, Paint, &c.*—Patented March 13, 1866, No. 53,140; reissued February 9, 1869.

Claim.—A paint or cement, composed of the ingredients herein set forth, prepared and compounded in the manner specified.

3,289.—George P. Hopkins, Albion, N. Y.—*Cooking-Stove.*—Patented June 2, 1863, No. 38,744; reissued February 9, 1869.

Claim.—1. The magazine D, in combination with the flues C and G and fire-chamber A, substantially as shown and described.

2. The curvature of the magazine D and the flues C and G, as herein set forth.

3. The tubular perforated shaft J, fitted in the lower part of the flue G, and provided with the wing *c* and serrated plate *d*, and placed in such position, relatively with the fire-chamber A and magazine D, to operate as and for the purpose specified.

4. The sliding or adjustable back, L, of the fire-chamber A, arranged as shown, when arranged and combined with the flues C G, perforated shaft J, and the magazine D, as herein set forth.

3,290.—Charles Parker, Meriden, Conn., assignee, by mesne assignments, of John A. Bailey.—*Rolling Taper Bars of Iron.*—Patented April 13, 1858, No. 19,963; reissued February 9, 1869.

Claim.—1. The combination of one roll of a set with eccentrics applied to its journals, for the purpose of imparting reciprocating motion to the roll, substantially as set forth.

2. Combining a rotating eccentric with a second eccentric arranged upon it, so that the reciprocating movement imparted by one of the eccentrics may be varied by the other, substantially as set forth.

3. The combination of one roll of a set with two eccentrics arranged upon each journal, for the purpose of imparting a reciprocating motion to the roll, and varying the said reciprocating motion, substantially as set forth.

3,291.—Eliza Mascher, Philadelphia, Pa., administratrix of the estate of John F. Mascher, deceased.—*Book for Photographs and other Pictures.*—Patented March 8, 1853, No. 9,611; extended seven years; reissued February 9, 1869.

Claim.—1. Binding together, in the form or style of a book, perforated or skeleton leaves, adapted for holding photographic or other similar pictures, so arranged that said pictures may be inserted or removed at pleasure.

2. Binding together, in the form or style of a book, perforated or skeleton leaves, adapted for holding removable photographic or other similar pictures, in combination with leaves containing printed matter.

3. Binding together, in the form of a book, skeleton leaves, for holding removable photographic or other pictures, in combination with a movable flap containing lenses for viewing said pictures.

4. In combination with a series of stereoscopic pictures, bound together in a book, a supplementary flap containing stereoscopic lenses for viewing said pictures.

3,292.—David Hammond and W. R. Reeves, Canton, Ohio.—*Iron Bridge.*—Patented June 21, 1864, No. 43,202; reissued July 30, 1867, No. 2,701; reissued February 9, 1869.

Claim.—1. The peculiar arrangement and combination of the arch-pieces *a a*, covering-piece *b*, bolt *m*, suspension-rod B, or diagonal brace C, with bolt *x* or *w*, and nuts *f* or *h*, the several parts being constructed and arranged substantialy in the manner and for the purpose herein specified.

2. The combination of the arch A, composed of arch-pieces *a a*, covering-piece *b*, clamping-pieces *c c*, and bolts *d d* with nuts *e*, the chord D, suspension-rods B B, braces C C, and shoes E E, the whole forming a bow-string girder, substantially as and for the purpose specified.

3,293.—I. H. A. Hervey, Cleveland, Ohio.—*Skating-Rink.*—Patented January 28, 1868, No. 73,806; reissued February 9, 1869.

Claim.—1. The construction and arrangement of a basin within a building, in combination with openings in the building for the introduction of cold air, substantially as described and for the purposes set forth.

2. The arrangement of openings around a basin within a building, in combination with higher openings in the building, the latter being for the exit of air therefrom, the whole substantially as described, and for the purposes set forth.

3. A skating-rink, provided with a cold-air trunk, D, extending partially or entirely around its foundation or lower part, and provided with doors, *b b′*, at its inner and outer sides, for the admission of external air, in connection with the openings *a* in the roof of the rink, all constructed and arranged substantially in the manner as and for the purposes set forth.

3,294.—Gordon McKay, Boston, Mass., trustee of The McKay Sewing-Machine Company, assignee of Stephen W. Baldwin.—*Nail for Leather-Work.*—Patented September 27, 1864, No. 44,382; reissued February 9, 1869.

Claim.—1. A headless nail, having thin, twisting edges, substantially as described.

2. Articles of leather-work, having their parts fastened together by headless screw-threaded or twisted nails, formed substantially as described.

3,295.—Dexter P. Webster and Herman W. Ladd, Boston, Mass.—*Spring-Bed Bottom.*—Patented April 23, 1867, No. 64,175; reissued February 9, 1869.

Claim.—1. A detachable frame, having spring-supporting cross-bars, interlocking with side-bars, in such a manner that the side-bars shall support the ends of the cross-bars, and at the same time prevent the side-pieces from separating laterally, or in line with the crossbars, without any other fastening, as set forth.

2. Cross-bars D, having plates E, constructed substantially as and for the purpose described, or their ends cut, so as to form a section of an interlocking joint.

3. The third or safety-bar D, in combination with side-bars B and spring-slats, substantially as and for the purpose described.

4. The removable sectional tubular cushions G, applied to the coils of the springs, substantially as described, for the purpose specified.

5. The pendent hooks *a*, constructed substantially as described, in combination with the bedstead-frame A, supporting the slat-bearing frame, substantially as and for the purpose set forth.

6. The combination of the longitudinal slats, conical springs, and the detachable frame, substantially as and for the purpose set forth.

3,296.—Russell Fisk, New York, N. Y.—*Concrete-Pavement.*—Patented October 8, 1867, No. 69,738; antedated July 20, 1867; reissued February 9, 1869.

Claim.—1. The mode, substantially as set forth, of compounding and preparing concrete, and making concrete-blocks for paving.

2. The mode of laying pavements by the use of concrete, and laying concrete-blocks, embedded and united substantially as set forth.

3,297.—William Hanlon and Edward Hanlon, New York, N. Y., assignees of George, William, Alfred, Edward, and Frederick Hanlon.—*Velocipede.*—Patented July 7, 1868, No. 79,654; reissued February 9, 1869.

Claim.—1. A velocipede constructed so that it can be converted from a three-wheel to a two-wheel velocipede, and *vice versa*, by means substantially as and for the purposes set forth.

2. The adjustable or variable saddle, or seat, as and for the purposes described.

3. Making the driving-cranks of a velocipede variable, as and for the purposes described.

4. Making the body of a velocipede, substantially as described, of a bifurcated or forked bar or perch, as set forth.

3,298.—Ebenezer D. Draper, Hopedale, and Edward W. Glover, Medford, Mass.—*Fire-Proof Safe.*—Patented January 14, 1868, No. 73,309; reissued February 16, 1869.

Claim.—1. The combination and arrangement of a heat non-conductor, *c*, of mica, or its equivalent, with each or either of the metallic jambs or sides of the door-frame, and the filling thereof, the whole being substantially as and for the purpose specified.

2. The combination and arrangement of one or more strata of fusible metal, *d*, with the mica heat non-conductor *c*, arranged in a safe, substantially in manner and for the purpose specified.

3. The combination and arrangement of mica, or its equivalent, or of mica and fusible metal, with the sides of the burglar-proof, and the next adjacent internal surfaces of the safe, the whole being substantially as specified.

4. In a safe, the construction of either or all of its jambs, for reception of the door, with an insulating-groove or space, *s*, arranged therein, so as to insulate, or aid in insulating from each other, the portions *a b* of the jambs, the said space being adapted for the reception of one or more insulating-media, as set forth.

5. In a safe, the boxed or chambered door, as constructed with an insulating groove or space, *t*, arranged in its edge or edges, and to extend outside of the filling or stuffing, or the chamber to contain the same, the said space *t* being adapted or intended for the reception of one or more insulating-media, or the same and a fusible metal, as set forth.

6. In a safe, the arrangement of an insulating-space directly around the burglar-proof, or between it and any side of it and the next adjacent inner wall of the safe, such space being designed or adapted for the reception of an insulating-medium, or slow conductor of heat, or the same and a fusible metal or composition which will melt at a low temperature, as explained.

3,299.—Nils P. Lindergreen, Boston, Mass.—*Packing-Can.*—Patented October 13, 1868, No. 83,070; reissued February 16, 1869.

Claim.—An octogon tin can, having four wide and four narrow sides, the joint of the sheet-metal being in the narrow side or sides of the body of the can, substantially as set forth.

3,300.—John McGill, Boston, Mass.—*Solution for Preventing Combustion.*—Patented May 1, 1866, No. 54,382; reissued February 16, 1869.

Claim.—The application of the aforesaid chemical, for the purpose of preventing combustion, as described.

3,301.—E. G. Patterson, Pithole City, Pa.—*Railway-Rail Joint.*—Patented October 6, 1868, No. 82,744; reissued February 16, 1869.

Claim.—1. The chair D, made with the inner sides of its jaws inclined, or wedge-shaped, substantially as herein shown and described, and for the purpose set forth.

2. The clamps F, constructed as described, and provided with bolts G and nuts H, in combination with the fish-plates C, by which they are supported, and with the wooden bar or bars E, which they support, substantially as herein shown and described, for the purpose set forth.

3. The combination of the fish-plates C and chair D with each other and with the ends A and B of the rails, substantially as herein shown and described, to form a rigid support for the said ends of said rails.

4. The combination of the fish-plates C, chair D, wooden bar or bars E, and clamps F, with each other and with the ends A and B of the rails, substantially as herein shown and described, and for the purpose set forth.

5. The fish-plates C, constructed in such a way as to bear wholly, or nearly so, upon the bottom flanges of the rails, and having inclined notches in their outer or sloping sides, substantially as herein shown and described, and for the purpose set forth.

3,302.—Payne Pettebone, Wyoming, and J. E. Patterson and A. W. Brown, Wilkesbarre, assignees of Edwin R. Shepard, Scranton, Pa.—*Rail for Railways.*—Patented March 3, 1868, No. 75,206; reissued February 16, 1869.

Claim.—1. The construction of a compound railroad-rail, composed of two parts, an upper, or head portion, having a vertical rib, and a lower, or base portion, having also a vertical rib, in such manner that the wear of such parts of the upper or lower portion, or both, as bear on each other, shall be compensated for, and all lateral motion of the parts prevented, substantially as set forth.

2. In combination with a compound railroad-rail, an automatic device, adapted to prevent an upward motion of the head, or upper portion, relative to the base, or lower portion of said rail.

3. In combination with a compound railroad-rail, a key or bolt, provided with an inclined or wedging face, for following the movement of the upper portion when it is depressed, and preventing it from being retracted.

3,303.—Adam R. Reese, Phillipsburgh, N. J., assignee of John J. Squire. — *Horse-Rake.*—Patented December 23, 1856, No. 16,318; reissued February 16, 1869.

Claim.—1. In combination with mechanism for raising the teeth operated by the draught of the team, means for throwing said mechanism into gear, placed under the control of the driver in his seat on the machine.

2. In a two-wheel rake, in which the teeth are raised for discharging the gathered hay by the draught of the team, mechanism, under the control of the driver in his seat on the machine, for causing the draught of the team to raise the teeth, in combination with means for automatically releasing the teeth after the hay has been discharged.

3. A feathered sliding clutch on the rake-head, in combination with a clutch-face or pins on the hub of the carrying or driving wheel, for the purpose set forth.

4. The clutch D, and lever B for operating the same, in combination with an arm, F, on the rake-shaft, whereby the rake is lifted by the draught of the team, and automatically released, substantially as specified.

3,304. — Asahel J. Severance, Middlebury, Vt., assignee, by mesne assignments, of Rodolphe Leschot.—*Rock-Drill.*—Patented July 14, 1863, No. 39,235; reissued February 16, 1869.

Claim.—1. A hollow rotating rock-drill, composed of a tubular boring-bar, B, and a cylindrical crown or boring-head, A, armed with diamond or other teeth, $a\ a^1\ a^2$, when said drill is used in combination with a force-pump E, and connected with rotating-machinery, substantially as and for the purposes set forth.

2. The use of a stream of water, when it is forced through a hollow rock-drill by means of a force-pump or other apparatus, which operates upon the same by means of mechanical pressure, substantially as and for the purposes set forth.

3,305.—Stephen Stucky, New Albany, Ind.—*Feed-Water Heater for Boilers.*—Patented July 28, 1868, No. 80,516; reissued February 16, 1869.

Claim.—A shell-reservoir or drum, of any suitable construction, provided with inlet, outlet, and refuse-matter pipes, when placed above or at the water-line of the boiler or boilers, to operate substantially as set forth.

3,306. — Clark W. Bryan, Samuel Bowles, B. F. Bowles, and J. F. Tapley, Springfield, Mass., assignees of Clark W. Bryan.—*Office-Calendar.*—Patented February 26, 1867, No. 62,313; antedated December 11, 1866; reissued February 23, 1869.

Claim. — 1. A calendar, constructed of several printed sheets attached together, and also to the top A, in the manner described, for the purpose of readily tearing off the outside sheet, or the sheet representing any past month, substantially as herein set forth.

2. The attachment of the counting-house calendar to the back of the last of a series of printed sheets, forming a calendar, substantially as herein described and specified.

3,307. — George J. Capewell, West Chesire, Conn.—*Button-Fastening.* — Patented February 12, 1867, No. 62,001; reissued February 23, 1869.

Claim.—1. A button, or button-head, having a recess of inverted-cone form, made in its inner side, to receive an eyelet, or hollow shank, or tube, which, when pressed into said conical recess, will expand radially, and be firmly connected to the button, and, at the same time, secure the button to the garment or fabric, substantially as described.

2. The combination of an eyelet, or hollow shank, with a cone, *e*, or its equivalent, either with or without a washer, substantially as and for the purpose specified.

3. The combination of two or more eyelets with the cone C, or its equivalent, of a button, and either with or without a washer, when arranged and combined for action, and for fastening the cloth, &c., between their two ends, substantially as specified.

3,308. — Thomas A. Conklin, New Britain, Conn. — *Tack-Hammer.* — Patented December 10, 1867, No. 71,986; reissued February 23, 1869.

Claim.—The cast-metal tack-hammer, consisting of the head A, hollow handle B, and claw C, in a single piece, the whole coated, substantially as and for the purposes herein set forth.

3,309.—David Lyman, Middlefield, Conn., and Sidney Fairbank and Washington Whitney, Winchendon, Mass., assignees of Henry Mellish, Walpole, N. H.—*Hollow Wooden Ware.*— Patented May 10, 1864, No. 42,675; reissued February 23, 1869.

Claim.—1. An article of wooden ware, the body of which is made from a strip of wood cut from the log or stock, in the form of a spiro-conical coil or scroll, substantially in the manner described.

2. Forming upon the upper edge of the scroll or strip of wood, cut in the manner described, so as to constitute the body of the article, a strengthening or stiffening bead or molding, substantially as and for the purposes specified.

3. The combination, with the body of the article of wooden ware thus produced, of a bottom groove to receive and hold the lower edge of the said body, whereby the body is maintained in shape by means of the bottom, and without the aid of hoops and other devices.

4. Uniting the upper ends of the contiguous edges of the wooden scroll which forms the body of the article, of wooden ware, whether the same be combined with a bottom such as described, or not, by means of a clasp or fastening-device, applied substantially as herein shown and set forth.

3,310.—Frederick H. Manny, Rockford, Ill., assignee of Albert Franklin.—*Seeding-Machine.* —Patented November 10, 1857, No. 18,579; reissued February 23, 1869.

Claim.—1. The combination of a hopper-bottom, having triangular openings, with a revolving seed-cylinder, when said openings are arranged in such relation to the cylinders that the revolution of the latter draws the seed to the apex of the former, as and for the purpose described.

2. The combination of the hopper-bottom, having triangular openings, with a revolving seed-cylinder, having cells or recesses upon its surface, when said combination is provided with a passage-way between the hopper and cylinder, as and for the purpose described.

3,311. — John S. Paine, Boston, Mass., assignee, by mesne assignments, of David Manuel. —*Bed-Bottom.*—Patented March 19, 1867, No. 63,066; reissued February 23, 1869.

Claim.—1. The compound wire spring, constructed substantially as described, viz, of the C-springs or bends *f f*, the connection or slat-rest *e*, the side-springs or parts *c c*, and the helix-coils *u*, and their prongs *g*, arranged substantially as set forth.

2. The arrangement of the compound wire springs, having spiral ends *a a* attached to the frame of the bedstead A, and held by the cords *b b*, and having, also, long curved sides *c c*, connected with the slats B by the overlap *d*, formed, combined, and operating substantially as and for the purposes herein described.

3. The arrangement of each of the springs C with the slat, so as to embrace it on its opposite edges, and extend below and from it, as specified.

4. The combination of the overlaps *d d* with the slat and its springs, arranged and applied together, and to a supporting-frame, as specified.

3,312. — Dexter Pettengill and Andrew Buckham, Delhi, N. Y., assignees, by mesne assignments, of Dexter Pettengill. — *Slide for Breast-Straps for Harness.* — Patented November 25, 1862, No. 37,006; reissued February 23, 1869.

Claim.—1. The application and use, in combination with the breast-strap of a harness, of a metallic slide, or shield, substantially as and for the purposes set forth.

2. In combination with such slide, or shield, the arrangement of two or more loops, L L, substantially as and for the purposes set forth.

3. In combination with such slide, or shield, the arrangement of the flanged edges F F, substantially as and for the purposes set forth.

3,313.—Shaw's Union Air-Engine Company, Brookline, Mass., assignees of Philander Shaw.—*Hot-Air Engine.*—Patented November 26, 1861, No. 33,799; reissued February 23, 1869.

Claim.—1. The combination and arrangement of the cylinders, pistons, reservoir, and furnace, substantially as herein made known.

2. The combination of the finished or upper part of the cylinder, with its head, piston, and trunk, therewith connected, all operating together, and with inlet and outlet valves, and suitable packing around the said trunk, to form an annular air-pump, substantially as set forth.

3. The combination and arrangement of the chamber or groove *v*, around the cylinder, substantially as specified.

4. The construction and arrangement of the oil-trough M, within the chamber or groove, around and within the cylinder, as herein set forth.

5. The inwardly projecting flange *s*, constructed, combined, and arranged substantially as shown and described.

6. The combination and arrangement of the valve *u*, valve-box *b*, and air-passages *w*, whereby to admit comparatively pure and cool air from the reservoir, in which it is constantly maintained compressed, at the place and times, substantially upon the principle herein made known.

7. In an air-engine, in which the products of combustion pass through the working-cylinder, the devices herein set forth, whereby to force the cool air from the air pump around and through all parts of the engine liable to be overheated by the intense heat from the fire-pot, substantially as herein set forth.

8. The device and arrangement for sending the cool air from the air-pump around and against the valves, valve-boxes, and valve-stems, for the purpose of cooling them.

9. The combination of the valve *p* with the fire-chamber, hot-air passage H′, and the regulating-device Q_3 *q*, whereby to govern the speed of the engine, as herein set forth.

3,314.—Benjamin Stephens, Wheeling, W. Va.—*Composition for Roofing, and for other Purposes.*—Patented September 1, 1868, No. 81,838; antedated April 3, 1868; reissued February 23, 1869.

Claim.—The compound, of coal-tar and pulverized slag, as and for the purposes described.

3,315.—Rufus S. Merrill, Irasburgh, Vt.—*Lamp.*—Patented June 14, 1859, No. 24,397; reissued March 2, 1869.

Claim.—1. The combination, with the wick-tube and deflector of a hydrocarbon-fluid burner, of a jacket, with sides contracted, or tapering towards the upper end of the wick-tube, together with apertures in or such arrangement of the burner, whereby the air outside of the jacket may be properly directed to impinge upon the flame, as set forth.

2. The combination, with a hydrocarbon-fluid burner, of a wick-tube-surrounding jacket, of conical or equivalent form, under an arrangement substantially as described, so that the vapor from within the vessel, and the air from without, may be directed to impinge upon the flame, substantially as and for the purposes set forth.

3. In hydrocarbon-fluid burners, of otherwise ordinary construction, the combination, with a flat-wick tube, of a directer, or jacket, constructed as described, so as to allow of its ready adjustment to and removal from its base, substantially in the manner and for the purposes set forth.

3,316.—George P. Nutting, Chicago, Ill.—*Water-Supply Regulator.*—Patented December 22, 1868, No. 85,121; reissued March 2, 1869.

Claim.—1. The arrangement of the vessel A, steam-pipes J H, chest I, valves *c c*, lever *b*, rod *d*, lever G, and float E, substantially as specified.

2. The arrangement of the vessel A, steam-pipes J H, valve-chest I, lever *b*, rod *d*, lever G, float E, adjustable pin *h*, and whistle-valve lever L, substantially as specified.

3,317.—E. L. Roberts, New York, N. Y.—*Ventilator.*—Patented June 30, 1868, No. 79,395; reissued March 2, 1869.

Claim.—1. In combination with means for effecting a distributed exhaust, as above described, means for effecting a forced exhaust, substantially as and for the purpose described.

2. Mixing heated air, for heating rooms, with the inflowing distributed supply of fresh air, at or near the top of the room, by means substantially as and for the purpose described.

3. The combination, with the supply-passages F or F′, at or near the top of the room, of the vertical tube D, substantially as and for the purpose described.

4. The combination, with the tube D, of the tube E, substantially as and for the purpose described.

5. The combination, with the supply-passages through the ceiling, or near the same, and the vertical supply-tube D, of the exhaust passages through the floor, substantially as and for the purpose described.

6. The combination, with the floor arranged as described, for effecting a distributed exhaust, of the flue H, provided with a heater, substantially as and for the purpose specified.

7. The means for producing a distributed supply and exhaust, consisting of the tubes D F F′, the perforated ceiling, perforated floor, flue H, and heater I, or the equivalents thereof, when all combined and arranged substantially as and for the purpose specified.

3,318.—Henry B. Sears, Liverpool, England, assignee of Samuel Golay.—*Machine for Dressing Millstones.*—Patented January 21, 1868, No. 73,524; reissued March 2, 1869.

Claim.—1. A tool, armed with a diamond, to which a vibrating or picking motion is imparted, and arranged to traverse the face of a millstone, substantially as described.

2. A cutting-tool, in which a diamond or diamonds are secured in recesses, formed in two plates clamped together laterally, substantially as described.

3. A guide-bar, C, secured to the frame of the machine, in combination with an adjustable support c^2, at the outer end, substantially as and for the purpose set forth.

4. A frame, B, carrying a guide-bar, C, and adjustable on a pin, *d*, on the frame of the machine, substantially as and for the purpose described.

5. The plates c^1, in combination with the set-screws *c*, substantially as and for the purpose specified.

6. The detachable guide-bar C, secured to the frame of the machine, and adjustable thereon, as set forth.

7. A carriage, G, hung to the slide D, and adapted for the reception of a cutting-tool at either end, substantially as specified.

3,319.—Stephen W. Smith, New York, N. Y., assignee of P. W. MacKenzie.—*Velocipede.*—Patented August 12, 1862, No. 36,161; reissued March 2, 1869.

Claim.—1. In combination with a saddle-seat for the rider, the employment and use of a cranked axle, arms E, and foot-rest B, so arranged that power applied by the feet of the rider shall give motion to the vehicle, substantially as described and specified.

2. The combination of the following elements, namely, a saddle-seat for the rider, a cranked axle for propelling the vehicle by power applied by the feet of the rider, and a steering-mechanism, so constructed that the direction of travel of the vehicle may be governed by the rider, substantially as described and specified.

3. The universal joint, in combination with the fulcrum of the vehicle and the steering-wheel, constructed and operating substantially as and for the purposes specified.

4. The hinged legs A″, in combination with the body of the horse, and with the cranks C, substantially as and for the purposes specified.

5. The foot-rests upon the arms E, substantially as and for the purposes specified.

6. The double-armed levers *e g* and diagonal cords *f*, in combination with the handle I and steering-wheel B, substantially as described and specified.

3,320.—Zenas Wheeler, San Francisco, Cal.—*Apparatus for Concentrating Metallic Ores.*—

Patented September 6, 1864, No. 44,130; reissued March 2, 1869.

Claim.—1. The arrangement and combination of the corrugated surface B, with a vibratory or oscillating pan, or concentrator.

2. The inclined grooves K L and K′ L′, or their equivalent, in combination with a vibratory or oscillatory pan, or concentrator.

3. The opening D, in combination with a vibratory or oscillating pan, or concentrator.

4. The bowl F and tube F′, or either of them, in combination with a vibratory or oscillating pan, or concentrator, substantially and for the purposes herein specified.

3,321.—S. B. Rowley, Philadelphia, Pa., assignee, by mesne assignments, of Charles G. Imlay. —*Fruit-Jar.*—Patented May 23, 1865, No 47,834; antedated December 6, 1864; reissued March 2, 1869.

Claim.—A fruit-jar, having on its neck a continuous screw-thread, in combination with an annular nut or screw-ring, made of thin, yielding metal, all as set forth, for the purpose specified.

3,322.—Colby Brothers and Company, Waterbury, Vt., assignees, by mesne assignments, of Harvey Murch.—*Mop-Head.*—Patented June 14, 1853, No. 9,781; extended seven years; reissued June 2, 1868, No. 2,957; reissued November 10, 1868, No. 3,188; reissued March 9, 1869.

Claim.—1. The combination of a rigid binder having the ends connected, so as to form a circuit around the cross-head, and secured by a rigid fastening, with a metallic cross-head socketed for the reception of the handle, substantially as described.

2. The combination of a metallic cross-head and handle with a rigid metallic binder, which surrounds the cross-head, and reaches to and is secured on the handle, and passes the joint between the cross-head and handle, so as to serve as a brace to strengthen and support the cross-head, substantially as described.

3,323.—Levi Decker, New York, N. Y.—*Cushion for Billiard-Tables.*—Patented December 18, 1866, No. 60,657; reissued March 9, 1869.

Claim.—The catgut, or other cord E, partially or fully embedded, or otherwise attached at the angle *a* of the rubber cushion C, so as to protect said cushion against the impact of the ball, substantially as herein shown and described, and for the purposes set forth.

3,324.—F. R. Wolfinger, Chicago, Ill.—*Extension-Table.*—Patented November 5, 1867, No. 70,668; reissued March 9, 1869.

Claim.—1. The end rails C, formed in three or four parts, c^1 c^2 c^3 c^4, in combination with the central folds E and side folds D, substantially as herein shown, and for the purpose specified.

2. The combination of the narrow strips or leaves I I with the central parts c^2 c^3 of the end rails C, substantially as shown and described.

3. The narrow leaves I I, resting upon the parts c^2 c^3, in combination with the leaves G^1 G^2 G^3 G^4, as herein set forth and described.

4. The central strips J, (having the legs K,) in combination with the central parts c^2 c^3 of the end rail C, end folds D, and central folds E, substantially as described, and for the purposes specified.

5. The arrangement of the leaves G^1 G^2 G^3 G^4, and narrow strips I I, whereby the leaves G^2 and G^3 are folded upon the end rails C, having the leaves G and strip I in the same horizontal plane, to form the top of the table, and the leaf G^1 folding down over the ends of the said leaves G^3 and G^4, substantially as shown and described.

6. The leaf G^2 hinged in an elevated position upon the side rail B, and supporting the leaves G^1 G^3, the outer end of the leaf G^1 adjusted by the spring-catch H, substantially as set forth.

3,325.—Samuel Danks, Cincinnati, Ohio, for himself and Joseph C. Butler and Lewis Worthington, assignees of Samuel Danks.—*Lining or Fix for Puddling and Boiling Furnaces.*—Patented September 10, 1867, No. 68,715; reissued March 16, 1869.

Claim.—The use of puddlers or boilers, tapping-cinder, squeezer-cinder, or hammer-cinder, or pulverized or melted iron-ore, when mixed with an alkali or alkalies, or lime, common salt, soda, or potassa, separately or combined, in the manner, and in the relative proportions, substantially as and for the purpose specified.

3,326.—John E. Hawkins, Lansingburgh, for himself and Jacob C. Horton, New York, N. Y., assignee of John E. Hawkins.—*Cracker-Machine.*—Patented June 25, 1867, No. 66,082; reissued March 16, 1869.

Claim.—1. The conducting-tubes, divided into parts T and T′, in combination with the knife K, working between them, substantially as described.

2. The knife K, consisting of a thin plate of sheet-metal, provided with apertures for the dough to pass through, in combination with a spring to throw the knife, and the lever *i* and cam *i′*, to move back the knife, so that the dough can again pass through the holes, substantially as described.

3. In combination with mechanism for feeding the dough to form the crackers in cylindrical strips, through tubes or holes, a reciprocating knife, with apertures in it for the dough to pass through, and so operated as to sever from each of said strips, at suitable intervals, a section to form a cracker, substantially as described.

4. The outside tubes, or thimbles, working on the lower sections T′ of the conducting-tubes, and operated substantially as described.

5. The docker, consisting of the plates *o*, *p*, *r*, and *s*, the pickers *v*, stamper W, and spiral springs S′ and *u*, all combined, constructed, and operating substantially as described, to press, prick, and stamp a row of crackers at one operation, substantially as described.

6. The mechanism moved by a crank on the main driving-shaft, by means of which an intermittent motion is given to the grooved rollers, the endless apron, and the docker, substantially as described.

7. In combination with the docker, the thin plate R, constructed, arranged, and operating substantially as and for the purpose described.

3,327.—F. I. Norton and William H. Cloud, Fremont, Ohio, assignees of F. I. Norton. —*Drying-Apparatus.*—Patented April 28, 1868, No. 77,205; reissued March 16, 1869.

Claim.—1. The herein described process of drying perforated timber and other articles of wood, by forcing steam through the apertures, afterwards filling said apertures with heated steam-pipes, as set forth.

2. Drying wagon-hubs and other articles of wood, by fitting them around and upon steam-pipes *d*, within a structure A, so that they may be enveloped by steam, as specified.

3. The combination of the steam-coil C and vertical-radiating and steam-pipes *d*, substantially as and for the purpose described.

4. The combination, with a drying-chamber, A B, of the steam-pipes C *d*, substantially as and for the purpose described.

3,328.—Arnold A. Wheelock, Washington, D. C.—*Railroad-Car Stove.*—Patented February 9, 1869, No. 86,790; reissued March 16, 1869.

Claim.—1. The arrangement of the openings *e e*, waste-cock *r*, and supply-cock *s*, at the upper end of the bent pipes P P, when said pipes are employed substantially as and for the purpose described.

2. The combination of water-reservoir C, conducting-pipes P P, having holes *e e*, water-cock *r*, supply-cocks *s*, with the stove A, having screen T and smoke openings *t*, all constructed and arranged to operate in the manner and for the purpose substantially as described.

3,329.—Otto Gsantner, Newark, N. J.—*Elevated Railway.*—Patented November 3, 1868, No. 83,772; reissued March 16, 1869.

Claim.—1. The hangers C and the bed for the rails, formed in one piece, in combination with the embedded rail, substantially as and for the purpose described.

2. The hangers C made movable, as and for the purpose described.

3. The sliding hangers L, with rails M for shifting the suspended cars from one track to the other, as represented and described.

3,330. — AMARIAH M. HILLS, Hockanum, Conn.—*Lawn-Mower.*—Patented January 28, 1868, No. 73,807; reissued July 14, 1868, No. 3,030; reissued March 16, 1869.

Claim.—1. The balaneed frame on the roller E, in combination with the bail Q, to which the handle S is secured, all constructed and arranged substantially as and for the purpose set forth.

2. The spiral rotary cutter M, provided with the cutting-edges *c*, when hung above the cutter D in a frame, which is adjustable upon the shoes N, in the manner and for the purpose specified.

3. The frame, mounted on the roller E, and provided with the adjustable shoes N, rotary cutter M, fixed cutting-blade D, bail Q, and handles S, all operating substantially as and for the purpose set forth.

3,331.—CYRUS NEWHALL, Hinsdale, N. H.—*Harvester.*—Patented July 29, 1862, No. 36,017; reissued March 16, 1869.

Claim.—1. The eombination, in a harvester, of a loose driving-gear ring, revolving on fixed arms, with a finger-beam suspended from the main frame by connections passing through the driving-ring.

2. The combination, with a two-wheeled harvester, of a finger-beam, hinged to the main frame by coupling-arms passing through one of the driving-wheels.

3. The combination, substantially as set forth, in a harvester, of two wheels, a main frame, a laterally-projecting hinged finger-beam, and a coupling-frame, when the main frame, the finger-beam, and the couplings are all arranged within the periphery of the wheels.

4. The combination, in a harvester, of a laterally-projecting finger-beam with cutters driven by a pitman passing through the driving-wheel.

3,332. — ALVIN T. DUNBAR and ARCHIBALD MCNAUGHT, Alba, Pa. — *Grain-Separator and Thrashing-Machine.*—Patented February 5, 1867, No. 61,816; reissued March 16, 1869.

Claim. — 1. A perforated, longitudinally-slotted grain-platform, G, in combination with vertically and longitudinally moving toothed beating and shaking bars E, arranged so as to play between the slats, and above and beneath the platform, substantially as described.

2. The eombination of simultaneously, vertically, and longitudinally moving toothed beating and shaking bars E, with a longitudinally-slotted platform, G, operating substantially as herein described.

3. The eombination of a thrashing-machine, a perforated and longitudinally-slotted stationary platform G, and toothed beating and shaking bars E, operating substantially as described.

3,333.—E. H. BARNEY and JOHN BERRY, Springfield, Mass., assignees, by mesne assignments, of JOHN COE, administrator of the estate of JOHN H COE, deceased, and WILLIAM B. SNIFFIN.—*Skate-Fastening.*—Patented May 3, 1859, No. 23,826; reissued March 23, 1869.

Claim.—1. The eombination, with a skate, of a movable elamp and a screw, arranged transversely to the skate, for pressing the clamp against the foot of the sole of a boot or shoe, substantially as described.

2. A skate-elamp having a raised or roughened surface, or the equivalent thereof, to hold the edge of the sole of a boot or shoe with a firm gripe, substantially as described.

3. The arrangement of a skate-clamp upon a vertical stud, or pivot, on which it can turn, so as to adjust itself automatieally to the surfaee against which the elamp is drawn, substantially as shown and described.

4. The eurved adjustable slotted bars E F F, eombined and arranged, in relation to each other, and to the foot, or base-plate A, substantially as and for the purpose described.

5. The arrangement, on the serew-shaft K, of a hinged handle, L, in sueh a manner that it can be folded out of the way, after the skate is fastened to the foot, substantially as shown and described.

3,334.—JOHN VREELAND BOGERT, New York, N. Y., and JOHN F. LOWELL, Boston, Mass., assignees, by mesne assignments, of JAMES TYZICK.—*Nail-Extractor.* — Patented June 9, 1868, No. 78,699; reissued March 23, 1869.

Claim.—The combination of the lever A, sliding-fulerum B D, and hook E, substantially as and for the purpose speeified.

3,335.—SAMUEL F. DAY, Ballston Spa, N. Y.—*Electro-Magnetic Telegraph.*—Patented May 24, 1864, No. 42,842; reissued March 23, 1869.

Claim. — 1. Combining, with an indenting telegraphic registering-instrument, a magnet, constructed according to the proportions described in the foregoing speeifieation, or substantially so, so as to accomplish the result stated, by means substantially the same, that is to say, so as to give suffieiency of intensity and power of action to produce uniformly legible indentations in the paper in an ordinary line-eurrent, without the aid of a local battery, as hereinabove set forth.

2. The arrangement of the sounding-box C, the lever D, and the sounding-post G, of a magnetie telegraph, in combination with each other, in the manner hereinbefore described, and to the effect stated.

3,336.—J. B. LEWIS and J. E. UDALL, Concord, Ill.—*Sulky-Plow.*—Patented September 1, 1868, No. 81,799; reissued March 23, 1869.

Claim.—1. The flanges G, eccentries I, bolts H, wrist-pins J, and pins L, when constructed, arranged, and operating substantially as and for the purposes herein described and shown.

2. The compound lever M, when constructed and operating substantially as and for the purposes described.

3. The arrangement of the above-named parts with the frame A, axle B, seat C, traction-wheels K, washers F, plow-beam D, plow E, and quadrant N, when eombined and operating substantially as herein set forth.

3,337.—DANIEL C. LOWBER, New York, N. Y., and GEORGE L. LAUGHLAND, New Orleans, La., assignees, by mesne assignments, of WILLIAM TROWBRIDGE.—*Cotton-Bale Tie.*—Patented March 10, 1868, No. 75,319; reissued March 23, 1869.

Claim.—The deviee herein described, to wit, a seetion or piece of wire, so formed as to be provided with the loop, or eye C, with the two ends bent into hook-form, substantially as herein described, for the purpose set forth.

3,338. — LEVI STEVENS, Washington, D. C.—*Manufacture of Illuminating-Gas.* — Patented February 23, 1869, No. 87,123; reissued March 23, 1869.

Claim. — 1. A separate vaporizing-chamber, for distilling coal and mixing the vapors from coal with hydro-oxygen, or steam, for retorting.

2. The combination of the vaporizing and mixing ehamber with a retort, and the passage *a*, uniting the ehamber with the retort, as and for the purposes substantially as described.

3. The combination of a vaporizing-chamber, B, with the retort B′ and superheater of steam, substantially as and for the purposes described.

3,339.—GEORGE W. VAN BRUNT, D. C. VAN BRUNT, and HIRAM BARBER, Horicon, Wis., assignees of GEORGE W. VAN BRUNT.—*Seeding-Machine.*—Patented July 22, 1862, No. 35,960; reissued March 23, 1869.

Claim.—1. The eoncentric-chambered recess *k*, in the cap G, in combination with a eylinder, E, having radial flanehes *f f*, when arranged to operate in the manner and for the purpose set forth.

2. The cones N, having a horizontal eireular flanch, *m*, at their lower ends, in eombination with the peculiarly-shaped tubes M, when constructed in the manner specified.

3,340.—ALLEN AND WILLARD, Hartford, Conn., assignees of EDWARD WEBSTER.—*Hot-Air Furnace.* — Patented June 12, 1866, No. 55,564; reissued March 23, 1869.

Claim.—1. The plate E, or its equivalent, whereby we are enabled to form an equalized draught-space, E.

2. The central orifice C, in combination with draught-space F.

3. The combination of the inner wall D′, top and bottom plates B B′, tubes I, plate E, or its equivalent, with the fire-pot G.

4. The exit-pipe H, passing through and in combination with the air-box A.

3,341. — ERASTUS STEBBINS, Chicopee, Mass. — *Stop-Cock.*—Patented April 19, 1859, No. 23,721; reissued December 20, 1859, No. 868; reissued March 23, 1869.

Claim.—1. In combination with the valve-spindle C, and valve-seat P, the chambered-valve-nut L, having orifices M, substantially as shown and described.

2. In combination with the rotating screw-spindle C and its reciprocating valve-nut L, the metal washer I and flexible washer H, arranged to operate substantially as described.

3. The relative construction and arrangement of the metal collar I, flexible washer H, and metal washer G, substantially as shown and described.

4. In combination with a flexible washer, a metal collar, formed with a recess adjacent to the valve-spindle, and extending outward therefrom, by which recess the collar is caused to pack the washer tightly around the spindle, when pressed against the washer, substantially as shown and described.

3,342. — EDWARD R. COLE and HENRY S. COLE, Pawtucket, R. I. — *Steam Fire-Engine.*—Patented July 7, 1868, No. 79,730; reissued March 30, 1869.

Claim.—1. The pump-cylinder A, constructed substantially as described, forming the chambers A A^1 and A A^2, by the interposition of plunger B.

2. The descending induction-pipe D D, as arranged in relation to the suction-pipe D D^2, and to the supply-chamber D, all substantially as shown and described, for the purposes specified.

3. The elevated induction-pipe D D, connected with the eduction-pipe C, arranged substantially as described, for the purposes specified.

4. The arrangement of the siphon-formed induction-pipe D D^2, in relation to the air-chamber C C, water-way, or elevated induction-pipe D D, and operative parts A B and A A^2, and B B.

3,343.—REUBEN W. DREW, Lowell, Mass., assignee of LOUIS GODDU.—*Hand-Pegging Machine.*—Patented December 5, 1865, No. 51,387; reissued March 30, 1869.

Claim.—1. The combination of the portable traveling frame, the handle by which the implement is held, the driving-spring, and the pegging-awl plunger, the whole constructed to operate substantially as before set forth.

2. The combination of the portable traveling frame, the handle by which the implement is held, the driving-spring, and the peg-driver, the whole constructed to operate substantially as before set forth.

3. The combination of the portable traveling frame, the handle by which the implement is held, the driving-spring, the plunger, and the crank-handle, the whole constructed to operate substantially as before set forth.

4. The combination of the portable traveling frame, the driving spring, the plunger, and the stop for the plunger, the whole constructed to operate substantially as before set forth.

5. The combination of the portable traveling frame, the driving-spring, the crank-handle, the plunger, and the stop for the plunger, the whole constructed to operate substantially as before set forth.

6. The combination of the portable traveling frame, the driving-spring, crank-handle, peg-driver, and peg-tube, the whole constructed to operate substantially as before set forth.

7. The combination of the portable traveling frame, the driving-spring, peg-driver, peg-tube, and peg-feeder, the whole constructed to operate substantially as before set forth.

8. The combination of the portable traveling frame, the driving-spring, peg-driver, peg-feeder, and knife, the whole constructed to operate substantially as before set forth.

9. The combination of the portable traveling frame and the traveling foot, the whole constructed to operate substantially as before set forth.

10. The combination of the portable traveling frame, the handle by which the implement is held, and the traveling foot, the whole constructed to operate substantially as before set forth.

11. The combination of the portable traveling frame, the driving-spring, the plunger, and the traveling foot, the whole constructed to operate substantially as before set forth.

12. The combination of the portable traveling frame, the handle by which the implement is held, the driving-spring, the plunger, and the traveling foot, the whole constructed to operate substantially as before set forth.

13. The combination of the portable traveling frame, the driving spring, the plunger, the stop for the plunger, and the traveling foot, the whole constructed to operate substantially as before set forth.

14. The combination of the portable traveling frame, the driving spring, the plunger, the traveling foot, and the gauge, the whole constructed to operate substantially as before set forth.

15. The combination of the portable traveling frame, the handle by which the implement is held, the driving spring, the plunger, the traveling foot, and the gauge, the whole constructed to operate substantially as before set forth.

16. The combination of the portable traveling frame, the driving-spring, the plunger, the stop, and the gauge, the whole constructed to operate substantially as before set forth.

17. The combination of the portable traveling frame, the driving-spring, the plunger, the stop, the gauge, and the traveling foot, the whole constructed to operate substantially as before set forth.

18. The combination of the portable traveling frame, the driving-spring, the plunger, the crank-handle, and the traveling foot, the whole constructed to operate substantially as before set forth.

19. The combination of the portable traveling frame, the driving-spring, the peg-driver, peg-feeding apparatus, peg-tube, and traveling foot, the whole constructed to operate substantially as before set forth.

20. The combination of the portable traveling frame, the driving-spring, peg-driver, peg-feeding apparatus, peg-tube, traveling foot, and gauge, the whole constructed to operate substantially as before set forth.

21. The combination of the portable traveling frame, the driving-spring, peg-driver, peg-tube, and traveling foot, the whole constructed to operate substantially as before set forth.

22. The combination of the portable traveling frame, the driving-spring, peg-driver, peg-tube, traveling foot and gauge, the whole constructed to operate substantially as before set forth.

23. An organized hand-pegging machine, containing the devices, constructed, arranged, and combined to operate substantially as described, by which, while with one hand the machine is held to the work, with the other it is moved over the work, the holes punched, and the pegs furnished and driven at regular distances, substantially in the manner set forth.

3,344.—GEORGE W. RAY and VARNUM N. TAYLOR, Springfield, Mass., assignees, by mesne assignments, of JOHN T. BRUEN and G. M. JACOBS.—*Machine for Applying Re-enforcing Patches to Button-Holes of Collars.*—Patented November 27, 1866, No. 59,957; reissued March 30, 1869.

Claim. — 1. The combination of the suspended die-plate D, main die-plate, or bed C, and punches *v w*, constructed and operating substantially as herein described, and for the purposes specified.

2. The feeding-toes *a*, in combination with the dogs *i*, bar *h*, and rods *g*, constructed and operating substantially as and for the purposes herein described.

3. The pusher-bars *b′*, in combination with the dogs *e′*, cross-head *b*, and springs *f′*, constructed and operating substantially as herein described and set forth.

4. The combination of the rolls *n n*, one of which has the ratchet *p* thereon, with the drums *m*, all constructed and operating substantially as herein described, and for the purposes specified.

5. Applying re-enforcing-patches to button-holes of

collars or cuffs automatically; that is to say, by mechanism which moistens or heats the paper, or collar, or patch, and then presses the said patches upon the paper or collar, substantially as described.

3,345.—JOHN TURNER, Norwich, Conn., for himself, and assignee of ISAAC E. PALMER.—*Machine for Making Covered Cord.*—Patented April 14, 1863, No. 38,190; reissued March 30, 1869.

Claim.—1. The arrangement of the main or laying spindle, the strand-spindles, and the hollow spindles, which carry the covering-bobbins, as herein described; that is to say, the said hollow spindles, having their axes in line with the axes of their respective strand-spindles, and arranged aronnd the line of the axis of the main or laying spindle, substantially as herein set forth.

2. The combination, with the spindles F and their disks H′, and bobbins H, of the hollow spindles G, and their disks I′ and bobbins I, the latter spindles, disks. and bobbins revolving independently of the former, substantially as and for the purpose herein shown and described.

3. The combination, with the spindles F and G, of the holes, or openings *g g*, arranged substantially as described, in the spindles G, for operation in concert with guiding-pins *f f*, to the yarns or threads from the bobbins, rotated by the spindles G, substantially as described.

4. In a machine for making covered twist, or cord, producing the revolution of the device or devices by which the covering-yarn is put on in a direction the reverse of that of the device or devices which produce the twisting of the yarns of which the strands are formed, whereby the covering or finishing-material is laid on in a converse direction to the twist imparted to the respective strands, substantially as and for the purpose specified.

5. The combination of a revolving laying-up mechanism, three or more spindles, for twisting the several strands together, and the strand-twisting and covering devices, rotating in opposite directions to each other, the whole operating substantially as herein described.

3,346.—GEORGE E. VAN AMRINGE, New York, N. Y.—*Tube for Steam-Generators.*—Patented December 22, 1868, No. 85,149; reissued March 30, 1869.

Claim.—The construction of tubes of steam-generators, substantially as herein set forth.

3,347.—FRANK B. WELLS, for himself, and J. HERVEY COOK, (assignee of one-half of said invention,) Fishkill on the Hudson, N. Y. — *Binding Books.*—Patented October 20, 1868, No. 83,345; reissued March 30, 1869.

Claim.—Mathematical and other books, provided with silicated leaves or sheets, combined therewith, substantially as and for the purpose specified.

3,348.—JAMES ARMSTRONG, Jr., Elmira, Ill.—*Cultivator.*—Patented December 26, 1865, No. 51,680; reissued March 30, 1869.

Claim.—1. Two longitndinal beams or levers C C, extending both in front and in rear of the axle B of a cultivator, and secured rigidly upon said axle, at any required distance on each side of its center, said beams or levers being pivoted or hinged, at their forward ends, to the shovel-carrying frame D D, substantially as described.

2. The beams or levers C C, applied to the axle of a cultivator, and extending both in front and in rear of said axle, so that when their ends are depressed, the shovel-carrying frame is raised, substantially as described.

3 Rigidly securing the draught-pole E to the transverse brace C′ and front brace *b*, of a shovel-carrying frame of a carriage cultivator, when such frame is hinged at its front end, and it, together with the rear end of the draught-pole, and with said braces, rises bodily, as the cultivator-teeth are elevated, substantially as described.

4. Pivoting the inner shovel-standards G G to a transverse brace C′ of a shovel-carrying frame, which is hinged at its front end, and has the draught-pole attached to it, substantially as described.

5. A carriage cultivator, combining, in its organization, two pairs of longitudinal beams, hinged or pivoted together at their front ends, or levers D D, C C, and a driver's seat, located on extensions which are above the axle, in rear of the axle of the transporting-wheels, and in rear of the plows or shovels, substantially as described.

6. The shovel carrying frame D D, with the driver's seat D′ secured to its rear end, said frame being pivoted by its forward end to two levers, which are secured rigidly to the carriage-axle B, and are provided with foot-stirrups *m m*, substantially in the manner and for the purpose described.

7. The movable stepped block *c*, applied to the axle B of a cultivator-carriage, for adjusting the shovel-frame of the cultivator, substantially in the manner herein described.

8. The longitudinally laterally-rocking rods *e e*, in combination with the pivoted cap *d*, applied in a cultivator, substantially in the manner and for the purpose herein described.

9. The compound pivot-joint *e i*, for connecting the shovel-standards G G to their supporting-frame, and allowing the lateral vibration of the standards, as well as permitting the desired adjustment of the same, either to the right or left, substantially in the manner described.

10. Constructing the shovels *s* with an embracing-extension *t*, which is pivoted to the standard, in the manner described and represented, for the purpose set forth.

11. The combination of the shovel-frame D D C′ with the levers C C, vibrating-standards G G, curved levers I I, and treadles H H, substantially as described.

3,349.—C. AULTMAN, Canton, Ohio, assignee, by mesne assignments, of HENRY FISHER.—*Harvester.*—Patented January 26, 1864, No. 41,411; reissued March 30, 1869.

Claim.—1. The combined raking and reeling apparatus, which rotates around a vertical shaft, when its arms adjust themselves successively from a horizontal to a vertical position, and when the combined apparatus is so located that its arms swing on hinges, which are below the highest point of the drive-wheel, and the extent of the sweep of any one of the arms does not interfere with the driver, seated outside of the drive-wheel, substantially as described.

2. The construction and adaptation of a combined rake and reel, which revolves entirely around a vertical center, so that it may be applied to the harvester at a point which is on the inside of the drive-wheel, and below the top of said wheel, substantially as described.

3. Attaching each of the respective arms of the combined rake and reel to a hinge, or pivot, which is on the inner side of the drive-wheel, and below the top of the same, substantially as described.

4. The adaptation of a raking and reeling apparatus combined, which revolves entirely around a vertical center, for application to the inner side of a harvester, at a point below the top of the drive-wheel, substantially as described.

5. The construction of the cam of the combined rake and reel, in the manner described and shown.

6. The crown-wheel, with a series of pivoted rake and reel arms, in the manner described and shown.

7. Attaching the rake-arm to the central head, below the driving-wheel, and in a line tangential instead of radial to the head, so as to cause the rake to pass the cutting-apparatus in a line more nearly parallel thereto.

8. So arranging the arms of a combined revolving raking and reeling apparatus, that the driver can sit on the machine and drive the team, the shaft of the rake and reel being at or nearly at right angles with the grain-platform, and the arms of rake and reel not sweeping over the seat on which the driver is located, so as not to interfere with him, substantially as described.

9. Driving a revolving rake and reel combined, mounted upon a vertical, or nearly vertical pivot, from a pulley on the inner side of the drive-wheel or main axle.

10. The combination of a horizontal miter-wheel, having combined rake and reel arms attached thereto, a vertical miter-spur wheel, and an endless belt, or its equivalent, extending to a pulley on the driving-wheel or shaft.

11. A driver's seat, supported wholly on the outer end of the main drive-wheel axle.

12. In a harvesting-machine, the frame of which has no support outside the main drive-wheel, a driver's seat, mounted on a support which is wholly outside of said wheel.

13. In a harvester, having a revolving rake and reel, a driver's seat, supported by the outer end of the main axle.

14. In combination with the stationary cam M, extending the rake-head back behind its fulcrum, so as to raise and control the rotating rake by the action of the cam-way on its heel, or rear end, substantially as described.

15. In combination with the rake, the curved projection attached thereto, to push the grain down in advance of the rake, and insure its being cut before the rake shall move it on the platform.

3,350. — AURY G. COES, Worcester, Mass. — *Wrench.*—Patented March 6, 1866, No. 52,968; reissued March 30, 1869.

Claim.—1. As a means of sustaining the support or step of the foot of the movable-jaw screw in position, the metal joint or connection, composed of the notch *a* and the ferrule H, with its eccentric lip, or its equivalent, in manner and for the purpose substantially as before explained.

2. The formation and application of the ferrule H, in such manner that it shall serve the twofold purpose of an abutment, to prevent longitudinal movement of the movable-jaw screw, or its step or support, in one direction, and as a protection against fracture or injury to the handle.

3. The combination and arrangement of the ferrule H with the shank C and the handle F, whereby such handle, or its equivalent, serves the purpose of preventing escape of the lip of such ferrule from the groove or notch in the shank, as described.

3,351.—THOMAS DANIELS, Toledo, Ohio.—*Soda-Water Apparatus.*—Patented January 11, 1859, No. 22,549; reissued March 30, 1869.

Claim.—The extension of the sirup and soda, or carbonic-acid-water pipe, through or over the upper part of the refrigerator, or ice-chamber, into the ice-chamber, and the extension of these pipes to, and the coiling them upon, the bottom of the ice-chamber, as described, where they can be conveniently covered with ice, and by that means, and in that manner, cooling their contents, as they pass through such pipes to the place where they are to be discharged for use, and in that way cooling them so near the place, or faucet through which they are to finally discharge for use, as to discharge such contents as nearly as possible as cold as when they leave the ice-chamber.

3,352.—ALFRED B. ELY, Newton, Mass., assignee of FRANCIS D. BALLOU.—*Boot and Shoe.*—Patented July 4, 1865, No. 48,614; reissued March 30, 1869.

Claim.—The new article of manufacture constituting a boot or shoe, made substantially in the manner described.

3,353.—JACOB B. KINGHAM, Dorchester, Mass.—*Nail-Cutting Machine.*—Patented October 11, 1864, No. 44,637; reissued March 30, 1869.

Claim.—1. Combining and arranging the griping-dies G, K, I′, and N, in the manner substantially as described and for the purpose set forth.

2. Combining, with the pivoted die N and stationary die I′, mechanism for vibrating said die N, in the manner described, so that when the nail is freed from pressure, the said die N will be forced under the die I, Fig. 3, and allow the nail to drop out of the machine, as specified.

3,354.—WILLIAM W. LEWIS, Cincinnati, Ohio.—*Machine for Rolling Horseshoe-Iron.* — Patented February 1, 1859, No. 22,812; reissued March 30, 1869.

Claim.—1. The combination, in a pair of rolls, of a groove with an inclined bottom and one or more creasers, for the purpose of guiding the iron, and producing a thicker edge on the outside of the shoe, substantially as described.

2. The combination of a pair of grooved rollers with one or more creasers, when the bottom of the groove or rolling-surface of either roll is eccentric, so as to make the shoes thicker at the heels than at the point or toe, substantially as set forth.

3. The combination, with a pair of rolls, of annular adjustable creasers, substantially as described.

3,355.—LIBERTY LITCHFIELD, FESTUS C. LITCHFIELD, and LIBYA M. LITCHFIELD, Southbridge, Mass., assignees of LYDIA W. LITCHFIELD, administratrix of the estate of LAROY LITCHFIELD.—*Shuttle for Looms.*—Patented May 1, 1855, No. 12,780; reissued March 30, 1869:

Claim.—1. The combination and arrangement of the spring *d* with the shuttle A, the spindle *a*, the joint pin *b*, the arm *c*, and the abutment or stop *h*.

2. The combination and arrangement of the pin *e* and its head *f* with the shuttle A, the spring *d*, the spindle *a*, the joint-pin *b*, the arm *c*, and the abutment or stop *h*.

3. The combination of means of adjusting the stop *h*, in manner as described, with such stop, the arm *c*, the spindle *a*, the pin *b*, and the spring *d*, arranged with the heel and the joint-pin of the spindle, and in the shuttle, as set forth.

3,356.—HORATIO O. PERRY and JOHN L. LAY, Buffalo, N. Y.—*Reciprocating Steam-Engine.*—Patented May 21, 1867, No. 65,003; reissued March 30, 1869.

Claim. — 1. A vertical compound-engine, A B, having a continuous piston-rod, the cylinders being united by a connection, or connections, which form a space between the proximate heads of said cylinders, substantially as set forth.

2. The combination and arrangement of the shell or frame surrounding the intervening chamber K, with the two cylinders, A and B, the bottom plate connected with, or forming the cover of the cylinder B, constructed substantially as herein set forth.

3. The sleeve *h*, or equivalent extension of the cylinder-head, and packing-box L, in combination with the cylinders A B, arranged and operating substantially as set forth.

4. In combination with the two cylinders, A and B, and chamber K, arranged as described, the removable section forming the main-hole I, whereby access is had to the interior of the lower cylinder, substantially as herein set forth.

5. So combining and arranging the two cylinders, A and B, where a continuous piston-rod is employed, that both cylinders may be packed around said rod, by the use of a single stuffing-box, in a space intervening between the two cylinders, substantially as described, or other equivalent means.

6. So constructing the frame, shell, or casting K, that while it serves the purpose of connecting the two cylinders, and sustaining one upon the other, it shall also serve as a head, or cover, for the proximate ends of one or both cylinders, substantially as shown and described.

7. The sustaining part K, or its equivalent, surrounding the piston-rod, between the proximate heads of the two cylinders, said portion acting as the support of the upper cylinder, and dispensing with any extraneous frame for the purpose, and thereby forming a compact arrangement and construction for a marine engine, substantially as set forth.

3,357.—JAMES S. ATTERBURY and THOMAS B. ATTERBURY, Pittsburgh, Pa. — *Manufacture of Glass-Ware.* — Patented March 3, 1868, No. 75,110; reissued April 6, 1869.

Claim. — 1. As a new article of manufacture, a glass ewer-mouthed pitcher or vessel, having its upper part at least blown in a mold, so that the edge or rim may be of such definite curved shape as that a metallic cap or cover, of a corresponding curved shape, shutting down upon the naked glass, may fit it exactly.

2. The mode, hereinbefore described, of perforating glass vessels for riveting covers thereto.

3. Making ewer-mouthed glass pitchers or vessels by blowing the upper or rim portion at least in a mold, and attaching metallic covers thereto in such manner as that the cover may fit closely to the naked glass rim, substantially as described.

3,358.— GEORGE CARLETON CASSARD, Baltimore, Md., (L. and J. L. CASSARD, assignees of GEORGE CARLETON CASSARD.)—*Lard-Cooler.*—Patented June 16, 1868, No. 78,925; reissued April 6, 1869.

Claim.—1. The central lard-discharge D, when used in a lard-cooler, substantially as and for the purpose set forth.

2. The scrapers R R, springs *s s*, arms P P, (supporting them,) or their equivalents, for the purpose specified.

3. The combination of the cylindrical tank C, inclosed in the tank B, or other suitable arrangement to form the interval F, for the purpose specified, with the vertical (hollow or solid) shaft I, whose bearings shall be above said tank or its contents, all substantially as set forth.

4. The combination of the shaft I, the fixed slats *n n*, and the movable slats *m m*, supported by and rotated with the shaft and its arms, and meshing between the fixed slats, when said parts are employed in connection with the vessel C and tank B, having the interval F, as described.

5. The central discharge, in combination with the funnel-shape bottom of tank C, or its equivalent, not restricting myself to either shape or material in construction, but all substantially as described, and for the purpose specified.

3,359.— JOHN DEGNON, Cleveland, Ohio.—*Governor.*—Patented August 7, 1866, No. 56,908; reissued April 6, 1869.

Claim.—1. The combination of the cylinder A and the propeller B, with the throttle-valve of a steam-engine, and the intermediate devices, substantially as herein set forth.

2. The combination of the cylinder A and the propeller B, with an arrangement of devices, whereby to transmit motion, and communicate changes of the said wheel to the throttle-valve of a steam-engine, as herein stated.

3. The combination of the propeller B, revolving in water in the cylinder A, the spindle C, and rack D, applied with the toothed segment E, attached to the spindle *d*, operated through the medium of the gearing *a b*, substantially in the manner represented and described.

3,360.—JASON B. LOOMIS, Chelsea, Mass., assignee, by mesne assignments, of SAMUEL S. SHERWOOD, New York, N. Y.—*Skeleton-Skirt.*—Patented June 26, 1860, No. 28,941; reissued April 6, 1869.

Claim.—1. The combination, with hoops of a skeleton-skirt, of a tape, braid, or equivalent, extending from hoop to hoop, and sewn through the covering of the hoops, substantially as hereinbefore set forth.

2. The combination, with hoops of a skeleton-skirt, of a tape, braid, or its equivalent, extending from hoop to hoop, and sewn through the covering of the hoop, and returned over the hoop, substantially as hereinbefore set forth.

3. The combination, with hoops of a skeleton-skirt, of a tape, braid, or equivalent, extending from hoop to hoop, and sewn through the covering of the hoop, and through the tapes or vertical support, substantially as hereinbefore set forth.

4. The combination, with hoops of a skeleton-skirt, of a tape, braid, or equivalent, extending from hoop to hoop, and sewn through the covering of the hoop returned over the hoop, and sewn through the tapes or vertical support, substantially as hereinbefore set forth.

3,361.— ALBERTO PAGENSTECHER, Curtisville, Mass., assignee of HENRY VOELTER. — *Reducing Wood-Fibers to Paper-Pulp.*—Patented August 10, 1858, No. 21,161; antedated August 29, 1856; reissued April 6, 1869.

Claim.—1. Placing the blocks of wood to be reduced with their fibers running parallel to the axis of the stone, or transversely to its face, substantially in the manner shown and described.

2. The arrangement of two or more blocks on the circumference of one and the same stone, one block behind the other, so that the fibers torn off, by the action of the stone, from the first block, will be carried under the succeeding block, and again exposed to the grinding-action of the stone, as set forth.

3. The automatic feed-motion, constructed of screw-spindles R, followers P, and jaws Z, in combination with the stone A, substantially as shown and described.

4. The pulleys T and ratchet-wheels *a*, in combination with the jaws Z, screw-spindles R, followers P, and stone A, substantially as described.

5. The separating-mechanism, consisting of a series of perforated and rotating cylinders, in combination with the separating-rollers, channels, and troughs, substantially as shown and described.

3,362.—DAVID S. QUIMBY and DAVID S. QUIMBY, Jr., Brooklyn, N. Y, assignees of STEPHEN R. GOING.—*Cooking-Stove.*—Patented June 17, 1862, No. 35,658; reissued April 6, 1869.

Claim.—1. A draught-regulator, applied in the oven-flue, near where the products of combustion pass away from under the oven, substantially as and for the purposes set forth.

2. In combination with an oven, and the flues thereof, a draught-regulator, formed of a range of holes that are larger at the front than toward the back of the oven, substantially as and for the purposes set forth.

3. A sliding damper, formed with holes decreasing from the front of the range toward the back, and applied in the flue that passes below the oven, substantially as set forth.

3,363.—JOHN E. VAN WINKLE, Paterson, N. J. —*Machine for Opening and Cleaning Cotton.*—Patented June 2, 1863, No. 38,794; reissued April 6, 1869.

Claim.—1. The combination of the apron I and fan H, with the parallel-toothed shafts C C′, *a a*, grid or grating D, and feed-aperture *g*, when the said parts are arranged as herein set forth, to cause the cotton to traverse the beaters longitudinally of the shafts C C′, in passing from the feed-aperture *g* to the apron I.

2. The combination of the oblique-deflecting ribs *w*, with the feed-aperture *g*, longitudinally-operating beaters C C′ *a*, carrying-apron I, and fan H, all arranged in the manner and for the purposes herein set forth.

3. The opening or openings *e*, for the admission of air at the feeding-end of the machine, beneath the grid or grating D, in the described combination with the said grid, or grating, and with longitudinally-operating beaters C C′ *a*, carrying-apron I, and fan H, all arranged and operating as set forth.

4. The eccentric Q, ratchet-wheel *c*, and pawl *d*, or their equivalents, employed in the described combination, with the beaters C C′ *a*, and grating D, to adjust the latter in its distance from the former.

5. The suction-fan H, communicating with the interior of the rotary screen F, in the manner and for the purposes specified, when used in combination with toothed beaters C C′ *a*, and apron I, arranged and operated as set forth.

6. The combination, with the suction-fan H and carrying-apron I, of the roller L and door S, to the end of the box E, through which the cotton is discharged, said roller and door being hung, or arranged so as to be capable of rising and falling, or of adjusting themselves relatively to the apron I, and cotton lying thereon, as it passes under the roller, substantially as and for the purpose or purposes herein set forth.

3,364.— WILLIAM BAXTER, Newark, N. J. — *Steam-Engine-Valve Device.*—Patented October 27, 1868, No. 83,444; reissued April 13, 1869.

Claim.—1. The method herein described of controlling the throw of a steam-valve by interposing between the moving cam and the valve a resisting medium, the action of which on the valve increases or decreases in proportion to the speed of the engine, substantially as and for the purposes described.

2. The combination, with the valve and its moving cam, or eccentric, of the regulating-barrel and piston, interposed between said cam and valve, and connecting the divided valve-rod, substantially in the manner specified.

3. The regulating piston and the barrel for containing the resisting-medium, provided with a channel connecting its ends, with or without an adjusting or

regulating valve, in combination with the valve and its moving cam and connecting-rod, substantially as and for the purposes set forth.

4. The combination, with the steam-cylinder, located within the boiler, or steam-space, or chamber connected therewith, of a wholly uncovered or open valve, also located within said boiler or steam-chamber, sliding on open steam-admission ports, and held or pressed against the valve seat by the pressure of steam alone, without the aid of any mechanical device applied for that purpose, substantially as set forth.

5. The arrangement, herein shown and described, of the cut-off-valve rod and main valve rod, so that the one shall pass through the other, or so that both shall have a common axis, for the purposes set forth.

6. The arrangement of a portable engine, built upon the flange of the steam-cylinder, which at once forms the bed-plate of said engine and the cover of the boiler or steam-space connected therewith, substantially as herein described, whereby the whole may be bodily applied to or removed from the boiler, as set forth.

3,365.—W. A. IVES, New Haven, Conn.—*Hollow Auger.*—Patented October 13, 1868, No. 82,957; reissued April 13, 1869.

Claim.—The circular stock A, having the slot B across its face, in combination with the screw D, adjustable dies, or knife-holders C C, and set-screws *f f*, when constructed and operated substantially as and for the purpose described and set forth.

3,366.—EBENEZER G. LAMSON, Shelburne Falls, Mass.—*Rock-Channeling Machine.*—Patented October 2, 1866, No. 58,435; reissued April 13, 1869.

Claim.—1. The combination of cutting-instruments, for working in or on stone, with the crank-wheel attached to driving-shaft, or otherwise, and an interposed spring, or its equivalent, so as to raise and lower the mechanism, substantially as described.

2. In combination with the stone-cutting machine herein described, which is moved along upon a track, or way or ways, whilst operating upon the rock or stone, the reversible pawl and the worm-gear and clutch, so as to enable the movement of the whole machine along in either direction upon the track, or stop it at will, during the continuous action of the cutters, substantially as described.

3. The interposition of a bow-spring, or other elastic or yielding device, between the cutters or drills, and the operating-mechanism of a stone-channeling drilling, or grooving machine, substantially for the purposes set forth.

4. The combination of the bow-spring, or its equivalent, and the eccentric feed, with worm-gear, when operated upon wheels which run on a track, the friction of which moves the machine along either way, upon the track, substantially as herein set forth.

5. The combination, in a stone drilling, grooving, or channeling machine, of an elastic or yielding instrument, of any construction, and a wrist-pin, or other device, which gives a positive movement to said elastic instrument, which is connected with drills, or cutters, substantially as set forth.

6. A stone-grooving, drilling, or channeling machine, that is provided with a mechanism which will assist in extracting the drills, or cutters from the rock, assist in elevating the same on their upward movement, and add to their velocity or stroke on or into the stone, substantially as and for the purposes described.

7. The adjustable crank-pins *a a* in the cranks M M, whereby the stroke of the drills may be increased or diminished, substantially as described.

8. In combination with a stone-drilling or cutting apparatus, that is moved upon a track, a friction or equivalent clutch, operated by a lever connected to the axle of the carriage, whereby the machine may be allowed to propel along or stop, substantially as set forth.

9. Reciprocating channeling-chisels, applied to opposite sides of a carriage-bed, and driven by a crank-shaft and connecting-arm, said shaft receiving its motions from an engine which is mounted upon said carriage-bed, substantially as described.

3,367.—E. G. LAMSON, Windsor, Vt., assignee of GEORGE W. BISHOP. — *Stone-Channeling Machine.*—Patented January 27, 1857, No. 16,460; reissued April 13, 1869.

Claim. — 1. A stone-grooving machine, upon a frame, which carries an engine, and a boiler, and a stone-channeling or grooving apparatus, with reciprocating cutters operating in connection with the frame, substantially in the manner specified.

2. A frame which carries an engine, and boiler, and a drilling, grooving, or cutting apparatus, when provided with a worm and spiral gear, for the purpose of giving motion to said frame, upon any suitable track or way, by means of friction, substantially as herein specified.

3. Propelling a stone-grooving or cutting machine, or a frame of a drilling, cutting, or grooving machine, by means of a worm, spiral, and bevel gears, which operate upon the wheels of axles which support or carry said frame substantially as specified.

4. A series of vertical inclined chisels, of different lengths, placed, one behind the other, in combination with a revolving hammer or cam, as described, whereby a positive motion is given to all the chisels, from a single hammer or cam for each series of chisels, substantially as set forth.

5. The combination of a feed-mechanism, a stone-channeling or grooving machine, and a steam-engine, all operating substantially as and for the purposes set forth.

6. The combination of wheels having plane surfaces, and which move upon a track having a plane surface, with the frame and propelling-mechanism for drilling, channeling, or cutting stone, whereby I am enabled to feed the machine without too positive a movement, substantially as and for the purposes specified.

3,368.—E. G. LAMSON, Windsor, Vt., assignee of WILLIAM PLUMER.—(Division A.) *Rock-Channeling Machine.*—Patented October 6, 1857, No. 18,352; reissued April 13, 1869.

Claim.—1. Feeding the cutter laterally in a direction at right angles to the cut, or nearly so, whether the cutting-tool be situated horizontally, vertically, or at any angle, by the devices herein described, or their equivalents, so arranged that the cutter or drill can be turned at right angles to the straight track of the machine, and also the requisite feeding motion be obtained, as set forth.

2. The slotted arms *c' d'* and *e' f'*, so arranged and constructed as to permit the whole cutting-apparatus to be turned at right angles to the cut, and to communicate, when fastened together, the lateral feeding motion to the frame *r r*.

3. The arrangement of devices herein described, whereby I am enabled to feed the cutter, working vertically, in a circular direction, and set the cutter at any desired distance from the center upon which the machine turns, by which blocks or pillars of any desired diameter can be cut out, as set forth.

4. A stone-cutting or channeling machine, which moves upon a straight track, mounted upon a circular track, the standards supporting the drill or drills resting upon a turning plate, all so constructed that the drill or drills may be operated on either side of the straight track in circular lines, or fed forward in parallel lines, substantially as set forth.

5. The arrangement, under a stone-drilling machine, substantially as herein set forth, of flanged rollers for keeping the frame and mechanism in place upon the track, substantially as specified.

3,369.—E. G. LAMSON, Windsor, Vt., assignee of WILLIAM PLUMEE—(Division B.) *Rock-Channeling Machine.*—Patented October 6, 1857, No. 18,352; reissued April 13, 1869.

Claim.—1. A stone-channeling or grooving machine, which is constructed to move upon a track, and provided with a reciprocating cutter or cutters, so arranged as to cut seams or grooves outside of frame and track, and in a line with the track, substantially as herein set forth.

2. A stone-channeling or grooving machine, which is constructed to move upon a straight track, which is provided with reciprocating cutters, which are arranged to cut seams or grooves between the tracks or ways, in the manner set forth.

3. A stone-channeling or grooving machine,

which runs upon a track, and which is provided with a cutter or cutters, attached to a cutter-holder, which cutter-holder moves freely on standard guides, the holders being operated upon suitable mechanism for raising the cutter or cutters, substantially as set forth.

4. The arrangement of the cuttter-holders with cutter or cutters, attached to slide freely on standard guides, confined to a frame or plate, which is hung on trunnions, substantially as and for the purposes set forth.

5. A stone-cutting or grooving machine, with chisels or drills, that are operated upon a frame and track, when said frame is supported upon trunnions, and held by adjustable braces, for giving the cutting-instruments any desired angle, substantially as herein set forth.

6. In combination with a stone-grooving or channeling machine, a horizontal rack-bar, placed either in the inner or outer surface of the track, and a pinion, attached to the mechanism of the machine, whereby the same is fed along, substantially for the purposes set forth.

7. Operating the feed-mechanism, as well as the cutting-mechanism of a stone-grooving or channeling machine, by a crank-shaft and eccentric, or equivalent device, substantially as set forth.

8. In a stone-grooving, drilling, or channeling machine, that is moved along upon a track, or way, a double acting pawl, acting upon a ratchet, or their respective equivalents, whereby the pinion is caused to feed into the rack-bar on the track, substantially as set forth.

9. A slotted arm, lever, or elbow, or their equivalents, connected with the feed-mechanism of a stone-drilling, cutting, or channeling machine, whereby I may regulate the progress of the machine, and its cutters on the stone, so as to feed the mechanism faster or slower while the cutters are operating, substantially by the means and for the purposes specified.

10. The hanging frame E′, which carries the cutters on trunnions, and the adjustable brace Y, or its equivalent, for the purpose of giving any desired angle to the cutters, substantially as set forth and described.

11. Giving a forward or backward movement to the stone-cutting machine at pleasure, and simultaneously with the upward stroke of the reciprocating cutters, and confining said machine positively in position upon its track, during the descending stroke of the said cutters, substantially by the means as herein set forth.

12. The employment of an air-cylinder, in a stone-cutting or channeling machine, for the purpose of assisting the force of the cutter or cutters on their descent to the stone, substantially as set forth.

13. The upright screw-shaft Q, arranged upon the frame E′, for the purpose of feeding down the frame H and the cutting-mechanism, substantially as specified.

14. The vertical screw-rods O′ O′, between the standards D D, on each side of the plate C′ for the purpose of allowing the frame E′, which is supported upon trunnions, to be raised or lowered between the standards, and set at any desired angle by the braces Y Y, or their equivalents, and stationed in position, substantially as herein specified.

3,370.—JOHN I. MONROE, Woburn, Mass.—*Horse-Rake.*—Patented March 19, 1867, No. 63,079; reissued April 13, 1869.

Claim.—1. The combination of the elastic tip G with the rigid descending bar e^2 of teeth E, substantially in the manner as described and shown.

2. The divider, as constructed with the head M, teeth L, bar K, spring, N, and bars J, substantially as described and shown.

3. So connecting the divider-head M with the divider, by means of spring N, or its equivalent, as that it shall have an independent yielding or vibratory motion, for passing obstacles, substantially as described and shown.

3,371.—FREDERICK NISHWITZ, Brooklyn, N. Y.—(Division A.) *Harvester.*—Patented February 16, 1858, No. 19,377; reissued March 5, 1861, No. 44; reissued April 13, 1869.

Claim.—1. The combination, in a two-wheeled front-cut harvester, of a tongue, or draught-frame, vibrating about a gear-center, with a frame vibrating about a gear-center, and a laterally-projecting cutting-apparatus, secured by one end only, to the inner front corner of the vibrating frame, the combination being and operating substantially as set forth.

2. The combination, in a two-wheeled front-cut harvester, of a tongue, or draught-frame, vibrating about a gear-center, a frame carrying a countershaft and a crank-shaft, and vibrating about a gear-center, and a laterally projecting cutting-apparatus, connected with the gear-frame at one end only, substantially as set forth.

3. The combination, in a front-cut harvester, of two wheels, a main frame arranged between the wheels, a laterally-projecting cutting-apparatus, secured to the frame at one end only, a vibrating tongue, or draught-frame, and a lifting hand-lever, and cord or chain operated by the driver, substantially as set forth.

4. The combination of a vibrating tongue, a vibrating gear-frame, a lifting-lever, a cord, or chain and pawl, with a tripping-lever operated by the driver's foot, substantially as set forth.

5. The combination, substantially as set forth, of two wheels, a tongue, or draught-frame secured directly to the axle of said wheels, a main frame arranged between the wheels, projecting beyond their peripheries at either end, and vibrating about the main axle, a laterally-projecting cutting-apparatus, connected with the gearing-frame at one end only, and a lifting-lever and cord, or chain.

3,372.—FREDERICK NISHWITZ, Brooklyn, N. Y.—(Division B.) *Harvester.*—Patented February 16, 1858, No. 19,377; reissued March 5, 1861, No. 44; reissued April 13, 1869.

Claim.—1. The combination, as set forth, of an adjustable lever, directly connected with the tongue, or draught-frame, with the laterally-projecting cutting-apparatus, for the purpose specified.

2. The combination with the tongue, or draught-frame, attached at its rear end, near the center of the machine, of the lever, the chain or cord, and the frame, carrying the cutting-apparatus, as and for the purpose set forth.

3. The combination, with the lever attached to the tongue, or draught-frame, of the pawl and treadle, operating as set forth.

4. The combination, with the lever, pawl, and treadle, of an adjustable stop, substantially as set forth.

3,373.—JOHN S. ROWELL and IRA ROWELL, Beaver Dam, Wis., assignees of JOHN S. ROWELL and MICHAEL F. LOWTH, same place.—*Seeding-Machine.*—Patented October 14, 1862, No. 36,672; reissued April 13, 1869.

Claim.—1. The triangular openings *d*, and groove *e*, in the cap I, in combination with the seed-cylinders H, when arranged to operate in the manner and for the purpose specified.

2. Broadly, the brace M, constructed and arranged so to clamp the shank K that it will retain its position when the shovel J is used in tillable soil, yet hold it in such a manner that it will loosen its hold on the shank, and allow it to swing back on the pivot *k*, when the shovel meets with obstructions, as specified.

3. The combination of the forked or friction-brace M, with the pivot *k* for connecting the shanks K, and consequently, the cultivator-teeth J to their drag-bars L, substantially as described.

3,374.—TALIAFERRO P. SHAFFNER, Louisville, Ky.—(Division A.) *Method of Blasting with Nitroleum*—Patented December 18, 1866, No. 60,573; reissued April 13, 1869.

Claim.—The use of nitro-glycerine and silicious matter mixed together, for blasting or military purposes, in the manner substantially as and for the purposes described.

3,375.—TALIAFERRO P. SHAFFNER, Louisville, Ky.—(Division B.) *Method of Blasting with Nitroleum.*—Patented December 18, 1866, No. 60,573; reissued April 13, 1869.

Claim.—1. For blasting-purposes, the use and interposition of a column of water between the "tamping" and "blasting" charges, when the same are arranged in the manner and for the purposes described.

2. As a method of blasting in rock, the adjustment and arrangements of the "tamping" and "blasting" charges, in such manner that the former shall be placed at or near the surface, or upper part of the drill-hole, while the latter is located at the bottom thereof, or in such a manner as that the gases of the two charges may be united, disrupting the rock in the manner and for the purposes hereinbefore described.

3,376.—J. B. Slawson, New York, N. Y. assignee, by mesne assignments, of W. H. McLellan. —*Fare-Boxes for Cars, &c.*—Patented April 16, 1867, No. 63,804; reissued April 13, 1869.

Claim.—1. The arrangement of the metallic screens upon opposite sides of the box, with reference to the tilt C, whereby the fare can be clearly seen and inspected by both the driver and passengers, or either, as herein described, for the purpose specified.

2. The combination of the knob F with the lever A and gate B, all made and operating substantially as set forth, so that the gate will be self-closing, as specified.

3. The device, herein described, for enabling the driver to close the box, consisting of the lever J and arm *q*, operating in combination with the pusher F, as specified.

4. The combination, in fare-box, of the knob or pusher F, lever A, tilts B C, and slide D, all made and operating substantially as herein shown and described.

3,377.—The United States Blasting-Oil Company, New York, N. Y., assignees of Alfred Nobel.—(Division A.) *Mode of Exploding Nitro-Glycerine.*—Patented October 24, 1865, No. 50,617; reissued April 13, 1869.

Claim.—Subjecting nitro-glycerine to the influence of confinement, combined with such degree of pressure, or heat, and pressure, however produced, as to result in the decomposition and explosion of the nitro-glycerine, substantially as hereinbefore described.

3,378.—The United States Blasting-Oil Company, New York, N. Y., assignees of Alfred Nobel.—(Division B.) *Device for Exploding Nitro-Glycerine.*—Patented October 24, 1865, No. 50,617; reissued April 13, 1869.

Claim.—1. The decomposition or explosion of nitro-glycerine when under confinement, as hereinbefore described, by means of heat generated within the mass of nitro-glycerine through the agency of an electric spark, or of a voltaic, magnetic-electric, or static-electric current, however generated, substantially as and for the purposes hereinbefore set forth.

2. The decomposition or explosion of nitro-glycerine, when under restraint or confinement, as hereinbefore described, by the evolution or generation of heated gas or gases, and the consequent production of heat and pressure within or upon the fluid mass of nitro-glycerine, by means of the explosion of gunpowder or their equivalent explosive or fulminating substance under or upon the surface of the nitro glycerine, substantially as and for the purposes hereinbefore set forth.

3. The use and application of the plug of wood, metal, or other suitable material, for holding or containing gunpowder, or other explosive substance, within, upon, or near to the fluid mass of confined nitro-glycerine, together with the parts and arrangements of such plug, in the manner and substantially as hereinbefore described.

4. The application and use of a percussion-cap, fitted to a train, or other fuse used for conducting fire, when used in connection with nitro-glycerine so that the said cap, evolving on its explosion the required heated gases, or the forces of percussion or concussion, shall decompose or explode nitro glycerine, when under confinement, in the manner and substantially as hereinbefore described.

5. The application and use, within the fluid mass of nitro-glycerine, subjected to confinement as hereinbefore described, of lime and water, or other substances which will, on combining under similar circumstances, generate a sufficient degree of heat, for the purpose of decomposing or exploding nitro glycerine by means of heat generated within it, substantially as hereinbefore described.

3,379.—The United States Blasting Oil Company, New York, N. Y., assignees of Alfred Nobel. —(Division C.) *Mode of Manufacturing Nitro-Glycerine.*—Patented October 24, 1865, No. 50,617; reissued April 13, 1869.

Claim.—Making nitro-glycerine (being a mixture of glycerine with nitric and sulphuric acids) by pouring together, into a funnel or other suitable receptacle, separate streams of glycerine and of those acids, and discharging the mixture therefrom into a body of cold water, maintained at low temperature, by any suitable means.

3,380.—The United States Blasting-Oil Company, New York, N. Y., assignees of Alfred Nobel.—(Division D.) *Use of Nitro-Glycerine.*—Patented October 24, 1865, No. 50,617; reissued April 13, 1869.

Claim.—The application and use of nitro-glycerine, simple or compounded, as an explosive for blasting, or for disrupting purposes, in the manner, and substantially as hereinbefore described.

3,381.—The United States Blasting Oil Company, New York, N. Y., assignees of Alfred Nobel. —(Division 1.) *Manufacture of Nitrine or Crystallizing Nitro Glycerine.*—Patented August 14, 1866, No. 57,175; reissued April 2, 1867, No. 2,538; reissued April 13, 1869.

Claim.—The mode or process, substantially as hereinbefore described, of mixing together glycerine, sulphuric acid, and nitric acid, free or nearly free from hyponitric acid, in the production, as a new article of manufacture, of nitrine, or crystallizing nitro-glycerine.

3,382.—The United States Blasting-Oil Company, New York, N. Y., assignees of Alfred Nobel. —(Division 2.) *Process of Manufacturing Nitro-Glycerine.*—Patented August 14, 1866, No. 57,175; reissued April 2, 1867, No. 2,538; reissued April 13, 1869.

Claim.—The combination and use of the vessel or tank A A, the worm F F, the dasher G H, for the purpose of containing, cooling, and agitating the acids and glycerine in the process of making and compounding nitro glycerine, in the manner substantially as hereinbefore described.

3,383.—Elijah Young, Fayetteville, Mo.—*Seed-Planter.*—Patented June 26, 1860, No. 28,936; reissued April 13, 1869.

Claim.—The seed-boxes E-F and their dropping-disks I-H, and delivery-tubes D-*c*, when combined and arranged as and for the purpose set forth.

3,384.—William Baxter, Newark, N. J.—*Steam-Generator.*—Patented October 27, 1868, No. 83,445; reissued April 20, 1869.

Claim.—1. A steam-generator, the fire-box of which is provided with descending flues or fire-tubes, passing from the upper combustion-chamber, through the water-space, and communicating with a jacket surrounding said water-space, and extending up to the water-line of the boiler, or thereabouts, so as to leave uncovered the dome, in which the steam-cylinder is contained and held, substantially as herein shown and specified.

2. The construction and arrangement, in connection with the boiler or steam-space, or chamber connected therewith, of the upper flange of the steam-cylinder, so that it shall form the top or cover of said boiler or chamber, in which the cylinder is suspended and held, as herein described.

3,385.—A. Milton Blake, Canton, Ohio.—*Spring-Chair.*—Patented April 28, 1868, No. 77,161; reissued April 20, 1869.

Claim.—1. The combination of the chair-leg C, socket or spindle D E, and conical spiral spring F, the several parts being arranged substantially as and for the purpose herein specified.

2. The combination of the chair-leg C, socket or spindle D E, conical spiral spring F, and foot plate G, the several parts being arranged substantially as and for the purpose specified.

3,386.—Francis W. Carruth, Boston, and Everett P. Richardson, Lawrence, Mass., assignees, by mesne assignments, of Henry Dunham, Jr.—*Machine for Sewing Boots and Shoes.*—Patented September 9, 1862, No. 36,396; reissued December 16, 1862, No. 1,363; reissued April 20, 1869.

Claim.—1. The last-holder B, and supporting-plate D, when so combined with a sewing-mechanism that their distance from the said sewing-mechanism can be varied to suit irregularities in the work.

2. In combination with a last-carrier, supported substantially as described, so that its distance from the sewing-mechanism may be varied, a feed-movement acting through the said last-carrier, as set forth.

3. In combination with a mechanism for sewing boots and shoes, the last A having a concave bottom, substantially as described.

4. In combination with a mechanism for sewing boots and shoes, a last, having the edge *a* chamfered so as to form a defined ridge or angle on the bottom thereof, as and for the purpose described.

5. The guide, or bearing H, when constructed with two bearing-faces or surfaces, against which the work may be pressed, so that the upper will be bent or held around the edge of the sole, substantially as described.

6. The combination of the guides or gauges H and I, bearing against the same side or face of the work, for the purpose of regulating the entrance and exit of the needle, or other piercing-instrument, and the distance of the stitches from the edge of the sole.

7. The curved needle N, when constructed with a hook upon its side or flank, substantially as described.

8. The combination of the curved needle N and the cast-off P, constructed and operating substantially as and for the purposes stated.

9. The combination of the curved awl O and curved hooked needle N, substantially as described.

3,387.—Francis W. Carruth, Boston, and Everett P. Richardson, Lawrence, Mass., assignees of Henry Dunham, Jr.—*Sewed Boot and Shoe.*—Patented October 17, 1865, No. 50,462; reissued April 20, 1869.

Claim.—1. A machine-made boot or shoe, having its upper connected to the sole by chain-stitches, which pass only partially through the thickness of the sole, and the chain or loops of which are concealed, or embedded, or received within a channel in the sole.

2. A boot or shoe whose upper is connected to the sole by chain-stitches, which dip into the sole without passing through its entire thickness, and are curved in planes transverse to the seam.

3,388.—Jarvis Case, La Fayette, Ind.—*Corn-Planter.*—Patented December 1, 1857, No. 18,730; reissued April 20, 1869.

Claim.—1. The runners D, in combination with the valves *g* and the spreaders *n*, arranged to operate substantially as described.

2. The combination of the hoppers with the slides J, the seed-ducts, with their valves *g*, and the spreaders *n*, arranged to operate substantially as set forth.

3. The combination, in a corn-planter, of the seat H, located in rear of the hoppers, the slides J, operated by the handle M and rock-shaft K, and the valves *g*, substantially as herein described.

4. The combination of the runner D, seed-ducts *d*, and spreader *n*, when arranged to operate substantially as described.

5. The combination of the rock-shaft K, with its arms *f*, and treadle, or foot-lever L, for operating the seed-slides, substantially as described.

6. The arrangement of the indicators *m*, substantially as described, to enable the operator, located on the seat H, to know when to operate the seed-slides, as set forth.

7. So combining, with the operator's seat H, a marker, having, in its arm, a hinged brace, or its equivalent, as that the operator may, from his seat, turn over or reverse said marker, suspend it upon the machine while turning around, and drop it into its working-position, without leaving his seat on the machine, as herein set forth.

8. The combination of the seat H, lever M, slides J, valves *g*, and runners D, when arranged to operate substantially as described.

9. The combination of the seat H, lever M, slides J, valves *g*, spreaders *n*, and runners D, arranged to operate substantially as described.

3,389.—Charles R. Cook, Buffalo, N. Y., assignee of Hiram R. Lavey.—*Harvester.*—Patented May 1, 1866, No. 54,374; reissued April 20, 1869.

Claim.—1. The combination of two spur-driving gears, of unequal size, with two corresponding pinions, for changing the speed of the cutters.

2. So combining two driving-gears, of unequal size, and two pinions meshing therewith, that the speed of vibration of the cutters may be changed without throwing said gears out of mesh.

3. Two gear-wheels or pinions on one shaft, either of which may be clutched to or unclutched from said shaft, for changing the speed of vibration of the cutters, substantially as described.

3,390.—W. N. Ely, Stratford, Conn., assignee, by mesne assignments, of Francis D. Ballou.—*Manufacture of Sewed Boots and Shoes.*—Patented January 10, 1860, No. 26,808; reissued April 20, 1869.

Claim.—1. The combination of the welt and upper with a series of waxed-thread stitches uniting the two, when the same is accomplished by means of a hook-needle waxed-thread sewing-machine, substantially as described.

2. The combination of the welt and sole with a series of waxed-thread stitches uniting the two, when the same is accomplished by means of a hook-needle waxed-thread sewing-machine, substantially as described.

3,391.—Eldridge M. Fowler, Bay City, Mich., assignee of John W. Thompson.—(Division A.) *Mowing-Machine.*—Patented July 15, 1856, No. 15,354; reissued April 20, 1869.

Claim.—1. The combination, substantially as set forth, in a mowing-machine, of a main frame, oscillating on a main axle, and a cutting-apparatus, in rear of said axle, and freely vibratable about an axis, in front of said axle, coincident with the axis of rotation of the counter-shaft.

2. The combination, substantially as set forth, of a cutting-apparatus with a coupling-frame, vibrating about an axis coincident with a counter-shaft having its bearings in pendants from the main frame and in front of the main axle.

3. The combination, substantially as set forth, of a rigid tongue, a main frame, oscillating on a main axle, a counter-shaft, turning in pendants below the main frame, in front of the main axle, and a shaft for reciprocating the cutters, driven from said counter-shaft, and vibratable freely with the cutting-apparatus around an axis coincident with said counter-shaft, independently of the main frame.

4. The combination, substantially as set forth, of a cutting-apparatus, vibratable vertically about an axis coincident with a gear-shaft in front of the main axle, with a shaft for reciprocating the cutters crossing the main axle, and vibrating with the cutting-apparatus.

5. The combination, substantially as set forth, of a separating-divider, supported from the main frame, with a vertically vibratable coupling-arm.

3,392.—Randolph Hayden and James C. Ferree, Middletown, Conn., assignees of Horace Vansands, same place.—*Blind-Fastening.*—Patented May 5, 1857, No. 17 243; reissued April 20, 1869.

Claim.—1. The two-part case, having a screw surface, in combination with the hook A, as a new and useful improvement in the manufacture of blind or shutter fastenings, substantially as described.

2. The recess or slots C D, formed in a two-part shell of a blind or shutter-fastener case, substantially as and for the purpose described.

3. In a blind or shutter fastener, a two-part cylindrical case, in combination with an actuating-spring

and hook A, substantially as and for the purpose described.

4. In a blind or shutter-fastener, a cylindrical case, in combination with a hook-fastening which oscillates upon an axis-pin, with an actuating spring.

3,393. — JAMES I. HENDRYX, Cooperstown, N. Y., assignee, by mesne assignments, of CHARLES CROOK.—(Division A.) *Harvester.*—Patented May 5, 1857, No. 17,205; reissued May 4, 1858, No. 548; reissued April 20, 1869.

Claim.—1. Two driving-gears, of unequal size or diameters, for changing the rapidity of vibration of the cutters.

2. A concentric arrangement of two driving-gears of unequal size, for changing the rapidity of vibration of the cutters.

3,394. —JAMES I. HENDRYX, Cooperstown, N. Y., assignee, by mesne assignments, of CHARLES CROOK.—(Division B.) *Harvester.*—Patented May 5, 1857, No. 17,205; reissued May 4, 1858, No. 548; reissued April 20, 1869.

Claim.—1. A lifting-segment, or cam, with lever and chain or cord attached thereto, for raising and lowering the cutting-apparatus.

2. A lifting-segment, or cam, with lever and chain, in combination with ratcheted teeth, and a pawl, or its equivalent, for holding the cutting-apparatus at any desired height.

3,395.—SAMUEL WARREN HENLON, Selma, Ala. —*Suspender.*—Patented December 1, 1868, No. 84,669; antedated June 1, 1868; reissued April 20, 1869.

Claim.—1. A suspender for garments, made of straps that diverge from the buttoning-loops at each side, so as to pass up and over the shoulder, and across the back, substantially as set forth.

2. A suspender for garments, made of straps, that diverge from the buttoning-loops to pass up and over the shoulder, and across the back, to the opposite point of attachment near the hips, in combination with a loop applied at the point of intersection of the straps at the back, substantially as specified.

3. A suspender formed of two straps, each of which diverges from the point of attachment near the hips, on the one side, so as to pass toward the back and over the shoulder to the point of attachment on the other side, and provided with an adjustment, applied to the front straps, substantially as specified.

3,396.—EVERETT G. PASSMORE, Philadelphia, Pa.—*Harvester.*—Patented April 10, 1866, No. 53,682; reissued April 20, 1869.

Claim.—1. The combination of a main frame, a rigid shoe, a hinged finger-beam, a platform, and its stiffening-bar, with a combined reel and rake, revolving on an axis, vertical or nearly so, in the line of the main axle and finger-beam, substantially as set forth.

2. The combination of a single driving-wheel, a frame located on the grain-side of said wheel, a laterally-projecting finger-beam, and a combined rake and reel, revolving on an axis, substantially vertical, in the line of the main axle and finger-beam, substantially as set forth.

3. The combination of an axle revolving in bearings on the main frame, with a driving-wheel fast on one of its ends, and with a gear on the other, and with a combined reel and rake revolving on an axis, vertical or nearly so, mounted on the main frame, in the line of the main axle and finger-beam, and driven directly from the main axle, substantially as set forth.

4. The combination, substantially as herein set forth, of gearing for driving the cutting and raking devices, mounted on the main frame, in a fixed relation thereto with the driving-wheel and main axle, sliding endwise on the main frame simultaneously, to stop and start both the cutting and raking devices.

5. The adjustable cam-hooks *o*, arranged and operating as set forth.

3,397.—CHARLES N. PETERSEN, Chicago, Ill.—*Wooden Packing for Piston-Rods and other Enginery.*—Patented January 26, 1869, No. 86,316; reissued April 20, 1869.

Claim.— The construction and arrangement of the double conic wooden packing, substantially in the manner herein set forth.

3,398.—OSCAR F. SMITH, Williamsport, Pa., assignee of SAMUEL N. PURSE.—*Harvester.*—Patented December 27, 1859, No. 26,616; reissued April 20, 1869.

Claim.—1. Rotating the crank by means of either of two driven gears, of unequal size, for changing the rapidity of vibration of the cutters.

2. Two pinions on the crank shaft, either of which may be made to rotate the same, for varying the speed of the cutters.

3. So arranging the gearing that the speed of the vibration of the cutters may be changed without changing the direction of rotation of any of the gears.

3,399.—SAMUEL WOODRUFF and H. B. BEACH, Hartford, Conn.—*Pump.*—Patented September 22, 1868, No. 82,371; reissued April 20, 1869.

Claim.—1. The combination of the following devices, viz, the chamber *a* between the inner cylinder and outer case, having a valvular eduction-passage, the valvular piston C, and the plunger G, connected and moving together, and the valvular induction passage or passages at the lower end, substantially as described, and having the mode of operation set forth.

2. In combination with annular chamber *a*, between the cylinder B and the outer casing A, the valvular piston and plunger G, and the induction-valves E, below the cylinder, a series of small eduction-valves D, in the said annular chamber, substantially as and for the purpose described.

3,400. — HENRY MARTIN, Wallingford, Conn. assignee, by mesne assignments, of SYLVESTER W. WARREN. — *Steam-Alarm.* — Patented July 6, 1858. No. 20,835; reissued April 27, 1869.

Claim.—1. An expansive metallic tube, combined with a valve-opener that is stationary at one end, and the other end is moved by the expansion of the tube, and produces an increased movement near the middle of the said valve-opener, substantially as set forth.

2. A horizontal expansive tube, connections to the steam and water spaces of the boiler, and an alarm, in combination with a valve-opener, actuated by an endwise movement applied to one end of said valve-opener, to give an increased movement near the middle of said valve-opener, substantially as set forth.

3,401. — ALFRED E. SMITH, Bronxville, N. Y.— *Axle for Carriages.* — Patented May 8, 1860, No. 28,207; reissued April 27, 1869.

Claim.—The new and usefully-improved article of manufacture of case-hardened malleable cast-iron axle-boxes, by means of the operations hereinbefor described, or equivalents therefor, for the purpose of producing an article cheaper, more expeditiously, and of a better and more useful kind, than heretofore known.

3,402. — NATHANIEL WHEELER, Bridgeport, Conn., assignee of SHERBURNE C. BLODGETT. — *Hemming and Cording Umbrella-Covers.*—Patented January 3, 1854, No. 10,386; antedated July 3, 1853; extended seven years; reissued April 27, 1869.

Claim.—1. A warped surface, substantially such as described, to be used in a sewing-machine for turning hems, substantially as described.

2. In combination with the feed of a sewing-machine, a warped surface, substantially such as described, acting upon the convex side of the cloth, the combination being substantially such as described.

3. A warped surface, in shape substantially such as is described, in combination with a shelf, the two acting in combination, substantially as set forth.

4. In combination with a spiral bridge, acting on the convex side of the cloth, a horizontal groove, covered on the top, and extending to the needle, completing the hem, and holding it in shape to be stitched, the spiral and groove being substantially such as described.

5. In combination with a spiral bridge, acting on the convex side of the cloth, a horizontal groove, covered at top, and extending to and beyond the needle, these parts being substantially such as specified, and acting as described.

6. In combination with a warped surface, acting on the convex side of cloth, to fold it, and a shelf, acting to support the concave side of a fold, a hole or guide for the cord, all these parts being substantially such as specified, and acting in combination, as described.

7. In combination with a slot, and spiral bridge and a shelf, all being and acting substantially as described, a cord-guide and groove, covered at top, the whole forming a cording-apparatus.

8. In combination with a warped surface, substantially such as described, and capable of acting on the convex side of the material, a channel, in which the horizontal part of the cloth whose edge is being hemmed may lie, and through which it passes, as described.

9. A needle-hole, or aperture for the passage of a needle, in combination with a groove, covered at top, and so shaped, substantially as described, as to partially surround a hem, whereby the line of stitching may be suitably placed in relation to a hem partially inclosed in the groove, the combination being as described.

10. A warped surface, substantially such as described, in combination with a shelf and a channel, which the cloth being hemmed may traverse, the combination being substantially such as hereinbefore set forth.

3,403.—A. S. Whittemore, Willimantie, Conn. —*Thrashing-Machine.*—Patented February 18, 1868, No. 74,650; reissued April 27, 1869.

Claim.—1. In combination with the rotary flails, the bearing F, for the support of the grain being thrashed at a point beyond the reach of the flails, substantially as and for the purpose herein specified.

2. The thrashing-machine, constructed as described, of a frame, A, having a bearing, F, shaft B, arms *e e*, and flails *e' e'*, substantially as herein described.

3,404.—James S. Goode and John W. Bookwalter, Springfield, Ohio, executors of the estate of James Leffel, deceased.—*Gate and Guide of Water-Wheels.*—Patented January 14, 1862, No. 34,150; reissued October 11, 1864, No. 1,792; again reissued October 27, 1868, No. 3,171; again reissued April 27, 1869.

Claim.—1. Gates H, pivoted centrally, as to the pressure of water, when they are closed, but this is only claimed when the gates are constructed as described, and so arranged around the wheel as to form converging throats, so that, when closed, there shall be an equilibrium of pressure on the opposite ends thereof, substantially as set forth.

2. Gates H, which have their faces, from *z''* to *z'*, outwardly flaring, and their faces, from *z'* to *z*, when closed, on a curve concentric with the wheel, and pivoted to the flanges *c* and *e*, at a point, *d*, in the middle of the latter faces, substantially as set forth.

3. The series of gates H, when constructed and pivoted substantially as set forth, connected and combined with the mechanism for simultaneously operating them, substantially as set forth.

4. The plates H, located and arranged, in relation to each other, and to the wheel substantially as described, thereby forming the converging chutes, to direct the water in a line, tangential to the wheel, into an annular vortex-chamber, substantially such as described, and substantially as set forth.

5. The plates H, substantially as herein described, and arranged around the wheel so as to form converging throats, in combination with the parallel flanges *c* and *e*, respectively attached to the crown-plate A and cylinder R, the whole being so connected as to form a portable case for a water-wheel, substantially as set forth.

6. The arrangement of the rods, ring, lever, segmental rack, and pinion, for operating the gates, but this we claim only when so arranged that the pinion shall be stepped upon the upper or crown-plate, above the gates, substantially as and for the purpose set forth.

3,405.—George Brodie, Plum Bayou, Ark.—*Metallic Band for Baling.*—Patented March 22, 1859, No. 23,291; reissued April 27, 1869.

Claim.—1. The bale-tie, formed by passing the bent ends or loops of the hoop A into the link B, and holding them there by means of the pins C C, passed through them and over the sides of the link, in the manner herein described, and shown in Figs. 1 and 3.

2. The bale-tie, formed by passing the loops of the hoop A into one or more recesses in the link B, through a slit or opening in its side, and holding said loops in the recesses, by placing pins C within them, and thus giving such extension to the loops as to prevent their being withdrawn from the recesses while the pins remain in place, in the manner herein described, and as shown in Figs. 4 and 5.

3. The connecting-link of a bale-tie, having a slit or opening in its side or end, through which the hoop can be introduced into the link as herein described, and as represented in Figs. 6, 7, 13, and 14.

3,406.—M. G. Hubbard, Syracuse, N. Y., assignee of L. M. Batty.—(Division A.) *Harvester.*—Patented September 19, 1865, No. 49,962; reissued April 27, 1869.

Claim.—1. Locating on the cross-shaft, which forms the center of the vertical movement of the cutting-apparatus, a bevel-wheel, for driving the crank-shaft and a pair of spur-pinions, of unequal size, for varying its speed.

2. The combination, in a harvesting-machine, of two independent driving-wheels, two spur-gears, of unequal size, and two corresponding pinions, for changing the speed of vibrations of the cutters.

3. So hanging the cutting-apparatus that its vertical vibration shall be around the center of two spur-pinions, which are so arranged as to vibrate the cutters with a changeable speed.

4. The combination of a main frame, two driving-wheels, two spur-gears, of unequal size, and two corresponding pinions, for varying the speed of the vibration of the cutters, with a cutting-apparatus, so attached, with respect to the cross-shaft which carries the bevel-wheel, that the vertical movement of said cutting-apparatus shall be around said shaft as a center.

3,407.—M. G. Hubbard, Syracuse, N. Y., assignee of L. M. Batty.—(Division B.) *Harvester.*—Patented September 19, 1865, No. 49,962; reissued April 27, 1869.

Claim.—1. The swivel-jointed stay-rod E, the upright guide-rod N, with the set-bolt and nut *u*, and the shoe H, in combination with the swivel-joint *v*, when operating conjointly, as and for the purpose set forth.

2. The cam-lever F, with the standard, and flexible joint *t'*, as herein set forth.

3. The arrangement of the outer shoe J, block T, and set-screw *z''*, for raising and lowering the shoe, independently of the cutter-guard, substantially as set forth.

4. The coiled supporting-spring *e*, with the set-screw *f*, in combination with the frame or arm B, as herein described, for the purpose set forth.

3,408.—William E. Prall, Washington, D. C., (for himself,) and A. C. Rand, New York, N. Y., assignee of William E. Prall.—*Hot-Water Elevator.*—Patented April 21, 1868, No. 77,090; reissued April 27, 1869.

Claim.—The combination of the steam-generator, condenser, and system of pipes and valves, whereby to force the water from the generator to the level of the connecting steam-pipe through which the steam escapes to the condenser, and by its condensation produces a vacuum sufficient to cause the water to rise into and fill, or partially fill the generator, and thus accomplish automatically the alternate partial filling and partial emptying of the generator, substantially in the manner set forth.

3,409.—The Metallic Compression Casting Company, Boston, Mass., assignees of John Joseph Charles Smith.—*Clay Mold and Pattern for Casting Metals.*—Patented December 29, 1868, No. 85,340; reissued April 27, 1869.

Claim. — A mold or pattern made of moist clay-powder, formed under high but slowly applied pressure, for use in casting metals, substantially as described.

3,410. — ALFRED E. SMITH, Bronxville, N. Y.— *Axle for Carriages.* — Patented December 24, 1867, No. 72,555; reissued April 27, 1869.

Claim.—The D-shaped washer J, in combination with the screw-tap H, and diaphragm E, whether formed at the end of the box A, or within the edge thereof, and operating substantially as hereinbefore set forth.

3,411. — DANIEL URMY and JOHN MANZ, Wilmington, Del., assignees of JESSE URMY.—(Division A.) *Grain and Grass Harvester.*—Patented July 24, 1855, No. 13,330; reissued January 3, 1860, No. 882; again reissued April 27, 1869.

Claim. — 1. The harvester-shoe D, or any equivalent thereof, having in combination the guide-way and horizontal slot s^2, and the slot for the cutter higher than the guide-way, the finger-bar having no other connection with the cutter's driving-wheel than that received through this shoe, and it (the shoe) having no other connection with this wheel than that received through the axial bolt v, so as to obtain the advantages obtained by this combination of elements.

2. The harvester's cutting-apparatus, having in combination the shoe D, as set forth in the first claim, and the open fingers g, or equivalents thereof, which have a portion under the finger-bar, and the portions above and below the cutter no other connection than by that portion in front of the cutter.

3. The harvester's cutting-apparatus, having in combination the shoe D, and open fingers g, as set forth in the first and second claims, and the narrow divider H, or any equivalent thereof, which is of a less width, where cut against, than the distance between points of the fingers, or the length of a section of the cutter on the cutter-bar.

4. The harvester's cutting-apparatus, having in combination the shoe D, and open fingers, g, as set forth in the first and second claims, except the horizontal slot in the shoe is not included, and the narrow divider H, or any equivalent thereof, which is of a less width, where cut against, than the distance between points of the fingers, or the length of a section of the cutter on the cutter-bar.

5. The combination of the shoe D, having the guide-way and horizontal slot s^2, the finger bar G having an axis between it and the main frame, about parallel with its line of forward motion, the open fingers g, and the pitman o, about horizontal with the cutter-bar, and having its axial connection directly therewith, as well as with the crank-wrist, and both about parallel with the axis between the finger-bar and frame, or equivalents of these parts.

6. The combination of the shoe D, having the guide-way and horizontal slot s^2, and the axial bolt v, and the open fingers g, with the pitman o, having its axial connection directly with the cutter-bar, as well as with the crank-wrist, and both about parallel with the axis v, or equivalents of these parts.

7. The combination of the shoe D, having the guide-way and horizontal slot s^2, and the axial bolt v, and the open fingers g, with the pitman o, about horizontal with the cutter-bar, and having its axial connection directly therewith, as well as with the crank wrist, and both about parallel with the axis v, or equivalents of these parts.

8. The harvester's cutting-apparatus, having, at the inner end, the shoe D, or an equivalent thereof, which is fitted with the guide-way and horizontal slot s^2, and the axial bolt v, at the outer end the narrow divider H, or an equivalent thereof, which is of a less width, where cut against, than the length of a section of the cutter on the cutter-bar, and between this shoe and divider, fingers, which have a portion above as well as below the cutter, while they have no other connection with each other than that in front of the cutter, so that the clogging matter may escape at the rear.

9. The harvester's cutting-apparatus, having the shoe D, and narrow divider H, as explained in the last claim, and, between them, fingers, which have that portion next the side of the cutter, on which is the edge, of steel, or harder metal than that portion connected to the finger-bar.

10. The harvester's cutting-apparatus, having the shoe D, and narrow divider H, as explained in the eighth claim, and between them, fingers, that portion of which, next the side of the cutter, on which is the edge, can be removed by the attendant, for grinding or replacing with a new part.

11. The harvester's cutting-apparatus, having the shoe D, the narrow divider H, and the open fingers, as explained in the eighth claim, and the clearing-projections u^2, or any equivalent thereof.

12. The combination of the caster-wheel e^3, or an equivalent thereof, with the cutting-apparatus described in the eighth claim.

13. The combination of the caster-wheel e^3, or an equivalent thereof, the line of whose axle, in respect to the axle of the cutter's driving-wheel, is different, when this wheel e^3 is run backward around the cutter's driving-wheel, than when run forward with it, with the outer end of the finger-bar G, or an equivalent thereof, which has no other connection with the main frame of the machine than that derived through the shoe D, or an equivalent thereof, having the guide-way and horizontal slot s^2, and the axial bolt v through it.

14. The combination, in the harvester, of the shoe D, or an equivalent thereof, having the guide-way and horizontal slot s^2, and the axial bolt v, and the box f, or an equivalent thereof, which sustains, between the cutter-bar and its driving-wheel, a gear-shaft, which, at one end, and one end of this box, receives the motion of the driving-wheel, and imparts it at the other end, and other end of this box, on its road to the cutter-bar.

15. The combination of the following parts or elements in the harvester: The supporting and internal driving-wheel C, the spur-pinion that gears therewith, the bevel-driver k, the bevel-pinion l, the crank-shaft m, and the shoe D, or any equivalent combination of parts which has one internal cog-wheel, one spur-wheel, two bevel-wheels, the crank-shaft, about horizontal, a guide way and horizontal slot in the shoe like unto slot s^2, and through it an axis like unto the axis v.

16. The combination of the shoe D, having the guide-way and horizontal slot s^2, the finger bar G, having an axis between it and the main frame about parallel with its line of forward movement, the divider H secured to the outer end of this finger-bar, and the reel K, maintaining substantially the same relative position to the finger-bar and divider, while vibrated upon this axis between the finger-bar and frame, or equivalents of these parts.

17. The combination of the reel K with the finger-bar, sustained by the shoe D, having the guide-way and horizontal slot s^2, and axial bolt v, or equivalents of these parts.

18. The combination of the reel K and the guiding-plate x'' with the finger-bar G, sustained by the shoe D, having the guide-way and horizontal slot s^2, and the axial bolt v, or equivalents of these parts.

19. The combination of the reel K and the guiding-board I with the finger-bar G, sustained by the shoe D, having the guide-way and horizontal slot s^2, and the axial bolt v, or equivalents of these parts.

20. The combination of the finger-bar G, the divider H, and the reel K, with the shoe D, having the guide-way and horizontal slot s^2, and the axial bolt v, when this finger bar, divider, and reel, maintain substantially the same relative position to each other while vibrated upon the axis v, or the equivalents of these parts.

21. The combination of the reel K, the diameter of which can be varied by the attendant to make it larger or smaller, as he desires, with the finger-bar G, sustained by the shoe D, having the guide-way and horizontal slot s^2, and the axial bolt v, or equivalents of these parts.

22. The combination of the shoe D, having the guide-way and horizontal slot s^2, and the axial bolt v, and the herein-described axis, about at right angles to the axis v, upon which the fingers and cutters can be vibrated so as to bring their front ends higher or lower, in respect to their rear ends.

23. The combination of the finger-bar G, the divider H, the reel K, the shoe D, having the guide-way and horizontal slot s^2, and the axial bolt v, and

the herein-described axis, about at right angles to the axis v, upon which the fingers and cutters can be vibrated, or equivalents of these parts acting conjointly.

24. The combination of the shoe D, having the guide-way and horizontal slot s^2, and the axial bolt v, the main frame A, having an inner and outer supporting-wheel, and the lever i^2, having an axial connection with both this frame and shoe, or equivalents of these parts, for cutting the crop well, and enabling the attendant, while riding on the main frame, to raise the finger-bar, confined to this shoe, over an obstruction while mowing.

25. The combination of the shoe D, having the guide-way and horizontal slot s^2, the finger-bar G, having no other connection with the cutter's driving-wheel than that received through the shoe, the open fingers g, the narrow divider H, the main frame A, having an inner and outer supporting-wheel, and the lever i^2, or equivalents of these parts for cutting the crop well, and enabling the attendant, while riding on the machine, to raise the cutting-apparatus from the ground when he desires.

26. The combination of the shoe D, having the guide-way and horizontal slot s^2, and the axial bolt v, or their equivalents, with the main frame A, or its equivalent, having an inner and outer supporting-wheel, and the wheel w^1, or its equivalent, by which some portion of the weight of this shoe is carried, when mowing, independent of the raising or lowering of the inner and outer edges of the frame.

27. The combination of the shoe D, having the guide-way and horizontal slot s^2, and and the axial bolt v, with the supporting-wheel w^1, or its equivalent, the main frame A, having an inner supporting-wheel, while this wheel, w^1, is its outer supporting one, the horizontal lever i^2, having an axial connection with both the shoe and frame, and the vertical holding-rack for this lever, rigidly secured to the frame, or equivalents of these parts, by which the attendant is enabled to have his shoe held at the proper height and distance from the frame while reaping.

28. The combination of the shoe D, having the guide-way and horizontal slot s^2, and the axial bolt v, with the main frame A, the tongue E, and the axis g^1, or equivalents of these parts.

29. The combination of the shoe D, having the guide-way and horizontal slot s^2, and the axial bolt v, with the main frame A, the tongue E, its cogged segment h^1, its axis g^1, the cogged segment i^1, its axle j^1, and holding-dog, or drop-latch m^1, or an equivalent of these parts, by which the attendant is enabled to have this tongue and frame, to which is connected this shoe, held in the desired position.

30. The combination of the shoe D, having the guide-way and horizontal slot s^2, and the axial bolt v, the main frame A, the tongue E, its axis g^1, and cogged segment h^1, the cogged segment i^1, its axis j^1, and the lever l^1, and its holding dog, or drop-latch m^1, or an equivalent of these parts, so that the attendant can, while riding on this frame, change the angle of the tongue thereto, and to the horizontal slot s^2, and axial bolt v, and also have the tongue held, as placed, in relation thereto.

3,412.—Daniel Urmy and John Manz, Wilmington, Del., assignees of Jesse Urmy.—(Division B.) *Grain and Grass Harvester.*—Patented July 24, 1855, No. 13,330; reissued January 3, 1860, No. 882; again reissued April 27, 1869.

Claim.—1. The combination of the automatic rake c, which removes the cut grain from the platform at intervals, or in gavels, by sliding it thereon and therefrom, the platform J having in front of it the open fingers g, and between it and the main frame an axis about parallel with its line of forward movement, or equivalents of these parts.

2. The combination of the automatic rake c, having between it and its driving-wheel the vertical gear-shaft r^3, through which this wheel's motion is received, and removing the cut grain from the platform at intervals, or in gavels, by sliding it thereon and therefrom, the platform J having in front of it the open fingers g, and between it and the main frame an axis about parallel with its line of forward movement, or equivalents of these parts.

3. The combination of the automatic rake c, having between it and its driving-wheel the adjustable gear-wheel t^3, by which the attendant is enabled to stop the motion of this rake, which slides the gavels on and from the platform, while the machine is being moved from place to place, the platform J having in front of it the open fingers g, and between it and the main frame an axis about parallel with its line of forward movement, or equivalents of these parts.

4. The combination of the automatic rake c, having between it and its driving-wheels, bearing upon the ground, the different-sized gears u^3 u^3, and the adjustable gear-wheel t^3, by which the attendant is enabled to change the frequency of this rake's removal of the gavels, by sliding them on and from the platform, and the platform J, having an axis between it and the main frame about parallel with its line of forward movement, or equivalents of these parts.

5. The automatic rake c, having between it and its driving-wheel, the cam v^3 and the holder d^4, or their equivalents, by which this rake, which slides the gavels on and from the platform, is caused to move more rapidly in one part of its circuit than while in another part, in combination with the platform J, having in front of it the open fingers g, and between it and the main frame an axis about parallel with its line of forward movement, or equivalents of these parts.

6. The combination of the shoe D, having the guide-way and horizontal slot s^2, the platform J, having an axis between it and the main frame about parallel with its line of forward movement, and the automatic rake c, which slides the gavels on and from the platform, or equivalents of these parts.

7. The combination of the shoe D, having the guide-way and horizontal slot s^2, and the axial bolt v, or their equivalents, with the automatic rake c, which removes the gavels from the platform, by sliding thereon and therefrom at intervals.

8. The combination of the shoe D, having the guide-way and horizontal slot s^2, and axle bolt v, the finger-bar G having in front of it the open fingers g, and at the outer end the narrow divider H and the automatic rake c, which slides the cut grain on and from the platform at intervals, or in gavels, or equivalents of these parts.

9. The automatic rake c, or its equivalent, having its return course for engaging with the gavels, which it slides on the platform and therefrom at intervals, or in gavels, governed by the holder d^4, or an equivalent thereof, which is further inward than its ax connection with its driving-mechanism, and fast to the main frame.

10. Making the connection of the platform J, or an equivalent thereof, to the finger-bar of the harvester, the inner end directly to the finger-bar, by a batten that is about at right angles thereto, and the outer end to the divider, secured to the outer end by screw-bolts, substantially as described, so that the platform may freely slide over the ground, and be quickly removed.

11. The combination of the shoe D, having the guide-way and horizontal slot s^2 and the axial bolt v, and the automatic rake c, having between it and its driving-wheel the vertical gear-shaft r^3, or its equivalent, and removing the gavels from the platform, by sliding them thereon and therefrom at intervals, or equivalents of these parts.

12. The combination of the shoe D, having the guide-way and horizontal slot s^2, and the axial bolt v, and the automatic rake c, having between it and its driving-wheel the adjustable wheel t^3, by which the attendant is enabled to stop the motion of the rake while the machine is being moved from place to place, or equivalents of these parts.

13. The combination of the shoe D, having the guide-way and horizontal slot s^2, and the axial bolt v, and the automatic rake c, having between it and its driving-wheels, bearing upon the ground, the different sized gears u^3 u^3, and the adjustable gear-wheel t^3, by which the attendant is enabled to change the frequency of the rake's sliding the gavels on and from the platform, or equivalents of these parts.

14. The combination of the shoe D, having the guide-way and horizontal slot s^2, and the axial bolt v, and the automatic rake c, having between it and its driving-wheel the cam v^3, and the holder d^4, by which it is caused to move more rapidly in one part of its circuit than while in another part, or equivalents of these parts.

15. The combination of the platform J, having between it and the main frame an axis, about parallel with its line of forward movement, the reel K, which presses the standing grain back to the cutters, and the automatic rake *c*, which slides the cut grain on and from the platform at intervals, or in gavels, or equivalents of these parts.

16. The combination of the platform J, having between it and the main frame an axis, about parallel with its line of forward movement, the reel K, which maintains substantially the same relative position to the finger-bar and divider, connected with this platform, while vibrated upon the axis, between it and the frame, and the automatic rake *c*, which slides the cut grain on and from the platform at intervals, or in gavels, or equivalents of these parts.

17. The combination of the shoe D, having the guide-way and horizontal slot s^2, and the axial bolt *v*, the finger bar G, having in front of it the open fingers *g*, the reel K, which presses the standing crop back to the cutters, and the automatic rake *c*, which slides the gavels on and from the platform at intervals, or equivalents of these parts.

18. The combination of the shoe D, having the guide-way and horizontal slot s^2, and the axial bolt *v*, the reel K, which maintains substantially the same relative position to the finger-bar and divider, connected to this shoe, while vibrated upon the axis *v*, and the automatic rake *c*, which slides the gavels on and from the platform at intervals, or in gavels, or equivalents of these parts.

19. The combination of the platform J, having between it and the main frame an axis, about parallel with its line of forward movement, the automatic rake *c*, which slides the gavels on and from the platform at intervals, and the horizontal axis g^1, on which the relative heights of the front and rear edges of the platform can be varied, or equivalents of these parts.

20. The combination of the platform J, having between it and the main frame an axis about parallel with its line of forward movement, the automatic rake *c*, which slides the gavels on and from the platform at intervals, and the horizontal axis g^1, the cogged segment h^1, the cogged segment i^1, its axle j^1, and its holding-dog or drop-latch m^1, by which the attendant is enabled to have the front edge of this platform held higher or lower in respect to the height of the rear edge, or equivalents of these parts.

21. The combination of the platform J, having between it and the main frame an axis, about parallel with its line of forward motion, the automatic rake *c*, which slides the gavels on and from the platform at intervals, and the horizontal axis j^1, the lever l^1, and its holding-dog or drop-latch m^1, by which the attendant is enabled to change the relative heights of the front and rear edges of this platform, on and from which the rake slides the gavels at intervals while the machine is in operation, and also have these edges held as placed.

22. The combination of the platform J, the automatic rake *c*, and the guard-board L, or their equivalents, with the main frame of the harvester, said platform having between it and the frame an axis about parallel with its line of forward movement, said rake sliding the gavels on and from the platform at intervals, and said guard-board holding the gavels,

3,413. — Bradford S. Pierce, New Bedford, Mass., and Mason R. Pierce, Woodstock, N. Y.— *Machine for Making Drain-Pipes.*—Patented April 19, 1859, No. 23,703; reissued February 28, 1865, No. 1,897; again reissued January 14, 1868, No. 2,841; again reissued April 27, 1869.

Claim.—1. The case, in combination with the core, and with the core-socket, when the latter is constructed and operates in the manner herein described.

2. In a mold, for molding drain-pipe, a core-socket, and a case, constructed, arranged, and combined in the manner described, so that the core-socket shall constitute a working portion of the mold during the whole of the molding process, substantially as and for the purposes set forth.

3. The combination, with the core and core-socket, of suitable mechanism for removing the core through the core-socket, from the finished pipe, without injury to the latter, substantially in the manner and for the purposes described.

4. The arrangement of the mold-case and core upon a suitable platform, or base, in the manner described, so that the pipe can be molded and the core discharged therefrom, without changing the position of the pipe and mold-case, substantially as set forth.

5. The arrangement of the mixing-apparatus and of the core-relieving devices above the platform which conveys the molds, in the manner and for the purpose substantially as specified.

6. The combination of the case, core, and core-socket, with the perforated revolving disk, substantially as and for the purposes described.

3,414.—John R. Abbe, Providence, R. I.—*Machine for Heading Bolts.* — Patented January 19 1869, No. 85,983; reissued May 4, 1869.

Claim.—1. The reciprocating swiveled jaws J J′, provided with slot M, and constructed substantially as described, in combination with the pin R on the frame, all arranged and operating essentially as shown and described.

2. In combination with the swiveled jaws J J′ and pin R, the spring-pawl L, operating to hold and open the said jaws, in the manner set forth.

3. The stops N, with their adjusting-screws *n*, in combination with the reciprocating swiveled jaws, operating automatically to close the said jaws, substantially as described.

4. The swiveled jaws J J′, having an oscillating motion around the center *h*, in combination with the reciprocating table H, substantially as shown and described.

5. The combination, with the stationary dies or former G G, of the intermittently-reciprocating upset F, cam or cams D D′, and intermittently-reciprocating jaws I I′, arranged to have a lateral or turning and opening and closing action, and the several parts being adjustable, to regulate the pressure to suit different-sized bolts, substantially as shown and described.

3,415.—Joseph Fox, Lansingburgh, N. Y.—*Cracker Machine.*—Patented February 1, 1859, No. 22,793; reissued May 4, 1869.

Claim.—1. The depressions in the spaces between the grooves in one or both of the rollers B and B′, that form the strips of dough from the sheet, substantially as and for the purposes hereinbefore specified.

2. The feed-bed of free rollers A′, in combination with the grooved rollers B B′, substantially as herein described and specified.

3. Moving the grooved rollers B B′, arranged with respect to each other, as herein specified, with a regular intermittent, or step-by-step motion, substantially in the manner and for the purposes hereinbefore specified and set forth.

4. The ways, or guides E, in combination with the grooved roller B B′, substantially as and for the purposes herein described and specified.

5. The perforated bar G, in combination with the ways or guides E, substantially as and for the purposes herein described and set forth.

6. The knife H, in combination with the perforated bar G, substantially as and for the purposes hereinbefore described and specified.

7. The rollers B B′, ways or guides E, perforated bar G, and knife H, all combined and operated, substantially as hereinbefore specified.

8. Feeding the said strips of dough Y through the perforated bar G, and opposite the knife H, with a regular intermittent, or step-by-step motion, in the manner and for the purposes hereinbefore specified.

9. Passing strips of dough Y through apertures in a plate or bar G, and cutting off short sections of said strips, by means of a sudden blow with a blade or knife, H, substantially in the manner and for the purposes hereinbefore described and specified.

10. The employment of the clamp-bars I I, in combination with the knife H, as herein described, to cut off and hold the sections of the strips of dough, as the strips are fed through the bar G, as specified.

11. Forming short sections of skin-covered strips of dough into disks, or crackers, by pressure applied

to the ends of the sections by the devices, substantially as herein described.

12. The rollers, substantially as described, by which the crackers are rolled on the apron, and by which the skin on the upper surface of the pressed crackers is completed.

13. The straight-edges R and R′, for evening the rows of crackers before rolling and docking, as specified, in combination with the rollers and dockers, substantially as herein described and set forth.

14. The combination of the docker O with the movable clearer-plate Q and springs *g g*, substantially as and for the purposes herein shown and specified.

15. And, finally, the endless apron L, inclined plane T, follower U, and second endless apron S, all combined and operated substantially in the manner and for the purposes herein described and specified.

3,416.—WARREN GALE, Peekskill, N.Y.—*Straw-Cutter.*—Patented March 7, 1854, No. 10,592; reissued June 26, 1866, No. 2,293; extended seven years from March 7, 1868; again reissued May 4, 1869.

Claim.—1. The pivot E, provided with a flanch, for fastening the pivot to the machine in combination with a moving knife of a feed-cutter.

2. The fixed pivot F, on which the moving knife works, provided with a flanch, for fastening to the machine, and made adjustable thereon, by means of slots *a a*, or their equivalent, substantially as described.

3. A knife-handle, to which the knife is directly attached, constructed with a bend at or near the pivot end, and with an upward bend of that part next to the outer end of the knife, and with a further bend downward at that part of the helve to be grasped by the hand, substantially as described.

4. The pivot E, provided with a flanch, for fastening the pivot to the machine, in combination with the bent handle, substantially as described.

5. The bent handle, in combination with the movable knife, substantially as described.

6. The arrangement of the adjustable gauge-plate G, in front of the fixed knife, in such a manner that it shall be raised above the fixed knife, in proportion to the increased distance at which it is adjusted away from the knife, to give a longer cut, and *vice versa*, substantially as herein set forth.

7. A chopping-handle, to which the knife is attached, hung or pivoted at one end, and with an upward bend, or curve at that end, and with another curve at the end to be grasped by the hand, when this handle is provided with a flange, or projection on its back part, formed by the extension of the knife, to aid in preventing the uncut feed from being pushed over the handle, substantially as described.

3,417.—GEORGE W. LADD and JOHN A. BROWN, Providence, R. I., assignees, by mesne assignments, of GEORGE W. LADD.—*Method of Making Side Bands of Watch-Cases.*—Patented June 11, 1867, No. 65,579; reissued May 4, 1869.

Claim.—1. The method of constructing the side band for watch-cases, substantially as herein described, for the purpose specified.

2. A side band for a watch-case, composed of a central band, A, and the side rims B and C, the article being of the character substantially as specified.

3,418.—GEORGE M. MORRIS and JOHN MCCREARY, Cohoes, N. Y.—*Lubricator for Loose Pulleys.*—Patented February 4, 1868, No. 74,116; reissued May 4, 1869.

Claim.—1. Providing the interior of a loose pulley, or other wheel, revolving upon a shaft or axle, with one or more longitudinal grooves, C, as and for the purposes herein specified and described.

2. The annular grooves *b b*, in combination with the longitudinal groove C, within the hub of a loose pulley, or other wheel, revolving upon a shaft or axle, substantially as and for the purposes herein shown and described.

3. The bushing E, within the hub of the loose pulley, constructed as described, having the chamber F, around its periphery, communicating with the shaft by means of the opening *m*, the shoulders *g*, of said bushing, fitting snugly within the hub, and provided with the annular grooves *h h*, communicating with the shaft and chamber F, by means of the openings *k k*, substantially in the manner and for the purposes herein shown and specified.

3,419.—JACOB H. MYERS, Rochester, N. Y., assignee, by mesne assignments, of J. B. CREIGHTON.—*Railway Day and Night Car.*—Patented May 18, 1858, No. 20,254; reissued September 21, 1858, No. 602; again reissued May 4, 1869.

Claim.—1. The employment, in combination, of the transverse backs and seats of a passenger railroad-car, to form a berth.

2. The combination of two pairs of contiguous backs and seats, so that when spread out horizontally they shall form a lower berth of the proper length.

3. The employment of the backs of the seats in the formation of lower berths.

4. The formation of an upper removable berth, by distending a canvas from suitable supports on the upper part of the car.

5. The within-described method of forming and concealing, when not in use, in the spaces between the windows, an upper tier of beds, as set forth and for the purpose specified.

3,420.—N. PETRÉ, New York, N. Y., for himself, and assignee of JOSEPH H. SUGGETT. (Division 1.) *Combined Latch and Lock.*—Patented July 30, 1867, No. 60,213; reissued May 4, 1869.

Claim.—1. The eccentric barrel K, in combination with the latch-bolt F and notched hub E, substantially as described, and for the purpose specified.

2. The notched eccentric, in combination with the spring-latch bolt and its projection *f* and hub B, as described, whereby the latter is prevented from engaging with the latch when locked, substantially as described, and for the purpose specified.

3. In combination with the eccentric, for raising and lowering the bolt by means of a pin-key, a loose key-pin, N, in said eccentric, so that the eccentric cannot be turned by appliances fastened on the key-pin, substantially as described.

3,421.—W. H. REED, New York, N. Y., Chairman of Committee on Organization, assignee of D. M. SOMERS and WALTER S. ATWOOD.—*Button.*—Patented December 31, 1867, No. 79,929; reissued May 4, 1869.

Claim.—The combination, with the button or its shank or neck, of an independent central stem or rivet, when said neck and stem are so constructed as that the one may be made to fit within or enter the other, and the two be secured together by compression applied laterally, or to the outside of them, in rear of the button, between the latter and the material to which the button is attached, substantially as specified.

3,422.—MICHAEL RIEHL, Philadelphia, Pa.—*Machinery for Trimming Books.*—Patented August 28, 1855, No. 13,501; reissued May 4, 1869.

Claim.—A device for cutting paper, books, &c., consisting of a knife having a vertical reciprocating motion, as well as a drawing, oblique, or quarter-circle motion, suitable to effect the cutting of the paper, books, &c., imparted to it by a continuously-turning wheel, crank, or equivalent, connected to said knife, substantially as described.

3,423.—BENJAMIN S. ROBERTS, United States Army.—*Machine for and Method of Compressing Cartridge-Shells to a Tapered Form.*—Patented March 9, 1869, No. 87,593; reissued May 4, 1869.

Claim.—Conjointly, the hereinbefore-described machine for and method of tapering metallic cartridge-shells throughout their entire length, in the manner shown.

3,424.—FREDERICK A. WOODSON, Anna, Ill.—*Hot Air Furnace.*—Patented February 2, 1869, No. 86,620; reissued May 4 1869.

Claim.—A furnace by which the volatile matters are separated from the ponderable constituents of

fuel and re-united with a fresh supply of air at the point of greatest heat, substantially as and for the purpose described.

3,425.—T. B SMITH, Ansonia, and B. W. CORNING, New Britain, Conn., assignees, by mesne assignments, of T. B. DOOLITTLE. — *Fruit-Box.*— Patented June 19, 1866, No. 55,631; reissued May 4, 1869.

Claim.—The manufacture of wooden boxes composed of end pieces of sufficient thickness of stock to receive and hold the nails, in combination with a veneer partially cut crosswise, and bent around and secured to said end pieces, all substantially as described.

3,426.—WILLIAM C. DURANT, West Troy, N. Y.—*Base-Burning Stove.*—Patented July 23, 1867, No. 66,957; reissued May 11, 1869.

Claim.—1. In combination with a fuel-magazine, B, of stoves, a deflector mouth-piece, C, either of a single or compound form of construction, substantially as herein described, and arranged to operate as and for the purpose set forth.

2. The combination of hook-headed pendent lugs or brackets *c* on the fire-pot base-plate W, with the respectively located coinciding notches or recesses *e*, in the flange of the bed-plate ring E, substantially as described, for the purpose of easily and quickly mounting or hanging said bed-plate ring with its fire-grate in operating-position, as set forth.

3. The combination of the dumping fire-grate, with an under suspended and horizontally-vibrating or shaking bed-plate, and with a lever operating them, when said fire-grate can be dumped, but not vibrated, independent of the bed-plate, substantially as and for the purpose set forth.

4. In combination with a horizontally-vibrating grate and bed-plate, and with a lever for shaking them, the terminating of the end of the journal or shank by which they are vibrated in a pocket, *z*, so that said shank shall not project beyond the exterior of the stove, but be accessible and operated from the outside by the shaker through a suitable opening in said exterior, substantially as and for the purpose described.

5. Arranging a boiler-plate, with or without the oven on the exit flue of a base-burning stove, substantially as described for the purpose specified.

3,427.—JOSIAH J. SHERMAN, Albany, N. Y.—(Division B.) *Apparatus and Process for Evaporating Liquids.*—Patented February 16, 1869, No. 86,948; reissued May 11, 1869.

Claim.—The condensing-apparatus, consisting of one or more supplemental chests, with their steam-chambers and evaporating-vats, when constructed and adjusted with relation to one another, and in relation to one or more primary evaporators, so as to take up and utilize, for purposes of further condensation by succeeding processes of evaporation, heat generated in the latter, before it is allowed either to pass them or escape into the atmosphere, or otherwise, all substantially as described.

3,428.—JOSIAH J. SHERMAN, Albany, N. Y.—(Division B.) *Apparatus and Process for Evaporating Liquids.*—Patented February. 16, 1869, No. 86,948; reissued May 11, 1869.

Claim. — 1. The evaporating-apparatus, whether embracing one or more supplemental steam-chests, substantially as described, when placed directly upon or over a primary or other antecedent vessel or vessels containing a liquid subjected to heat, in combination with any suitable mechanical device for either raising it vertically, or removing it horizontally, or both, from such primary or other vessel or vessels, or their surroundings, for any purpose whatever.

2. The supplemental evaporating-apparatus, substantially as described, whether consisting of but one or more chests or vessels when supported immediately over, or upon, or at any distance, either wholly or partially, over, or under, or diagonally from a primary or other antecedent vessel or vessels containing a liquid subjected to heat, in combination with a cover or covers, either opening or removable, or both, to such primary or other vessel or vessels with a connection or connections between such primary or other vessel or vessels and such apparatus, so as to afford open access to the whole or any part of such primary or antecedent vessel or vessels, or their surroundings, for any purpose whatever.

3,429.—H. C. STORRS, New York, N. Y.—*Knob-Latch.*—Patented January 21, 1868, No. 73,666; reissued May 11, 1869.

Claim.—1. The combination of the sliding bolt F with the latch-bolt B, arranged so that by the closing of the door both bolts are forced inward, the bolt F retained within the case; the bolt B, shooting into the keeper, is locked through the instrumentality of the bolt F, substantially as herein set forth.

2. The combination of the locking-bar *b*, pivoted to the latch-bolt, with the bolt F and latch-bolt B, substantially as shown and described.

3,430.—WHEELER AND WILSON MANUFACTURING COMPANY, Bridgeport, Conn., assignees, by mesne assignments, of ALLEN B. WILSON.—*Sewing-Machine.*—Patented June 15, 1852, No. 9,041; extended seven years; reissued May 11, 1869.

Claim.—1. In combination with an eye-pointed reciprocating needle, a hook, so shaped and moved, substantially as specified, as to act upon loops of needle-thread, substantially as described.

2. In combination with a hook, shaped and moved substantially as specified, a bobbin containing under or lower thread, located, in reference to the hook, substantially as set forth.

3. In combination with an eye-pointed needle, a hook and a bobbin, all operating in combination, to form a stitch, substantially in the manner specified.

4. A ring, in combination with a hook and bobbin, all operating substantially as specified.

5. In combination with a hook, shaped and operating substantially as specified, a pad, constructed and operating substantially as described.

6. In combination, an eye-pointed needle, hook, bobbin, and pad, all operating substantially as set forth.

7. The method, substantially as herein described, of mounting a rock-shaft, which carries a needle-arm, whereby the needle may be adjusted, substantially as hereinbefore set forth.

8. The device herein described, for feeding the cloth along in a sewing-machine, consisting of a tooth having an upward motion, for grasping the cloth between itself and a smooth surface, a motion forward for feeding the cloth along, a downward motion for freeing the tooth from the cloth, and a backward motion, out of contact with the cloth, substantially as above set forth.

9. A tooth having four motions, substantially in the manner and for the purposes set forth, in combination with a surface bearing upon the cloth with a yielding pressure, and a slotted platform, whereby the cloth is not only fed, but is also clamped, so as to be held at rest between the platform and the yielding surface, at certain times, in the operation of the parts, the combination being and operating substantially as described.

10. A tooth, operating as described, in combination with a cam for lifting the tooth, and moving it forward, and a spring for moving it backward, the combination being substantially such as described.

11. The relative arrangement, substantially as herein described, of a rod to which a tooth is attached, beneath a platform, and a cam beneath the rod, and acting upon it.

12. A feeding-tooth having four motions, as described in combination with a slotted platform, in such manner that the tooth rises, at times, through the slot, above the level of the platform, as described.

13. In combination with a feeding-tooth, moved forward by a positive motion, as described, and rearward by a spring, an eccentric, acting substantially as described, whereby the extent of forward motion is determined, substantially as set forth.

3,431.—BEAUMAN BUTLER, Saint Johnsbury Centre, Vt., for himself, and BENJAMIN M. TILLOTSON, Manchester, N. H., assignee of CHARLES F.

RAMSAY.—*Saw-Frame.*—Patented October 20, 1868, No. 83,131; reissued May 11, 1869.

Claim.— 1. The saw-frame, constructed with either or both of its two ends, A′ C E and B C E′, either rigid or flexible, when braced by the connection of the central part of the rod E E′, to the cross-piece C, substantially as set forth.

2. The provision, in a buck-saw frame, of the spring, or cushion G or G′, substantially as and for the purpose set forth.

3. The slotted ears I I, or their equivalent, employed to connect the cross-bar and end-piece, and permit mutual play between them, substantially as described.

3,432. — PATRICK A. DOHERTY, Boston, Mass., assignee of JANE G. WATERMAN, (widow,) and JAMES D. MARTIN, administrator of the estate of NATHANIEL WATERMAN, deceased. — *Table-Tray or Waiter.*—Patented May 12, 1863, No. 38,519; reissued May 11, 1869.

Claim.— 1. A table-waiter, or tray, as made or provided with the lip C, or its equivalent, applied to and projecting down from its rear part, such lip being for the purpose specified.

2. A table-waiter, or tray, as made with the rim extended partially around it and above its bottom, in manner substantially as specified.

3. A table-waiter, or tray, as having not only a rim extended partially around and above its bottom, as set forth, but with a lip, or its equivalent, extended down from its rear edge, the whole being substantially as explained.

3,433. — DAVID HAMMOND, Canton, Ohio. — *Bridge.* — Patented July 3, 1866, No. 56,043; reissued April 30, 1867, No. 2,586; again reissued May 11, 1869.

Claim.—1. The arch A, composed of the wrought-iron arch-pieces C C, having one or more flanges *x y* rolled thereon, and united by intervening clamping-pieces and clamping-bolts, and the covering-piece B, the several parts being connected and combined substantially as and for the purpose specified.

2. The combination of two or more wrought-iron arch-pieces C C, having one or more flanges *x y* rolled thereon, when said arch-pieces are united by intervening clamping pieces and bolts, constructed as herein specified, and are used in the construction of a wrought-iron arch-girder, substantially as is herein specified.

3. The clamping-piece Q, herein described, whether the same be made as a single or as a double bolted clamping-piece, when constructed and used substantially as and for the purpose specified.

4. The post or brace-clamping pieces herein described, whether the same be made as double-bolted clamping-pieces, as shown in Fig. 4, or as single-bolted clamping-pieces, as shown in Fig. 5, when used substantially as and for the purpose specified.

5. The securing-piece *o*, provided with bolt o^1 and nut o^2, when constructed and used substantially as and for the purpose herein specified

6. The combination of the arch-pieces C C, covering-piece B, truss-post F, with jam-nuts N N, and post-clamp M, with raised portion *m*, the several parts being arranged substantially as and for the purpose specified.

7. The combination of the arch A, constructed as specified in first claim, the chords D D, arch-shoes G G, truss-posts F F, and diagonal braces E E, the whole forming a wrought-iron girder, substantially as and for the purpose specified.

3,434.—JOHN G. MURDOCK, Cincinnati, Ohio.— *Hydrant.* — Patented May 26, 1863, No. 38,694; reissued May 11, 1869.

Claim.—1. In combination with the valve-seated supply-pipe, or chamber D *d*, the moving water-way and plunger E F, wholly external to said chamber, and shutting against the pressure.

2. A wasting-hydrant, having the described hollow plunger and moving water-way, shutting against the pressure, in combination with a valve-seated supply-pipe, or chamber, as set forth.

3. The wasting open-mouthed barrel A B W, valve seat *d*, valve G, gaskets I J, and ventage W, combined in the manner described with a moving water-way, shutting against the pressure, substantially as and for the purposes set forth.

3,435. — ELISHA WATERS and GEORGE A. WATERS, Troy, N. Y. — *Boat.* — Patented June 30, 1868, No. 79,421; reissued May 11, 1869.

Claim.—1. The construction of the shell or skin, and the decks (when decks are used) of boats, of or from paper prepared and arranged in a layer or layers, each of which is arranged and combined, one with the other, in the manner and for the purposes substantially as herein described, contained, and set forth.

2. A boat, constructed of paper, in the manner substantially as herein described and set forth, and suitably stayed, braced, supported, and strengthened, by means of ribs, stays, braces, or strips, constructed of paper, wood, or other suitable material, and the same arranged upon the inner side of such boat, in the manner substantially as herein described and set forth.

3. The shell or skin of a boat, constructed of paper, in the manner substantially as herein described, in combination with an inner frame-work, suitably constructed, and each arranged in the manner and for the purposes substantially as herein described and set forth.

3,436. — WILLIAM E. MARSTON, Troy, N. Y., assignee of ELIZABETH HAWKS.—*Heating-Stove.*— Patented December 1, 1868, No. 84,626; reissued May 11, 1869.

Claim.—1. The base, A, constructed substantially as herein described and set forth, with a partition, B, or any equivalent therefor, thereby dividing said base into two chambers, which partition is provided with suitable openings or apertures, *b b*, and with the slides or damper L, substantially as and for the purposes herein described and set forth.

2. The arrangement of the outer, or surrounding cylinder, D, and of the inner cylinder, E, when used in combination with vertical partition-plates F, whereby a flue space, or chamber, M, is formed for the passage of the smoke, and also for the passage and consumption of any escaping gases or products of combustion, and which also form a radiating-chamber, S, in the front of such rear vertical chamber M, in the manner substantially as herein described and set forth.

3. The combination of the base-chamber *o* with the intermediate combustion-chamber Q, and with the rear base-chamber N, by the means of the partition B, having therein the damper L, or any other equivalent therefor, the whole being arranged and operated in the manner substantially as herein described and set forth.

4. The downward-draught damper I, constructed and arranged upon the top of the inner cylinder, E, when used in combination with the upper combustion-chamber, P, with the fuel-chamber H, lower or intermediate combustion-chamber Q, the chamber *o* in the front of the base A, lower and base damper L, the rear chamber N in the rear part of the base A, and with the rear vertical chamber M, each operating in the manner and for the purposes substantially as herein described and set forth.

5. The arrangement and combination of the cylinders D and E and the upright plates F F, thereby forming a flue or chamber for the passage of any escaping products of combustion from the consuming fuel, and also, and thus and thereby forming in front of such flue or chamber, and between said cylinders, a hot-air chamber for the radiation of the heat, in the manner substantially as herein described and set forth.

6. The double and sliding dampers L L, when constructed, combined, and operated in a stove, furnace, or heater, in the manner and for the purposes substantially as herein described and set forth.

3,437. — ALFRED ARNOLD, Tenafly, N. J.—*Tea and Coffee Pot.* — Patented December 10, 1867, No. 71,837; reissued May 18, 1869.

Claim. — 1. In combination with *b b′*, or their equivalents, the heating-surface D, when so arranged that it will come in contact with the hot surface of the stove, receive its heat, and then recede therefrom, substantially as is herein set forth.

2. Arranging C, or other support, on which the boiler oscillates, so that the plane of D will conform to that of the stove when in contact.

3. The combination of *b b'*, D, and E, in one vessel.

4. Arranging the boiler to oscillate on its own base, without employing a separate device to support it, substantially as described.

3,438.—ALFRED BARDELL and SAMUEL SMITH, New York, N. Y.—*Construction of Coal-Scuttles.*—Patented March 12, 1867, No. 62,807; reissued May 18, 1869.

Claim.—1. The combination of a body and base-rim with a bottom so constructed as to have a flange which can be sprung into the recess formed upon the body, and thereby bring together three thicknesses of sheet-metal just above bottom of the scuttle or other utensil, substantially as and for the purpose herein described.

2. A struck-up and corrugated sheet-iron bottom, B, in combination with the body and base-rim, substantially as and for the purpose herein described.

3,439.—P. CORBIN and F. CORBIN, (a joint-stock corporation,) New Britain, Conn., assignees of ANDREW TURNBULL.—*Door-Bell.*—Patented June 13, 1865, No. 48,242; reissued May 18, 1869.

Claim.—A pivoted or swinging cam-piece, in combination with the hammer and bell, when said cam-piece produces a positive motion of the hammer by movement in each direction, substantially as set forth.

3,440.—THOMAS S. DAVIS, Jersey City, N. J.—*Steam-Engine Exhaust-Valve.*—Patented December 29, 1868, No. 85,289; antedated December 23, 1868; reissued May 18, 1869.

Claim.—The valve B, and its arrangement relating to the seat D in the exhaust-passage A of a locomotive or other analogous engine liable to be reversed, as herein set forth.

3,441.—WENDELL T. DAVIS and AUSTIN DE WOLF, Greenfield, Mass., assignees of OZI M. PIKE.—*Machine for Cutting Vitreous Substances.*—Patented December 29, 1868, No. 85,396; reissued May 18 1869.

Claim.—A tool for cutting glass, or other vitreous substances, constructed to operate substantially as described.

3,442.—DANIEL A. DRAPER, Cambridge, Mass.—*Device for Forming Letters and Figures on Type-Blocks.*—Patented May 7, 1867, No. 64,410; reissued May 18, 1869.

Claim.—1. The combination of the within-described devices for producing letters, figures, &c., upon the edges of type-blocks, for hand-stamps and other purposes, substantially as set forth.

2. As a new article of manufacture, a type-block with letters, figures, or characters produced thereon, in the manner substantially as described.

3,443.—HELEN DOUGHERTY, Rochester, N. Y., assignee, by mesne assignments, of JOHN B. DOUGHERTY.—*Machine for Making Splints for Barrel-Hoops.*—Patented February 23, 1864, No. 41,688; reissued May 18, 1869.

Claim.—1. As an improvement in the manufacture of hoops, the cutting of the hoops from the edge of the plank or board, by cuts alternately in a right-angled line and a bevel-line with the side of face of the plank or board, or in alternate bevel-lines, as set forth.

2. The combination of the knives K K with the knife O, for the purpose of cutting the taper of the ends of the hoop at the same time that the hoop is cut from the timber.

3. The combination of the tilting-bars *b*, cams M, and springs *s*, as and for the purpose specified.

3,444.—ALONZO HITCHCOCK, GEORGE G. SAXE, and JAMES H. ROBERTSON, New York, N. Y., assignees of RILEY W. CARPENTER.—*Tremolo-Attachment.*—Patented June 27, 1865, No. 48,366; reissued May 18, 1869.

Claim.—1. The application of means to the instrument, by which the air may be agitated, to produce a tremulous note, substantially as described.

2. The arrangement of an agitator, applied to the production of a tremolo outside the trunk, wind-chest, and other air-passages of the instrument, and operated independently of the bellows-power.

3. The arrangement of a fan, or agitator in the instrument, at right angles to the keys, and parallel to the line of reeds, or pipe-mouths, at any convenient distance from them, as described.

3,445.—GEORGE W. LA BAW, Jersey City, N. J.—*Miter-Machine.*—Patented May 29, 1855, No. 12,956; reissued May 18, 1869.

Claim.—1. The knives or cutters G, H H, and X, attached to the stock F, in combination with the mechanism for operating the same, substantially as described, and for the purposes specified.

2. The knives, or cutter X, arranged as described, in combination with mechanism for operating the same, for cutting miters, substantially as described, and specified.

3. The mechanism for holding the material for cutting miter and square joints, consisting of the bar C, slotted both vertically and horizontally, and the eccentric lever D, constructed substantially as described, and for the purpose specified.

3,446.—WILLIAM W. LEVERING, New York, N. Y.—*College-Cabinet.*—Patented December 18, 1866, No. 60,529; reissued May 18, 1869.

Claim.—1. Arranging a slate or blackboard on two opposite sides of the cabinet, so that a desk may be used on one side, and a blackboard on the other, at the same time, substantially as described.

2. Combining, permanently, with a table, or desk-lid, or board, slated or blackboard surface, on the under side, for its appropriate and proper use, substantially as described.

3,447.—C. H. MCCORMICK, Chicago, Ill., assignee, by mesne assignments, of HAMILTON A. PARKHURST.—(Division C.) *Harvester.*—Patented February 23, 1858, No. 19,442; reissued May 18, 1869.

Claim.—1. The combination, in a two-wheeled harvester, of a main frame, and a laterally-projecting cutting-apparatus with a coupling-frame, hinged both in front and rear of the wheels, in line with the crank-shaft, substantially as set forth.

2. The combination, in a two-wheeled harvester, of a main frame, and a laterally-projecting short finger-beam, with a coupling-frame, encompassing the inner wheel, and hinged to the main frame above the plane of the cutters, substantially as set forth.

3,448.—JOHN MCKIBBEN, Lima, Ohio.—*Bridle.*—Patented December 8, 1868, No. 84,838; antedated December 1, 1868; reissued May 18, 1869.

Claim.—1. The rein E, provided with stops *h h h*, in combination with guides *f f*, rings *i* and *j* on the bit, and tubes *e*, at the rear edges of the blinders, and through which the reins pass, all arranged substantially as and for the purposes set forth.

2. The reins E, suspended by loops, or swivels *a*, short snap-hooks *b*, and rings *c*, from the head-strap D, all substantially as specified.

3,449.—METALLIC COMPRESSION CASTING COMPANY, Boston, Mass., assignees of MICHAEL SMITH.—*Apparatus for Casting Refractory Metal.*—Patented October 22, 1867, No. 70,038; reissued May 18, 1869.

Claim.—1. The provision of, and combination with, one or a series of molds for casting metal, of a separate injecting-vessel or cylinder, J, said cylinder being provided with a piston or plunger, K, and an internal non-conducting lining, made of clay and plumbago, or other non-conducting material equivalent thereto, said lining to be detached, and used in the manner and for the purpose described.

2. The provision, on said cylinder J, of a temporarily-closable, but self-opening communication with the molds, as and for the purpose set forth.

3. The combination of the mold-box D, detachable thimble I, injecting-vessel J, and plunger K, all constructed, arranged, and operating in the manner and for the purposes explained.

4. The arrangement of a series of molds, having consecutive orifices or gates, a slab or follower, B, and set-screw F, and inclosed in a box, D, as and for the purpose set forth.

5. The subjects of clause last recited, when inclosed in an air-tight chest, G, having connections with an air-exhaust, for the purpose specified.

3,450.—D. P. SHARP, Ithaca, N. Y.—*Horse-Rake*—Patented December 12, 1865, No. 51,486; reissued May 18, 1869.

Claim.—1. The rake-teeth, arranged to oscillate for a limited distance independently of each other, around the rake-head as a fulcrum or bearing, substantially as specified.

2. The combination of the eyes or sockets *d d d* with the metallic plates *c*, and coiled teeth E, all arranged to operate as and for the purposes specified.

3. The stops *d'*, when used in connection with the teeth, applied to the rake-head, substantially as and for the purpose specified.

3,451.—MARTIN VOORHEES, Princeton, and GEORGE W. N. CUSTIS, Camden, N. J.—*Process and Apparatus for Seasoning and Impregnating Wood with Preservative Materials.*—Patented February 23, 1869, No. 87,226; reissued May 18, 1869.

Claim.—1. For the purpose of treating wood, textile fabrics, or other material, in whole or in part, with the vapors of oleaginous, antiseptic, or other substances or compounds, the vaporization of such substances or compounds, in the same chamber in which the wood, &c., may be placed, or in a section thereof, or in a projection forming substantially a part of the same.

2. The return of the condensed vapors to the body of the heated substance from which evolved, to be revaporized as often as may be deemed desirable.

3. Such arrangement of apparatus that the condensed material may be caused to flow back into the body of the substance from which evolved, or to flow from the chamber at will.

4. The combination, with a wood-treating chamber, of an air-space around it, so that the air may be confined therein, or be caused to flow over the surface of the treating-chamber at will.

3,452.—ELIZA C. STEWART, Troy, N. Y., sole legatee and executrix of the estate of PHILO P. STEWART, deceased.—(Division A.) *Cooking-Stove.*—Patented January 18, 1859. No. 22,681; reissued May 31, 1864, No. 1,684; again reissued July 7, 1868, No. 3,027; again reissued May 18, 1869.

Claim.—1. The supplying of a continual current of atmospheric air, heated by the front plate of the fire-box or chamber of combustion or by the front and end plates thereof, and in a flue, chamber, or space, immediately in front of the same, or in front and at the end of said fire-chamber, and in combination therewith, to the oven of a cooking-stove, in which the oven is in the rear of the fire-chamber, and at the same time extends under the same, so as to connect with the said flue, chamber, or space, and thus and thereby permit the said heated air to enter the said oven, in the manner and for the purposes substantially as herein described and set forth.

2. The flue, space, or intervening chamber F, immediately in front of the fire-box or chamber of combustion, having a fire-grate and ash-pit or chamber combined therewith, or in front and at the end of said fire-chamber, and the whole arranged and suspended in the front and upper corner or part of the oven I, into which space or intermediate chamber atmospheric air is admitted, through apertures *x'*, or any equivalent therefor and thereof, and which are and shall be in and through the plate or door or doors in the front part of the cooking-stove, and in combination with the oven of such stove, so that the air heated within such intermediate chamber, substantially as herein set forth, may or shall be conducted to and into the oven, for the purposes and by the means substantially as herein described and set forth.

3. The admitting of air to said chamber F, and through it to said oven, constructed and arranged as described, by means of the apertures *x*, in the front plate or doors, or by means of the apertures *x''* in the side plate of the stove, or by any equivalent for either or both of said apertures, substantially as and for the purposes herein described and set forth.

4. In a stove constructed with an oven, and with a fire-box or chamber of combustion, having a fire-grate therein, and an ash-pit or chamber below, and all combined therewith substantially like the one hereinabove described and set forth, the making of the front plate of the stove to open with a door or doors, K, and the attaching an apron in the front of the stove, so as to receive and contain a kitchen or other suitable roaster, substantially as specified herein, so that the heat radiated by the front plate of the fire-box or combustion-chamber shall be aided by the heat radiated by the oven-plates therein, in the manner and for the purposes substantially as herein described and set forth.

5. The employment and arrangement of the front doors K, provided with apertures *x*, or any equivalent thereof and therefor, therein, in combination with the fire box or chamber of combustion *a*, by means of which atmospheric air, in a highly-heated condition, is admitted to the oven of a cooking-stove, for the purposes substantially as herein described and set forth.

6. The employment and arrangement, in the front of a cooking stove, of a door or doors, K, or any equivalent thereof and therefor, so that the same, or a part thereof, shall open in front of the fire-box or chamber of combustion, in combination with the fire-chamber or chamber of combustion, having a fire-grate therein, and ash-pit chamber combined therewith, and arranged and suspended in the front part of the oven of a cooking-stove, in the manner and for the purposes substantially as herein described and set forth.

7. The employment and arrangement of a suitable door or doors in the front of a cooking-stove, which shall in part or in whole open into that part or portion of the oven which extends forward and under the fire-box or chamber of combustion, and other parts necessarily employed and used therewith, in the manner and for the purposes substantially as herein described and set forth.

8. The arrangement of a fire chamber or chamber of combustion with a fire-grate, and an ash-pit or ash-chamber combined therewith, and the whole suspended in the front part and upper corner of oven of a cooking-stove, in the manner and for the purpose substantially as herein described and set forth.

9. The employment and arrangement of the additional or extra bottom or incasement *r*, in combination with the flues of the bottom of a cooking-stove, and underneath the oven I, in the manner and for the purposes substantially as herein described and set forth.

10. The employment and arrangement of the additional or extra back and incasement *u*, in combination with the ascending or descending flues in the rear end of a cooking stove, and between the rear end of the oven and the rear vertical end plate of the stove, in the manner and for the purposes substantially as herein described and set forth.

11. The employment of a corrugated plate, perforated along the front thereof, for the top of the oven I, as arranged in connection with the flue H and fire-chamber or chamber of combustion, and with the rear and vertical plate of the oven of a cooking-stove, substantially as and for the purposes herein described and set forth.

12. The employment and arrangement of the front damper or valve Y, in the front and hearth of a cooking-stove, in combination with the flue or flues, as the case may be, immediately underneath the oven and bottom plate of the oven of a cooking-stove, having the fuel-chamber and ash-pit arranged as hereinbefore specified, in the manner and for the purposes substantially as herein described and set forth.

13. The employment and arrangement of the boiler or reservoir, having a removable or detached cover or top, and containing two inclined flues or tubes, which are separated at the bottom or lower ends thereof, and which unite at the top or upper ends thereof, and thus and then form but one pipe, in the manner and for the purposes substantially as herein described and set forth.

3,453. — ELIZA C. STEWART, Troy, N. Y., sole legatee and executrix of the estate of PHILO P. STEWART, deceased.—(Division B.) *Cooking-Stove.*—Patented January 18, 1859, No. 22,681; reissued May 31, 1864, No. 1,684; again reissued July 14, 1868, No. 3,041; again reissued May 18, 1869.

Claim. — 1. The employment and arrangement of the top plate of a cooking-stove, extended over and beyond the rear end and upper portion of the descending and ascending flues, back of the oven thereof, in such manner as to receive and support a reservoir, or water-tank, upon or over a suitable opening therein, and with a heating chamber, below or underneath the same, in the manner and for the purpose substantially as herein described and set forth.

2. The arrangement and employment of the heating-chamber D, or its equivalent, in combination with the rear ascending and descending flues of a cooking-stove, and with the reservoir, or water-tank C, in the manner and for the purposes substantially as hereinbefore described and set forth.

3. The combination of the reservoir, or water-tank C with the chambers D and S, on the rear end of a cooking-stove, having ascending and descending flues, in the manner and for the purposes substantially as herein described and set forth.

4. The arrangement and combination of the chamber S, or any equivalent thereof, upon or with the rear end of a cooking-stove, containing ascending and descending flues, in the manner and for the purpose substantially as herein described and set forth.

5. The vertical end plate of a cooking-stove, containing the opening O, or any equivalent therefor, for the passage of hot air, or the escaping heated products of combustion, against the reservoir, or water tank, substantially as herein described and set forth.

6. The employment and arrangement of the damper L, or any equivalent therefor, within the flues of a cooking-stove, having a boiler, or reservoir, supported over or beyond the descending or ascending flues of said stove, so that the heated products of combustion may be either thrown against said reservoir, and directly into the exit flue, or may be caused to pass through other parts of said stove, and then against said reservoir, and into said exit-flue, for the purpose of heating the water contained in said reservoir, substantially as herein described and set forth.

7. The flue B, constructed as described, in combination with the reservoir C, substantially as and for the purpose shown.

8 A reservoir, or water-tank, for the warming or heating of water therein, in combination with the descending and ascending rear flues of a cooking-stove, substantially as and for the purpose shown.

3,454.—THOMAS BAKEWELL and JOHN LIPPINCOTT, Pittsburgh, Pa, assignees, by mesne assignments of PEARSON CROSBY.—*Hanging Reciprocating-Saws.* — Patented October 4, 1859, No. 25,632; reissued May 25, 1869.

Claim.—1. Hanging reciprocating-saws by means of buckles B, having a continuous bearing on a strap or straps attached at or near the end of the saw, in combination with a pin or pivot, by which the buckle is attached to the stirrup, the buckle being left free to adapt itself to the rake or inclination given to the saw, substantially as described, and for the purposes set forth.

2. Pivoting the stirrup of reciprocating-saws by a single pin or pivot to a buckle bearing against straps fastened across the ends of the saw, substantially as described.

3. A buckle for hanging reciprocating-saws, consisting of side pieces, each with a continuous lip or lips, for engaging the straps on the ends of the saw, and pivoted by a pin, *q* or *k*, at a single point only, to the stirrup by which it is connected with the sawgate, substantially as shown and described.

3,455.—ALBERT H. CARROLL, Baltimore, Md.—*Picker for Looms.*—Patented April 13, 1869, No. 88,845; reissued May 25, 1869.

Claim.—A picker, constructed as shown in the drawings, and provided with a layer of cloth, felt, or other suitable material, all substantially as and for the purposes set forth.

3,456.— AARON CHANDLER, Davenport, Iowa, and SAMUEL F. ESTELL, Richmond, Ind.—*Folding-Desk.*—Patented February 16, 1869, No. 87,025; reissued May 25, 1869.

Claim.—In combination with the book-box A, the slots *u*, in the standards S, S, the pins *t*, and pivoted braces D, substantially as described and for the purpose set forth.

3,457.—A. W. COATES, Alliance, Ohio.—*Horse-Rake.*—Patented August 27, 1867, No. 68,288; reissued May 25, 1869.

Claim.—The toggle H, constructed as described, whereby the rake teeth are held down, when the arms *d d* are in line, or nearly so, with each other, and lifted by drawing up the handle *e*, which raises the inner ends of the arms *d d'*, the weight of the driver assisting, substantially as herein shown and described.

3,458.—CARLOS B. CURTISS, Bridgeport, Conn., assignee, by mesne assignments, of CORNELIUS ST. JOHN. — *Lamp-Shade.*—Patented July 4, 1865, No. 48,632; reissued May 25, 1869.

Claim.—1. In a lamp-shade, hinging the several sides, so that they may be turned upon their respective hinges, to operate in the manner substantially as herein set forth.

2. The combination of the pyramidal lamp-shade A and the series of reflectors C C, &c., arranged and applied to it, substantially as and so as to operate as specified.

3. The pyramidal shade, as made with the heat resisting and reflecting lining and the adjustable reflectors, arranged substantially as specified.

3,459.—EDWARD GWYN, Tiffin, Ohio, assignee of CHARLES W. ISBELL.—*Gas and Water Pipe Joint.*—Patented July 24, 1860, No. 29,281; reissued May 25, 1869.

Claim. — 1. The combination of the spigot and bell, constructed to taper in reverse directions, as regards their contiguous surfaces, and in relation to or from the mouth of the bell, essentially as specified.

2. A pipe-joint, substantially as herein described, by constructing the spigot and bell, so that on fitting two lengths or sections of pipe together, they are made self-centering, and leave a packing-space around the spigot, of a wedge-like form or character, increasing in diameter from the month of the bell, essentially as and for the purpose or purposes herein set forth.

3. The combination, with the reversely-tapering bell and spigot, of the shoulder F to the inner portion of the bell, and curved extremity G to the inner end of the spigot.

4. The combinations of the openings C C and annular projection D with the reversely-tapering bell and spigot, substantially as shown and described.

3,460.—SILAS E. JACKSON and MORGAN P. JACKSON, Booneville, N. Y.—*Mowing-Machine.*—Patented December 29, 1857, No. 18,975; reissued May 25, 1869.

Claim.—1. The combination, with the cutting-apparatus and main frame of a harvesting-machine, of a flexible or yielding draught-connection, which extends from a part of the machine below the main axle, and near the heel-end of the finger-beam, or the shoe which supports it, to a point underneath, and in line with the tongue, but not connected thereto, for the purposes stated.

2. The combination, with the frame, having a laterally-projecting finger-beam, of a harvester, of a pole or guiding-device arranged to project forward of the line of cut, and a draught-connection, which is independent of such pole or guiding device of the machine, substantially as and for the purpose stated.

3. The combination, with the frame which supports the finger-beam in a harvesting-machine, of an oblique flexible or yielding draught-connection, but independent as a draught-connection from the pole by which the machine is guided, for the purposes stated.

4. The combination, with an independent flexible or yielding draught-connection, substantially as described, of a supporting-device for retaining the forward end of said connection and the whiffletree-

devices in elevated positions under the tongue, but which supporting-device does not prevent an independent longitudinal movement of the connection, for the purposes stated.

5. The combination, with the stud M and brace N, of the draught-chain O and ring *r*, substantially as and for the purposes set forth.

3,461.—JOHN F. KELLER, Hagerstown, Md., assignor to ABRAHAM MILLER, WILLIAM H. PROTZMAN, ALPHEUS R. APPLEMAN, and WILLIAM UPDEGRAFF, same place.—*Machine for Sowing Fertilizers.*—Patented January 8, 1861, No. 31,084; reissued July 5, 1864, No. 1,718; again reissued May 25, 1869.

Claim.—1. The arrangement of a series of spiked rollers, B, when placed vertically and moved through a partial revolution by a reciprocating motion, substantially as set forth, whereby the fertilizers are both delivered and prevented from clogging.

2. The combination of the clearers H and feed-slide R, (Figs. 5 and 6,) the latter having the peculiar openings G, with sharp edges for cutting the fertilizer away, substantially in the manner and for the purposes described.

3. The combination and arrangement of the rollers B, cranks C, and bar D, as and for the purpose specified.

3,462.—GEORGE A. LAWRENCE, Springfield, Mass., assignee, by mesne assignments, of MICHAEL SIMONS.—*Strainer for Coffee and Tea Pots.*—Patented March 5, 1867, No. 62,697; reissued May 25, 1869.

Claim.—The arrangement and combination of the removable strainer C, having a handle, D, thereon, with the guides B B, when made of Britannia-ware, or of other substance or metal, rendered non-corrosive, and attached to, and operating on the inside of the base of a tea or coffee pot, all constructed and operating substantially in the manner and for the purposes herein described and set forth.

3,463.—ROBERT O. LOWREY, Salem, N. Y.—*Bed-Bottom.*—Patented March 16, 1869, No. 87,948; reissued May 25, 1869.

Claim.—1. The slats A, having the holes *c*, with recesses for the points of the hooks to rest in, substantially as shown and described.

2. Connecting the adjoining springs of the series by means of the blocks E, constructed and applied as shown and described.

3. An elbow-spring, constructed substantially as herein described, with a hook on its upper or free end, for loose attachment to an opening in a slat, in the same vertical plane, or nearly so, with its attachment below, and with a shoulder formed on each side of the hook for the slat to bear upon, as set forth.

4. The combination of the slats A with the elbow-springs D and cross-bar B, when constructed and arranged substantially as described and for the purpose set forth.

3,464.—SILAS G. RANDALL, New Braintree, Mass.—*Seeding-Machine.*—Patented September 13, 1859, No. 25,443; reissued May 25, 1869.

Claim.—1. The harrowing plate-wheels D, revolving upon axes oblique to the line of draught, arranged in series, and inversely duplicated, substantially as shown and described, for the purposes specified.

2. The arrangement and combination of the series of plate-wheels D D, seed-boxes A, and horizontal bar B, substantially as herein described and shown, so that as the bar B is drawn along, the plate-wheels shall assume an oblique position, as set forth.

3,465.—JOHN SANDERS, Harrisburgh, Pa., administrator of the estate of RICHARD NORRIS, deceased.—*Exhaust-Nozzle for Steam-Engines.*—Patented November 24, 1868, No. 84,370; reissued May 25, 1869.

Claim.—The arrangement of the valves *c c*, rods *d d*, springs *e e*, partition *h*, and exhaust-pipes *b b*, constructed as described.

3,466.—THE S. STOW MANUFACTURING COMPANY, Plantsville, Conn., assignees of J. J. LAUBACH.—*Machine for Pressing the Locks of Sheet-Metal Plates.*—Patented January 6, 1857, No. 16,337; reissued May 25, 1869.

Claim.—The combination of the groover-roller F and the pressure-roller J, when combined and arranged so as to be moved simultaneously by the rack-bar E, or its equivalent, substantially as described, and for the purposes set forth.

3,467.—C. WHEELER, Jr., Auburn, N. Y., assignee of WILLIAM P. MAXSON.—*Harvester.*—Patented September 9, 1856, No. 15,703; reissued May 25, 1869.

Claim.—1. An adjustable cutter-frame, made in one piece, adapted to support a laterally-projecting finger-bar, and the bevel-wheel and pinion-shaft, for operating the cutters in combination with an arm or support for the driving-wheel, which is adjustable upon or around the pinion-shaft, as a center.

2. A driving-wheel, located outside of the cutter-frame, on a vibrating arm or support, in combination with an adjustable cutter-frame and reciprocating cutters.

3. A driving-wheel mounted on a vibrating arm, outside of the cutter-frame, said wheel having no outside support, in combination with an adjustable cutter-frame, a cutter-bar, a grain-platform, and an adjustable grain-wheel.

4. The vibrating drive-wheel arm, or support, located outside the cutter-frame, and provided with a lever for adjusting the height of said cutter-frame, substantially as described.

5. The combination, in a harvesting-machine, of the following elements, namely, a cutting-apparatus and a gear-frame, arranged inside of the driving-wheel, which is adjustable around the axial center of the first pinion-shaft; a platform, to receive, and an automatic rake to discharge the grain at one side, out of the path of the cutters; and a seat for the driver, so located that he will sit behind the axis of the driving-wheel.

3,468.—JOHN WILKESON, Buffalo, N. Y., assignee, by mesne assignments, of BENJAMIN M. VAN DERVEER.—*Pipe for Railway Water-Tank.*—Patented April 27, 1858, No. 20,108; reissued May 25, 1869.

Claim.—1. The combination, with a water-house, or reservoir, of a pipe-head and a water-pipe, when the latter constitutes a permanent appendage of the water-house, and is so constructed and arranged that it is capable of being placed and retained in such connection with the pipe-head as to form a continuous conduit, or passage for water from the interior of the house, or reservoir, through the pipe, and of having its connection with the pipe-head cut off, or broken, in such a manner that any water remaining in the pipe will at once run out, leaving it clear and dry, and thereby obviating all danger of its freezing or bursting, substantially as set forth.

2. The combination, with a water house, or reservoir and a water-pipe, having the capacities described, of a suitable weight, or counter-balance, so arranged and operating, that when the connection of the pipe with the pipe-head is cut off, or broken, it will automatically raise the pipe, so that any water remaining in it will at once run out, leaving it clear and dry, and will retain it in a convenient position, near to the water-house, in readiness for further use, substantially as and for the purposes specified.

3,469.—JAMES GREER and RUFUS J. KING, Dayton, Ohio.—*Cooking-Stove.*—Patented March 16, 1869, No. 87,925; reissued June 1, 1869.

Claim.—1. The fender B B′, constructed substantially as herein described, so as to admit of its being opened, for the purpose of getting at the fire, for broiling and other purposes.

2. The combination of the imperforate inner doors or fender B B′, forming the front wall of the fire-chamber, and affording access thereto for the removal of its contents, and the outer doors C C′, provided with the registers D, and forming, in connection with said inner doors, a space or passage for heating the draught-air and directing it to the bottom of the fire-space, and also to keep said outer doors cool, substantially as described.

3,470.—J. D. NIETSCKE, Somerset, Ohio.—*Preserving Dead Bodies.*—Patented September 24, 1867, No. 69,238; reissued June 1, 1869.

Claim.—1. The apparatus for filling the coffin with gas, consisting of the tube G, having the perforation *k*, in combination with the tube I, having the perforation *l*, and with the collars *h h'* and the cap O, substantially as and for the purposes specified.

2. Saturating defunct bodies with antiseptic gases, in an air-tight coffin, substantially as and for the purposes specified.

3,471.—AARON C. VAUGHAN, Philadelphia, Pa.—*Head-Light for Locomotives.*—Patented November 26, 1867, No. 71,431; reissued June 1, 1869.

Claim.—1. In combination with a parabolic reflector, an extension or rim J, shaped in the form of a frustum of a cone, attached to the parabola.

2. A parabolic reflector, and, attached thereto, the frustum of a cone, either with or without the use of a lens, substantially as described.

3,472.—J. C. BLYTHE, MARK JOHNSON, JAMES S. NOBLES, and CHARLES W. G. NOBLES, Perry, N. Y., assignees of J. C. BLYTHE.—*Flour-Bolt.*—Patented August 7, 1866, No. 56,887; reissued June 1, 1869.

Claim.—1. The combination, with the bolting-screen or cylinder, and the arms B B, sustaining the same, of the ribs C C, retreating or standing back, as described, so as to give a free sifting-action to the whole circle of the bolting-cloth, in the manner and for the purpose specified.

2. The combination, with the bolting-screen or cylinder, and the arms B B sustaining the same, of the radial partitions E E, dividing the interior of the said screen or cylinder into compartments, in the manner and for the purposes specified.

3. The combination, with the bolting-screen or cylinder, and the ribs C C, and arms B B sustaining the same, of the hoops D D, attaching and holding in line of the arms, and removable at pleasure, as herein set forth.

4. The construction and mode of attaching the bolting-screen or cylinder with an inside skeleton, substantially as described, whereby the whole inner surface of the bolting-cloth, except the parts covered by the hoops D D, is free and unobstructed, as herein set forth.

3,473.—J. L. BOOTH, Rochester, N. Y.—*Railroad-Rail.*—Patented August 28, 1866, No. 57,467; reissued June 1, 1869.

Claim.—The construction of steel-capped rails, substantially as herein described and shown.

3,474.—CORNELIUS AULTMAN, Mansfield, Ohio, assignee, by mesne assignments, of IRA HART.—*Machine for Thrashing and Cleaning Grain.*—Patented July 31, 1860, No. 29,374; reissued June 1, 1869.

Claim.—1. The combination, in a grain-separator, of two separating-platforms or shakers, which move in opposite directions, and are supported by or mounted upon vibrating links or arms, in such manner that both of said platforms shall rise during the entire extent of their throw in one direction, and fall during the entire extent of their throw in an opposite direction.

2. In a grain-separator, having two separating-platforms or shakers suspended or supported in such manner that they rise throughout the entire extent of their throw in one direction, and fall throughout their entire throw in an opposite direction, operating said platforms in such a manner that they shall rise and fall simultaneously.

3. The combination, in a grain-separator, of two separating-platforms or shakers, and lifting-rods or fingers, for lifting the straw from the platform over which it passes after leaving the thrasher.

4. The combination, in a grain-separator, of a concave deflector and a lifting separating-platform or shaker, provided with lifting-rods or fingers.

5. The scrapers K, which sweep the lower screen, when constructed with three sides, and arranged as shown, for the purpose set forth.

6. The combination of a stationary, adjustable deflector, N, with a swinging one, M, in the cap O of the machine, as set forth.

3,475.—C. JILLSON, Worcester, Mass. (Division A.) *Machine for Making Tapered Wire-Blanks.*—Patented September 15, 1857, No. 18,205; reissued June 1, 1869.

Claim.—1. The improved pattern-plate, *o*, swiveled at one end to the frame E, and slotted transversely at the other, to admit of different adjustments, as set forth.

2. The combination of a series of rests, *v*, with the socket or projecting support F, and cutting-tool, substantially in the manner and for the purposes described.

3. The combination of the rest *v*, yielding gauge *m*, and retreating knife C, all arranged and operating together, substantially as specified.

4. The construction and arrangement, substantially in the manner described, of mechanism for simultaneously gauging the blank and retiring the knife.

5. The arrangement of the reciprocating cutter C, projecting or supporting socket-piece F, and rest *v*, substantially as and for the purposes specified.

3,476.—C. JILLSON, Worcester, Mass.—(Division B.) *Method of Forming Conical Points on Wires, Rods, &c.*—Patented September 15, 1857, No. 18,205; reissued June 1, 1869.

Claim.—The process or method, herein described, by which a conical point is formed upon wire and analogous articles, namely, by adjusting the tool so as to commence the apex of the cone, or point, in the axial line of the wire, and turning the metal therefrom, in a continuously-increasing circle, until the base of the intended cone is reached, and the point formed, substantially in the manner set forth.

3,477.—CHARLES H. SAYRE, for himself, and THE REMINGTON AGRICULTURAL WORKS, Utica, N. Y., assignees, by mesne assignments, of CHARLES H. SAYRE and GEORGE KLINCK.—*Cultivator-Tooth.*—Patented February 12, 1856, No. 14,254; reissued June 1, 1869.

Claim.—1. So constructing a cultivator-tooth, that when made of thin or sheet-metal, a part thereof will form a tubular shank, B, whereby said tooth may be drawn up and securely attached to the frame, substantially as described.

2. Forming shoulders or braces G from sheet-metal, by bending or swaging it, substantially as and for the purpose set forth.

3. A cultivator-tooth made from sheet-metal, in such a manner as to form braces G and tubular shank B, substantially as described.

4. A cultivator-tooth made of sheet-metal, so as to form a tubular shank, B, and brace G, in combination with the nut F, screw-thread *a*, and plate A, substantially as and for the purpose described.

3,478.—JOHN F. SEIBERLING, Akron, Ohio.—*Harvester.*—Patented October 15, 1861, No. 33,496; reissued June 14, 1864, No. 1,701; again reissued June 1, 1869.

Claim.—1. The combination, substantially as described, of a shoe, to which the finger-beam is attached, a coupling-arm, pivoted at one end to the fore part of the shoe, and at the other to the main frame, and a brace-bar, rigidly secured to the coupling-arm at one end, and pivoted to the main frame at the other, with an intermediate coupling connecting the heel of the shoe with the brace-bar, for the purposes set forth.

2. The combination, substantially as described, of a shoe, extending behind the finger-beam, with a swiveling-link connecting the shoe and short coupling-arm, for the purpose of allowing the finger-beam to fold horizontally.

3. A short arm, or connection, one end of which supports the rear end of the shoe, and the other end of which is rigidly combined with a brace-bar, one end of which is supported by the rear inner corner of the main frame, and the other end by an arm, to which it is rigidly attached, extending from the front end of the frame to which it is pivoted, for the purpose set forth.

4. The arrangement of the hinged bars F F', for supporting the heel of the finger-beam, and for elevating and depressing the same, by means of a lever, G, said hinged bars being used in connection with a shoe, H, and its flexible attachment, substantially as set forth.

3,479.—AMALIE STIEREN, Natrona, Pa., assignee by mesne assignments, of EDWARD STIEREN, deceased.—(Division A.) *Process of Treating the Mother-Water of Salines to Obtain Useful Products.*—Patented December 12, 1854, No. 12,077; extended seven years; reissued June 1, 1869.

Claim.—1. The herein-described process for obtaining the crystals of the sulphate of magnesia from bittern-water of saline springs.

2. The herein-described process for obtaining iodine from the bittern-waters of saline springs.

3. The herein-described process for obtaining bromine from the bittern-waters of saline springs.

3,480.—AMALIE STIEREN, Natrona, Pa., assignee, by mesne assignments, of EDWARD STIEREN, deceased.—(Division B.) *Apparatus for Obtaining Bromine and other Products from the Mother-Water of Salines.*—Patented December 12, 1854, No. 12,077; extended seven years; reissued June 1, 1869.

Claim.—1. The within-described apparatus, for the production of sulphate of magnesia, or Epsom salts, from bittern-water of the salines, consisting of the pan A, vats B and F, filtering-tubs D D, &c., vat F, box G, pan H, and vessels I I, &c., all constructed and arranged substantially as and for the purpose herein set forth.

2. The eduleorating or filtering tubs D D, &c., constructed substantially as herein described, and for the purpose set forth.

3. The retort L, when constructed substantially as and for the purpose specified.

4. The apparatus used for the production of bromine, consisting of the stone vessels N and P, and the earthenware or burnt clay vessels O, R, S, and T, together with their communicating siphon-shaped pipes *n*, *o*, *p*, *s'*, and *t'*, all constructed and arranged to operate substantially as and for the purpose shown.

5. The vessels N and P, constructed of sandstone, granite, porphyry, or their equivalent, substantially as and for the purpose herein shown and described.

6. The application of steam to and within the vessels N and P, or their equivalent, substantially as and for the purpose herein shown.

7. The use of sandstone, granite, or porphyry, or their equivalent, in the construction of vessels for use in the production of bromine.

3,481.—C. J. STODDARD, Worcester, Mass.—*Hay-Spreader.*—Patented June 28, 1859, No. 24,588; reissued June 1, 1869.

Claim.—1. The combination, in a hay-making machine, of a frame, connected with the axle of the supporting-wheels, and a frame carrying rotating rakes, and vibratable about said axle, the combination being and operating substantially as set forth.

2. The combination, in a hay-making machine, of two wheels, a draught-frame, carrying a driver's seat, a vibratable frame, carrying rotating rakes, and a catch on the draught-frame, to hold up the rakes.

3. The combination, in a hay-making machine, of a draught-frame, carrying the driver, with a vibratable rake-frame, raised or lowered by the driver.

4. The combination, substantially as set forth, in a hay-making machine, of two wheels, a frame arranged between the wheels, and carrying the driver, and a vibratable frame, also arranged between the wheels, and carrying rotating rakes.

5. The combination, in a hay-making machine, of a frame vibratable on the axle of the supporting-wheels, with rotary rakes, mounted on the frame outside the periphery of the driving-wheels, and raking a swath wider than the distance between the wheels.

6. The combination, in a hay-making machine, of a frame vibratable about the axle of the supporting-wheels, with rakes rotated from the outer side of the driving-wheels.

7. The combination, in a hay-making machine, of a frame vibratable about the axle of the supporting-wheels, and a main frame, with a driving-belt, traversing pulleys on the axle and rake-shaft, substantially as set forth.

8. The combination, in a hay-making machine, of a perforated rotating shield, with rake-teeth, adjustable radially, relatively to their axis of rotation.

9. The combination, with a hay-making machine, of rotating rake-teeth, adjustable relatively to their axis of rotation.

10. The combination, with a hay-making machine having rotating teeth, of a stop to cause the teeth to act as rakes.

11. Making one set of the adjustable rotating rake-teeth longer than the others, for use as a hay-rake, as set forth.

12. The combination, in a hay-making machine, of rake-teeth, adjustable radially, relatively to their axis of rotation, with a frame vibratable about the main axle.

3,482.—EUGENE SULLIVAN, Boston, Mass., assignor to THE AMERICAN HORSE-COLLAR COMPANY, same place.—*Fabric for Covering Horse-Collars.*—Patented June 16, 1868, No. 79,024; reissued June 1, 1869.

Claim.—1. The combination of the within-described strong and elastic fibrous fabric with a water-proof layer or coating, composed wholly or in part of vulcanized caoutchouc or gutta-percha.

2. As a new manufacture, my improved horse-collar, the bearing-surface of which is formed of the within-described strong, elastic, and water-proof fibrous and gum fabric.

3,483.—LORING COES, Worcester, Mass., assignee, by mesne assignments, of GEORGE C. TAFT.—*Wrench.*—Patented November 10, 1863, No. 40,590; reissued June 1, 1869.

Claim.—1. An improved Coes wrench, so constructed that the thrust or back-strain of the rosette-screw, when the wrench is used, shall be borne by the shank, instead of the handle of the wrench, substantially as described.

2. A notch formed at right angles to the line of motion of the movable jaw, in the shank of a Coes wrench, for relieving the handle from the back-strain of the rosette-screw, substantially as described.

3. The combination of two or more parallel grooves, *d*, in the shank A, with two or more corresponding projections, *e*, on the rosette D, the same not being spiral, but running at right angles to the line of motion of the jaw, substantially as described.

3,484.—J. F. SEIBERLING, Akron, Ohio, assignee of FANNY HOLMES, executrix of the estate of JOHN E. NEWCOMB, deceased.—(Division 1.) *Harvester.*—Patented January 9, 1855, No. 12,215; extended seven years; reissued June 1, 1869.

Claim.—1. The combination, with the tongue and carriage, or main frame of a reaper and mower, of an intermediate spring-connection, substantially as and for the purposes set forth.

2. The combination, with tongue N and frame A, of the peculiarly-constructed spring-metal piece O O', substantially as described.

3. The combination, in a harvesting-machine, of the following elements, viz, two main supporting-wheels, a main frame, arranged between the two supporting-wheels, and vibrating around the main axle, a vibrating tongue, a seat for the driver, and a laterally-projecting finger-beam, connected, at one end only, to the forward end of the vibrating frame.

4. The combination, with the finger-beam of a front-cut two-wheeled combined reaping and mowing machine, connected at one end only to a vibrating frame, which admits of its rising and falling, to conform to the inequalities of the ground, of two small adjustable wheels, the outer wheel being connected with the outer shoe, so as to run on the ground back of the finger-beam, and the inner wheel arranged in advance of the back of the finger-beam, and connected to the machine at a point forward of the line of cut, whereby the finger-beam, whether adjusted for reaping or mowing, is supported and prevented from dropping into water-furrows, or dragging on the ground, substantially as described.

5. The combination, with the frame A, of the caster-wheel Q and adjustable frame Q', substantially as described.

6. The combination, with shoe S' and standard 8, on said shoe, of the supporting-wheel T, and its arm S, hinged to the forward end of shoe, substantially as and for the purposes as set forth.

7. The combination, with the outer shoe, of an arm,

hinged to the forward end of said shoe, and extending back to support a wheel which runs upon the ground in rear of the shoe, when the machine is in operation, substantially as described.

8. A metallic finger-beam for mowing and reaping machines, having a ledge, 12, and shoulder, 2, formed on its front upper corner, for receiving and guiding the back of the scythe, substantially as set forth.

9. A metallic finger-beam, for reaping and mowing machines, having a flange or down-projection upon its rear under side, for the purposes stated.

10. The combination of the grooved pressure-plate or bar *f*, and adjusting-screws *g*, with the scythe-plate, substantially as and for the purposes set forth.

3,485.—J. F. SEIBERLING, Akron, Ohio, assignee of FANNY HOLMES, executrix of the estate of JOHN E. NEWCOMB, deceased.—(Division 2.) *Harvester-Dropper.*—Patented January 9, 1855, No. 12,215; extended seven years; ; reissued June 1, 1869.

Claim.—1. The combination, with the finger-beam of a reaping-machine, of a dropping-platform, with mechanism for operating the same, whereby the driver, from his seat on the machine, can, by the simple action of the foot, release said platform so that it may drop toward the ground at regular or irregular intervals, to discharge the cut stalks of grain in gavels upon the ground.

2. The combination, with the inner and outer shoes of a reaping-machine, of pivots *a a*, substantially as and for the purposes described.

3. The combination, with a dropping-platform, the pivots or journals of which are supported by the inner and outer shoes, substantially as described, and in rear of the finger-beam, of an operating-crank or projecting arm, attached to the inner pivot or journal, for the purposes stated.

4. The combination, with the crank or projecting arm I, arranged as described, for operating the platform, of a shield or guard, R, or equivalent device, for shielding said arm from cut stalks of grain, substantially as stated.

5. The combination, with the operating-crank I, arranged substantially as described, of an elevating, holding, and depressing rod or bar, arranged parallel, or nearly so, with the line of motion of the machine, for the purposes stated.

6. The combination, with the crank or projecting arm, combined with the journal which supports the inner end of a dropping-platform in a reaping-machine, of a holding rod or bar, for retaining said platform in an elevated position until a sufficient quantity of cut stalks of grain has accumulated to form a gavel.

7. The combination, with the rod or arm which holds the rear of the platform in an elevated position while the cut stalks of grain are accumulating to form a gavel, of a stop or check-piece on the frame of the machine, for retaining the operating-rod, for the time being, in a fixed position, and relieving the driver, substantially as stated.

8. The combination, in a reaping-machine, of mechanism for automatically elevating the dropping-platform, with a retaining stop or device for holding said platform in an elevated position until released by the action of the driver's foot.

9. The combination, in a reaping-machine provided with a grain-dropping platform, of a foot-device, so arranged and combined with the devices and mechanism by which the platform is operated, that they can be thrown into gear at pleasure by the foot of the driver, for the purposes stated.

10. The combination, in a reaping-machine, with a finger-beam, arranged so that it can rise and fall, to conform to the inequalities of the ground over which it is drawn, of a dropping-platform, and devices or mechanism for operating the same, in such a manner that the platform can, by means of mechanism thrown into action or gear by the driver's foot, be retained in an elevated position, or allowed to drop, to discharge the gavel, at the pleasure of the driver.

11. The combination, with the platform-arm or crank I, of rod or bar J, cam K, stop *m*, loop *f*, and foot-spring piece K, with its projections *e* and *d*, substantially as and for the purposes set forth.

12. The combination, with the finger-beam of a reaping-machine, of a grain-platform, adjustable or extensible in the direction of its width, substantially as and for the purposes stated.

13. A dropping-platform, for supporting the cut stalks of grain, in a reaping-machine, made in longitudinal sections, one section of which can be moved so as to reduce the platform in width, the width of the section so moved, for the purposes stated.

3,486.—CORNELIUS AULTMAN, Mansfield, Ohio, assignee, by mesne assignments, of CYRUS ROBERTS.—*Machine for Thrashing and Separating Grain.*—Patented April 16, 1861, No. 33,085; reissued June 8, 1869.

Claim.—1. The combination of the perforated feed-board *a*, with the vibrating conveyor, substantially as specified.

2. Constructing the concave with diverging distributing-grooves, or channels, substantially as described.

3. The combination, with grooves in the concave, of supplemental distributing-grooves or channels, in front of the concave, substantially as described.

4. The combination, in a grain-separator, of two separating-platforms, or shakers, each provided with lifting-rods or fingers.

5. Two vibrating conveyors or separators, moving in opposite directions, for counterbalancing each other, and one of which projects underneath the cylinder, in combination with lifting-fingers, or their equivalent, for the purpose set forth.

6. Constructing the separator in sections, having opposite and simultaneous vibrating motion, in combination with lifting-fingers overlapping the opening between the sections.

7. The method of separating the grain from the straw by drawing out and attenuating, and, at the same time, shaking, by means of lifting-fingers, the mass of mixed straw, grain, and chaff over the openings between the sections of the separator, substantially as described.

8. The diaphragm *d'*, the fingers *j*, above the space *d''*, and bottom *d*, below, in combination, substantially as described.

9. The combination, with a vibrating conveyer and separator, of fine rods or fingers, over the throat of the conveyor, and coarse vibrating and shaking fingers above the finer ones, the coarse fingers shaking up the straw, and making a coarse separation, and the fine fingers making it finer and more complete, thereby facilitating the winnowing.

10. The combination of the head-trap *z'*, with a wheat-screen, *z*, acting together, substantially as described.

3,487.—JOHN A. LIEB, Newark, N. J., for himself, and assignee of JOHN SCHAMADEL.—*Caster for Trunks.*—Patented June 13, 1865, No. 48,214; reissued June 8, 1869.

Claim.—A caster consisting of a flexible plate and a roller, striking up lugs, or ears for the roller-journal from inside of the flexible plate, substantially as described.

3,488.—DANIEL MATER, Bellmore, Ind.—*Plow.*—Patented October 6, 1868, No. 82,858; reissued June 8, 1869.

Claim.—1. The arrangement of the transversely-adjustable shield F, with reference to the beam of the plow and shovel C, substantially as shown and described.

2. In combination with the beam and standards, the brace-rods H, clamps I, and nuts I', substantially as and for the purpose set forth.

3. The construction of the shovel C' with its guides or studs, for retaining the same in position, in connection with the staple for securing it to the standard.

4. The arrangement of the bolts *b b b*, at equal distances apart, in combination with the rear standard and brace, as set forth, for the purpose described.

3,489.—W. H. NETTLETON, Bristol, Conn., assignee of WILFORD H. NETTLETON, CHARLES RAYMOND, and ANSON HATCH.—*Machine for Turning Pillars for Clock-Movements.*—Patented November 17, 1857, No. 18,661; reissued June 8, 1869.

Claim.—1. The combination, substantially as described, of the wire to be operated on; the straight-

ener and its sliding carriage, or support; mechanism for drawing forward the wire, and with it the straightener and its carrier; mechanism for holding the wire in a fixed position after each successive drawing, or feed forward; and mechanism for gradually forcing the straightener and its carriage back to their original positions after each movement forward, for the purposes of straightening the wire and feeding it up to the cutters and jaws.

2. The compound levers *i* and 19, made and acting in connection with the feeding-slide *h* and clamp 14, substantially as and for the purposes specified.

3. The holding-jaws *k* and 26, constructed and combined substantially as described, in combination with the screws 28 and 29 and the cam *n*, substantially as and for the purpose set forth.

4. The holding-jaws *k* and 26, constructed and combined substantially as described, in combination with the screws 28 and 29, cam *n*, and turning-tools 32, substantially as and for the purpose set forth.

5. The combination of the feeding-device *h*, hopper 37, jaws *k* and 26, and the turning-tools 32, as and for the purpose set forth.

3,490.—Edmund D. Reynolds and O. Bradford Reynolds, North Bridgewater, Mass.—*Combined Cultivator and Harrow.*—Patented January 24, 1865, No. 46,025; reissued June 8, 1869.

Claim.—1. In combination with a wheeled frame or carriage-body, a share or shares, secured to a beam or beams, so arranged as to swing vertically, the share or shares being thus left free to move in vertical directions while in operation, and so as to be self-adjusting as to depth of penetration into the soil, each share also having provision for angular adjustment, relatively to its beam, substantially as shown and described.

2. In combination with the shares *g*, the rotary harrow, arranged to swing vertically, substantially as set forth.

3,491.—Anna Weissenborn, New York, N. Y.—*Tuck-Creasing Attachment for Sewing-Machine.*—Patented May 28, 1867, No. 65,141; reissued June 8, 1869.

Claim.—1. The combination, with a stationary gauge-plate, A, of the movable blade A^{12}, having a creasing-edge, A^{12}, and the creasing-wheel A^{10}, or their stated equivalents, when the said blade and wheel are connected together and adjustable in relation to the gauge, substantially as described.

2. In combination with the above, a spring, substantially as described, for pressing the wheel against the edge.

3. In combination with the elements of the first clause the wheel-elevating devices A^5 B.

4. The combination, with a stationary gauge-plate and with creasing-mechanism, substantially such as described, connected together and adjustable thereon, of a set-screw, for confining the said creasing-devices in proper position with the gauge.

3,492.—Benjamin J. Greely, Boston, Mass.—*Suspender.*—Patented October 10, 1865, No. 50,351; reissued June 8, 1869.

Claim.—1. Suspenders, consisting of straps, passing over the shoulders, uniting under the arms, the two connected together behind, and provided with suitable devices for sustaining the pantaloons at the sides, the whole arranged so as to operate substantially as described.

2. In combination with the straps and devices for sustaining the pantaloons, specified in the first claim, the adjustable strap A, when so arranged as to form a combined shoulder-brace and suspender.

3. The combination, with suspenders and pantaloons, of a spring-hook and ring, substantially as and for the purpose specified.

3,493.—J. H. Myers, Philadelphia, Pa., assignee of Collins B. Brown.—(Division A.) *Harvester.*—Patented July 11, 1854, No. 11,249; extended seven years; reissued June 8, 1869.

Claim.—1. A main frame, mounted on two main carrying-wheels, in combination with a laterally-projecting finger-bar, arranged in rear of the axis of the drive-wheel, and propelled or drawn forward over the ground by a hinge-connection with the main frame at its inner or heel-end only.

2. In combination with the main frame of a two-wheel rear-cut machine, a laterally-projecting finger-bar, connected with the main frame, and drawn forward over the ground by hinges in front and rear of the main drive-wheel axle.

3. An inclined or oblique brace, W, to the hinged finger-bar, located between the main carrying-wheels.

4. A hinged finger-bar, in combination with a hinged brace, to assist in propelling said finger-bar, arranged underneath and crossing the main drive-wheel axle.

5. Varying the height of the inner end of the finger-bar, to adapt the machine to mowing or reaping, as desired, by the adjustment of the propelling-hinges.

3,494.—J. H. Myers, Philadelphia, Pa., assignee of Collins B. Brown.—(Division B.) *Harvester-Rake.*—Patented July 11, 1854, No. 11,249; extended seven years; reissued June 8, 1869.

Claim.—1. A grain-platform, connected with the main frame, and propelled over the ground through the medium of the hinged finger-bar only.

2. An automatic rake, in combination with a laterally-projecting hinged finger-bar and platform.

3. The combination of a main frame, two main supporting-wheels, a laterally-projecting hinged finger-bar and platform, and an automatic rake.

4. A laterally-projecting finger-bar and grain-platform, in combination with the supporting-arm of an automatic rake, which is connected to and operated by a horizontal driving-wheel, arranged below the top of the main ground or drive-wheel.

5. In a harvesting-machine, having two main carrying-wheels and a laterally-projecting cutting-apparatus and platform, an automatic rake for discharging the grain from said platform, operated from between the main carrying-wheels.

3,495.—Frederick Nishwitz, Brooklyn, N. Y.—(Division A.) *Harvester.*—Patented February 21, 1865, No. 46,488; reissued June 8, 1869.

Claim.—1. Connecting the finger-beam with the main frame by means of a joint, composed of semicircular grooves in the pendants, and semicircular projections on the socket of the finger-beam, substantially as described.

2. The combination of the rigid metallic shoe with the finger-beam, vibrating on a pivot behind the shoe, substantially as set forth.

3. The combination of the main frame, the finger-beam, and the pitman, with the supplementary guard-shoe, operating substantially as set forth.

4. The combination of a frame, vibrating about a gear-center, and a laterally-projecting cutting-apparatus, hinged to said frame at one end only, with a fixed shoe in advance of the finger-beam, substantially as set forth.

3,496.—Frederick Nishwitz, Brooklyn, N. Y.—(Division B.) *Harvester.*—Patented February 21, 1865, No. 46,488; reissued June 8, 1869.

Claim.—1. The combination of the main frame, vibrating on the main axle, the tongue, vibrating on the main frame, the finger-beam, hinged to the main frame, and the lifting-lever, mounted on the tongue, with the tilting-lever, interposed between the tongue and gear-frame, in the same vertical plane as the finger-beam, with which it is also connected by a chain, attached outside of the pivot of the finger-beam, the whole being constructed for joint operation, as set forth.

2. The combination of a vibrating gear-frame, and a vibrating draught-frame, with a driver's seat supported on the draught-frame, and connected with the gearing-frame by a pivoted link.

3. The combination of a vibrating gear-frame, a vibrating tongue or draught-frame, and a vibrating driver's seat, with a lifting-lever, L, the combination being and operating substantially as set forth.

4. The combination, substantially as set forth, of a vibrating tongue or draught-frame, and a vibrating gear-frame, with a driver's seat, mounted on the tongue or draught-frame, and connected with the gear-frame by an adjustable pivoted link, for the purposes specified.

3,497.—Frederick Nishwitz, Brooklyn, N. Y.

—(Division C.) *Harvester.*—Patented February 21, 1865, No. 46,488; reissued June 8, 1869.

Claim.—1. The combination of two driving-wheels, the fixed internally-geared spur-wheel on the frame, with spur-pinions on an arm revolving with the main axle, and with the interposed loose pinion on the axle, as set forth.

2. The combination of a fixed internally-geared spur-wheel D, pinions E′, and arm E, revolving with the main axle, an interposed pinion, E, turning loosely on the main axle, and a bevel-wheel, also turning loosely on the main axle, and driving the crank-shaft, the combination being and operating as set forth.

3. The combination, as described, with the fixed gear-wheel, of the disk or shield to inclose the gearing and protect the driver.

3,498.—George P. Reed, Boston, Mass.—*Regulator for Time-Pieces.*—Patented February 5, 1867, No. 61,867; reissued June 8, 1869.

Claim.—The adoption of a spring, suitably adapted to one side of the index-pointer of an ordinary watch or time-piece regulator, in combination with an adjusting-screw, or equivalent device, applied to the opposite side thereof, against which it is forced by the action of the spring, and which impels the lever in one direction against the power of the spring exerted to force it in a reverse direction, substantially as described.

3,499.—W. Edgar Simonds, Hartford, Conn.—*Telegraph-Insulator.*—Patented November 26, 1867, No. 71,418; reissued June 8, 1869.

Claim.—1. The shoulder *c*, or its equivalent, formed upon the body of an insulator, for the purpose of supporting the rubber band *o*, or its equivalent, in combination with the rubber band *o*, or its equivalent, attached to and supported by said shoulder, the whole arranged, constructed, and operating as described, for the purpose described.

2. The combination of the insulator proper A, the rubber band *o*, and the cup *s*, together with the standard or shank supporting it, the whole constructed, arranged, and operating as and for the purposes described.

3,500.—Lemuel T. Wells, Saint Louis, Mo.—*Printing-Press.*—Patented March 20, 1855, No. 12,568; reissued June 8, 1869.

Claim.—1. A turning or partially-rotating platen, upon a vibrating arm or arms, substantially as and for the purpose set forth.

2. The platen U, hinged or pivoted to vibrating arms V, in combination with the stationary pin or pins *n* and retracting-springs K, or equivalent devices, for the purposes explained.

3,501.—Jesse Hanford, Lexington, Mass.—*Machine for Granulating and Drying Sugar.*—Patented September 18, 1866, No. 58,098; reissued June 8, 1869.

Claim.—1. The employment of a revolving cylinder provided with the helical wings, or their equivalent devices, for elevating the sugar or other substance, and allowing it to be precipitated to the bottom of such cylinder, and also with a suitable means of drying said sugar or substances.

2. The combination of the hollow rotary drum or cylinder I, and the tubular heater, arranged and connected substantially as described.

3. The combination of the rotary or hollow cylinder I, the crushing-roller K, and the tubular heater, arranged and applied together, substantially in manner and so as to operate as and for the purpose described.

4. The combination of the journals *e e*, and their supporting-standards B B, of the tubular heater with such heater, and the rotary cylinder, or the same and the crushing-roller applied and arranged together, substantially as specified.

5. The combination and arrangement of the series of helical rings *i i*, with the cylinder and heater, applied in the manner, and so as to operate as specified.

3,502.—C. Aultman, Mansfield, Ohio, assignee, by mesne assignments, of Cyrus Roberts and John Cox.—*Grain-Separator.*—Patented March 25, 1856, No. 14,517; reissued June 15, 1869.

Claim.—1. The combination, with a separator which is made to widen as it recedes from the cylinder, of lifting or shaking rods, or fingers, for the purpose of carrying forward, agitating, and attenuating the straw.

2. The method of facilitating the separation of the grain from the straw, by means of diverging-bars and lifting-rods, or fingers, substantially as herein described.

3. Constructing the rear portion of the conveyer with a solid ridged bottom, in such manner as to form a series of diverging channels, to spread the grain preparatory to delivering it to the winnower, as herein set forth.

4. The combination, with a separating-platform, of lifting-rods, or fingers, adapted to be raised above and withdrawn below the surface of the said platform on which the straw rests.

5. The combination, with the separator, of two or more rock-shafts, provided with lifting-fingers, operating as set forth.

6. Two or more sets of lifting-fingers, or their equivalent, for raising the straw up from and dropping it again upon the separator-bottom for the purpose described.

7. The lifting-rods, or fingers, in combination with means for adjusting their throw, substantially as and for the purpose set forth.

8. The employment of lifting-rods, or fingers, arranged and operating in such manner that they will rise on the forward movement of the conveyer, and thus lift and shake the straw as it is thrown forward, in combination with the carrying-bars, whereby certain advantages are attained, as herein set forth.

9. The arrangement of lifting-rods, or fingers, in a recess, M, in the bottom of the conveyer, in such manner that they can be alternately protruded above and retracted below the carrying-bars, to shake the straw thoroughly, and at the same time not interfere with its conveyance, as herein described.

10. The adjustable turning tail-spout P, arranged substantially in the manner and for the purpose herein set forth.

3,503.—Harrison Ogborn, Richmond, Ind.—(Division A.) *Fanning-Mill, Grain and Seed Separator.*—Patented November 12, 1867, No. 70,885; reissued June 15, 1869.

Claim.—1. The trough I^3, situated under and at the lower end of the upper grain-board, with a removable side, i^3, substantially as and for the purposes described.

2. The combination of the adjustable trough I^3 with the upper grain-board I^1, forming the bottom of the front part of the shoe I, and the adjustable screen J, substantially as and for the purposes described.

3. A hopper, consisting of the side-boards E, with converging grooves *e*, the sliding board F, and adjustable swinging board H, substantially as and for the purposes described.

4. The combination of the swinging board H, lever E′, provided with a tooth or spur, *e′*, and the rack c^2, substantially as and for the purposes described.

5. The vertical circular rim R, secured to the fan-wings Q, substantially as and for the purposes described.

6. The knocker-rod *p*, with its bent part *p′*, and the lever *n*, substantially as and for the purposes described, of giving a jolting motion to the screen.

7. The rod *p*, in combination with the linked rods *m* and *m′*, wrist *v*, and wheel V, substantially as and for the purposes described.

8. The pins g^2, on the cleats of the sliding doors G′, substantially as and for the purposes described.

3,504.—Harrison Ogborn, Richmond, assignor to Ellis Michael, La Porte, Ind.—(Division B.) *Fanning-Mill.*—Patented November 12, 1867, No. 70,885; reissued June 15, 1869.

Claim.—The devices described, W, *k*, k^1, k^2, *l*, *x*, *p*, and V, for the purpose of imparting increased motion to the "shoe" of a fanning-mill, and which imparts four motions to the "shoe," to one revolution of the fan-shaft.

3,505.—J. B. Rand, Concord, N. H.—*Composi-*

tion for Welding Iron and Steel.—Patented March 16, 1869, No. 87,968; reissued June 15, 1869.

Claim.—A welding-composition, made of the ingredients and in the manner substantially as described and set forth in the specification.

3,506.—THE SHAW AND WILCOX COMPANY, Bridgeport, Conn., assignees, by mesne assignments, of JEHYLEMAN SHAW.—*Apparatus for Recovering Gold and Silver from Waste Solutions.*—Patented July 8, 1862, No. 35,842; reissued April 5, 1864, No. 1,652; again reissued June 15, 1869.

Claim.—An apparatus for recovering gold, silver, &c., from waste solutions, by means of suitable precipitating-ingredients, substantially as herein specified.

3,507.—THE AMERICAN RAILWAY GAS-LIGHT COMPANY, New York, N. Y., assignees, by mesne assignments, of JOHN B. TERRY.—*Gasoline Head-Light.*—Patented December 24, 1867, No. 72,697; reissued June 15, 1869.

Claim.—1. A head-light or lamp for locomotive-engines, produced by the vapor of a volatile hydrocarbon-liquid, generated by the heat of steam applied from the boiler of the locomotive, substantially as set forth.

2. The combination of a hydrocarbon-liquid-holding vessel, provided with a burner or burners, of an internal coil, for admitting steam from the locomotive-boiler to vaporize such liquid, for the production of an illuminating-gas, substantially as set forth.

3. The combination, with a hydrocarbon-liquid vessel, provided with a burner or burners, of a surrounding jacket, for admitting steam from the locomotive-boiler, for vaporizing such liquid, for the purpose of generating an illuminating-gas, substantially as set forth.

4. The combination of a burner or lamp, having its flame supplied by the vapor of a hydrocarbon-liquid generated by the application of steam from the locomotive-boiler, with the reflecting-box, known as a locomotive head-light, as set forth.

5. The combination, with the hydrocarbon-vessel, of an elastic diaphragm and valve or stopper, operating in connection with the steam-induction pipe, for the automatic regulation of the vapor generated, substantially as set forth.

6. The employment, for locomotive head-lights, of porous, fibrous, or other capillary material, for holding the hydrocarbon-liquid in the vaporizing-vessel, for the better volatilization by heat, substantially as set forth.

7. The use, in the liquid-holding vessel of locomotive-lamps or head-lights, of porous, fibrous, or capillary material, to prevent the swashing or agitation of the liquid under the motion of the locomotive, substantially as set forth.

3,508.—JAMES RADLEY, ALEXANDER MCALISTER, and ROBERT S. AIKMAN, New York, N. Y., assignees, by mesne assignments, of PETER BUDENBACH.—*Lamp for Locomotive Head-Lights.*—Patented March 24, 1863, No. 38,001; reissued June 15, 1869.

Claim.—The bridge in the oil-chamber A A, formed of the curved plate C and perforated sides *a a*, and provided with a perforated cylinder, D, inclosing the tube B which leads to the lamp, substantially as and for the purpose specified.

3,509.—AMERICAN CAR-HEATING COMPANY, New York, N. Y., assignee, by mesne assignments, of W. S. MCNEIL and O. S. CADWELL, JR.—*Railroad-Car Heater.*—Patented August 25, 1868, No. 81,392; reissued June 22, 1869.

Claim.—1. A railroad-car heating and ventilating apparatus, in which the following elements are combined, substantially as hereinbefore described, viz: 1. Pipes, or conduits for taking in air from the exterior of the moving car. 2. Means for distributing or both heating and distributing, through the car, the air received from such conduits. 3. Passages or openings for taking in air when the car is at rest, and conducting it to 4. A heating-chamber, or space, wherein such air is heated, and from which it is discharged into the body of the car, such chamber, or space, being distinct from that which receives and heats the air taken in when the car is in motion.

2. The combination, with the elements named in the preceding clause, of an air-purifying apparatus, for removing the impurities from the air taken in when the car is in motion, before such air is distributed through the car.

3. The arrangement, substantially as herein described, of two separate and non-communicating annular air-heating chambers around the radiator, or heater, the one receiving air from above the car, when in motion, by means of funnels and automatic valves, and discharging it into the car through perforated pipes, as specified; the other receiving air from the base of the radiator, or heater, or from below the car when at rest, and discharging it directly from the heater; the air in both cases being heated while ascending through the heater, substantially as and for the purposes set forth.

4. The construction of the air-purifying chamber, provided with absorbent material, as specified, and its arrangement with relation to the air-supply pipe and the heater, substantially in the manner shown and described.

3,510.—JOHN C. BYRAN, Titusville, Pa., assignee, by mesne assignments, of EDWARD GUILLOD.—*Construction of Drilling-Jar.*—Patented June 16, 1868, No. 78,958; reissued June 22, 1869.

Claim.—1. The manufacture of drilling-jars, of combined iron and steel, in which at least the part *a* in each half of the jars that receives the blow, and the inner faces *a'* of the link-bars *b*, shall be of steel, substantially as and for the purposes described.

2. The hereinbefore described drilling-jars, constructed of wrought iron and steel, combined substantially in the manner and for the purposes set forth.

3,511.—JOSEPH H. DENIGER, Bridgeport, Conn.—*Tempering Steel Springs.*—Patented March 23, 1869, No 88,142; reissued June 22, 1869.

Claim.—The mode, method, or process herein described, of tempering steel springs for railroad-cars, carriages, &c.

3,512.—PATRICK JOYCE, Rochester, N. Y.—*Coffin-Bier.*—Patented March 9, 1869, No. 87,570; reissued June 22, 1869.

Claim.—1. The employment, in connection with a coffin-bier or other coffin-holder, or support, of a wholly or partially revolving platform, or equivalent, for the purpose set forth.

2. In combination with a wholly or partially revolving platform, or equivalent, as described, so arranging the same that it may be elevated to any desired height, for the purpose specified.

3. In combination with a coffin-bier, or other coffin-holder, or support, provided with a wholly or partially revolving platform, or equivalent, the screws D, or equivalents, for elevating the same, for the purpose specified.

4. In combination with a bier or other coffin-holder, having a wholly or partially revolving platform, the hinged block to support and strengthen the platform, when said platform is revolved and elevated by means of a central screw-pivot.

3,513.—JOHN O'MAHONY, Savannah, Ga.—*Dray-Saddle.*—Patented April 28, 1868, No. 77,310; reissued June 22, 1869.

Claim.—1. In a dray-saddle, the beveled blocks C C, secured to the leather covering A, in combination with the pads D, and grooved bar B, said blocks C being secured to the pads at their centers, for the purpose of preventing such pads from flattening upon the back of the animal, under the weight of the dray, as herein shown and described.

2. In a dray-saddle, the bent and beveled blocks C, when constructed and arranged to operate substantially as and for the purposes specified.

3. A dray-saddle, having cover A, blocks C, and pads D, constructed and arranged to operate substantially as described.

3,514.—MATHEW G. SLEMMONS, Cadiz, Ohio.—*Plow.*—Patented October 9, 1860, No. 30,357; reissued June 22, 1869.

Claim.—1. Two converging beams A A, each one of which has a shovel-standard, A′, formed by bending its rear end, substantially as described.

2. the converging beams A A, connected together, and constructed with curved shovel-standards, A′ A′, upon them, substantially as described.

3. The union of the front ends of plow-beams, which have their rear ends bent to form shovel-standards, by means of a clevis, or device, by which the team are hitched to the implement, substantially as described.

4. The converging plow-beams A A, having shovel-standards A′ A′ formed on them, in combination with handles F F, and handle-supporting braces E E, substantially as described.

5. In combination with the foregoing, also, the manner, substantially as described, of adjusting the handles F F, and securing them to the beams at any desired angle.

6. Constructing, of one piece of metal, a plow-beam A and a curved shovel-standard, A′, with a shoulder *d*, formed on the latter, substantially as described.

3,515.—Mervin R. Smith, Armonk, N. Y.—*Sewing-Machine.*—Patented March 24, 1863, No. 37,985; reissued June 22, 1869.

Claim.—1. The combination of the cam G, having an eccentric slot, curved as shown and described, and arranged upon the needle-end of the main shaft F, with the reciprocating needle-bar D, provided with a pin projecting into said slot, substantially as and for the purposes set forth.

2. The combination of the needle-operating cam G, constructed as described, the shuttle-driving eccentric J, and the feed-lever H, having an elongated slot, *n*, fitted with a slide, *p*, and deriving a positive motion in both directions from a crank-wrist, *k*, the whole arranged and operating substantially as set forth, to cause the machine to operate with the driving-shaft or pulley rotating in either direction, and the feed to be reversed by reversing the direction of the said shaft or pulley.

3. The combination, with each other and with the isolated portion of the flat bed constituting a cylinder, or its equivalent, of the shuttle-driving eccentric J, rod M, rock-shaft L, arm N, rod P, and feed-operating crank-wrist *k*, the whole arranged and operating substantially as and for the purpose herein specified.

4. The slide *y*, guide-bar *w*, and spring *z*, combined with each other and the shuttle, substantially as and for the purpose herein specified.

3,516.—William A. Clark, Bethany, Conn.—*Expansive Bit.*—Patented May 11, 1858, No. 20,192; reissued June 22, 1869.

Claim.—1. The construction of the shank so as to form a seat, or bearing for the adjustable cutter, so that the said cutter will take its bearing above or back of the edge, the said cutter being held into its seat by the action of a set-screw brought to bear upon the cutter, substantially as described and for the purpose set forth.

2. The arrangement of the fixed and expansive cutters C B, on opposite sides of their axis, when constructed to operate as shown and described.

3,517.—Alpheus C. Gallahue, Riverdale, N. Y.—*Machine for Pegging Boots and Shoes.*—Patented March 29, 1859, No. 23,361; reissued June 22, 1869.

Claim.—1. The rack-bar E, constructed of two parts, *e* and *f*, arranged substantially as described, so as to adjust it for boots or shoes of various sizes.

2. Pivoting the plate, or frame G, that supports the last, at or near its center, and so arranging it that it may turn on said pivot during the operation of pegging, thereby so adjusting the boot or shoe as to present the various portions of the sole in the requisite position to the awl and peg, as the sole moves along, substantially as described.

3. The inclined planes *i*, or their equivalents, when arranged to operate in combination with the hinged plate G, for adjusting the boot or shoe, substantially as set forth.

4. The inclined peg-gauge *y′*, in combination with the feed, or peg-box S, so as to gauge the pegs from their lower ends, as described.

5. The vibrating socket *c′*, in connection with the plunger-rods *u v*, arranged in the same slide-bar *t*, to operate as set forth.

6. The bar R, provided with the shoulder, or bearings *s*, at its front end, and having the yoke *o′* hinged to its rear end, and arranged to be operated by the cam *p′*, as and for the purpose set forth.

7. The combination of the swinging bed-plate D and rack B, arranged to operate as described.

3,518.—Benjamin F. Morey, Clinton Ind.—*Tire for Wagons.*—Patented January 19, 1869, No. 86,029; reissued June 22, 1869.

Claim.—1. The grooved tire B, combined with the exterior flat surface of the felly A, substantially as herein shown and described, and for the purpose specified.

2. A tire, or band, having a grooved interior, as described, when designed for use as a receptacle of lubricating-matter upon the exterior surface of cylindrical bodies.

3,519.—Russell and Erwin Manufacturing Company, New Britain, Conn., assignees, by mesne assignments, of Marshall T. Lincoln.—*Door-Latch.*—Patented May 31, 1864, No. 42,954; reissued June 22, 1869.

Claim.—1. The combination of the latch B, and sliding or locking bolt D, constructed and arranged so that both are acted upon or operated by the closing of the door, and that the latter will, as the former moves back to fasten the door, lock or secure the latch, for the purposes set forth.

2. In combination with such latch B and locking-bolt D, the arrangement of the cam E, for moving or sliding back the bolt D, for the purposes set forth.

3. The combination and arrangement of the latch B, knob C′, lever C, and sliding bolt D, operating substantially as and for the purposes set forth.

4. In combination with the latch B, and sliding or locking bolt D, the arrangement of the key-bolt G, or its equivalent, for moving back such bolt, for the purposes specified.

5. The combination and arrangement of the tumblers H, key-bolt G, latch B and sliding-bolt D, for the purposes specified.

6. The combination of the latch B and cam E, pivoted to said latch, substantially as and for the purposes specified.

3,520.—Frances Lee Barnes, New York, N. Y., administratrix of the estate of Samuel H. Barnes, deceased.—*Corset-Spring.*—Patented July 17, 1866. No. 56,345; reissued May 12, 1868, No. 2,929; again reissued June 29, 1869.

Claim.—1. A corset-spring, consisting of two or more metallic plates placed one upon another, and fastened together at their centers, but so connected, at or near each end, that they can play or move upon each other in the direction of their length.

2. A corset-spring consisting of the parts B provided with pins *b*, and slotted springs B^2, riveted as shown, and having suitable clasps C, and headed rivets D, and of form corresponding to the body of the wearer, constructed and operating in the manner and for the purpose herein shown and described.

3,521.—Eldridge M. Fowler, Bay City, Mich., assignee of John W. Thompson.—(Division B.) *Mowing-Machine.*—Patented July 15, 1856, No. 15,354; reissued June 29, 1869.

Claim.—1. In a rear-cut harvester, a frame carrying a cutting-apparatus, arranged to vibrate about a center coinciding with the center of rotation of a bevel-wheel, which is mounted on an axis parallel with but independent of the main drive-wheel axle, the combination being and operating substantially as set forth.

2. The combination of the vibrating frame, carrying the shaft for driving the cutters, and a bevel-pinion, with a frame carrying a bevel-wheel mounted on an axis independent of the main drive-wheel axle, in such manner that the axis of rotation of said bevel-wheel and the axis of oscillation of the vibrating frame shall coincide, the combination being and operating substantially as set forth.

3,522.—Christian Garver, Middletown, Pa.—*Horse-Rake.*—Patented December 7, 1858, No. 22,232; reissued June 29, 1869.

Claim.—1. A cleaning-bar, A, lying across the rake-teeth, and so constructed and operating that the raising of the teeth causes it to scrape the hay from the rake-head towards the points of the teeth, while the lowering of the rake-teeth brings it back to its original position.

2. A cleaning-bar, A, constructed with arms B B, and swinging on a pivot, *o*, substantially as described.

3. The arrangement of the cross-piece A, staples *f*, parallel arms B, slots *i*, and pins O, with rake J, in the manner and for the purpose herein specified.

3,523.—JOSEPH C. HENDERSON, Albany, N. Y.—*Coal-Stove.*—Patented May 29, 1860, No. 28,482; reissued June 30, 1863, No. 1,506; again reissued January 15, 1867, No. 2,459; again reissued June 29, 1869.

Claim.—1. A hopper or reservoir for supplying coal suspended over a fire-pot, or grate, larger at the upper than at the lower end of the same, and detached from the fire-pot substantially in the manner and for the purpose above described.

2. An expanded combustion-chamber, directly over the surface of the incandescent coal in the fire-pot, and surrounding the mouth or lower end of the hopper, substantially in the manner and for the purpose above described.

3. The use of inclined plates *f*, in combination with a combustion-chamber, formed above the surface of the incandescent coal, and around the mouth of the hopper, to reflect and throw back the heat and gases upon the surface of the fire, substantially n the manner and for the purposes above described.

4. The contracted outlet *m*, in combination with said expanded chamber, so arranged that the escaping products of combustion shall pass out at or near the surface of the incandescent coal, substantially in the manner and for the purposes above described.

5. In combination with a hopper suspended over the fire, and separate from the fire-pot, a circulating current of air around the lower end of the hopper, substantially in the manner and for the purposes above described.

6. In combination with the above-described hopper, a chamber or its equivalent, in the lower end of the same, and immediately above the fire, for the purpose of preserving the mouth of the hopper and supplying air to the surface of the fire, substantially as above described.

7. The circulation of a current of air around the lower end or mouth of a supply-cylinder, and entering the combustion-chamber, substantially in the manner and for the purpose above described.

8. The use of fire-brick, soapstone, or other similar fire-proof substances, in protecting the mouth or lower end of the hopper, in combination with my expanded combustion-chamber *l*, and air-chamber *g*, substantially in the manner and for the purposes above described.

9. The admission of air to the surface of the burning fuel in the bottom of my combustion-chamber *l*, above described, in combination with the use of fire-brick, or other similar material, to protect the mouth of the hopper, substantially in the manner and for purpose above described.

10. The combination of the expanded chamber, at the base of the hopper, with draught from said chamber, substantially in the manner and for the purpose above described.

11. A current of air circulated around or in contact with the lower part of the said hopper, in combination with the expanded combustion-chamber at the base of the hopper, substantially in the manner and for the purpose above described.

3,524.—JOHN P. MANNY, Rockford, Ill.—(Division B. *Harvester.*—Patented July 14, 1857, No. 17,779; reissued June 29, 1869.

Claim.—1. The combination, substantially as set forth, in a rear-cut harvester, of two main wheels; a frame, vibrating about the main axle; a tongue, hinged within the periphery of the wheels; and a laterally-projecting finger-beam, vibrating with the frame.

2. The combination, substantially as set forth, in a rear-cut harvester, of two main wheels; a frame arranged between said wheels, and vibrating about he main axle; a finger-beam, projecting laterally from said frame; and a tongue hinged to said frame, near the axle.

3. The combination, substantially as set forth, of two main wheels; a vibrating frame, arranged between the wheels, and projecting beyond their periphery at the rear end only; a laterally-projecting finger-beam, secured to the rear of said frame; and a tongue, hinged to the forward end of said frame, near the axle.

3,525.—JOHN P. MANNY, Rockford, Ill.—(Division B.) *Harvester.*—Patented July 14, 1857, No. 17,779; reissued June 29, 1869.

Claim.—1. The combination, substantially as set forth, of a finger-beam, projecting laterally from a frame vibrating about the main axle, with a hinged supplementary frame supported behind said axle by a caster-wheel.

2. The combination, substantially as set forth, of two main wheels, a frame pivoted near the axle of said wheels in front, and supported by a caster-wheel in rear, and a vibrating frame carrying a laterally-projecting finger-beam suspended from the caster-frame by flexible connections.

3. The combination, substantially as set forth, of two main wheels, a main frame, vibrating about the main axle, and carrying a laterally-projecting finger-beam, with a frame pivoted near the axle, supported at its rear end by a caster-wheel, and carrying devices for raising and lowering the finger-beam.

4. The combination, substantially as set forth, of two main wheels, a vibrating main frame, and a laterally-projecting finger-beam, with lifting-devices, and a driver's seat mounted on a vibrating frame, behind the axle.

5. The combination of a laterally-projecting finger-beam, a frame, vibrating about the main axle, a supplementary frame supported by a caster-wheel, a tension-spring and lifting-cord, the combination being and operating substantially as set forth.

6. The combination, substantially as set forth, in a two-wheeled rear-cut harvester, of a tongue, a frame, carrying a laterally-projecting finger-beam, and a frame, carrying lifting-devices and a conductor's seat, the tongue and frames each being independently hinged near the main axle, and moving independently of each other.

3,526.—JOHN P. MANNY, Rockford, Ill.—(Division C.) *Harvester.*—Patented July 14, 1857, No. 17,779; reissued June 29, 1869.

Claim.—1. The combination, substantially as set forth, of two main wheels; a frame connected with the main axle in front, and supported by a caster-wheel in rear; a frame vibrating about the main axle; a laterally-projecting finger-beam, connected with the frame; and a platform vibrating with the finger-beam.

2. The combination, substantially as set forth, of a laterally-projecting finger-beam, vibrating about the main axle, with a platform, vibrating about the finger-beam, so as to raise the rear end of the platform as the finger-beam is lowered, and *vice versa*, to keep the platform horizontal.

3. The combination, substantially as set forth, in a two-wheeled harvester, of a laterally-projecting finger-beam, vibrating about the main axle, with reel-supports and a platform, both vibrating in unison with the finger-beam.

3,527.—ISAAC H. PALMER, Lodi, Wis.—*Device for Unloading Grain-Car.*—Patented June 18, 1867, No. 65,826; reissued June 29, 1869.

Claim.—1. A series of holes in the car-floor, in combination with sliding covers or gates *b b*, having holes *d* in them, and so arranged, with relation to the holes in the car-floor, that when in one position they will close said holes, but when in another will open them, substantially as and for the purpose set forth.

2. The slide-valves *b*, in combination with the racks *e*, pinions *i*, and shaft D, substantially as described.

3. The pivoted valve *c*, in combination with crank *i*, substantially as described.

3,528.—HERVEY D. SNOW, Bennington, Vt.—*Water-Wheel Regulator.*—Patented July 14, 1868, No. 79,870; reissued June 29, 1869.

Claim.—1. The pawls *r s*, in combination with the ratchet-wheel *f*, that operates to move the gate or regulator, and the connection to the governor, substantially as set forth.

2. The disk *h*, operated by a connection to the governor, in combination with a pawl and ratchet, for causing the pawl to be operative or inoperative, according to the speed of the governor.

3. The disk *h*, in combination with a pair of pawls, pointing towards each other, and acting in opposite directions, substantially as set forth, so that the disk determines which of the pawls shall be operative, or throws both out of action.

4. The stop *g* or *g'*, arranged substantially as set forth, whereby to relieve the pawl *r* or *s*, and prevent the same operating beyond a certain point, irrespective of the movement of the governor, substantially as set forth.

3,529.—James Watt, Charlestown, Mass., and Henry Childs, Buffalo, N. Y., assignees of James Watt. — *Utilizing Waste Heat of Puddling-Furnaces, &c., in Generating Steam.*—Patented May 12, 1863, No. 38,521; reissued June 29, 1869.

Claim.—1. The arrangement of the boiler at the end of the furnace, and on a horizontal plane therewith, so that the surplus heat and slag from the furnace may be directed into a fire-chamber, B', within the boiler, substantially as described.

2. The combination of the neck of the puddling or heating furnace with the water-jacket of the boiler, substantially as set forth.

3,530.—Thomas L. Baylies and Edwin Crawley, Richmond, Ind.—*Vise.*—Patented September 15, 1868, No. 82,073; reissued July 6, 1869.

Claim.—1. In combination with the jaws of a vise, the series of screws having threads of a different pitch, and the spring or brake arranged to operate automatically in changing the speed, substantially as and for the purpose set forth.

2. Coupling the adjusting-screw and the sleeve G, by means of projections and recesses, by which they are made to revolve conjointly, and the sleeve G is allowed to move endwise, independently of the adjusting-screw, substantially as shown and described, and for the purpose set forth.

3. A pawl or cam, J, for locking sleeve G, when so arranged as to be automatically released by the boss on the screw E, substantially in the manner described and for the purpose set forth.

3,531.—James S. Carew, Norwich, Conn., assignee of Caleb Swan, executor of Daniel Hayward, deceased.—*Manufacture of India Rubber.*—Patented August 29, 1854, No. 11,608; extended seven years; reissued July 6, 1869.

Claim.—1. The herein-described process of vulcanizing and molding rubber compounds, viz, by means of molds heated substantially as described, and so arranged that the compound, being placed in the mold, and therein softened by the heat, is then forced, by pressure, to fill the mold, and therein vulcanized, substantially as described.

2. The herein-described process of vulcanizing rubber compounds, viz, by applying heat to the compound to be vulcanized, by means of steam in steam-jackets, substantially as described.

3. The herein-described process of vulcanization of rubber goods, consisting in the application of heat, by means of steam-jackets, to the compound to be vulcanized while under pressure, substantially in the manner described.

3,532.—John Davis, Allegheny City, Pa.—*Railway Car-Brake.*—Patented May 29, 1866, No. 55,067; reissued July 6, 1869.

Claim. — 1. The described arrangement of the cranks *o* and *o'* on the spring-shaft 11, of the improved brake, substantially as herein described and set forth.

2. The combination of the pawl *m* and ratchet-wheel *n* with the shaft 11, cranks *o* and *o'*, and coil-spring, combined, arranged, and operating substantially as herein described, and for the purpose set forth.

3. The combination and arrangement of the coil-spring shaft 11, cranks *o* and *o'*, rods *j k j'*, and *k'*, levers 18 and 16, and shaft *x*, with the rods *i i' h h'*, brake-bars *e* and brakes *d*, constructed, combined, arranged, and operating as herein described.

4. The stirrups *g g'* constructed and arranged as herein described, to inclose and suspend the brake-bar.

3,533.—Alpheus C. Gallahue, Riverdale, N. Y.—*Machine for Pegging Boots and Shoes.*—Patented August 16, 1853, No. 9,947; antedated February 18, 1853; extended seven years; reissued July 6, 1869.

Claim.—1. The use, in a pegging-machine, of a gauge, arranged in relation to the part that supports the boot or shoe, to form a bearing for the edge of the sole, and thus insure the insertion of the pegs at a uniform distance from the edge of the sole, without the use of pattens, substantially as described.

2. Adjusting the tension of the spring that operates the awl-carrier or peg-driver, substantially as described, for the purpose of regulating the force of the blow, as may be desired.

3. The combination of the awl carrier and the peg-driver, each separately lifted by a cam and driven down by a spring, substantially as described.

4. The combination, in a pegging-machine, of a gauge for the edge of the sole to rest against, and an awl-carrier driven by a spring, substantially as herein described.

5. Making the gauge *a*, against which the edge of the sole bears, adjustable, for the purpose of enabling the shoe to be so adjusted as to have two or more rows of pegs inserted therein.

6. The combination, in a pegging-machine, of a gauge for the edge of the sole to bear against, and a rotating last-holder or support, substantially as described.

3,534.—William F. Sherman, Bucksport, Me.—*Process of Repairing Crucibles.*—Patented February 16, 1869, No. 87,075; reissued July 6, 1869.

Claim.—1. The process of coating new, or renewing old crucibles, by repeated applications of a thin coating of a mixture composed of plumbago and other refractory substance or substances, substantially in the manner and for the purposes described.

2. The mixture, in water, of plumbago with refractory clay, sand, or other similar refractory substances, as a wash for coating and renewing crucibles, in the manner substantially as hereinbefore described.

3,535.—Albert G. Buzby, Philadelphia, Pa.—*Safety-Valve.*—Patented April 21, 1868, No. 76,992; reissued July 6, 1869.

Claim.—1. The valve-chest A, having opening and seats on which rest two separate safety-valves, B B', substantially as herein described.

2. The two valves B and B', the former being connected to, but loaded independently of the valve B', when the said valves are arranged upon a single chest, A, substantially as and for the purpose specified.

3. The casing or cover A', in combination with the two valves B B', arranged on a single chest, A, substantially as described.

3,536.—John B. Mayer, Niagara Falls, and Tobias Witmer, Williamsville, N. Y., assignees of John B. Mayer.—*Striking-Mechanism for Clocks.*—Patented September 15, 1868, No. 82,267; reissued July 6, 1869.

Claim.—1. The sliding-shafts O and P, carrying the hammer-tails, and the operating lever *q*, combined and operating substantially as described.

2. The shifting-lever R, in combination with the locking-mechanism C, and sliding hammer-shaft P, for alternating the action of the hammers on the bells, substantially as set forth.

3. The combination of the locking-mechanism B C, and the locking-wheel A, for controlling the action of the hour and quarter-hour hammers on two or more separate bells, substantially as set forth.

4. The wheel D, pinion F', tumbler-wheel E, spur-wheel F, the pinion and fly wheel G, in combination with the hammer-tails, in order to effect the striking of quarters and hours on separate bells, substantially as set forth.

3,537.—C. H. McCormick, Chicago, Ill., assignee, by mesne assignments, of Hamilton A. Parkhurst.—(Division A.) *Harvester.*—Patented February 23, 1858, No. 19,442; reissued July 6, 1869.

Claim.—1. The combination of the main frame supported on wheels mounted on independent axles, which oscillate around a center coincident with that of one of the shafts which drives the cutters, substantially as set forth, with a laterally-projecting short finger-beam hinged to the main frame at one end only, and above the plane of the cutters.

2. The combination of a main frame, adjustable on a center coincident with that of a shaft parallel with but independent of the driving-wheel axles, substantially as set forth, with a laterally-projecting short finger-beam hinged to said frame by joints both in front and rear of the wheels, and above the plane of the cutters.

3. The combination of a main frame, movable around a center coincident with that of a shaft in front of the axis of the wheels, substantially as set forth, with a laterally-projecting short finger-beam connected with the main frame by a coupling-frame inclosing the inner wheel.

4. The combination of the main frame, radius-bars, and their connecting-frame, substantially as set forth.

5. The combination of the radius-bars, quadrant-racks, rock-shaft, and lifting-levers, with the driver's seat, substantially as set forth.

3,538.—C. H. McCormick, Chicago, Ill., assignee, by mesne assignments, of Hamilton A. Parkhurst. (Division B.)—*Harvester.*—Patented February 23, 1858, No. 19,442; reissued July 6, 1869.

Claim.—1. In a two-wheeled harvester, a frame carrying the cutting-apparatus, arranged to vibrate about a center coincident with the center of rotation of a bevel-wheel mounted on an axis parallel with, but independent of, the main drive-wheel axle, substantially as set forth.

2. The combination, in a two-wheeled harvester, substantially as set forth, of a frame, carrying a crank-shaft and pinion, and adjustable around a gear-center in front of the axles of the driving-wheels, with a laterally-projecting cutting-apparatus hinged in the line of the crank-shaft.

3. The combination, in a two-wheeled harvester, substantially as set forth, of a frame vibratable about a gear-center, independent of the axes of the wheels, with a laterally-projecting cutting-apparatus vibrating about a gear-center at right angles to the main axle.

4. The combination, with a two-wheeled harvester, of a laterally-projecting cutting-apparatus connected with the main frame at one end only, and movable around two gear-centers at right angles to each other, and both independent of the driving-wheel axle, substantially as set forth.

5. The combination of the internally-geared driving spur-wheel, the spur pinion, on the counter-shaft, and its bevel-wheel with the bevel-pinion on the line-shaft, crossing the axle of the driving-wheels, and its spur-gear driving the corresponding pinion on the crank-shaft, also crossing the axes of the bearing-wheels, the combination being and operating substantially as set forth.

3,539.—William S. Pratt, West Manchester, Pa.—(Division A.) *Plow.*—Patented September 5, 1865, No. 49,799; reissued July 6, 1869.

Claim.—Making a mold-board for steel plows, with a bed for the plowshare, said mold-board and share-bed being made in one or more parts, with the landside welded, bolted, or riveted to the share-bed, the whole being constructed and arranged substantially as herein described and for the purpose set forth.

3,540.—Claus Spreckels, San Francisco, Cal.—*Manufacture of Crushed Sugar.*—Patented March 17, 1868, No. 75,656; reissued July 6, 1869.

Claim.—The process of preparing for crushing sugar, taken from the centrifugal machine, by molding, pressing, and drying it, in the manner substantially as herein described.

3,541.—J. A. Woodward, S. S. Woodward, and Thomas Mason, Sandwich, Ill.—*Cultivator.*—Patented September 15, 1868, No. 82,191; reissued July 6, 1869.

Claim.—1. Broadly, the reversible arms K, hinged to the frame A B, and arranged to balance the same, substantially as set forth.

2. The combination of the above-described reversible arms K, with the frame A B and folding-seat L, as and for the purpose herein described.

3. The handles D D, pivoted to the standards E E, and made adjustable to or from each other, by means of the slotted plates F F and set-screws I I, as described and shown.

3,542.—Richard Montgomery, New York, N. Y.—(Division A.) *Iron Railway-Car.*—Patented August 7, 1860, No. 29,510; reissued July 22, 1862, No. 1,325; again reissued July 6, 1869.

Claim.—1. The use of the corrugated-iron beams, constructed as described when applied to railway-cars and other vehicles, in the manner and for the purposes herein set forth.

2. The combination of the curved top-pieces B with the side or base pieces A, and coupling-pieces H and G, operating substantially as described.

3. The corrugated covering F, arranged as described, in combination with the arched top-pieces B.

4. The coupling-pieces H G, or either of them, when constructed as described, and applied to the corrugated beams of a railway-car, substantially as herein set forth.

3,543.—Richard Montgomery, New York, N. Y.—(Division B.) *Floor for Cars and Buildings.*—Patented August 7, 1860, No. 29,510; reissued July 22, 1862, No. 1,325; again reissued July 6, 1869.

Claim.—A metallic support for a floor, whether the latter be formed of wood or other material, composed of arched metallic plates, corrugated in the direction of the curve of the arch, and metallic girders, on or against which said plates abut, substantially as herein described.

3,544.—David Howell, Louisville, Ky.—*Nut-Machine.*—Patented July 2, 1866, No. 66,238; reissued July 6, 1869.

Claim.—1. The supporting-matrix or die H, in combination with the cutting-plunger or punch F, operating substantially as described, to carry the nut-blank to a certain point within said matrix, suspend its movement therein, and then discharge the nut from the opposite side to the one of entrance.

2. The steel plate or cutter I, in combination with the gauge-block M, having an oblique flange *m*, and the die H, when arranged and constructed substantially as described.

3. The sleeve G, with its square head *g'*, and circular head *g''*, its slot K, and its feather, its concave head, and its longitudinal bore, constructed substantially as and for the purpose described.

4. The adjustable gauge-block J, having an overhanging lip *j*, and another overhanging lip on the opposite side of it, provided with the slot *j'*, when constructed substantially as and for the purpose described.

5. The elastic arm X, in combination with the jointed pitman Y and the head-block D, constructed substantially as described.

6. The pitman V, with its screw *v*, in combination with the rock-arm W, its shaft *w*, cam T, yoke U, when constructed and arranged substantially as described.

7. The combination of the sleeve or crown-punch G, the steel cutter I, guide-blocks E and E', matrix or die H, and sole-punch F, when constructed substantially as described.

8. The general construction and arrangement of the parts of the described machine, co-operating to produce the results designed, substantially as described and set forth.

3,545.—Israel Mosher, Mosherville, and Walden Eddy, Union Village, N. Y.—*Shovel-Plow.*—Patented March 31, 1863, No. 38,056; reissued July 6, 1869, and omitted in the list of claims of that date; again reissued July 13, 1869.

Claim.—1. The employment, arrangement, and combination of the right-angle triangle *d*, or its equivalent, with the beam-standard *a'*, or its equiva-

lent, having thereto attached the mold-board *b b*, in the manner and for the purposes substantially as herein described and set forth.

2. The curved extension and additional pieces, or wings *i i*, arranged upon and combined with the mold-board *b b*, substantially in the manner and for the purposes herein described and set forth.

3. The employment and combination of the removable shoe *e*, with the right-angle triangle *d*, or any equivalent therefor, in the manner and for the purposes substantially as herein described and set forth.

4. The arrangement and combination of the handles *f f* with the plow-beam or standard *a*, in the manner and by the means substantially as herein described and set forth.

5. The combination of the plowshare or point *c*, mold-board *b b*, and extension and additional curved pieces or wings *i i*, arranged and operating in the manner substantially as herein described and set forth.

6. A mold-board for shovel-plows, constructed with the ribs or raised flanches *s s*, upon the under side of the same, in such manner as to receive and hold the standard *a'*, in the manner substantially as herein described and set forth.

7. The arrangement of each of the aforesaid described curved extension and additional pieces or wings *i i*, upon the outward projections of the mold-board *b b*, and securing or fastening of the same thereto and thereupon, by the respective bolts *n* and nuts *n'*, in the manner and for the purposes substantially as herein described and set forth.

3,546.—JOHN F. BOYNTON, Syracuse, N. Y.—*Apparatus for Generating Carbonic Acid.*—Patented October 7, 1856, No. 15,838; reissued July 13, 1869.

Claim.—1. An apparatus for generating carbonic-acid or other gas, having the acid-chamber suspended within the generator, and operated from without, substantially as and for the purposes herein described.

2. An acid-chamber, so constructed within the generator that the acid may be delivered to the solution, or chemicals contained therein, in measured quantities and at desired intervals.

3. The method of operating the plunger E, or acid-chamber D, by means of a rod or tube B, as herein described.

4. The hollow tube B, carrying the acid-chamber D and plunger E, for filling the acid-chamber, as herein described.

5. The stirrer K, attached to said tube, substantially as herein described.

6. In combination with the generator, the hollow screw-plug with conical end, as and for the purpose therein described.

7. The drip-valve *b*, for the purpose herein described.

3,547.—A. T. DENISON and E. P. FURLONG, Mechanic's Falls, Me., assignees of JOHN E. COFFIN.—*Machine for Folding and Cording the Edge of Paper Strips.*—Patented November 17, 1868, No. 84,091; reissued July 13, 1869.

Claim.—1. The paste-roll *j*, having the pasting-disks, with grooved edges, to receive the cord to be inserted into the fold of the paper, substantially as shown.

2. The method of folding, pasting, and inserting a cord into the edge of paper goods, substantially as herein shown, to wit, by the described operation of rolls *c d*, paste-roll *j*, made as set forth, roll *m*, trough *k*, guards *z*, chutes *b'*, rolls *p q*, and winding-roll *v*, constructed and arranged as herein set forth.

3,548.—WILLIAM C. DODGE, Washington City, D. C.—*Metallic Cartridge-Case.*—Patented July 4, 1865, No. 48,536; reissued July 13, 1869.

Claim.—A cartridge-case for fire-arms, composed of ductile metal, and coated or plated internally or externally, or both internally and externally, with tin or other suitable metals or alloy of metals, substantially as and for the purposes herein set forth.

3,549.—HENRY GETTY, Brooklyn, N. Y.—(Division B.) *Tube-Cutter.*—Patented August 6, 1867, No. 67,530; reissued July 13, 1869.

Claim.—1. A tube-cutting instrument, formed with two rollers, for sustaining the pipe in the groove between them in a position parallel to the axis of said rollers, in combination with a cutter for cutting the tube, (an open jaw, in which the parts are mounted,) and a lever, or handle, whereby the instrument is capable of being revolved around a pipe or other cylindrical article for operating the same, substantially as set forth.

2. The slide C, with its slot *c'*, containing the block *d* of the head A, in combination with the screw D and rollers E, substantially as and for the purposes set forth.

3. The V-shaped cutter B, held in a head-block, in combination with a pair of cylindrical rollers E E, and mechanism substantially as specified, for operating on such parts in cutting tubes.

4. The V-shaped cutter B, in combination with a pair of cylindrical rollers E E, block *d*, slide C, and screw D, substantially as set forth.

3,550.—REUBEN HARDER and MINARD HARDER, Cobleskill, N. Y., assignees of MINARD HARDER, GEORGE W. DOUGLASS, HIRAM BECKER, and DAVID ANTHONY.—(Division A.) *Thrashing-Machine.*—Patented June 9, 1863, No. 38,862; reissued July 13, 1869.

Claim.—1. The concave, suspended upon the arms *b*, the rods *e*, and jam-nuts *g*, as and for the purposes herein set forth.

2. The hinged joint *o*, for connecting the pitman *l* to the separator *n*, as and for the purposes described.

3. The suspending-rods or hangers *p*, placed outside of the casing, and connected to the separator by the eyes *r*, and arms or hooks *s*, passing through the slots *t*, in combination with the strips *z'*, and side-boards *x'*, whereby the separator is moved and guided, as herein described.

4. The hooks *v*, eyes *w*, and bolts *x*, for connecting the bottom, *u*, of and underneath the separator to the separator, so that the bottom, *u*, may be easily and readily detached, as herein recited.

3,551.—REUBEN HARDER and MINARD HARDER, Cobleskill, N. Y., assignees of MINARD HARDER, GEORGE W. DOUGLASS, HIRAM BECKER, and DAVID ANTHONY.—(Division B.) *Thrashing-Machine.*—Patented June 9, 1863, No. 38,862; reissued July 13, 1869.

Claim.—1. In a thrashing-machine, a dust-flue or passage, leading from the front to the rear of the cylinder, and arranged so that the rotation of the cylinder will generate or produce a current of air through said flue, substantially as described.

2. The combination of the deflector *d* with the air-passage *h*, when arranged to operate substantially as described.

3,552.—WILLIAM E. LOCKWOOD, Philadelphia, Pa., assignee, by mesne assignments, of WALTER HUNT.—*Compound Fabrics for the Production of Shirt-Collars.*—Patented May 4, 1869, No. 89,768; reissued July 13, 1869.

Claim.—1. A fabric whereof to make shirt-collars, wristbands, bosoms, &c., the said fabric consisting of cotton or linen cloth as a facing, secured to a backing of the same material, or equivalent material or fabric, by cementing, sizing, pasting, starching, or otherwise, all prepared substantially as set forth.

2. As new articles of manufacture, shirt-collars, bosoms, wristbands, &c., made from the above-described compound fabric.

3,553.—DAVID STEWART, Kittanning, Pa.—*Manufacture of Iron.*—Patented December 17, 1867, No. 72,335; reissued July 13, 1869.

Claim.—Purifying pig-iron or blast-furnace metal and converting it into granules or partially-wrought iron by passing it in a stream through atmospheric air, or other oxygen-bearing gas or vapor, substantially as herein described and set forth.

3,554.—C. WILLIAMS, New York, N. Y.—*Wooden Pavement.*—Patented July 21, 1868, No. 80,261; reissued July 13, 1869.

Claim.—1. The dovetailed or wedge-shaped keys

a or *a**, in combination with the blocks A, substantially as and for the purpose described.

2. The intermediate elastic bed C and sub-bed B, in combination with the wooden blocks A, substantially as and for the purpose set forth.

3,555.—J. S. ATTERBURY and T. B. ATTERBURY, Pittsburgh, Pa., for themselves, and assignees of JAMES REDDICK.—(Division A.) *Manufacture of Hollow Glass-Ware.*—Patented June 3, 1862, No. 35,429; reissued July 20, 1869.

Claim.—A new manufacture, consisting of blown-glass ware, with illuminated pressed relief-work on its surface, substantially as described.

3,556.—J. S. ATTERBURY and T. B. ATTERBURY, Pittsburgh, Pa., for themselves, and assignees of JAMES REDDICK.—(Division B.) *Manufacture of Hollow Glass-Ware.*—Patented June 3, 1862, No. 35,429; reissued July 20, 1869.

Claim.—The combination of a cast or pressed base, A, a cast or pressed handle, B, and a blown bowl, C, substantially as described.

3,557.—JOHN BIRKENHEAD, Ilion, N. Y.—*Ring or Spinning.*—Patented May 24, 1864, No. 42,829; reissued July 20, 1869.

Claim.—1. A spinning-ring, having an eccentric bearing, substantially as and for the purpose set forth.

2. The combination of the gib *j* and bush *d*, substantially as and for the purpose herein set forth.

3,558.—COLUMBUS COLEMAN, Allegheny City, Pa.—*Rake-Tooth Bender.*—Patented February 20, 1866, No. 52,680; reissued July 20, 1869.

Claim.—1. The improved bending-apparatus herein described, consisting essentially of a table, A, a series of interchangeable curved formers, and a series of interchangeable curved levers, or their equivalents, as and for the purpose set forth.

2. In combination with the above, a header, for giving the spring-coil to rake-teeth, substantially as herein described.

3,559.—LEWIS T. HAWLEY, Salina, N. Y.—*Milk-Cooler.*—Patented March 30, 1869, No. 88,476; reissued July 20, 1869.

Claim.—1. The vessel C, having the air-chamber D, and cooling-tubes *a a*, formed within it, substantially as and for the purpose set forth.

2. The combination of the vessel C with a clothed or covered can or vessel, substantially as and for the purpose described.

3,560.—D. P. HENRY, Windsor, Ill.—*Pump.*—Patented May 4, 1869, No. 89,662; reissued July 20, 1869.

Claim.—The combination of the pump-tube E, which supports, at its upper end, the operating-shaft, and at its lower end the submerged pump-barrel A, with the solid plunger D, which is suspended from the jointed connecting-rod I, and the valves C F, all arranged and operating substantially as described, for the purpose specified.

3,561.—ADAM D. REESE, Phillipsburgh, N. J., assignee of THEODORE J. STEFFE.—*Horse-Rake.*—Patented September 20, 1859, No. 25,535; reissued July 20, 1869.

Claim.—1. Supporting metallic teeth in a horse hay-rake, against backward strain, by means of a device which will admit of the teeth being lengthened or shortened between the gathering-point and the point of attachment.

2. Supporting metallic teeth in a horse hay-rake, against backward strain, by means of a device through which pressure is applied to the teeth.

3. In combination with a device by which a metallic tooth in a horse hay-rake is supported against backward strain, a spring to hold the tooth to the ground.

4. The combination of the metallic teeth with metallic boxes and key, to support the teeth against their backward strain.

5. In combination with metallic teeth, a key to keep the tooth in its proper place.

6. Attaching the metallic teeth of a horse-rake to metallic boxes or heads supported upon the axle of the rake in such manner that they (the teeth) are free to vibrate vertically, and can be removed without taking the heads or boxes from the axles.

3,562.—B. S. ROBERTS, United States Army.—*Breech-Loading Fire-Arm.*—Patented June 11, 1867, No. 65,607; reissued July 20, 1869.

Claim.—1. In combination with a breech-plug, B, which swings about a curved abutment, *c*, a rocking shield *g*, so applied to said breech-plug as to allow the opening and closing of the breech of the barrel for the insertion and withdrawal of a cartridge, substantially as described.

2. The lever B′, formed on the rear curved end of a swinging breech-plug, B, and adapted to move about the solid abutment *c*, in combination with a rocking block, *g*, which will admit the opening and closing of the breech, substantially as described.

3. The lever-extractor *p*, arranged on one side of the barrel, and having one of its arms arranged in a recess in the recoil-shield, so as to be acted upon by the shoulder *n*, at the upper termination of said recess, substantially as described.

4. The curve *c c c*, at the rear of the cheeks containing the breech-plug B, when formed substantially as described, and so that the force of the gas, when the gun is fired, shall have no tendency to throw the breech-plug out of its place, as set forth.

5. A bodily swinging breech-plug, B, having a rear extension, B′, and a lever-latch, C, constructed substantially as described.

3,563.—E. C. THOMPSON, Rochester, N. Y., assignee of T. A. LONG.—*Soda-Fountain.*—Patented April 2, 1867, No. 63,537; reissued July 20, 1869.

Claim.—A portable soda-fountain, in which both the air-chamber and the pump are situated in the interior of the case, the pump being submerged in the liquid, and so arranged as to force the liquid to the air-chamber without carrying it out of the fountain, as herein set forth.

3,564.—R. B. VARDEN, Uniontown, Md.—*Coal-Stove.*—Patented June 8, 1869, No. 91,186; reissued July 20, 1869.

Claim.—1. The arrangement and construction of the air-heating chamber in such manner that while A acts as a fire-box and air-heater, B shall be enveloped by flame and products of combustion, through its axis and on its outer periphery, substantially in the manner and for the purpose set forth.

2. The air-heating cylinder B, when constructed and arranged to operate substantially as and for the purpose herein specified.

3,565.—THOMAS BOYD, Boston, Mass.—*Ventilating-Cap for Tents.*—Patented August 20, 1861, No. 33,068; reissued July 27, 1869.

Claim.—1. A cap or covering, so arranged as to be susceptible of motion in a vertical or up-and-down direction, and so operating that the tent can be ventilated in both stormy and pleasant weather, substantially as herein set forth.

2. A conical ventilating-cap, the apex of which is an acute angle, substantially as shown, when so arranged, with reference to the orifice or orifices through which the upward current of air passes, that said orifice or orifices shall be within the cap, or above the lower edge thereof, substantially as and for the purpose specified.

3,566.—EBEN MOODY BOYNTON, Grand Rapids, Mich., assignee of ALFRED BOYNTON.—*Saw.*—Patented November 27, 1866, No. 59,951; reissued July 23, 1867, No. 2,695; again reissued July 27, 1869.

Claim.—1. A saw provided with teeth A A′, having two cutting-points, *a a*, as shown, with cutting-edge on each face *b b′*, and their outer cutting-faces inclined inward from the point, substantially as shown and described.

2. The tooth A, with its two points dressed to cut on one side of the kerf, and the next succeeding cutting-tooth A′, with its two points dressed to cut on the other side of the kerf, as set forth.

3. The clearing-tooth B, constructed substantially as shown and described.

3,567.—Horace F. Evans, Beloit, Wis.—*Manufacture of Tarred Paper, Pasteboard, &c.*—Patented February 2, 1869, No. 86,380; reissued July 27, 1869.

Claim.—The process or method of saturating or partially saturating paper or straw-board, by passing the same from the paper-machine whereon it is made, directly from the driers or calenders, through the tar or other water-proof material, in the manner and for the purpose herein substantially described.

3,568.—Lewis P. Garner, Ashland, Pa.—*Device for Separating Coal from Slate.*—Patented August 7, 1860, No. 29,479; reissued July 27, 1869.

Claim.—1. The improved mode of separating the thin, flat pieces of slate from coal by the use of grate-bars, arranged to contract the spaces from the top downward, substantially as specified.

2. The employment of the screen within the screen, movable, so that the inside screen may be raised or depressed, at the will of the operator, thus increasing or diminishing the width of the spaces or openings between the bars, by reason of the peculiar shape of the bars, so that larger or smaller pieces of slate and other impurities may be separated from the coal and other materials that may be passed over said screens.

3,569.—Charles Kirchhof, Newark, N. J.—*Blast-Gun.*—Patented April 21, 1868, No. 76,925; reissued July 27, 1869.

Claim.—1. The combination, with an air-tube or other air-reservoir, of a device for holding paper or other fabric across the outlet of the tube or reservoir, substantially as and for the purpose described.

2. The employment, in combination with the outlet of the air-tube or reservoir, of a packing to prevent the escape of air between the paper or sheet and the outlet of the tube or reservoir, substantially as herein described.

3. The employment of the clamp E, or its equivalent, in combination with the packing *b* and the tube or reservoir of a blast-gun, substantially as and for the purposes described.

4. The latch F, when hinged to the clamp E, and constructed as shown, whereby it is adapted to catch in the rigid notched projection *b* of the collar B, as herein described, for the purpose specified.

5. The finger-piece G, in combination with the clamp E, substantially as and for the purpose described.

6. The employment of a device to hold the clamp in a partially-closed position, to prevent the falling or loss of the sheet, substantially as described.

7. The clamp E, of a blast-gun, adapted to receive either the mouth-piece H, or barrel I, substantially as described, for the purpose specified.

3,570.—P. H. Roots and F. M. Roots, Connersville, Ind.—*Case for Rotary Blower.*—Patented August 11, 1868, No. 81,010; reissued July 27, 1869.

Claim.—1. A rotary-blower case, the interior of which is rendered true and accurate by means of plaster of Paris, or its described equivalent, applied substantially as shown and described.

2. A rotary-blower case, the ends or heads of which are rendered true and accurate by means of plaster of Paris, or its described equivalent, applied substantially as described.

3. A rotary-blower case, the concaves, or arcs of circles of which are rendered true and accurate by the use of plaster of Paris, or its described equivalent, applied substantially as described.

4. A rotary-blower case, having concave arcs B B′, in combination with end-plates I I, arranged so as to admit of the abutments being introduced or removed, without requiring the case to be taken apart, substantially as set forth.

5. A rotary-blower case, the ends or heads of which are made true and accurate by the use of secondary or inside metal plates F′, substantially as and for the purpose described.

6. The guards *x x*, in combination with concaves B B, lined or finished interiorly, substantially as described.

3,571.—Moses Rubel, Chicago, Ill.—*Cutlery.*—Patented May 26, 1868, No. 78,328; reissued July 27, 1869.

Claim.—1. The tips C C and bolsters D D, provided with projections F, or their equivalents, to prevent the lateral displacement of the scales, cast on to and in combination with the tang E, passing through the handle so as to connect the bolsters and tips, and fasten the scales without rivets, substantially as specified.

2. The lugs F, when so located as to project beyond that part of the bolsters and tips which is in contact with the tang, in combination with the corresponding notches in the scales, substantially as and for the purposes specified.

3,572.—The Alden Type Setting and Distributing Machine Company, New York, N. Y., assignees, by mesne assignments, of Timothy Alden.—*Type Setting and Distributing Machine.*—Patented September 15, 1857, No. 18,175; reissued July 27, 1869.

Claim.—1. The method, substantially as described, for conveying the type to and from the type-cases, and the composing and setting tables, consisting of a type-carrier, in combination with a series of conveyers, which are capable of receiving any type indiscriminately, and also of receiving an indication representing the type so received or that required, whereby that type may be deposited into or taken from the type-cases, substantially as set forth.

2. The herein-described or any equivalent method of attaching the conveyers to the carrier-wheel, by which they are permitted to stop while delivering or receiving type, without arresting the motion of said carrier, substantially as set forth.

3. Giving to the gripping-end of the conveyer a motion from and toward the center of the carrier-wheel, whereby said gripping-end is made to closely approach the place at which the conveyer is to receive or deposit a type, for the purposes and in the manner substantially as described.

4. The cam u^5 and lever t^5, whereby the gripping-bolt *o* is withdrawn and made to release the type, substantially as described.

5. The latch v^5 and notch x^5, in the bolt *o*, to retain said bolt open, substantially as set forth.

6. The pin y^6, on the carrying-wheel, to throw back the latch and release the bolt *o*, substantially as described.

7. The cam d^6, on the carrier-wheel, in combination with the pusher b^6 on the conveyer, to discharge the type from the grippers, substantially as set forth.

8. The lever u^6, secured to a stationary fulcrum, to give motion to the pusher z^5 of the setting-conveyers, substantially as set forth.

9. The springs l^5, having the double function of thrusting the conveyers out and forcing them in, substantially as described.

10. The projecting piece g^6, on the conveyers, and the stationary hooks *x x*, for the purpose of arresting the conveyers at proper places, substantially as set forth.

11. The adjustable indicator-points o^5, on the conveyers, substantially as and for the purpose described.

12. The bar n^6, cams j^6, and spring o^6, for carrying the conveyers to the forward ends of their slots, substantially as set forth.

13. In combination with the devices or mechanism for receiving the types into and for delivering them from the type-cases, arranging the types edgewise in said cases, whereby, for all the types of a font, a uniform throw or action may be given to said mechanism.

14. In combination with the type-channels or cases, the mechanism for pushing out the type, consisting of the rack, pendulum, lever, and propelling-rod, and the pusher upon the conveyers, or any equivalent thereof, as described.

15. In combination with the type-channels, the mechanism for preventing the stopping of a setting-conveyer at a type-channel, when it is empty, or a distributing-conveyer at a channel, when full of type, consisting of the tilting-bar s^7, the pendulum-lever, and rack or equivalents, as described.

16. The rim r^7, to lift the pawl m^7 clear of the ratchet l^7, substantially as set forth.

17. The excavated ring m^5, in combination with

the conveyers and type-channels, substantially as and for the purpose described.

18. The stationary inclined pieces g^7, in combination with the grooves of the ring m^5, for restoring the indicating-points upon the conveyer to a zero or starting-point, as set forth.

19. The movable indicators e^7, in combination with the grooves in the ring m^5, and with the shifting-bars of the distributing-mechanism, substantially as described.

20. The channel of excess Q, in addition to the regular type-cases K, and in combination with the conveyers d, substantially as and for the purpose set forth.

21. The latch j^8, and pusher b^8, in combination with the channel Q, substantially as and for the purpose described.

22. The mechanism for feeding up the line of type, consisting of the cam w^2, spring x^2, arm u^2, and pawl q^2, substantially as set forth.

23. The mechanism for feeding up the column of type, and for elevating the successive lines thereof into the channel, substantially as described.

24. The method of engaging and disengaging the feeding-pawls, consisting of the hanging-lever a^3, in combination with the frame x, with the means for depressing the bolt d^3, and with the ratchet having the engaging and disengaging wedges, as described.

25. The movable plate d^2 in the channel a, to allow of raising the top line free of obstruction, substantially as set forth.

26. The arrangement of type-levers, to act on the nicked edges of the type, and produce the required set in the machine, substantially as and for the purpose described.

27. The combination of the type-levers z^3 with the distributing-conveyers, substantially as and for the purpose set forth.

28. The movable frame y^3, carrying the type-levers z^3, in combination with the graduated stop c^4, substantially as and for the purpose described.

29. The lever i^4 and apron g^4, to regulate the throw of the frame y^3, for the "thin space," substantially as set forth.

30. The hammer a^5 to keep the type down on the bottom of the channel a, and insure a correct operation of the levers z^3, substantially as described.

31. The bell-crank lever e^4, and pin l^4, for relieving the frame y^3, substantially as described.

32. The arrangement of mechanism for transmitting the movements produced upon the levers z^3, by the nicks in the type, and for effecting the proper combinations upon the indicators e^7, consisting of the detaining-levers n^4, the bars p^4, bar t^4, bars r^4, bar y^4, and the connecting-levers g^4, together with the operating-cams upon the shaft j^4, or any equivalent combination, whereby the same results will be produced, as described.

33. In combination with the keys, the arrangement of mechanism whereby the separate different signals represented by each of a great number of keys may be produced by a less number of indicators, as described.

34. The independent registering-apparatus, constructed as described, or its equivalent apparatus, which will effect the recording of the letters or signs as indicated by the keys, independently of the type-carrying apparatus, substantially as set forth.

35. The pins o^9 placed in the rings R of the register-wheel, substantially as and for the purpose described.

36. The stationary cam s^{10}, for returning the pins o^9, substantially as set forth.

37. The radiating revolving levers h^9, in combination with the register-wheel and with the keys, substantially as described.

38. The mechanism for transmitting the indications from the register, consisting of the detaining-levers k^0, in combination with the setting-indicators and with the register, substantially as described.

39. The springs g^0 j^0, and lever i^0, in combination with the indicator-bars f^0 and with the register and carrier-wheel, whereby the indicator-bars are caused to act on the setting-conveyers, and immediately thereafter made to retreat previous to the passage of a distributing-conveyer, substantially as set forth.

40. The toe c^0, in combination with the radiating revolving frame j^9, stop-pawl d^0, and register-wheel R, substantially as and for the purpose described.

3,573.—Robert Allison, Port Carbon, Pa.—*Steam Pumping-Engine.*—Patented September 29, 1868, No. 82,475; reissued August 3, 1869.

Claim.—1. The arrangement of the sliding bar L, cam-slot q, rods n n, and bell-crank R, whereby the supplementary valve k is operated, substantially as shown and described.

2. The valve-chambers J′, valves K′, and reversed stuffing-boxes h', arranged substantially as shown and described for the purposes set forth.

3. The arrangement of the piston w, graduating-cock y, and cylinder V, with reference to the rod E, pistons G G, and main valve C, as herein shown and described.

4. The combination and arrangement, with the slide-valve C of the direct-acting pumping-engine, of the regulating apparatus, consisting of the dash-pot or cylinder with the passage x leading from end to end, the solid piston, and the regulating-cock, the said cylinder containing a liquid substance, operating as the medium whereby to regulate the action of the piston in both directions, substantially as specified.

3,574.—Emory L. Bates, (assignee of George F. Rice,) Fiskedale, Mass.—*Boring-Machine.*—Patented December 21, 1858, No. 22,379; reissued August 3, 1869.

Claim.—1. The combination, with the hinged uprights of a boring-machine, of clamping and bracing mechanism, constructed substantially as described, whereby the lower ends of the uprights are clamped to a central brace or support, at the same time and by the same mechanism by which they are clamped to their curved ways or guides.

2. A hollow cross-brace or support, in combination with the uprights, substantially as and for the purposes set forth.

3. The combination, with the side-pieces, or uprights, semicircles, and center-brace, of a double-headed bolt, substantially as and for the purposes set forth.

3,575.—Devoe Manufacturing Company, Long Island City, N. Y., assignees, by mesne assignments, of Hermann Miller.—*Soldering Sheet-Metal Cans.*—Patented August 18, 1863, No. 39,616; reissued August 3, 1869.

Claim.—1. In an apparatus in which the joint of any vessel is to be soldered by dipping, a pan provided with a soldering-channel, of a form corresponding with that of the joint to be soldered, substantially as and for the purpose herein specified.

2. The soldering-pan, constructed or provided with a rest or resting-place for the can or vessel to be soldered, to regulate the depth to which the joint will enter the solder, and to protect adjacent parts from contact with the latter, substantially as herein described.

3. Providing the pan or apparatus with a vent, in communication with the atmosphere, so arranged as to admit of the expulsion and free admission of air from and below the can, within the space circumscribed by the rest, on which the can is made to bear in dipping the joint, essentially as herein set forth.

3,576.—Lewis Francis and Cyrus H. Loutrel, New York, N. Y., assignees of Lewis Francis.—*Composition of Matter.*—Patented March 8, 1864, No. 41,887; reissued September 27, 1864, No. 1,772; again reissued February 28, 1865, No. 1,886; again reissued August 3, 1869.

Claim.—Combining glue, glycerine, and sugar, or any other analogous saccharine matter, to form a new and useful composition of matter for various purposes.

3,577.—Elliott P. Gleason, Providence, R. I.—*Socket-Coupling.*—Patented October 16, 1860, No. 30,400; reissued August 3, 1869.

Claim.—1. A socket, provided with a recess, fitted with an elastic packing, substantially as and for the purposes specified.

2. A socket-coupling, having a hollow cylindrical cushion of caoutchouc, or other similar gum, adhering to the inner walls of the socket-shell, and having the surface of the opening through the same

molded in the desired form by compression, and made elastic by the action of heat applied thereto, in the manner and for the purpose substantially as herein specified.

3. In combination with such a cushion, a socket-piece, or nipple, having a bulb, or swelling ridge upon the end, which passes through the opening in said cushion, by the contraction of which opening the nipple is held securely within the socket, as set forth.

3,578.—M. Greenwood and Company, Cincinnati, Ohio, assignees of Henry M. Ritter.—*Reversible Knob-Latch.*—Patented May 7, 1867, No. 64,571; reissued August 3, 1869.

Claim.—The reversible latch A D, whose collar B occupies a suitable socket, C, and whose flat two-sided tail or shank G is tangential to one of the screw-holes in both positions of the latch, so as to render the latter irreversible, by the direct contact of the holding-screw, substantially as described.

3,579.—Nathaniel Jenkins, Boston, Mass.—*Manufacture of Elastic Packing.*—Patented May 8, 1866, No. 54,554; reissued August 3, 1869.

Claim.—1. An elastic packing, composed of at least four-tenths of finely-pulverized refractory, earthy, or stony material, intimately mingled with and held together by rubber prepared for vulcanizing, and then vulcanized, as and for the purpose described.

2. The composition of the ingredients, and within the proportions above set forth, substantially as and for the purpose described.

3. The employment of French chalk, or equivalent talcose mineral, substantially in the manner and for the purpose described.

3,580.—John P. Manny, Rockford, Ill.—(Division A.) *Harvester.*—Patented July 14, 1857, No. 17,798; reissued August 3, 1869.

Claim.—1. The platform, constructed with converging sides, operating to compress the gavel while being discharged, as set forth.

2. The combination, with a rake-head, of teeth, pivoted to vibrate in a vertical plane parallel with the rake-head, but rigidly supported against lateral strains, as set forth.

3. The combination, substantially as set forth, with a platform, gradually diminishing in width from front to rear, of a rake, having teeth pivoted to vibrate in a vertical plane parallel with the rake-head.

4. The combination, with a vertical rake-shaft, of a rake-head, oscillating in a vertical plane parallel to its length, and connected with the shaft by parallel bars, substantially as set forth.

5. The combination of a platform vibrating about the main axle, reel-supports vibrating with the platform, and an oscillating rake, also vibrating vertically in conformity with the movements of the platform, the combination being and operating substantially as set forth.

6. The cam-guide, pivoted between the shaft and the rake-head, substantially as set forth.

7. The combination of a rake, turning on a vertical axis, with a cam-guide, vibrating vertically in unison with the movements of the platform about the main axle, the combination being and operating substantially as set forth.

8. The combination, with a pivoted cam-guide, of a rake-arm, pivoted to and turning with a vertical shaft, the combination being and operating substantially as set forth.

9. The combination, in a two-wheeled harvester, of a rake, turning on a vertical axis between the plane of the wheels, with a cam-guide, also pivoted between the plane of the wheels, the combination being and operating substantially as set forth.

3,581.—John P. Manny, Rockford, Ill.—(Division B.) *Harvester.*—Patented July 14, 1857, No. 17,798; reissued August 3, 1869.

Claim.—1. The combination, with a platform vibrating about the main axle, of a rake, moving over the platform in the arc of a circle, the combination being and operating substantially as set forth.

2. The combination of a platform and reel-supports, vibrating about the main axle, with a rake, moving over the platform in the arc of a circle, the combination being and operating substantially as set forth.

3. The combination of a rake with a platform, suspended from a frame vibrating about the main axle, the combination being and operating substantially as set forth.

4. The combination of a frame, vibrating about the main axle, two driving-wheels, and a rake, moving in the arc of a circle over a platform suspended between the planes of the wheels, the combination being and operating substantially as set forth.

5. The combination of a vibrating frame, a platform, vibrating with the finger-beam around the main axle, and a rake, moving over the platform in a circular path, the combination being and operating substantially as set forth.

6. The combination of a platform, vibrating about the main axle, a rake, supported between the planes of the wheels, and a coupling-piece, interposed between the platform and raking-mechanism, which secures the conformity of the movements of the rake with those of the platform, in passing over uneven ground, the combination being and operating substantially as set forth.

7. The combination of a rake with mechanism for adjusting the rake, finger-beam, and platform, so arranged that the driver can operate the adjusting-mechanism, without stopping the machine, substantially as set forth.

3,582.—Alonzo P. Payson, San Francisco, Cal.—*Gymnastic Swing.*—Patented June 25, 1867, No. 66,038; reissued August 3, 1869.

Claim.—1. In combination with a swing, the motive-power levers E E, connected with the suspended bars C C, so that the person swinging may operate the swing thereby, substantially as described.

2. In combination with the seat of a swing, whether said seat is impelled by levers E E or not, the elastic hoop or band F, substantially as and for the purposes herein shown and described.

3. The combination of the bars C C, levers E E, seat D, and the protecting hoop F, with the supports A A, or their equivalents, when arranged substantially as and for the purposes decribed.

3,583.—Henry Seymour, New York, N. Y., assignee of Hermann Wendt and Henry Seymour.—*Manufacture of Sheep-Shears.*—Patented November 22, 1864, No. 45,198; reissued August 3, 1869.

Claim.—Sheep-shears, consisting of the shanks and spring formed of a single piece of metal, and the blade-plates made separately, and afterward connected to the shanks by welding or swaging, said blade-plates being of iron, and having cast-steel plates welded to them, all constructed substantially as set forth.

3,584.—George Westinghouse, Jr., Pitsburgh, Pa.—*Railway-Frog.*—Patented April 7, 1868, No. 76,365; reissued August 3, 1869.

Claim.—1. The arrangement of a chair, *c*, under one or both ends of the frog A, substantially as and for the purpose described.

2. The arrangement of dovetailed ends *a*, in the frog A, substantially as set forth.

3,585.—Elizabeth Hawks, Troy, N. Y.—*Auxiliary Air-Chamber for Stoves, Heaters, and Furnaces.*—Patented April 23, 1867, No. 64,102; August 10, 1869; reissued August 3, 1869, and omitted in the list of claims of that date; again reissued August 10, 1869.

Claim.—1. The shield A, or any equivalent therefor, containing a horizontal opening or slot *b* at or near the top or upper edge thereof, constructed and applied, or used in the manner and for the purposes substantially as herein described and set forth.

2. The employment of the auxiliary air-chamber H, constructed, arranged, and operated in combination with the fire-grate F, and fire-chamber or chamber of combustion E, in the manner substantially as hereinbefore described and set forth.

3. The arrangement and combination of the opening or elongated slot B, or any equivalent thereof, with the auxiliary air-chamber H, by means of

which atmospheric air is admitted to the fire in the combustion-chamber E, so as to promote and facilitate combustion and economy in the use of fuel, substantially as hereinbefore described and set forth.

3,586.—MARCUS P. NORTON, Troy, N. Y.—*Post-Office Post Marking and Canceling Hand-Stamp.*—Patented April 14, 1863, No. 38,175; reissued August 23, 1864, No. 1,748; again reissued August 3, 1869, and omitted in the list of claims of that date; again reissued August 10, 1869.

Claim.—1. The postage-stamp-canceling device cylinder, or tube C, containing a die, or type, G, made of cork, wood, or other suitable material, or any equivalent for said cylinder, or tube C, or for the said canceling-die, or type G, whereby to efface, cancel, or destroy the postage-stamp with indelible or other ink, in the manner and for the purposes substantially as herein described and set forth.

2. The canceling-device cylinder or tube C, with cork, or wood, or any substantial equivalent thereof, forming the die or type G therein, in combination with the cross-bar, or piece B, and with the post-marking device D, substantially as and for the purposes herein described and set forth.

3. The post-marking of letters, envelopes, and packets, and the cancellation of the postage-stamps thereon with ink, at one and the same blow or operation of the instrument, in the manner, and by the means, substantially as herein described and set forth.

4. The employment and combination of a post-marking device with a postage-stamp-canceling device, both being operated by one or the same handle, for the post-marking of letters, envelopes, or packets, and for the cancellation of the postage stamps thereon, with indelible or other ink, in the manner substantially as herein described and set forth.

3,587.—CALEB C. FOSTER, Odessa, Del.—*Fertilizer-Attachment.*—Patented April 28, 1868, No. 77,269; reissued August 3, 1869, and omitted in the list of claims of that date; again reissued August 10, 1869.

Claim.—1. The arrangement, upon a suitable shaft under the bottom of the hopper of a fertilizer-attachment, of one or a series of polygonal-shaped rollers, of any suitable material, said rollers being provided with small recesses and projecting edges on their peripheries, substantially as shown and described.

2. The arrangement, upon a cross-shaft in the hopper, a suitable distance above the movable or stationary bottom, of the wings W S and pins P P, or their equivalents, substantially as and for the purposes set forth.

3. In combination with the polygonal-shaped rollers R M, the springs S C P, substantially as and for the purposes specified.

4. Broadly, the saddles R V, whether cast with or connected to the hopper-bottom by screws, or otherwise, said bottom being provided with beveled openings, as described, in combination with the polygonal-shaped wheels R M, substantially as set forth.

5. In combination with the saddles R V, the beveled openings R H in the hopper-bottom, over which pass the vertical pins P on the shaft S′ H′, substantially as set forth.

3,588.—AMERICAN STANDARD TOOL COMPANY, Newark, N. J., assignees, by mesne assignments, of ANDREW R. ARNOLD.—*Machine for Making Twist-Drills.*—Patented August 30, 1864, No. 44,037; reissued August 10, 1869.

Claim.—1. The combination of the revolving cutter-arbor, revolving mandrel, advancing-mechanism, and stop-mechanism, substantially as before set forth.

2. The combination of two revolving cutter-arbors, revolving mandrel, advancing-mechanism, and stop-mechanism, substantially as before set forth.

3. The combination of the revolving cutter-arbor, revolving mandrel, advancing-mechanism, and variable stud, substantially as before set forth.

4. The combination of two revolving cutter-arbors, revolving mandrel, advancing-mechanism, and variable stud, substantially as before set forth.

5. The combination of the revolving cutter-arbor, revolving mandrel, advancing-mechanism, and tubular guide, substantially as before set forth.

6. The combination of two revolving cutter-arbors, revolving mandrel, advancing-mechanism, and tubular guide, substantially as before set forth.

7. The combination of the revolving cutter-arbor, revolving mandrel, advancing-mechanism, and poppet, substantially as before set forth.

8. The combination of the revolving mandrel and advancing-mechanism, with two revolving cutter-arbors, and two poppets, substantially as before set forth.

9. The combination of the revolving cutter-arbor, revolving mandrel, advancing-mechanism, poppet, lever *s′*, and variable fulcrum, substantially as before set forth.

10. The combination of the revolving mandrel and advancing-mechanism, with two revolving cutter-arbors, two poppets, two levers *s′*, and two variable fulcra, substantially as before set forth.

11. The combination of the revolving cutter-arbor, revolving mandrel, advancing-mechanism, variable stud, changeable cog-wheels, and stop-mechanism, substantially as before set forth.

12. The combination of the revolving cutter-arbor, revolving mandrel, advancing-mechanism, stop-mechanism, and tubular guide, substantially as before set forth.

13. The combination of the revolving cutter-arbor, revolving mandrel, advancing-mechanism, stop-mechanism, and poppet, substantially as before set forth.

3,589.—ESEK BUSSEY, Troy, N. Y.—*Cooking-Stove.*—Patented July 24, 1866, No. 56,525; reissued August 10, 1869.

Claim.—1. A diving-flue cooking-stove, with the exit-flue so constructed as to inclose, on the sides and bottom, the culinary boiler or hot-water reservoir B.

2. A diving-flue cooking-stove, with the exit-flue constructed across the bottom, and up the rear upright side of the culinary boiler or hot-water reservoir B.

3. A diving-flue cooking-stove, constructed with an exit-passage, F, below the top of the oven, and an exit-flue, E E′, in combination with an uncased reservoir, B, attached to the rear of the stove, and placed just above such exit-passage, and so arranged that the gases of combustion, on passing through such exit-flue, will impinge upon or come in direct contact with said reservoir, substantially as and for the purposes hereinbefore specified.

4. An exit-passage, F, constructed in the rear of a diving-flue cooking-stove, and below the top of the oven, in combination with an uncased reservoir, B, attached to the rear of the stove, and wholly or partly below the top plate thereof, and so arranged that the gases of combustion, in passing through said passage, will come in contact with and heat such reservoir by a direct draught from the fire-box to the smoke-pipe.

3,590.—JOHN CURTIS, Cincinnati, Ohio.—*Carriage.*—Patented March 26, 1867, No. 63,223; reissued August 10, 1869.

Claim.—1. The bent strip or strips B C D E of elastic timber, or its equivalent, forming the sills of the body proper, and to take the place of the spring-bar and body-loops, as and for the purpose set forth.

2. The bent and rebated strip or strips L *l* N N′, or their equivalents, discharging the functions of the double perch and the upper member of the fifth-wheel, as set forth.

3. The arrangement of strap P, screw Q, and gland R, or their mechanical equivalent, to enable the members of a fifth-wheel to be set up as they wear, in the manner explained.

4. In the described combination, with the elements of claim third, the pad or cushion S, for the purpose stated.

3,591.—EDGAR F. GRIFFIN, Chicago, Ill., administrator of the estate of ANSON D. GRIFFIN, deceased.—*Packing for Deep Wells.*—Patented August 13, 1867, No. 67,749; reissued August 10, 1869.

Claim.—1. The described arrangement and combination of the collars *d* and *e*, bag *c*, and casing or tubing *a*, the collar *e* being attached by a screw-thread, opposite to that connecting the several joints

of casing or tubing, and operating substantially as and for the purposes set forth.

2. The loose sliding-ring *f*, arranged with relatiou to the bag and tubing, substantially as and for the purposes set forth.

3. The springs *g g*, in combination with the bag *c* and loose ring *f*, as and for the purposes set forth.

4. The slotted easing *a'*, with its shoulder *h*, arranged in relation to the bag *c*, as and for the purposes set forth.

5. The apertures *i i* iu the tubing *a*, arranged with relation to the bag and collars *d* and *e*, substantially as and for the purposes set forth.

3,592.—August Kessberger, Springfield, Ill. —*Wagon-Brake.*—Patented April 6, 1869, No. 88,721; reissued August 10, 1869.

Claim.—1. The automatic brake G, provided with the projection *g* and curved tooth H, and pivoted or hinged to or upon the bolster F, substantially as herein shown and described.

2. The notched band H upon the inner end of the hub, in combinatiou with the brake G, substantially as and for the purpose specified.

3. The within-described wagon running-gear, consisting of the axle A, thimble-skein C, clip D, coupling-bar E, bolster F, brakes G G, (provided with the projections *g g* and curved teeth H H,) and the slotted band I, upon the inner end of the hub, all constructed and arranged substantially as and for the purpose shown.

3,593.—John D. King, Toronto, Canada West. —*Tobacco-Press.*—Patented July 25, 1865, No. 48,955; reissued August 10, 1869.

Claim.—1. The combination of a rotating pressing-roller, K, the traversing-bed, and the interposed removable trough, the combination being and operating substantially as set forth.

2. The combination of pressing-rollers of different widths, mounted on a common axle, with troughs of correspondingly different widths, mounted on a traversing-bed, the combination being and operating substantially as set forth.

3. The combination of yielding spring-pressure rollers, traversing-troughs, the traversing-bed, and its driving-drum D, the combination being and operating substantially as set forth.

4. The combination of the bed, the driving-drum D, the supporting-rollers, and the pressure-rollers, the combination being and operating substantially as set forth.

5. The combination of the pressure-rollers, the bed, its rack, the grooved driving-drum, and the grooved supporting-rollers, all constructed for joint operation, substantially as set forth.

3,594.—S. W. Kirk, Coatesville, Pa., and C. E. Stotsenburg, Wilmington, Del,, assignees of S. W. Kirk.—*Mode of Purifying Cast Iron.*—Patented March 24, 1863, No. 38,003; reissued August 10, 1869.

Claim.—The use of the binoxide of manganese, or any other oxide or oxides of the same which may be substituted in lieu thereof, with or without the sesquioxide of iron, or any other oxide or oxides of the same which will effect substantially the same result, introduced to iron when the same is perfectly fluid, for the purpose of washing out the impurities of the said iron, substantially in the manner and for the purpose set forth.

3,595.—Holmes, Booth and Haydens, Waterbury, Conn., assignees, by mesne assignments, of Joseph Ridge.—*Coal-Oil Lamp.*—Patented April 15, 1862, No. 34,984; reissued February 4, 1868, No. 2,855; again reissued August 10, 1869.

Claim.—A lamp for kerosene and other oils, formed of a draught plate or deflector, with a flame-slot, in combination with a perforated air-distributer, the parts being so constructed that the light can shine through the transparent medium surrounding the flame and the wick-tube, substantially as set forth.

3,596.—George Ambrose, for himself, and Edward Hagan, assignee of George Ambrose, New York, N. Y.—*Hoisting-Apparatus.*—Patented May 23, 1865, No. 47,782; reissued August 17, 1869.

Claim.—1. The upper catches, in combination with the hod-racks and frame, all arranged with respect to each other as and for the purpose specified.

2. Spring-latches *m m*, and levers *n n*, in combination with the guides A A, and elevator or hod-rack C, substantially as described.

3,597.—D. R. Averill, New Centreville, for himself, and The Averill Chemical Paint Company, New York, N. Y., assignees of D. R. Averill.—(Division A.) *Paint.*—Patented July 16, 1867, No. 66,773; reissued July 28, 1868, No. 3,051; again reissued August 17, 1869.

Claim.—A paint composed of the ingredients herein named, or their equivalents, and prepared and compounded substantially in the manner specified.

3,598.—D. R. Averill, New Centreville, for himself, and The Averill Chemical Paint Company, New York, N. Y., assignees of D. R. Averill.—(Division B.) *Paint.*—Patented July 16, 1867, No. 66,773; reissued July 28, 1868, No. 3,051; again reissued August 17, 1869.

Claim.—A liquid paint, prepared and mixed ready for use during its manufacture, and which will be preserved in such condition, substantially as and for the purpose described.

3,599.—D. R. Averill, New Centreville, for himself, and The Averill Chemical Paint Company, New York, N. Y., assignees of D. R. Averill.—(Division C.) *Paint.*—Patented July 16, 1867, No. 66,773; reissued July 28, 1868, No. 3,051; again reissued August 17, 1869.

Claim.—A new article of manufacture, a liquid oleaginous paint, prepared ready for use, and which will retain its fluid condition when not applied

3,600.—D. R. Averill, New Centreville, for himself, and The Chemical Paint Company, New York, N. Y., assignees of D. R. Averill.—(Division D.) *Paint.*—Patented July 16, 1867, No. 66,773; reissued July 28, 1868, No. 3,051; again reissued August 17, 1869.

Claim.—The combination of soluble silica, in any of its forms, with a liquid oleaginous paint, for the purpose set forth.

3,601.—D. R. Averill, New Centreville, for himself, and The Averill Chemical Paint Company, New York, N. Y., assignees of D. R. Averill.—(Division E.) *Manufacture of Paints.*—Patented July 16, 1867, No. 66,773; reissued July 28, 1868, No. 3,051; again reissued August 17, 1869.

Claim.—The combination of the solution, in water, of the salts of lead and zinc, or either of these, with linseed-oil, or other drying-oil, for the purpose of preparing paints.

3,602.—Charles Buffum, Lynn, Mass., assignee of Joseph B. Johnson.—(Case A.) *Shoe.*—Patented February 7, 1865, No. 46,299; reissued August 17, 1869.

Claim.—1. The above-explained improvement in lasting a shoe, the same consisting in the employment of a "false inuer sole," B, in connection with the last E and upper A, and drawing the upper on the said last and sole, by means of thread *a*, sewing *f*, or the equivalent thereof, extended across the false sole, but without going into or through it, so as to prevent it from being easily detached from such thread, so as to be removed from the shoe after the outer sole may have been sewed to the upper.

2. The combination of centering-devices with the false inner sole and the upper, or with such and the outer sole; such centering devices, as represented, being the pins *a b c*, and for the purpose of effecting, by means of the holes in the outer sole, the ready centering or proper arrangement of the outer with the "false inner sole" and the overlaps of the upper.

3. The combination of the false inner sole, and its centering-pins or devices, with mechanism for clamping or holding the outer sole in place on the false inner sole after being centered or properly adjusted thereon, such clamping-devices as described and represented consisting of the annuli *d*, and their screws *e*.

4. The combination of the spurs *g g*, or their equivalents, with the "false sole" B and the upper A, when lasted as specified; such spurs being for the purpose of maintaining the said outer sole and the upper in their proper relation at or near the ball of the foot.

5. The combination of one or more pins *a c*, or their equivalents, with the false sole B, and the sewing *f*, extended across such sole, and about the said pin or pins, substantially in manner as hereinbefore explained.

6. The improved manufacture or shoe, substantially as described, viz, as made with the outer sole and the upper sewed together, and the overlaps of the upper connected by a lacing, or its equivalent, crossing from one to the other of them, and applied in lasting the upper, by the use of a false inner sole or support-plate, as specified.

7. In constructing a boot or shoe, as connecting the side overlaps of its upper by a lacing, extended transversely across the shoe from one of them to its opposite, and holding in place the heel and toe-overlaps by such lacing extended through them.

8. In combination with the upper and the lasting-plate applied to the last, as described, a lasting-thread, carried across such lasting-plate, and passing through the laps of the upper.

3,603.—ORLO CADY, Morristown, Vt., and WILLIAM W. W. WOOD, Brooklyn, N. Y., assignees, by mesne assignments, of THOMAS ADAMS and GEORGE JOHN PARSON. — *Slide-Valve.*—Patented September 17, 1867, No. 68,932; patented in England, February 15, 1866; reissued August 17, 1869.

Claim.—A slide-valve, having a ring, H, provided with a fillet, N, and recess O, so that the pressure of steam on the different surfaces will balance the valve, substantially as described.

3,604.—H. T. CUSHMAN, North Bennington, Vt. —*Composition Paper-Polisher.* — Patented June 1, 1869, No. 90,733; reissued August 17, 1869.

Claim. — 1. The herein-described compound of matter, composed of the ingredients, mixed as specified, and adapted for polishing paper, as set forth.

2. A paper-polishing implement, composed of a handle, A, of ivory, or other substance, and a mass, B, of the compound herein specified.

3,605. — DANIEL FISHER, Oil City, Pa.—*Clamp for Elevating Well-Tubes.* — Patented February 23, 1869, No. 87,097; reissued August 17, 1869.

Claim.—1. A tubing-drawer, with jaws adapted to catch under a collar or thimble on the well-tube, all substantially as set forth.

2. The hinged jaws A A′ and suspending-links B B′, adapted to operate substantially as herein described.

3. In combination with the aforesaid jaws A A′ and links B B′, the clamping-screw C, employed substantially as and for the purpose set forth.

4. The pintle D *d*, in combination with the jaws A A′ and link B′, substantially as set forth.

3,606.—JOHN B. MAYER, Niagara, Falls, N. Y. —*Clock.*—Patented September 15, 1868, No. 82,266; reissued August 17, 1869.

Claim.—1. The combination and arrangement of the wheel A, pinion E, and escapement-wheel D, the parts having the characteristics and operating together in the manner described, and for the purpose set forth.

2. The combination and arrangement of wheel A, pinion E, and escapement-wheel D, with the hour and minute hands upon the axis of said escapement-wheel, substantially as set forth.

3. The combination, with wheel A, pinion E, and escapement-wheel D, of the ratchet-wheels *k l*, revolving tooth *i′*, pin *i*, and wheel G, substantially as and for the purpose described.

4. The shaft B, carrying the loose wheel F, friction-spring *s*, wheel A, and winding-drum, in connection with pawl *h*, arranged and combined to prevent the carrying back of the hands during the winding of the clock, as set forth.

3,607.—JAMES D. SMITH, Greig, N. Y., assignee of WILLARD H. SMITH. — *Vapor-Burner.*—Patented June 30, 1868, No. 79,404; reissued August 17, 1869.

Claim.—1. Providing the air-tube E, between the air-passages F F and the base of the flame, with perforated heaters, consisting of the heat-conducting flange or flanges K K, substantially as and for the purpose herein stated.

2. Bringing sides of the perforated heater K downwardly upon the tube A, substantially in the manner as and for the purposes set forth.

3,608.—DAVID STUART and RICHARD PETERSON, Philadelphia, Pa., assignees of DAVID STUART and LEWIS BRIDGE. — (Division A.) *Base-Burning Fire-Place Stove.* — Patented June 23, 1868, No. 79,275; reissued August 17, 1869.

Claim.—1. The base of the stove inclosing the passages E, F, and G, arranged and communicating with the pipes P and P′, substantially as described.

2. Two or more pipes P and P′, arranged within the outer casing of a fire-place stove, for conveying the products of combustion to the chimney, and for heating the air admitted to the space within the said outer casing, all substantially as and for the purpose herein set forth.

3. The pipes P and P′, in combination with the compartments *k* and *k′*, and the valved partition between the same.

4. The double cover, consisting of plates 2 and 3, one for fitting to the top of the stove, and the other to the top of the feeder, and so arranged that the products of combustion can pass between them.

3,609.—GEORGE WATT, Richmond, Va.—*Plow.* —Patented November 26, 1867, No. 71,560; reissued August 17, 1869.

Claim.—1. A plow-frame or casting, A, having a flange for the support of the mold-board, constructed as represented and described, for the purpose of adapting it to support any desired form of mold-board, as set forth.

2. A plow-frame or casting, A, having a neck or breast *a*, constructed substantially as herein described, and serving to prevent the accumulation of trash, &c., between the cutting-edge and the beam.

3. A plow, having its landside constructed as herein represented and described, for the purposes set forth.

4. The combination, with the mold-board B, of the colter or cutter E, forming a part of the same as described, for the purpose set forth.

5. The brace-rod J, reflexed at both ends, as described, and employed, in conjunction with the staples *j′*, b^1, and key b^2, to connect the frame A and mold-board B, substantially as set forth.

6. The combination, with the slide or landside-bar D, of the hook-shaped projection *d*, staple d^1, key d^2, and notches a^5, for adjustably securing said slide to the frame A, as set forth.

7. The handles G G′, both attached to the landside side of the plow, as represented and described, for the purposes set forth.

8. The removable extension-piece F, applied substantially as and for the purpose set forth.

9. The mold-board B, Fig. 10, formed for the purposes set forth.

10. The mold-board B, Fig. 11, adapted for support on the frame A, and to be removed and reversed, as represented and described.

3,610.—MILTON D. WHIPPLE, Cambridge, Mass., assignee, by mesne assignments, of himself.—*Machine for Combing Cotton.* — Patented October 26, 1858, No. 21,932; reissued August 17, 1869.

Claim.—1. The vibrating elastic feed-roll and permanent knife-edge, for holding the staple, substantially as described.

2. The combination of a feed, for introducing the material into the machine, the vibrating card and nippers, and the stationary cards, operating together in the manner substantially as described.

3. In combination with the nippers for receiving and carrying the cotton in tufts past or to the cards to be carded and straightened, the doffer for receiving said carded or combed tufts preparatory to their being formed into a continuous sliver, substantially as described.

4. In combination with the nippers for carrying, and the doffer for receiving the cotton in tufts, the rolls, for stripping the doffer and taking off the cotton in a continuous sliver, substantially as described.

3,611. — JAMES P. WOOD and JOSEPH WOOD, Philadelphia, Pa., and WILLIAM E. WOOD and CHARLES J. WOOD, Baltimore, Md., assignees of G. ADOLPH REIDEL. — *Steam-Generator.* — Patented February 23, 1869, No. 87,294; antedated February 12, 1869; reissued August 17, 1869.

Claim.—1. The construction and arrangement of the hollow rims B, with the openings forming the drum D, hollow spokes C, and flexible pipes E, substantially as herein set forth.

2. The construction of the annular ribs *k*, when arranged with the rims B, for the purpose of forming return-flues for the products of combustion, substantially as described.

3. The arrangement of the man-hole plates *b*, and rods *c*, with the rims B, and hollow spokes C, substantially as and for the purpose above described.

3,612.—BARTON P. VAN MARTER, Lyons, N. Y. —*Tub for Distilling Essential Oils.*—Patented January 19, 1869, No. 85,115; reissued August 17, 1869.

Claim.—1. The employment of the convex-shaped perforated metal plate D, when arranged to operate substantially as and for the purpose herein described.

2. The cover E, when provided with the rubber ring G, substantially as described, and for the purpose set forth.

3. The employment of a rubber ring, between the cover and the upper end of the staves, for the purpose herein specified.

4. The devices used for pressing down and securing the cover E in place, consisting of the beam B, rods H H, and bar I, constructed and arranged substantially as herein specified.

5. The still, consisting of the tub A, beam B, bottom C, disk D, cover E, rubber ring G, rods H H, and bar I, all constructed and arranged substantially as and for the purpose specified.

3,613.—T. BAILEY and VIRGIL W. BLANCHARD Bridport, Vt.—*Washing-Machine.*—Patented March 9, 1869, No. 87,617; reissued August 24, 1869.

Claim.—1. The perforated diaphragm E, constructed and arranged substantially as described, in combination with the spring-pounder D, said pounder being provided with pumps or pistons, substantially as set forth.

2. In combination with the shaft F, ratchet G, pawl *g*, and lever C, the perforated diaphragm E and pounder D, substantially in the manner specified.

3,614. — JOSEPH F. CALHOUN, Wolcottville, Conn., assignee, by mesne assignment, of P. J. CLARK.—*Skate.* — Patented February 5, 1861, No. 31,348; reissued August 24, 1869.

Claim. — 1. The arrangement, below the metal plate, of the clamping-slides and operating-screw G *d*, with right and left-hand threads, substantially as and for the purposes set forth.

2. The strap K and connecting-clamps H, in combination with the blocks E and screw G, substantially as and for the purposes set forth.

3,615. — ALEXANDER WIMBISH HARRIS, New York, N. Y.—*Suspenders.*—Patented June 16, 1868, No. 78,872; reissued August 24, 1869.

Claim. — 1. A suspender or brace, substantially such as described, consisting of a single piece of webbing, leather, cloth, or other equivalent material, passed through and sliding freely in two button-strap loops, and the two ends connected by a buckle, or equivalent means, by which the length can be adjusted at pleasure, as and for the purpose described.

2. As a new article of manufacture, a suspender or brace, consisting of a single piece of webbing, or other equivalent material, constructed substantially as described, in combination with a slide to secure an adjustable crossing of the webbing, or other material, substantially as described.

3. So combining an adjustable slide with a suspender crossing on the back of the wearer, that the strap or straps shall cross in said slide, and so make the point of crossing adjustable, substantially as described.

3,616.—JAMES W. MURFEE, Havanna, Ala.—*Subsoil-Plow.*—Patented June 22, 1869, No. 91,657; reissued August 24, 1869.

Claim. — 1. The wedge-shaped concavo-convex share, hoe, or point herein described, the upper (convex) side being composed of inclined triangular surfaces, the under (concave) side in all cases being arched and beveled, so as to form, as nearly as the kind of metal used will allow, feather-edges upon the sides and point, reducing the friction to a minimum, thus allowing the plow to pass through the earth as easily as possible, and by these means making the plow a self-sharpener, substantially as specified.

2. The reversed truncated wedge-shaped heel, elevated toward the rear, substantially as specified.

3. The arrangement and set of the colter-shank in rear of the greatest transverse diameter of the wedge, and as acutely as practicable thereto, substantially as described.

4. The arrangement of the standard of the frame as near in a line with the colter-shank as practicable, and the handles parallel to a line, which, in direction, is a mean between the line of the shank and point, or nearly so, substantially as specified.

5. The herein-described share or point, either separately, or in combination with an elevated heel, as specified.

6. The peculiar set and arrangement of the colter-shank, standard of frame, handles, and beam, substantially as herein specified.

3,617.—CHARLES PARKER, Meriden, Conn., assignee of GEORGE FOWLER and the administrators of the estate of DE GRASSE FOWLER, deceased, viz, MALTBY and SOPHRONIA FOWLER.—*Machine for Punching Metal.* — Patented April 17, 1855, No. 12,723; extended seven years; reissued August 24, 1869.

Claim.—1. Combining with the slide and shaft of a power-press, and the wheel, by means of which the said shaft is caused to revolve, a mechanism which operates automatically to disconnect the said wheel from the shaft at a certain point after one revolution.

2. In a power-press, combining, substantially as described, with the rotating shaft and the slide or tool-stock, an eccentric wrist-pin and an eccentric circle or ring, placed upon and around said wrist-pin for the purpose of varying the play of said slide or stock.

3. In combination with the wrist-pin B, the slide D, and block *c*, the adjusting-plates *e*, more or less in number, substantially as and for the purpose set forth.

3,618.—EDWIN R. STILWELL, Dayton, Ohio.—*Feed-Water Heater and Filterer.*—Patented October 4, 1864, No. 44,561; reissued January 23, 1866, No. 2,159; again reissued August 24, 1869.

Claim.—1. Filtering material F between a series of shelves, and an outlet, *r*, substantially as described.

2. The arrangement of steam-inlet *n*, shelves *a a*, filtering-material F, and outlet *r*, in a vessel, A, substantially as described.

3. The depositing-plates *a a a*, constructed and arranged substantially as described.

4. The arrangement of the steam-pipes *m* and *n*, with reference to the plates *a a a*, substantially as specified.

5. The combination of the vessel A, the plates *a a a*, the plate *d*, the steam-pipes *m*, *n*, and E, and water-pipes *f'* and *r*, substantially as described.

3,619.—C. H. EMERSON and JOHN F. EMERSON, New York, N. Y.—*Machine for Heading Bolts.*—Patented April 20, 1869, No. 89,211; reissued August 24, 1869.

Claim.—1. The combination of roughing and finishing-headers J and J', with grippers H H and sliding-dies attached to carriers I I, arranged and operating, first, to roughly form the head of the bolt upon the bar, and then to finish it, substantially as specified.

2. In combination with the above, the inclined faces or bearings *f f*, on the forward end of the head-stock L, and the inclined faces or bearings *g g*, attached to the carriers I I of the sliding-dies, for re-

tracting the said carriers by the action of the heading-stock L, substantially as specified.

3,620.—DANIEL R. PRINDLE, East Bethany, New York.—*Process of Preserving Wood and Timber.*—Patented March 26, 1867, No. 63,300; reissued August 24, 1869.

Claim.—1. The process of first charging or saturating wood or other porous material with any substance or substances, of preservative qualities, and subsequently coating or covering the same with any suitable substance or substances, of proper consistency, in the manner and for the purpose herein specified.

2. In combination with the above, also seasoning the wood or material, by heat applied prior to or during the process, as specified.

3,621.—P. H. ROOTS, Connersville, Ind., assignor to himself and F. M. ROOTS, same place.—*Water-Wheel*—Patented March 15, 1859, No. 23,267; reissued February 28, 1860, No. 918; reissued August 24, 1869.

Claim.—1. The wheel A and rotary breast or abutment E, moving with different degrees of velocity, in combination with the apron or concave D, arranged to operate substantially as and for the purpose set forth.

2. The wheel A and rotary breast or abutment E, in combination with the apron or concave D, having its interior surface lined and rendered true with soft metal, substantially as and for the purpose set forth.

3. The wheel A and rotary breast or abutment E, having its recesses *g g'* lined with soft metal, in combination with the concave or apron D, arranged to operate substantially as and for the purpose described.

3,622.—JOEL F. KEELER, Pittsburgh, Pa.—*Railroad-Car for Transporting Petroleum.*—Patented January 10, 1865, No. 45,834; reissued July 18, 1865, No. 2,031; again reissued August 31, 1869.

Claim.—1. The construction of a fire-proof railway tank freight-car, substantially as described.

2. The construction of a railway-tank freight car in such a manner that the tank constitutes, substantially, the frame-work of the car.

3. The construction of tank freight-cars in such a manner that their tanks, or some parts thereof, are carried as low as the tops of the car-wheels, substantially as described.

4. A metallic inverted-arch truss or bottom in the construction of railway-cars, substantially as described.

5. The construction of railway-cars having two inclosed stories, substantially as described.

6. The construction of railway tank-cars, with tanks having a depression in their bottom, through which their contents are drawn off, substantially as described.

3,623.—LANE AND BODLEY, Cincinnati, Ohio, assignees of PHILANDER P. LANE, same place.—*Self-Lubricating Journal-Box.*—Patented November 26, 1867, No. 71,313; reissued August 31, 1869.

Claim.—1. The oil-chamber E, placed below the bottom of the journal, and communicating therewith by one or more apertures, F, in a protuberance projecting downward into the said oil-chamber, substantially as represented.

2. The self-lubricating journal-box, having the oil-chamber E below the bottom of the journal, and communicating with the journal at or near its mid-length, by one or more apertures, F, and at or near the ends thereof, by ducts G *g* G' *g'*, to which the overplus of oil is conveyed by channels H H', substantially as set forth.

3,624.—FRANCES LEE BARNES, New York, N. Y., executrix of the estate of SAMUEL H. BARNES, deceased.—*Corset-Spring.*—Patented July 17, 1866, No. 56,345; reissued May 12, 1868, No. 2,929; again reissued June 29, 1869, No. 3,520; again reissued August 31, 1869.

Claim.—1. A pair or set of corset-springs, each spring consisting of two or more metallic plates, placed one upon another, and fastened together at their centers, but so connected, at or near each end, that they can play or move upon each other in the direction of their length, and be prevented from sliding off each other laterally.

2. A pair or set of corset-springs, each spring composed of two or more metallic plates, placed one above another, and fastened together at their centers, and so connected at or near each end that they can move or play upon each other in the direction of their length.

3. A pair or set of corset-springs, each spring consisting of two or more metallic plates, placed one upon another, and fastened together at their centers, but so connected at or near each end that they can play or move upon each other in the direction of their length, and be prevented from sliding off each other laterally—the clasps by which the springs are combined, except the center one, being attached to only one of the plates.

3,625.—GEORGE DOOLITTLE and GEORGE H. DIMOND, Bridgeport, and THOMAS WALLACE, Jr., Ansonia, Conn., assignees, by mesne assignments, of T. B. DOOLITTLE.—*Lamp-Shade.*—Patented March 10, 1868, No. 75,390; reissued August 31, 1869.

Claim.—1. As an article of manufacture, a corrugated metallic shade for lamps, combined with a spring or springs, at or near the upper edge, to be self-adapting to the chimney, substantially as described.

2. The employment, in combination with a shade or reflector of a spiral or coil spring or springs, arranged in the upper edge of the shade, so as to roll over or spring back, substantially as described, for the purpose set forth.

3. Forming a corrugated or crimped metallic shade, so as to be yielding at its upper edge, and providing it with projecting teats or lips, *s s*, substantially as described and for the purpose set forth.

3,626.—JAMES F. HARCOURT, Moscow, Ind.—*Wheat-Drill.*—Patented November 13, 1866, No. 59,595; reissued August 31, 1869.

Claim.—1. The concave bottom *l* in hopper E, provided with the holes or openings *m*, in combination with the toothed wheels *n*, fitted in inclosures *t* underneath the bottom *l*, the yielding plates *u*, and arms *v*, attached to shaft *w*, for adjusting the plates *u*, substantially as and for the purpose set forth.

2. The pivoted standard *c*, in combination with the slotted arm *i*, bearing the shaft C, substantially as described, for the purpose specified.

3. The adjustable yielding plate *u*, in combination with arms *v*, shaft *w*, and index-arm *a'*, substantially as described, for the purpose specified.

4. The arrangement of the adjusting wheel B, in line with and in rear of the central standard *f*, as and for the purpose stated.

5. The seed-conductors S, attached at their respective ends to the frame A, and standards *c*, in the manner described, so as to form braces or supports for said standards, as set forth.

6. In combination with the wheel B, and the seed-shaft and its accessories *n o p t u v*, the gears *r*, communicating motion from the wheel B to the said shaft, as described.

3,627.—ÆTNA MANUFACTURING COMPANY, Salem, Ohio, assignees of AMOS RANK.—*Harvester.*—Patented February 12, 1867, No. 61,953; reissued August 31, 1869.

Claim.—1. The combination, in a harvester, of a bearing projecting from the main frame, a swiveling eye-bolt working in the bearing, and a gauge-collar fitting on the eye-bolt and changeable from one side of the socket to the other, the combination being and operating substantially as set forth.

2. The combination, in a harvester, of a fixed bearing or socket, a changeable gauge-collar, a longitudinally-adjustable eye-bolt, and a vibrating drag-bar, with a hinged cutting-apparatus, the combination being and operating substantially as set forth.

3,628.—JOHN THRASHER, Albion, Mich.—*Wagon-Wheel.*—Patented January 30, 1866, No. 52,341; reissued August 31, 1869.

Claim.—In combination with a wooden hub, formed with mortises to receive the tenons of the

spokes, a metallic band encircling the hub, and formed with sockets to receive and support the spokes, substantially as and for the purpose set forth.

3,629.—KATE LOWE and WILLIAM MCTEER, Baltimore, Md., assignees, by mesne assignments, of BENJAMIN A. LAVENDER and HENRY LOWE.—*Fiber from Cane for Paper, and for other Purposes.*—Patented April 4, 1854, No. 10,722; extended seven years; reissued June 9, 1868, No. 2,983; again reissued August 31, 1869.

Claim.—1. Obtaining the fiber from the cane or reed *Arundinaria macrosperma* of Michaux, for the purpose specified.

2. Cane-cotton or hemp, as a new article of commerce and manufacture, for the purpose specified.

3. Breaking down woody fiber of cane and other like plants, and dissolving the gummy and other foreign matters therefrom, by means of muriatic or sulphuric acid of the strength of 16° Baumé, or thereabout, preparatory to making hemp or cotton for bagging, rope, paper-pulp, &c., in the manner substantially as set forth.

3,630.—JAMES ARMSTRONG, Jr., Elmira, Ill.—*Corn-Planter.*—Patented July 22, 1862, No. 35,914; reissued September 7, 1869.

Claim.—1. A treadle-frame, J, pivoted in front of the axles C C, and extending in rear of the same, in combination with the main wheel-frame A, and with a secondary frame D, which is hung from the main frame, and provided with furrow-openers and seed-dropping devices, substantially as described.

2. The combination of the main frame A, pivoted secondary furrowing and seed-dropping frame D, treadle J, and the rigid draught-pole L, substantially in the manner and for the purpose described.

3. The oscillating valve H′, applied to the seed-tube G substantially as described.

4. The stationary shelf *n*, in combination with valve H′, substantially as described.

5. The construction of the seed-tube G′, with channels *m*, terminating in a recess adapted to receive a valve H′, and shelf *n*, substantially as described.

6. The transversely-adjustable drop-plate *i*, constructed substantially as described.

7. Double slides on each end of the seed-slide, in combination with a perforated intermediate drop-plate *i*, substantially as described.

8. The adjustable runners H, arranged in front of colters I, substantially as described.

9. The arrangement of the oscillating valve H′ and shelf *n*, in combination with the two channels *m* of the seed-tube G′, and with seed-distributing mechanism, constructed to operate substantially as described.

10. The arrangement of hinged adjustable runners H, secondary frame D, and lever J, in combination with the colters I and shoes I′, constructed and operating substantially as described.

11. The arrangement of the seed-hoppers, the operator's seat, and the seed-tubes, in the relation shown, so that the operator, when on his seat, can see the seed as it falls from the shelves of the tubes upon the ground, substantially as described.

3,631.—GEORGE DUNHAM, Unionville, Conn., assignee, by mesne assignments, of EDWARD PAYE and SAMUEL HALL.—*Machine for Forging Nuts.*—Patented September 8, 1857, No. 18,156; reissued September 7, 1869.

Claim.—1. The combination and arrangement of the cutters, perforating-punch, and edging-hammers, so that the punch enters the nut-blank at the crowning face thereof, and that the nut is hammered edgewise, substantially as before set forth.

2. The combination of the adjustable cutter, transferring-instrument, and edging-hammers, in such manner that the nut-blank, after being cut from the bar, is transferred to the place between the edging-hammers so as to be forged edgewise.

3. The combination of the perforating-punch with edging-hammers, arranged and constructed to hammer all sides of the blank without the necessity of turning the blank.

4. The combination of the cutters, the die for the crowning face of the nut-blank, and edging-hammers, substantially as set forth.

5. The combination of the adjustable cutter, the die for the crowning face of the nut, the edging-hammers, and the flatter, substantially as before set forth.

6. The combination of the die and edging-hammers with a flatter, so constructed and arranged, relatively to said die and hammers, that it operates both as a flatter to compress the nut-blank faceewise against the die, and as a transferring instrument to move the blank to the place where the edging-hammers act upon it, substantially as before set forth.

7. The combination of the edging-hammers with cutters, one of which is constructed with a perforation in its face to admit the perforating-punch, and with a lateral opening to permit the escape of the piece punched out of the blank, substantially as before set forth.

8. The combination and arrangement of the punch, edging-hammers, die, and flatter, in such manner that the blank is punched in the space between the edging-hammers before it is forged by them, substantially as before set forth.

9. The combination of the adjustable cutter, punch, die, flatter, and edging-hammers, substantially as before set forth.

10. The combination and arrangement of the flatter and edging-hammers, in such manner that the former operates upon the nut-blank while it is not griped or held by the latter, substantially as before set forth.

3,632.—B. A. EARL, Philadelphia, Pa., assignee of B. A. EARL and HENRY HOLCROFT.—*Apparatus for Oiling Wool.*—Patented May 30, 1865, No. 47,938; reissued September 7, 1869.

Claim.—The mechanism for oiling wood, substantially as described, said mechanism consisting of an oil-reservoir and a sprinkler, having such a movement imparted to it that it will enter the oil in the reservoir, and then discharge the adhering oil on to the wool in the form of drops or spray.

3,633.—JAMES W. RUTTER, Saint Louis, Mo.—*Ore-Crusher.*—Patented March 23, 1869, No. 88,216; reissued September 7, 1869.

Claim.—1. The cone B on the arbor D, when sustained and operated in such manner as to swing in a conical orbit around the axis of its surrounding cylinder, without rotating around said arbor, substantially as set forth.

2. The gauge-ring C, arranged and operating in combination with the cylinder A, and crusher or grinder B, substantially as and for the purposes herein set forth.

3. The combination, with the gauge-ring C, and cylinder A, of the stripper or clearer *j*, substantially as and for the purpose herein set forth.

3,634.—HERBERT L. ANDREWS, Chicago, Ill.—*Inkstand.*—Patented March 31, 1868, No. 76,138; reissued September 7, 1869.

Claim.—1. The rim D, surrounding the flange of the reservoir, and having the inner beveled side, and the laterally-swinging cover C, and either with or without the recesses or indentations *n*, in combination with the reservoir B, either with or without the lateral projections *a*, substantially as herein described, for the purpose specified.

2. The cover C of an ink-well, made concave or recessed upon its upper surface, to form a receptacle for pens, wafers, &c., substantially as herein shown and described.

3. The combination of the rearward extension *d*, formed upon the cover C, with the lug *g* formed upon the inner end *e* of the guard D, arranged as herein shown and described, for the purpose specified.

4. The laterally-swinging cover of an ink-well, provided upon its upper surface with a pen-rack, substantially as described, for the purpose specified.

3,635.— CHARLES GOODYEAR, Jr., FRANCIS DU BOIS, FREDERICK RENAUD, and HENRY T. CLOSE, New York, N. Y., assignees of AUGUSTUS DESTOUY.—*Sewing-Machine for Boot and Shoe Sewing.*—Patented February 18, 1862, No. 34,413; reissued September 7, 1869.

Claim.—1. The combination, in a sewing-mechanism, of a needle, or equivalent instrument, carrying thread through the material to be sewed, with an independent piercing-instrument, when both have

motion upon a common center of oscillation or revolution, substantially as set forth.

2. The combination of a needle and an awl or piercing-instrument, both operating on a common axis of revolution or oscillation, with a support, holding in the path of both the work to be sewed, substantially as set forth.

3. The oscillatory needle or awl-stock, driven by the direct and positive action of the driving-mechanism, so that the needle may describe an arc of a circle not less than thirty degrees, substantially as and for the purposes described.

4. A sewing-mechanism, adapted to unite, by machinery, the upper, welt, and sole, substantially as described, so as to produce a machine-made welted boot or shoe.

5. The combination of a sewing-mechanism and a support for the work to be sewed, arranged, in relation to each other, substantially as described, so that the seam uniting the upper and the sole may be made through part of the thickness of the sole.

6. The support, arranged substantially as herein shown and described, so as to serve as a rest upon which the work will slide, a sewing-gauge to regulate the distance of the stitches from the upper or from the edge of the sole, and also as a guard or shield, to prevent the awl and needle from marking or injuring the surface of the uppers, substantially as set forth.

7. The combination, in a sewing-mechanism, of a circularly-curved awl with a circularly-curved needle, substantially as and for the purposes described.

3,636.—ANDREW CHRISTIAN, New York, N. Y. —*Children's Carriage.*—Patented April 24, 1866, No. 54,111; reissued August 11, 1868, No. 3,074; again reissued September 14, 1869.

Claim.—The new article of manufacture of a child's carriage, or perambulator, constructed substantially as herein specified, that is to say, the combination, in order to produce such carriage, of the following parts, to wit: a body, provided with a permanent seat and a handle, two rear wheels, which are placed one at each side of the body, and two forward wheels, which are arranged within parallel lines drawn forward from either side of the carriage-body, substantially as and for the purposes herein specified.

3,637.—HENRY H. COLLINS, BENJAMIN F. COLLINS, and HOMER WRIGHT, Pittsburgh, Pa., assignees of EDWARD M. DAVIS.—*Fruit-Jar.*—Patented October 27, 1868, No. 83,367; reissued September 14, 1869.

Claim.—1. A preserve jar or can, having a series of names of articles thereon, one or the other of which is intended to be sealed therein, and used, in connection with an indicator, to designate the particular fruit or article of said series, when sealed in said jar or can, substantially as described.

2. As a new article of manufacture, a preserve jar or can top, having a series of names thereon, to designate the articles intended to be sealed or preserved, substantially as described.

3,638.—TIMOTHY J. POWERS, New York, N. Y. —*Metallic Cartridge.*—Patented October 17, 1865, No. 50,536; reissued September 14, 1869.

Claim.—A shot-cartridge, consisting of the case, Fig. 2, formed of strips *e* of metal or other suitable material, longitudinally arranged in a cylindrical form, loaded with shot, constructed and arranged substantially as specified.

3,639.—ALMON ROFF, Southport, Conn.—*Lock-Nut.*—Patented April 13, 1869, No. 88,908; reissued September 14, 1869.

Claim.—1. The shaft C, with double threads, *a* and *b*, crossing each other, as shown in Fig. 1, to allow a right-hand nut to pass over a thread adapted to a left-hand nut, and *vice versa*, as specified.

2. The combination of the screws *c* with the nuts A B and screw-shaft C, substantially as described, for the purpose specified.

3. The combination, with a screw-bolt, C^2, and nut A^2, of a locking-screw, B^2, operating substantially as described.

3,640.—JAMES OSWALD SWINNEY, Glasgow, Mo., and A. H. POLLOCK, Germantown, Ky., assignees, by mesne assignments, of JOSEPH BENOHUE HARRIS.—*Composition for Rendering Paints Fire-Proof.*—Patented July 3, 1866, No. 56,044; reissued September 14, 1869.

Claim.—1. The herein-described composition or material for mixing with paints, to render them fire-proof, substantially as described.

2. The combination of calcined schist, shale, or mineral coal, prepared as above described, with any kind of oil-paint, to render the same uninflammable, or fire-proof, substantially as above set forth.

3,641.—MICHAEL THORNTON, Philadelphia, Pa. —*Sole of a Boot or Shoe.*—Design No. 3,530, dated June 1, 1869; reissued September 14, 1869.

3,642.—CLEMENT OLHABER, Cincinnati, Ohio.—*Cooking-Stove.*—Patented February 2, 1869, No. 85,578; reissued September 21, 1869.

Claim.—1. The long-center, composed of two pieces, A *a*, A′ *a*′, supported by the post C, in the manner set forth.

2. A sliding oven-door, provided with wedge-formed surfaces, substantially as and for the purpose set forth.

3. The slide F′, secured to the jamb by one or more hooks L, and one or more bolts K, as explained.

4. The provision of one or more extensions G, upon the jamb G, substantially as set forth.

5. In combination with the elements of claim second, the strips *e*′ and groove *e*, serving to steady the movement of the doors, as described.

3,643.—WILLIAM E. PRALL, Washington, D. C., and A. C. RAND, New York, N. Y., assignees of WILLIAM E. PRALL.—*Steam Water-Elevator.*—Patented July 6, 1869, No. 92,357; reissued September 21, 1869.

Claim.—1. A water-elevating engine, combining in its construction a steam-generator, so arranged that it is supplied with hot water from the hot-water cylinder or pipe, a condenser, which receives its steam from the generator, a hot-water cylinder or pipe, in which the water acts as a piston for the steam to press against in expelling the cold water therefrom, and curved or siphon pipes, in which the water which they contain acts as a valve to cut off the communication between the generator and the condenser, substantially as shown and described.

2. So arranging the condenser and siphon, or curved pipes of a water-elevating machine, that the steam which is used to expel the water from the generator or hot-water cylinder, shall afterward be used in the condenser to take the place of the receding water, as the generator is being refilled, and afterward be condensed for the purpose of forming a vacuum in such condenser, in order that water may flow in and refill such condenser, substantially as shown and described.

3. The combination of the reservoir A, the generator A^2, and connecting-pipe A^1, constructed and arranged substantially as set forth.

4. The arrangement of the reservoir A, the pipe D, and the cylinder or pipe A^1, substantially as shown and described.

5. The combination of pipe D, generator A^2, and the pipe E, substantially as shown and described.

6. The combination and arrangement of the discharge pipe C, jet-pipe F, and pipe D, substantially as shown and described.

3,644.—GEORGE L. SMITH, Brooklyn, N. Y.—*Grate.*—Patented March 29, 1864, No. 42,118; reissued September 21, 1869.

Claim.—1. Arranging the air-passages or openings in furnace-grates diagonal or oblique to the length or width of the grate, as shown and described, and for the purpose set forth.

2. The arrangement of the air-passages or openings within furnace-grates oblique to the length or width of the grate, in combination with the constructing of the said grate of a series of sections, substantially as shown and for the purpose described.

3,645.—JULES STREHLER, New York, N. Y., as

signee of EUGENE BOURSON.—*Steam-Engine.*—Patented November 19, 1867, No. 70,948; reissued September 21, 1869.

Claim.—1. The method of retarding or stopping the motion of the piston in a steam-cylinder, substantially as herein specified.

2. The combination, with the two ends of a steam-cylinder, of a pipe, C, provided with one or more stop-cocks, substantially as herein described.

3. The combination, with the pipe C, and its stop-cocks *a a*, of the blow-off pipes or orifices *c c*, substantially as herein specified.

4. The connection of the two cylinders of a locomotive-engine by means of a pipe, F, whereby steam or water, or both together, can be conducted into the ends of the cylinders, substantially as and for the purposes herein specified.

3,646.—D. A. KENNEDY, WILLIAM WADSWORTH, and E. D. MURRAY, Darien, Wis., assignees of D. A. KENNEDY. — *Rotary Oven.*—Patented July 20, 1869, No. 92,840; reissued September 21, 1869.

Claim.—1. The fire-chambers M and flues P of a rotary oven, arranged as described, or in any equivalent manner, to discharge the heat and products of combustion equally throughout the oven, both above and below the rotary table, substantially as herein set forth, for the purpose specified.

2. The combination of the rotary table or oven bottom with the stationary vertical shaft C, rotary collar E, fixed collar D, and friction-balls F, substantially as herein shown and described, for the purpose specified.

3. The friction-wheels or rollers B, in combination with the rotary oven-table and the track a^1, substantially as herein shown and described, for the purpose specified.

4. The rotary table, constructed substantially as described, of the collar E, radial arms G, rollers B, and sectional plates I, and either with or without the rim H, for the purpose specified.

3,647.—AMERICAN PRINT-WORKS, Fall River, Mass., assignees of JOHN LIGHTFOOT. — *Printing Certain Textile Fabrics and Yarns.*—Patented October 20, 1868, No. 83,182; reissued September 28, 1869.

Claim.—The improvement in the process of printing textile fabrics, which consists in modifying the indigo-preparation as herein set forth, and in connection with such modified preparation, the use of carbonate of potash, alkaline silicates, or the chemical equivalents of them, in simultaneously fixing indigo blue or green, or both, in juxtaposition with ordinary madder mordants, substantially as described.

3,648.—CHARLES EDWARD BLAKE, San Francisco, Cal.—*Pump-Device for Steam and other Engines.*—Patented January 26, 1869, No. 86,273; reissued September 28, 1869.

Claim.—1. The arrangement of the cylinder A, escape-valve C, spring D, adjusting-screw F, waste-way E, with an indicator, all constructed substantially as set forth.

2. In combination with the subject-matter of the first clause of claim, the joint B, for the attachment of the main or leading hose, substantially as set forth.

3. In combination with the subject-matter of the first clause of claim, the waste-cock I, as specified.

3,649.—ESEK BUSSEY, Troy, N. Y.—*Cooking-Stove.*—Patented July 24, 1866, No. 56,525; reissued September 28, 1869.

Claim.—1. A diving-flue cooking-stove, with the exit-flue so constructed as to inclose, on the sides and bottom, the culinary boiler or hot-water reservoir B.

2. A diving-flue cooking-stove, with the exit-flue constructed across the bottom, and up the rear upright side of the culinary boiler or hot-water reservoir B.

3. A diving-flue cooking-stove, constructed with an exit-passage, F, below the top of the oven, and an exit-flue, E E′, in combination with an incased reservoir, B, attached to the rear of the stove, and placed just above such exit-passage, and so arranged that the gases of combustion, in passing through such exit-flue, will impinge upon or come in direct contact with said reservoir, substantially as and for the purposes hereinbefore specified.

4. An exit-passage, F, constructed in the rear of a diving-flue cooking-stove, and below the top of the oven, in combination with an incased reservoir, B, attached to the rear of the stove, the bottom of which reservoir is also below the top of the oven, and so arranged that the gases of combustion will come in contact with and heat such reservoir by a direct draught from the fire-box to the smoke-pipe.

3,650. — BENJAMIN COLLINS, New York, N. Y., assignee, by mesne assignment, of RICHARD B. LOCKE and WILLIAM B. ULRICH. —*Gas-Burner.*—Patented April 16, 1867, No. 63,802; reissued September 28, 1869.

Claim.—1. The divisional piece *d*, or its equivalent, applied to the orifice *a* of the grooved cock D, and constructed with gas-escapes *e e*, in combination with a self-lighting burner, substantially as described.

2. The hood or shell G, for supplying oxygen to the burner, and for the concealment and protection of the small flame, substantially as described.

3,651.—HENRY DISSTON and HAMILTON DISSTON, Philadelphia, Pa., assignees, by mesne assignments, of JOSEPH W. STRANGE.—*Detachable Saw-Teeth.*—Patented August 13, 1867, No. 67,682; reissued September 28, 1869.

Claim. — A detachable saw-tooth, with a base adapted to a recess in the blade, when the said base and recess are made with corresponding curves of such character that pressure against the point of the tooth will tighten the base in its recess, all substantially as shown and described.

3,652.—D. ELLIOT and E. SEELY, New York, N. Y.— *Washer for Lock-Nuts.*—Patented February 4, 1868, No. 74,060; reissued September 28, 1869.

Claim.—1. A nut formed with ratchet-teeth at its inner end, in combination with a sheet-metal washer, having a pawl made of the sheet-metal of the said washer, substantially as set forth.

2. The washer formed out of sheet-metal, substantially as set forth.

3,653. —ALFRED B. ELY, Newton, Mass., assignee of FRANCIS J. VITTUM and EDGAR M. STEVENS.—*Breech-Loading Fire-Arm.*—Patented October 22, 1861, No. 33,560; reissued September 28, 1869.

Claim.—1. The charge-holder, materially larger than the bore of the barrel, substantially as described.

2. The devices for exploding the charge, constructed, arranged, and operating substantially as described.

3. The devices for moving and locking the movable chambers, constructed, arranged, and operating substantially as described.

3,654. — CHARLES F. HALL, for himself, and CHARLES S. HALL, assignee of CHARLES F. HALL, Brooklyn, N. Y.—*Machine for Refitting Valves.*—Patented December 10, 1867, No. 72,031; reissued September 28, 1869.

Claim.—1. A tool, whether composed of two or more arms or longitudinal sections of a hollow cone, or a hollow cone and a stock, A, provided with one or more cutters, adjustable or movable toward or from the valve to be operated on, and otherwise adapted for refitting the faces of conical valves, substantially as specified.

2. In combination therewith, the yielding center C, substantially as described.

3,655.—DAVID MANUEL, for himself, DEDHAM, and FREDERICK K. BALLOU, assignees, by mesne assignments, of DAVID MANUEL, Foxborough, Mass.—*Bedstead.*—Patented April 14, 1863, No. 38,202; antedated October 14, 1862; reissued September 28, 1869.

Claim. — 1. The combination of conically-coiled spring D, having its apex *d* inserted in the bar B, with bar B, box C, and slat F, arranged substantially as herein described.

2. The combination of conically-coiled spring D, for the support of the bearing E, having additional spring-rod and hinge G, shouldered for the loops or bracelets *f*, on slats F, and supporting and wedging cross-bars B and boxes C, all arranged and applied in the manner specified.

3. The slotted and tongued bed-rail fasteners H K, constructed and applied substantially as specified.

3,656.—O. B. Olmsted, Beloit, Wis.—*Adjustable Stove-Pipe Shelf.*—Patented August 20, 1867, No. 67,900; reissued September 28, 1869.

Claim.—1. A stove-pipe shelf encircling the stove-pipe, made or cast of metal in open work of any design, substantially as described.

2. An improved stove-pipe shelf, constructed in two parts, substantially as described.

3. In combination with the foregoing, the collar K, with the projections D D, as and for the purpose specified.

4. The ribs C C, when the whole is constructed substantially as herein set forth, for the purpose specified.

3,657.—H. W. Shepard, Mannsville, N. Y., assignee of George A. Huggins. — *Milk-Can.*—Patented July 14, 1868, No. 79,907; reissued September 28, 1869.

Claim.—A can, consisting of the sheet-metal cylinder A and metal bottom B, the latter being provided with a recess, *c*, groove *c'*, and inclined sides *b b'*, as set forth.

3,658.—Henry Callahan, John Reese, and R. S. Hoglen, Dayton, Ohio, assignees, by mesne assignments, of Henry Callahan.—*Bucket-Ear.*—Patented May 7, 1867, No. 64,484; reissued October 5, 1869.

Claim.—A wire bucket-ear, constructed separate from the vessel to which it is to be attached, substantially as described.

3,659.—Edmund J. Cridge, Troy, N. Y.—*Cooking-Stove.*—Patented May 6, 1862, No. 35,141; reissued October 5, 1869.

Claim.—1. The combination of the continuous air-space I J, the oven D, fire-chamber A, draught-chamber C, and fire-flues E E' E'', the latter provided with a damper, W, substantially as set forth.

2. The air flue or flues *t t* and *u*, having communication with the open air, fire-chamber A, and air space or flue I J, substantially as set forth.

3. The arrangement of the defleeting-plates *d d* in the upright portion of the continuous air-space I J, in combination with the oven D, fire-chamber A, and fire-flues E E' E''; and with the air-passages *r o p* and *q*, or their equivalents, substantially as set forth.

4. The arrangement of the apertures or air-passages *r o p* and *q*, in combination with the continuous air-space I J, oven D, fire-chamber A, draught-chamber C, and fire-flues E E' E'', provided with a valve or damper, W, substantially as set forth.

3,660.—Martin Martins, New York, N. Y.—*Metal Frame for Pianos.*—Patented September 4, 1866, No. 57,743; reissued October 5, 1869.

Claim.—1. The east-metal frame A, constructed as described, with the strengthening-ribs *a*, double-shouldered bracket *b*, supporting the wrest-plank *c*, the plate *d*, the lips *e f*, and L-shaped plank *i*, and provided with the tension-rods *h*, as herein set forth, for the purpose specified.

2. The L-shaped plank *i*, in combination with the lips *e f* of the frame A, and with the tension screw-rods *h*, constructed and operating substantially as and for the purpose described.

3,661.—Isaac V. Holmes, New York, N. Y.—*Metallic Lathing.*—Patented January 26, 1869, No. 86,305; reissued October 5, 1869.

Claim.—1. A metallic stud or support, when formed with suitable projections and recesses or slits for holding metallic lathing, substantially as herein described and set forth.

2. The mode of fastening metallic laths, of any suitable form, upon metallic studs or supports, when formed with projections and recesses or slits, by riveting the corners of the projection down over the edge of the lath, substantially as described.

3,662.—John Reist, Philadelphia, Pa.—*Wash-Boiler.*—Patented November 29, 1864, No. 45,272; reissued October 5, 1869.

Claim.—1. The combination of a loose-fitting solid or unperforated false bottom, B, having an upright tube, D, or equivalent, attached thereto, with a boiler, for the purposes hereinbefore described.

2. The combination of the cap E, or an equivalent therefor, with the upright tube D and loosely-fitting unperforated false bottom B, for the purposes hereinbefore described.

3,663.—Arthur Wadsworth, Newark, N. J., for himself, and Robert Schell, New York, N. Y., assignee of Arthur Wadsworth.—*Attachment of Mainsprings to Watch-Barrels, &c.*—Patented June 15, 1869, No. 91,388; antedated December 15, 1868; reissued October 5, 1869.

Claim.—1. The pivoted segment *d*, fitted in the periphery or side *b* of the barrel A, with the pivots, which are at one end of the segment, working in fixed bearings in the barrel, and the opposite or free end of the segment attached to the outer end of the spring C, all arranged substantially as and for the purpose herein set forth.

2. The manner of attaching mainsprings to watches, so that the end of the spring may turn on pivots fitted into fixed bearings in the upper and lower sides of the barrel.

3,664.—John L. Whipple, Detroit, Mich.—*Spring Seat.*—Patented June 9, 1868, No. 78,705; reissued October 5, 1869.

Claim.—In combination with any suitable frame, A, the series of coil springs D, with loops or bights pointing inwardly, and connected by interlaced webbing or straps, substantially as and for the purposes set forth.

3,665.—Alonzo Hitchcock, George G. Saxe, and James H. Robertson, New York, N. Y., assignees of Riley W. Carpenter.—*Tremolo-Attachment.*—Patented June 27, 1865, No. 48,366; reissued May 18, 1869, No. 3,444; again reissued October 5, 1869.

Claim.—1. The application of means to the instrument, by which the air may be agitated to produce a tremulous note, as described.

2. The arrangement of a fan or agitator in the instrument, at right angles to the keys, and parallel to the line of reeds or pipe-mouths, at any convenient distance from them, as described.

3,666.—Hosea Ball, New York, N. Y.—*Oven.*—Patented September 23, 1856, No. 15,753; reissued October 12, 1869.

Claim.—1. One or more swinging bread-holders, suspended from the arms or end plates of a rotating reel, in combination with a furnace, so arranged and connected that the products of combustion will pass into or through the chamber within which the bread-holders move.

2. In combination with a rotating reel and swinging bread-holders, a flue around the chamber in which the reel rotates, and communicating with said chamber through perforations in the wall between them.

3. In combination with a swinging bread-holder, revolving in an oven, a discharging-chute and tripping-device, by which the bread is delivered from its platform, and into the chute, substantially as and for the purposes described.

3,667.—Edwin D. Brainard, Albany, N. Y.—*Method of Preserving the Aromatic Principle of Hops.*—Patented July 27, 1869, No. 92,934; reissued October 12, 1869.

Claim.—The improved mode of preserving the aromatic principle of hops, by keeping them stored in a dry atmosphere, at a low temperature, as herein described.

3,668.—W. T. Bush, Union City, Tenn.—*Manufacture of Soap.* — Patented August 24, 1869, No. 94,073; reissued October 12, 1869.

Claim.—The combination of the said ingredients, when the same are manufactured into soap, substantially as set forth.

3,669.—Gustavus A. Davison, San Leandro, Cal. — *Gang-Plow.* — Patented July 7, 1868, No. 79,639; reissued October 12, 1869.

Claim.—1. Regulating the level of the machine by

the device O O′, and set-screw P, or their equivalents, substantially as set forth.

2. The rigid arms H, H′, and G, attached to the axle, and connecting the lever or sweep J, either directly to the arm G, or by the link I, substantially as and for the purpose specified.

3,670. — A. S. DINSMORE, New York, N. Y.— *Needle-Sharpener.* — Patented May 25, 1869, No. 90,433; reissued October 12, 1869.

Claim.—A needle-sharpener, constructed, as described, of plates A and B, having approximate beveled and roughened edges, and secured together, substantially as specified.

3,671.—OSCAR T. EARLE, Norwalk, Conn., assignee of NORMAN W. WHEELER.—*Method of Operating Steam-Valves.* — Patented July 31, 1855, No. 13,369; antedated March 1, 1855; extended seven years; reissued October 12, 1869.

Claim.—1. Connections or passages leading from a main cylinder to a cylinder inclosing valve-moving pistons, whereby steam is admitted from the main cylinder, so as to act upon valve-moving pistons, substantially as described.

2. In combination with passages leading from a main cylinder to a cylinder containing valve-moving pistons, a main piston, acting, substantially as described, as a valve to open and close such passages, the construction being as described.

3. Combining valve-moving pistons and valves, substantially as described, so that no stuffing-boxes intervene between the valves and the pistons, which operate them.

4. Mounting valves and valve-moving pistons upon the same spindle or stem, as described.

5. Piston-valves, in combination with valve-working pistons, and a cylindrical chamber containing them, substantially as set forth.

6. A pocket or recess, closed by a piston, so as to arrest the movement of a valve and valve-spindle, the pocket communicating directly with the valve-chest in which the valve slides, and there being no stuffing-box between the valve and the pocket.

3,672.—JAMES ORR, Hampden Township, Pa., assignee of P. DANIELS.—*Tire-Tightener.*—Patented April 17, 1866, No. 53,957; reissued October 12, 1869.

Claim.—1. The right-and-left threaded screw H, in combination with the lugs F and G, and nuts I and J, or their equivalents, and the tire of a wheel, arranged and operating substantially in the manner and for the purpose herein shown and specified.

2. The plates K and L, in combination with the right-and-left threaded screw H, arranged and combined substantially as and for the purpose herein shown and described.

3. The caps O and P, or their equivalent, in combination with the right-and-left threaded screw H, arranged, with relation to each other and the rim of a wheel, substantially as and for the purpose specified.

4. The combination and arrangement of the right-and-left threaded screw H, and lugs F and G, and nuts I J, or their equivalents, plates K L, and caps O and P, or their equivalent, and the tire of a wheel, substantially as and for the purpose herein shown and set forth.

3,673.—R. B. PARKS and J. R. PARKS, Neponset, Ill.—*Stalk-Cutter.*—Patented January 12, 1869, No. 85,847; reissued October 12, 1869.

Claim.—1. The heads I I, constructed each of two parts *b b*, provided with arms *c*, and connected by bolts *d*, for the purpose of firmly securing the knives J in position, substantially as herein shown and described.

2. The combination of the heads I, supporting-knives J, frame G, chains L, lever N, and hooks K, all constructed and arranged as described.

3,674.—EDWARD WESTERMAYR, Chicago, Ill.— *Composition for Artificial Stone.*—Patented January 5, 1869, No. 85,713; reissued October 12, 1869.

Claim.— Artificial stone, of any desired form or color, composed of the ingredients, substantially as herein described.

3,675.—FREDERICK W. DEAN, Tremont, Ill.— *Door-Latch.*—Patented August 17, 1869, No. 93,685; reissued October 19, 1869.

Claim.—1. The combination of weighted latch *b*, levers *e* and D, and spindles *g f*, when constructed and arranged substantially as specified.

2. The spindles *g f*, in combination with the covers B and E, when arranged to hold said spindles in place, substantially as described.

3,676.—FLORENCE MANUFACTURING COMPANY, Florence, Mass., assignee, by mesne assignments, of ALANSON C. ESTABROOK.—*Brush.*—Patented June 19, 1866, No. 55,764; reissued October 19, 1869.

Claim.—1. A back, composed of an interior strip or plate of metal, or other suitable material, to give it requisite strength, and embedded in a composition or cement, that forms, in whole or in part, the exterior of the back, substantially as described.

2. In a back composed of an interior strengthening-piece, and a composition or cement exterior, the giving of its shape, form, and ornamentation to it, at the same time and by the same means that presses the plastic material around the strengthener, substantially as described.

3,677.—WILLIAM A. FLECK, Philadelphia, Pa., assignee of HUGO FLECK.—*Manufacture of Glue.*— Patented May 18, 1869, No. 90,160; reissued October 19, 1869.

Claim.—The herein-described use of salts, either dry or in solution, in the process of drying glue.

3,678.—CHARLES E. L. HOLMES, New York, N. Y.—*Machine for Drying and Scouring Sheet-Metal* —Patented July 21, 1868, No. 80,179; reissued October 19, 1869.

Claim.—1. A series of moving rollers, arranged to act successively upon the surface of a sheet of metal, and scour or wipe the surface of the same while being passed through the machine, substantially as set forth.

2. A series of moving rollers, arranged to act upon the surface of a sheet of metal, and scour or wipe the surface of the same, in combination with an inclosing-box or case for retaining sawdust or other fine particles of material for operating on the sheet-metal, substantially as set forth.

3. In a machine for scouring or drying sheet-metal, arranging the rollers or parts that operate upon the sheet-metal, in substantially the manner specified, so that the sheet-metal shall be in a curved position while being acted upon, substantially as and for the purposes specified.

4. A winding-up roller, in combination with the scouring or drying mechanism, substantially as specified, whereby the sheet-metal can be drawn through the apparatus, wound up, and then removed with facility, substantially as set forth.

3,679.—ISAAC KEITH, HIRAM T. KEITH, and ISAAC N. KEITH, West Sandwich, Mass., assignees of ISAAC KEITH.—*Dumping-Car.*—Patented July 13, 1869, No. 92,457; reissued October 19, 1869.

Claim.—1. The combination and arrangement of the rails *c* and wheels *d*, and the middle and lateral stops *k r r*, or their equivalents, with a tip-cart body, B, and a railway-carriage, A.

2. The combination and arrangement of the chains *m*, or their equivalents, with a railway-carriage, A, and a tip-cart body, B, the supporting-wheels *d*, and rails *e*, and middle and lateral stops *k r r*, or the equivalents thereof, the whole being substantially as set forth.

3. The combination and arrangement of the guide-rails *l*, or their equivalents, with a railway-carriage, A, a tip-cart body, B, and the supporting-wheels *d*, and rails *e*, and stops *k r r*, of such tip-cart body, the whole being substantially as explained.

4. A long ear or platform, *a*, and two or more trucks *b b*, and one or more tip-cart bodies B, and supporting-wheels *d*, rails *e*, and middle and lateral stops *k r r*, or their equivalents, arranged in combination, essentially as described.

3,680.—J. D. S. NEWELL, Tensas Parish, and A. G. BRICE, E. TOMATIS, and THOMAS PICKLES, New Orleans, La., assignees of J. D. S. NEWELL.—*Breech-*

Loading Fire-Arm.—Patented April 6, 1869, No. 88,730; reissued October 19, 1869.

Claim.—1. The combination of the slotted or hooked link *c*, and hammer or lever B, when said lever is located in a plane centrally with the axis of the bore of the barrel, whereby the reciprocating breech-closer is operated both ways, as herein described.

2. The centrally-located hammer or lever B, in combination with the reciprocating breech-closer, for the purpose of locking said closer against the recoil or force of the explosion, as set forth.

3. The combination of the mainspring, central vibratiug hammer, and breech-closer, whereby the breech is closed and locked, and the charge ignited at the one operation of pulling the trigger, as specified.

4. The combination of the mechanism herein described, whereby the cartridge or case is withdrawn and expelled, the breech opened, and piece cocked, as set forth.

3,681.—NICOLAS PETRÉ, New York, N. Y.—*Lock.*—Patented July 30, 1867, No. 67,213; reissued October 19, 1869.

Claim.—In a lock, the combined use of a single cam turned by a pin-key, and a bolt, when a spring is so interposed betwcen the cam and the bolt as to draw the latter within the case when unlocked, and to hold the cam and bolt together by frictional contact when locked, substantially in the manner herein described and represented.

3,682.—LUKE TAYLOR, Springfield, Vt.—*Mop-Head.*—Patented February 15, 1859, No. 22,990; reissued November 10, 1868, No. 3,192; again reissued November 24, 1868, No. 3,215; again reissued October 19, 1869.

Claim.—1. In a mop-head, in which the cross-head or stationary jaw is attached permanently and immovably to the handle, operating the movable jaw or binder by means of a tubular screw or socket fitted on the haudle, and having its screw-thread on its exterior, in combination with a nut encompassing the screw, and connected with the movable jaw, so as to operate substantially as shown and described.

2. In a mop-head, in which the movable jaw or binder is operated through the medium of a screw-nut or collar, by means of thumb-ears attached to or formed with the said screw-nut or collar, placing the said ears outside the yoke or bow of the movable jaw or binder aforesaid, as herein described, for the purpose set forth.

3,683.—WILLIAM C. VOSBURGH and WILLIAM A. LUDDEN, Brooklyn, N. Y., assiguors to JOHN J. MERRITT, same place, assignor to RUBBER-TIP PENCIL COMPANY, New York City.—*Means of Attaching Rubber to Pencils.*—Pateuted May 20, 1862, No. 35,355; reissued Oetober 19, 1869.

Claim.—1. The combination, with a pencil of ordinary construction, of an India-rubber eraser and a metallic sleeve, or casing, holding the eraser and fitting the end of the pencil, substantially as and for the purposes herein specified.

2. The within-described construction of the said sleeve, or casing, to wit, the two semi-cylindrical clamps, *b b*, formed as specified, and the ring or rings *d*, in combination with the section of India rubber, *c*, and the pencil or peu-handle *a*, as and for the purposes herein set forth.

3,684.—THE AMERICAN BROILER COMPANY, Elmira, N. Y., assignee of SYLVESTER BOWERS.—*Broiler.*—Patented July 21, 1868, No. 80,125; reissued October 19, 1869.

Claim.—1. A culinary utensil, combining in its construction a converging flange or plate, B, and a grate, D, substantially as described, and for the purposes set forth.

2. The combination of the rim A, internal converging flange B, grate D, and cover C, constructed and arranged, iu relation to oue another, substantially as described, and for the purposes set forth.

3. The combination of the rim A, internal converging flange B, grate D, cover C, and reflector E, constructed and arranged, in relation to one another, substantially as described, and for the purposes set forth.

3,685.—A. T. BARNES, Tiffin, Ohio, assignor to "THE TIFFIN AGRICULTURAL WORKS," same place.—*Horse Hay-Rake.*—Patented March 24, 1868, No. 75,836; reissued Oetober 26, 1869.

Claim.—1. The adjusting-braces, having their front ends secured to the lower sides of the draw-bars D, and their rear ends extending through the standards C, with screw-nuts upon these rear ends, for tightening up the parts at will, substantially as described.

2. An improved stop, provided with a flange, and having a broad face, and au oblique adjustment, substantially as described.

3,686.—THOMAS J. CLOSE, Philadelphia, Pa.—*Settee-Frame.*—Patented February 9, 1869, No. 86,644; reissued October 26, 1869.

Claim.—1. The combination of the slope-sided or inclined studs *a'*, on the frames A, and the slope-sided or under-cut holes 5, in the slats B, substantially as and for the purpose hereinbefore set forth.

2. The combination of the abutting-plate E, wedge 10, frame A, and slat B, substantially as and for the purpose hereiubefore set forth.

3. The combination of the curved draw-bolt C and nut *c'*, with the frame A and slat B, as a modification of the wedge 10 and abutting-plate E, as and for the purpose described.

3,687.—CHARLES A. DURGIN, New York, N. Y., assignee of CHAUNCEY O. CROSBY.—*Machine for Folding Paper.*—Patented December 23, 1856, No. 16,266; reissued October 26, 1869.

Claim.—1. The combination, with a vibrating fly, of a folding-blade, which shall form a bight or double in the sheet, for the first fold, as it is received from the press, and deliver the same to mechanism to complete the folds, whereby the sheets of paper may be folded direct from a printing-press, substantially as described and specified.

2. The combination, with a vibrating fly and folding-blade, of griping-bars, constructed, arranged, and operating substantially as described and specified.

3. The folding-blades, in combination with the fingers, arranged and operating substantially as described and specified.

4. The employment and use of jaws, one of which in each set is cut away, in combiuation with a folding-blade having portions cut away, so that the sheets of paper can be griped at the points where the blade is cut away, and firmly held during the retraction of the folding-blade from the jaws, substantially as described and specified.

3,688.—HENRY HANNEN, THOMAS WOODS, and BENJAMIN F. PINE, Philadelphia, Pa., assignees of HENRY HANNEN.—*Process of Utilizing the Waste Products of Combustion for the Manufacture of White-Lead, and for other Purposes.*—Pateuted February 9, 1869, No. 86,835; antedated February 1, 1869; reissued October 26, 1869.

Claim.—1. The production of carbonic-acid gas from the waste gaseous produets of combustiou, and gathering the same under pressure produced by hydrostatic column, in the manner and by the apparatus described.

2. Purifying carbonic-acid gas arising from the combustion of fuel, by passing the same through water impregnated with chloriue, or its equivalent, for the purposes specified.

3,689.—CHARLES PARKER, Meriden, Conn., assignee of GEORGE FOWLER and the administrators of the estate of DE GRASSE FOWLER, deceased, viz, MALTBY and SOPHRONIA FOWLER.—*Machine for Punching Metals.*—Patented April 17, 1855, No. 12,723; extended seven years; reissued August 24, 1869, No. 3,617; agaiu reissued October 26, 1869.

Claim.—1. Combining, with the slide and shaft of a power-press, and the wheel, by means of which the said shaft is caused to revolve, a mechanism which operates automatically to disconnect the said wheel from the shaft at a certain point after one revolution.

2. In a power-press, combining, substantially as described, with the rotating shaft and the slide or tool-stock, an eccentric wrist-pin and an eccentric circle or ring, placed upon and around said wrist-

pin, for the purpose of varying the play of said slide or stock.

3. In combination with the wrist-pin B, the slide D and block *c*, the adjusting-plates *e*, more or less in number, substantially as and for the purpose set forth.

3,690.—ASAHEL J. SEVERANCE, Middlebury, Vt., assignee, by mesne assignments, of RUDOLPH LESCHOT.—*Rock-Drill.*—Patented July 14, 1863, No. 39,235; reissued February 16, 1869, No. 3,304; again reissued October 26, 1869.

Claim.—1. A continuously-revolving and progressing boring-head, having projecting diamond points, in combination with a tubular boring-bar, substantially as and for the purposes specified.

2. The row of cutting-edges a^1, when attached to a revolving boring-head, so as to project beyond the circumference thereof, for the purposes specified.

3. In combination with a revolving and progressing boring-head, having cutting-points projecting beyond the periphery thereof, a hollow central drill-rod, through which water is forced or passed.

4. A series of cutting-edges, a a^1 a^2, arranged in the face and upon the outer and inner peripheries respectively, of a tubular or annular bit or boring-head, A, substantially as and for the purposes specified.

3,691.—JOSEPH H. STEELE, New Haven, Conn., assignee of WALLACE A. MILES. — (Division A.) *Spice-Box.*—Patented October 2, 1866, No. 58,455; reissued October 26, 1869.

Claim.—In spice-boxes, the combination, in one end, of two plates, the one constructed so as to turn and register with the openings or perforations in the other plate, or close the same, as the case may be, in the manner substantially as herein set forth.

3,692.—JOSEPH H. STEELE, New Haven, Conn., assignee of WALLACE A. MILES. (Division B.)—*Spice-Box.*—Patented October 2, 1866, No. 58,455; reissued October 26, 1869.

Claim.—A sheet-metal spice-box, provided with covers B and D, and combined with the perforated plate C, so as to operate as specified.

3,693.—MARCUS BROWN WESTHEAD, Manchester, England.—*Tape-Roll Clip-Fastening.*—Patented July 28, 1868, No. 80,375; reissued October 26, 1869.

Claim.—A ribbon or tape-roll clip or slide, made and applied substantially as herein described.

3,694.—WILLIAM H. AKINS, and JOSEPH C. BURRITT, Ithaca, N. Y.—*Calendar-Clock.*—Patented September 19, 1854, No. 11,711; extended seven years; reissued November 2, 1869.

Claim.—1. The combination, in a calendar-clock, of a cam or disk, which revolves but once in forty-eight months, with a thirty-one-day wheel, which revolves once in each month, when said parts are constructed and operated in such manner as to effect the desired changes in the number of days of the months, (including those of bissextile or leap-year,) as described.

2. The construction of a calendar-clock, in such manner that the rod or lever which is operated by the twenty-four-hour wheel, shall move the day-of-the-week wheel forward one day at each revolution of the twenty-four-hour wheel, and shall also move variably the single click or ratchet which operates the thirty one-day wheel, over one, two, three, or four days or teeth, as the length of the month shall require.

3. The construction of the day-of-the-month wheel of a calendar-clock, with four rows of teeth, numbering from twenty-eight to thirty-one, for the purpose set forth.

4. The combination, in a calendar-clock, of the following elements, namely, a dial, provided with a circle of numbers representing the days of the month, apertures, arranged within the circle, for the days of the week and names of the month, and a calendar-movement, operated by the time-movement of the clock.

5. The combination, in the dial of a calendar-clock, of a circle of figures from one to thirty-one, inclusive, representing the days of the month, with a time-dial, an aperture through which to display the day of the week, and an aperture for the names of the month, all arranged within the day-of-the-month circle, substantially as set forth.

6. The combination, in a calendar-clock, of one or more cylinders, adapted to show the days of the week, the month, or the year, any or all of them, with the time-movement of the clock, when the cylinders are connected with said time-movement in such manner as to be operated by it, substantially as and for the purpose set forth.

7. The combination of cylinders F G, clicks or ratchets 39 and 41, oscillating about centers coincident with the centers of said cylinders, twenty-four-hour wheel K, and connecting-devices, for the purpose set forth.

8. A dial, exhibiting the name of the month, inclosed within a circle of figures representing the days of the month, in combination with a calendar-movement, operated by the time-movement of the clock.

9. The construction of a calendar-clock, in such manner that the click or ratchet which actuates the thirty-one-day wheel may move variably over one or more teeth of said wheel, for the purpose set forth.

3,695.—JAMES ARMSTRONG, Jr., Elmira, Ill.—*Corn-Planter.*—Patented September 20, 1864, No. 44,273; reissued November 2, 1869.

Claim.—1. The secondary frame C, hinged or pivoted at points in front of its seed-hoppers, to extensions *a a* of the main draught-frame A, and having rigidly secured to it the draught-pole D, in combination with a lifting-frame, E, substantially as and for the purpose described.

2. The arrangement, with reference to the main frame A, of the draught-pole D, rigidly secured to the pivoted frame C, substantially as and for the purpose herein set forth.

3. The anti-friction rollers *d d*, applied to loops F, in combination with treadle-frame E, as and for the purposes specified.

4. Stirrers P, when hung so as to be operated by slide K, substantially as set forth.

3,696.—THOMAS BAKEWELL, Pittsburgh, Pa.—*Trade-Mark.*—Design No. 2,792, dated October 1, 1867; reissued November 2, 1869.

3,697.—JAMES BLAKE and GEORGE BLAKE, Scranton, Pa., assignees of JAMES BLAKE.—*Auxiliary Table.*—Patented March 22, 1869, No. 88,121; reissued November 2, 1869.

Claim.—The point or points of attachment and suspension of an auxiliary table or other support, in a plane or planes within the perpendicular plane of the edge of the main table or other like convenience, for the purpose specified.

3,698.—ABNER H. BRYANT, Philadelphia, Pa.—*Egg-Carrier.*—Patented March 17, 1868, No. 75,623; reissued November 2, 1869.

Claim.—1. An egg-carrier, constructed with compartments, in removable trays or shelves, in which eggs may be suspended by cords or their equivalents.

2. In an egg-carrier, provided with pockets or compartments, in removable trays or shelves, for the reception of single eggs, the use of suspending-cords in the construction of such pockets or compartments.

3. A suspension egg-carrier, composed of cloth pouches, for holding single eggs suspended between meshes of cord and twine, laced through the sides of the wooden trays, set in a wooden holder, constructed and arranged as set forth by the drawings.

3,699.—BETHEL BURTON, Brooklyn, and WILLIAM G. WARD, New York, N. Y., assignees of BETHEL BURTON.—*Breech-Loading Fire-Arm.*—Patented August 11, 1868, No. 81,059; reissued November 2, 1869.

Claim.—1. A slide or cover, with a recess in the under side of the rear end, in combination with a breech-pin, provided with sectional screws or cams, substantially as shown and described.

2. A breech-piece or receiver, formed with a ring or enlargement at its rear end, and with a recess to allow the slide or cover to pass under said ring, substantially as shown and described.

3. An opening in the top of the breech-piece, with vertical walls or sides, in combination with a slide or cover, formed in one piece with a recoil-block, substantially as shown and described.

4. A recoil-block, formed in one piece with the slide, and having a steady-pin attached, substantially as shown and described.

5. A groove or recess in the slide or cover, for olding the cartridge-extractor in place, without the id of screws or other fastenings, substantially as hown and described.

6. A hammer and firing-pin, formed in one piece, with a beveled shoulder on the front portion, and with a hollow open rear end, to receive a spiral spring, substantially as shown and described.

7. The arrangement of the firing pin, with relation to the extractor, and the recoil-block and steady-pin, so as to eject the cartridge from the breech-piece during the backward movement of the slide or cover, substantially as shown and described.

8. The combination of a hook on the trigger-bolt with a projection in the L-shaped slot of the breech-pin, as shown and described, for the purpose specified.

9. The safety-bolt R, constructed and arranged as shown and described, for the purpose specified.

10. The combination of the slide or cover C, recoil-block D, steady-pin E, breech-pin F, and sectional screw or cam, entering the recess *c*, coupling the parts without the use of a screw or other fastening, and forming a broken-jointed breech-pin, substantially as shown and described.

3,700.—Elliot P. Gleason, New York, N. Y., assignee of Benjamin F. Gladding.—*Horse-Hay Fork.*—Patented February 9, 1869, No. 86,661; reissued November 2, 1869.

Claim.—The combination, with fingers *a* and *c* provided with handles *b* and *d*, of the ring *f*, slot *g*, pivoted lever *h*, ring *j*, and ropes *l l l* and *n*, when the same shall be constructed and operate substantially as and for the purposes fully described.

3,701.—Robert K. Kille, Mount Holly, N. J.—*Roofing.*—Patented September 7, 1869, No. 94,689; reissued November 2, 1869.

Claim.—The strips D, arranged with the coating or cement E, and the slate or other equivalent outer covering, so as to break joints thereunder, substantially in the manner set forth.

3,702.—Joseph H. Littlefield, Cambridge, Mass.—*Press and Strainer.*—Patented June 16, 1868, No. 79,981; reissued November 2, 1869.

Claim.—1. A combined press and strainer, having a substantial rim or base, A, provided with a strong open grating, *a a*, for the support of the sieve or strainer O, when all these parts are constructed and arranged substantially as described.

2. The grated base A, provided with a flange and ears, for the attachment of the can C, and with radial arms, for the purpose of spanning a large vessel, as set forth.

3. The frame A, with grates *a a* and arms B B, in combination with the strainer O and bottomless can C, stay D, lever E, standard G, and follower F, constructed, arranged, and operating substantially as and for the purposes specified.

3,703.—John Lough, Buckingham Village, Quebec.—*Dressing Saw-Teeth.*—Patented November 24, 1868, No. 94,365; reissued November 2, 1869.

Claim.—1. Widening saw-teeth on their under or cutting face by pressure, substantially as and for the purpose set forth.

2. Widening the saw-tooth at its under side in such a manner that the expanded cutting-face thereby produced is parallel-sided, or in the form substantially as shown in Fig. 10, and as hereinabove described, for the purpose set forth.

3. The plates *c c*, when united by the bolts *d d*, and provided with the projections *e e* and the arm h^2, and having between them the space *f* and the space for the compression-bar, substantially as described.

4. In combination with said plates *c c*, constructed as above described, the lever *h*, pivoted at h^1, the strap h^3, the compression-bar *i*, and the die *k*, all operating together in the manner and for the purpose set forth.

5. In combination with said plates *c c*, constructed as above described, the wedge g^1, lever g^2, strap g^3, key, or equivalent g^4, eccentric g^5, and pivots g^6 g^7 g^8, all operating together substantially as and for the purpose set forth.

6. The improved saw-dressing machine herein described, consisting of the bed-plate *o*, top-plate *p*, clamp *q*, plane *r*, iron strap or file-holder *s*, adjustable screws *t*, file *u*, adjustable strip *v*, and adjusting-screws *v'*, all arranged and working together, substantially in the manner and for the purpose described.

3,704.—H. B. Morrison, for himself and Caroline Morrison, assignee, by mesne assignments, of H. B. Morrison, Le Roy, N. Y.—*Stove-Pipe Elbow.*—Patented October 27, 1868, No. 83,401; reissued November 2, 1869.

Claim.—1. A pipe-elbow, made with a suitable connecting and disconnecting joint, substantially as set forth.

2. A pipe-elbow, having the central enlargement *a a*, and its joint so formed and connected that the arms or ends of said elbow may be turned in any position from right angle to a straight length, as herein described.

3. A pipe-elbow, having a suitable connecting and disconnecting joint, in which the central space *a a* is made enlarged to form a chamber, substantially as described.

4. The connecting and disconnecting joint formed by the overlapping tongue and groove *c d*, and located obliquely from the angle of the elbow centrally around the chamber, substantially as described.

5. The combination and arrangement of the lugs *f*, notches *g*, groove *h*, and tongue and groove *c d*, the whole constituting the joint, as herein described.

3,705.—George Owen, Jacksonville, Ill.—*Plow-Coupling.*—Patented February 4, 1862, No. 34,316; reissued January 5, 1864, No. 1,598; again reissued November 2, 1869.

Claim.—1. Coupling two or more plows, with rigid couplings made of wood or iron, or partly of wood and partly of iron, and connected with the plows by loose or hinge-joints, substantially as and for the purpose herein specified.

2. The combination of the curved or bent piece or pieces *t t*, and the sliding joints of the bars C and D, in the manner and for the purpose herein specified.

3. Connecting the compound curved or bent coupling-bar C with the upper coupling-bar D, substantially in the manner and for the purpose herein set forth.

4. The combination of the front curved or bent stretcher-bar B', and curved or bent coupling-bar C, for connecting two plows, substantially in the manner and for the purpose herein set forth.

3,706.—Samuel B. Pierce, Samuel S. Johnson, Robert Andrews, and Robert N. Austin, Milwaukee, Wis., assignees of Robert Andrews.—(Division 1.) *Composition for Stuffing Leather.*—Patented May 25, 1869, No. 90,333; reissued November 2, 1869.

Claim.—1. Tar so treated in connection with tallow, oil, fat, grease, and fatty or greasy matter, or one or more of said substances, that it becomes completely absorbable, and no longer sensitive to changes of temperature.

2. The compound of tar and tallow, oil, fat, grease, and fatty or greasy matter, or one or more of them, acting as one substance, described in the specification, as a new article of manufacture, all substantially as and for the purposes set forth.

3,707.—Samuel B. Pierce, Samuel S. Johnson, Robert Andrews, and Robert N. Austin, Milwaukee, Wis., assignees of Robert Andrews.—(Division 2.) *Process of Treating Tar for the Manufacture of Stuffing for Leather.*—Patented May 25, 1869, No. 90,333; reissued November 2, 1869.

Claim.—1. The so treating tar, in connection with tallow, oil, fat, grease, and fatty or greasy matter, or one or more of said substances, that it becomes completely absorbable, and is no longer sensitive to changes of temperature.

2. The process of preparing a compound of tar

and tallow, oil, fat, grease, and fatty or greasy matter, or one or more of said substances, by the application of heat with agitation.

3. The causing tar to unite with tallow, oil, fat, grease, and fatty or greasy matter, or one or more of them, producing one substance, by the application of heat with agitation.

4. The purifying of the above-described compound, by means of boiling, all substantially as and for the purposes described.

3,708.— FREEMAN F. REYNOLDS, Bethany, for himself, and JOSEPH H. HINES, Davisborough, Ga., assignee of FREEMAN F. REYNOLDS.—*Plow.*— Patented January 1, 1867, No. 60,938; reissued November 2, 1869.

Claim.—1. Attaching the landside or guide-bar to the side of the standard, by means of one or more bolts, *a a*, substantially as and for the purposes specified.

2. In connection with the standard E and beam A, the brace F, arranged as described, and connected to the share by bolts *w w*, and to the beam by a single bolt, *m*, substantially as and for the purpose set forth.

3. The combination of the parts E H I F, when bolted together and fastened to the beam, substantially in the manner described and shown, and for the purposes indicated.

3,709.—GOTTLIEB SCHREYER, Columbus, Ohio.—*Mode of Making the Skeins of Axle-Arms for Carriages.*—Patented May 7, 1861, No. 32,255; reissued November 2, 1869.

Claim.—1. An axle-skein, with its under wearing-part *a a a*, and its end *c d d*, of a uniform thickness, as represented in the drawings, and its upper part *f f*, of a gradually-decreasing thickness, as hereinbefore set forth, and illustrated in the drawings.

2. An axle-skein, made of one plate, with its under part back of shoulder, to extend back far enough to give the wood axle any desired support, constructed as and for the purposes hereinbefore set forth.

3,710.—CHESTER STONE, Ravenna, Ohio.—*Fruit-Frame.*—Patented February 11, 1868, No. 74,252; reissued November 2, 1869.

Claim.—1. The braces C D, in combination with the standards A and slats B, when arranged and pivoted together as described, substantially as and for the purpose set forth.

2. The extension in each direction of the slats B beyond the standards A, as shown and described.

3. The herein-described fruit-frame as a whole, when the several parts thereof are constructed, combined, and arranged as and for the purpose specified.

3,711.—GEORGE B. TURRELL, New York, N. Y., assignee, by mesne assignments, of JEAN LOUIS BAUDELOT.—*Apparatus for Cooling Beer and other Liquids.*—Patented November 1, 1859, No. 25,992; antedated April 13, 1856; reissued January 28, 1862, No. 1,267; again reissued November 2, 1869.

Claim.—1. A vertical range of horizontal tubes, in which the cooling-liquid is passed from the lower to the upper tubes, in combination with downward projections from said tubes, and an apparatus for supplying the liquid to be cooled with uniformity along the upper tube, substantially as and for the purposes set forth.

2. A vertical range of horizontal tubes, provided with downward projections, and sustained by the end-pieces or their equivalents, and an apparatus for distributing the liquid to be cooled, in combination with the caps *l*, made removable, as and for the purposes specified.

3,712.—G. A. WATKINS, Proctorsville, Vt.—*Device for Weaving Chair-Seats.*—Patented March 10, 1868, No. 75,500; reissued November 2, 1869.

Claim.—1. A hand-needle or shuttle, for weaving splint chair-seats, provided with devices, herein shown and described, to hold the splints at their one end in such a manner that the splint may be readily detached therefrom, after it has been passed through the warp, substantially as specified.

2. A needle or shuttle, constructed as described, to hold the splints at their one end in such a manner that the splint may be readily detached therefrom after it has been passed through the warp, and shaped to form a batten, for beating up the filling, substantially as specified.

3,713.—ANDREW B. CLEMONS, Ansonia, Conn.—*Friction-Clutch Pulley.*—Patented December 8, 1868, No. 84,681; reissued November 9, 1869.

Claim.—1. The two parts A and D of a friction-clutch, combined with one or more threaded levers E, hung in one part, and a corresponding threaded hub on the other part, so that by the revolution of one of the parts, the two may be drawn together, substantially in the manner set forth.

2. In combination with the subject-matter of the first clause of claim, the slide F, arranged so that, by its axial movement on the shaft, the levers may be operated, to cause the two parts of the clutch to run together, substantially as set forth.

3,714.— GEORGE DRAPER and WILLIAM F. DRAPER, Hopedale, Mass., assignees of WILLIAM T. CARROLL.— *Ring for Spinning-Machines.* — Patented June 2, 1868, No. 78,427; reissued November 9, 1869.

Claim. — 1. The combination of the flange *c*, or the posts *f*, and the adjusting-screws *e*, with the annulus A, and the supporter B thereof, to be placed on and within the ring-rail, as specified.

2. The new or improved arrangement of a ring and its holder, the same being so that the former shall extend entirely above the ring-rail, and in or on the holder, and the latter, separate from the former, be extended above the rail, and within a socket made therein.

3. The flange *c*, when provided with the open space *d*, and the screws *e e e*, and combined with or forming part of the supporter B, and for use with the ring A, as set forth.

3,715.—MAURICE FITZGIBBONS, New York, N. Y., for himself and R. S. JENNINGS, assignee of MAURICE FITZGIBBONS. — *Drawer or Tray.* — Patented August 24, 1869, No. 94,096; reissued November 9, 1869.

Claim. — The drawer or tray herein specified, lined with cedar, and having a cover, *v*, lid *s*, and gummed strips, as described, when constructed and arranged as and for the purposes specified.

3,716.— THOMAS J. HALL, Bryan, Texas. — *Gang Plow.*—Patented May 1, 1855, No. 12,791; extended seven years; reissued November 9, 1869.

Claim. — 1. The arrangement of the plows and pivoted beams with the adjustable cross-beams, so that the plows may have a convenient permanent adjustment, in connection with their self-adjusting property in the plow-beam, as set forth and described.

2. Limiting the lateral vibration of the revolving cutter or colter, that it may not, when out of the ground, vibrate so far that it would not recover its true position when again in contact with the ground, substantially as described.

3. The bent brace *k*, when constructed in the form as described, and attached to the frame of the plow in the manner and for the purpose substantially as described.

3,717.—JULIUS HORNIG, Chicago, Ill.—*Mechanism for Converting Rotary Motion into Oscillating Motion.* — Patented February 7, 1865, No. 46,437; reissued November 9, 1869.

Claim.—1. The combination of mechanism, applicable to the conversion of rotary into oscillating motion, consisting of the shaft C, carrying the eccentric D, of the strap I, ear K, pivot L, and lever F, all arranged to operate substantially as herein shown and described.

2. The combination of the curved edge *d*, and lever F, with the eccentric strap and ear, substantially as herein shown and described.

3,718.—EDWIN J. HOWLETT, Philadelphia, Pa., assignee of himself and SUSAN KIRK. — *Tool for Manufacturing Paper Bags.* — Patented February 26, 1867, No. 62,342; reissued November 9, 1869.

Claim. — 1. The construction of the board A, blade B, and adjustable strip D, the whole being arrange substantially in the manner described.

2. The combination of the board A, the permanent strip *a*, and blade B.

3. The combination of the board A, the guide-plate E, and adjustable strip D.

3,719.—E. F. KEELING, Amwell, Ohio.— *Harvester-Cutter Grinder.*—Patented August 13, 1861, No. 33,043; reissued November 9, 1869.

Claim. — 1. The combination of the yielding adjustable support for the harvester-cutters, with a revolving grinder, substantially as set forth, so that the position of the cutters and cutter-bar to the axis of the grinder and the plane of its rotation may be adjusted for grinding the cutting-edges with uniformity, and at the desired angle, substantially as specified.

2. The adjustable yielding supports for the cutter-bar and cutters, arranged on each side of the plane of rotation of the grinder, substantially as specified, so that the cutters may be presented to the grinder and sharpened on opposite sides, substantially as set forth.

3,720.—EMERY PARKER, New Britain, Conn.— *Attaching Knobs to their Spindles.*—Patented May 5, 1863, No. 38,406; reissued June 21, 1864, No. 1,707; reissued November 9, 1869.

Claim. — The combination of a screw-threaded knob and spindle, with the saddle-key, let into the end of the knob-shank, and held in place by the escutcheon-plate, substantially as shown and described.

3,721. — THOMAS PARSONS, Brookline, Mass., assignee of GERARD SICKELS.—*Water-Meter.*—Patented May 5, 1868, No. 77,542; reissued November 9, 1869.

Claim.—1. The combination of the main cylinder *a*, its ports *n n'*, valve *m*, and piston *c c d*, with the auxiliary piston *k* and cylinder *l*, and a mechanism, substantially as described, (viz, the lever *o*, its rollers *p*, and supporter *q*, provided with abutments *q'*,) for operating the latter piston by the main piston, while in movement in its cylinder, as set forth.

2. The peculiar mechanism or combination shown in Figs. 1, 2, and 3, and substantially as described, by which the auxiliary piston and the main valve are put in operation, through the action of the main piston within its cylinder, such mechanism consisting of the lever *o*, its rollers *p*, and supporter *q*, provided with the projections or abutments *q'*, as described.

3. The arrangement, shown in Figs. 1 and 2, of the auxiliary piston and cylinder with the main valve, the main cylinder, and its valve-chest.

4. The combination of the auxiliary piston and cylinder with the main valve, and mechanism, as described, for effecting the movements of the auxiliary piston, through the action of the main piston, as specified.

5. The arrangement and combination of the lever *o* with the auxiliary and main pistons, so as to be operated by the latter, and be caused to operate the auxiliary piston, in manner as explained.

3,722.—B. S. ROBERTS, United States Army.— *Breech-Loading Fire-Arm.* — Patented June 11, 1867, No. 65,607; reissued July 20, 1869, No. 3,562; again reissued November 9, 1869.

Claim.—1. In combination with a breech-plug, P, which swings about a curved abutment, *c*, a rocking shield, *g*, so applied to said breech-plug as to allow the opening and closing of the breech of the barrel for the insertion and withdrawal of a cartridge, substantially as described.

2. The breech-plug B, when adapted to fit and swing about the solid curved convex abutment *c c c*, and when it has formed, on its rear end, the extension B', that constitutes a lever, by which the same may be conveniently manipulated, as described.

3. The lever B', formed on the rear end of the swinging breech-plug B, and adapted to move about its solid abutment *c*, in combination with a rocking-block, *g*, which will admit the opening and closing of the breech, substantially as described.

4. The lever extractor *p*, arranged on one side of the barrel, and having one of its arms arranged in a recess in the recoil-shield, so as to be acted upon by the shoulder *n*, at the upper termination of said recess, substantially as described.

5. The curve *c c c*, at the rear of the checks containing the breech-plug B, when formed substantially as set forth, and so that the force of the gas, when the gun is fired, shall have no tendency to throw the breech-plug out of its place, as described.

6. A bodily swinging breech-plug, B, having a rear extension B', and a lever-latch, C, constructed substantially as described.

3,723. — SARGENT AND COMPANY, New Haven, Conn., assignees of PURMORT BRADFORD.—*Lifting-Handle for Coffins, &c.*—Patented March 12, 1867, No. 62,729; reissued November 9, 1869.

Claim.—1. The socket A, formed with a vertical slot, *d*, provided midway with a seat to receive the trunnion *a*, constructed and arranged to operate as herein described, as an article of manufacture.

2. The combination of the hollow cylinder or handle C with the swinging levers B B, and rod *n* passing through the cylinders and levers, so as to bind the handle and swinging levers together, when constructed substantially as described, so that the handle will be retained in its fixed position between the two levers.

3,724.—EMIL T. HERTLE and RICHARD THOMPSON, New York, N. Y.—*Machinery for Making Wire Heddles.*— Patented July 14, 1868, No. 79,905; reissued November 9, 1869.

Claim.—1. In machines for making wire heddles, the arrangement of mechanism, substantially as described, whereby the distance between the twisting-mechanism and the eye-forming die or pincers is shortened, during the operation of twisting the wire.

2. Arranging the head-stocks *b' b'*, which support the inner or adjacent ends of the cylinders *a* a^1, substantially in the manner described, and for the purpose set forth.

3. The arrangement of a cam or cams, *g*, in combination with the movable cylinder or cylinders *a*, substantially as described.

4. The combination of the movable cylinders *a* a^1, the rods *i i'*, bars *h h'*, and cams *g g*, substantially as set forth.

5. The combination of a spring, *t*, with the sliding tooth-carrying pinion a^2, substantially as described.

3,725.—ALBERT LORSCH, Memphis, Tenn., assignee of THEODORE NOEL. — *Spectacle-Frame.* — Patented January 11, 1859, No. 22,572; reissued November 9, 1869.

Claim.—1. The combination, with an eye-piece of a pair of spectacles or eye-glasses, of a spring, so arranged upon the eye-piece, over the point where its continuity is broken, that it will permit of the expansion of the said eye-piece sufficiently to allow of the insertion and withdrawal of the glass, and thereafter cause the said eye-piece to resume its normal position, substantially as and for the purpose herein specified.

2. The combination of the spring *b* with the opening *a* and temple *c*, substantially as herein specified.

3,726. — EDMUND WRIGHT, JOHN WRIGHT, JOSEPH WRIGHT, and JOHN NOBLE, Philadelphia, Pa., and JACOB H. FILSON, New York, N. Y., assignees of JOHN A. LIEB and E. W. CRANE. — *Safety-Attachment for Umbrellas.* — Patented February 18, 1868, No. 74,555; reissued November 9, 1869.

Claim.—1. The combination, with the runner and stick of an umbrella, of a permutation locking-device, or equivalent mechanism, whereby the control of the runner is made dependent upon the proper adjustment of movable parts of the locking-mechanism, and such proper adjustment is determined by letters or other characters on the said movable parts.

2. The combination of the stick, with its projections *e e*, slotted runner B, and rings *c*, with the notched flanges.

3. The scalloped edges of the rings, in combination with the spring *h'*, or its equivalent.

3,727. — E. H. ASHCROFT, Boston, Mass., assignee of WILLIAM NAYLOR.—*Steam Safety-Valve.*—

Patented October 16, 1866, No. 58,962; patented in England, January 21, 1864; reissued November 9, 1869.

Claim. 1. The combination and arrangement, with the hereinbefore-described safety-valve, of bent levers of the first order, and the spring or springs, in the manner substantially as hereinbefore set forth.

2. The safety-valve C, with its overhanging downward-curved lip or periphery, and annular recess D, substantially as herein shown and described, and for the purpose set forth.

3. The annular recess D, surrounding the valve-seat, substantially as herein set forth.

4. The combination of the valve C and the annular recess D, as herein set forth, and for the purpose described.

3,728.—JOHN AHERN, Baltimore, Md., assignee of BENJAMIN BEST. — *Composition for Destroying Insects on Fruit-Trees.*—Patented June 2, 1868, No. 78,569; reissued November 16, 1869.

Claim.—1. A composition, compounded of the above-named ingredients, with or without the coal-tar, substantially as set forth.

2. The mode of protecting trees, by the application of the hereinbefore-described composition to bands of fibrous material surrounding the tree, substantially as described.

3,729.—JOSEPH COLTON, New York, N. Y.—*Safety-Pocket.* — Patented December 3, 1867, No. 71,706; reissued November 16, 1869.

Claim. — 1. The open shield C, in combination with the clasp and fastening-devices, as described.

2. The clasp-plates A B, constructed as described, with the slot or openings *a'*, between their adjacent edges, substantially as described.

3. The combination of the plates A B, shield C, and spring-slide *b* or *d*, (either or both,) with the pocket, substantially as and for the purpose set forth.

4. The combination of plates A B, shield C, stop *a*, spring-slides *b d*, springs *e f g*, and pin *h*, all arranged and operating substantially as described.

3,730. — MARKS FISHEL, ADOLPH OPPER, and LEO POPPER, New York, N. Y., assignees of MARKS FISHEL.—(Division A.) *Skeleton-Skirt.*— Patented January 14, 1862, No. 34,182; reissued November 16, 1869.

Claim. — 1. A supporting fabric for hoop-skirts, provided with holes C C, through which the hoops may be passed and be thereby sustained, passing inward and outward through the holes, substantially as and for the purposes herein set forth and described.

2. In connection with the above, the hard lining of the holes C C, to defend the fabric against destruction by the movement of the hoops therein, substantially as shown.

3. A hoop-skirt, having the hoops supported in holes formed and arranged in the supporting-material, substantially as herein set forth.

3,731. — MARKS FISHEL, ADOLPH OPPER, and LEO POPPER, New York, N. Y., assignees of MARKS FISHEL.—(Division B.) *Skeleton-Skirt.* — Patented January 14, 1862, No. 34,182; reissued November 16, 1869.

Claim.—Securing the hoops A A to the tapes B B, by means of fastenings D, or their equivalents, passing through the eyelets C C, and across a portion of the tape between them, substantially as and for the purposes herein set forth.

3,732.—LIBERTY LITCHFIELD, FESTUS C. LITCHFIELD, and LIBYA M. LITCHFIELD, Southbridge, Mass., assignees of LYDIA W. LITCHFIELD, administratrix of the estate of LAROY LITCHFIELD, deceased.—*Shuttle for Looms.*—Patented May 1, 1855, No. 12,780; reissued March 30, 1869, No. 3,355; extended seven years; again reissued November 16, 1869.

Claim.—1. The combination and arrangement of the spring *d* with the shuttle A, the spindle *a*, the joint pin *b*, the arm *c*, and the abutment or stop *h*.

2. The combination and arrangement of the pin *e* and its head *f*, with the shuttle A, the spring *d*, the spindle *a*, the joint-pin *b*, the arm *c*, and the abutment, or stop *h*.

3. The combination of means of adjusting the stop *h*, in manner as described, with such stop, the arm *c*, the spindle *a*, the pin *b*, and the spring *d*, arranged with the heel and the joint-pin of the spindle, and in the shuttle, as set forth.

4. The arrangement of the spring *d*, so as to rest on a bearing at or near its rear end, and to press toward the head of the spindle, in or about in the direction of the axis or length of the spindle.

5. A loom-shuttle, provided with a spring, substantially as described, to act on the head of the spindle, and hold it in either or each of its extreme positions, and having, also mechanism, substantially as described, to act on the bobbin-head catch, to liberate it from the bobbin-head, while the spindle is being raised in the shuttle, and admit of it catching upon the said head while the spindle is in the act of being depressed into the shuttle.

3,733.—WILLIAM A. CLARK, Woodbridge, Conn. —*Expansive Bit.* — Patented May 11, 1858, No. 20,192; reissued June 22, 1869, No. 3,516; again reissued November 16, 1869.

Claim.—1. The formation of a V-ledge in the recessed shank, and a correspondingly-shaped recess in the adjustable cutter, back of or above its cutting-edge, to fit the ledge in the shank, substantially as and for the purposes set forth.

2. The combination, with the recessed shank and adjustable cutter in which a V-ledge and correspondingly-shaped recess are respectively formed, as specified, of the follower and screw for driving home the cutter against the said V-ledge, which forms its lower bearing, and binds it to the shank, substantially as shown and set forth.

3,734. — ORIGIN HALL, Willimantic, Conn., and TIMOTHY MERRICK, Holyoke, Mass. — *Machine for Dressing and Finishing Thread.*—Patented August 21, 1860, No. 29,690; reissued November 16, 1869.

Claim.—1. In combination with a brush-cylinder, the heated and rapidly-revolving metallic cylinder I, substantially as shown and described, for the purpose specified.

2. In combination with the hot polishing-cylinde the rollers J and J', and the adjustable roller Q, or their equivalents, by means of which the passing threads may be forced or actuated into a greater or lesser degree of contact with the surface of said cylinder, substantially as shown and described, for the purposes specified.

3. In combination with the roller J, the vibrating roller J', when arranged to operate in combination with a hot polishing-cylinder, in a brush-cylinder machine, substantially as shown and described.

4. A heated metallic cylinder, having in its peripherical surface, grooves of a proper size, and well polished, in combination with a brush-cylinder, as and for the purposes specified.

3,735. — RICHARD M. HOE and STEPHEN D. TUCKER, New York, N. Y.—*Printing-Press.*—Patented June 29, 1869, No. 92,050; reissued November 16, 1869.

Claim.—1. The combination and arrangement, in a printing-machine, of two series of rollers, consisting of two printing-cylinders and one impression-cylinder, with two impression-cylinders and one printing-cylinder, with the requisite inking-machinery, arranged and operating substantially as and for the purposes set forth and specified.

2. Arranging the endless blankets for the impression-cylinders, as shown, whereby the same are made to perform the twofold duty of blankets and sheet-conveyers, thereby dispensing entirely with the use of tapes, for conveying the sheets, substantially as described and specified.

3. The mechanism for sustaining the cylinder, for changing the form or blanket, consisting of the rod *o* and bar *k*, substantially as described and specified.

3,736. — ALEXANDER KING and GEORGE H. KING, Painesville, Ohio.—*Washing-Machine.*—Patented August 24, 1869, No. 94,005; reissued November 16, 1869.

Claim.—1. The revolving disk D D, located near

the bottom of the tub, and supported at the upper end of a vertical shaft which passes through the bottom of the tub.

2. The revolving disk, vertical shaft passing through the bottom of the tub, and the stuffing-box, as shown.

3. The arrangement of the support for the step of the vertical shaft on brackets attached to the bottom of the tub, as shown.

4. The stay-rods or braces V, passing from the central bolt or step to each leg of the washing-machine, for stiffening the legs.

5. The arrangement of the revolving disk D D, located at the bottom of the tub, and supported on a vertical shaft which passes through the bottom of the tub, and the direct vertical driving-shaft, and beveled gearing G H, arranged below the tub.

6. The arrangement of the crank-wheels M K, the crank O, the connecting-bar L, the pin P, and slotted bar Q, as described and shown.

3,737.—ANSON C. MCMAHAN, Lincoln, Ill.—*Compound for Curing Cholera in Hogs and Chickens.*—Patented August 31, 1869, No. 94,428; reissued November 16, 1869.

Claim.—The medical compound herein described, compounded in the proportions and in the manner substantially as specified.

3,738.—O. W. STOW, Plantsville, Conn.—*Machine for Folding Tinned Plates.*—Patented December 24, 1867, No. 72,561; reissued November 16, 1869.

Claim.—In a machine, substantially as herein described, the combination of the folding-plate F, folding-bar D, and adjustable bearings, the whole combined and arranged substantially as described, whereby the distance between the adjacent edges of the folding-plate and folding-bar can be increased or diminished, by means of the adjustable bearings for the journals of the folding-bar.

3,739.—ARTHUR M. ALLEN, New York, N. Y.—*Mechanical Velocipede.*—Patented August 24, 1869, No. 94,058; reissued November 23, 1869.

Claim.—The friction-joint in the connection between the front and hind wheels of a toy-velocipede, substantially as set forth.

3,740.—EDWARD T. COVELL, Brooklyn, N. Y.—*Soldering-Machine.*—Patented March 26, 1867, No. 63,220; reissued November 23, 1869.

Claim.—1. A movable adjustable support, so constructed and combined with a receptacle for molten solder as to properly sustain the vessel to be soldered, and allow its joints or seams to be dipped in the solder, and removed therefrom, substantially as herein set forth.

2. The supporting-plate B, when secured in a fixed position, and so combined with a pan or vessel, A, to contain molten solder, as that the plate B shall extend over and partially cover the solder-space in the pan, substantially as herein set forth.

3. The combination of a suitable non-conducting material, *x*, with the supporting-plate or base-piece B of a soldering-apparatus, constructed and arranged substantially as herein set forth.

4. The stay-bars or arms E E, in combination with a movable support, B, solder-pan A, and fixed supports F, to guide and retain the support in a proper position over or within the solder-pan A, substantially as herein set forth.

5. In combination with the movable support B, guides F F, and a solder-pan, A, springs, so placed and arranged as to facilitate the elevation of the support after its depression, substantially as herein set forth.

3,741.—GEORGE C. HOWARD, Philadelphia, Pa—*Machine for Pressing and Molding Pliable Materials.*—Patented June 19, 1866, No. 55,658; reissued November 23, 1869.

Claim.—1. Constructing the frame of the machine of the two housings, A A^1, each in one piece, the bolt E and the table B, or its equivalent, interposed between and secured to said housings, substantially as set forth.

2. In the construction of said housings, casting in one piece with them, respectively, and at the points thereon described and shown, the bosses for the pressure-rods and for the treadle-shaft, all as set forth.

3. In the construction of said housings, casting in one piece with them, respectively, and at the points thereon described and shown, the bosses R^1, V, and *m*, as and for the purposes set forth.

4. The combination of the stand for the lower mold and the table of the press-frame, by means of cross-slots and bolts, as before set forth, so as to permit of the horizontal adjustment of the stand upon the table in every direction.

5. In the construction of said housings, casting in one piece with them, respectively, and at the points thereon described and shown, all the bosses severally described herein; that is to say, for the pressure-rods, for the rods which confine the table, for the rod E, for the rock-shaft O, and for the treadle-shaft W, in the manner and for the purposes set forth.

6. In combination with the frame of the press, the shaft W, treadle I, two or more bosses I′ I″, on said treadle I, and two or more bosses, A′ A″, on said frame, all of said bosses being provided with holes for the reception of said shaft W, as set forth.

3,742.—GUSTAVUS A. JASPER, Charlestown, Mass.—*Apparatus for Drying Sugar and other like Articles.*—Patented May 25, 1869, No. 90,549; reissued November 23, 1869.

Claim.—1. The rotary cylinder A, provided with means for heating air, substantially as described, and means for carrying the heated air through the cylinder, substantially as described, for the purpose of drying the sugar and like articles by the action of the heated air.

2. The combination of the rotary cutter L and rollers M M with a tunnel, substantially as described, for the purpose described.

3,743.—WILLIAM J. LEWIS, Pittsburgh, Pa.—*Bolt-Making Machine.*—Patented March 5, 1864, No. 41,929; reissued January 5, 1869, No. 3,251; reissued November 23, 1869.

Claim.—1. As a new and improved method of forming bolt-heads, upsetting, by means of a reciprocating heading-tool, the end of the bolt-blank against the faces of the griping-dies, and into a cavity formed therein, of a breadth in one direction equal to the breadth of the finished head, but open on one or both the other sides, to permit the exudation of the metal, and, after each impact of the heading-tool, turning the blank one-fourth of a revolution, in order that the metal forced beyond the line of finish by the operation of the header may be forced back into the body of the head by the next succeeding operation of the dies, substantially as described.

2. The combination of a heading or upsetting tool, the working-face of which is longer than it is broad, with a pair of griping-dies, which, when closed, form a working cavity of the same width as the bolt-head to be formed therein, and of a length at least equal to the length of the working-face of the heading-tool, the combination being substantially such as and operating conjointly in the manner described, and for the purposes set forth.

3. The construction and arrangement, in a bolt-heading machine, of three dies, substantially in the manner and for the purposes set forth.

3,744.—PETER NAYLOR, New York, N. Y., assignee of WILLIAM ANTHONY SHAW.—*Manufacture of Tin-Lined Lead Pipe.*—Patented February 18, 1868, No. 74,613; antedated February 6, 1868; reissued November 23, 1869.

Claim.—1. The manufacture of lead-incased tin pipe from ingots, or a charge of metal, made substantially as herein described, of three parts, whether the same be united before or after they are put into the cylinder.

2. The manufacture of lead-incased tin pipe from a compound ingot, composed of concentric parts of lead and tin, when the central ingot is made of tin, in the form of superposed inverted frusta of cones, or their equivalent.

3. In the manufacture of the compound ingot for lead-incased tin pipe, the employment of an intermediate cone or cones, whereby a large portion of

the lead ingot may be cast without contact with the tin, thus reducing the alloying of the two metals.

4. In the manufacture of the compound ingot, as herein described, the formation of the tin ingot of superposed inverted frusta of cones, the upper one being of larger diameter but proportionally shorter than the lower.

3,745.—HERMANN SCHMIDT, New York, N. Y.—*Hand-Screw Clamp.*—Patented August 14, 1866, No. 57,195; reissued November 23, 1869.

Claim.—A hand-screw clamp, the nut or nuts of which are capable of being thrown in or out of gear with the clamping screw or screws, substantially in the manner and for the purpose herein set forth

3,746.—THE WOVEN-WIRE MATTRESS COMPANY, Hartford, Conn., assignees, by mesne assignments, of FRANZ RUDOLPH WEGMAN.—*Wire-Spring Mattress.*—Patented June 16, 1868, No. 79,040; patented in Saxony, March 6, 1865; reissued November 23, 1869.

Claim.—A fabric, formed of double-woven spiral springs, coiled and intertwined, in the manner described.

3,747.—WILLIAM WESTLAKE, JAMES F. DANE, and JOHN P. COVERT, Chicago, Ill., assignees of WILLIAM WESTLAKE.—*Lantern.*—Patented April 26, 1864, No. 42,520; reissued November 23, 1869.

Claim.—1. The lantern-guard *a*, constructed entire, without hinge or joints, so that, as a whole, it can be readily attached to or removed from the lantern, as set forth.

2. The disk *g*, in combination with the ring or band *b* of the guard, and fastenings *e*, substantially as and for the purposes specified.

3. The guard *a*, in combination with the disk *g*, fastenings *e*, and removable globe *d*, substantially as specified.

3,748.—CLEAVELAND F. DUNDERDALE, New York, N. Y.—*Apparatus for Generating and Carbureting Gas.*—Patented June 1, 1869, No. 90,644; reissued November 30, 1869.

Claim.—1. The manufacture of carbureted-hydrogen gas, by placing the hydrocarbon-liquid and the diluted acid in different vessels or compartments, not in contact with each other, but in the same machine, and under the same cover, and near each other, for the purposes described.

2. The combination and arrangement of the cover B, containing the funnel-shaped cylinder D and annular chamber E, with pipes F and outlets M; the chamber D, as a regulator, conductor for the hydrogen-gas, and supporter for the hydrocarbon-chamber E, the tank A, water-chamber C, and feed-pipe H, the whole being combined in the manner and for the purpose substantially as herein set forth and described.

3,749.—JOHN F. FISHER, Greencastle, Pa., and DANIEL BREED, Washington, D. C., assignees of JOHN F. FISHER.—*Guano-Attachment for Seed-Drills.*—Patented June 1, 1869, No. 90,653; reissued November 30, 1869.

Claim.—1. The above-described screw bevel-gear, or its equivalent, for operating the stirrers of a guano-attachment to wheat-drills, or other fertilizer-machines, substantially as set forth.

2. The quarter pinion F and reciprocating rack-bar E, placed under the hopper, in combination with the swinging fingers, or stirrers, inside of the hopper, substantially as set forth.

3. In combination with the stirrers and quarter pinion, the reciprocating bar E, the rod D, crank C, pinion B, and gear-wheel A, substantially as set forth.

3,750.—THOMAS J. HALL, Bryan, Texas.—*Gang-Plow.*—Patented April 20, 1869, No. 89,144; reissued November 30, 1869.

Claim.—1. The combination of the up-and-down adjustable slotted cross-bar D, having the perforated plate *f*, with the plow-beams E, pins *e*, and pivoted levers G, all arranged and operating substantially as and for the purpose herein shown and described.

2. The levers G, pivoted to the up-and-down adjustable cross-bar D, connected at their front ends with the plow-beams, and adjusted with their rear ends on a cross-bar, *k*, all arranged and operating substantially as described, for the purpose of oscillating the plow-beams, as specified.

3. The brace or bridle P, when constructed and arranged with relation to the plow-beam and revolving cutter I, to support and strengthen the stock O, in the manner substantially as described.

3,751.—RICHMOND A. LEEDS, Stamford, Conn.—*Gate-Latch.*—Patented September 25, 1866, No. 58,268; reissued November 30, 1869.

Claim.—1. The arrangement, horizontally across the face of the front stile of a gate, of one or more eccentrically-hung dogs or plates, provided with a handle or handles, when used in combination with a stationary lug or projecting piece, secured to the fence-post, substantially as herein specified.

2. A latch for gates, consisting of two eccentrically-hung bolts or plates, D, provided with handles or arms, E, and arranged within an inclosing case, F, in combination with a lug or projecting piece, H, substantially as herein specified.

3,752.—IRA WOOD, Woodstock, Vt.—*Composition of Liquids for Tanning.*—Patented September 14, 1869, No. 94,805; reissued November 30, 1869.

Claim.—1. A tanning-liquid, made of the leaves of the trees of the different varieties of alder, sycamore, elm, basswood, chestnut, walnut, hickory, apple, peach, poplar, and birch, hereinbefore described, used separately, or combined one with another, or two or more, or all, in equal or any proportions, for the purpose and in the manner above set forth.

2. A tanning-liquid made of the leaves of the different varieties of alder, sycamore, elm, basswood, chestnut, walnut, hickory, apple, peach, poplar, and birch trees, used separately, or two, or more, or all together, in combination with the leaves of the different varieties of oak, maple, willow, and beech trees, the leaves of the four last-mentioned varieties of trees being used separately, or two, or more, or all, in making the liquid, all the said varieties of leaves being mixed in equal or any proportions, for the purpose and in the manner above set forth,

3. A tanning-liquid, made of the different varieties of the alder, sycamore, elm, basswood, chestnut, walnut, hickory, apple, peach, poplar, and birch trees, used separately, or two, or more, or all of them together, in combination with alum, Glauber's salts, and nitric or sulphuric acid, in about the proportions above specified, and for the purpose and in the manner above set forth.

4. A tanning-liquid, made of the leaves of the different varieties of the alder, sycamore, elm, basswood, chestnut, walnut, hickory, apple, peach, poplar, birch, oak, maple, willow, and beech trees, in combination with alum, Glauber's salts, and nitric or sulphuric acid, in about the proportions above specified, and for the purpose and in the manner above set forth.

5. A tanning-liquid, made of the leaves of the different varieties of the oak, maple, willow, beech, alder, sycamore, elm, basswood, chestnut, walnut, hickory, apple, peach, poplar, and birch trees, used separately, or two, or more, or all of them together, in combination with a liquid made of hemlock bark, or oak bark, or cutch, or other tanning-liquid used in the manufacture of leather, in equal or any proportions, for the purpose and in the manner above set forth.

6. The employment of my improved tanning-liquids, made of the leaves of the different varieties of the oak, maple, willow, beech, alder, sycamore, elm, basswood, chestnut, walnut, hickory, apple, peach, poplar, and birch trees, one, or more, or all together, in finishing leather tanned by the use of other liquids or processes.

3,753.—H. B. DURFEE, Decatur, Ill.—*Plow.*—Patented May 18, 1869, No. 90,246; reissued November 30, 1869.

Claim.—1. The construction and arrangement of the beam and short handle, for the purpose of leaving an open landside space and clearance, for the clogging material that drops over the mold-board, substantially as described.

2. In combination with the short handle D, a brace,

e, extending therefrom to the standard or beam, or both, substantially as and for the purpose described.

3,754.—LIVERUS HULL, Charlestown, Mass.—*Manufacture of Whip-Stocks.*—Patented January 8, 1867, No. 61,070; reissued November 30, 1869.

Claim.—1. In a whip-stock composed of a center-piece of one material, surrounded by several outside pieces or strips, the mode of producing the requisite shape or taper therein, by a turning-machine, the said process consisting of first butting each outside strip laterally against its contiguous strip, securing them together by glue, substantially as above described, and afterwards turning the same into proper shape by tools working transversely, without disarrangement of its several pieces or parts.

2. The improved whip-stock, when arranged and turned substantially as described.

3,755.—METROPOLITAN WASHING-MACHINE COMPANY, Middlefield, Conn., assignee of ALFRED M. BAILEY and JOHN O. COUCH.—*Clothes-Wringer.*—Patented January 14, 1862, No. 34,178; reissued November 30, 1869.

Claim.—1. In a clothes-wringer, of otherwise ordinary or suitable construction, elastic rolls so mounted in the frame and combined with springs that one end shall be free to play within the capacity of the springs, while the other is confined.

2. In combination with elastic rolls, mounted in the frame of a wringing-machine, as herein shown, so as to have a more limited play at the geared end than at the other, the employment of a spring or springs, having a central or common bearing at a point intermediate between the ends of the rolls.

3. The construction of wringing-machines in which the rolls are operated by gear-wheels in such manner as to allow play to the rolls at the end nearest the wheels, to an extent as will not permit them to be thrown out of gear, and at the other end allow a larger play against a spring or its equivalent, so as to operate upon masses of clothing of different thicknesses, as herein set forth.

3,756.—GEORGE W. LEE, Sandy, Ohio.—*Feed-Cutting Attachment to Thrashing Machines.*—Patented May 4, 1869, No. 89,669; reissued December 7, 1869.

Claim.—1. The combination of a series of fixed saws with a spiked cylinder or its equivalent, for cutting feed, substantially as herein set forth.

2. The combination, with the toothed cylinder and toothed shell of a thrashing-machine, of the attachment D, provided with saws, and either permanently or detachably connected thereto, substantially as specified.

3. The aprons F G, combined with the attachment D and the casing H, and arranged substantially as specified.

4. The plate L, combined with the apron G, the casing H, and attachment D, when arranged substantially as specified.

3,757.—CHARLES GREEN, WILLIAM WILSON, Jr., HENRY DU PONT, E. I. DU PONT, L. DU PONT, and EUGENE DU PONT, Wilmington, Del., and CHARLES PRATT, New York, N. Y., assignees of JAMES WILSON, CHARLES GREEN, and WILLIAM WILSON, Jr.—*Powder-Keg.*—Patented July 12, 1859, No. 24,772; reissued January 6, 1863, No. 1,383; again reissued December 7, 1869.

Claim.—1. The method of closing the ends of sheet-metal cans by means of a countersunk head or cap fitting within the orifice to be closed, and provided with a flange, which rests upon the upright edges of the can around the orifice, and is formed, with said edges, into a lap-seam, against an external mandrel, as a support, substantially as shown and set forth.

2. The flaring lap-seam, formed by the union of the flange of the countersunk head with the upright edges of the can surrounding the orifice to which said head is applied, substantially as and for the purposes shown and set forth.

3. A sheet-metal can, composed of flanged and countersunk heads, in combination with corrugated or bulging sides, the two being united by a lap-seam, formed as specified, and brought within the compass of the bulging sides, so that the seam or seams may be protected from injury, as herein set forth.

4. The formation of a groove or recess in the body of the can, parallel with the lap-seam, and adjoining the edge of the turned-down flange of the countersunk head or cap, as and for the purposes set forth.

5. A sheet-metal can, one or both ends of which are closed by means of a flanged or countersunk head or cap, applied and secured to the can in the manner substantially as shown and set forth.

3,758.—SMITH, LATROBE AND COMPANY, Baltimore, Md., assignees of FREDERICK H. SMITH.—*Bridge.*—Patented October 26, 1869, No. 96,278; reissued December 7, 1869.

Claim.—1. The combination, in a beam-truss, of the strut or post with the adjusting-devices herein described, or their mechanical equivalent, applied directly to the foot or base of said post, for the purpose of contracting or elongating its working-length, substantially as set forth.

2. The herein-described construction and combination of the loops and pin constituting an adjusting-device applied to the foot of the post, in either beam or suspension-trusses, substantially as shown and set forth.

3. The arrangement of the chord-bars, provided, at their upper edge or edges, with flanges or stiffening-irons, for the purpose specified, and jointed to the pins upon which their ends are supported, substantially as shown and set forth.

4. The attachment of the lateral-bracing systems to the joint-pins, by means of the bolt which at once combines the pin, strut, loops, and adjustable ties into a hinged joint in the lateral plane of the truss, substantially as shown and specified.

5. The combination, with the feet of the struts or posts, of the adjustable loops and joint-pins, with which the lateral-bracing system is connected substantially as herein shown and set forth.

3,759.—REUBEN KIDEN HUNTOON, for himself and JOHN AUGUSTUS LYNCH, assignee, by mesne assignments, of REUBEN KIDEN HUNTOON, Boston, Mass.—*Steam-Engine Governor.*—Patented December 4, 1866, No. 60,192; reissued December 14, 1869.

Claim.—1. The combination of the bearing C, its passage *c* and stop-cock *d*, with the shaft B, the propeller D, and the cistern or vessel A, arranged as and for the purpose set forth.

2. The combination and arrangement of the deflector *e* with the cistern A, the shaft B, and the propeller D, arranged as and for the purpose set forth.

3. The combination and arrangement of the wings *a* with the cistern A, the shaft B, and propeller D, arranged as set forth.

4. The governor, as constructed of the propeller D, its shaft B, and case A, and with the long gear *g* applied to, so as to move endwise with the shaft B, and to operate with and be operated by the driving-gear of a shaft, *i*, as set forth.

3,760.—THEODORE MACE, New York, N. Y., assignee of GEORGE C. TAFT.—*Variable Crank for Boring-Machines.*—Patented December 10, 1867, No. 72,114; reissued December 14, 1869.

Claim.—1. Combining with the shaft *g* and gearing of the boring-machine, a crank-handle that is variable in its length, so that the leverage of the crank may be adapted to the work to be performed by the boring-tool, substantially as specified.

2. The arm *i*, attached at the end of the shaft *g*, and provided with the hub *k*, through which passes the rod *m*, to the handle *n*, substantially as set forth.

3,761.—H. OLDS, Syracuse, N. Y.—*Slide for Extension-Table.*—Patented September 10, 1867, No. 68,782; reissued December 14, 1869.

Claim.—The metal slides *a*, made in the form of a cross, as herein specifically set forth, and working in corresponding grooves in the slide-bars *b*, constructed, arranged, and combined as herein specified.

3,762.—CHARLES PRATT, New York, N. Y.—*Nozzle for Cans.*—Patented April 20, 1869, No. 89,167; reissued December 14, 1869.

Claim.—1. As a new article of manufacture, a combined nozzle and seal for cans, composed of a metallic nozzle, in combination with a cap of thin soft metal, applied and secured to the same, substantially as herein described.

2. The combination, with a nozzle for cans, of a soft-metal cap covering the mouth of the nozzle, and extending downward upon the sides of the same a sufficient distance to admit of the cap being soldered to the nozzle at a point removed from or below its mouth, substantially as and for the purposes set forth.

3. The formation, upon the soft-metal cap which covers the mouth of the nozzle, of a shoulder or ridge for the guidance of the cutting-instrument, as shown and set forth.

3,763.—CYRUS ROBERTS and JOHN A. THROP, Three Rivers, Mich.—*Horse-Power.*—Patented December 8, 1868, No. 84,766; reissued December 14, 1869.

Claim.—1. The combination of a V-shaped truck-frame, and its tranverse bolsters, with the bed-plate and gearing, the whole constructed for joint operation, substantially as set forth.

2. The combination, with the sweeps, of the diagonal braces, having their leading ends respectively connected with the sweeps, in advance thereof, at points outside of the sockets through which said sweeps pass, all constructed for joint operation substantially as set forth.

3. The combination of the line-shaft, the bed-plate, and the dished bevel-wheel, arranged below the bed-plate, all constructed for joint operation, substantially as set forth.

4. The combination of the bevel-wheel, united by the clutch to the pinion above it, the friction-roller rotating upon the upper surface of the wheel, above the pinion of the line-shaft, and the friction-roller at right angles thereto, all these parts being constructed to operate as set forth.

5. The combination of the annular master-wheel, the friction-rollers, the fixed bed-plates, and the guides, all these parts being constructed to operate as set forth.

6. The arrangement of the frame, the bed-plate, the line-shaft, and the hangers B^2, constructed as described.

3,764.—EDWARD SEELEY, Scranton, Pa.—*Composition for Concrete Pavements.*—Patented September 6, 1864, No. 44,117; reissued December 14, 1869.

Claim.—1. The combination of silica, gas-tar, and sulphur, substantially as and for the purposes described.

2. The within-described composition of silica and gas-tar, when prepared substantially in the manner and for the purposes set forth.

3. The herein-described process of preparing the composition, by heating the silica, and then mixing it with the heated gas-tar, substantially as and for the purposes described.

3,765.—BERNARD STEINMETZ, Paris, France.—*Carpet-Bag Lock.*—Patented August 1, 1865, No. 49,207; reissued December 14, 1869.

Claim.—1. The pivoted spring-lever D, with its catch-projection *m*, and the spring tumbling-block or bolt *v*, operated by a key, combined and arranged substantially as herein described, when applied to the jaws of a satchel, bag, or portmanteau, for the purpose specified.

2. The combination of the "eagle," or shield-knob T, constructed so as to cover the slot 2 in the lock-case C, the catch *m* of the spring-bar D, and the staple *h* of the jaw-frame B, as herein specified.

3,766.—A. J. WARREN and D. W. WILSON, West Eau Claire, Wis., assignors to themselves and NOAH SHAW, same place, and URIAH M. STONE, Augusta, Wis.—*Steam-Generator Furnaces.*—Patented June 22, 1869, No. 91,800; reissued December 14, 1869.

Claim.—1. The arrangement, upon the forward end of the boiler, of one or more inclined spouts, E E, which spouts are provided with self-acting valves, *y*, whereby the sawdust may be fed down from over the top of the boiler to the fire-box, and the valves close themselves to prevent the ascension of flame or other products of combustion, as set forth.

2. The combination of the boiler A, dome *d*, superheating-pipe C, inclined spouts E, and valves *y*, all substantially as set forth.

3,767.—PATRICK ADIE, of the Strand, London, England.—*Machine for Clipping Horses' Hair.*—Patented June 30, 1868, No. 97,293; patented in England April 24, 1867; reissued December 21, 1869.

Claim.—1. The arrangement and combination of the teethed plates A and B, screws I and I, and handle A H, with handle or lever L K D H, the whole constructed and operated substantially in the manner and for the purpose set forth and described.

2. The combination of the two teeth-plates of the clipping-machine, whereby the faces of the teeth are kept in proper contact, by reason of the elasticity of the teeth-cutting plates, all constructed substantially in the manner and for the purpose described.

3,768.—WILLIAM H. BLISS, Newport, R. I., assignee of himself and ROBERT B. LAWTON.—*Hose-Coupling.*—Patented February 22, 1859, No. 23,033; reissued December 21, 1869.

Claim.—1. The combination of the two thimbles C and D, by means of a pin, operating longitudinally through the outer thimble C, and against the inclined side of the groove in the thimble D, so that the two thimbles will be forced together by the inward movement of the pin, and be liberated by its outward movement, substantially as described.

2. The side of the groove in D nearest to the joint to be formed, or to the flanch, constructed with an incline, substantially as described.

3. The combination of the thimbles C and D, cap *i*, and pin *g*, when constructed and operated substantially as described.

3,769.—HENRY BUNDELL, Dayton, Ohio.—*Seeding-Machine.*—Patented January 23, 1866, No. 52,135; reissued December 21, 1869.

Claim.—1. Combining, with the shaft of seed-drills, the sets of zigzag channels *a a*, in the seed-delivery cylinder, with or without the interposed agitating-wheels E, when said channels are made substantially in the manner and for the purpose specified.

2. In combination with the zigzag channels and agitating wheel or wheels E, the sectional case and shield F, arranged substantially in the manner and for the purpose set forth.

3,770.—BETHEL BURTON, Brooklyn, and WILLIAM C. WARD, New York N. Y., assignees of BETHEL BURTON.—*Breech-Loading Fire-Arms.*—Patented December 20, 1859, No. 26,475; reissued December 21, 1869.

Claim.—1. The opening 13, arranged as described, in connection with the breech-piece and stock, for the purpose of allowing the escape of gas and smoke, preventing heating and clogging, and facilitating the lubrication of the parts, substantially as shown and described.

2. A breech-pin made in two or more pieces, with a broken joint or joints, when the front end has a reciprocating motion only, and the rear end a reciprocating and rotary motion, substantially as shown and described.

3. One or more projections on the forward end of the breech-pin, for guiding it and holding it in place, when made and operating as shown and described.

4. The L-shaped groove 11 in the breech-pin, in combination with the pin or projection 12 on the inside of the breech-piece, when arranged and operating as shown and described.

5. A concavity or depression on the front end of the reciprocating breech-pin receiving the conical rear end of the barrel, in combination with a sliding packing-ring in the rear end of the barrel, when made as shown and described.

6. The combination of the breech-piece, and the reciprocating breech-pin made to slide therein, when provided with sectional screws as shown and described.

3,771.—S. J. GENUNG, Waterloo, N. Y.—*Extension-Slide for Tables.*—Patented September 7, 1869, No. 94,486; reissued December 21, 1869.

Claim.—1. The combination, with the wooden bars of an extension-table, of separators at the ends, which receive the frictional contact at those points, without any intermediate connection of the bars, as herein described.

2. Forming the slides B with the dovetailed lugs *g* for attaching to the wood, in the manner and for the purpose specified.

3. In combination with the outside slides B B′, the central connection *a b*, substantially as described.

3,772.—The Kennedy Electric-Clock Company, New York, N. Y., assignees of Samuel A. Kennedy, S. W. Holt, and Joseph Gerlach.—*Electric Clock.*—Patented December 3, 1867, No. 71,624; reissued December 21, 1869.

Claim.—1. Vibrating a pendulum having a magnet attached thereto, by means of two electric coils, arranged, one at each end of the magnet, the said maget and coils having their corresponding poles placed opposite to each other, as shown and described.

2. Actuating the driving-pawl of a clock-mechanism by a weight moved from a state of rest to a certain distance, and retracted by its own gravity.

3. Carrying the weighted pawl-driver intermittently to its point of limitation, and then leaving it to the action of gravity by means of an oscillating pendulum, in the manner set forth.

4. The combination of the ratchet-wheel E with the pendulum H, by means of the lever F, forked bar G, and pawl I, arranged and operating, in relation to each other, substantially as described and for the purposes specified.

3,773.—B. F. Koller, Shrewsbury, Pa., assignee of Samuel Gibson.—*Scrubbing-Brush.*—Patented October 6, 1868, No. 82,705; reissued December 21, 1869.

Claim.—1. Attaching a strip of rubber to one side of a long-handle scrubbing-brush, so that it will be parallel with the rows of the bristles thereof, substantially as described.

2. In a long-handle scrubbing-brush, the arrangement of the strip of rubber D, so as to project from one and the same side of the brush with the bristles thereof, substantially as and for the purpose specified.

3. The arrangement of the shouldered plate A and flanged keeper E, inclosing the strips of rubber D upon the forward part of the bristle-brush G, all as herein shown and described.

3,774.—Henry R. Sensenig and Moses W. Martin, Earl Township, Pa., assignees, by mesne assignments, of Martin W. Zimmerman and John Zimmerman.—*Pump.*—Patented May 3, 1864, No. 42,617; reissued December 21, 1869.

Claim.—1. The rocker-heads B H, with their arms D C I J, and counterpoise L, when operated in unison by a single wire, W, by means of a crank, N, and wheel, M, substantially in the manner and for the purpose specified.

2. In combination with the foregoing arrangement, the adjusting-screw Y, with its burrs V V, when applied in the manner and for the purpose set forth.

3,775.—John Ralston, Abraham L. Thomas, and William Parkinson, for themselves and William A. Shoemaker, Schuylkill County, and George E. Buckley, Philadelphia, Pa., assignees of said Ralston, Thomas, and Parkinson.—*Manufacture of Iron and Steel.*—Patented March 23, 1869, No. 88,208; reissued December 21, 1869.

Claim.—1. The manufacture of an improved article of wrought iron in the puddling-furnace, by using, in combination with molten cast iron therein, the micaceous, gray, magnetic iron-ore, substantially as described.

2. The manufacture of steel direct in the puddling-furnace, by using, in combination with molten cast iron therein, the micaceous, gray, magnetic iron-ore, substantially as herein described.

3,776.—P. J. Clever, Goliad, Texas.—*Sewing-Machine.*—Patented November 16, 1869, No. 96,866; reissued December 28, 1869.

Claim.—1. The combination of the treadle A and clamp A^2 with the machine-frame, whereby the treadle may be adjusted to either side or end of the frame, according to the direction of the feeding-movement, all substantially as specified.

2. The arrangement of the driving-wheel A^{11}, hinged supporting-frame B, eccentric plate B^3, adjustable hanger B^5, and spring D^4, substantially as specified.

3. The combination and arrangement of the vertically-adjustable driving friction-wheel A^{11}, loose friction-wheel B^7, ratchet-clutch B^{11}, spring B^{12}, fly-wheel B^{13}, and friction-lever B^{14}, all substantially as specified.

4. The combination, with the stand and table-plate, of the jointed brace B^{18} and sleeve B^{19}, when constructed and arranged as specified.

5. The crank-shaft B^3, adjustable connecting-rod C^1, oscillating plate C^3, rod C^4, connected by ball-joints with oscillating plate and needle-arm C^5, all constructed as described, and arranged as specified.

6. The combination, with the curved pivoted shuttle-carrying arm having spring-forks to retain the shuttle, of the crank-shaft B^3, when the shaft and shuttle-carrier are connected by the adjustable connecting-rod D^3, constructed as described, to compensate for the wear of parts, substantially as specified.

7. The combination, with the shuttle, of the tension-spring D^8, set-screw D^{10}, and guards D^{11}, when arranged, substantially as specified, to prevent the thread from catching on the adjusting-screw.

8. The combination of the feed-shoe E, vertically-sliding plate E^1, adjusting-spring E^5, set-screw E^8, carrier E^2, and cam E^7, all substantially as specified.

9. The combination, with the feed-carrier E^2 and notched bar F, of the inverted V-shaped frame F^2, stud-pins H, spring H^1, bar F^8, with stud F^9, vertical slide F^4, and cam F^7, all substantially as specified.

10. The combination, with the vertical slide F^4, and stud-pin F^6, of the bent arm H^3 H^4, and adjusting-screw, H^7, substantially as specified.

11. The combination, with tension-spring K, connected to the needle-arm support, as described, of the right-and-left threaded screw K^2, with movable nuts, the disk K^4, and friction-block K^5, all substantially as specified.

12. The spooling-device L, consisting of the vertical stock, arm L^4, grooved pulleys L^1 and L^2, and arranged relatively to the table and friction-wheel B^7, all substantially as specified.

3,777.—John A. McClelland, Louisville, Ky.—(Division A.) *Preparing Compounds Containing Collodion.*—Patented April 28, 1868, No. 77,304; reissued December 28, 1869.

Claim.—1. The method of redissolving and working collodion and its compounds, prepared substantially as described.

2. Collodion and its compounds, dried and reduced to a granular or powdered state preparatory to being treated with the proper solvents, substantially as described.

3,778.—John A. McClelland, Louisville, Ky.—(Division B.) *Material for Forming Dental Plates.*——Patented April 28, 1868, No. 77,304; reissued December 28, 1869.

Claim.—1. A base for artificial gums or dental plates, in which pyroxyline or collodion forms a component part, substantially as described.

2. A dental base, composed of a granulated compound of collodion and coloring-matter, substantially as described.

3. A dental base, composed of collodion and a resinous matter, substantially as described.

3,779.—Blakey Pilkington, Oakland, Cal., assignee, by mesne assignments, of James D. Jenkins.—*Carbureting Air for the Production of Light and Heat.*—Patented January 28, 1868, No. 73,900; reissued December 28, 1869.

Claim.—1. The carbureting of air for lighting and heating purposes by driving a current of the same through a metallic chamber filled with absorbent material saturated with gasoline, or other carbon-oil, by means of a fan-blower, as is hereinbefore specified.

2. An apparatus for producing light or heat, consisting of a vessel or chamber filled with absorbent material saturated with gasoline or other carbon-fluid, and of a fan-blower for forcing air through said saturated material, substantially as herein shown and described.

3,780.—HENRY E. SHAFFER, Rochester, N. Y. —*Fruit-Jar.*—Patented August 31, 1869, No. 94,248; reissued December 28, 1869.

Claim.—The arrangement of the clamp C, spring-bar E, and screw D, either connected or disconnected, when combined with the cover B, having the concavity *a*, whereby a natural spring of the bar is allowed, for giving elasticity to the cover, as herein described.

3,781.—THOMAS H. WHITNEY and S. A. WHITNEY, Glassborough, N. J., assignees of JOHN FOCER. —*Fruit-Jar.*—Patented June 12, 1866, No. 55,581; reissued December 28, 1869.

Claim.—1. The thin metal ring D, having screw-threads adapted to similar threads on the cover B and neck A of a preserving-jar, all substantially as and for the purpose herein set forth.

2. The combination, with a preserve-jar, the neck of which is constructed substantially as herein set forth, of the cover B, gasket C, and ring D, as and for the purpose specified.

3,782.—THOMAS J. HALL, Bryan, Texas, for himself, and HENRY P. STOCKTON and ROBERT P. LANE, Rockford, Ill., assignees of THOMAS J. HALL. —*Plow.*—Patented April 3, 1855, No. 12,627; extended seven years; reissued December 28, 1869.

Claim.—1. The cutter or colter-wheel B, freely revolving on its own axis, when attached to the beam A of a plow, so that it will swivel or turn in such attachment, and the wheel-colter be free to vibrate laterally, and follow the line of draught or direction given to the beam of the plow, in the manner described.

2. The combination of the slotted rod *b*, curved arms *c c*, and wheel-colter B, with the swiveling of the rod *b* in the beam A, in the manner and for the purpose substantially as herein described.

3,783.—J. M. JONES, HENRY JOHNSON and GEORGE M. BOWMAN, Palmyra, N. Y., assignees of J. M. JONES.—*Printing-Press.*—Patented August 11, 1868, No. 80,865; reissued December 28, 1869.

Claim.—1. The arm or arms N, or its or their equivalents, in combination with the platen Q, or its equivalent, when arranged to engage with the said platen or its yoke, and to draw it against the form, to which it has been previously raised, substantially as and for the purpose described.

2. The rocker-arm or arms Q^2, or its or their equivalents, arranged for operation upon the arm or arms N, or equivalent therefor, substantially as described, for the purpose specified.

3. The lever or levers M^3, or equivalent therefor, when arranged for operation upon the rocker-arm or arms Q^2, of the lifting device, to the impression-arms N, substantially as and for the purpose described.

4. A movable hook or clasp, for holding the chase to the bed of the press, when operated by lever *d*, and arranged for operation substantially as specified.

5. The lever G^3, or its equivalent, in combination with the frame carrying the ink-rollers to the press, when arranged for operation therewith, substantially as and for the purpose described.

6. A box or receptacle, in combination with the frame carrying the platen, when arranged thereon for operation, substantially as and for the purpose set forth.

7. As a means of distribution, and for other purposes, detaining the inking-rollers in contact with the distributing-cylinder, during the will or requirements of the operator, with or without stopping the other parts of the machine, such detention being produced by means of the lever G^3, or its equivalent, substantially as and for the purpose described.
